## Introduction 1

- 0.1 The Assyrian Christians of Urmī 1
- 0.2 Literary and Vernacular Forms of the C. Urmi Dialect 7
- 0.3 Previous Scholarship on the C. Urmi Dialect 11
- 0.4 Aim of This Work 20
- 0.5 The Position of C. Urmi within the Neo-Aramaic Dialects 22
- 0.6 Varieties of the C. Urmi Dialect 28
- 0.7 Languages in Contact 37
- 0.8 Interference from the Literary Language 40
- 0.9 Relationship of C. Urmi to J. Urmi 42
- 0.10 Methodology and Layout of the Work 44

## 1 Phonology 48

- 1.1 Consonant Phonemes 48
- 1.2 Vowel Phonemes 48
- 1.3 Suprasegmental Emphasis 50
  - 1.3.1 *Introductory Remarks* 50
  - 1.3.2 *Long Stressed Vowels* 53
  - 1.3.3 *Short Stressed Vowels* 62
  - 1.3.4 *Short Unstressed Vowels* 68
  - 1.3.5 *Dialect Differences in Vowels* 74
  - 1.3.6 *Consonants* 76
- 1.4 Notes on the Phonetic Realization of Selected Consonants 92
  - 1.4.1 *Laryngal Settings of Unvoiced Stops and Affricates* 92
    - 1.4.1.1 Introductory Remarks 92
    - 1.4.1.2 /p/, / $\hat{p}$ /, /b/ 95
    - 1.4.1.3 /t/, / $\dot{t}$ /, /d/ 99
    - 1.4.1.4 /č/, / $\check{c}$ /, /j/ 100
    - 1.4.1.5 /c/, / $\zeta$ /, /ʃ/ 101
    - 1.4.1.6 /k/ 103
  - 1.4.2 /v/ 103
  - 1.4.3 /s/, / $\grave{s}$ /, /z/ 103
  - 1.4.4 /x/ 103

1.19.4.3	Stress on Both Components	236
1.19.5	<i>Quantifier + Complement</i>	236
1.19.5.1	Stress on the Nominal	237
1.19.5.2	Stress on the Quantifier	237
1.19.5.3	Stress on Both Components	237
1.19.6	<i>Prepositions and Prepositional Phrases</i>	237
1.19.6.1	Stress on Complement of Preposition	237
1.19.6.2	Stress on Preposition and Complement	237
1.19.7	<i>Stress Groups Consisting of More Than Two Words</i>	237
2	<b>Pronouns</b>	238
2.1	<i>Independent Personal Pronouns</i>	238
2.2	<i>Demonstrative Pronouns</i>	238
2.2.1	<i>Independent Near Deixis Pronouns</i>	239
2.2.2	<i>Independent Medium Deixis Pronouns</i>	239
2.2.3	<i>Independent Far Deixis Pronouns</i>	240
2.2.4	<i>Independent Default Demonstrative Pronouns</i>	240
2.2.5	<i>Attributive Near Deixis Pronouns</i>	240
2.2.6	<i>Attributive Medium Deixis Pronouns</i>	241
2.2.7	<i>Attributive Far Deixis Pronouns</i>	241
2.2.8	<i>Attributive Default Demonstrative Pronouns</i>	241
2.3	<i>Pronominal Genitive Suffixes on Nouns and Prepositions</i>	242

2.4	The Independent Genitive Particle	245
2.5	Reflexive Pronoun	245
2.6	Pronoun of Isolation	245
2.7	Reciprocal Pronoun	246
2.8	Interrogative Pronouns	246
<b>3</b>	<b>Copula</b>	<b>248</b>
3.1	Present Copula	248
3.2	Past Copula	251
3.3	Deictic Copulas	253
3.3.1	<i>Near Deictic Copula</i>	253
3.3.2	<i>Far Deictic Copula</i>	253
3.4	Negative Present Copula	253
3.5	Negative Past Copula	254
<b>4</b>	<b>Verbs</b>	<b>255</b>
4.1	Verbal Roots	255
4.2	Verbal Patterns	260
	<i>Pattern I</i>	260
	<i>Pattern II</i>	260
	<i>Pattern III</i>	261
	<i>Quadrilateral I</i>	261
	<i>Quadrilateral II</i>	261
4.3	Inflectional Suffixes	264
4.3.1	<i>S-Suffixes</i>	264
4.3.2	<i>L-Suffixes</i>	265
4.3.3	<i>Inflection of the Present Template with S-Suffixes</i>	266
4.3.3.1	Pattern I	266
4.3.3.2	Pattern II	266
4.3.3.3	Pattern III	267
4.3.3.4	Quadrilateral	268
4.3.4	<i>Inflection of the Past Template with L-Suffixes</i>	269
4.3.4.1	Pattern I	269
4.3.4.2	Pattern II	270
4.3.4.3	Pattern III	270
4.3.4.4	Quadrilateral	270
4.3.4.5	Roots Ending in /n/ or /r/	271
4.3.5	<i>Inflection of the Past Template with S-Suffixes</i>	271
4.3.5.1	Pattern I	272
4.3.5.2	Pattern II	273

4.3.5.2	Pattern III	273
4.3.5.3	Quadriliteral	274
4.4	Particles Combined with Verbs Derived from the Present and Past Templates	274
4.4.1	<i>Habitual Particle</i>	274
4.4.2	<i>Future Particle</i>	275
4.4.3	<i>Deontic Particles</i>	276
4.4.4	<i>Past Converter Prefix</i> kam-	276
4.4.5	<i>Past Converter Suffix</i> -va	276
4.4.5.1	Present Template Verbs	276
4.4.5.2	Past Template Verbs	277
4.5	Inflection of the Imperative	278
4.5.1	<i>Pattern I</i>	278
4.5.2	<i>Pattern II</i>	278
4.5.3	<i>Pattern III</i>	278
4.5.4	<i>Quadriliteral</i>	278
4.6	Inflection of the Resultative Participle	279
4.6.1	<i>Pattern I</i>	279
4.6.2	<i>Pattern II</i>	279
4.6.3	<i>Pattern III</i>	279
4.6.4	<i>Quadriliteral</i>	279
4.7	Inflection of the Active Participle	280
4.7.1	<i>Pattern I</i>	280
4.7.2	<i>Pattern II</i>	280
4.7.3	<i>Pattern III</i>	280
4.7.4	<i>Quadriliteral</i>	280
4.8	Compound Verbal Forms Containing the Verb 'to be'	281
4.8.1	<i>Copula Combined with Resultative Participle</i>	281
4.8.1.1	Present Perfect	281
4.8.1.2	Past Perfect	281
4.8.1.3	Irrealis Perfect	282
4.8.1.4	Irrealis Past Perfect	282
4.8.2	<i>Copula Combined with Progressive Stem</i>	282
4.8.2.1	Present Progressive	282
4.8.2.2	Past Progressive	284
4.8.2.3	Progressive Constructions with the Verb <i>avə</i> I	284
4.9	Negation of Verbal Forms	285
4.9.1	la	285
4.9.2	le	286

4.9.3	<i>Negative Copula</i>	286
4.10	Weak Verbs in Pattern I	286
4.10.1	<i>Verba Primae /Ø/</i>	287
4.10.1.1	Present Template	287
4.10.1.2	Past Template	287
4.10.1.3	Resultative Participle	288
4.10.1.4	Imperative	288
4.10.1.5	Infinitive	288
4.10.1.6	Progressive	288
4.10.1.7	Verbal Noun	288
4.10.1.8	Active Participle	289
4.10.2	<i>Verba Primae /Ø/ ~ Primae /y/</i>	289
4.10.2.1	Present Template	289
4.10.2.2	Past Template	290
4.10.2.3	Resultative Participle	290
4.10.2.4	Imperative	290
4.10.2.5	Infinitive	290
4.10.2.6	Progressive	290
4.10.2.7	Verbal Noun	291
4.10.2.8	Active Participle	291
4.10.3	<i>Verba Mediae /Ø/ ~ Mediae /y/</i>	291
4.10.3.1	Present Template	291
4.10.3.2	Past Template	292
4.10.3.3	Resultative Participle	292
4.10.3.4	Imperative	292
4.10.3.5	Infinitive	292
4.10.3.6	Progressive	292
4.10.3.7	Verbal Noun	293
4.10.3.8	Active Participle	293
4.10.4	<i>Verba Mediae /y/</i>	293
4.10.4.1	Present Template	293
4.10.4.2	Past Template	294
4.10.4.3	Resultative Participle	294
4.10.4.4	Imperative	294
4.10.4.5	Infinitive	295
4.10.4.6	Progressive	295
4.10.4.7	Verbal Noun	295
4.10.4.8	Active Participle	295
4.10.5	<i>Verba Primae /y/, Mediae /Ø/</i>	295
4.10.5.1	Present Template	295

4.10.5.2	Past Template	296
4.10.5.4	Resultative Participle	296
4.10.5.5	Imperative	296
4.10.5.6	Infinitive	296
4.10.5.7	Progressive	296
4.10.5.8	Verbal Noun	296
4.10.6	<i>Verba Primae /Ø/, Mediae /y/</i>	297
4.10.6.1	Present Template	297
4.10.6.2	Past Template	297
4.10.6.3	Resultative Participle	297
4.10.6.4	Imperative	297
4.10.6.5	Infinitive	297
4.10.6.6	Progressive	298
4.10.6.7	Verbal Noun	298
4.10.6.8	Active Participle	298
4.10.7	<i>Verba Mediae /y/ ~ Primae /Ø/</i>	298
4.10.7.1	Present Template	298
4.10.7.2	Past Template	299
4.10.7.3	Resultative Participle	299
4.10.7.4	Imperative	299
4.10.7.5	Infinitive	299
4.10.7.6	Progressive	300
4.10.7.7	Verbal Noun	300
4.10.7.8	Active Participle	300
4.10.8	<i>Verba Mediae /y/ ~ Primae /y/</i>	300
4.10.8.1	Present Template	300
4.10.8.2	Past Template	301
4.10.8.3	Resultative Participle	301
4.10.8.4	Imperative	301
4.10.8.5	Infinitive	302
4.10.8.6	Progressive	302
4.10.8.7	Verbal Noun	302
4.10.8.8	Active Participle	302

## Preface

These volumes are the result of a project that aimed to document the spoken Neo-Aramaic dialect of the Assyrian Christians of the region of Urmi. It follows my previous work on the dialect of the Jews of the region (Khan 2008a). Although much scholarly work has been done on the dialect of the Assyrians of the region and the dialect has gained central importance due to its being the basis of a widely used literary form of Neo-Aramaic, we still do not have a systematic description of the spoken dialect of the Assyrians of Urmi. The current work is intended to fill this gap. It has taken almost ten years to complete. This was due in part to the extensive fieldwork that was necessary to achieve a detailed documentation of the dialect in its different regional varieties. Another factor was the arduous labour needed to create a transcribed text corpus sufficiently large to serve as a satisfactory source for the linguistic description. Virtually all the material for this work was gathered through my own fieldwork in order to have direct access to the source language and ensure maximal accuracy of analysis.

Although the dialect of Assyrians originating from the Urmi region is still widely spoken, the number of speakers with a command of the lexicon relating to the traditional life of the villages of the Urmi plain is now rapidly dwindling and so there has been a degree of urgency in the documentation project. This is because due to the tragic events of the 20th century the Assyrians have been forced to abandon their villages on the Urmi plain, and the world of the villages and the mapping of their linguistic varieties have now to be reconstructed from the memories of the older generation of speakers.

This project would not have been possible without the help of many people, to whom I here extend my warmest gratitude. The preliminary fieldwork for the project was undertaken in London in the home of Jacob and Bella Petrus. Jacob and Bella continued to offer me great help and warm hospitality over the years. I was able to make important advances in the documentation of the dialect in a series of fieldtrips to California, where I interviewed many Assyrians from the Urmi region now resident in Turlock, Fresno and Los Angeles. I would like to express my particular thanks to Robert Paulissian (Los Angeles) and Yosəp bet Yosəp (Turlock) for their immensely kind hospitality and great patience with my endless questions. Julius Petros (Turlock) and Homer Ashurian (Chicago) also gave me much help.

My sincere thanks are extended also to the many people whom I interviewed on my fieldtrips and who offered me hospitality and help. These include in particular Yulia Davoodi (Sydney), Nancy George (Turlock), Natan Khoshaba

(Turlock), Alice bet Yosəp (Turlock), Yonan Petrus (Fresno), Victor Orshan (Los Angeles), Frederic Ayyubkhan (Los Angeles), Lina Yakubova (Armenia), Anahit Khosroeva (Yerevan, Armenia), Manya Givoyev (Guylasar, Armenia), Nadia Aloverdova (Guylasar, Armenia), Arsen Mikhaylov (Arzni, Armenia), Sophia Danielova (Arzni, Armenia), David Adamov (Tbilisi, Georgia), Uri Rubanov (Canda, Georgia), Mari Rubanova (Canda, Georgia), Maryam Gwirgis (Canda, Georgia), Merab Badalov (Canda, Georgia).

I would like register my gratitude also to the following academic colleagues: Nineb Lamassu, who helped me with the transcription of some of the texts as well with some other tasks; Demsin Lachin, who helped me immensely coordinate with the older generation in Turlock, made a number of recordings and also supplied me with many important pieces of phraseology; Hezy Mutzafi, who gave me helpful comments on several items of the lexicon, Elisabetta Ragagnin, who helped me with many of the Turkic etymologies and Turkic parallels to various constructions, and also the Azeri informants Asma Rezaei and Naghme Nadjibzade; Ergin Öpentin, who helped me with many issues relating to Kurdish; Mahbod Ghaffari, who helped me find parallels to various constructions in Persian; Julia Krivoruchko and Nadia Vidro, who helped me with Russian; Hrach Martirosyan and Lidiya Muradova who helped me with some Armenian words; Edit Doron, who gave me much valuable advice about syntactic analysis; Noam Faust, with whom I had insightful discussions about morphological analysis.

Several institutions have supported this project and I hereby recognize this support with gratitude. These include the UK Arts and Humanities Research Council, which supported a documentation project on the North-Eastern Neo-Aramaic Dialects between 2004 and 2009. Some of the fieldwork for these volumes were carried out within the framework of this project. The Assyrian Universal Alliance Foundation supplied funding that supported the research assistance supplied by Nineb Lamassu. A large proportion of the writing of the project was carried out while I was a visiting fellow at the Institute for Advanced Studies in Jerusalem (2012–2013), the Institute for Advanced Study in Princeton (2015), a Lady Davis visiting professor at the Hebrew University in Jerusalem (2015) and a Sackler Fellow at the Institute of Advanced Studies in Tel-Aviv University (2015). I acknowledge also with thanks the constant support of my home institution, the University of Cambridge, and its administrative staff.

*Geoffrey Khan  
Cambridge, November 2015*

# Abbreviations

adj.	adjective
adv.	adverb
annex.	annexation form
approx.	approximately
Arab.	Arabic
Arm.	Armenia
Arm ... Arm	Armenian
Az ... Az	Azeri
Azer.	Azeri
C.	Christian dialect
cst.	construct state
E ... E	English
Eng.	English
exclam.	exclamation
f.	feminine
fs.	feminine singular
Gaw.	Gawilan
Ge ... Ge	Georgian
Georg.	Georgia
imper.	imperative
inf.	infinitive
intr.	intransitive
invar.	invariable
J.	Jewish dialect
JBA	Jewish Babylonian Aramaic
Kurd.	Kurdish
m.	masculine
metaphor.	metaphorical
mod.	(non-attributive) modifier
ms.	masculine singular
lit.	literally
N	northern Urmî variety
n.	noun
NENA	North-Eastern Neo-Aramaic
num.	numeral
obl.	oblique
P ... P	Persian

part.	particle
Pers.	Persian
pl.	plural
prep.	preposition
prog.	progressive
pron.	pronoun, pronominal
prs.	present template
pst.	past
R...R	Russian
rsp.	resultative participle
Rus.	Russian
S	southern Urmi variety
Sal.	Salamas
so.	someone
sth.	something
Syr.	Syriac
tr.	transitive
voc.	vocative
vn.	verbal noun

# Introduction

## 0.1 The Assyrian Christians of Urmi

The town of Urmi is situated in north-western Iran on a fertile plain between Lake Urmi to the east and the mountains leading up to the border with Turkey on the west. It is the capital of the West Azerbaijan province of Iran. ‘Urmi’ is the form of the name of the town that is used by the Aramaic-speaking Assyrian Christians and this is the form that is used throughout this work. A variety of other forms of the name are used in other languages, e.g. Urumiya (Persian), Urmiyā (Armenian), Urmīyə, Urmu (Azeri), Úrmiyə (Kurdish). According to a local popular etymology, the name means ‘place of water’ (*miyya*). It is likely, however, that it is connected to the name Ormazd, the Middle Persian form of the name of Ahuramazd. Evidence for this is the gentilic adjectival form *urməžnaya* ‘man from Urmi’ (Yohannan 1900, xi). During the Pahlavi Dynasty (1925–1979), the town was called Rezaiyeh after the name of the ruler Rezā Shāh.

The presence of Aramaic-speaking Assyrian Christians<sup>1</sup> in the town of Urmi and the surrounding plain in north-western Iran can be traced back in historical records to the Middle Ages. There is reference in the sources to the existence of a bishop in Urmi in the year 1111 C.E. and the church of Mat Maryam of the town is referred to in 1284 (Fiey 1973, 402–407; 1993, 141–142). It is not clear, however, at what date the Aramaic-speaking Assyrians first settled in the area. It is likely that they were originally migrants from the mountains of eastern Turkey (Nöldeke 1868, xxiii; Yaure 1957, 77–79). This is indicated by the close linguistic relationship of the dialect of the Assyrian Christians of Urmi (henceforth C. Urmi) with Neo-Aramaic dialects of this mountain region (§ 0.6.). Presence in the dialect of Arabic loanwords that preserve Arabic phonological features suggest that the ancestors of the C. Urmi-speakers were at some point in contact with Arabic in northern Mesopotamia (§ 15.1.1.1.).

Until the beginning of the twentieth century the majority of the Assyrians in the Urmi area lived in villages on the plain lying to the north and the south of the town. The majority of these villages were inhabited exclusively by Assyrians. The villagers made their living as agriculturalists cultivating a variety of crops. Reports by the early missionaries to the area in the 19th century

<sup>1</sup> The native name is *suraya* (in the written sources spelt with an initial *’alap*: or *+aturaya*.

indicate that only a small number lived in the town of Urmi itself. The American missionary Justin Perkins when he first visited the region in the 1830s estimated that only about 600 Assyrians lived in the town whereas 30,000 or 40,000 lived on the surrounding plain (Murre-van den Berg 1999, 40). Before the First World War the Assyrian villages of the region numbered over 200.<sup>2</sup>

Until the first half of the 19th century the vast majority of the Assyrians of the region belonged to the Church of the East and owed allegiance to a Patriarch who had his residence in Qodshanis in the Hakkari Mountains of south-eastern Turkey. Only a small minority belonged to the Chaldean Church, which was in communion with Rome. There was a Chaldean community in the village of Ardişay, south of Urmi and also in the region of Salamas, to the north of the Urmi plain adjacent to the northern end of the Lake of Urmi. In the 1830s western missionaries began to arrive in the region.<sup>3</sup> A Protestant mission under the responsibility of the American Board of Commissioners for Foreign Missions arrived in 1835 and this was followed by a Lazarist Catholic mission in 1839 and an Anglican mission, called ‘The Archbishop of Canterbury’s Mission to the Assyrian Christians’ in 1886.<sup>4</sup> The missionaries opened schools for both children and adults in villages across the Urmi plain and provided medical care. One of the objectives of this education programme was to teach the Assyrians to read the Bible and other edifying literature in their own vernacular language. In order to achieve this they developed a literary form of the vernacular written in Syriac script and brought printing presses which produced scores of printed books. The American Protestants started printing vernacular texts in 1842, starting with the New Testament, and this was rapidly followed by the Old Testament and other literature. The other missions followed a similar educational programme and had their own presses. A consequence of these activities was that some of the Assyrians joined the congregations of the Christian denominations represented by the missions. The missions also seem to have played a role in a demographic change, in that a large number of Assyrians moved from the villages to the town of Urmi, where the missions and their presses were based. As a result the Assyrian community of the town grew to around 6,500 in 1910 (Hartmann 1980, 74).

After the Treaty of Turkmenchay (1828), which fixed the borders between Russia and Persia at the end of the Russo-Persian War (1826–1828), numer-

<sup>2</sup> For lists of the names of the villages see Coakley (1993), Sanders (1997, 72–75), Gaunt (2006, 417), Petrus (2012a) and the sources cited by Al-Jeloo (2010).

<sup>3</sup> For a detailed account of the western missions to the Urmi region and their activities until the First World War see Murre-van den Berg (1999).

<sup>4</sup> For details of this Anglican mission and its activities see in particular Coakley (1992).

ous Assyrians from the Urmi region began to settle in Russia, in particular in the Caucasus region, which was close enough to allow them to maintain contact with their families on the Urmi plain. Many of these joined the Russian Orthodox Church. In 1898 the Russian Orthodox Church established a mission in Urmi, which won over many converts among the Assyrians in the region, including some who had joined the churches of the other missions. One of the motivating factors for the enthusiasm with which the representatives of the Russian Orthodox Church were received is likely to be that the Assyrians hoped for political support from this major Christian power, which had interests in the region. At this period there was a further wave of emigration of Assyrians from the Urmi region to the Caucasus and the major Russian towns, in particular St. Petersburg. Many also left for the USA, where they had many job opportunities on account of their education in the western missionary schools. According to the census in 1897 the number of Assyrians in the Russian empire was 5,400 (Isaev 1979, 17).

In 1914 the Assyrians constituted one of the largest ethnic groups in the population of the Urmi region. According to the statistics provided by Namik and Nedjib (1919) they numbered 78,000 at this period. They were only slightly outnumbered by Turks and Turkmen (80,000), while other groups were considerably smaller: sedentary Kurds (38,000), Armenians (20,000), Persians (10,000), Jews (4,000).<sup>5</sup> The events of the First World War brought about major upheavals among the Assyrian population. In the years leading up to the war the Assyrians had high hopes in the protection of the Russians, who extended their control to Azerbaijan in 1908 and occupied Urmi and other towns in 1911. In January 1915, however, the Russians withdrew following an onslaught by the Turkish army. Many Assyrians left with them, which further increased the size of the migrant Assyrian communities in Russia, especially the Caucasus. The Turks in consort with Kurdish troops raided villages on the Urmi plain and the Assyrian villagers fled to Urmi to seek refuge in the Protestant and Roman Catholic missions. In May 1915 the Russian army returned and the Assyrians were able to return to their villages. In the winter of 1916 many of the Assyrians from the villages in the Hakkari Mountains, fleeing from massacres by Kurds, sought refuge on the Urmi plain. In the autumn of 1917 the Russians withdrew from the region as a consequence of the Russian Revolution. The Assyrian Patriarch formed his own Assyrian battalion and this was able to retain control of Urmi, guided by the missionary W.A. Shedd and some Russian officers who had stayed behind. Attempts were made to regain territory, which climaxed in a major offensive

---

5 Cf. Dubois (1921, 72) and Gaunt (2006, 406).

by the Assyrians after the murder of their Patriarch Shimun XIX Benjamin in March 1918 by Kurds. In April 1918 the Turkish army joined forces with the Kurds and made an onslaught on Urmi. Assyrian troops made contact with British forces further to the south and subsequently the remaining Assyrians, together with missionaries who had stayed in the town, all fled to Hamadan, which was controlled by the British. Many lost their lives in this perilous flight. The survivors were subsequently settled by the British in a refugee camp in Baquba. It is estimated that approximately 40,000 Persian Assyrians were killed in events of the First World War.<sup>6</sup>

After the war Assyrians from the Urmi region were able to return to their homeland, but the majority settled in the town of Urmi and only a small proportion went back to their villages on the Urmi plain. This had a major impact on the C. Urmi dialect, since the numerous village varieties became increasingly mixed together in the urban Assyrian communities. The American missionaries returned in 1923 and resumed their educational and health-care programme. Under the government of Reza Khan in 1934 the missionaries and all other foreigners had to leave the region of Azerbaijan. Many of the Assyrians who had received a good education in the missionary schools subsequently left the Urmi region to take up jobs in other Iranian towns, such as Tabriz, Hamadan and in particular in Tehran where a large community of Assyrian speakers of the C. Urmi dialect developed.

During the Second World War the Assyrian community in the Urmi region suffered further due to the fact that the Iranian government lost control of the region of north-western Iran to Azerbaijani and Kurdish independence movements, which were supported by the Soviet Union. This resulted in violent Kurdish uprisings on the Urmi plain in which Assyrians lost their lives (see B6 in the text corpus). At the end of 1946 the Iranian government regained control of the region after the withdrawal of Soviet troops. In the post-war years the situation of the Assyrians of Iran improved. In 1949 the patriarch of the Church of the East, who since 1940 was based in the USA, negotiated an agreement with the Iranian government to give permission for the founding of a governing body of the church in Iran. The Chaldean church received permission to open a seminary in 1953 (Yonan 1978, 83–84).

Although the villages on the Urmi plain had been resettled to some extent after the First World War, there was an inexorable gravitation of the village

---

<sup>6</sup> Sources giving details of these tragic events include Rockwell (1916), Dubois (1921), Werda (1924, 3–220), Macuch (1976, 230–260), Yonan (1978, 28–39), Yonan and Bangert (2006), Gaunt (2006, 81–120).

population towards the town of Urmi for work, education and, in some cases, due to natural disasters such as floods (Younansardaroud 2001, xvi).

According to Hartmann (1980, 27) in 1970 there were approximately 19,800 Assyrians in Iran. After the Islamic revolution of 1979 the Assyrians suffered considerable hardships and large numbers left the villages and also the town of Urmi seeking a new life outside of Iran. Today there is only a very diminished community of Assyrian speakers of the C. Urmi dialect in the Urmi region, virtually all of them living in the town of Urmi. According to al-Jeloo in 2010 there were only 5,000 Assyrians left in the area. Virtually all of these resided in the town of Urmi (Jeloo 2010).

The Assyrian community in the Soviet Union continued to grow after the First World. In 1926 their number was approximately 9,000, many, but not all were from families originating in the Urmi region. This number grew to 21,800 in 1959, 24,294 in 1970 and approximately 25,000 in 1979 (Pennacchietti, and Tosco 1991, 15). According to the available statistics in 1926 91.1% of the Assyrians of the Soviet Union retained Neo-Aramaic as a first language. In 1959 this had dropped to 64.3%, but this remained stable until at least 1970 in which the retention rate was 64.5% (Lewis 1972, 23, 134; Pennacchietti and Tosco 1991, 15). There is a large settlement of Assyrians from Urmi near Armavir in the northern Caucasus of Russia in a town called Urmia.

The Armenian term for Assyrians is *Aysor* and this was used also in Russian until at least the 1920s, but *Aysor* is now regarded as derogatory by Russian-speaking Assyrians and they prefer the Russian term *Assiriytsi*, which is used also to refer to the ancient Assyrians.<sup>7</sup>

The first settlement of Assyrians in Georgia can be dated to the last third of the 18th century. In 1770 the Georgian king Iraqli II invited Assyrians to join his troops to fight against the Ottomans. This followed earlier appeals to Iraqli by the Assyrian Patriarch to allow Assyrians to settle in Georgia (Tsereteli 1969; 1970a, 376). As a result some Assyrian families, including it seems some from the Urmi region, settled in Georgia at this period. Subsequent waves of immigrants from the Urmi region came after the Treaty of Turkmenchay in 1828 and during the First World War.

According to the 1989 population census, there were 8,600 Assyrians in Georgia. A large number left the country after Georgian independence in the 1990s. Today there are approximately 6,000 Assyrians in the country. The largest and oldest settlement of Assyrians is in the village of Dzveli Canda (Mtskheta District). The population of this village today numbers approximately 350 families

---

<sup>7</sup> Tsereteli (1978b, 23) and Alexey Lyavdansky (personal communication).

(1,500 people), 80 percent of whom are Assyrians. The vast majority of the Assyrians originate from the Urmî region and speak a variety of the C. Urmî dialect. The first Assyrian settlers of Canda arrived in the 19th century and the community grew substantially during the First World War. According to local tradition a large proportion of the settlers originated from the village of <sup>+</sup>Nazə in the northern Urmî plain. In the region of Gardabani there are approximately 110 Assyrian families (600 to 700 people), some of whom are speakers of C. Urmî. In the city of Tbilisi there are approximately 2,000 Assyrians, mostly in the neighbourhood of Kukia, but the majority of these do not originate from the Urmî region. Smaller settlements of Assyrians are found in other Georgian towns, including Kutaisi, Batumi, Senaki, Zugdidi and Zestafoni.

In the early decades of the Communist period the cultural, literary and intellectual activities of the Assyrians of Georgia flourished, especially in Tbilisi, where there was a theatre group performing in the C. Urmî dialect, a literary journal (*Cuxva d-Madənxa* ‘Star of the East’) was published and Assyrian schools were opened (Tsereteli 1970a, 377). Under Stalin’s regime in 1937, however, most of the intellectuals and clergy were repressed, resulting in the cessation of publishing and the closure of schools. Ten years later in a new wave of repressions Assyrians were deported to Siberia and Kazakhstan in huge numbers, many of whom returned only after the rehabilitation of 1954. Today the literary form of C. Urmî is taught in schools in Canda and Tbilisi.

The Assyrians who migrated to Armenia after the Treaty of Turkmenchay (1828) moved from place to place in search of favourable living conditions, first living in Nakhchivan, then in Karabakh province, and finally, in the middle of the 19th century, settled in Yerevan province. The leader of this migration was Alawerd Tumayev, who served in the Russian army (Tsereteli 1970a, 376). In the Yerevan region the communities of C. Urmî-speakers made their homes mainly in the villages of Guylasar (now known officially as Dimitrov), Dvin and Arzni, where they still live today. According to the ethnographic report *Sbornik materialov dlya opisaniya mestnostey i plemen Kavkaza* (*Materials for describing regions and tribes of the Caucasus*) (Tbilisi, 1894, 284–326), the settlers in Guylasar came mainly from the villages of <sup>+</sup>Spurğan, <sup>+</sup>Mušava, <sup>+</sup>Nazə and Juytapa (Juctapa). A few C. Urmî-speakers settled in the village of Shagriar in the Armavir region. Another settlement, mainly by Assyrians from eastern Turkey, was in the village of Gol-Aysor, but this was abandoned in the period of Stalin. Shortly after settling in Armenia, the Assyrians joined the Russian Orthodox Church.

According to a census in 1897 the number of Assyrians in Yerevan province was 2,682. A census in 1979 indicates that the Assyrian population had grown to 6,183. Throughout the 20th century Assyrians gradually settled in the Armenian

towns and some subsequently lost their knowledge of the C. Urmî dialect. Those who remained in the villages generally retained their knowledge of the dialect. Many villagers intermarried with their Armenian neighbours, but the Armenians of the villages generally learned the C. Urmî dialect and, to this day, frequently communicate with Assyrians in C. Urmî. Since the 1970s attempts have been made to teach the literary form of C. Urmî in the village schools, but this initiative has been hampered by lack of competent teachers.

In the 1980s many Assyrians began to leave Armenia, and by the 1989 census their number had dropped to 5,963. In the years following the independence of Armenia in 1991, there was a massive exodus of Assyrians from the country, mainly for economic reasons.

In the course of the 20th century many of the Assyrian speakers of the C. Urmî dialect left Iran and settled, for the most part, in North America, Europe and Australia. Initially one of the main centres of Assyrian immigration was Chicago (Shoumanov 2001, 10–11), but in the course of time a particularly large community of Urmî Assyrians developed in California. One of the main concentrations of Urmî Assyrians is now in the San Joaquin Valley of California, especially in the town of Turlock. The first Assyrian settlers in Turlock arrived in 1910 and their number grew rapidly thereafter. The immigration came in waves peaking around the two World Wars and the Iranian Islamic revolution in 1979. This region was favoured by the Assyrians from Urmî since the climate and agricultural land was felt to be similar to those of the Urmî plain. Today there are approximately 15,000 Assyrians in the San Joaquin Valley, the majority from families originating in the Urmî region. The older generation of Assyrians who were brought up in Iran still have a good knowledge of the language. Those who had lived in villages when they were younger generally retain features of the village varieties of the dialect in their speech and remember a large proportion of the lexicon relating to the material culture of the villages.

## 0.2 Literary and Vernacular Forms of the C. Urmî Dialect

One of the major achievements of the western missionaries to Urmî in the 19th century was the creation of a written literary form of the spoken C. Urmî dialect.<sup>8</sup> A few scattered attempts at the representation of the vernacular in

<sup>8</sup> The formation and background of this literary C. Urmî Neo-Aramaic until the First World War have been described in detail by Murre-van den Berg (1999). The following account is largely based on this excellent study. See also Macuch (1976), who covers developments in the literary language also in the period after the First World War.

written form had been made before the arrival of the missionaries. One of these, for example, is a catechism written by a Chaldean priest in Khosrova in the Salamas region, north of Urmi, in 1827, which was published by Rödiger (1838) and used by Nöldeke (1868) as one of his sources for his grammar of C. Urmi, although the text reflects the C. Salamas rather than the C. Urmi dialect. It was the American Protestant mission that took the lead in both the creation of a standard written form of vernacular and also its dissemination by printing. The C. Urmi dialect was chosen as the basis of the literary language probably because as the dialect of the main centre of commerce and education in the region it was more widely understood than the dialects in the mountains.

As remarked, in 1842 this mission started printing the literary neo-Aramaic form of the New Testament, which was finished in 1846. This was followed by the publication of a translation of the Old Testament in 1852. The printed neo-Aramaic Bible versions became the main models for the standardization process. In addition to these Bible versions numerous other works were published. These include translations from English as well of original compositions. Notable among the latter was the magazine *Zāhīri d-Bāhrā* 'Rays of Light', which began to be published in 1849. Native Neo-Aramaic-speaking Assyrians were involved in the translation and editing of the Bible versions and other translations, and were the authors of many of the original compositions. The literary form of the language was used and developed by subsequent missions to the region, in particular by that of the Anglicans.

The Syriac script was chosen for this literary language since it was perceived that this would be more readily accepted by the local population as it did not break with the traditional use of the script in the communities of the Church of the East. Indeed the aforementioned vernacular Bible translations were published together with the Syriac Peshitta version in a parallel column. The orthography of Classical Syriac, the traditional literary language of the liturgy of the Church of the East, had an impact on that of the new literary form of the vernacular. As a result, the orthography of this literary C. Urmi in many respects does not represent the phonology and morphology of the vernacular directly. The orthography often reflects the corresponding forms in Classical Syriac, which differed from the vernacular. The Anglican missionaries, foremost among them Arthur J. Maclean, who was head of the Archbishop of Canterbury's Assyrian Mission from 1886 to 1891, advocated an even greater degree of classicism in the orthography, not only because of the prestige of the more ancient Classical Syriac tradition, but also since such classicism was seen to be a means of overarching regional differences in the vernacular. This view was shared by the American Protestants, who produced a new Bible version, first in a preliminary version of Genesis in 1886 and then the complete Bible in 1893,

printed by the American Bible Society in New York. In this new version many of the vernacular lexical items in the earlier version that were loanwords from other languages of the area, such as Azeri and Persian, were replaced by the corresponding words in Classical Syriac. This was felt to be necessary in order for the Bible version to be accessible also to Assyrians outside the Urmi region.

The literary language also deviated from the vernacular in certain aspects of syntax. As Murre-van den Berg (1999, 219–348) has shown, Bible translations in particular often imitate the syntax of the source text with regard to the ordering of constituents and also other aspects of syntax, such as the use of the preposition *l-* to mark the direct object, in accordance with the practice of Classical Syriac, but in contrast to the vernacular, which more frequently uses the preposition *ka* for this purpose (Murre-van den Berg 1999, 211–213). Some classicizing syntactic features, such as the use of *l-* as object marker, are found also in texts that were original compositions.

The literary C. Urmi language was accessible to readers who were speakers of other dialects and such speakers also became authors of works in the language. One of the foremost authors of this type was Paul Bedjan, who was a native speaker of the dialect of Salamas, and composed numerous works in the literary C. Urmi language between 1840 and 1870.

By the time of the First World War the literary C. Urmi language had become accepted as a central aspect of Assyrian culture in Urmi. It was used in literature, documents and also inscriptions in churches and graveyards (Jeloo 2010). Its tradition was continued by Assyrian intellectuals in Urmi after the missionaries had left the town and also in the diaspora of C. Urmi speakers in Tehran and other Iranian towns. A large number of books and journals were published and even continued to some extent after the Islamic revolution.<sup>9</sup> A characteristic feature of the flourishing use of the literary language was the constant proliferation of neologisms, generally based on Classical Syriac, that were introduced by writers. This literary culture was transferred to the USA by Assyrian intellectuals who migrated there from Iran in the course of the 20th century.

The use of the literary language also continued in the Caucasus, in particular in Tbilisi in Georgia. In the 1920s in the Soviet Union the Communist regime included the Assyrian community among the officially recognized national minorities who had the right to develop their own literary languages as a means of increasing literacy. As a result the Assyrian community developed a literary form of language written in a Latin alphabet known in Russian as the Noviy

<sup>9</sup> For a survey of the Assyrian literature produced in Iran in the period after the First World War see Sarmas (1962–1970) and Macuch (1976). For the journals see Yonan (1985).

Alfavit 'New Alphabet' (Polotsky 1961; Friedrich 1959; Friedrich 1960). The literary language written with this New Alphabet, which in Russian was referred to as *aysorkij*, derived from the Armenian term for Assyrian *Aysor*, was a continuation in some respects of the tradition of the literary C. Urmi language that was developed in north-western Iran. It was based on the C. Urmi dialect. The orthography of the Latin alphabet was developed by a number of Assyrian linguists, notable among them being E.D. Polivanov (1891–1938), N.V. Yushmanov (1896–1946) and K.I. Marogulov (1901–1937). The range of Latin characters and their phonetic value were similar to those of the Latin alphabets developed for other minority languages in the Soviet Union at that period. It reflected the spoken language far more closely than that of the classicizing Syriac orthography of the original literary language. Suprasegmental emphasis, for example, is represented in most words where it occurred. It was essentially a broad phonemic representation of the language. The texts, nevertheless, contain a number of features in phonology, syntax and the lexicon that are characteristic of the literary rather than the vernacular language. Even phonemic distinctions that are not made in the Syriac orthography continued to be unrepresented in the New Alphabet, namely the distinction between aspirated and unaspirated unvoiced stops.

During the period from 1926 to 1937 a large amount of literature, articles and newspapers were published in the New Alphabet in the Soviet Union, including educational material for schools, where this literary language was taught to Assyrians. The literature includes novels, short stories and poems, many of them translations of Russian writers. The non-literary material included, for example, scientific texts, speeches of political leaders and reports of the Communist party. In total 387 books were printed (Macuch 1976, 320). Texts in the New Alphabet ceased to be printed in 1939 due to a change in policy by the Soviet regime led by Stalin, whereby it was decreed that Russian should be the obligatory language of education and the Cyrillic alphabet should replace all other writing systems (Lewis 1972, 73). Although many of the minority languages began to be written in Cyrillic script, this did not apply to C. Urmi, which lost its status as one of the 'languages of the Soviet peoples' (Polotsky, preface to Marogulov 1976). The New Alphabet literature never enjoyed great favour among the main concentrations of the Assyrians in the Caucasus, who regarded it as an innovation that cut them off from the traditional literary culture in Syriac script (Tsereteli 1970a, 378).

The supradialectal function of the literally Urmi language in Syriac script also proliferated in the period after the First World War, in that it was used as the basis of a literary culture by Assyrians who spoke different Neo-Aramaic dialects. This was the case in particular in Iraq, where writers adopted a form

of written language that contained many features characteristic of literary Urmî that did not occur in their native dialects.

The literary language had an impact on the spoken language of educated speakers of C. Urmî. This is most conspicuous in their use of a number of neologisms or classicisms in the lexicon, but is also manifest in some aspects of phonology and morphology (§ 0.8.).

### 0.3 Previous Scholarship on the C. Urmî Dialect

The C. Urmî dialect has gained a particularly prominent status among the Neo-Aramaic dialects due to its being the basis of the literary form of Neo-Aramaic that enjoyed a wide distribution and high prestige among the Assyrian community. This is reflected also in the large number of grammatical studies of the dialect that have been published. The majority of these studies are devoted to a description of the literary language and many have a pedagogical purpose.

The earliest grammar of the language is that of Stoddard (1855), who was one of the Protestant missionaries in Urmî and was actively involved in the shaping and standardization of the literary language. The groundwork for the grammar was laid by the missionary Albert Lewis Holladay, who left the mission in 1845 for reasons of health (Murre-van den Berg 1999, 102, n. 101). Stoddard represents the language in Syriac script with the classicizing type of orthography that was used in the literary Urmî texts printed by the missionaries, with a description on how this should be read in the initial section on ‘orthography and orthoëpy’. In the grammar he occasionally makes evaluative remarks about ‘vulgar’ forms that deviate from the shape of Classical Syriac. This grammar, however, is primarily a description of the spoken vernacular language with the data represented in the orthography of the literary language rather than a description of the literary language as it appears in texts. Stoddard had a good knowledge of the C. Urmî dialect and also of the dialects of Neo-Aramaic dialects spoken by Assyrian communities in the mountains as far away as Bohtan. His grammar refers to variations within the C. Urmî dialect on the Urmî plain and also makes comparative reference to the mountain dialects. This objective is made clear by the full title of the work: *Grammar of the Modern Syriac Language as Spoken in Oroomiah, Persia, and in Koordistan*. It is, therefore, a highly important record of the C. Urmî dialect and other dialects as they were spoken in the middle of the 19th century. It includes a description of pronunciation, morphology, syntax and idiomatic phraseology. The morphology section presents extensive lists of verbs, which are a valuable lexicographical source. He mentions in various places morphological forms and lexical items that are not used

in the current state of spoken C. Urmî. In some cases this may be due to the fact that the forms have fallen from use. In a number of cases, however, the items in question appear to originate in the dialects of the adjacent mountains. This applies in particular to some verbs in the lexical lists.<sup>10</sup> The main disadvantage of this grammar for the investigation of the spoken vernacular is the use of the Syriac script and classicizing orthography, which does not represent accurately the phonology of the dialect.

Nöldeke's grammar, *Grammatik der Neusyrischen Sprache am Urmia-See und in Kurdistan* (1868), is a major contribution to scholarly research of the language, with detailed treatment in particular of morphology and syntax, including copious comparisons with earlier forms of Aramaic and discussions of the background of loanwords in various languages. The main drawback of the work is that Nöldeke did not have direct access to the spoken language. It is based mainly on a corpus of texts printed by the Protestant mission press and the grammar of Stoddard. These are supplemented by a short catechism text in the related Salamas dialect written in Syriac, which had been discovered by the early missionary visitors to the region, Eli Smith and H.G.O. Dwight, in 1834 and published by Rödiger (1838). Nöldeke admits in the foreword:

Als Hauptmangel des Buches empfinde ich es, dass es mir unmöglich war, durch mein eignes Ohr die Laute der Sprache von einem Eingeborenen zu vernehmen. In Folge davon bleibt namentlich in der Lautlehre Manches ungenau und zweifelhaft.

I feel that a major deficiency of the book is that it was not possible for me to hear with my own ear the pronunciation of the language by a native speaker. As a consequence much remains inexact and doubtful, in particular in the section on phonology.

In the introduction Nöldeke criticizes the missionaries for deciding to represent the language in Syriac script, since this conceals many features of the spoken language. He had access only to a short word-list of C. Urmî written in a roman transcription that was published by Müller (1864, 106–107). This was taken down by Müller from speakers of C. Urmî who passed through Vienna in 1863. The lack of access to the spoken language prevents Nöldeke not only from giving an accurate presentation of the phonology of the language, but also

---

<sup>10</sup> Even Maclean writing forty years later (1895, xi, n. 1) was not able to verify the existence of some forms given by Stoddard among native speakers.

from assessing the relationship of other levels of grammar reflected by his written sources, in particular the syntax, with the vernacular.

Collections of texts in the C. Urmi dialect with German translations were published by Merx (1873) and Socin (1882). These were written in Syriac script by an Assyrian named Audishu Arsani from the village of Mat-<sup>+</sup>Maryam (<sup>+</sup>Has-sar) near Urmi.<sup>11</sup> He used the classicizing orthographic conventions of the American missionaries. A particularly valuable feature of these editions is the fact that they are accompanied by a transcription into Latin characters of the pronunciation of the texts when read aloud. All the texts in Socin's edition are transcribed in this way. Some are, in fact, given only in transcription. Merx provides a transcription only for an extract from St. Luke's gospel according to the 1846 version. The edition of Merx contains numerous notes, mainly relating to phonology and etymology. The transcriptions indicate many features of the spoken language that are hidden by the conventional orthography of the literary language. Nöldeke (1882) reviewed Socin's work with numerous notes on points of detail. The validity of many of these, however, is weakened by his lack of knowledge of the spoken form of the language.

As part of a documentation project of the culture of the various ethnic groups of the Caucasus at the end of the nineteenth century, the Assyrian scholar A.I. Kalashev (1894a) published a short corpus of folktales in the C. Urmi dialect, which he gathered from the community of Guylasar in Armenia. He transcribes them using the 'Russian Linguistic Alphabet,' which was used by various Russian linguists at that period (Polotsky 1961, 3). This was a highly accurate method of representing the sounds of the language. It distinguished, for example, between aspirated and unaspirated stops and represented suprasegmental pharyngalization. None of these features are accurately reflected by the Syriac orthography of the literary language or by the transcriptions of Socin and Merx. The texts are supplied with a Russian translation. Kalashev also contributed to the documentation project a dictionary (Kalashev 1894b) consisting of two sections, Russian—C. Urmi and C. Urmi—Russian. Words in the dictionary are likewise transcribed using the Russian Linguistic Alphabet. Many of the words recorded in this dictionary are not used by C. Urmi speakers today, either by those living in the Caucasus or those from the Urmi area.

Maclean's *Grammar of the Dialects of Vernacular Syriac as Spoken by the Eastern Syrians of Kurdistan, North-West Persia, and the Plain of Mosul, with Notices of the Vernacular of the Jews of Azerbaijan and Zakhru Near Mosul* (1895)

---

<sup>11</sup> Yonan (2012a, 67).

is a major milestone in scholarly research of Neo-Aramaic. Maclean was head of the Archbishop of Canterbury's Assyrian Mission from 1886 to 1891 and acquired an excellent knowledge of a wide range of Neo-Aramaic dialects. A precursor of this grammar was written in literary C. Urmî (Coakley 1985, 46–47). The core of the grammar is a description of C. Urmî but it also contains a copious quantity of data concerning the phonology and morphology of other dialects in Iran, eastern Turkey and Iraq. The majority of these are Christian dialects, but he also includes, as the title indicates, some information about the dialects of the Jews of the Urmî region and of Zakho in Iraq. The bulk of the grammar is concerned with morphology, with some consideration of the historical relationship between the vernacular dialects and Syriac as reflected in sound changes. The book also contains lists of idiomatic phrases and proverbs. Maclean represents all the dialectal forms in Syriac script. He applies the principles of orthography that were advocated by the Anglican mission for the literary vernacular. These favoured highly classicizing spellings that overarch dialectal differences. As in the grammar of Stoddard, this results in a less than adequate representation of the phonology of the dialects. Some of the distinctions between dialects in the Urmî region that are mentioned by Maclean have now been levelled to some extent, no doubt due to the mixing of village dialects after the population displacements of the 20th century.

Maclean's other major contribution to Neo-Aramaic studies was his *Dictionary of the Dialects of Vernacular Syriac as Spoken by the Eastern Syrians of Kurdistan, North-West Persia, and the Plain of Mosul* (1901). This includes a very large quantity of lexical material gathered from the various dialects that he used for his grammar. He states in his introduction that he incorporated lexical lists that had been prepared by Stoddard. Again the main core is C. Urmî, which is the dialect to which Maclean had greatest access in his mission post in Urmî. He includes words found in literary dialect texts that were printed in Urmî. The entries are written in the classicizing Syriac orthography. Some entries are arranged under letters that are not pronounced in C. Urmî due to the elision of the initial consonant, but pronounced in other dialects. One of the most conspicuous cases of this is the arrangement of pattern II verbs (the erstwhile *pa<sup>a</sup>el*) under 'm', although the initial *m-* has been elided in C. Urmî. The entries in Syriac script are followed by a Latin transcription. This does not represent phonological distinctions as accurately as the transcription system of Kalashev. Suprasegmental emphasis, for example, is not represented, e.g. (m)bâsim 'to heal' (= *basəm*) vs. (m)shâdir 'to send' (= +šadər). A number of words attributed to C. Urmî in the dictionary are no longer used by C. Urmî speakers today.

The first volume of the dictionary of Yohannan (1900), entitled *A Modern Syriac-English Dictionary* appeared one year before that of Maclean. The entries of the dictionary are presented in Syriac script. The author was a native speaker of the Urmi dialect and the core of the data comes from the Urmi literary language. There are many additions of words from other dialects, drawn from publications that were available at that time, including from Turoyo. This volume contains only words beginning with *'alap* and, as far as I can establish, no other volumes were published. It has a particularly useful introduction, which describes differences in the speech across various villages of the Urmi plain in the 19th century. It also refers to the existence of unaspirated stops and affricates in the Urmi dialect. The dictionary entries themselves do not include a transcription and so these unaspirated consonants and distinctions of suprasegmental emphasis are not represented.

In the early 20th century a variety of pedagogical grammars of literary C. Urmi were published, all presenting the language in the standard classicizing Syriac orthography. These include the grammar of Thomas Audo, which was published by the Lazarist press (1905, 2nd edition 1911). Audo, who was the Chaldean bishop of Urmi from 1892 until his murder in 1918, was born in Alqosh and was not a native speaker of the C. Urmi dialect. His grammar is prescriptive and is written in literary Urmi. It contains extracts from literary texts, including poetry. Rosenberg (1903) produced a short grammar, in German, with extracts from texts printed by the Protestant press and missionary correspondence supplied to him by B.W. Labaree, who worked in the American mission. These extracts in Syriac script are supplied with a transliteration into Hebrew characters and a German translation. The Hebrew transliteration corresponds to the Syriac orthography. The book also contains a list of phrases used for curses and the expression of condolence. Another pedagogical grammar was published by Mooshie (1912), who was the first editor the Assyrian literary journal *Kokbā*. This is written in literary Urmi and is similar in format to the grammar of Audo. More recent pedagogical grammars of the literary language written in literary Urmi are those of Simono (1974, 1994), Simono and Binyamin (1981), Dinkha (1984), William Sarmas (n.d.) and Bet-Zayya (2008). We should also mention an unpublished manuscript of a grammar by William Daniel (d. 1988) entitled *Turaş-Mamla d-Lišana 'Aturaya Xata* ('Grammar of the new Assyrian language').<sup>12</sup>

---

<sup>12</sup> For this and also an analysis of the literary language used by William Daniel himself see Lamassu (2014).

Kampffmeyer (1905) published a collection of proverbs in C. Urmi which he collected from Assyrians who visited Berlin. The proverbs are written in Syriac script and also in roman transcription. The transcription is problematic in some respects, in particular in its lack of representation of suprasegmental emphasis. The publication contains linguistic comments, mainly on pronunciation.

In 1909 the Russian orthodox mission in Urmi published a Russian—C. Urmi dictionary (*Russko-Sirskiy Leksikon*) by Archmandrite Sargs intended for the use of Assyrian students of Russian. The C. Urmi words are written in Syriac script.

A short but excellent transcription of a C. Urmi folktale into IPA symbols was published by Osipoff (1913). This scholar was an Assyrian from Georgia who had contact with the British phonetician Daniel Jones (Polotsky 1961, 3).

Schahbaz, a native speaker of C. Urmi, published a number of folktales and proverbs in the dialect in Syriac script with a Latin transcription and German translation (Schahbaz 1919). Bergsträsser wrote a short sketch of the C. Urmi dialect in his *Einführung in die semitischen Sprachen* (1928, 89–96) and included one of the texts published by Schahbaz as a sample. The transcription of Schahbaz is not fully satisfactory. In particular it fails to indicate suprasegmental emphasis and this phonological inaccuracy continues in the work of Bergsträsser.

Linguistic studies were published in the 1930s by the Soviet Assyrian scholars who were among the creators of the Latin-based New Alphabet. A grammar of this form of literary C. Urmi was published by Marogulov (1935), which was translated into French by Kapeliuk (Marogulov 1976). The grammar was designed principally as a pedagogical tool to teach adults literacy in the New Alphabet. The grammar is clearly structured with explanations of general theoretical concepts of grammar. It covers phonology, orthography, morphology, syntax and also punctuation. The section on phonology, which is based on phonemic principles, is an advance on previous treatments of the topic and includes a systematic treatment of the phenomenon of suprasegmental emphasis. The grammar, however, is concerned primarily with the standardized form of the literary language in the New Alphabet and so cannot be taken to be a direct reflection of the spoken vernacular in all respects. It includes various literary forms and neologisms based on Syriac morphology, such as adverbs in *-əit* (i.e. *-ā̄t̄*), e.g. *stunəit̄* ‘fundamentally’, and derivatives of verbs with *t* affixes, e.g. *m̄taxlana* ‘edible’, and ordinal numerals such as *tl̄jtaj̄ə*. A shorter version of the grammar was published in the following year for school children (Marogulov 1936).

Yushmanov, one of the scholars who were involved in the creation of the New Alphabet, made a number of contributions to the research of the C. Urmi dialect. These include an article on general issues (1933), and studies on the /m/ in imperative forms (1935) and on suprasegmental emphasis ('synharmonism') (1938).

Some of the New Alphabet texts were republished by western scholars with a linguistic analysis. Friedrich (1960; 1962; 1963) published a number of pieces of literature that were sent to him from the Caucasus in 1942 and provides a linguistic sketch. E. Cerulli gathered material on the C. Urmi dialect when he was Italian ambassador in Iran from 1950 to 1954. This included several samples of texts in the New Alphabet that were published in the Soviet Union. In addition to copying the texts, he had them read aloud by Assyrian informants from the Urmi region and made a transcription of the reading. These texts together with linguistic comments and a glossary, but not the transcriptions, were published posthumously by Pennacchietti and Tosco (1991).

A series of important linguistic studies of the literary language of the texts written in the New Alphabet have been published by H.J. Polotsky<sup>13</sup> and O. Kapeliuk.<sup>14</sup> These concern, in particular, aspects of syntax. Some of these studies include also consideration of the texts published by the missionary presses. In a number of Kapeliuk's publications attention has been directed to the relationship of the language of the New Alphabet translations to the original source language<sup>15</sup> and also linguistic features arising from the contact of the C. Urmi dialect with other languages.<sup>16</sup>

When in Iran in the 1950s Cerulli also gathered collections of folktales written in Syriac script, which he had read aloud and transcribed phonetically. He also made transcriptions of folktales and phrases taken down directly from informants without the intermediary of a written text. These texts and transcriptions were published with a glossary prepared by Pennacchietti (Cerulli

<sup>13</sup> Polotsky (1961) researches the background of the New Alphabet in detail and the phonology it represents, together with short studies of a number of grammatical features. Subsequent publications are concerned in particular with verbal syntax (Polotsky 1962; 1979; 1984; 1991; 1994; 1996). On his death in 1991 Polotsky left a number of pieces of research on C. Urmi unfinished. In particular he had prepared a preliminary draft of a major work on the verb in C. Urmi based on literary texts. O. Kapeliuk has published some material from this, e.g. Kapeliuk (2005; 2015).

<sup>14</sup> These include Kapeliuk (1992; 1996a; 1996b; 2002; 2004; 2005; 2006; 2007; 2008; 2012; 2013; 2015). Many of these appear in a volume of selected papers (Kapeliuk 2009).

<sup>15</sup> Kapeliuk (2006).

<sup>16</sup> See in particular Kapeliuk (1996a; 2004; 2013).

and Pennacchietti 1971). Cerulli's transcription system is problematic in a number of ways, in particular since it does not systematically mark suprasegmental emphasis. Further editions of literary texts in the C. Urmi dialect were published in the *Neusyrische Chrestomathie* by Macuch and Panoussi (1974).

A milestone in Neo-Aramaic lexicography is Oraham's *Dictionary of the Stabilized and Enriched Assyrian Language and English* (1943). In the introduction Oraham explains that the rather curious term 'stabilized' in the title refers to the fact that the language of the dictionary 'is practically the same as when Christ and his disciples used it.' The term 'enriched' refers to the fact that it contains 'many new technical words and terms, which have been inserted to keep this book abreast of the times.' The author was a native speaker of the C. Urmi dialect. He was born in the Urmi region in 1898. The core of the entries of the dictionary is, therefore, from the C. Urmi dialect. These have been supplemented, however, not only with many neologisms, often, it seems, created by Oraham himself, but also words from other Neo-Aramaic dialects. As a result a large number of the words occurring in the dictionary are not used today in the spoken form of C. Urmi. It does, however, contain a number of genuine C. Urmi vernacular words that do not occur in the dictionaries of Maclean or Kalashev. Each entry in Oraham's dictionary is accompanied by a transcription into Latin characters, which reflects to some extent the distinction between front and back vowels and so indicates words with suprasegmental emphasis (Polotsky 1961, 9–10). The gender of nouns is not indicated in the entries.

A number of other glossaries and dictionaries of the Urmi literary language were published by other Assyrian scholars in the twentieth century. These include the Persian–Assyrian dictionary of William Sarmas (2 vols., 1969, 1980), the short glossary of his brother Pira Sarmas (1965), the English–Assyrian–Arabic dictionary of Shamun (n.d.) and the Russian–Assyrian dictionary of Shoumanov (1993), which contains a selection of 8,000 of what are judged to be the most frequently occurring words.

Yaure, a native C. Urmi-speaker, published a poem extracted from the Assyrian literary journal *Kokbā*, published in 1909, and transcribed it into Latin characters with linguistic notes (1957). The transcription is not an accurate representation of the phonology of the spoken language and, like many previous transcriptions, does not represent suprasegmental emphasis.

The Georgian scholar Konstantin Tsereteli made numerous scholarly contributions to the study of Neo-Aramaic, especially of the dialects spoken in Georgia. Many of his publications relate to the C. Urmi dialect. The most important of these include a grammar (Tsereteli 1964), which was published also in an Italian (1970b), English (1978b) and German (1978a) version, a corpora of transcribed texts in the C. Urmi dialect (Tsereteli 1960; 1965) and a chrestomathy of

literary C. Urmi texts in Syriac script with a glossary that includes a transcription (Tsereteli 1958). In addition he published numerous articles dealing with aspects of the C. Urmi dialect (many of which are published in the collected volume Tsereteli 2001). The grammar has as its core a description of the C. Urmi dialect as standardized in the literary form of the language, including an introduction on the orthography. It also contains comparative remarks about other dialects. The chrestomathy represents the language in the conventional Syriac orthography. It is not clear to what extent his grammatical description is a faithful reflection of the form of the dialect spoken in Georgia, in particular that of the village of Canda where most of the C. Urmi-speakers live. My own fieldwork in Canda has revealed linguistic features deviating from those of standard literary Urmi that are not documented by Tsereteli. The collections of transcribed texts, which were gathered mainly from C. Urmi speakers in the village of Canda (Tsereteli 1960; 1965), by contrast, do reflect some of the distinctive features of the Georgian variety of C. Urmi, such as the 3pl. L-suffix *-le* rather than the form *-lun*, which is found in other varieties of spoken C. Urmi and also the literary language.

The analysis of the language presented by Tsereteli is problematic in some respects. This applies in particular to his analysis of the phonology of the language and the narrow transcription system that he uses to reflect this analysis. He proposed that the dialect contained three timbres, ‘hard’, ‘medium’ and ‘soft’, the former two corresponding to two degrees of emphasis. He presented this analysis in a series of publications in addition to his grammar (e.g. Tsereteli 1961; 1982). My own research has convinced me that Tsereteli’s analysis is not tenable (see §1.5.3.). Tsereteli has, however, without doubt made a major contribution to the scholarly study and documentation of C. Urmi, in particular in his publication of dialectal texts. These texts are a valuable resource. They have been used, for example, by Tomal (2008, 111–202) as a source for the study of the C. Urmi verbal system.

Hetzron (1969) published an excellent study of the morphology of the verb in C. Urmi based on data gathered from a native speaker. This includes an introductory section on the phonology of the dialect. Since the source for this study was a single speaker, it inevitably reflects a single variety of spoken C. Urmi and some of the features described, especially in the phonology, are not found in all varieties of the dialect.

E. Odisho’s book *The Sound System of Modern Assyrian* (1988) is a study of the phonology of the koine dialect that developed among Assyrians in Iraq after the First World War. The main core of this koine is the C. Urmi dialect, though it exhibits a number of differences from C. Urmi on all levels of grammar due to mixing with other dialects. The phonetic analysis of the koine

by Odisho using instrumental techniques casts much light on the phonology of the C. Urmī dialect in Iran.

H. Murre-van den Berg's study of the formation of the literary form of C. Urmī contains excellent linguistic studies of the literary language, with particular attention to the phonology reflected by the orthography and the syntax of the clause (Murre-van den Berg 1999, 123–188, 219–348). The syntactic analysis, which is a detailed study of the ordering of clausal constituents within a functionalist framework, makes a particularly impressive advance in research.

H. Younansardaroud published a study of the variety of C. Urmī spoken in the village of Sardarid on the southern Urmī plain (Younansardaroud 2001). This contains a description of the phonology and morphology of the dialect as well as a short sketch of syntax and a small corpus of transcribed texts. This was a valuable contribution to research since it offered for the first time systematic data on a variety of the dialect spoken on the southern Urmī plain. In particular it drew attention to palatalization processes of dorsal plosive consonants that had not been previously documented. An unfortunate feature of the grammar, however, is the fact that Younansardaroud adopts Tsereteli's problematic analysis of suprasegmental emphasis, with three degrees or timbres. This results in a highly cumbersome transcription system.

#### 0.4 Aim of This Work

The foregoing survey of previous scholarly literature shows that the C. Urmī dialect is by no means *terra incognita* among researchers of Neo-Aramaic. Despite the large amount of previous scholarship, however, there is still a need for a systematic description of the spoken form of the dialect taking account of its different varieties. The aim of the present work is to address this need. The documentation of the dialect published here is based on data that I collected in my own fieldwork. My first objective was to re-examine the phonology of the dialect, using instrumental measurements, and develop a new transcription system. An accurate understanding of the phonology and prosody of the dialect is also important for the understanding of many aspects of morphophonology, morphology and syntax. The work also has the aim of presenting a systematic description of the syntax of the dialect. In order to achieve this it was necessary to undertake the painstaking task of creating a large corpus of transcribed texts, presented in my own transcription system, which takes account of prosodic structure. None of the hitherto published corpora of texts was suitable for this purpose, due the unsatisfactory transcription systems and the lack of information on prosody. An attempt was made to make a systematic documentation

also of the lexicon. This includes lexical items relating to the traditional life and material culture of the villages. This aspect of the lexicon is now in particular danger of falling into oblivion due to the displacement of populations from the villages and their mixing together in towns.

The object of study is the state of the dialect as it is still spoken today by the older generation of speakers. This has changed in several respects from the spoken language that was the object of study by scholars in the 19th and early 20th centuries. This applies to several grammatical features and also to the lexicon. One case of change, for example, is the restriction of the root '-z-l' to go' to the present template of the verb, viz. *'azəl*, in all varieties of the current state of the dialect, it being replaced by a suppletive lexical root in other inflections (§ 4.14.1.). In sources published in the 19th and early 20th centuries, however, examples of the root '-z-l' in a wider range of inflections are found, e.g. the progressive form *bizaləva* 'was/were going' (Socin 1882, 60–61; Kalashev 1894a, 38—transcription normalized), Lekə *bizəlivit?* 'Where are you going?' (New Alphabet text Pennacchietti and Tosco 1991, 42).

It became clear in the early stages of the work that the spoken C. Urmi dialect contains numerous regional varieties, which are still distinguishable despite the levelling force of the mixing together of displaced village communities over the last hundred years. Several previous studies of the spoken language, such as those of Hetzron (1969) and Younansardaroud (2001), reflect only one particular variety of the C. Urmi dialect. In the present work an attempt was made to gather data from fieldwork among speakers of a range of different varieties of the dialect.

Despite the fact that this work has grown to a considerable size, it is limited in its scope by the limits of the corpus and the fieldwork. It cannot pretend, therefore, to be a completely comprehensive documentation of the current state of the language. The limits of the modern spoken language, moreover, are constantly shifting, especially as the speakers of the older generation who were brought up in the villages gradually pass away. This project, furthermore, is essentially one of synchronic documentation and no systematic attempt has been made to compare features of the current state of the dialect with descriptions and records of the dialect from earlier periods. Likewise the work does not include a systematic comparison of the dialect with other dialects of Neo-Aramaic or a detailed examination of the historical background of features of the dialect with earlier forms of Aramaic. This task will be undertaken in a separate comparative volume on the NENA dialects, which I am currently preparing. A desideratum for the future would be to collate the data presented here with the abundant data recorded in previous research, texts and dictionaries on C. Urmi in the 19th and early 20th centuries.

### 0.5 The Position of C. Urmi within the Neo-Aramaic Dialects

*Map of the NENA dialect area*

C. Urmi is located on the north-eastern periphery of the diverse subgroup of Neo-Aramaic known as North-Eastern Neo-Aramaic (NENA).<sup>17</sup> This subgroup consisted of over 150 dialects. Until the far-reaching displacement of communities in the 20th century, the NENA dialects were spoken by Christians and Jews in towns and villages east of the River Tigris in northern Iraq, south-eastern Turkey and western Iran. The NENA subgroup is distinct from three other subgroups of Neo-Aramaic. These include the western subgroup spoken by Christians and Muslims in the villages of Ma'lula, Bax'a and Jub'adin in the region of Damascus, the Turoyo subgroup, spoken by Christians in the Tūr 'Abdīn region of south-eastern Turkey, and Mandaic, spoken by Mandaeans in the cities of Ahwaz and Kermanshahr in Iran. None of these subgroups is as diverse as NENA (Khan 2007; 2011). Although Classical Syriac formed part of the religious heritage of the Assyrian Christian community of Urmi,

<sup>17</sup> The term was coined by Hoberman (1988, 557) to replace 'Eastern Neo-Aramaic' of earlier classifications (cf. Socin 1882, v; Duval 1896, 125; Tsereteli 1977; 1978b).

C. Urmi and the other NENA dialects are not its direct linear descendants. The NENA dialects are descendants of an ancient vernacular spoken in northern Mesopotamia, which cannot be identified with any earlier surviving literary form of Aramaic. The modern dialects preserve ancient features that are not found in the varieties of literary Aramaic (Nöldeke 1868, xxxv), some of which are developmentally more archaic (Maclean 1895, xv; Khan 2007). The typological profile of this ancient vernacular lay somewhere between that of Classical Syriac and Jewish Babylonian Aramaic (Nöldeke 1868, xxxvii–xxxviii; Fox 2008).

The NENA dialects differed according to geographical region and also according to religious community, in that the dialects spoken by the Jews were different from those of the Christians even in the same geographical locations. The study presented here of the position of C. Urmi within NENA, therefore, will examine first its relationship to other Christian NENA dialects and subsequently consider its relationship to the Jewish dialect of the area. Christian dialects are distinguished from Jewish dialects by the abbreviation C. and J. respectively.

Before the major population displacements of the 20th century, other NENA dialects were spoken by Christian communities in north-western Iran. These neighbouring dialects can divided into two main groups: (i) the dialects of the region of Salamas and the villages of Gawilan and Jamalawa lying to the north of the Urmi plain (henceforth referred to as the Salamas group), and (ii) the dialects in the mountains and mountain foothills lying to the west of the Urmi plain in the Tergawar and Margawar regions, including, for example, the villages of <sup>+</sup>Mawana, <sup>+</sup>Balulan, Darband, Kalla, Tazacand. An exceptional case is the village of Anhar near the mountain foothills on the west of the Urmi plain, which was settled by Assyrians from the Tyare district of south-eastern Turkey (Maclean 1895, xiv). As a result, the dialect of this village exhibited a mixture of Tyare and Urmi features. There were no dialects of Christian Neo-Aramaic spoken immediately to the south of the Urmi plain. Christian communities in this area in the 20th century, e.g. in the town Solduz (Naqade), are reported to have spoken Azeri Turkish as their first language.

These neighbouring dialects share many innovative linguistic developments with C. Urmi. Such shared innovations in development from an earlier state of the dialect group can be interpreted as reflecting a relationship, as is the accepted methodology in linguistic classification.

Some of the phonological innovations of C. Urmi are more advanced in their development in the Salamas group of dialects. In C. Urmi, for example, an *\*a* is raised in a few nouns to /i/ when it was originally in a closed syllable, e.g.

- cíca* ‘tooth’ < \**kakkā*  
*+míra* ‘spade’ < \**marra*

In the Salamas group this raising has taken place more systematically than in C. Urmî across words of all grammatical categories, including adjectives, verbs and adverbs. In the dialects of Gawilan and Jamalawa, which are the closest geographically to C. Urmî in the Salamas group, the development is slightly less systematic than in the dialect of Salamas further north:

	C. Urmi	C. Gawilan	C. Salamas
‘bride’	<i>cálu</i>	<i>cílu</i>	<i>cílu</i>
‘pleasant’	<i>basíma</i>	<i>bísíma</i>	<i>bísíma</i>
‘he sends’	<sup>+</sup> <i>sádər</i>	<sup>+</sup> <i>šádər</i>	<sup>+</sup> <i>šídər</i>
‘send!’	<sup>+</sup> <i>sádər</i>	<sup>+</sup> <i>šíðər</i>	<sup>+</sup> <i>šídər</i>
‘much’	<sup>+</sup> <i>raba</i>	<i>ríba</i>	<i>ríba</i>
‘back’	<sup>+</sup> <i>xasa</i>	<sup>+</sup> <i>xasa</i>	<sup>+</sup> <i>xasa</i>

In C. Urmî an intervocalic /t/ is optionally omitted in plural inflections and some prepositional phrases, e.g.

- baxtátə* ~ *baxtáy* ‘women’  
*kátux* ~ *káx* ‘to you’

In the Salamas group intervocalic /t/ is elided more systematically, but still not totally regularly, e.g.

	C. Urmi	C. Gawilan	C. Salamas
‘house’	<i>béta</i>	<i>býa</i>	<i>býa</i>
‘village’	<i>máta</i>	<i>ma</i>	<i>ma</i>
‘mother-in-law’	<i>xmáta</i>	<i>xma</i>	<i>xma</i>
‘redness’	<i>smukúyta</i>	<i>smukúvva</i>	<i>smukúvva</i>
‘sister’	<i>xáta</i>	<i>xáta</i>	<i>xáta</i>

The processes of the raising of /a/ and the elision of /t/ are even more advanced in dialects spoken in eastern Turkey. Examples below are from Sat, where the raising is to /e/ (Mutzafi 2008a), and Van:

	Salamas/Gawilan	Sat
‘back’	<sup>+</sup> <i>xasa</i>	<sup>+</sup> <i>xesa</i>

	<b>Salamas/Gawilan</b>	<b>Van</b>
'sister'	<i>xata</i>	<i>xa</i>

In the dialects in the mountains to the west of the Urmi plain, on the other hand, the aforementioned processes have, in general, not taken place, e.g.

	<b>C. Urmi</b>	<b>+Mawana</b>
'women'	<i>baxtátə/baxtáy</i>	<i>baxtátə</i>
'tooth'	<i>cíca</i>	<i>cáca</i>
'spade'	<i>+míra</i>	<i>+mára</i>

In C. Urmi long /u/ has become diphthongized to /uy/, whereas in the Salamas group this process is more advanced in that the palatal approximant /y/ offglide has become strengthened to a velar fricative:

	<b>C. Urmi</b>	<b>C. Gawilan</b>	<b>C. Salamas</b>
* <i>xabbūša</i> 'apple'	<i>xabúyša</i>	<i>xibúxša</i>	<i>xibúxša</i>

In the mountain dialects to the west of the Urmi plain, the diphthongization has not taken place, but rather the vowel has developed into a fronted monophthong:

	<b>C. Urmi</b>	<b>+Mawana</b>
'apple'	<i>xabúyša</i>	<i>xabúša</i>

A phonological innovation that C. Urmi shares with the Salamas group of dialects, the dialects of the mountains west of the Urmi plain and also many of the dialects of eastern Turkey is the phenomenon of the development of suprasegmental pharyngalization (§1.3.), transcribed with the symbol +, in words with an original emphatic segment:

	<b>C. Urmi</b>	<b>C. Salamas</b>	<b>C. +Mawana</b>	<b>C. Van</b>
* <i>tīnā</i> 'mud'	<i>+tīna</i>	<i>+tīna</i>	<i>+tīna</i>	<i>+tīna</i>

This feature is absent in some dialects in northeastern Iraq, such as C. Diyana-Zariyaw, in which the pharyngalization of the historical emphatic consonants \**t* and \**s* is totally lost in some words (Napiorkowska 2015, 45–56), e.g.

C. Urmi	C. Diyana-Zariyaww
*saydā 'hunt'	+séda séda
*hatṭē 'wheat'	+xáttə xáttə

A feature that C. Urmi shares with all dialects in Iran and most dialects in eastern Turkey and northeastern Iraq is the loss of the interdental consonants \*θ and \*ð. In north-western Iran and eastern Turkey \*θ has shifted to the stop /t/ or been elided, and \*ð has shifted to the stop /d/.

C. Urmi	C. Salamas	C. Van
*hāθā 'sister'	xáta	xáta
*iðā 'hand'	'ída	'ída

In most dialects in north-eastern Iraq the interdentals shift to either the stops /t/ and /d/ or to the fricatives /s/ and /z/, or to /s/ and /d/, whereas they have been widely preserved in dialects in north-western Iraq, e.g.

	*hāθā 'sister'	*iðā 'hand'
C. Urmi	xáta	'ída
C. Bədyəl (NE Iraq)	xáta	'ída
C. Xərpə (NE Iraq)	xásə	'íza
C. Sulemaniyya (NE Iraq)	xásə	'ída
C. Barwar (NW Iraq)	xáθa	'iða

In morphology C. Urmi is distinguished from the Salamas group and the dialects of the neighbouring mountains (examples below are from C. Tazacand) in some of the pronominal suffixes, viz.

	C. Urmi	C. Salamas	C. Tazacand
3ms genitive suffix:	-u	-u	-θ
3pl. genitive suffix	-é	-é	-u
3pl. L-suffix:	-lun	-le	-lu

The 3ms -u can be regarded as an innovative development whereas the 3ms suffix -θ is more conservative, being a reflex of an original \*eh. The -θ has been preserved in C. Urmi in the 3ms L-suffix -lə. The suffix -u has developed from the combination of -e with -u. Other Christian dialects that have -u or an uncontracted form such as -ew, are mainly situated in north-eastern and north-western peripheries of the NENA area in eastern Turkey. In Iraq most dialects have a reflex of \*-eh without the -u augment. The lack of an augment is a feature also of conservative non-peripheral dialects in eastern Turkey:

*\*-eh*

C. Urmi	-u
C. Qočanəş (SE Turkey)	-u
C. Bēşpən (SE Turkey)	-u
C. Sat (SE Turkey)	-ew
C. Bāz (SE Turkey)	-əv, -əf
C. Bohtan (SE Turkey)	-əw
C. Barwar (N Iraq)	-e
C. Telkepe (N Iraq)	-e
C. Walṭo (SE Turkey)	-e
C. Ankawa (N Iraq)	-eh
C. Qaraqosh (N Iraq)	-əh

In the field of syntax one innovative feature can be mentioned that shows the relationship of C. Urmi to other Christian dialects. This is the formation of the progressive by means of the copula and an infinitive combined with the locative preposition *b-*, e.g. *bəptaxələ* 'he is opening' (< \**b* + *ptaxə* + *ilə*). This feature is found in the Salamas group and mountain group adjacent to the Urmi plain. It is also found across south-eastern Turkey up to the Cudi region (example below from Bēşpən) and in some dialects in northern Iraq, mainly in the far north close to the Turkish border (example below from Barwar). In some cases the preposition *b-* has been omitted:

C. Urmi (NW Iran)	<i>bəptáxələ</i>
C. Salamas (NW Iran)	<i>bəptáxələ</i>
C. +Mawana (NW Iran)	<i>bəptáxələ</i>
C. Van (SE Turkey)	<i>bəptáxəl</i>
C. Bēşpən (SE Turkey)	<i>bəptáxele</i>
C. Barwar (N Iraq)	<i>pəráxele</i>

In many dialects of north-east Iraq and along the southern periphery of the NENA area in Iraq the progressive is, by contrast, expressed by constructions containing the present stem of the verb, e.g.

C. Bədyəl	<i>ma-k-pátəx</i>
C. Sulemaniyya	<i>pátəx-ile</i>
C. Koy Sanjak	<i>lā k-pátəx</i>
C. Shōsh-u-Sharmen	<i>nə-k-pátəx</i>
C. Ankawa	<i>də-k-pátəx</i>
C. Qaraqosh	<i>k-ílə k-pátəx</i>

It emerges from this brief sketch of the linguistic innovations of C. Urmi that it is most closely related to dialects of the Salamas group. Within NENA as a whole it is related more closely to the dialects of the adjacent mountains and the mountains of eastern Turkey, corresponding broadly to what Maclean (1895, xiii; 1901, ix–x) classified as the ‘Northern Group’ of dialects, than to the dialects further west in Turkey, classified by Maclean as the ‘Ashirat Group’, and the dialects of Iraq, classified by Maclean as the ‘Southern Group’. The original heartland of NENA was in Iraq, as is shown by the greater diversity of the dialects there, so the general profile of C. Urmi can be regarded as the result of innovative developments on the north-eastern periphery of NENA.

## 0.6 Varieties of the C. Urmi Dialect

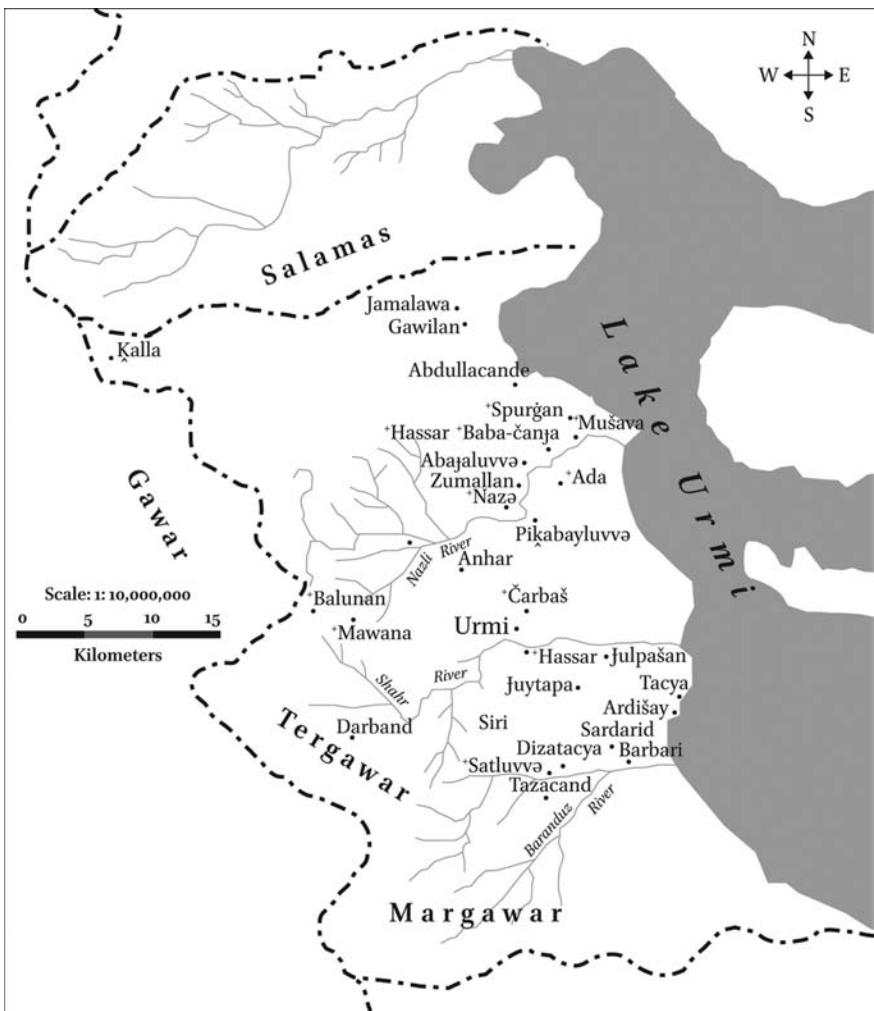

The fieldwork that forms the basis of this book was carried out among speakers of the C. Urmi dialect from Iran and the Caucasus. The C. Urmi dialect exhibits regional variations. These can be broadly classified into (i) the varieties used in the villages south of the town of Urmi (referred to by the abbreviation S), (ii) the varieties used in the villages north of the town of Urmi, including Tabriz (referred to by the abbreviation N), (iii) the varieties spoken in Armenia (referred to by the abbreviation Arm.) and (iv) the variety spoken in Georgia (referred to by the abbreviation Georg.). There are some variations within these four broad groups. There are, for example, some small variations across different villages within the southern and the northern regions of Urmi respectively. Speakers from Tabriz, moreover, exhibit a few distinctive features. In Armenia the variety spoken in the village of Arzni has some features that distinguish it from varieties spoken in other villages of Armenia.

In the Urmi region in Iran most speakers of the dialect originally lived in the many villages of the Urmi plain, but due to the displacement of the village population in the various traumatic upheavals over the last hundred years, the majority of the speakers left their villages and mixed together in Urmi and other large Iranian towns, or in diaspora communities across the world. As a result, the distinctive linguistic features of the individual villages have now been considerably levelled and blurred. It is, nevertheless, still possible to reconstruct the main differences by extensive fieldwork among the older generation of speakers.

After the First World War many speakers of the C. Urmi dialect were settled in refugee communities in Iraq, mainly in Baghdad and Kirkuk, where they had contact with speakers of other NENA dialects. As a result they came to speak a koine dialect which exhibited various deviations from the dialect spoken in

Iran and the Caucasus, mainly due to the influence of other dialects. This koine dialect is not included among the varieties covered by this work.

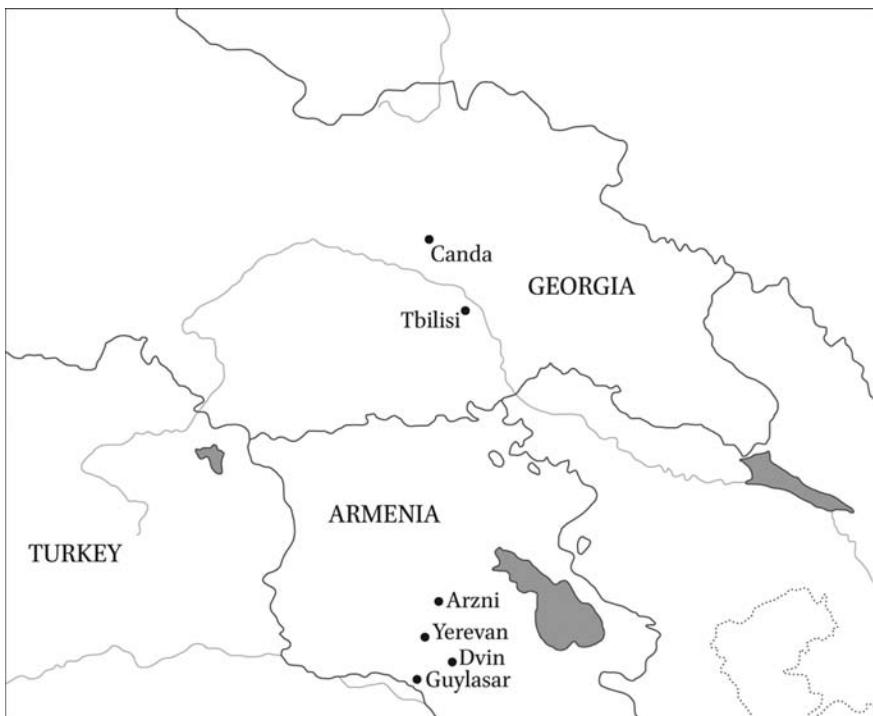

A number of features that distinguish the varieties of C. Urmi spoken in the northern area of the Urmi plain from those in the southern area are shared by the dialects of the Salamas group. The variety of C. Urmi spoken in the village of Canda in Georgia shares more features with the Salamas group than any other C. Urmi variety. The shared features with the Salamas group are of a lesser extent in the varieties spoken in Armenia. According to the community in Canda the core of the settlers in the village in the 19th century originated in the village of <sup>+</sup>Nazə in the northern region of the Urmi plain. Speakers of C. Urmi who grew up in <sup>+</sup>Nazə in the 20th century and were interviewed as part of this documentation project do not have so many shared features with Salamas in their speech as were found in the speech of the inhabitants of Canda. It is likely, therefore, that the variety spoken in Canda has resulted from mixing of the community with speakers from the Salamas region. Indeed many speakers of the C. Salamas dialect settled in Georgia and can still be found in Tbilisi. One should take into account, however, that there was a degree of levelling of the varieties spoken on the Urmi plain over the last one hundred years. This is shown by descriptions given by Maclean (1895, xiii; 1901, ix) at the beginning of the 20th century of the language situation on the Urmi plain. He classifies, for example, the dialect of <sup>+</sup>Spurğān in the northern area of the Urmi plain as a separate dialect from the Urmi dialect, which was influenced by the Salamas group of dialects, and in his grammar indicates several differences between the <sup>+</sup>Spurğān dialect and C. Urmi. This is also confirmed by Yohannan (1900, xii) and Audo in the introduction to the first edition of his grammar of the literary language, which was published in 1905 (see Audo 1911, ii). At the southern end of the Urmi plain Maclean (1901, ix) notes that inhabitants of the village of Barbari extensively code-switched between NENA and Azeri. Yohannan (1900, xiii) and Audo (1911, ii) likewise note that in the southern villages in the region of the Baranduz river more Turkish was used than in the north. According to Yohannan (1900, xiii) the inhabitants of the villages of Tacya and Ardişay in the southern plain had a tendency to raise low vowels in their pronunciation, e.g. bəbi (according to his transcription) for *babi* 'my father'. Speakers from <sup>+</sup>Spurğān who were interviewed for this project did not exhibit anything in their speech that distinguished it clearly from other northern varieties of the dialect. Speakers originating from Barbari and villages on the Baranduz River, moreover, now do not practice the code-switching that is attributed to their ancestors. The Assyrians who were resident in the southern villages in the middle of the twentieth century were, however, considerably exposed to Azeri and used to recite Azeri oral litera-

*Map of Assyrian villages in the Urmi region*

ture (Younansardaroud 2001, xix). Furthermore the vowel raising mentioned by Yohannan was not found in the pronunciation of present-day speakers originating from Ardišay.

The features distinguishing the C. Urmi varieties in the southern and northern regions of the Urmi plain find some parallels in the dialects spoken in the southern and northern region respectively of the mountains lying to the west of the Urmi plain. These correspondences, however, are not as consistent as the correspondences between the northern Urmi variety and dialects of the Salamas group.

*Map of Assyrian villages in the Caucasus*

Informants originating from the following places were interviewed. A star (\*) indicates that a transcription of recordings of speakers from the place is included in the text corpus.

Ardišay (S)

Barbari (S)\*

+Čarpaš (S)

Julpašan (S)\*

+Satluvvə (S)

Siri (S)

Dizatacyā (S)

Abajaluvvə (N)

Abdullacande (N)

+Ada (N)

+Hassar +Baba-čanja (N)\*

Zumallan (N)\*

+Mušava (N)\*

<sup>+</sup>Nazə (N)  
 Piğabayluvvə (N)  
<sup>+</sup>Spurğān (N)\*

Tabriz (N)

Guylasar (Armenia)\*  
 Arzni (Armenia)\*  
 Dvin (Armenia)  
 Canda (Georgia)\*

There are differences across the varieties of C. Urmi in all levels of grammar and in the lexicon. Some salient examples of differences that distinguish the broad sub-groups mentioned above are given below. These are dealt with in greater detail in the appropriate place in the ensuing chapters.

### *Phonology*

1. In the dialects of the southern region of the Urmi plain there is a process of fronting of the palatal consonants, with the result that they are realized as affricates. This fronting has not taken place in the speech of many people originating from the northern region. The dialects in the Salamas group spoken further north also lack the affricated realization. The fronting of palatal consonants is found consistently in the mountain dialects adjacent to the southern Urmi region, such as Tazacand. In mountain dialects spoken further north, such as <sup>+</sup>Mawana, it occurs but is less consistent:

	<i>cipa</i> 'stone'	<i>fóšra</i> 'bridge'
S Urmi	[t̪ʰi:pʰa]	[dʒifra]
N Urmi	[cʰi:pʰa]	[ʃifra]
Salamas	[cʰi:pʰa]	[ʃifra]
Tazacand	[t̪ʰi:pʰa]	[dʒifra]
<sup>+</sup> Mawana	[t̪ʰi:pʰa]	[ʃifra]

By a push-chain effect the palatal affricates /č/ (unvoiced aspirated), /č/ (unvoiced unaspirated) and /j/ (voiced) are sometimes fronted further to [ts<sup>h</sup>], [ts] and [dʒ] respectively in the southern varieties of C. Urmi but remain unfronted in the north and in Salamas. The southern mountain dialects such as Tazacand exhibit this fronting, but not the northern mountain dialects such as <sup>+</sup>Mawana:

	<i>xáčča</i> 'few'	<i>+jummíla</i> 'he gathered'	<i>jummíla</i> 'he gathered'
S. Urmi	[ <i>'xatstsa</i> ]	[ <i>‘dzv̥oṁ'mi:lə</i> ]	
N. Urmi	[ <i>'xatſſa</i> ]	[ <i>‘dʒv̥oṁ'mi:lə</i> ]	
Salamas	[ <i>'xatſſa</i> ]	[ <i>‘dʒv̥oṁ'mi:lə</i> ]	
Tazacand	[ <i>'xatstsa</i> ]		[ <i>dzv̥om'mi:lə</i> ]
+Mawana	[ <i>'xatſſa</i> ]		[ <i>dʒv̥om'mi:lə</i> ]

Affrication of the palatals /c/ and /j/ has taken place in the varieties of C. Urmi spoken in Armenia and Georgia. In most villages in the Caucasus /č/, /č/ and /j/ are realized as [tʃʰ], [tʃ] and [dʒ] respectively, except in the village of Arzni in Armenia, where they are fronted as in the southern variety on the Urmi plain:

	<i>cípa</i>	<i>jéšra</i>	<i>xáčča</i>	<i>+jummíla</i>
Canda (Georgia)	[ <i>tʃʰi:pʰa</i> ]	[ <i>‘dʒiʃra</i> ]	[ <i>'xatſſa</i> ]	[ <i>‘dʒv̥oṁ'mi:lə</i> ]
Guylasar (Armenia)	[ <i>tʃʰi:pʰa</i> ]	[ <i>‘dʒiʃra</i> ]	[ <i>'xatſſa</i> ]	[ <i>‘dʒv̥oṁ'mi:lə</i> ]
Arzni (Georgia)	[ <i>tʃʰi:pʰa</i> ]	[ <i>‘dʒiʃra</i> ]	[ <i>'xatstsa</i> ]	[ <i>‘dʒv̥oṁ'mi:lə</i> ]

## 2. Suprasegmental emphasis

There are differences in the distribution of suprasegmental emphasis (pharyngalization §1.3.) across the varieties of the dialect. Salamas generally corresponds to the northern Urmi varieties whereas the mountain dialects (examples below are from +Mawana in the northern region of the mountains) exhibit inconsistent correspondences:

	Urmi S	Urmi N	Salamas	+Mawana
'leech'	+ <i>zallu</i>	<i>zallu</i>	<i>zalluğ</i>	<i>zallu</i>
'he pulls'	+ <i>jarəš</i>	<i>jarəš</i>	<i>jarəš</i>	+ <i>jarəš</i>
'skinny'	+ <i>cílaza</i>	<i>cílaza</i>	<i>čəlləzna</i>	<i>čəllaza</i>
'butter'	<i>carra</i>	+ <i>carra</i>	+ <i>carra</i>	<i>carra</i>

## 3. Contraction of inflectional endings

In the Caucasus there is a greater tendency to contract certain inflectional endings than in the varieties spoken on the Urmi plain. This applies in particular to plural endings and the genitive annexation ending. Contractions do occasionally occur in the Urmi plain varieties, but to a lesser extent, e.g.

Caucasus	Urmi plain
<i>bnūn</i>	<i>bnúnə</i>
<i>‘akláy</i>	<i>‘akláta</i>
<i>lišán +hošára</i>	<i>lišánət +hošára</i>
	'sons'
	'legs'
	'language of the Muslims'

A pronounced tendency to contract such endings is also found in dialects spoken in eastern Turkey, such as C. Van, speakers of which also settled in the Caucasus and this may have had an impact on the C. Urmi dialect.

#### 4. Phonology of individual lexical items

Certain words of high frequency undergo a range of different phonetic developments across the varieties of the dialects. This is seen, for example, in the variant forms of the noun *mdita* 'town' and the progressive stem *bərraxša* 'going':

Most Urmi varieties:	<i>mdita</i>
Piğabayluvvə N, Armenia	<i>məndita</i>
Abdullacande N, Salamas	<i>mdəcta</i>

Most Urmi varieties	<i>bərraxša</i>
Barbari S	<i>bərrəšxa</i>
Dizatacyə S, Armenia	<i>bərrəşša</i>
Armenia	<i>bəšša</i>

#### *Morphology*

##### 1. Demonstratives pronouns

There are a few differences in the form of demonstrative pronouns between the southern Urmi group and the varieties spoken in the Caucasus. Some dialects of the northern Urmi group correspond to the varieties of the Caucasus. This applies, for example, to the plural attributive default demonstrative (§ 2.2.8.):

S. Urmi	N. Urmi	Caucasus
'those'	'an	'an ~ ēn

##### 2. Pronominal suffixes

There are some differences in pronominal suffixes across the Urmi dialectal area. In some cases dialects on the periphery exhibit convergences with other dialects.

Throughout most of the Urmi area the 3pl. L-suffix has the form *-lun*. In the variety spoken in Canda, Georgia, however, the 3pl. L-suffix is *-le*, which is the form used in the Salamas group of dialects. In the far south in the village of Siri, the suffix is *-lu*, as in the neighbouring mountain dialect of Tazacand:

## 3pl. L-suffix

Most Urmī dialects	<i>-lun</i>
Canda (Georgia), Salamas, Gawilan	<i>-le</i>
Siri S, Tazacand	<i>-lu</i>

Various pronominal suffixes can have short and long forms. The long forms are used more frequently in some varieties of the dialect than in others. Some of these differences correspond to region. This applies, for example, to the existence of the long form of the ipl. genitive suffix *-eni* 'our' in addition to the default short form *-an*. The long form is used predominantly in the varieties of the C. Urmī dialect spoken in the Caucasus and in the dialects of the Salamas group. On the Urmī plain the suffix regularly has the form *-an*.

## ipl. genitive suffix

Urmī plain	<i>-an</i>
Caucasus, Salamas	<i>-an, -eni</i>

## 3. Morphology of weak verbs

Some differences in the morphological shape of weak verbs are found across the varieties of the dialect. These sometimes have a regional correlation. In the southern Urmī region, for example, the infinitive of pattern II (historical *pa<sup>č</sup>el*) and pattern III (historical *'ap<sup>č</sup>el*) final /y/ verbs have the ending *-uya*, whereas in the northern Urmī region and the Caucasus the ending is *-uvvə*. The ending *-uvvə* is also found in the Salamas group of dialects:

Infinitives of *t-n-y* II 'speak' and *+m-mt-y* III 'to cause to arrive'

Urmī S	Urmī N, Caucasus, Salamas
<i>tanuyə</i>	<i>tanuvvə</i>
<i>+mamtuyə</i>	<i>+mamtuvvə</i>

The verb 'to bring' has two regional variants:

Urmī S	Urmī N and Caucasus
<i>maya</i>	<i>mava ~ maya</i>

Weak verbs sometimes exhibit different ordering of radicals or different radicals. These differences sometimes occur within a particular variety. In some cases the differences correspond to particular regions, e.g.

<b>Most Urmi varieties</b>	<b>Guylasar, Armenia</b>
+ <i>yasər</i>	+ <i>sayər</i>
<b>Most Urmi varieties</b>	<b>Siri S</b>
+ <i>azəl</i>	+ <i>zayəl</i>
	'he ties'
	'he spins (wool)'

## Syntax

## 1. Expression of pronominal object of past perfective verbs

There are various means of expressing the direct pronominal object of past perfective verbs (§ 4.17.). One of the alternative strategies has a regional correlation. This is a construction consisting of the particle *kam* + the present stem *patax*, which is used only in the northern region and is a feature also of the dialects of the Salamas group. In the south only constructions formed from the past base can be used:

	Urmi S	Urmi N	Salamas
'I saw her'	<i>xəzyali</i>	<i>xəzyali</i> <i>kam-xazənna</i>	<i>xəzyali</i> <i>kam-xazənna</i>

## 2. Subordinator particles

Throughout the Urmi plain and in Armenia the particle *kat*, which developed historically from a combination of *ka* 'to' + *t*, is used as a general subordinator before subordinate content clauses and relative clauses (§ 14.5.3., § 14.1.1.). This particle is not used, however, in Canda in Georgia, where one finds other subordinators such as *yanət* and *t-i* (§ 14.5.3.):

Urmi and Armenia   Georgia  
*kat*                    *yanat, t-i*

### 3. Gender agreement

There are some variations of gender that have a regional correlation. In particular in Armenia inanimate nouns that are masculine in the Urmia region are often treated as feminine (§ 5.12.6.), e.g.

- <sup>+</sup>*rəzza* n.m. (Armenia n.f.) ‘rice’  
<sup>+</sup>*xalva* n.m. (Armenia n.f.) ‘milk’

Lexicon

There are various regional differences in the lexicon. A few cases are found on the Urmi plain, e.g.

Urmi S	Urmi N
'knife'	<i>čakku</i>

The greatest difference in the lexicon is found in the village of Canda in Georgia. The variety of C. Urmi spoken in Canda contains a number of lexical items that are not found in other varieties. A few selected examples include:

<i>pučeča</i>	'stalk of maize'
<i>+čara</i>	'head of maize'
<i>čančuyra</i>	'small plums'
<i>tambuyra</i>	'large plums'

Some words in Canda have a different form from the cognate form in other varieties. The form in Canda often corresponds to the form used in the Salamas group of dialects, e.g.

Canda, Salamas	Urmi plain
<i>caraz</i>	<i>caravuz</i>
<i>penč</i>	<i>peč</i>

## 0.7 Languages in Contact

All varieties of the C. Urmi dialect have been exposed to and influenced by other languages of the region. In recent history the dialect has had particularly extensive contact with Azeri Turkish, which is reflected by numerous Azeri loanwords in the lexicon. Azeri is now the major spoken language of the Muslim population of the Urmi region in north-western Iran. Some of the loanwords of Turkic origin in the C. Urmi dialect, however, are no longer used in modern Iranian Azeri, indicating that they entered the dialect at an earlier historical period. The historical depth of the Azeri loanwords in general does not seem to be very great, since the vast majority are unadapted to the morphology of the C. Urmi dialect. This would reflect what is known about the settlement of Turkic-speaking groups in the area. The speakers of Azeri in north-western Iran today are descended from a variety of different Turkic tribes. A politically dominant group in recent history was that of the Afshar Turks. Large numbers of these were settled in the region by Nader Shah in the 18th century (Nikitine 1929). Due to this authoritative status of the Afshars, the Azeri language is sometimes referred to as the 'language of the Afshars' (*lisānat +hošarə*) by speakers of C. Urmi.

There are numerous loanwords from Persian, which is the official language of administration in the region. In some of the villages contact with Persia was a relatively recent phenomenon (Younansardaroud 2001, xix).

Russian has had some impact on the lexicon in the recent history of the dialect and some Russian loanwords can be found in the varieties of the dialects spoken on the Urmi plain. This is the result of the presence of the Russians in the region in the 19th and early 20th centuries. In the Caucasus speakers use a larger proportion of Russian words in their speech, mostly unadapted to the morphology of the dialect.

The lexicon exhibits layers of influence from also Kurdish and Arabic at earlier historical periods (§ 15.1.1.). Kurdish continues to be spoken in the Urmi region to this day. This includes both the Kurmanji and Sorani varieties, the former being spoken to the north of the town of Urmi and the latter in the region lying to the south of the town. The Arabic influence may reflect the existence of spoken Arabic in the region sometime in the past or it may be explicable by the hypothesis that there were migrations of speakers from Arabic-speaking areas in northern Mesopotamia to Iran.

Armenian is also spoken on the Urmi plain. In some cases Assyrians and Armenians lived in the same village and many Assyrians spoke Armenian in addition to C. Urmi and generally also Azeri (Younansardaroud 2001, xix). There were numerous cases of intermarriage between Assyrians and Armenians. The Armenian language has not left much trace in the C. Urmi lexicon. In the Caucasus the local languages of Armenian and Georgian have, likewise, not had much impact on the lexicon of the varieties of C. Urmi spoken there.

Contact with other languages has had an influence on other areas of the language. This is the case in particular in the phonology. The aforementioned fronting and affrication of palatal consonants is a phenomenon that has also taken place in the Azeri and Kurdish dialects of the region (§ 1.5.1.). The C. Urmi dialect has developed a series of unaspirated unvoiced stops, which has been stimulated, it seems, by Kurdish and/or Armenian in the region (§ 1.5.1.). The phenomenon of suprasegmental emphasis is the result of some degree of convergence with the vowel harmony of Azeri Turkish. Here, however, and also in other features, the convergence is only partial and not complete (§ 1.5.1.).

Some developments in morphology are most likely due to convergence with Kurdish. This applies in particular to the development of morphology associated with the annexation of one noun to another in a genitive construction (§ 5.14.). The historical genitive particle \**d* has developed into an affix of the head noun, e.g. *naša d-* > *naš-at*. Moreover demonstrative pronouns have undergone a particular morphological change whereby the genitive particle

has become bonded to the front of them creating thereby oblique forms of the pronouns, e.g. *d’o* > *do*. This mirrors the morphology of Kurdish genitive constructions whereby a marker of the genitive relation is added as a suffix to the end of a noun (*izafe*) and demonstrative pronouns in the dependent phrase are in an oblique form:

C. Urmi	<i>naš-ət</i>	<i>do</i>	<i>+atra</i>
	man-GEN	dem.OBL	country

Kurmanji	<i>mirov-ê</i>	<i>wî</i>	<i>welat-î</i>
	man-GEN	dem.OBL	country-OBL 'Man of that country'

In C. Urmi there has been a development away from a transparent application of root and pattern morphological derivation (§ 4.15.) and one stimulus for this may have been contact with Kurdish and Azeri, which have a stem and affix type of derivational morphology.

Some developments in syntax exhibit convergence with languages in contact. Some are common to all or at least many NENA dialects, such as enclitic copulas in predictions (§ 3.), ergativity in past perfective constructions (§ 4.3.5.) and the perfect constructions consisting of a resultative participle and copula (§ 4.8.1.). These are likely to have arisen by convergence with Kurdish, which is spoken across the whole NENA area.

Some developments in C. Urmi syntax are more local developments that have most likely been stimulated by contact with Azeri Turkish. These include the frequent placement of the adjective before the head noun in nominal phrases (§ 9.6.1.). This distinguishes C. Urmi from NENA dialects in Iraq, in which there is no or at least far less frequent preposing of adjectives. The fact that the canonical ordering of components of nominal phrases in Azeri is adjective—noun must have facilitated this syntactic development. Adjective preposing in C. Urmi is, however, still pragmatically marked and the unmarked position is after the noun head, so the convergence with Azeri syntax is not complete. The order of argument constituents in a clause also exhibits convergence with the verb-final syntax characteristic of Azeri and Kurdish, in which it is the norm to place the direct object before the verb. Again, however, the convergence is not complete since the preposing of objects, although frequent in C. Urmi, still performs a pragmatic function (§ 12.5.5.2.).

In verbal syntax it is noteworthy that the progressive construction formed from a stem that has developed historically from an infinitive and locative particle is of particularly frequent use in C. Urmi. This form is likely to have evolved historically under the influence of progressive constructions in Azeri, e.g.

Azeri: *al-maq-ta-yum*  
 take-INF-LOC-COP.IS  
 'I am taking'

C. Urmi *bəškal-əvən* < \**b* + *škala* + *ivən*  
 LOC + take.INF + COP.IS

In C. Urmi, however, the form has undergone further developments beyond the Azeri model. The compositionality of the progressive stem into locative particle + infinitive has now become opaque (§ 1.15.2.). Its function has, moreover, become extended beyond the expression of the progressive, which is the function of the Azeri model (Dehghani 2000, 123–124) and is now used also to express narrative events and habitual situations.

A notable feature of the C. Urmi verbal system is the use of the perfect to express not only a resultative but also an 'indirective' perfective or imperfective (Johanson 1996; 2000; 2003), used to express an event that is inferred or one that is distanced from the speaker temporally in the remote past, or, sometimes, a mirative function of expressing an event that is removed some way from the norm. This function is likely to have developed in C. Urmi due to contact with the Turkic or Iranian languages of the area at some historical period (Khan 2012). It is significant, however, that the perfect of the Azeri spoken in Iran today does not have this indirective function (Dehghani 2000, 123), so the construction must have entered C. Urmi at an earlier historical period.

The syntactic organization of the constituents of causatives of transitive verbs is parallel to that of Azeri and also Kurdish dialects of the region (§ 4.25.3.4.). The productiveness of morphological causative constructions in C. Urmi with both transitive and intransitive verbs may have been stimulated by contact with Azeri, where causatives can in principle be freely created by a verbal suffix. It is significant to note, however, that in the Azeri that is used in Iran today the morphological causative is losing ground to periphrastic causative constructions under the influence of Persian. As a result, morphological causatives of C. Urmi are now more productive than those of Iranian Azeri and the convergence with Azeri must have taken place at an earlier period.

## 0.8 Interference from the Literary Language

The written literary form of C. Urmi that is used by educated speakers today differs in a number of respects from the vernacular spoken language. As we have

seen, these differences are, in general, due to normalizations and archaisms based on literary Syriac. The literary language sometimes has an impact on the vernacular of educated speakers. Some examples of such influence in phonology, morphology, syntax and lexicon are as follows.

A distinctive feature of the phonology of C. Urmī is the shift of long *\*ū* to a diphthong with a palatal off-glide /uy/ (§ 1.12.1.). Representation of this diphthongization is systematically avoided in the orthography of the literary language in Syriac script, though the transcriptions of Socin (1882) show that the diphthong was pronounced in the spoken language in the 19th century when the orthography was developed (Murre-van den Berg 1999, 168–172), e.g. the word **ܩܼܻܻܻ** ‘heavy’ (pl.) in the version of a text written in Syriac script is transcribed by Socin (1882, 9:1) *yāquīrē*. The diphthong is also not represented in the literary texts written in the New Alphabet that were printed in the Soviet Union in the 1920s and 1930s. Some educated speakers avoid pronouncing this diphthongization in their vernacular speech due, it seems, to the influence of the normative literary language.<sup>18</sup>

As has just been remarked, progressive verbal forms have developed historically by the combination of the preposition *b-* with the infinitive. This has been preserved in the vernacular in the simplex verbal pattern I (the erstwhile *pə'äl*) but has now been elided in the progressive of derived verbal patterns II and III (the erstwhile *pa“el* and *'ap̥el*) and quadrilateral verbs. It is a feature of the modern vernacular, however, that the *b-* is beginning to be lost in the progressive of many pattern I verbal forms, especially when these begin with a labial consonant (§ 4.8.2.). These elisions in pattern I tend to be avoided by educated speakers under the influence of the literary language, in which *b-* is systematically written.

Some educated speakers occasionally use the literary form of the verb ‘to be’ *hava* rather than the normal vernacular form *'avə*.

In the vernacular direct objects of verbs are often marked by the preposition *ka-*, which also expresses a dative relationship. This corresponds to the use of the dative preposition *l-* in literary Syriac to mark the direct object. In the literary form of C. Urmī *l-* is often used with this function, presumably in imitation of Syriac. Some educated speakers sporadically mark direct objects in their vernacular speech by the vernacular reflex of *l-*, viz. *+al*, under the influence of the literary language (§ 10.18.2.5.).

---

18 According to Yohannan (1900, xii) there were originally variations across the various villages on the Urmī plain with regard to this shift, at least in the abstract nominal ending *-uyta* (*-uta*).

Educated speakers use in their speech a number of lexical items that originate in the literary language. These are often neologisms based on Syriac rather than vernacular C. Urmī morphology. Conspicuous in this regard are a number of words that have Syriac-style *t*-morphemes, e.g. *+mət'axlana* 'edible', *məšta'lana* 'responsible'. In the vernacular the verbal patterns with *t*-morphemes ('*etpə'el*, '*etpa"al* and '*etta"al*) have been lost (§ 4.2.).

### 0.9 Relationship of C. Urmī to J. Urmī

A NENA dialect was spoken also by Jews in Urmī until they left the region in the 1950s (Garbell 1965; Khan 2008a). Despite their geographical contiguity, however, the Christian and Jewish dialects of Urmī exhibit fundamental differences in their structure. The following comparative list illustrates some selected divergences in phonology, morphology and lexicon:

J. Urmī	C. Urmī	
<i>belá</i>	<i>béta</i>	'house'
<i>zorá</i>	<i>súra</i>	'small'
<i>+turá</i>	<i>+túyra</i>	'mountain'
<i>-ú</i>	<i>-é</i>	'their'
<i>-ilet</i>	<i>-ivət</i>	2ms copula
<i>plixé</i>	<i>ptíxələ</i>	'He has opened'
<i>paloxé</i>	<i>bəptáxələ</i>	'He is opening'
<i>xəzyéllux</i>	<i>xázyuxilə</i>	'He has seen you'
<i>maqoé</i>	<i>hamzúmələ</i>	'He is speaking'
<i>+samoxé</i>	<i>bəcláyələ</i>	'He is standing'
<i>kwašé</i>	<i>+bəsláyələ</i>	'He is descending'

These fundamental differences between the Jewish and Christian dialects of Urmī arose not only because of the social separation of the two religious communities but also on account of their different settlement history. The Jewish community, as far as can be established, had deep historical roots in the town whereas most Christians moved to the town from the surrounding countryside in relatively recent times. The contiguity of the two communities within Urmī, therefore, does not have a long history. Despite these differences between the dialects, Christians and Jews could understand each other without great difficulty.<sup>19</sup>

---

<sup>19</sup> This is reported by both the Assyrian Christians and the Jews from the Urmī region whom I

C. Urmi shares a few innovations with J. Urmi. One of these is the morphological innovation of adding a *-u* augment to the 3ms suffix. This is a feature of the Jewish dialects spoken east of the Zab River, known as the ‘trans-Zab’ subgroup (Mutzafi 2008b):

	<b>*-eh</b>
C. Urmi	-u (< -eu)
J. Arbel	-eu
J. Sulemaniyya	-ew
J. Sanandaj	-ew

Other shared innovations include the development of suprasegmental pharyngalization and constructions based on the infinitive. In both cases, however, these innovations are more advanced in J. Urmi. The suprasegmental pharyngalization, for example, has been accompanied by a fronting of back vowels (/o/ and /u/) in non-pharyngalized words (Khan 2008a, 23). This represents a greater convergence with the principles of Azeri Turkish vowel harmony. In C. Urmi, on the other hand, such fronting does not take place in most varieties of the dialect (§ 1.3.). In the progressive construction the locative *b-* preposition has been completely lost in J. Urmi and the copula element has become grammaticalized as an affix, which has undergone phonetic contraction:

	C. Urmi	J. Urmi
‘He is opening’	<i>baptáxələ</i> (< <i>b + ptaxa + ilə</i> )	<i>paloxé</i> (< <i>b + paloxe + ile</i> )

In C. Urmi there are three patterns of verbs, viz. patterns I, II and III, which correspond historically to the *pe‘al*, *pa“el* and *‘ap̄el* of earlier Aramaic. The derivative pattern III is far more productive and ‘alive’ than stem II (§ 4.25.3.1.). In J. Urmi this tendency has developed into the complete elimination of pattern II, the erstwhile *pa“el* (Khan 2008a, 65–67).

In syntax J. Urmi shares a number of innovative features with C. Urmi but in general the innovation in J. Urmi is more advanced. In C. Urmi, for example, the object is frequently placed before the verb and this has been stimulated by the verb-final syntax of the contact languages of the area. Such fronting, however, still has a pragmatic function and is not the unmarked order. In

---

have interviewed in my research and also by Stoddard (1855, 8), who refers to the language situation in the 19th century.

J. Urmi, on the other hand, verb-final syntax is the unmarked order of a clause (Khan 2008a, 324–325). This is reflected by the fact that the unmarked verb-final order has brought about a number of consequential changes in J. Urmi that are typologically expected in verb-final languages, such as the placement of auxiliary verbs after the main verb, e.g. *+qtila-hawe* ‘He may have killed’ (Khan 2008a, 81). The corresponding construction in C. Urmi, on the other hand, has the auxiliary before the main verb: *'avə +k̥tila* (§ 4.8.1.3.).

J. Urmi also exhibits innovative developments, usually induced by the contact languages, that have not taken place in C. Urmi. In J. Urmi, for example, the gender distinction between the independent 3rd person singular pronouns has been lost, which is a result of convergence with Kurdish and Azeri, where there is also no gender distinction:

C. Urmi	<i>+av</i>	‘he’	<i>'ay</i> ‘she’
J. Urmi	<i>o</i>	‘he/she’	
Iranian Azeri	<i>o</i>	‘he/she’	
Kurmanji Kurdish	<i>ew</i>	‘he/she’	

One of the explanations for the greater degree of convergence of J. Urmi with languages in contact is likely to be the fact that the Jews were a much smaller component of the population of the area than the Assyrians. According to Namik and Nedjib (1919) in 1914 the Jews of the area numbered 4,000, compared to 78,000 Assyrians and 80,000 Turks and Turkmen.

## 0.10 Methodology and Layout of the Work

This work is divided into three main sections, dedicated to grammar, lexicon and texts respectively, which are published in four volumes:

- Volume 1: Grammar: phonology and morphology
- Volume 2: Grammar: syntax
- Volume 3: A description of the lexicon, arranged by lexical fields and alphabetically
- Volume 4: A text corpus consisting of transcribed texts with English translations

The material presented in this work is entirely based on fieldwork that I carried out among native speakers of the dialect. The previously published work on the dialect guided me in some details regarding the gathering of data in the field,

*Fieldwork in Canda, Georgia*

but the material is entirely new and is not incorporated from earlier work. The fieldwork was carried out between 2005 and 2015 among the older generation of speakers who were born in the region of Urmia in Iran or in the Caucasus. The informants born in the Urmia region were interviewed in London (England), Turlock (USA), Fresno (USA), Los Angeles (USA), Chicago (USA) and Sydney (Australia). The informants who were born in the Caucasus were interviewed in the villages of Arzni (Armenia), Guylasar (Armenia), Dvin (Armenia) and Canda (Georgia). A few elderly speakers of Urmia who were born in Georgia were interviewed in Almaty (Kazakhstan).

Extensive recordings were made of the speech of the various informants and additional data were written down in notebooks. The informants were requested in particular to tell folktales and give descriptions of the traditional way of life in the villages. A large selection of these recordings were transcribed and these form the text corpus, which is published in volume 4. This text corpus is divided into folktales, which are numbered with a prefixed A (e.g. A1, A2, etc.), and expository texts about village life and history, which are numbered with a prefixed B (e.g. B1, B2, etc.).

The text corpus formed the source for a large proportion of the grammatical description. This applies in particular to the sections on syntax, which are

based on analyses of structures that occur in the text corpus. Further interviews were conducted to complete the description of the morphology and to check details of phonology. Speakers were questioned about the context of usage of certain grammatical elements in a speech situation. Elicitation of syntactic structures from informants out of context were avoided as much as possible. Most of the examples that do not occur in the published text corpus are taken from my unpublished recordings.

The grammatical description broadly follows the format of my other Neo-Aramaic grammars (Khan 1999; 2002; 2004; 2008a; 2008b; 2009), covering phonology, morphology, and syntax. Instrumental analysis was used to analyse phonetic features of the dialect using the programme Praat. The description of the syntax directs particular attention to the function of forms and structures within the context in which they occur. This involves using various functional and communicative notions such as topic, focus, cohesion and boundaries of discourse sections. These are explained in the appropriate place or are self-explanatory where they are used. The analysis does not follow one particular theoretical framework but rather various theoretical notions are invoked according to needs arising from the data. In various places in the grammar parallels to certain structures in contact languages are identified.

The material for the volume on the lexicon was based on my recordings and field notes. The previous lexicographical work on the Urmî dialect was used as an initial guide for the study of the lexicon. Words occurring in the dictionaries of Kalashev (1894b), Maclean (1901) and Oraham (1943) that did not occur in my own material were checked with informants. Likewise the lexical items occurring in the grammars of scholars who worked directly with speakers, such as Stoddard (1860), Maclean (1895), Marogulov (1935), Tsereteli (Tsereteli 1965; 1958; 1978b) and Younansardaroud (2001), and in lexicographical studies such as those by Petrus (2010b; 2010a; 2011; 2012b; 2013) were trawled and checked. Some of the words occurring in these sources were found to be now unknown to speakers of the vernacular language. Moreover the dictionaries and also other sources contain words used in the literary language or neologisms, neither of which are used by speakers without an education in the literary language. This applies in particular to the dictionary of Oraham and the lexical studies of Petrus, but also to some extent to other sources. Such literary words and neologisms have been, for the most part, excluded from the description of the lexicon presented in this work, unless they occur in the text corpus. Some of the lexical items documented in volume 3, especially those relating to village life, do not appear in previous dictionaries and lexicographical studies. The origin of loanwords is identified where this was possible. Regional variants of lexical items or their inflections are indicated

where appropriate, including lexical items in the neighbouring dialects of Salamas and Gawilan.

The text corpus contains transcriptions of recordings of speakers originating from northern and southern Urmi villages, from the villages of Arzni and Guylasar in Armenia and from the village of Canda in Georgia. Many of the speakers originating from the Urmi villages lived for a certain period in the town of Urmi or other Iranian towns before emigrating to the USA, Australia and the UK. The texts are samples of natural speech and so in some cases they contain anacolutha and fragments of clauses. Speakers from time to time code-switch by using unadapted loanwords or phrases from various other languages. These are printed in roman script in the transcriptions with an indication of the source language in superscript abbreviations. This distinguishes them from the main text of the transcriptions, which is written in italics. The audio files of the text corpus will be made accessible in the near future through the website of the NENA database project, University of Cambridge.

## CHAPTER 1

# Phonology

## 1.1 Consonant Phonemes

### Phoneme Inventory

	Labials	Dental/ Alveolar	Palato- alveolar	Palatal	Post-Velar	Laryngal
<b>Stops</b>						
Unvoiced lax	<i>p</i>	<i>t</i>		<i>c</i>		
Unvoiced tense	<i>ɸ</i>	<i>tʃ</i>		<i>ç</i>	<i>k</i>	
Voiced	<i>b</i>	<i>d</i>		<i>ɟ</i>	<i>g</i>	
<b>Affricates</b>						
Unvoiced lax				<i>č</i>		
Unvoiced tense				<i>χ</i>		
Voiced				<i>j</i>		
<b>Fricatives</b>						
Unvoiced	<i>f</i>	<i>s</i>	<i>š</i>		<i>x</i>	<i>h</i>
Voiced	<i>v</i>	<i>z</i>	<i>ž</i>		<i>ɣ</i>	
			<i>y</i>			
Nasal	<i>m</i>	<i>n</i>				
Lateral		<i>l</i>				
Rhotic		<i>r</i>				

## 1.2 Vowel Phonemes

The following vowel phonemes can be distinguished:

/i/, /e/, /ə/, /a/, /o/, /u/

These oppositions are demonstrated by minimal pairs such as the following:

/i/ : /e/    *bíta*    'egg'  
              *béta*    'house'

<i>/e/ : /a/</i>	<i>méta</i>	'she dies'
	<i>máta</i>	'village'

<i>/a/ : /ə/</i>	<i>náša</i>	'man'
	<i>nášə</i>	'people'

<i>/a/ : /o/</i>	<i>máta</i>	'village'
	<i>móta</i>	'death'

<i>/o/ : /u/</i>	<i>béto</i>	'her house'
	<i>bétu</i>	'his house'

The vowel */ə/* contrasts with */i/* only in word-final open syllables, e.g.

<i>xazíli</i>	'he sees me'
<i>xazílə</i>	'he sees him'

The two vowels stand in complementary distribution in word-internal position, */i/* in open syllables and */ə/* in closed syllables:

<i>šapíra</i>	'beautiful' (ms.)
<i>šapərta</i>	'beautiful' (fs.)

In the variety of the dialect spoken in the Urmi region the vowels */e/* and */ə/* always stand in complementary distribution. There are no full minimal pairs since */ə/* replaces */e/* when */e/* is shortened in closed syllables, e.g. *bət-+kuyra* < \**bet-+kura* 'tomb', or in post-stress open syllables, e.g. *xíšələ* < \**xíše*le 'he has gone'. Quasi-minimal pairs are found that are distinguished by stress position only, e.g.

<i>bétələ</i>	'it is a house'
<i>betéłə</i>	'it is their house'

In Georgia, however, the vowels */e/* and */ə/* stand in a clear phonemic opposition in final unstressed syllables, due to the fact that in this variety of the dialect the 3pl. L-suffix is *-le*, which contrasts with the 3ms *-lə*, e.g.

<i>tílə</i>	'he came'
<i>tile</i>	'they came'

### 1.3 Suprasegmental Emphasis

#### 1.3.1 Introductory Remarks

A further phonemic opposition relates to phonological emphasis. Although in many cases the historical background of this can be traced to the original presence of emphatic consonant segments in a word, in the synchronic state of the dialect the phenomenon is suprasegmental and its domain is in principle the entire word. The fundamental articulatory gesture of emphasis is pharyngalization, which involves the constriction of the upper pharynx with increased muscular tension. This is a non-primary articulation that accompanies the primary articulation of consonants and vowels. It is accompanied by a variety of other features including the retraction of the tongue from the primary point of articulation of coronal and dorsal consonants. The articulation of vowels tends to be retracted. There tends to be a lip-rounding gesture. Labial consonants are pronounced with a degree of protrusion and rounding of the lips.

There are a number of minimal pairs of words that differ only in the feature of suprasegmental emphasis. In the transcription emphasis is marked by the symbol + at the front of the word,<sup>1</sup> e.g.

*'arya*

'lion'

*+’arya*

'saint's festival'

*bara*

'opening in a channel'

*+bara*

'light'

*dara*

'valley'

*+dara*

'generation'

*pala*

'piece of fruit'

*+pala*

'labourer'

*lala*

'nurse'

*+lala*

'mute'

*mata*

'village'

*+mata*

'boil (on skin), grape'

---

<sup>1</sup> This practice was first used for Neo-Aramaic by Jacobi (1973).

<i>marta</i>	'owner (f.); mistress'
<sup>+</sup> <i>marta</i>	'Martha (proper name)'
<i>tala</i>	'mousetrap'
<sup>+</sup> <i>tala</i>	'fox'
<i>yarxa</i>	'month'
<sup>+</sup> <i>yarxa</i>	'she stretches out'
<i>karta</i>	'cold' (noun)
<sup>+</sup> <i>karta</i>	'cold' (adjective fs.)
<i>xalta</i>	'aunt'
<sup>+</sup> <i>xalta</i>	'eating'
<i>xyarta</i>	'to look'
<sup>+</sup> <i>xyarta</i>	'cucumber'
<i>azəl</i>	'he goes'
<sup>+</sup> <i>azəl</i>	'he spins (wool)'
<i>darə</i>	'he pours'
<sup>+</sup> <i>darə</i>	'he winnows'
<i>sapə</i>	'he hands over'
<sup>+</sup> <i>sapə</i>	'he filters'
<i>sarəp</i>	'it soaks up'
<sup>+</sup> <i>sarəp</i>	'it smarts'
<i>šarə</i>	'he unties'
<sup>+</sup> <i>šarə</i>	'he begins'
<i>maslə</i>	'he despises'
<sup>+</sup> <i>maslə</i>	'he causes to descend'
<i>čanjər</i>	'it jingles'
<sup>+</sup> <i>čanjər</i>	'it scratches with a paw'

*čarčar* ‘he screams’  
 +*čarčar* ‘it creaks (door)’

*parpər* ‘to flap (flag)’  
 +*parpər* ‘to blow (one’s nose) loudly’

*parušta* ‘parting (of hair)’  
 +*parušta* ‘flat stone’

*marduta* ‘bravery’  
 +*marduta* ‘culture’

*rayyə* ‘it sets, it thickens’  
 +*rayyə* ‘it rains’

*meta* ‘she dies’  
 +*meta* ‘churn’

*bəzza* ‘teat, breast’  
 +*bəzza* ‘hole’

*dora* ‘lock’  
 +*dora* ‘generation’

*jora* ‘she marries’  
 +*jora* ‘husband’

*mometa* ‘oath’  
 +*mometa* ‘to purr’

*nora* ‘mirror’  
 +*nora* ‘glow’

*dorana* ‘doorman’  
 +*dorana* ‘rolling pin’

*bita* ‘egg’  
 +*bita* ‘desired (fs.)’

<i>curra</i>	'foal of a donkey'
+ <i>curra</i>	'mud, slime'
<i>julla</i>	'bullet'
+ <i>julla</i>	'pip, stone of fruit'
<i>dur</i>	'close!'
+ <i>dur</i>	'return!'

Although the domain of emphasis is the entire word, it does not have equal articulatory impact on all segments of the word and indeed there are grounds for analysing some segments as 'transparent' to emphasis.

This applies to a number of the vowel phonemes. Suprasegmental emphasis clearly changes the quality of some vowels, in that their realization is distinctly further back than in plain words. The quality of other vowels, however, is far less affected by emphasis. This can be demonstrated by plotting vowel qualities by instrumental acoustic analysis. The emphatic articulation of a vocalic segment with retracted tongue root and constricted pharynx is reflected in spectrographs by the lowering ('flattening') of high frequency energy, specifically by the lowering of the second formant (Ladefoged and Maddieson 1996, 360–363). This impression of flattening is created by the enlargement of the oral cavity by decreasing the volume of the pharyngal cavity and also, in many cases, by protrusion and rounding of the lips (Watson 2007, 270). In what follows I present the results of my analysis of the quality of the vowel phonemes in emphatic and plain words based on the measurement of their first and second formants ( $F_1$  and  $F_2$ ).

### 1.3.2 Long Stressed Vowels

In the first section I present plots of the quality of several tokens of long stressed vowels in open syllables in emphatic and plain words. This applies to the vowels /a/, /i/, /e/, /u/ and /o/. The vowel /ə/ is always short (§ 1.7.2.).

Emphatic long stressed /a/

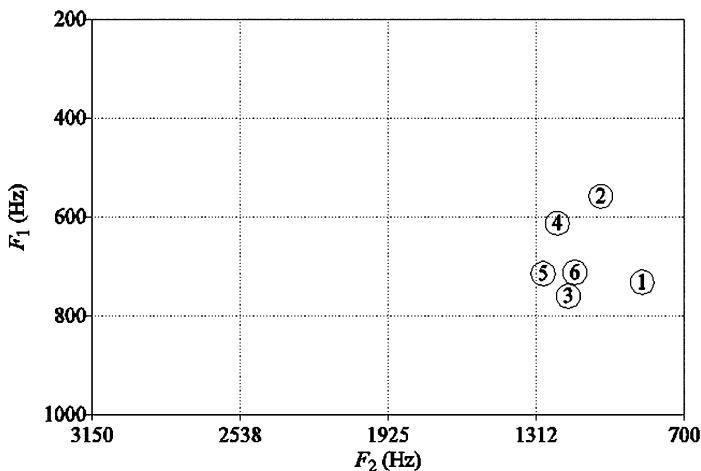

FIGURE 1

1. <sup>+</sup>*tála* 'fox'
2. <sup>+</sup>*táta* 'sweat'
3. <sup>+</sup>*tuyrána* 'mountains'
4. <sup>+</sup>*byáyələ* 'he wants'
5. <sup>+</sup>*xoravátə* 'friends'
6. <sup>+</sup>*háva* 'air'

## Plain long stressed /a/

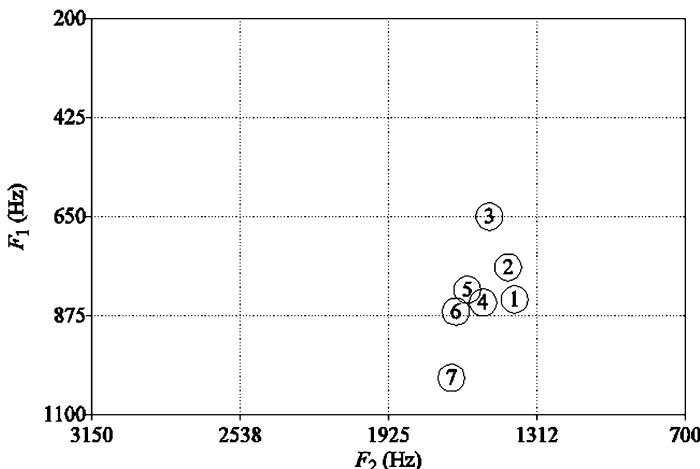

FIGURE 2

1. *tála* 'mousetrap'
2. *pátəx* 'he opens'
3. *pátux* 'your face'
4. *práka* 'to finish'
5. *kátux* 'to you'
6. *bábi* 'my father'
7. *taxána* 'miller'

It is clear from these plots that long stressed /a/ is consistently realized with a significantly lower  $F_2$  in emphatic words than in plain words. This indicates that it is articulated considerably further back when the word is emphatic. In plain words most tokens of the vowel are in the region of [a] whereas in emphatic words they are in the region of the back vowel [ɑ].

### Emphatic long stressed /i/

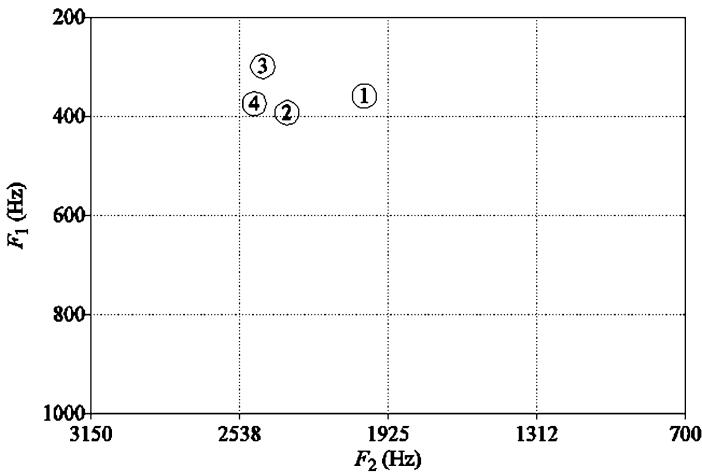

FIGURE 3

1.  ${}^+jříša$  'pulled'
2.  ${}^+karíva$  'he used to read'
3.  ${}^+říša$  'awake'
4.  ${}^+slímun$  'come down (pl.)!'

### Plain long stressed /i/

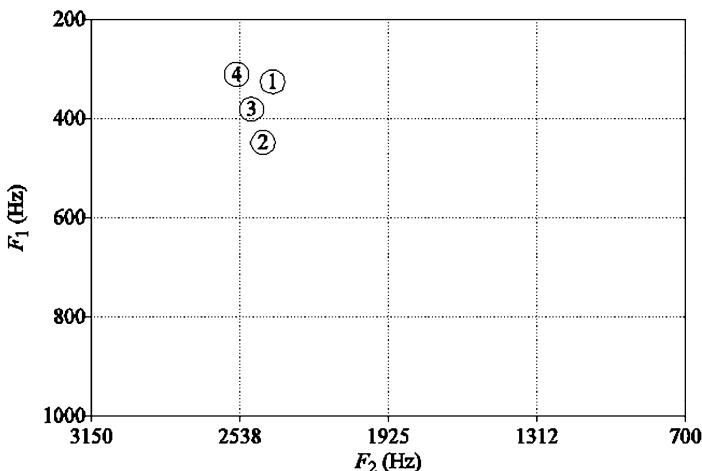

FIGURE 4

1. *ptíxəłə* 'it is open'
2. *fvírəva* 'he had married'
3. *štímun* 'drink (pl.)!'
4. *ríša* 'head'

It can be seen that there is not a significant difference between the quality of /i/ in emphatic and plain words. The majority of tokens are realized in the region of [i] with a tendency for those in emphatic words to be articulated slightly further back, in one case to the region of [ɪ]. In many cases, however, the quality of the vowel in emphatic words overlaps with the quality it has in plain words.

Emphatic long stressed /e/

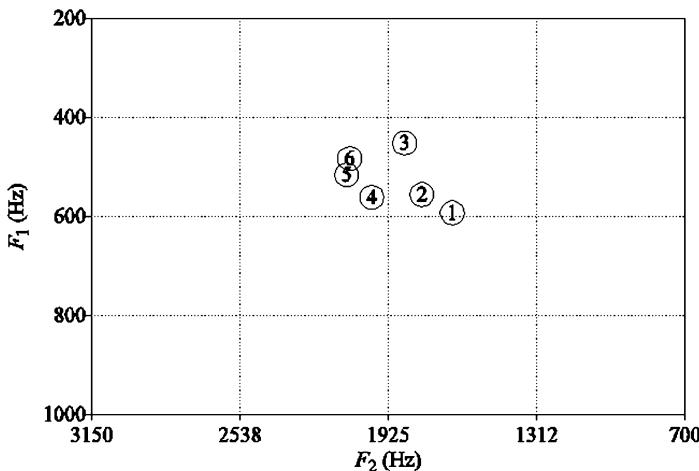

FIGURE 5

1. *+téra* 'bird'
2. *+palléta* 'division'
3. *+tašéta* 'hiding'
4. *+méta* 'churn'
5. *+kéta* 'summer'
6. *+taté* 'their sweat'

## Plain long stressed /e/

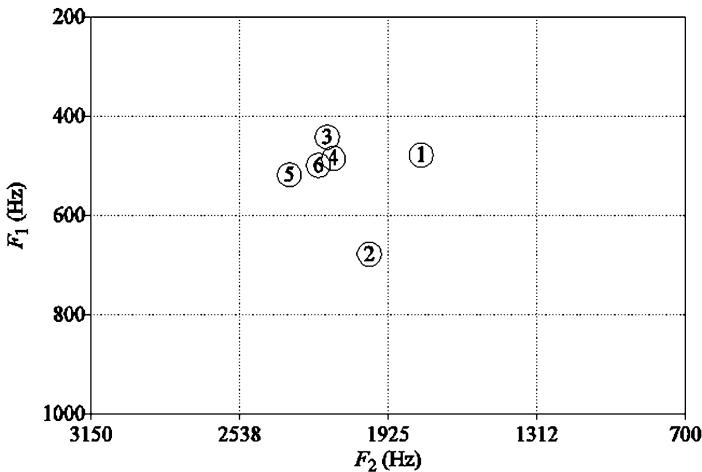

FIGURE 6

1. *mréta* 'moth'
2. *béta* 'house'
3. *péša* 'she remains'
4. *paté* 'their face'
5. *mélə* 'bring him!'
6. *kémi* 'they rise'

The phonetic realizations of /e/ in emphatic and plain words are scattered in the regions of [e] and [ɛ]. There is a tendency for /e/ in emphatic words to be articulated slightly further back, but there is some overlap of its realization in emphatic and plain words.

Emphatic long stressed /u/

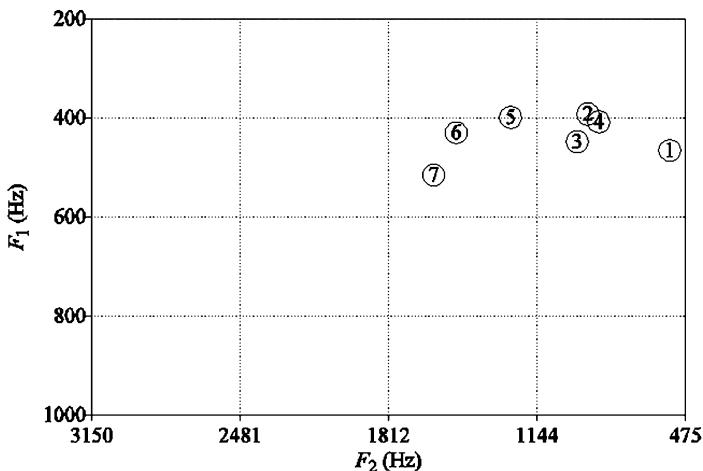

FIGURE 7

1. *+júra* 'big'
2. *+slúta* 'prayer'
3. *+ajəbbúta* 'amazement' (pl.)
4. *+kaṭúla* 'murderer'
5. *+tíyra* 'mountain'
6. *+axúla* 'glutton'
7. *+palúṭəna* 'they go out'

## Plain long stressed /u/

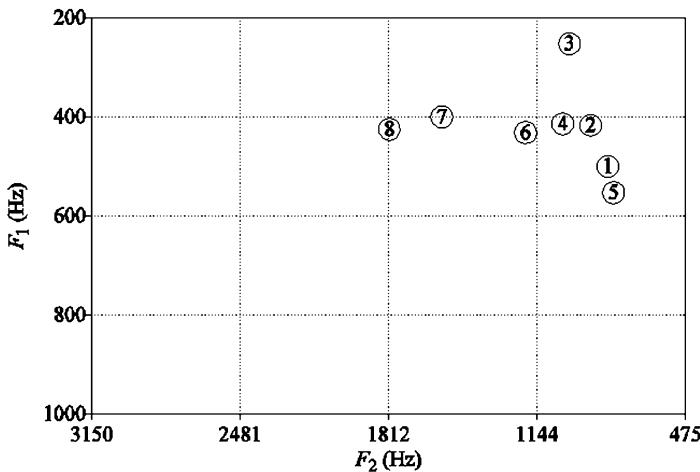

FIGURE 8

1. *kú* 'arise!'
2. *mú vədlə?* 'What did you do?'
3. *brúnux* 'your son'
4. *súra* 'small'
5. *dúla* 'here he is'
6. *xabúyša* 'apple'
7. *núyna* 'fish'
8. *zúyzə* 'money'

The rounded vowel /u/ has a wide scatter of realizations, mostly lower than the cardinal vowel [u], in the regions of [ʊ], [o] and centralized between the qualities of [u] and [e]. The more advanced articulation is found before /y/ in the diphthong /uy/, though not exclusively in this context, as shown by tokens 6 and 7 of the emphatic words. Crucially, the scatter of realizations in emphatic and plain words is largely overlapping.

## Emphatic long stressed /o/

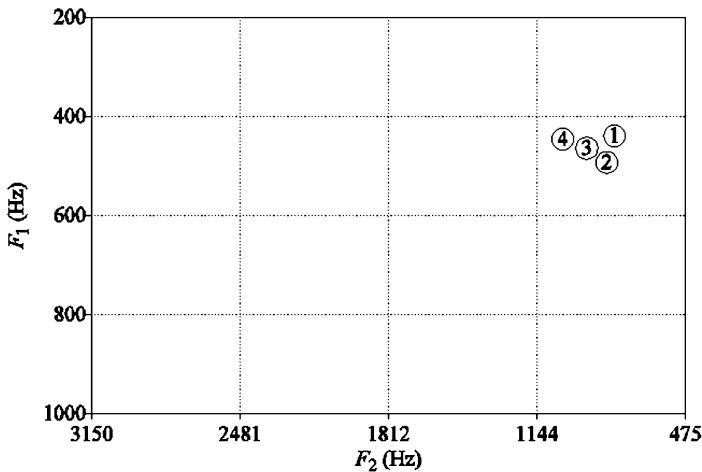

FIGURE 9

1. *+jóra* 'husband'
2. *+xóla* 'rope'
3. *+tatóxun* 'your sweat'
4. *+aynóxun* 'your eyes'

## Plain long stressed /o/

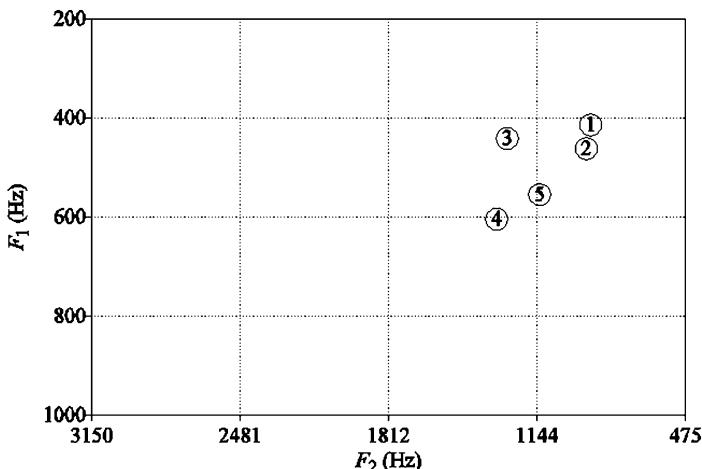

FIGURE 10

1. *patóxun* 'your face'
2. *'ódi* 'they do'
3. *jóra* 'she marries'
4. *'óya* '(that) she is'
5. *'ó márux* 'that master of yours'

The rounded vowel /o/ has a narrower scatter than /u/ and is realized between the regions of [o] and [ɔ]. There is some overlap with the scatter of the realizations of /u/, but the mean realization of /o/ is slightly lower than that of /u/. Some tokens of /o/ in plain words are more advanced than the tokens in emphatic words, but there is overlap in the scatter of the tokens in emphatic and plain words.

Overall, therefore, among the long stressed vowels /a/, /i/, /e/, /u/ and /o/, it is only /a/ that exhibits a significant and consistent difference in quality in emphatic and plain words. This is shown in Fig. 11, which presents the mean plots of the tokens for each of the vowels in emphatic and plain words.

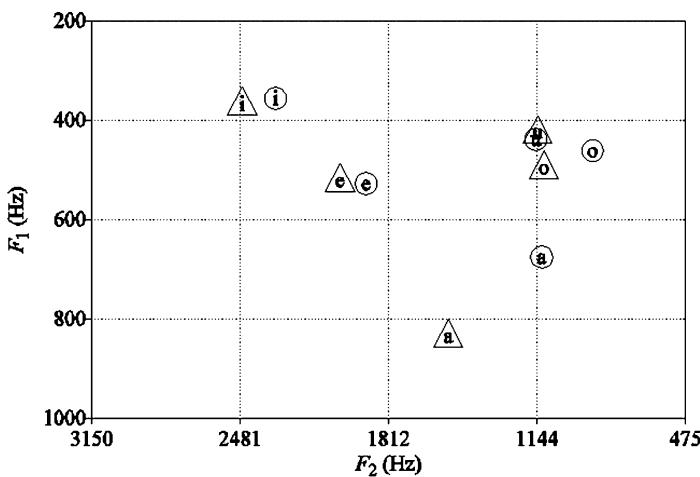

FIGURE 11 *Mean plots of long stressed vowels (triangles = plain, circles = emphatic)*

### 1.3.3 Short Stressed Vowels

The vowels that can be realized as short include /a/, /ə/ and /u/ (see §1.7.). In this section plots are presented of the quality of the realization of these vowels in stressed closed syllables of emphatic and plain words.

Emphatic short stressed /a/

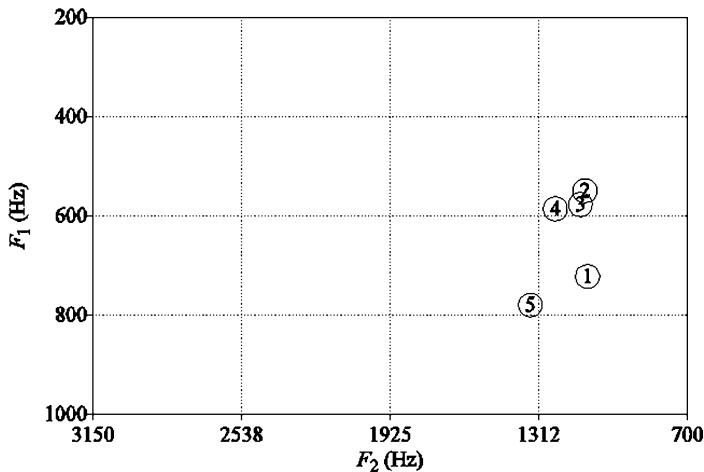

FIGURE 12

1. <sup>+</sup>*xálta* 'eating'
2. <sup>+</sup>*támma* 'here'
3. <sup>+</sup>*yárxa* 'she lies down'
4. <sup>+</sup>*tášya* 'she hides'
5. <sup>+</sup>*árþunte* 'the four of them'

## Plain short stressed /a/

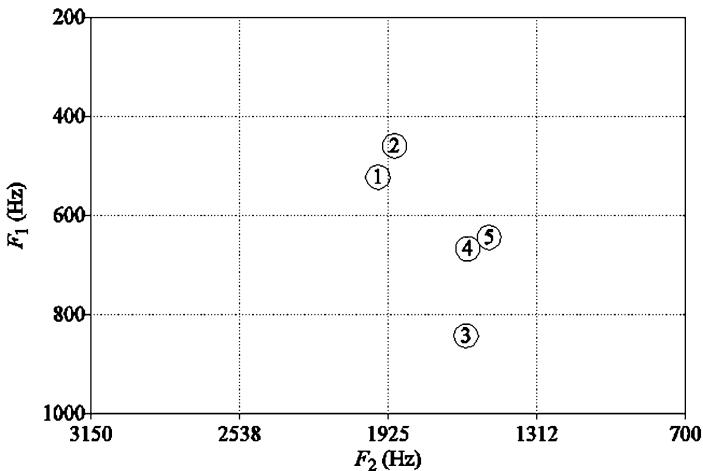

FIGURE 13

1. *yárxa* 'month'
2. *'ákla* 'foot'
3. *hálli* 'give me!'
4. *báxtu* 'his wife'
5. *xálta* 'aunt'

The plots show that stressed short /a/ is consistently more retracted in its realization in emphatic words than in plain words. In plain words it is realized in the regions of [a] and [æ] and as high as the region of [ɛ]. In emphatic words it is realized in the region of [ɑ].

## Emphatic stressed /ə/

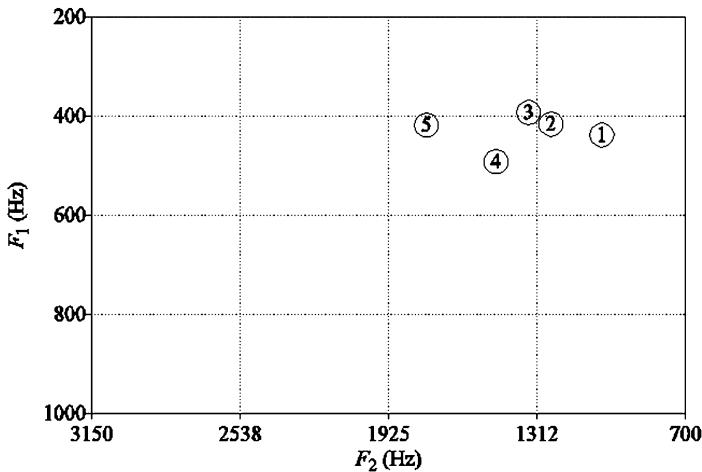

FIGURE 14

1. <sup>+</sup>*kéṭma* 'ash'
2. <sup>+</sup>*bázza* 'hole'
3. <sup>+</sup>*dámma* 'tear'
4. <sup>+</sup>*tályələ* 'he has slept'
5. <sup>+</sup>*cátra* 'knots'

## Plain stressed /ə/

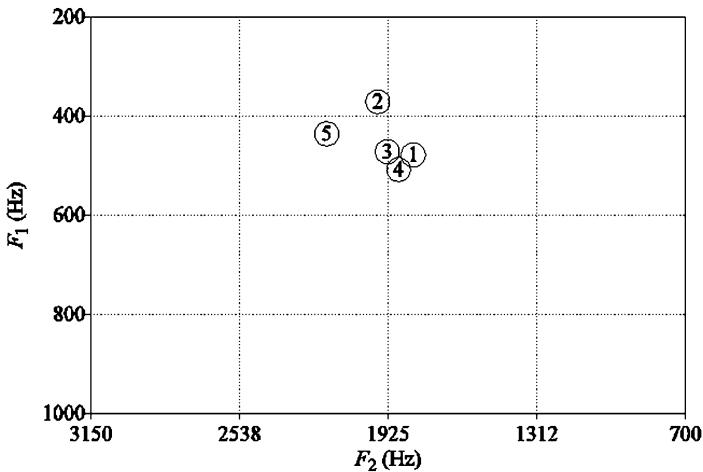

FIGURE 15

1. *fvárra* 'she married'
2. *dámma* 'blood'
3. *lábba* 'heart'
4. *pálla* 'she fell'
5. *þákka* 'frog'

The realizations of the vowel /ə/ have consistently distinct qualities in emphatic and plain words. In emphatic words it is realized with a scatter ranging from the region of the close-mid unrounded back quality [χ] to the region of the close-mid central quality [ø]. In plain words it has a significantly more advanced quality in the region of [ɪ] or [e].

Emphatic short stressed /u/

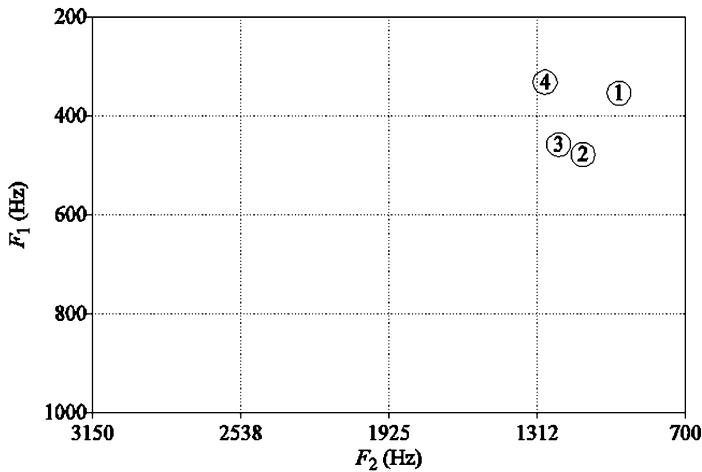

FIGURE 16

1. <sup>+</sup>*mútra* 'rain'
2. <sup>+</sup>*basúrtəla* 'it is lacking'
3. <sup>+</sup>*súppa* 'finger'
4. <sup>+</sup>*jrúš* 'pull!'

Plain short stressed /u/

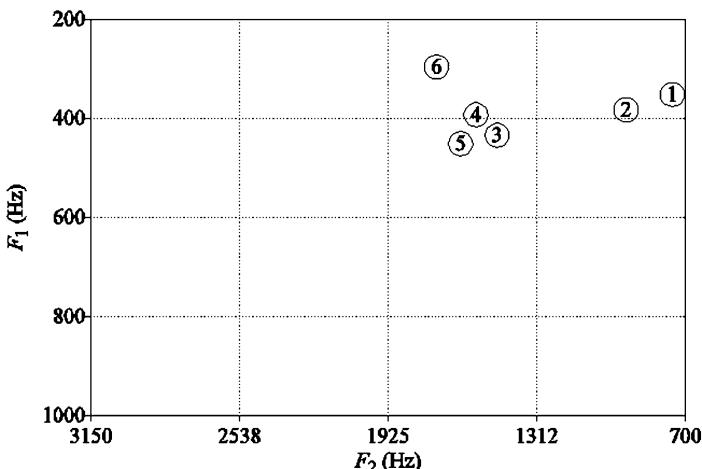

FIGURE 17

1. *'úpra* 'soil'
2. *ptúx* 'open!'
3. *júpta* 'cheese'
4. *sústa* 'mare'
5. *cúl* 'all'
6. *dúcta* 'place'

The vowel /u/ has quite a wide scatter of realizations, with those of emphatic words overlapping to some extent with those of plain words in the region of [ʊ]. Plain words contain some advanced tokens between the centralized rounded qualities of [u] and [ø], especially in the environment of palatals (tokens 5 and 6).

Overall, only the vowels /a/ and /ə/ exhibit significant quality differences, as shown in the mean plots in fig. 18.

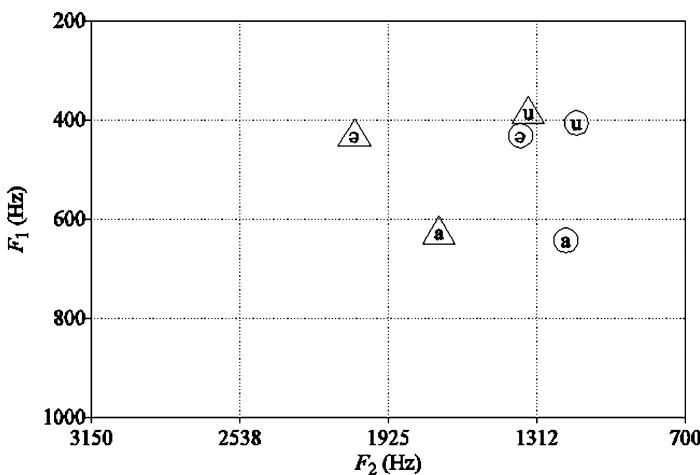

FIGURE 18 *Mean plots of stressed short vowels (triangles = plain, circles = emphatic)*

### 1.3.4 *Short Unstressed Vowels*

The sharp distinction in quality between short /a/ in emphatic and plain words is blurred slightly in unstressed syllables, especially those in word-final position. In some cases the retraction of the short /a/ in this position in emphatic words is weakened and it is realized with a more advanced quality that overlaps with that of /a/ in the equivalent position in plain words. This is shown in the following plots.

## Emphatic short /a/ in final unstressed syllables

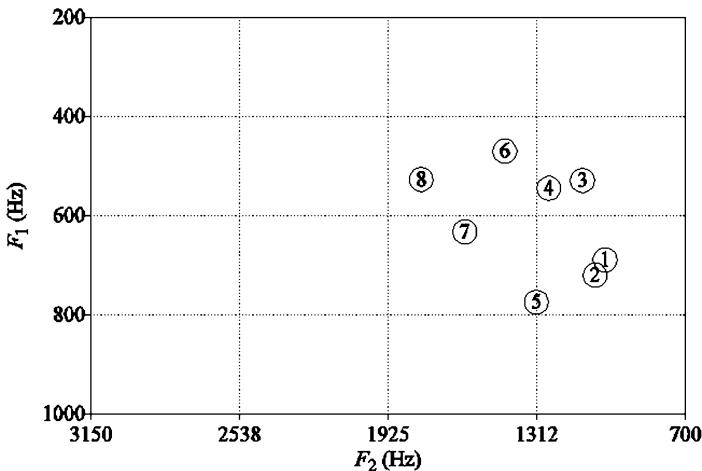

FIGURE 19

1. *+tálɑ* 'fox'
2. *+támma* 'there'
3. *+jóra* 'man'
4. *+slúta* 'prayer'
5. *+arṭálɑ* 'she farts'
6. *+tíyra* 'mountain'
7. *+ajəbbúta* 'amazement'
8. *+déta* 'knowledge'

Plain short /a/ in final unstressed syllables

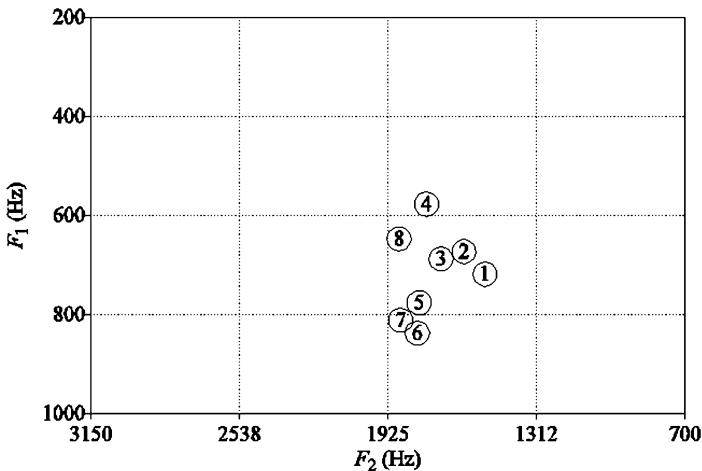

FIGURE 20

1. *tála* 'mousetrap'
2. *šapórta* 'beautiful (fs.)'
3. *taxána* 'miller'
4. *sústa* 'horse (f.)'
5. *fvárra* 'she married'
6. *práka* 'to finish'
7. *xátna* 'groom'
8. *túyta* 'mulberry'

The overlap is shown in the combined plot in Fig. 21.

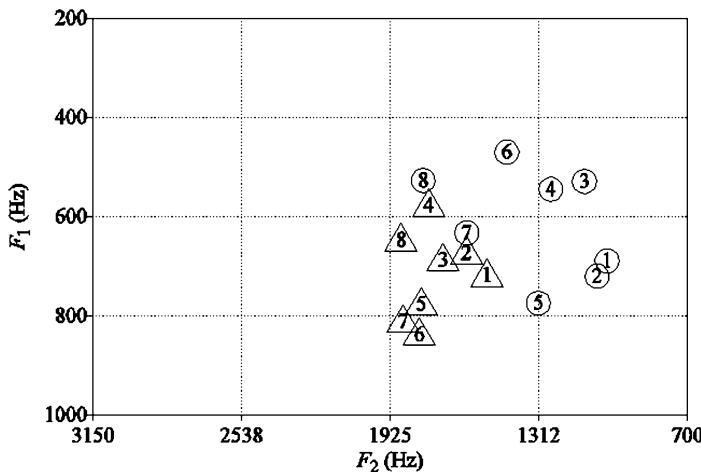

FIGURE 21 *Combined plot of unstressed short final /ə/ (triangles = plain, circles = emphatic)*

The sharp quality distinction of the realizations of /ə/ in emphatic and plain syllables is, however, maintained in final unstressed syllables, as shown in the following plots.

#### Emphatic /ə/ in final unstressed syllables

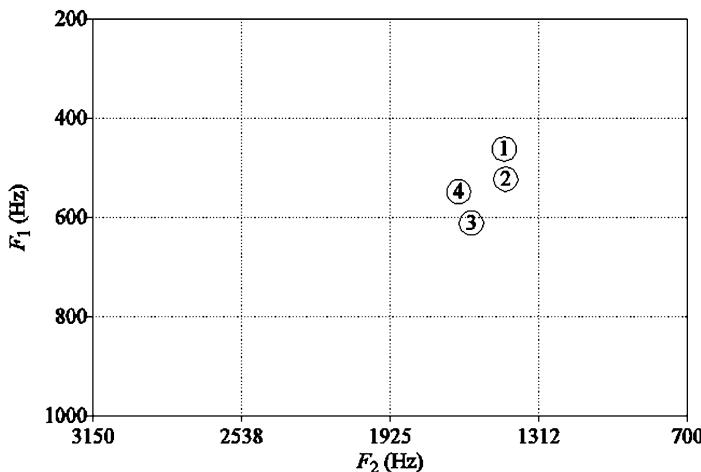

FIGURE 22

1. *+byáyələ* 'he wants'
2. *+ajjúbələ* 'he is surprised'
3. *+ruyšána* 'shoulders'
4. *+keṭaváta* 'summers'

Plain /ə/ in final unstressed syllables

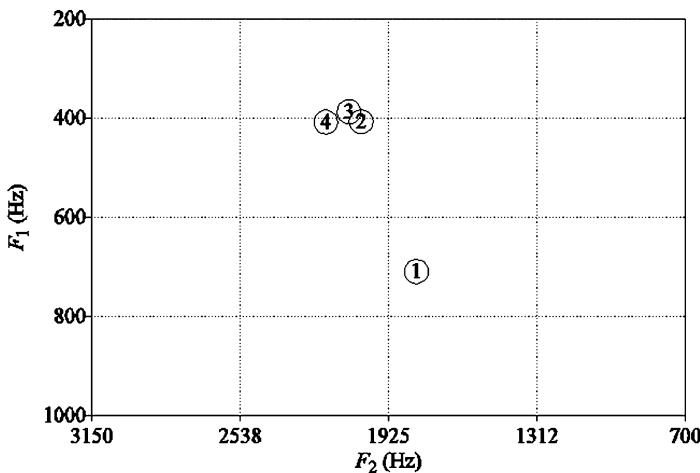

FIGURE 23

1. *ptíxələ* 'it is open'
2. *susaváta* 'horses'
3. *níyna* 'fish'
4. *príkələ* 'he has finished'

Despite the blurring of the quality distinction between some of the realizations of /a/ in emphatic and plain words in unstressed final syllables, the mean realizations of tokens still exhibit a significant distinction. This is shown in the mean plot of /a/ and /ə/ in this position presented Fig. 24.

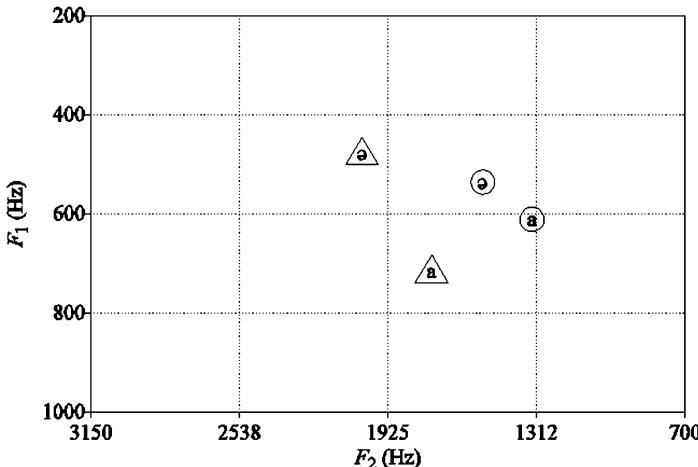

FIGURE 24 Mean plot of short unstressed final /a/ and /ə/ (triangles = plain, circles = emphatic)

In sum, the main burden of distinction between emphatic and non-emphatic words in the vowel system is borne by the vowels /a/ and /ə/. Although this may seem highly restrictive, these are the most common vowels and at least one of them occurs in the majority of words and their inflections.

From a phonological point of view the opposition between emphatic and non-emphatic realization of these vowels is based on different degrees of backness, i.e. [-back] vs. [+back]. This is the basis of vowel oppositions in Turkish vowel harmony. Some languages, including many from the Altaic family, have, on the other hand, vowel harmony systems based not on backness oppositions but rather on oppositions of Advanced Tongue Root (ATR): [-ATR] v. [+ATR]. The primary acoustic correlate of backness is either the second formant or the absolute value of the difference between the first and second formants ( $F_2-F_1$ ). The feature [ATR], on the other hand, depends primarily on the value of the first formant and so vowels in [ATR] oppositions are distinguished by their  $F_1$  values (see Vaux 2009 and the references cited there). The tables below presents the relevant data for the mean plots of emphatic vs plain realizations of long stressed vowels and short stress vowels. This clearly demonstrates that the opposition is based on backness as in Turkish rather than on ATR, since ATR values are not clearly distinct and indeed are identical in the short vowels.

## Long stressed

	<sup>+a</sup>	a
F <sub>2</sub>	1140	1650
F <sub>1</sub>	725	820
F <sub>2</sub> -F <sub>1</sub>	415	830

## Stressed short

	<sup>+a</sup>	a	<sup>+ə</sup>	ə
F <sub>2</sub>	1250	1800	1320	2000
F <sub>1</sub>	770	780	410	410
F <sub>2</sub> -F <sub>1</sub>	480	1020	910	1590

**1.3.5 Dialect Differences in Vowels**

In the speech of speakers originating from some of the villages north of Urmī there is a tendency for the F<sub>2</sub> of /a/ vowels in emphatic words to be lowered to a greater extent than described above. This applies in particular to speakers from <sup>+Spurğān</sup> and <sup>+Mušava</sup>. A comparison of words uttered by speakers from these villages with those in the speech of an informant from a village in the southern region (Julpašan) is given below:

<sup>+Spurğān</sup> (N):    <sup>+ra</sup>(F<sub>1</sub> 399, F<sub>2</sub> 751)ba(F<sub>1</sub> 339, F<sub>2</sub> 964)  
<sup>+tá</sup>(F<sub>1</sub> 530, F<sub>2</sub> 851)ma(F<sub>1</sub> 470, F<sub>2</sub> 773)

<sup>+Mušava</sup> (N):    <sup>+rá</sup>(F<sub>1</sub> 613, F<sub>2</sub> 865)ba(F<sub>1</sub> 514, F<sub>2</sub> 909)  
<sup>+tá</sup>(F<sub>1</sub> 556, F<sub>2</sub> 883)ma(F<sub>1</sub> 468, F<sub>2</sub> 735)

Julpašan (S):    <sup>+rá</sup>(F<sub>1</sub> 654, F<sub>2</sub> 1161)ba(F<sub>1</sub> 555, F<sub>2</sub> 1404)  
<sup>+tá</sup>(F<sub>1</sub> 672, F<sub>2</sub> 1042)ma(F<sub>1</sub> 818, F<sub>2</sub> 1029)

In some villages, the intensifier <sup>+raba</sup> 'very' is regularly pronounced with greater F<sub>2</sub> drop of the stressed /a/ than in other words, to the extent that it is realized with lip-rounding in the region of /o/. It should, therefore, be transcribed <sup>+róba</sup>. This is the case, for example, in the villages of Armenia and Georgia, and in some villages in the southern region of the Urmī plain such as <sup>+Satluvvə</sup>.

There are some differences among the different varieties of the C. Urmī dialect regarding the distribution of emphasis in the lexicon, e.g.

<i>zallu</i> (north) 'leech'	<sup>+</sup> <i>zallu</i> (south)
<i>jarəš</i> (north) 'he pulls'	<sup>+</sup> <i>jarəš</i> (south)
<sup>+</sup> <i>čanya</i> (north) 'handful'	<i>čanya</i> (south)
<i>čilaza</i> (north) 'slim'	<sup>+</sup> <i>čilaza</i> (south)
<sup>+</sup> <i>carra</i> (north) 'butter'	<i>carra</i> (south)
<i>karja</i> (default) 'crow'	<sup>+</sup> <i>karja</i> (Ardishay S, Dizatacyā S)
<i>kəppəl</i> (default) 'lock'	<sup>+</sup> <i>kəppəl</i> (Siri S)

The setting of words in the northern Urmi dialects generally corresponds to that of the adjacent dialects of Gawilan and Salamas, e.g.

S. Urmi	N. Urmi	Gawilan	Salamas
<sup>+</sup> <i>jarəš</i>	<i>jarəš</i>	<i>jarəš</i>	<i>jarəš</i> 'he pulls'
<sup>+</sup> <i>kariva</i>	<i>kariva</i>	<i>kariva</i>	<i>kariva</i> 'best man'

Some words that are emphatic in all Urmi dialects are plain in the dialects of Gawilan and Salamas, e.g.

Urmi	Gawilan	Salamas
<sup>+</sup> <i>badya</i>	<i>badya</i>	<i>badya</i> 'bowl'
<sup>+</sup> <i>maša</i>	<i>maša</i>	<i>maša</i> 'tongs'

In some cases the distribution of the emphatic and plain variants does not correspond clearly to the division of the northern and southern Urmi sub-groups. This is the case, for example, with the word *kəmsa*/<sup>+</sup>*kəmsa* 'dragonfly', the emphatic variant of which is found in both the north and the south:

<i>kəmsa</i>	Zumallan (N), Salamas
<sup>+</sup> <i>kəmsa</i>	Ada (N), Abdullacande (N) Dizatacyā (S), <sup>+</sup> Čarbaš (S), Siri (S)

There are differences between the distribution of emphasis in the C. Urmi dialect and the Christian dialects spoken in the mountains to the west of Urmi, e.g. <sup>+</sup>Mawana:

C. Urmi	+Mawana	
<i>mata</i>	<sup>+</sup> <i>mata</i>	'village'
<i>'ilana</i>	<sup>+</sup> <i>'ilana</i>	'tree'
<sup>č</sup> <i>əčči</i>	<sup>+</sup> <i>əčči</i>	'ninety'
<sup>+</sup> <i>dana</i>	<i>dana</i>	'time'
<sup>+</sup> <i>azəl</i>	<i>'azəl</i>	'weave'
<sup>+</sup> <i>tata</i>	<i>tata</i>	'sweat'
<sup>+</sup> <i>cətra</i>	<i>cətra</i>	'knot'
<sup>+</sup> <i>šammə</i>	<i>šame</i>	'he hears'
<sup>+</sup> <i>bəddayəva</i>	<i>bəddayəva</i>	'he used to know'

### 1.3.6 Consonants

The impact of suprasegmental emphasis on the consonants can be identified acoustically by measuring F1 and F2 at the onset of a following high front vowel, /i/ or /e/. As has been shown above, these vowels do not undergo significant retraction of their articulation in emphatic words. The measurements of F1 and F2 for the vowels presented in the plots above were taken in the main body of the vowel. When occurring after consonants in emphatic words, they tend to have lower F2 at their onsets. This reflects pharyngalization which should be interpreted as resulting from coarticulatory spreading of the pharyngalization of the previous consonant. The dip in F2 at the onset of high front vowels is found in emphatic words after all consonants except /y/ and /k/. This is illustrated below in figs. 25–29. These show the formant contours for <sup>+</sup>*tína* 'mud', <sup>+</sup>*táti* 'my sweat', <sup>+</sup>*méta* 'churn', <sup>+</sup>*šýya* 'sealed' and <sup>+</sup>*xílələ* 'he has eaten', which demonstrate the pharyngalization of the unaspirated stop /t/, the aspirated stop /t/, the labial /m/, the palato-alveolar /š/ and the velar fricative /x/ respectively:

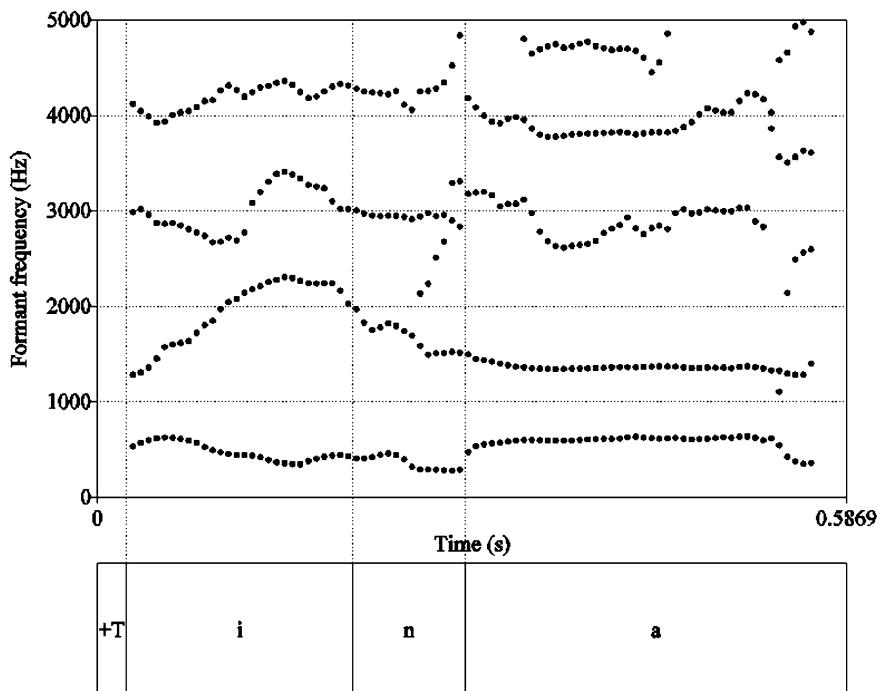

FIGURE 25  ${}^+\ddot{\text{t}}\text{i}\text{n}\text{a}$  'mud'

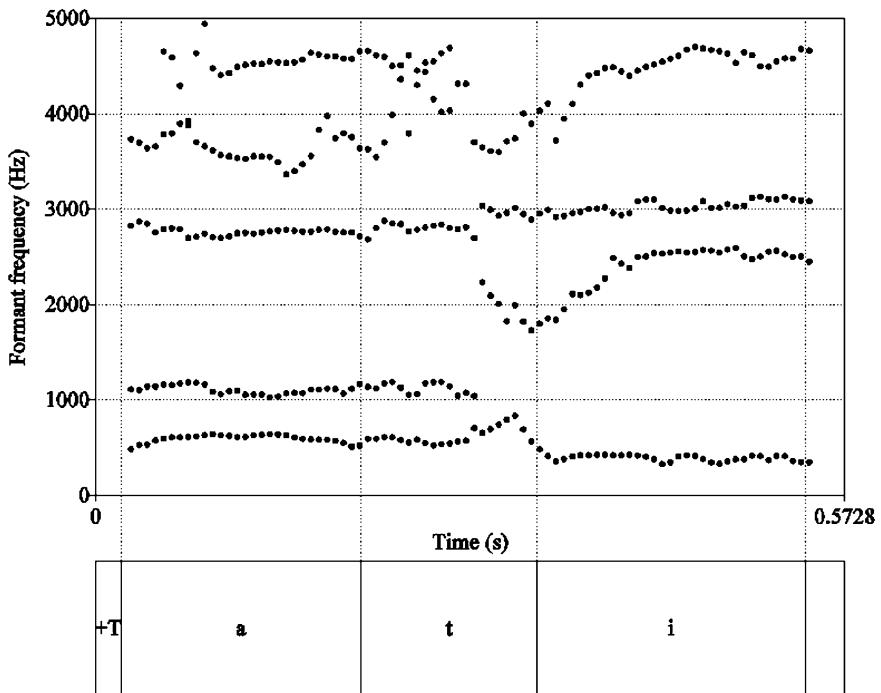

FIGURE 26 +tati 'my sweat'

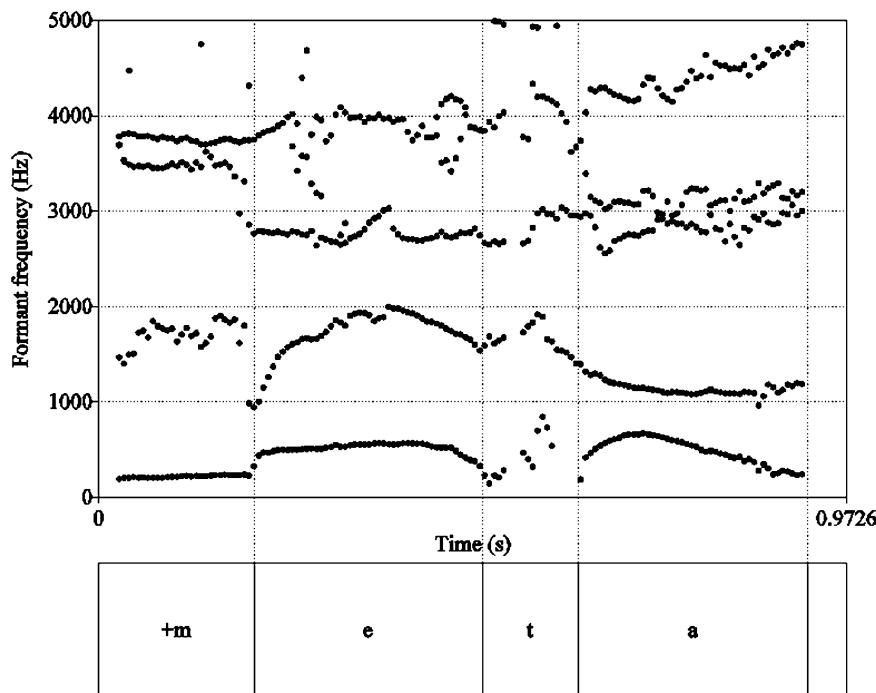

FIGURE 27   +méta 'churn'

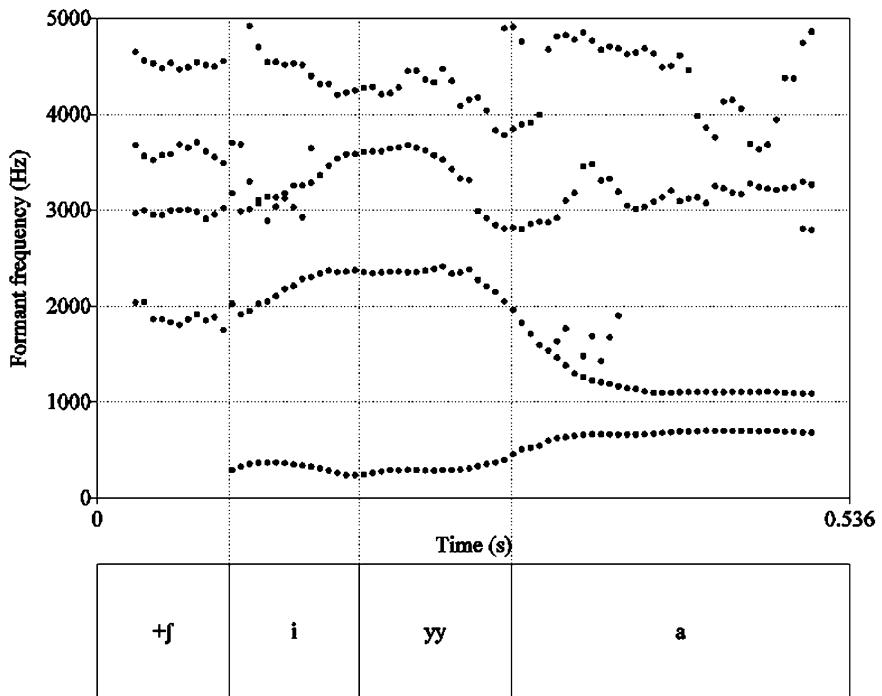

FIGURE 28 +ʃiyya 'sealed'

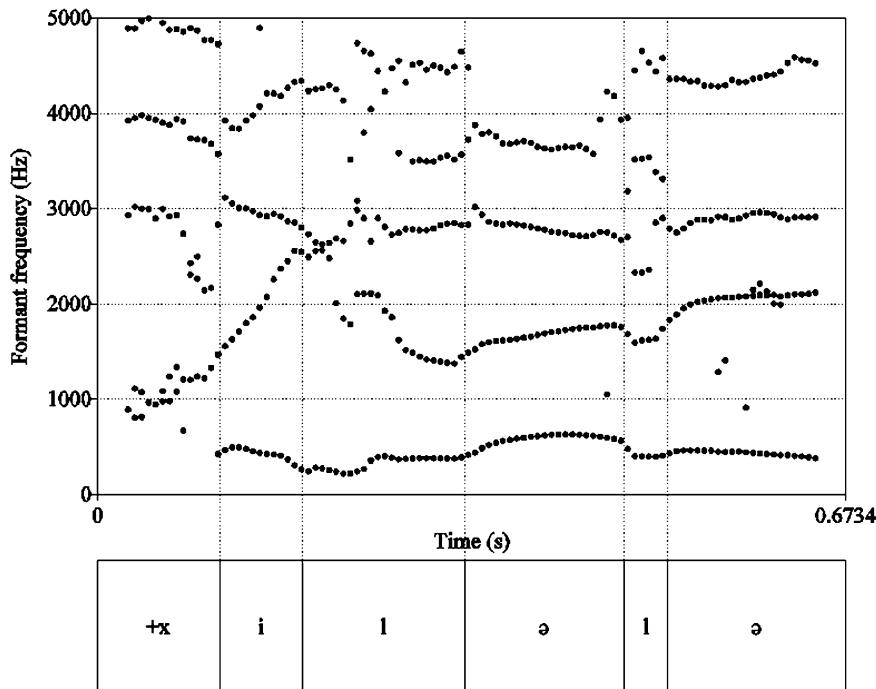

FIGURE 29 *+xilələ 'he has eaten'*

Contrast these formant contours with those of high front vowels after the same consonants in plain words, shown in figs. 30–34, in which there is no significant dip at the beginning of the vowel segment:

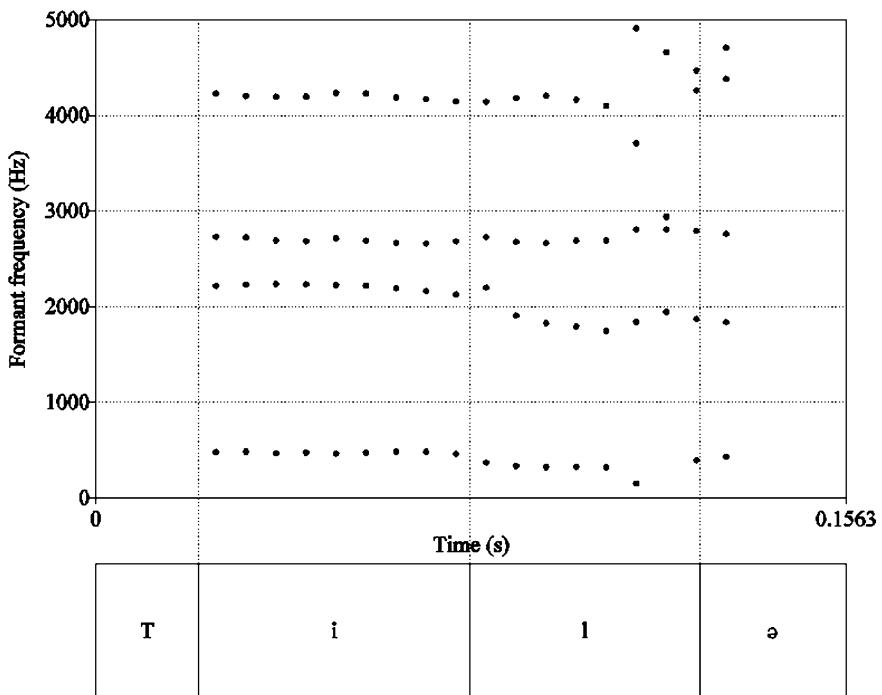

FIGURE 30 t-ilə 'that he is'

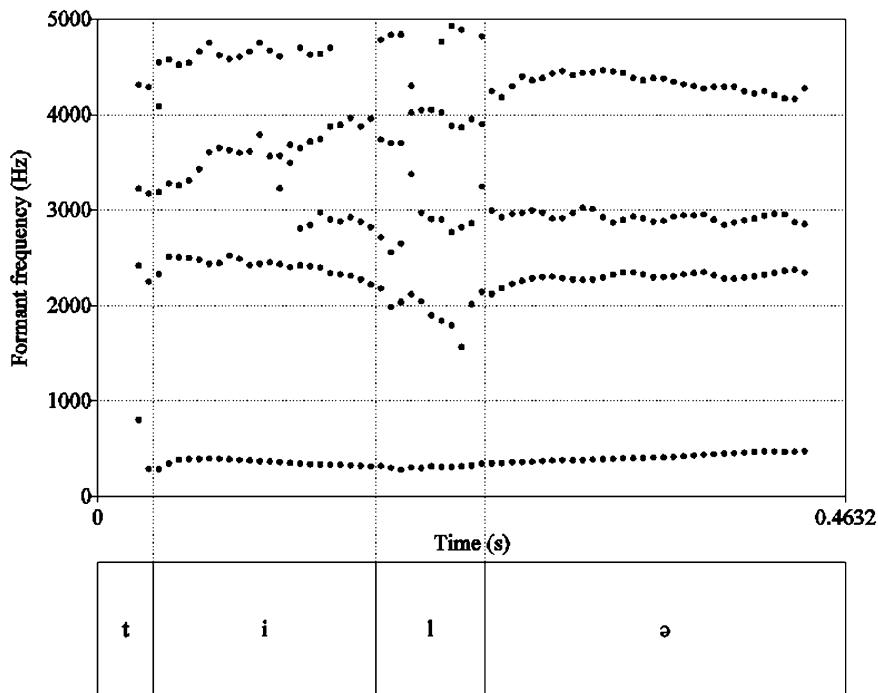

FIGURE 31 tilə 'he came'

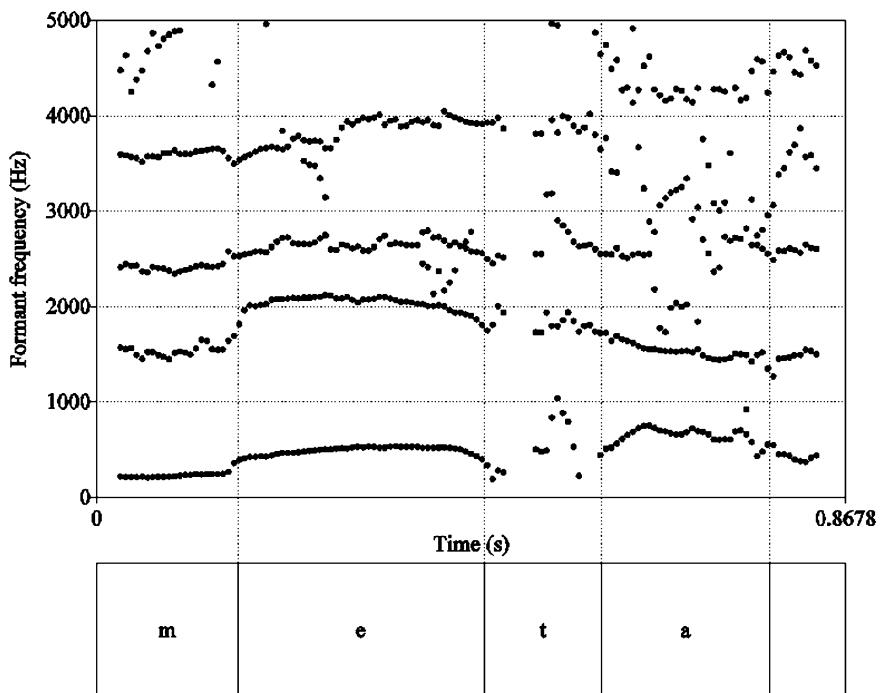

FIGURE 32 métá 'she dies'

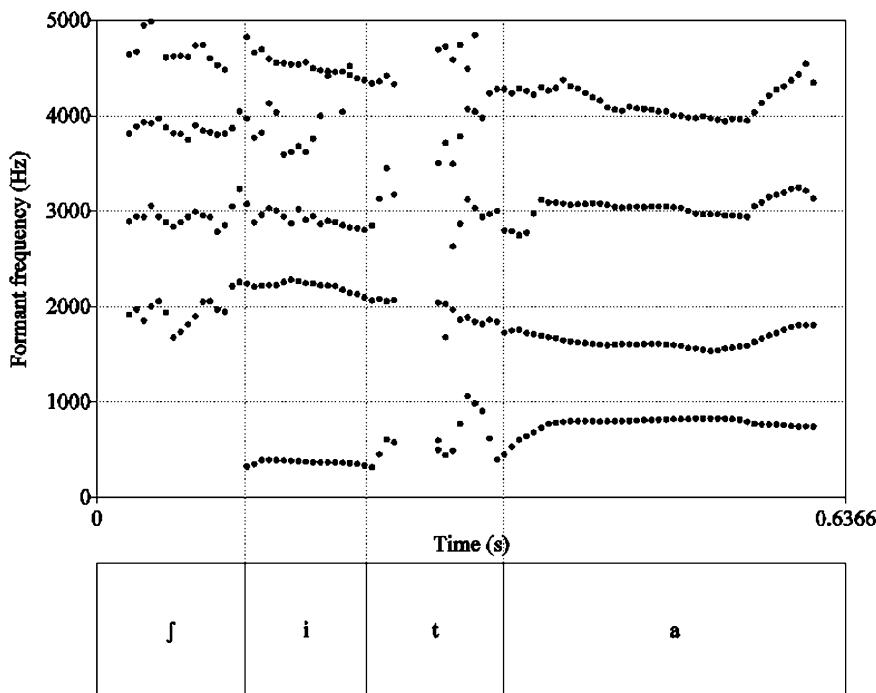

FIGURE 33 šíta 'year'

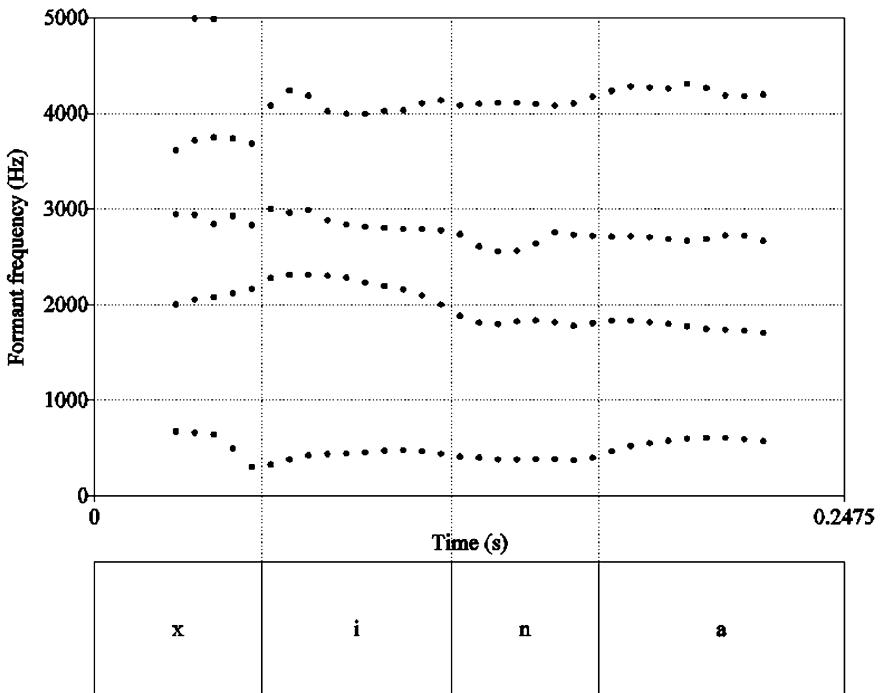

FIGURE 34 *xína* 'other'

The dip in F<sub>2</sub> at the onset of high front vowels can be detected also after the laryngals /ɿ/ and /h/ as can be seen in figs. 35–36, which show the formant contours for *+’ita* 'church' and *+heyyan* 'animal':

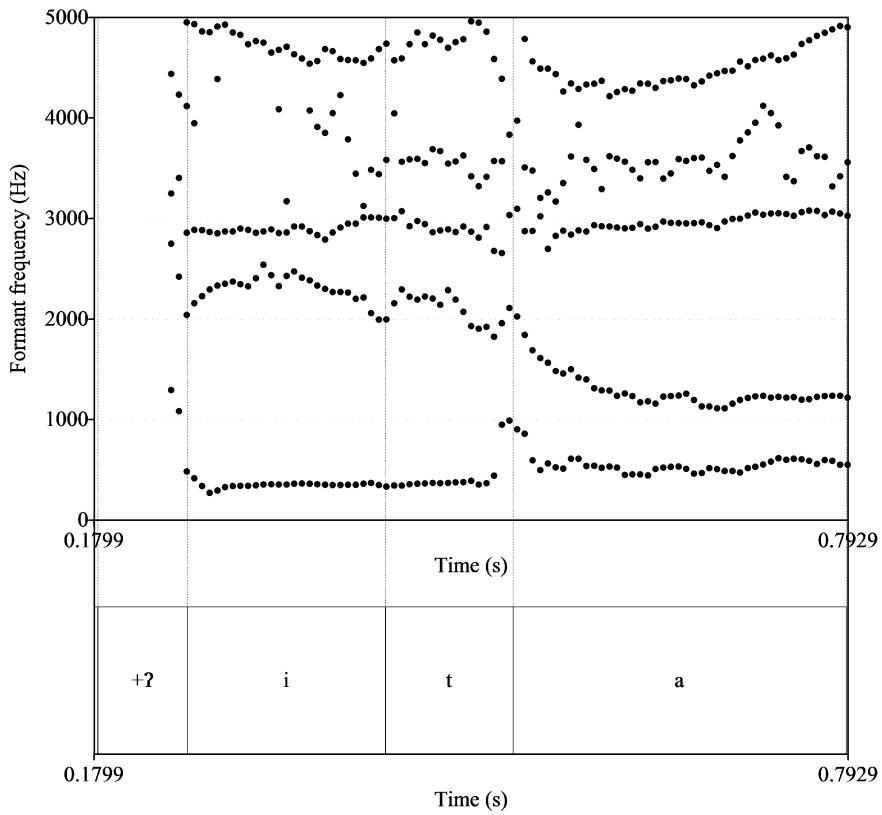

FIGURE 35 +'ita 'church'

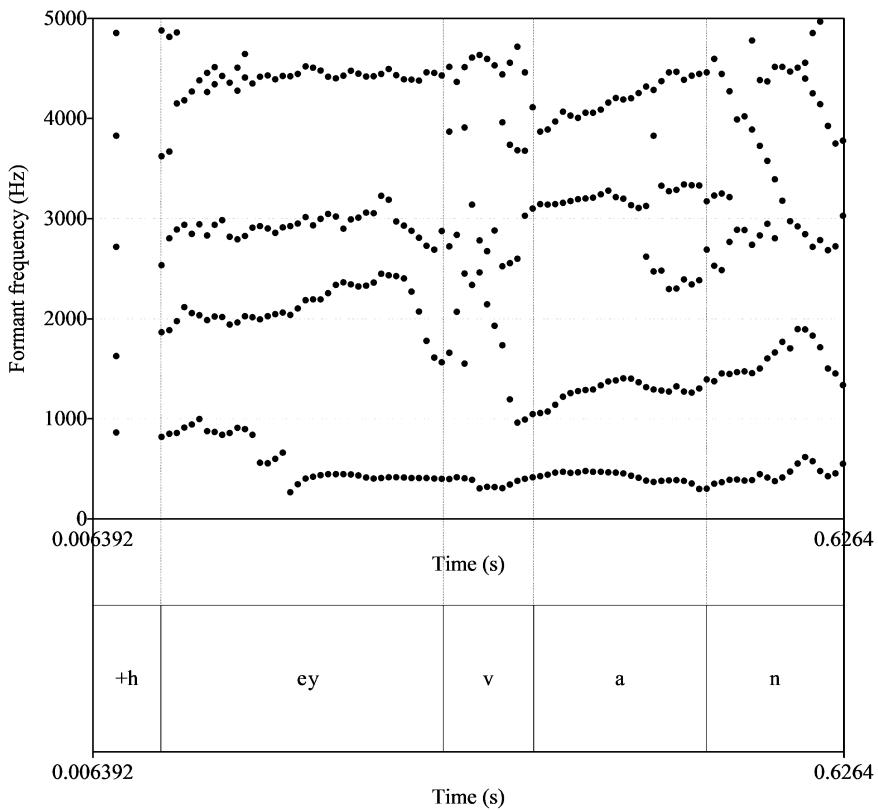

FIGURE 36 +heyvan 'animal'

Contrast this with the plain words '*ita* 'then' and *hi* 'yes', which do not exhibit such a dip:

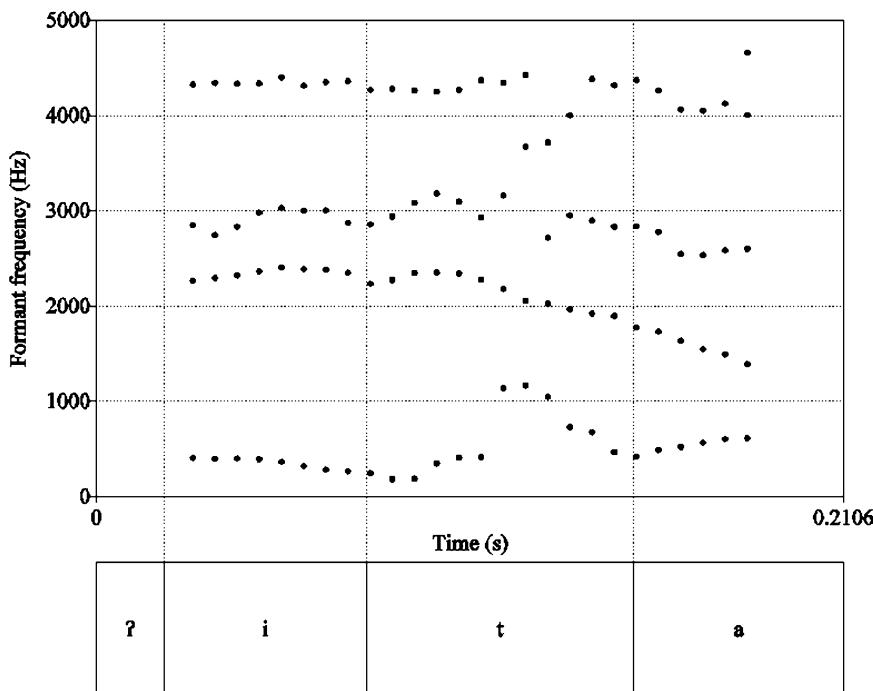

FIGURE 37 'ita 'then'

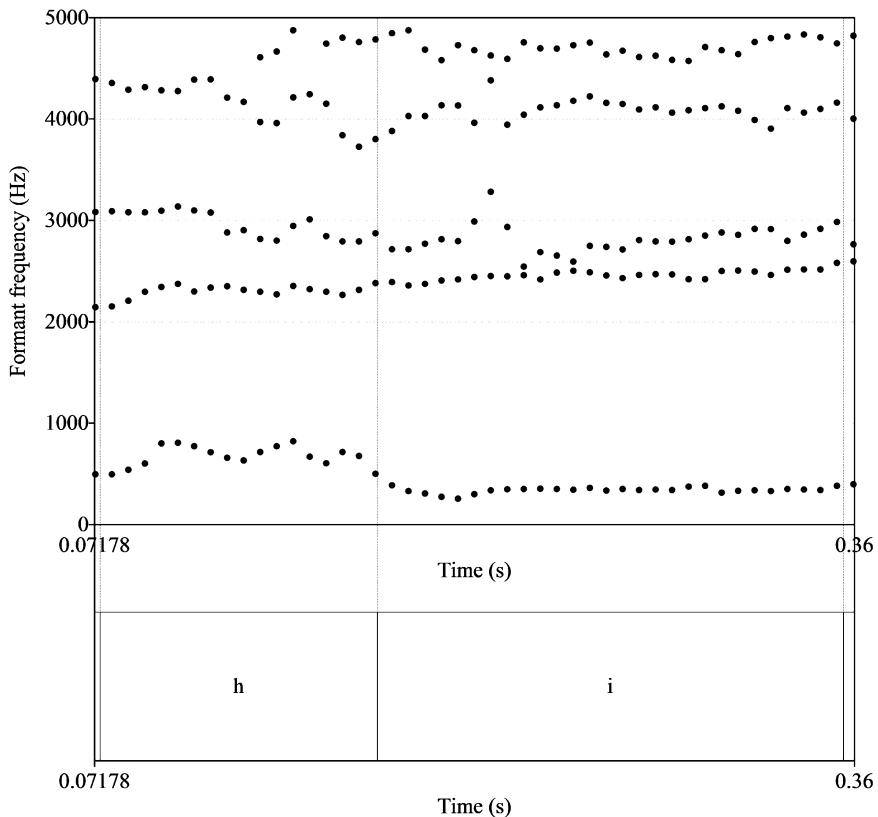

FIGURE 38 hi 'yes'

High front vowels do not exhibit a dip in F<sub>2</sub> after the consonants /y/ and /k/ in emphatic words, indicating that they are not articulated with pharyngalization. This can be seen in figs. 39.-40.

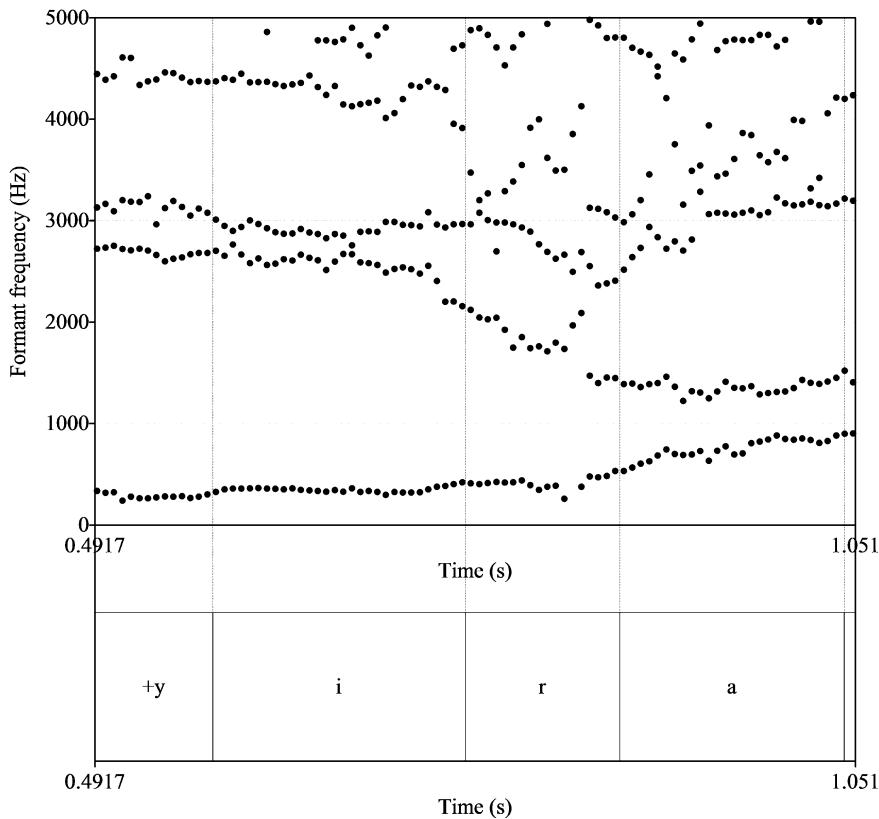

FIGURE 39    *+yira 'dared'*

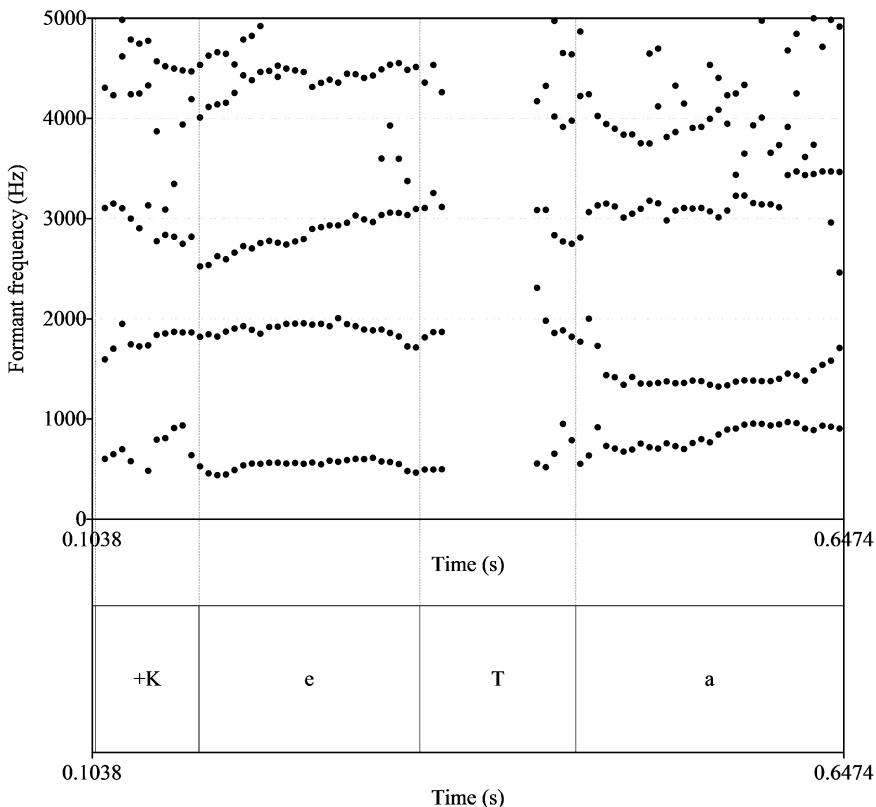

FIGURE 40 +kéta 'summer'

The consonant /k/ in a pharyngalized setting does not occasion the spread of pharyngalization to the adjacent vowel (see the discussion concerning /k/ in § 1.5.1.). It should be noted, however, that the articulation of /k/ is slightly more retracted before a pharyngalized /a/ (e.g. +kátl̥ 'he kills') than before a plain one (e.g. kárta 'cold'). The lack of pharyngalization in palatal /y/ may be correlated with its absence in the high vowel /i/, which is articulated in the same region as this glide.

#### 1.4 Notes on the Phonetic Realization of Selected Consonants

##### 1.4.1 Laryngal Settings of Unvoiced Stops and Affricates

###### 1.4.1.1 Introductory Remarks

The unvoiced stops and affricates can be classified into two groups according to their laryngal settings. These are designated as 'lax' and 'tense':

	Lax	Tense
Bilabial stop	/p/ [p <sup>h</sup> ]	/p̪/ [p]
Alveolar stop	/t/ [t <sup>h</sup> ]	/t̪/ [t]
Alveolar affricate	/č/ [tʃ <sup>h</sup> ~ ts <sup>h</sup> ]	/č̪/ [tʃ ~ ts]
Palatal stop	/c/ [c <sup>h</sup> ~ tʃ <sup>h</sup> ]	/c̪/ [c ~ tʃ]
Post-velar stop	—	/k̪/ [k]

The lax consonants are aspirated. During the occlusion of the lax consonants the vocal folds in the glottis are open and there is a relatively long voice onset time (VOT) before a following vowel. There is a relatively long gap in time between the release of the occlusion and the beginning of the vibration of the vocal folds, which is filled with a flow of air. The tense consonants are unaspirated and have a much shorter VOT before vowels in all contexts and voicing begins almost immediately after release of the occlusion. During the occlusion of tense segments the vocal folds are far more constricted than they are during the occlusion stage of lax segments and there is greater tension of the vocal tract walls. They may be described as glottalized. In the variety of the dialect spoken in Georgia they are sometimes realized as glottal ejectives, which results from the raising of the larynx. Glottal ejection in this variety does not occur in all tokens of these consonants and should be regarded as an allophonic alternant of non-ejective glottalization. In the Urmi region and all varieties in Iran and Armenia the post-velar /k̪/ is occasionally pronounced as an ejective, but other tense consonants are non-ejective. When ejection does occur in any of the aforementioned cases, it is generally a weak ejection.

The glottalized tense consonants are marked by a diacritic symbol <sup>h</sup> in the transcription (*p̪*, *t̪*, *c̪*, *č̪*, *k̪*). The symbol is superscribed in the case of /p̪/ for typographic convenience.

After sibilants and fricatives the VOT of the lax consonants is very short (e.g. /t/ in *štilə* 'he drank' and *čúxti* 'my hut') and is equivalent to that of tense consonants. In this context, therefore, the distinction between tense and lax unvoiced stops is neutralized. In the transcription lax consonants with such contextually conditioned deaspiration are not marked with a tense diacritic, e.g.

š-t-y	<i>štilə</i> ['ʃti:lɪ] 'he drank'	<i>šátə</i> ['ʃa:t <sup>h</sup> ɪ] 'he drinks'
š-p-x	<i>špəxlə</i> ['ʃpəxlɪ] 'it overflowed'	<i>šapəx</i> ['ʃap <sup>h</sup> ɪx] 'it overflows'

As can be seen, in other inflections such as *šátə* ['ʃa:t<sup>h</sup>ɪ] 'he drinks', in which the stop is preceded by a vowel, it is not deaspirated. In several verbal roots,

however, the deaspirated stop after sibilants and fricatives has been lexicalized and occurs in all inflections. In such cases the tense consonant should be regarded as a root phoneme and the diacritic is marked, e.g.

<i>s-ŷ-r</i>	<i>sŷərrə</i> 'he waited'	<i>saŷər</i> 'he waits'
<i>s-ŷ-s</i>	<i>sŷəslə</i> 'it decayed'	<i>saŷəs</i> 'it decays'
<i>s-ŷ-r</i>	<i>sŷərrə</i> 'he destroyed'	<i>saŷər</i> 'he destroys'
<i>š-ŷ-l</i>	<i>šŷəlla</i> 'he became paralyzed'	<i>šaŷəl</i> 'he becomes paralyzed'
<i>š-ŷ-k</i>	<i>šŷəklə</i> 'he became silent'	<i>šaŷək</i> 'he becomes silent'
<i>x-ŷ-k</i>	<i>xŷəklə</i> 'he embraced'	<i>xaŷək</i> 'he embraces'
<i>x-ŷ-r</i>	<i>xŷərrə</i> 'he dug'	<i>xaŷər</i> 'he digs'

Aspiration of the lax consonants is also sometimes eliminated at the end of words in fast speech due to the lack of release of the stop phase of the plosive. Deaspiration may occasionally occur in other cases, sometimes as a peculiarity of particular lexical items. The /t/ of the feminine inflection in the form *súṛta* 'small' (f.), for example, is pronounced unaspirated ['sorta]. This has developed by a process of sound symbolism, whereby aspirated stops in words of diminutive meaning are deaspirated (§ 1.10.).

With the exception of /k/, these pairs of unvoiced consonants and their voiced equivalents form a series of triads with three different types of laryngal setting:

Unvoiced lax glottis	Unvoiced tense glottis	Voiced
/p/	/ŷ/	/b/
/t/	/t̪/	/d/
/č/	/č̪/	/j/
/c/	/č/	/ʃ/
—	/k/	—

These can all occur in either plain or emphatic words. With regard to the pair of unvoiced stops (lax and tense), there are grounds for regarding the lax stop as the unmarked member and the tense one the marked one on the grounds that the lax stop occurs frequently in both plain and emphatic contexts but the tense stop occurs predominantly in emphatic contexts and only marginally in plain contexts (Tosco 2002, 745).

There are some variations in the glottal setting of the tense consonants across the Urmi villages. Speakers from some villages exhibit a certain tendency to realize the tense stops /ŷ/ and /t̪/ and the tense affricate /č̪/ as voiced [b], [d], [dʒ] in emphatic contexts. This is found in the form of the dialect

spoken in Sardarid<sup>2</sup> and was also documented for /t/ by Hetzron (1969) in the pronunciation of his informant. As already remarked, speakers of the dialect in Georgia sometimes pronounce the tense consonants as ejectives. This is heard mainly in the articulation of /t/ and /k/. They are not consistently realized as ejectives, rather this realization alternates sub-phonemically with non-ejective glottalization. The remark of Tsereteli (1978b, 28) that they are similar to the Georgian ejectives, therefore, is rather misleading.

#### 1.4.1.2 /p/, / $\hat{p}$ /, /b/

In most contexts the VOT of the unvoiced lax bilabial /p/ averages around 50ms. When preceded by a sibilant or fricative, e.g. *špaxla* ‘it overflowed’, *maxpal* ‘he neglects’, its VOT has an average of about 10ms. The tense bilabial / $\hat{p}$ / has an extremely short VOT, with a maximum of around 10ms. In some cases, in fact, the voicing begins almost simultaneously with the release of the occlusion of / $\hat{p}$ /. Such a short VOT may cause it to sound voiced. In the articulation of the voiced /b/, however, there is voicing during the occlusion before release.

The lax and tense members of this pair occur in both plain and emphatic words, e.g.

	Plain	Emphatic
Lax	<i>páta</i> ‘face’	+ <i>palléta</i> ‘division’
Tense	<i>þakkə</i> ‘it splits’	+ <i>þarméta</i> ‘understanding’

The waveforms in figs. 41–44 show the distinctions in VOT between lax /p/ and tense / $\hat{p}$ :

---

<sup>2</sup> E.g. +*duyra* ~ +*tuyra* ‘mountain’, +*blaša* ~ +*þlaša* ‘war’. Younansardaroud (2001, 36) mentions also devoicing of /d/ to /t/ in contexts where the dialect spoken in the town of Urmi has /t/, e.g. +*sayaṭa* = town dialect +*sayada* ‘hunter’.

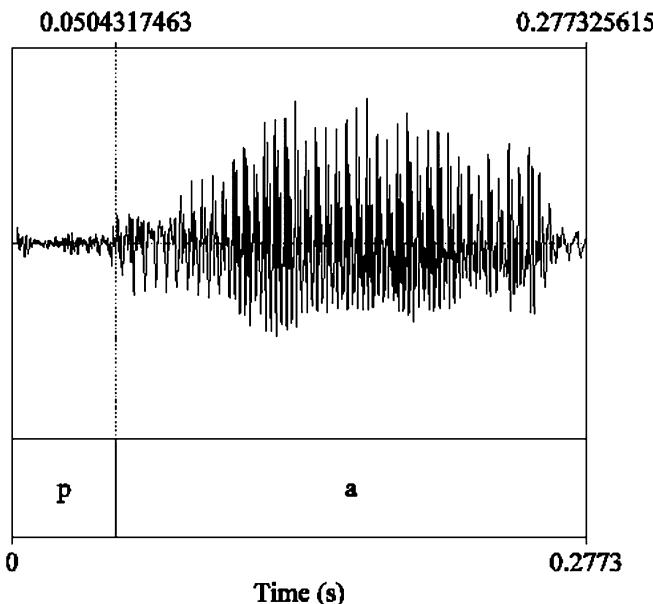

FIGURE 41 *First syllable of patu 'his face,' VOT 50ms*

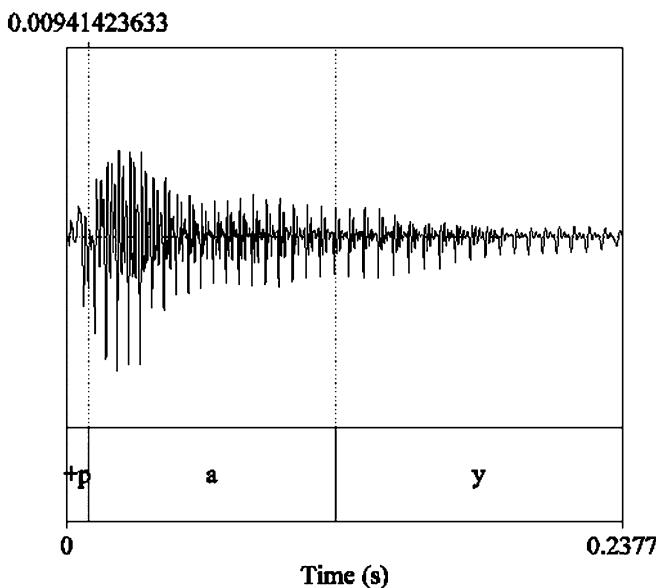

FIGURE 42 *Lax /p/ after sibilant in<sup>+</sup>spay 'good,' VOT 9ms*

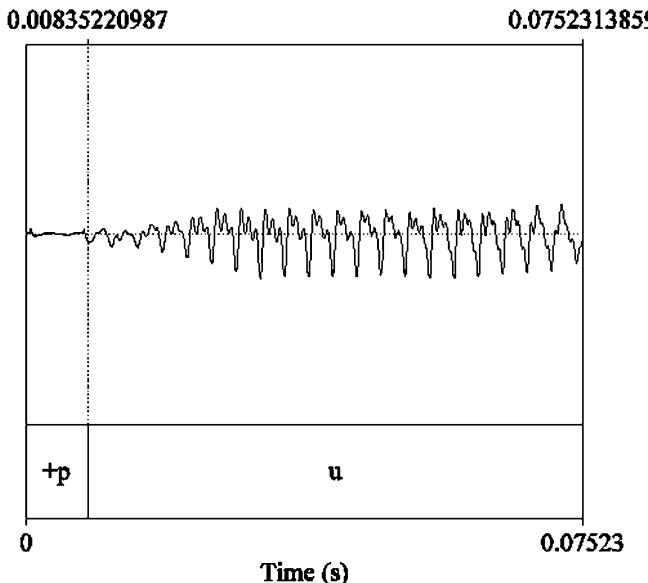

FIGURE 43 Tense /p/ in *+árþunute* 'the four of them', VOT 8ms

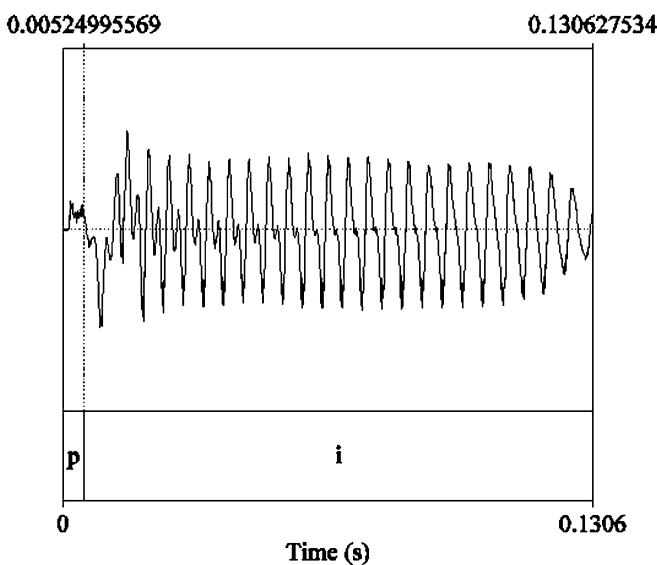

FIGURE 44 Tense /p/ in *p-ídi* 'by my hand', VOT 5ms

The spectrograms in figs. 45–47 show the differences in voice timing between tense /p/ and voiced /b/. A band on the bottom left reflecting the onset of voice before /b/ can be clearly seen in the spectrogram in fig. 47.

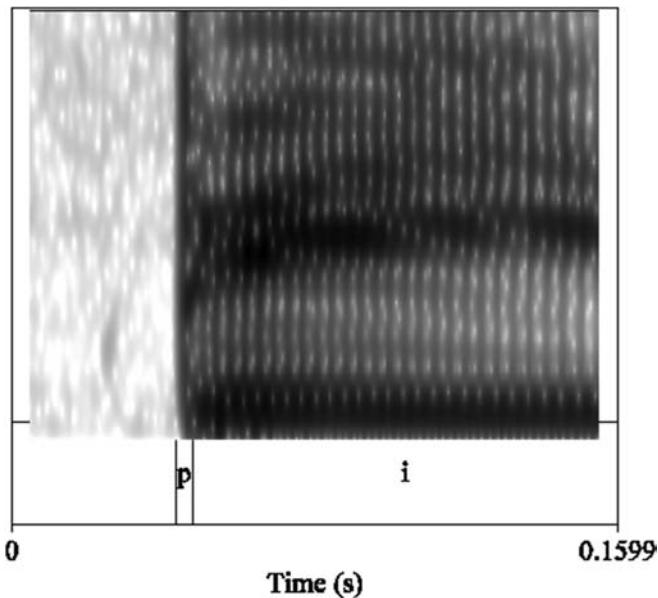

FIGURE 45 /p-idi/ 'by my hand'

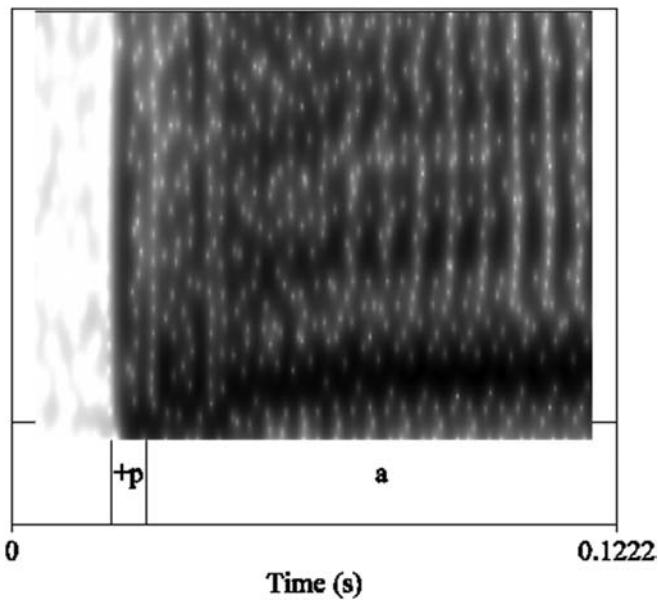

FIGURE 46 /+parmi/ 'they understand'

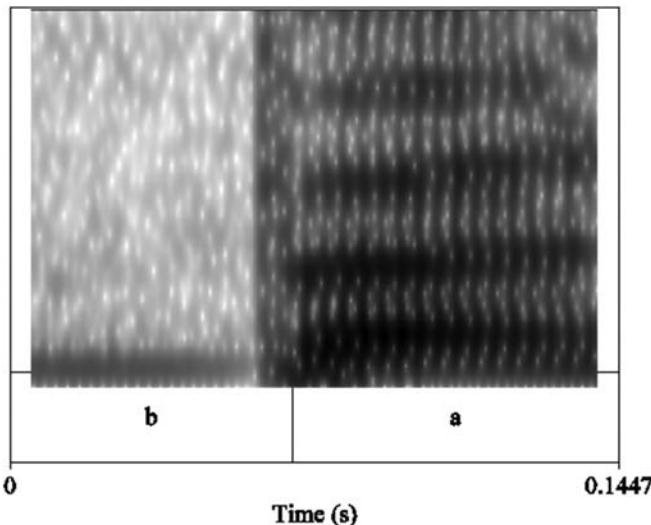

FIGURE 47 basima 'pleasant'

Minimal pairs demonstrating the opposition of lax /p/ and tense / $\hat{p}$ / are attested in both emphatic and plain words, e.g.

- |  |  |
|--|--|
| ${}^+páltun$ 'overcoat'                        | ${}^+páltun$ 'go out! (pl.)'           |
| $\hat{p}at\hat{p}\hat{o}\hat{t}$ 'he whispers' | $patp\hat{o}\hat{t}$ 'he cards (wool)' |

In some sporadic cases the closure of the lax /p/ is weaken to a bilabial fricative, e.g. *sépu* ['se: $\phi^h$ u] 'his sword' (A 39:19);  ${}^+rappiyula$  [r<sup>c</sup>a<sup>c</sup>ϕ<sup>c</sup>'ϕ<sup>h</sup>u<sup>c</sup>:ju<sup>c</sup>.l<sup>c</sup>ə<sup>c</sup>] 'he throws it' (A 40:5).

#### 1.4.1.3 /t/, / $\hat{t}$ /, /d/

There is a slight difference in tongue gesture between the lax /t/ and tense / $\hat{t}$ . The lax /t/ is a laminal alveolar, articulated with the blade of the tongue [t̪], whereas the front of the tongue is slightly retracted for / $\hat{t}$ /, which is an apical alveolar, articulated with the tip of the tongue [t̡]. As is the case with /p/, in most contexts the VOT of the unvoiced lax /t/ averages around 50ms. When preceded by a sibilant or fricative, e.g. *šti* 'drink!', *čuxti* 'my hut', its VOT has an average of about 10ms. The tense bilabial / $\hat{t}$ / has a similar average VOT of around 10ms.

The lax and tense members of this pair occur in both plain and emphatic words, as seen in the following minimal pairs, e.g.

**Plain**

- Lax *tílə* ‘he came’  
 Tense *t̪-ílə* ‘who is’

**Emphatic**

- Lax *+tálə* ‘fox’      *+tama* ‘there’  
 Tense *+t̪álə* ‘she plays’    *+t̪ama* ‘taste’

In these pairs the lax and tense stops contrast before a vowel in stressed syllables. Contrasts are also found in non-stressed syllables, e.g.

- +xálta* ‘food’      *+xálta* ‘mistake’  
*+natrívə* ‘they fell’    *+natrívə* ‘they guarded’

The voiced alveolar stop /d/ has different tongue gestures in plain and emphatic words. It is laminal like lax /t/ in plain words [d̪] but retracted and apical like tense /t̪/ in emphatic words [d̪], e.g. *dur* [du:r] ‘open!’, *+dur* [+du:r] ‘return!’

## 1.4.1.4      /č/, /չ/, /j/

The unvoiced alveolar affricates /č/ and /չ/ have different realizations in the various Urmi villages. Broadly speaking in the northern Urmi villages and Tabriz they are realized as affricates consisting of an alveolar stop onset [t̪] and a palato-alveolar sibilant [ʃ] offset, viz. /č/ [t̪h], /չ/ [t̪ʃ]. In the villages south of Urmi, on the other hand, the offset is the sibilant [s], viz. /č/ [ts̪h], /չ/ [ts]. There is, however, a certain amount of free variation between these two types of realization in the speech of informants originating from the southern villages. There is, moreover, some degree of mixing of the realizations in the speech of informants who have been in contact with different varieties of the dialect. In the Caucasus these affricates are realized with palato-alveolar offsets in most villages, viz. /č/ [t̪h], /չ/ [t̪ʃ], but in the village of Arzni in Armenia they tend to be realized as in the southern Urmi villages, viz. /č/ [ts̪h], /չ/ [ts].

In the lax member of the pair /č/ the onset is a laminal alveolar, articulated with the blade of the tongue, whereas in the tense affricate /չ/ the onset is apical alveolar. The VOT of the aspirated lax /č/ is shorter than after lax stops, averaging around 20ms before a following vowel. When preceded by a fricative, however, e.g. *‘axči* ‘but’, the voicing of the vowel begins immediately after the sibilant offset. The tense /չ/ is unaspirated with no perceptible gap between the release of the sibilant offset and the voicing of a following vowel.

The lax and tense members of this pair occur in plain and emphatic words, e.g.

	<b>Plain</b>	<b>Emphatic</b>
Lax	<i>čamčəm</i> 'he hurls'	<sup>+</sup> <i>čančəl</i> 'he becomes tired'
Tense	<i>čarčər</i> 'he screams'	<sup>+</sup> <i>čayəm</i> 'he closes'

The voiced /j/ has a palato-alveolar offset in the northern variety, i.e. /j/ [dʒ]. In the southern villages the offset tends to be a voiced sibilant [z], i.e. /j/ [dz]. As with /č/ and /č̄/, there is some degree of free variation between these two types of realization in the southern villages and there is some mixing of the realizations in the speech of informants who have been in extensive contact with different varieties. In the Caucasus /j/ is realized with palato-alveolar offset in most villages, viz. [dʒ], but in the village of Arzni in Armenia it tends to be realized as in the southern Urmi villages, viz. [dz].

As is the case with the voiced consonant /d/, in plain words the onset is a laminal alveolar whereas in emphatic words it is slightly retracted and articulated as an apical alveolar.

The realization of the offset of the affricates with a palatal offset in the southern variety is particularly common in lax /č/ [tʃ<sup>h</sup>] and the voiced /j/ [dʒ] in plain contexts, e.g. *čirýya* [tʃ<sup>h</sup>i'rijjɪ] 'autumn', *jvájta* ['dʒyadʒtʰa] 'movement'. Speakers of the southern variety more frequently realize the offset as alveolar [ts]/[dz] or post-alveolar [ts]/[dz] in the emphatic series <sup>+</sup>/č/, <sup>+</sup>/č̄/ and <sup>+</sup>/j/. This may be due to the greater possibility of anchoring the tip of the tongue at the alveolar zone than the palato-alveolar zone (where [tʃ] is pronounced), which is a condition required to counter the tendency to disturb the primary articulation under the pressure of the rearward movement of the tongue during its retraction in pharyngalization (see the remarks of Odisho 1988, 50). In the northern variety of the dialect the consonants /č/, /č̄/ and /j/ are regularly pronounced as alveolar-palatals ([tʃ<sup>h</sup>], [tʃ] and [dʒ]). Due to these variations it was decided to normalize the transcription and transcribe all tokens of this series of affricates with the characters /č/, /č̄/ and /j/.

#### 1.4.1.5 /č/, /č̄/, /j/

In the northern variety of the dialect the unvoiced consonants /č/ and /č̄/ are normally realized as palatal stops ([č<sup>h</sup>], [č]) or postpalatal stops ([č̄<sup>h</sup>], [č̄]), in all cases with a short homorganic period of frication after the release. In the southern variety, on the other hand, they are normally realized as palato-alveolar affricates ([tʃ<sup>h</sup>], [tʃ]). There is, however, a certain amount of variation and mixing, especially in the speech of informants who have been brought up in the town of Urmi or another mixed urban community such as Tehran or Hamadan. In plain words the stop onset is a laminal alveolar whereas in emphatic words the front of the tongue is retracted slightly and the onset is

articulated as a apical alvelor. In the Caucasus these consonants are normally realized as palato-alveolar affricates ([t<sup>h</sup>], [tʃ]), as in the southern Urmî villages. This means that their realization in the Caucasus is identical to that of /č/ and /č̄/, except in the village of Arzni in Armenia, where the latter tend to be realized as [tsh] and [ts] respectively.

There is a certain amount of aspiration after /c/, with a VOT averaging around 20ms in most contexts before vowels, whether it is realized as a stop [c<sup>h</sup>] or an affricate [t<sup>h</sup>]. When preceded by a sibilant or a fricative, however, e.g. *mascanta* ‘to become poor’, *jaxci* ‘they laugh’, the consonant is deaspirated.

The lax and tense members of this pair occur in plain and emphatic words, e.g.

	<b>Plain</b>	<b>Emphatic</b>
Lax	<i>catəv</i>	‘he writes’
Tense	<i>çarra</i>	‘deaf’
		+ <i>camutra</i> ‘pear’
		+ <i>çal</i> ‘unripe’

The tense consonant /č/ is largely restricted to loanwords from Kurdish and Azeri.

The same patterns of realization apply to the voiced /j/. In the northern variety it is normally pronounced as a voiced palatal stop [j] or postpalatal stop, with a short homorganic period of frication after the release. In the southern variety it is normally realized as a voiced palato-alveolar affricate [dʒ]. The affricate realization is also found in the speech of informants originating in the northern villages who have mixed extensively with speakers of other varieties. In the Caucasus /j/ is realized as [dʒ], as in the southern Urmî villages. This means that its realization in the Caucasus is identical to that of /j/, except in the village of Arzni in Armenia, where /j/ tends to be realized as [dʒ].

The onset of the consonant is a laminal alveolar in plain words and an apical alveolar in emphatic words.

Some speakers who pronounce /c/, /č/ and /j/ predominantly as palato-alveolar affricates, according to the southern relaization, frequently also pronounce /č/, /č̄/ and /j/ as palato-alveolar affricates and so the distinctions may collapse, e.g.

<i>crəxlə</i>	[t <sup>h</sup> rɪxli]	‘he surrounded’
<i>črəxlə</i>	[t <sup>h</sup> rɪxli] ~ ['tʃrɪxli]	‘he climbed’

<i>jnávlə</i>	[dʒnivli]	‘he stole’
<i>jnávlə</i>	[dznivli] ~ [dʒnivli]	‘he kidnapped’

In the speech of such informants the distinctions tend to be levelled in plain contexts in particular. As remarked above, there is a greater tendency to have a sibilant offset ([ts], [dz]) in the southern type of realization when the word is emphatic.

#### 1.4.1.6 /k/

The tense unvoiced consonant /k/ is a post-velar stop in the environment of low or back vowels, e.g. *kátu* ['ka:tʰu] 'to him'. In the environment of front high vowels it is slightly more advanced and has a velar rather than post-velar occlusion, e.g. *dvíkévən* [dvi:k'e:vɪn] 'I have seized them'. As with other tense unvoiced stops, its VOT has an average of about 10ms.

#### 1.4.2 /v/

The most common realization of /v/ is a labio-dental fricative [v], e.g. *vádla* ['vdłɪ] 'he did', *+av* [+?av] 'he', *sávlux* ['svłox] 'you have grown old', *ləlaváta* [le:la:və:tʰɪ] 'nights'.

Its articulation is sometimes weakened to a labio-dental approximant [v̺], e.g. *+av* [+?av], *+šammánəvən* [+ʃam'ma:nəvən] 'I am a listener', *švávu* ['ʃva:vʊ] 'their neighbour'. In some cases there is no perceptible dental articulation and it is realized as a labio-velar approximant [w], e.g. *+xoraváta* [+xo:rə:wə:tʰə] 'friends', *+varída* [+wa:rɪ:da] 'flower', *ju-bétəvax* [ju:bɛ:tʰɪwax] 'you (fs.) are in the house', *savunváta* [savon'wə:tʰɪ] 'grandfathers'.

#### 1.4.3 /s/, /š/, /z/

The sibilant /s/ is articulated by forming a constriction between a grooved tongue and the alveolar ridge. In plain words the constriction is made with the blade of the tongue, whereas in emphatic words the tongue is retracted slightly and it is articulated with the tongue tip. The same remarks apply to the voiced sibilant /z/.

The palato-alveolar /š/ is articulated with a constriction further back on the alveolar ridge than /s/. In both plain and emphatic words the constriction is made with the blade of the tongue, but in emphatic words the tongue is retracted slightly and so the articulation is made further forward on the blade.

#### 1.4.4 /x/

The fricative /x/ is articulated on the velum in plain words but in emphatic words the constriction is post-velar in the place of articulation of the tense stop /k/, e.g. *xálta* ['xaltʰa] 'aunt', *+xalta* [+xaltʰa] 'eating'.

### 1.4.5 /h/, /ɾ/

When the laryngal /h/ occurs between vowels the vocal folds continue to vibrate and so it is realized as a voiced [h]. The continued voicing is shown the waveform of 'aha 'this' in fig. 48.

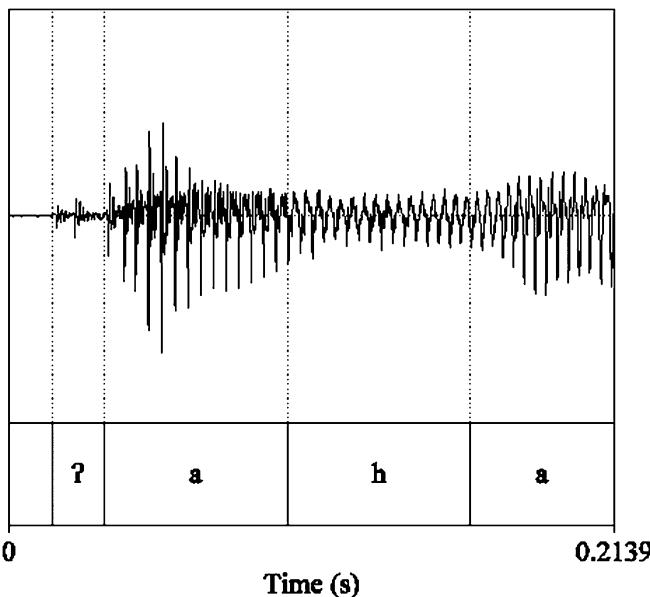

FIGURE 48 *Waveform of 'aha 'this'*

In fast speech the /h/ is weakened with no perceptible constriction of vocal folds or diminution of voicing, resulting in the coalescence of two adjacent vowels, as shown in fig. 49, which is the realization of *b-álaħa* 'by God':

In Armenia speakers in some cases pronounce a velar fricative /x/ where speakers from the Urmi region have /h/. This is found in word-initial position in some tokens of words, but is not a consistent feature, e.g.

<i>xáda</i>	'thus' (B 15:3)	< <i>hada</i>
<i>xátxa</i>	'thus' (B 16:14)	< <i>hatxa</i>
<i>xál</i>	'until' (A 46:2)	< <i>hal</i>
<i>xakyánnux</i>	'I shall tell you' (A 42:1)	< <i>hakyannux</i>
<i>xamzùməxva</i>	'we were speaking' (B 16:13)	< <i>hamzuməxva</i>

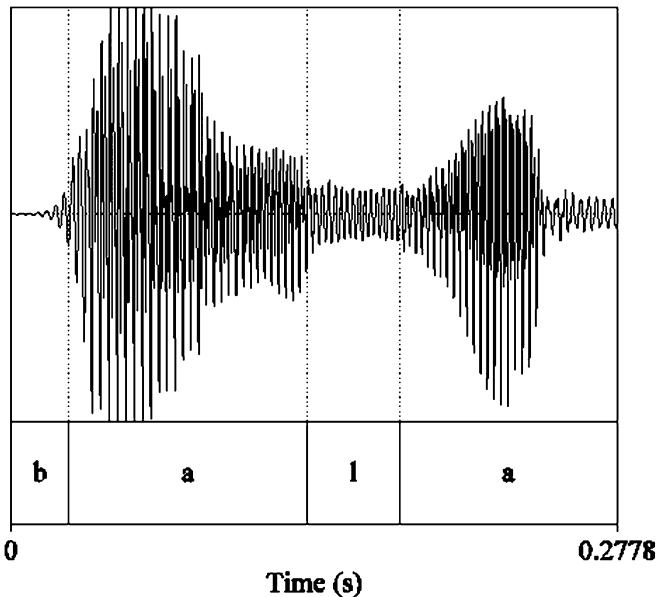

FIGURE 49 b-álaха 'by God'

The glottal stop /ʔ/ is pronounced clearly as a break in voicing between two vowels in slow careful speech, as shown in fig. 50. In fast speech, however, it is often weakened without any clear break, as shown in fig. 51. The /ʔ/ is represented in the transcription even when weakened in this way for the sake of orthographic consistency.

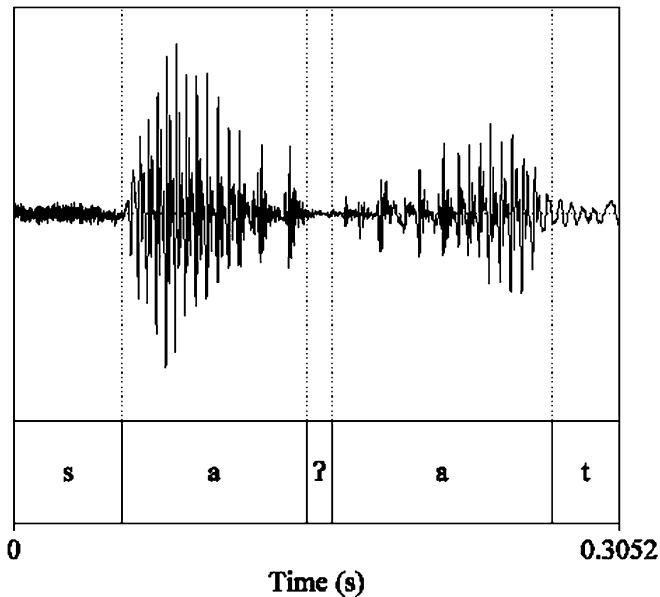

FIGURE 50 *Waveform of +sa'at 'hour' (lento)*

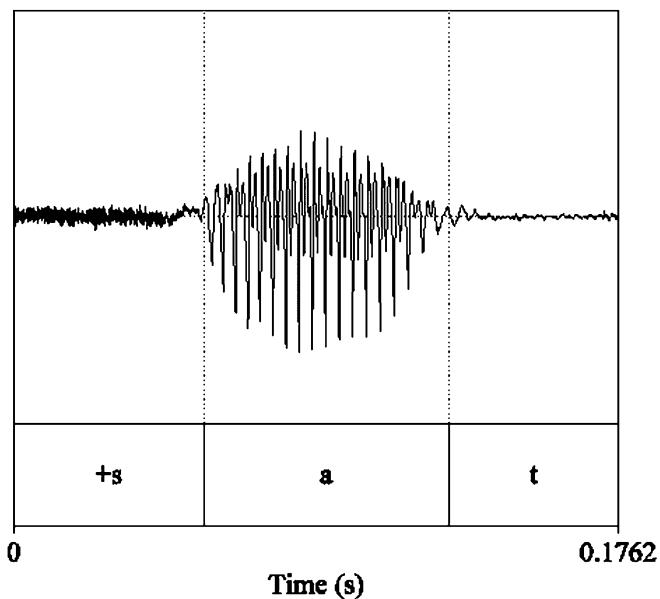

FIGURE 51 *Waveform of +sa'at 'hour' (allegro)*

### 1.4.6 /n/

The alveolar nasal /n/ is realized as a velar nasal [ŋ] before the velar and post-velar consonants /x/ and /k/, e.g. *bənxàpən* [bɪŋ'xa:pɪn] 'I am ashamed' (A 1:17), *mən-xa-bàxta* [mɪŋxa'baxta] 'from a woman'. Before a labial it is realized as [m], e.g. *munpàllun* [mom'pɪllon] 'they dropped' (A 3:78), *mən-púmmət* [məm'pommit] 'from the mouth of' (A 3:19).

### 1.4.7 /r/

The rhotic /r/ has two different modes of articulation according to whether the word is plain or emphatic. In plain words it is an alveolar tap [ɾ] articulated with the blade of the tongue, whereas in emphatic words it is pronounced more robustly as an alveolar trill [r] with a series of several contacts between the tongue blade and the alveolar ridge, e.g. *dur* [dʊ:r] 'open!', *+dur* [+dʊ:r] 'return!'

## 1.5 Phonological Aspects of Emphasis

### 1.5.1 *Phonological Analysis and Historical Background*

In C. Urmi emphasis, that is pharyngalization, is not a phonological feature of individual consonant segments, as it is in many Neo-Aramaic dialects and in Arabic. So the historical emphatic consonant phonemes \**t* and \**s* no longer exist as segments, but rather emphasis has become detached from the feature profile of these segments and become a 'floating' suprasegmental feature. The phonological domain of emphasis, therefore, is a word rather than a segment. In the transcription suprasegmental emphasis is marked at the beginning of its word domain by the symbol +.

When the historical emphatic \**s* lost the feature of pharyngalization from its segmental profile, it merged on the segmental level with historical \**s* resulting in one phoneme /s/.

When the historical emphatic \**t* lost the feature of pharyngalization from its segmental profile, on the other hand, it retained a glottal tension that distinguished it from the historical plain \**t*, creating the opposition /tʃ/ : /t/. The muscular tension associated with the emphatic segment \**t* and its tendency to be pronounced with constricted larynx converged with the tense glottal setting of /tʃ/. So on the phonetic level the first segment in a word such as *+t̪amər* 'he buries' would sound similar to the corresponding emphatic segment in its historical antecedent \**tamər*. On a phonological level, however, there has been a reanalysis, which can be represented thus:

Word level [+Pharyngal]

Segment level:  $t \quad > \quad t$   
 [+Pharyngal]      [+Tense]  
 [+ Tense]

This harmonic feature of suprasegmental backing no doubt developed under the influence of the vowel harmony of Azeri Turkish with which the dialect was in contact. There was, however, only partial convergence to the Turkish harmonic system. In the Azeri system the vowels are affected, and some consonants, in particular sonorants and the dorsal consonants, which are retracted adjacent to back vowels (Vaux 2009), but not the range of consonants that undergo pharyngalization in C. Urmi. In C. Urmi there is only harmony of backness of vowels, not of roundness, since, unlike in Azeri, words can contain high rounded and unrounded vowels, e.g. *muplóxxa* ‘she uses’. In Azeri all vowels participate in the front—back harmony system, whereas in C. Urmi this is in effect restricted to /a/ and /ə/. This is more characteristic of the Iraqi NENA dialects and Arabic, in which emphasis spread tends does not to affect or is blocked by high vowels, especially long ī (Hoberman 1989, 80–81). In some varieties of C. Urmi spoken in villages south of Urmi, e.g. Sardarid (Younansardaroud 2001), a clear front—back distinction is extended to more vowels, notably to the /u/ and /o/ vowels, which are noticeably fronted in plain words. This would represent a greater convergence with Azeri. The Jewish Urmi dialect also exhibits the distinct fronting of /u/ and /o/ in plain words (Khan 2008a, 23). A further difference between Azeri and C. Urmi is that C. Urmi treats loanwords originating from Persian differently from Azeri (see below).

As a result of the reanalysis of segmental emphasis as suprasegmental emphasis, a ternary system of stops emerged: *t*, *t̪*, *d* (unvoiced lax, unvoiced tense, voiced). This is likely to have been stimulated by contact with non-Semitic languages in the region. The Caucasian languages and other languages spoken south of the Caucasus across an area extending into northern Iran had a similar ternary system of stops (Chirikba 2008, 44–45). In the Caucasian languages the tense member is a glottal ejective. This is found also in non-Caucasian languages spoken in the Caucasus region, such as dialects of Armenian (an Indo-European language) spoken in Georgia. In Eastern Armenian spoken further south in Armenia and north-western Iran the tense member is an unaspirated stop, which corresponds to the phonetic quality of the unaspirated tense /t̪/ of C. Urmi. Eastern Armenian has also a ternary system of labials, affricates and velar stops, but only a binary system of fricatives (voiced—unvoiced, e.g. *s*, *z*). This is parallel to the system of phonemes that developed in C. Urmi. This is

shown in the following table, in which the transcription conventions adopted for the C. Urmî dialect are used to represent the corresponding sounds in Armenian:

C. Urmî Eastern Armenian		
labials		
voiceless aspirated	/p/	/p/
tense	/p̪/	/p̪/
voiced	/b/	/b/
dental/alveolar stops		
voiceless aspirated	/t/	/t/
tense	/t̪/	/t̪/
voiced	/d/	/d/
dental/alveolar fricatives		
voiceless	/s/	/s/
voiced	/z/	/z/

The ternary system of labials in Armenian would have induced the development of tense /p̪/ in C. Urmî. The lack of a ternary system of fricatives in Armenian would have induced the merger of \*s with \*s in C. Urmî. It should be noted, however, that in some isolated cases an emphatic \*s shifts to the tense affricate /χ/, which is in the Armenian sound inventory (see below), e.g. *+χəlpa* ‘crack’ < \*səlpa (§1.9.6.). Speakers of the C. Urmî dialect in Georgia sometimes realize the tense stops as ejectives, just as the tense stops are realized as ejectives in Armenian in Georgia. The loss of the NENA interdental consonants \*t and \*d in C. Urmî is also a consequence of convergence with the Armenian type of consonant system. Unaspirated stops are also found in Kurdish dialects of the Urmî region (Kahn 1976).

Armenian has a triad of velar stops (aspirated, tense and voiced k, կ, g) but no uvular stops. In order to converge with the Armenian type of system the historical uvular \*q of C. Urmî was fronted to converge with tense կ and as a result there was a push-chain effect whereby the NENA velars \*k, \*կ and \*g were in turn moved forward to a palatal articulation /c/ [cʰ] ~ [t̪ʰ], /ç/ [c] ~ [t̪] and /j/ [j] ~ [dʒ]. The realization of the existing affricates /č/, /χ/ and /j/, in their turn, tended to be pushed further forward in some varieties to [tsʰ], [ts] and [dz], though this fronting at the end of the chain has not always taken place. A similar push-chain fronting of the dorsal consonants and affricates in order to converge with an Armenian type of system without an uvular is attested in other lan-

guages of the region of north-western Iran, notably in the Azeri dialects of this area, known as Western Azeri (Stilo 1994). Such a process occurs in languages in what Stilo calls the ‘transition area’ between language areas of Transcaucasia and northern Iran. Each of these language areas contains languages of diverse genetic groups but they share similar phonological systems, which are typically represented by those of Armenian (Transcaucasia) and Persian (northern Iran). In Azeri, unlike in Armenian, however, there was only a binary system of stops (voiced and unvoiced) without tense unvoiced counterparts, which is a feature shared with Persian. The original uvular in Azeri in Iran was voiced [g] and so this moved forward to the voiced velar [g] and the other dorsals moved forward (Caferoglu and Doerfer 1959, 295). C. Urmi has converged with both the Azeri and the Armenian type of systems, in that it has tense stops and has undergone a push-chain fronting of the dorsals and affricates to eliminate an uvular, thus:

	Western Azeri	Armenian	C. Urmi	NENA
<b>Velar</b>				
voiceless aspirated	—	/k/	—	
tense	—	/χ/	/χ/	*q
voiced	/g/	/g/	—	
<b>Post-alveolar</b>				
voiceless aspirated	/č/ [tʃʰ]	/č/ [tʃʰ]	/č/ [cʰ]/[tʃʰ]	*k
tense	—	/č/ [tʃ]	/č/ [c]/[tʃ]	*č
voiced	/j/ [dʒ]	/j/ [dʒ]	/j/ [ʃ]/[dʒ]	*g
<b>Dental/Alveolar</b>				
voiceless aspirated	/č/ [tʂʰ]	/č/ [tʂʰ]	/č/ [tʃʰ]/[tʂʰ]	*č
tense	—	/č/ [tʂ]	/č/ [tʃʰ]/[tʂ]	*č
voiced	/j/ [dʐ]	/j/ [dʐ]	/j/ [dʒ]/[dʐ]	*j

Among the historical antecedents listed in the rightmost column, the \*č was an emphatic affricate segment and the \*χ was an unaspirated non-emphatic stop. The former developed in some NENA dialects from earlier native Aramaic consonants, e.g. š and t (Khan 2008b, 60–62), whereas the latter entered NENA dialects in loanwords, principally from Kurdish.

In Iranian Azeri the affrication of velar stops tends to be restricted to the environment of front vowels (Dehghani 2000, 28–36), which is not a restriction that is found in C. Urmi NENA. Palatalization, but not affrication, of velars occurs also in Persian (Dehghani 2000, 36). The palatalization of k is a feature also of Arabic dialects spoken in Turkey (Jastrow 1978, 1:40).

As has been remarked, there is dialectal and, to some extent, idiolectal variation, whereby in the northern variety of C. Urmi the NENA velars \**k*, \**χ* and \**g* are not pushed fully forward to affricates but rather are realized as pre-velar palatal stops /c/ [c<sup>h</sup>], /χ/ [c], /j/ [t̪] and consequently the post-alveolar affricates \*č, \*č̄ and \*j are not pushed forward to dental/alveolar affricates.

The greater degree of fronting, which is characteristic of the southern variety of the dialect, can be regarded as reflecting a greater convergence with the languages in contact, in particular with the push-chain process of Azeri resulting in palatal affricates and dental-alveolar affricates, which is a feature of Azeri dialects as far north as Nakhchivan (İmamquliyeva 2014). It has already been noted that some of the southern varieties of C. Urmi NENA exhibit a greater degree of fronting of back vowels in plain words than in the northern dialects, again in conformity with processes in Azeri. Older informants report that at an earlier period the speakers from the southern villages had a reputation for mixing NENA with Azeri in their speech to a greater extent than in the northern dialects. This is also noted by Maclean (1901, ix). Speakers from the village of Barbari had a particular reputation in this regard.

Furthermore, it is relevant to note that a similar palatalized affrication of dorsal consonants occurs in the variety of Kurdish spoken immediately to the south of Urmi but not in Kurdish spoken north of Urmi. The Kurdish spoken to the south of Urmi belongs to the Mukri variety of Sorani Kurdish, whereas the dialects to the north belong to the Kurmanji group. In Mukri the dorsals /k/ and /g/ are realized as the affricates [tč<sup>h</sup>] and [dž] respectively before high front vowels, e.g.<sup>3</sup>

/ke:ʃe/	[tč <sup>h</sup> e:ʃe]	'problem'
/kør/	[tč <sup>h</sup> ør]	'blind'
/kif/	[tč <sup>h</sup> i:f]	'bag'
/gezər/	[dže:zər]	'carrot'
/gøz/ -	[džøz]	'walnut'
/ba:rgi:n/	[ba:rðzi:n]	'carthorse'

There are traces of Sorani Kurdish influence on the southern C. Urmi varieties also in the lexicon, e.g. the word čakku 'knife' (= Sorani Kurdish čeqo), which is not used in the northern C. Urmi villages.

The published descriptions and transcriptions of vernacular C. Urmi reflect various realizations. Younansardaroud (2001) represents the palatals of the

<sup>3</sup> I am grateful to Ergin Öpentin for supplying these examples from his forthcoming grammar of Mukri Kurdish.

dialect of the village of Sardarid, lying south of Urmi, as fully fronted, in accordance with the expected profile of southern Urmi dialects. The informant of Hetzron (1969) pronounced /c/ as an aspirated stop rather than an aspirate, which suggests that he originated from the northern region.

At an earlier period Stoddard (1855, 11) describes the /c/ of C. Urmi as being pronounced like 'k in *kind* ... a y being quickly inserted after k', i.e. a stop with a palatal offglide. In the transcriptions of texts from Urmi by Socin (1882) /c/ and /ʃ/ are transcribed *k[y]* and *g[y]* respectively. Socin's informant was from the village of Mat-<sup>+</sup>Maryam (<sup>+</sup>Hassar), which lies to the south of Urmi. This may suggest that full affrication of /c/ and /ʃ/ was less widespread in the 19th century. One should note, however, the somewhat idiosyncratic transcriptions *talba* and *dümlâ* in the word-list of Müller (1864a, 106–107) representing *calba* 'dog' and *jumla* 'camel,' which seem to reflect the alveolar onset of the affricates [tʃ<sup>h</sup>] and [dʒ].

Osipoff (1913), who was an Assyrian from Georgia (Polotsky 1961, 3 n. 2), represents /c/ and /ʃ/ as [c'] and [ʃ] in his careful phonetic transcription. Kalashev (1894b), who gathered his material in the Caucasus, transcribes these consonants by the symbols ꙗ and Ꙙ respectively. This could be interpreted as evidence that at an earlier period the palatals /c/ and /ʃ/ were pronounced as stops in the Caucasus.

Not all occurrences of the segment /t/ in the synchronic state of C. Urmi derive historically from \*t. In emphatic words /t/ sometimes derives from a coalescing of \*d and a laryngal \*, e.g.

<sup>+</sup> <i>yatta</i> 'she knows'	<	* <i>yad'a</i>	<	* <i>yad'a</i>
<sup>+</sup> <i>tata</i> 'sweat'	<	* <i>d'ata</i>	<	* <i>d'ata</i>

As can be seen, in both cases the laryngal is ultimately derived from a pharyngal. The phoneme /t/ derived from \*d also occurs in plain contexts, e.g.

<i>t-ilə</i> 'that he is'	<	* <i>d-ile</i>
<i>t-atə</i> 'he will come'	<	* <i>bəd-ate</i>

Furthermore /t/ occurs in a few plain words which at some stage of development contained an emphatic \*t. This applies to the word *tanṭən* 'he hums' (< \**tanṭən*). Speakers from the village of Dizatacyā, on the southern periphery of the Urmi plain, still pronounce the word emphatic <sup>+</sup>*tanṭən*. Note also the verb *šaṭəx* 'he spreads out (small objects on)', which has developed as a doublet from <sup>+</sup>*šaṭəx* 'he stretches himself/a person (on the ground)' by removing the empha-

sis. Another example seems to be *tupra* ‘tail’ (< \**tupra*). The dialect C. Qaraqosh preserves the emphatic consonant in the word *bar-tupra* ‘strap for securing saddle tied around the back of an animal’ (literally ‘behind the tail’). The emphasis may have been removed from these words through a process of sound symbolism whereby there is an iconic association between the higher pitch of plain sounds and the thinness and lightness of objects and sounds. The unaspirated feature of the stops is retained also as an expression of the diminutive (§ 1.10.).<sup>4</sup> An original non-emphatic \**t* has, indeed, developed into an unaspirated /t/ in a few words through sound symbolism to express the diminutive, e.g. *t̪alpa* ‘eyelash’ < \**t̪alpa* (cf. Syriac *tallīpē*, Turoyo *tlafine*), *surta* ‘small’ (fs.) < \**zurta* and the derivative verb *sarṭən* ‘he becomes small’.

Some words with an original emphatic \**t* have undergone loss of emphasis in C. Urmī but have a plain lax /t/, e.g.

<i>taxana</i>	‘miller’	< * <i>tahhānā</i> (cf. C. Qaraqosh <i>taxana</i> )
<i>taxən</i>	‘he grinds’	< * <i>tāhen</i> (cf. C. Qaraqosh <i>taxən</i> )
<i>talək</i>	‘he disappears’	< * <i>tāleq</i> (cf. C. Walto <i>taləq</i> )
<i>tapə</i>	‘he sticks/ignites’	< * <i>tāpē</i> (cf. C. Barwar <i>tape</i> )
<i>tarə</i>	‘it becomes wet’	< * <i>tāre</i> (cf. C. Qaraqosh <i>tare</i> )

The lack of retention of the unaspirated quality of the emphatic correlates with the lack of diminutive sound symbolism in these words. The removal of emphasis in these cases appears to have been an arbitrary process. Some of these forms are still emphatic on the periphery of the Urmī region, e.g.

Dizatacyā (south periphery of Urmī plain)

<sup>+</sup>*texana* ‘miller’

<sup>+</sup>Mawana (highlands west of Urmī)

<sup>+</sup>*taxana* ‘miller’

<sup>+</sup>*tape* ‘he sticks/ignites’

Conversely, the pharyngalization may be retained but the tense stop is replaced by a lax one, e.g.

<sup>4</sup> It is relevant to note that higher pitch is one of the features of sound symbolism that Nichols (1971) identified in diminutives in native American Indian languages.

<sup>+</sup> <i>cətra</i>	'knot'	< <sup>+</sup> * <i>kətra</i>	< * <i>qəṭrā</i>
<sup>+</sup> <i>catər</i>	'he knots'	< <sup>+</sup> <i>katər</i>	< * <i>qāter</i>

Here also the initial tense <sup>+</sup>*k* is replaced by the lax /c/.

It is worth noting that also in the Jewish Urmī dialect emphasis has become a suprasegmental word-level feature, but, unlike C. Urmī, there are no tense stops in its phoneme inventory, so when emphasis was removed from the historical emphatic stop segment <sup>+</sup>*t*, it became a lax aspirated stop:

C. Urmī	J. Urmī
* <i>tina</i> 'mud'	+ <i>tīna</i> [+'ti:na]

In fact in the Iraqi NENA dialects emphatic /t/, although often unaspirated, may also be realized with aspiration, e.g. Jewish Zakho *tālāb* [tʰa:lāb] 'he seeks'. In C. Urmī the unaspirated alternant realization has been phonologized due to convergence with the Armenian-type tense stop phonemes.<sup>5</sup>

The consonant system of Jewish Urmī corresponds more closely to that of Persian than to those of Armenian of Transcaucasia or Western Azeri (Stilo 1994, 78), in that it has retained the uvular /q/ and the velars /k/ and /g/ have not been palatalized.<sup>6</sup> As in Persian, /q/ tends to be voiced and fricativized, especially in intervocalic position (Khan 2008a, 20):

Persian	J. Urmī	C. Urmī	NENA
/q/	/q/	/k/	*q
/k/	/k/	/c/ [cʰ]/[tʃʰ]	*k
/g/	/g/	/f/ [j]/[dʒ]	*g
/č/	/č/	/č/ [tʃʰ]/[tsʰ]	*č
/j/	/j/	/j/ [dʒ]/[dz]	*j

In C. Urmī Persian loanwords containing /q/ (realized in Persian as uvular [q] or [χ]) have /k/, which corresponds to the Persian uvular stop realization [χ], e.g.

5 According to Garbell (1965a, 33) in the Jewish dialects of southern Iranian Azerbaijan all unvoiced stops are pronounced without aspiration in emphatic words irrespective of their historical origin.

6 It is relevant to note that Garbell (1965b, 159), in her study of the impact of Kurdish on J. Urmī, concluded that the dialect had been influenced by the Kurdish dialects spoken to the south of Urmī in Iran and north-eastern Iraq, rather than those spoken to the north. It is the northern dialects of Kurdish that exhibit the Armenian type of opposition of aspirated and unaspirated stops (Tosco 2002, 748–749).

*karibáya* ‘stranger’ < Pers. (< Arab.) *qarīb* [ga'ri:b]

The consonant \**q*, from which /k/ in the C. Urmī dialect is derived historically, is associated with emphasis in other NENA dialects. In many dialects /q/ shares with the emphatics /t/ and /š/ the quality of preserving the pharyngal consonants /χ/ and /h/, which have elsewhere lost their pharyngal articulation, /χ/ shifting to /ʃ/ or zero and /h/ to /x/. This is found, for example, in NENA dialects in Iraq, e.g.

### Qaraqosh

‘amoqa	‘deep’
ta‘ən	‘he lifts’
haziqa	‘strong’
raḥoqa	‘far’
qyaḥa	‘to touch’

### Jewish Zakho

‘amoqa	‘deep’
raḥuqa	‘far’
‘apṣa	‘gallnut’
nhaqa	‘to touch’

Conversely a pharyngal in a word may cause an etymological velar \**k* to shift to a /q/, as in the Jewish Arbel dialect:

*haqen* ‘I speak’ < \**ħky* (Arab.)

In the Iraqi NENA dialects the vowels adjacent to the emphatics /t/ and /š/, especially the low vowel /a/, undergo clear pharyngalization due to coarticulatory assimilation. The vowel /a/ has distinctly lower F2 values than in plain contexts. This can be seen in the following analyses of /a/ adjacent to emphatic /t/ and /š/ in the Jewish Zakho dialect compared to /a/ adjacent to plain consonants:

*tálab* ‘he requests’ ['tˤa:ləb(F1 562, F2 1109)lb]

*nátər* ‘he guards’ ['na:tˤ(F1 869, F2 1162)tˤə:r]

*mṣále* ‘he prays’ ['mˤsˤa:l(F1 849, F2 1281)le]

*mṣályā* ‘she prays’ ['mˤsˤa:l(F1 800, F2 1292)lja(F1 647, F2 1945)]

*táxər* 'he remembers' ['thə:(F1 965, F2 1747)xir]

*p-sápəs* 'it will rot' ['psa:(F1 743, F2 1758)pis]

*kálo* 'bride' ['kʰa:(F1 920, F2 1775)lo]

It can be seen that the F<sub>2</sub> after the emphatics /t/ and /s/ is considerably lower (by 500–600 Hz). The F<sub>2</sub> reading of the final vowel of *mṣályā* shows that the pharyngalization does not spread throughout the word.

By contrast this pharyngalization is not detectable in vowels adjacent to /q/ and /h/, as can be seen in the data below from Jewish Zakho:

*qála* 'voice' [qa:(F1 983, F2 1719)la]

*nḥáqa* 'to touch' [nħa:(F1 1029, F2 1610)qa]

*ḥábəs* 'he incarcerates' ['ħa:(F1 899, F2 1707)bis]

The F<sub>2</sub> values of the /a/ vowels here are roughly equivalent to those of the vowel after plain consonants.<sup>7</sup> The data from Jewish Zakho relating to the voiced pharyngal /ʕ/ indicate that adjacent /a/ vowels have a range of values that are roughly intermediate between those of /a/ after /t/ and /s/ and those found adjacent to plain consonants:

*‘ájəq* 'he becomes elated' ['ʕa:(F1 895, F2 1477)dʒɪq]

*‘ájəz* 'he becomes tired' ['ʕa:(F1 950, F2 1398)dʒɪz]

*‘áqəl* 'intelligent' ['ʕa:(F1 904, F2 1407)qɪl]

*‘áyəč* 'he smears' ['ʕa:(F1 846, F2 1360)jɪtʃ]

*‘ájab* 'wonder' ['ʕa:(F1 943, F2 1439)dʒab]

*‘ájam* 'Persia' ['ʕa(F1 856, F2 1412)dʒam]

In sum, the adjacent /a/ vowels are clearly and consistently pharyngalized adjacent to /t/ and /s/, have intermediate pharyngalization adjacent to /ʕ/ and are not pharyngalized adjacent to /h/ and /q/.

The reason for the preservation of the pharyngal in a word such as Jewish Zakho *nħaqa* or Qaraqosh *ħaziqa*, therefore, is not any suprasegmental spread of pharyngalization, which affected all segments, but rather some form of consonant assimilation. The process, it seems, involved the harmonizing of the pharyngal consonant with the pharyngalized emphatic consonants, without

<sup>7</sup> In some dialects of Arabic the uvular /q/ has a similar effect on adjacent vowels to the pharyngalized coronals (Watson 2007, 43, 270–273), but this is not always the case (Jakobson 1978).

necessarily affecting other intervening segments. This is what Rose and Walker (2004) term ‘Long Distance Consonant Agreement’ which operates in many languages on consonants that share a considerable degree of similarity but skips intervening, less similar segments.

This harmonization between pharyngals and pharyngalized emphatics (*/t/*, */ṣ/*, */q/*) took place also in the so-called trans-Zab Jewish NENA dialects (Mutzaifi 2008b), as shown by Hoberman (1985). In the trans-Zab dialects in Iraq the pharyngalization of the oral emphatics is generally preserved, though often considerably weakened. This has been documented in the Jewish dialects of Arbel (Khan 1999a), Sulemaniyya and Halabja (Khan 2004), and Koy Sanjaq (Mutzaifi 2004). In the related dialects in western Iran such as Sanandaj (Khan 2009) the pharyngal has been preserved in some words containing historical pharyngalized consonants, but the emphatic coronals */t/* and */ṣ/* have subsequently largely lost their emphasis and have become plain consonants, e.g.

### J. Sanandaj

<i>tam'a</i>	‘she tastes’	< * <i>tām̥ā</i>
<i>ta'na</i>	‘load’	< * <i>ṭa'na</i>
<i>'aqəwra</i>	‘scorpion’	< * <i>'aqəbrā</i>
<i>hānəq</i>	‘he drowns’	< * <i>hānəq</i>

In J. Sanandaj pharyngals are also preserved in environments where other consonants adjacent to the pharyngal became emphaticized at some stage of development. This is found especially in the environment of the sonorant consonants */m/*, */b/*, */l/* and */r/*, e.g.

<i>dəm'e</i>	‘tears’	< * <i>dəm̥e</i>	< * <i>dəm̥e</i>
<i>gul'a</i>	‘kernel of fruit’	< * <i>gul̥a</i>	< * <i>gul̥ā</i>
<i>ma'lela</i>	‘eve of festival’	< <i>ma'lela</i>	< * <i>ma'lē 'edā</i>
<i>pərtə'na</i>	‘flea’	< * <i>pərtə'na</i>	< * <i>purtā'na</i>
<i>za'ra</i>	‘barley’	< * <i>za'rā</i>	< * <i>sārā</i>
<i>z'r</i>	‘to plant’	< * <i>zr̥</i>	< * <i>zr̥</i>
<i>bl'</i>	‘to swallow’	< * <i>bl̥'</i>	< <i>bl'</i>
<i>'əč'a</i>	‘nine’	< * <i>'əč'a</i>	< * <i>tš̥ā</i>

In some cases the labial */m/* became emphaticized independently. A non-etymological pharyngal has even developed in the environment of such emphaticized labials, as in the following case:

- tma'nisar* ‘eighteen’ < *tmanisar*  
*tma'ni* ‘eighty’ < *tmani*

Similar examples are found in the neighbouring Jewish dialect of Sulemaniyya (Khan 2004, 35):

- ma'e* ‘water’ < *ma'e* < *maye*  
*ma'danusi* ‘parsley’ < *madanusi*

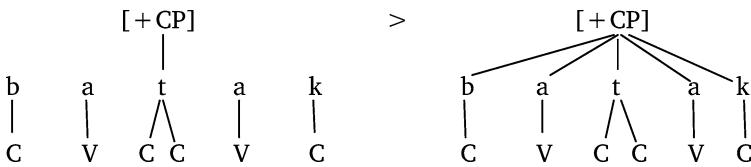

This appears to be similar to the phenomenon of pharyngalization in Kurdish of north-western Iran, which Margaret Kahn (1976, 49–52) analyses as having an underlying pharyngal segment. This pharyngal, according to Kahn, underlies a word that has a pharyngalized consonant and such words can also be realized with the pharyngal on the phonetic surface in place of the pharyngalized consonant. One can have variants, therefore, such as *taezi* ~ *tae'zi* ‘fresh’. No more than one pharyngal or pharyngalized segment is tolerated in a word, so when Arabic loanwords are integrated into the Kurdish dialects, pharyngalization is dropped for all but one segment, e.g. Iraqi Arabic *suhba(t)* ‘conversation’ > Kurdish *sibhat*, Iraqi Arabic *qūtiyya* ‘box’ > Kurdish *qoti* (Kahn 1976, 44). According to Kahn’s explanatory model, this is due to the fact a word can contain only one underlying pharyngal segment.

The difference between Kurdish and the NENA dialects in question is that in the NENA dialects forms with the pharyngal on the surface do not alternate with forms of the word with emphatic segments. It appears that the background to the phenomenon in the NENA dialects is similar to what is found in the Iraqi NENA dialects such as J. Zakho in that the pharyngal is preserved due to some kind of long distance consonant agreement between consonants with similar features rather than emphasis spreading. The non-etymological pharyngals developed from laryngals, e.g. *ma'e* < *ma'e* ‘water’, due, it seems, to a perceived similarity between laryngals and pharyngals. An allophonic alternance between ['] and [ɾ] is documented in the trans-Zab Jewish NENA dialects not only for etymological \*<sup>c</sup> in historically emphatic words (Khan 2004, 35; Khan 2009, 29) but also for etymological \*<sup>s</sup> in plain words, e.g. J. Arbel *hula'e* [hu:læ'ʔe:] ~ [hu:læ'fe:] ‘Jews’ (Khan 1999a, 26–27). The tendency to restrict the outcome of this consonant agreement to the pharyngal and to eliminate the pharyngalization of the oral consonant is likely to reflect a convergence with the Kurdish type of emphasis described by Kahn (1976).

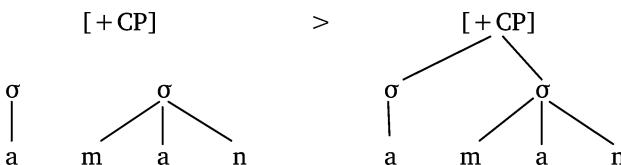

In C. Urmi pharyngals are not preserved in words containing historical emphatic consonants or \*<sup>q</sup>. The unvoiced pharyngal \*<sup>h</sup> in words of Aramaic stock generally shifts to /x/, sporadically to zero, and the voiced pharyngal

\*<sup>c</sup> regularly reduces to zero. In the NENA dialects of Iraq the pharyngals and pharyngalized emphatic consonants shared a common feature which we may designate as [+pharyngal]. The backing of segments in the environment of emphatic consonants is a phonetic coarticulatory consequence but not a phonological feature. For this reason the spreading of backing has no consistent domain, but may occur in words in different degrees, sometimes with variation in different tokens of the same word. In C. Urmi, on the other hand, the backing of segments in the environment of emphatic consonants became a systemic phonological feature with a fixed domain rather than a phonetic coarticulatory consequence. This process involved the transfer of the phonological feature [+pharyngal] from the segment to the word domain. Previously when emphasis spread only by phonetic articulation, the surrounding segments were phonetically pharyngalized but did not acquire the phonological feature [+pharyngal]. We have seen that in the Iraqi NENA dialects the pharyngal /h/ and the pharyngalized uvular /q/, although sharing the feature [+pharyngal] with emphatic consonants and so participating in long distance consonant agreement, do not bring about the pharyngalization of segments in the environment by phonetic coarticulation. Although they share the phonological feature [+pharyngal] with the emphatic consonants /t/ and /š/, they do not behave like them phonetically. As pointed out by Jakobson (1978), 'a phonemic feature cannot be defined on the basis of the degree of its assimilatory power upon adjacent phonemes'. The coarticulation features of /'/ in the Iraqi dialects is equivocal.

Hoberman in various studies (1988b; 1989) has analysed emphasis in Jewish Urmi NENA, and also in Arabic and the Kurdish dialect described by Kahn (1976) in the framework of autosegmental phonology. Although the phenomenon of emphasis in these various languages differs in some respects, he presents them all as having a feature of emphasis, which he calls 'Constricted Pharynx' [+CP], on a separate autosegmental tier, following the approach of Van der Hulst and Smith (1982) and Card (1983) for the treatment of emphasis in Arabic. In the Arabic type of emphasis, which can be considered to be similar to that of Iraqi NENA dialects, it is proposed that at an underlying level an Arabic emphatic consonant segment is linked to the feature [+CP] on another tier rather than containing this feature in the segment tier. Emphasis spread is explained as taking place by the subsequent process of association of other segments in the word with this feature, e.g. the spread of the emphasis of emphatic *t* in *battak* 'your ducks' in Palestinian Arabic would be derived thus:

Hoberman represents the [+CP] feature in J. Urmi as floating at the underlying level and not linked to any segment, as in the normal autosegmental representation of vowel harmony. The feature subsequently becomes associated with all syllables of the word, e.g. *+aman* 'safeguard':

On the basis of the data in Kahn (1976), Hoberman proposes that in Kurdish an emphatic ('Constricted Pharynx' in his terminology) feature is on a separate tier and there is a constraint preventing it from associating with more than one segment in the word.

If it is assumed that in NENA a system similar to that of Arabic developed into a system such as that of the Urmi dialects, this type of analysis is problematic in some respects as a tool for explaining this historical shift. In Iraqi NENA dialects such as J. Zakho /q/ is emphatic in the sense that it has, according to my representation, the feature [+pharyngal], as it is in Arabic (Jakobson 1978; Watson 2007, 43–44) and Kurdish (Kahn 1976, 42). The pharyngals /ʃ/ and /h/ are likewise emphatic. This is the case in the Kurdish dialect described by Kahn (1976; see Hoberman 1989, 90) and also in Arabic, according to Watson (2007, 44–47), who considers them to be emphatic laryngals.<sup>8</sup> According to the

<sup>8</sup> Arabic pharyngals do not, however, affect the adjacent vowels to the same extent as pharyngalized oral consonants (Card 1983, 16–22; Hoberman 1985, 223), which coincides with my acoustic analysis of NENA pharyngals. The constriction of the pharynx is lower in the articulation of the pharyngal consonants than in the pharyngalized oral consonants since in the articulation of the latter the pharyngalization is restrained by the oral gestures of the tongue (Hoberman 1985, 223; Laufer and Baer 1988; Watson 2007, 46). For this reason Dolgopolsky (1977, 1) prefers to use the term 'uvularization' to distinguish it from 'lower pharyngalization', which is found in Caucasian languages.

proposed autosegmental analysis, a /q/ in J. Zakho in a word such as *nšaqa* 'to kiss' would be linked to a feature of emphasis on a separate tier. The most obvious way to explain the shift to an Urmi-type of emphasis in this approach would involve the unlinking of the emphasis feature from the segment in the underlying level and converting it into a floating feature:

J. Zakho	C. Urmi
[+Pharyngal]	[+Pharyngal]
n    š    a    q    a	n    š    a    k̪    a
C    C    V    C    V	C    C    V    C    V

This analysis would predict, therefore, that \**nšaqa* would have suprasegmental emphasis in C. Urmi, which is erroneous, since the word is plain and, moreover, /q/ is not a primary trigger of suprasegmental emphasis elsewhere. A more satisfactory way of explaining the historical shift, therefore, is to posit that the [+Pharyngal] feature is located in the emphatic segment matrix (i.e. the segment tier according to the autosegmental mode) in the Iraqi type NENA dialects and that any spread of emphasis is a phonetic feature of coarticulation not a phonological process. The historical shift in the Urmi type dialects involved the phonologization of the phonetic coarticulation. Since there is no emphasis spread with /q/ in the Iraqi type dialects, the corresponding word in C. Urmi is plain.

In the history of C. Urmi the main source of emphatic coarticulation would be expected to be long /a/ vowels, in which pharyngalization is particularly perceptible. Since this phonetic coarticulation was regular with the emphatics \*t̪ and \*š, words containing historical \*t̪ and \*š are regularly pronounced emphatic, i.e. they regularly have the suprasegmental [+pharyngal] feature, e.g.

+ <i>ṭaləb</i>	'he requests'	< * <i>ṭaləb</i>
+ <i>ṭuyra</i>	'mountain'	< * <i>ṭura</i>
+ <i>xəttə</i>	'wheat'	< * <i>xəttə</i>
+ <i>palət̪</i>	'he goes out'	< * <i>palət̪</i>
+ <i>soma</i>	'fast'	< * <i>ṣoma</i>
+ <i>salə</i>	'he goes down'	< * <i>ṣale</i>
+ <i>msaya</i>	'to be able'	< * <i>mṣaya</i>

There are only a few marginal exceptions, where words with \*t̪ have lost the emphasis (see above). When a word contained the pharyngal \*, in many cases it is emphatic. The pharyngal itself is reduced to zero. This resulted from the

removal of the [+pharyngal] feature from the segment \*<sup>c</sup>. Words beginning with a vowel acquire an initial laryngal /<sup>h</sup>/ by a secondary morphophonemic process (§ 1.15.2.). Examples:

<sup>+</sup> <i>tala</i>	'fox'	< * <i>ta'lā</i>
<sup>+</sup> <i>dəm'ma</i>	'tear'	< * <i>dəm'ā</i>
<sup>+</sup> <i>tarra</i>	'door'	< * <i>tar'ā</i>
<sup>+</sup> <i>baluta</i>	'throat'	< * <i>bālō'tā</i>
<sup>+</sup> <i>amra</i>	'wool'	< * <i>'amrā</i>

Several words that contained the pharyngal \*<sup>c</sup>, however, have not acquired suprasegmental emphasis and are pronounced as plain, e.g.

<i>'avəd</i>	'he does'	< * <i>'abəd</i>
<i>'ida</i>	'festival'	< * <i>'eda</i>
<i>'upra</i>	'soil'	< * <i>'aprā</i>
<i>bita</i>	'egg'	< * <i>bē'tā</i>
<i>xmaya</i>	'to ferment'	< * <i>xmā'ā</i>

This could be explained by the assumption that historical \*<sup>c</sup> was not accompanied by clear pharyngalized coarticulation in adjacent segments equivalent to that of \*<sup>t</sup> and \*<sup>s</sup>, as we have seen from the data from the Jewish Zakho dialect. It should also be taken into account that suprasegmental emphasis may be brought about by the presence of the sonorants *r*; *l* and by the voiced labials *b*, *m* and *v*, which must be assumed to have acquired segmental emphasis with coarticulatory emphasis spread at some point in the history of the dialect. e.g.

<sup>+</sup> <i>šádər</i>	'he sends'	< * <i>šadər</i>
<sup>+</sup> <i>jóra</i>	'husband'	< * <i>gawṛa</i>
<sup>+</sup> <i>xálta</i>	'food'	< * <i>xalta</i>
<sup>+</sup> <i>rábə</i>	'much'	< * <i>raḥa</i>
<sup>+</sup> <i>áv</i>	'he'	< * <i>aw</i>

These were 'non-etymological' emphatic forms of the consonants and developed only in a certain proportion of the words containing the consonants, in some cases, it seems, to fulfil a functional need, e.g. to create semantic contrasts or to express iconic gravity. Examples of contrasts are:

<sup>+</sup> <i>xalta</i> 'eating'	<i>xalta</i> 'aunt'
<sup>+</sup> <i>jóra</i> 'husband'	<i>jóra</i> 'she marries'

Possible examples of iconic gravity are:

- +*jura* 'big'      cf. *sura* 'small' (plain)
- +*yarixa* 'long'    cf. *kərya* 'short' (plain)
- +*raba* 'much'

Emphatic words that contained the pharyngal \*<sup>c</sup> generally also contain one of the consonants *r*, *l*, *b*, *m* or *v*, so in such words these latter consonants could have been the primary source of the suprasegmental emphasis rather than the pharyngal consonant itself, or at least reinforced the pharyngalization of the \*<sup>c</sup>. As remarked, in the Iraqi dialects of NENA coarticulatory pharyngalization is absent in the environment of the consonant /q/. This no doubt is the reason why /k/, the reflex of original \**q*, does not by itself bring about suprasegmental emphasis in C. Urmī, e.g.

*nšaka* 'to kiss' < \**nšaqa*

In a word such as this none of the other consonants belong to the category of those that would be expected to trigger emphasis and no emphasis is induced by the /k/. This would have been because there was no coarticulatory emphasis spread generated by /k/ that could be phonologized into phonological suprasegmental emphasis. Words containing both historical \**q* and the pharyngal \*<sup>c</sup> do not induce suprasegmental emphasis, e.g.

- +*atika* 'old'      < \**atīqā*
- +*p̪kaya* 'to split' < \**pqā'ā*
- +*p̪əkkā* 'frog'     < \**pəq'ā*
- +*raka* 'to flee'    < \**rāqā*

These words do not contain other consonants that would induce emphasis. Contrast words such as:

- +*blaya* 'to swallow' < \**blā'ā*
- +*šmaya* 'to hear'    < \**šmā'ā*
- +*fraya* 'to shave'    < \**grā'ā*
- +*mraya* 'to be ill'    < \**mrā'ā*

These are historically final \*<sup>c</sup> verbs, like +*p̪kaya*, but they contain the emphasis-inducing consonants *r*, *l*, *b* and *m* and have acquired emphasis. Some words containing /k/ are emphatic, but these all contain other emphasis-inducing consonants, e.g.

<sup>+</sup> <i>k̥eta</i>	'summer'	< * <i>qayṭā</i>
<sup>+</sup> <i>kraya</i>	'to read'	< * <i>qrāyā</i>
<sup>+</sup> <i>kariva</i>	'close'	< * <i>qarībā</i>
<sup>+</sup> <i>k̥tala</i>	'to kill'	< * <i>qtālā</i>
<sup>+</sup> <i>k̥çaya</i>	'to cut'	< * <i>qtā'ā</i>

So, /*k̥*/ by itself does not induce emphasis and there are only a limited number of cases where \*<sup>c</sup> seems to have induced emphasis without the support of other emphasis-inducing consonants. Some such examples include:

<sup>+</sup> <i>ayna</i>	'eye'	< * <sup>c</sup> <i>aynā</i>
<sup>+</sup> <i>ita</i>	'church'	< * <sup>c</sup> <i>ēttā</i>
<sup>+</sup> <i>syaša</i>	'to rock'	< * <sup>c</sup> <i>s̥ašā</i> < * <sup>c</sup> <i>šgāšā</i>
<sup>+</sup> <i>šada</i>	'almond'	< * <i>ša'da</i> < * <i>šaḡdā</i>

The emphasis in some of these could have had a functional motivation to distinguish meaning. The emphatic form <sup>+</sup>*ita* 'church', for example, contrasts with the plain homophonous form *ita* 'then'. Other words in this category, however, do seem to represent cases where the primary cause of the emphasis is the historical presence of the pharyngal \*<sup>c</sup>. Note that a historical velar fricative \**g̥* developed into a pharyngal before being reduced to zero, and so words with this historical consonant are also included.

The presence of the high vowel /i/ or the glide /y/ can block the development of emphasis. This is seen clearly in the paradigms of numerals in which many numerals in the tens paradigm ending in *-i* are plain whereas the corresponding unit numerals ending in *-a* are emphatic, e.g.

<sup>+</sup> <i>əsra</i> (< * <sup>c</sup> <i>əsra</i> )	'ten'	<sup>+</sup> <i>əsri</i> (< * <sup>c</sup> <i>əsri</i> )	'twenty'
<sup>+</sup> <i>tla</i> (< * <i>tlaṭa</i> )	'three'	<sup>+</sup> <i>tlay</i> (< * <i>tlati</i> )	'thirty'
<sup>+</sup> <i>arpa</i> (< * <i>arb'a</i> )	'four'	<sup>+</sup> <i>arpi</i> (< * <i>arb'i</i> )	'forty'

Evidence for the argument that the suprasegmental [+pharyngal] feature originates in pharyngalized vowels adjacent to emphatic consonants can be found in the treatment of Persian loanwords. Since the long *ā* vowel segment in Persian has a back quality in its default realization similar to a pharyngalized long /a/ vowel in the C. Urmi dialect, this vowel is interpreted as having the feature [+pharyngal] when the word is integrated into the phonology of the dialect. In accordance with the treatment elsewhere of this feature, it is detached from the vowel segment and made a suprasegmental feature in the domain of the word, affecting other segments in the word that do not have a backed articula-

tion in the source language. Notice that the loanwords in C. Urmī are adapted with regard to the placement of the stress, in that it is moved from the final syllable of the Persian source word to the penultimate syllable, the canonical position in C. Urmī:

C. Urmī	Persian	
<sup>+</sup> sárbaž [s <sup>ə</sup> rbəz]	sarbáž [sar'bə:z]	'soldier'
<sup>+</sup> hává [h <sup>ə</sup> a:v]	havá [ha'va:]	'air, weather'
<sup>+</sup> háram [h <sup>ə</sup> a:rəm]	harámm [ha'rə:m]	'forbidden'
<sup>+</sup> tapávut [t <sup>ə</sup> hpávut]	tafāvút [t <sup>ə</sup> hafa:vut <sup>h</sup> ]	'difference'
<sup>+</sup> dívan [d <sup>ə</sup> i:v]	díván [di:və:n]	'court'
<sup>+</sup> stícan [s <sup>ə</sup> t'i:c]	istikán [isti:kʰa:n]	'glass'
<sup>+</sup> póllan [p <sup>ə</sup> llan]	folán [fo'lə:n]	'so-and-so'
<sup>+</sup> ótağ [o:təg]	'otáq [o'ta:q]	'room'
<sup>+</sup> júvvab [dʒ <sup>ə</sup> vvab]	javáb [dʒa:və:b]	'answer'
<sup>+</sup> sánjak [s <sup>ə</sup> ŋa:k]	sanjáq [san'dʒa:q]	'pin'
<sup>+</sup> Hamádan [h <sup>ə</sup> a:dən]	Hamadán [hama'da:n]	'Hamadan'

In words such as <sup>+</sup>*divan* and <sup>+</sup>*stican* the pharyngalization does not affect the /i/, but it does affect the consonants before the /i/, which clearly shows that the domain of this phenomenon is the word and that it does not spread by phonetic coarticulation from a particular segment. One may contrast this with spoken Arabic in which emphasis spreads from segments and this spread is blocked by high, non-back segments such as ī, y and š (Hoberman 1989, 79). The same is true in the Iraqi NENA dialects, in which the spread of emphasis from a segment would be generally blocked by /i/, e.g. J. Zakho *tina*, in which the emphasis does not spread beyond the segment /t/. By contrast, in the cognate word in C. Urmī, viz. <sup>+</sup>*tina*, although the /i/ is not affected by emphasis, the following segments, /n/ and /a/, are pharyngalized.

There are a few exceptions in which a loanword that has long ā in Persian is plain, e.g.

C. Urmī	Persian	
sázjar [sazjar]	säzgár [sa:z'ga:r]	'agreeable'
buxári [bu'xa:ri]	boxári [boxa:'ri:]	'stove'
húšyar [hoʃjar]	hošyár [hoʃ'ja:r]	'careful'
jíyaz ['dʒi:yas]	jiház [dʒi:həz]	'dowry'

These can be regarded as cases of the arbitrary removal of the suprasegmental [+pharyngal] feature, as in the native Aramaic words such as *taxana* 'miller', *talək* 'he becomes losts', *tapə* 'he sticks/ignites' discussed above.

When a loanword from Azeri Turkish contains an /a/ vowel it is generally plain or emphatic according to whether the Azeri word has front or back vowel harmony, though there are some exceptions, e.g.

Azeri	C. Urmi	
otáq (back)	+ótaǵ (emphatic)	'room'
ocáq (back)	+ojáxta (emphatic)	'hearth'
aralíq (back)	+arálləj (emphatic)	'between'
dustáq (back)	+dússaǵ (emphatic)	'prison'
torbá (back)	+tórba (emphatic)	'bag'
batmán (back)	+bátman (emphatic)	'batman'
baltá (back)	+bálta (emphatic)	'axe'
palán (back)	+pálan (emphatic)	'pack-saddle'
témiz (front)	támməz (plain)	'clean'
keçél (front)	cačála (plain)	'bald'
gémí (front)	jámi (plain)	'boat'
dérz (front)	dárza (plain)	'sheaf of corn'
døllék (front)	dállac (plain)	'barber'
cømdék (front)	jándac (plain)	'carcass'

Exceptions:

çardáq (back)	čárdak (plain)	'shed'
davúl (back)	davúla (plain)	'drum'
køvér (front)	+cávar (emphatic)	'leek'

When the word contains other vowels the correspondence is also generally consistent, e.g.

Azeri	C. Urmi	
dúz (front)	dúz (plain)	'correct'
gół (front)	jól (plain)	'lake'
hörük (front)	hórəc (plain)	'tether (of animal)'
dönük (front)	dónuc (plain)	'rebellious'
külgüng	cúlluny (plain)	'crowbar'
qullúq (back)	+kúlluǵ (emphatic)	'service'
burgǘ (back)	+búrgi (emphatic)	'drill'
xurcún (back)	+xúrjun (emphatic)	'saddle-bag'
tóz (back)	+tóz (emphatic)	'dust'
dóst (back)	+dóst (emphatic)	'friend'

Azeri	C. Urmi	
tóp (back)	+ <i>tóp</i> (emphatic)	'cannon'
şór (back)	+ <i>şór</i> (emphatic)	'salty'
limón (back)	+ <i>límon</i> (emphatic)	'lemon'
başlíq (back)	+ <i>bášləg</i> (emphatic)	'hood'

Exceptions:

qoşún (back)	<i>kóšun</i> (plain)	'army'
qifíl (back)	<i>káppəl</i> (plain)	'lock'
qarǵá (back)	<i>kárja</i> (plain)	'crow'
bibér (front)	+ <i>bíbar</i> (emphatic)	'pepper'
dərəcə (front)	+ <i>darája</i> (emphatic)	'degree'

In some cases there are known variations in the setting of words across different Azeri dialects, which would eliminate some of these exceptions, e.g. kəvər ~ kavar 'leek', qarǵá ~ qərgə 'crow'. Moreover some varieties of C. Urmi have different settings and correspond to the Azeri setting in the list of exceptions listed above, e.g. +*karǵa* (Ardishay S, Dizatacyä S), +*kəppəl* (Siri S). It may be significant that the exceptional cases of emphatic setting of C. Urmi words that have a front setting in Azeri all contain letters that are known to bring about pharyngalization, namely /r/, /l/ and labials.

As has been remarked, C. Urmi has not adopted the harmonic feature of vowel roundedness from Azeri. In a number of loanwords containing rounded vowels in Azeri, one of the rounded vowels is replaced by a corresponding unrounded vowel in C. Urmi, e.g.

Azeri	C. Urmi	
sürű	<i>súri</i>	'flock'
ütü	<i>úti</i>	'iron (for clothes)'
bütün	<i>bítun</i>	'whole'
hörük	<i>hórəc</i>	'tether (of animal)'
qulluqçú	+ <i>kullúxči</i>	'servant'

In word-final position this is, in fact, a feature found in varieties of Azeri spoken in Iran, e.g.

**Azeri orthography   Azeri Tabriz/Ardabil**

sürű	[su'ri]	'flock'
hörük	[hø'rɪh]	'tether (of animal)'
dönük	[dø'nih]	'rebellious'
külüng	[tʃyl'lɪh]	'crowbar'

Persian loanwords in Azeri have sometimes not been adapted to the harmony system. This applies, for example, to some cases where the Persian word contains a long back /ā/ and a short front /a/, a number of them of ultimately Arabic origin. In many such cases C. Urmī exhibits a greater degree of adaptation of the same loanword and has full harmony of emphasis, e.g.

Persian	Azeri	C. Urmī	
dallál	dəllál	+dállal	'broker'
dastmál	dəsmál	+dásmał	'towel'
jallád	cəllád	+jállad	'executioner'
qassáb	qəssáb	+kássab	'butcher'
madaxél	mədaxil	+mudaxəł	'income'

There are, however, a few loanwords in C. Urmī from Persian and Azeri in which the emphasis harmony does not embrace the whole word. This is found in a number of words with derivational suffixed components. When the derivational suffix contains a back vowel in Persian but the stem of the word does not contain a back vowel, only the derivational suffix is emphatic in C. Urmī. The suffixes concerns include *+stan*, *+zada*, *+xana*, *+jah*, which are of Persian origin. In such words Azeri exhibits the same incomplete harmonization of the backness (Rahmati and Buğday 1998, 189–194), e.g.

Persian	Azeri	C. Urmī	
'armanestán	Ermənistən	'armanəs+tan	'Armenia'
hendostán	Hindistan	həndus+tan	'India'
ğorjestán	Gürcüstan	jurjəs+tan	'Georgia'
bagzadé	bəyzada	baf+zada	'noble'
haramxáné	hərəmxana	haram+xana	'harem'
marızxáné	mərizxana	marəs+xana	'hospital'
dazgáh	dəzgah	daz+jah	'work bench'

The same applies to words with such derivative suffixes which are of Azeri origin, e.g.

Azeri	C. Urmi
çörəkxana	<i>čorac+xana</i>
dəmirçixana	<i>damurči+xana</i>

'bakery'  
'smithy'

The stress patterns of these words in Azeri and C. Urmi give a clue as to the background of this apparently defective harmonic prosody. In Azeri these words generally take two word stresses. The primary word stress (marked below with an acute accent) may be placed on the first component of the word rather than on the derivative suffix, with, optionally, a secondary word stress (marked below with a grave accent) being placed on the suffix, e.g.

Gúrcüstàn	'Georgia'
Érmənistàn	'Armenia'
béyzadà	'noble'
hərámxonà	'harem'
çörəkxanà	'bakery'
dəmirçíxanà	'smithy'

Alternatively the primary stress may be placed on the suffix and a secondary stress on the first component, e.g.

Gúrcüstán	'Georgia'
Èrmənistán	'Armenia'

Similar stress patterns are found in the C. Urmi form of these words. This can be interpreted as reflecting their status as stress groups consisting of two prosodic words, which should, therefore, be separated by a hyphen in the transcription (§ 1.19.), e.g.

<i>fúrjəs-+tàn</i>	'Georgia'
<i>ármanəs-+tàn</i>	'Armenia'

The first component word of the group may have final stress, which is a common feature of the first word in stress groups (§ 1.19.), e.g.

<i>fúrjəs-+tan</i>	'Georgia'
<i>ármanəs-+tan</i>	'Armenia'

Individual words in stress groups have autonomous domains of emphasis. This would, therefore, explain the lack of emphasis harmony. When the first

component of the word in the source language, however, contains a back vowel, the word has full emphasis harmony in C. Urmī, since both components have motivations for emphasis, e.g.

Persian	Azeri	C. Urmī
‘āšpazxānē	aşpazxana	+ <i>ušpaz-xána</i> ‘kitchen’
mehmānxānē	mehmanxana	+ <i>meman-xána</i> ‘guesthouse’

When a loanword from Persian contains a back /ā/ in the stem and a derivative suffix with a front /a/ vowel, the emphasis in C. Urmī moves rightwards and embraces the whole word, although in Azeri the word is not adapted for backness harmony, e.g.

Persian	Azeri	C. Urmī
jādūjár	cadugér	+ <i>jadújar</i> ‘magician’

As remarked, in the loanwords that are integrated into C. Urmī the stress is shifted to the penultimate syllable, which is the canonical stress position in the dialect. Loanwords are also used in the dialect without being phonologically integrated. In such cases a Persian back long /ā/ in one syllable does not result in suprasegmental pharyngalization throughout the word but rather the backness remains a phenomenon that is restricted to the site of its occurrence, e.g.

darāmád [dara:’math <sup>h</sup> ]	< Persian darāmád	‘income’
jādūjár [dʒa:du:’dʒar]	< Persian jādūjár	‘magician’

In the transcription such words are written in roman characters with the vowel length indicated by diacritics and enclosed in the symbols <sup>P...P</sup>, e.g. <sup>P</sup>darāmád<sup>P</sup>, whereas phonologically integrated loans are transcribed in italics, e.g. +sárbaz.

Loanwords from Russian which have a velarized ‘dark’ /l/ in Russian are given an emphatic setting in C. Urmī, e.g.

+adyal ‘blanket’	< Russian одеяло [ad'yała]
------------------	----------------------------

Lexically related words of different grammatical categories may differ in their setting, e.g.

kavər ‘he buries’	+kora ‘grave’
karta ‘cold’ (noun)	+kayra ‘cold’ (adjective)

<i>šapîra</i> 'beautiful'	<i>+šuprâ</i> 'beauty'
<i>layyə</i> 'it burns'	<i>+laha</i> 'flame'

There are a few cases of doublet verbs, derived historically from the same verbal root, one emphatic and one plain, e.g.

<i>balbəl</i> 'he confuses'	<i>+balbəl</i> 'he babbles'
<i>šatəx</i> 'he spreads (object)'	<i>+šatəx</i> 'he stretches out'
<i>barəx</i> 'he blesses'	<i>+barəx</i> 'he consecrates'

Verbs that are formed on the basis of emphatic nouns may be plain, e.g.

<i>jávvəb</i> 'he answers'	<i>+juvvab</i> 'answer'
----------------------------	-------------------------

All morphological inflections of a particular verb, however, have the same setting. One may generalize by saying that the setting must be consistent within sets of inflections but need not within sets of lexical derivations.

### 1.5.2 *The Phonological Domain of Emphasis*

The domain of emphasis in C. Urmi is the word. The word domain of emphasis also includes enclitic grammatical elements of no lexical content that are attached to the end of a word. In such cases the emphasis setting of the main word spreads rightwards to the enclitic. These enclitic elements are marked as attached to the word in the transcription by the symbol =. Such enclitics include the following the grammatical elements: (i) the copula and (ii) the inclusive particles *da* and *zə*. In the following examples the emphasis domain boundaries are marked by /, e.g.

/+úllul/	'above'
/+úllul=ilə/	'he is above'
/+úllul=da/	'also above'

These enclitics may be combined, in the order copula + inclusive particle. In such cases both enclitics are included within the domain of emphasis of the base word, e.g.

/+úllul=ilə=da/	'he is also above'
-----------------	--------------------

When an emphatic word is combined with a preceding proclitic word or particle in a single stress group, the proclitic element is generally not within the

domain of emphasis and so is not pronounced emphatic if, when standing independently, it is plain. These preceding elements are marked as combined to the following word by a hyphen in the transcription, e.g.

- /mən-/ +'úllul/ ‘from above’
- /a-/ +'jóra/ ‘this man’
- /lá-/ +'xəlla/ ‘he did not eat’

Conversely, if a proclitic element in a stress group is emphatic when standing independently and is followed by a word that is plain, the emphasis does not extend from the proclitic to the following word. This applies, for example, to prepositions before nouns, which have their own autonomous domain of emphasis:

- +’al/-/’ídi/ ‘on my hand’

In certain cases, however, when the first element is closely bonded grammatically with the following word, the first element is within the domain of emphasis of the second word, e.g. in compound nouns such as:

- /+bra=sup̪pa/ ‘thimble’
- /bra=’ida/ ‘glove’

In the first example the *bra* element harmonizes with the emphasis of *+sup̪pa*, whereas in the second it harmonizes with the plainness of *’ida*. This is represented by the double hyphen. The form *bra* is derived historically from the old construct state of *brata* ‘daughter’ (*bra* < \**brat*). Although *brata* is plain, the relationship of the form *bra* to this lexical item is now completely opaque, especially since it is referring to an inanimate object, and it is devoid of lexical content. Further examples of emphasis spreading across compounds in which the original components have lost their independence and identifiability include:

- /+berašə/ ‘in the evening’ < \**bət*-+*ramša*
- /+madəlbarə/ ‘from now onwards’ < *mən*-’*adiyya* +’al-+*bara*

Conversely, tightly-knit phrases that contain elements whose original lexical content is still identifiable maintain their own autonomous domains of emphasis and each component is treated like a separate word. This applies also to old construct forms and contracted words, e.g.

- (1) /<sup>+</sup>*bar*/-náša/ 'son-man' = 'human being' (<sup>+</sup>*bar*, cf. *bruna*)
- (2) /<sup>+</sup>*xvār*-/*dákn̩a*/ 'white-beard' = 'old man'
- (3) /<sup>+</sup>*arþó*-/*šiba*/ 'four in-week' (< <sup>+</sup>*arþa*-*b*-*šiba*) = 'Wednesday'
- (4) /*bət*-/<sup>+</sup>*kúyra*/ 'house-grave' = 'grave' (*bət* < *betət*)
- (5) /*bax*-/<sup>+</sup>*mámu*/ 'wife-paternal uncle' = 'the wife of a paternal uncle' (*bax* < *baxtət*)

In all these examples the lexical content of the two components is still identifiable and they have autonomous domains of emphasis. In (1)–(3) the first component is emphatic and the second is plain and vice versa in (4) and (5). The placement of the stress on the numeral component of names of days of the week is a further sign that the two components of such phrases are treated as separate words.<sup>9</sup>

An apparently exceptional case is that of the 11–19 and hundreds paradigms of numerals (§ 7.1.2., § 7.1.4.). The word for 'hundred' is plain ('*mma*), but it harmonizes with the first decade cardinal that is attached to it, e.g.

' <i>mma</i>	'one hundred'
<i>trəmma</i>	'two hundred'
<sup>+</sup> <i>fləmma</i> ~ <sup>+</sup> <i>flamma</i>	'three hundred'
<sup>+</sup> <i>arbámma</i> ~ <sup>+</sup> <i>arþámma</i>	'four hundred'

The explanation seems to be that these are analysed as unitary lexical items and not compounds, and the final element *-mma* is treated like a derivative morpheme. The same applies to the 11–19 paradigm, the forms of which are treated as unitary lexical items with a derivative morpheme *-(s)sar*, e.g.

<i>taryəssar</i>	'twelve'
<sup>+</sup> <i>talqásar</i>	'thirteen'

As has been mentioned, a long back vowel in some derivative suffixes of Persian loanwords does not bring about emphasis across the entire word, as is normally the case with Persian loanwords. In this respect, they resemble compounds such as (1)–(5):

/<sup>+</sup>*armanás*/-<sup>+</sup>*tan*/ 'Armenia'

---

9 In the J. Urmi dialect several corresponding phrases have a single domain of emphasis, e.g. <sup>+</sup>*xwar-dəqna* 'old man', <sup>+</sup>*bel-šultana* 'house of the king' (Hoberman 1989, 85).

The domain of emphasis is a phonological phenomenon. The boundaries of the domain are observed in slow careful speech. In fast speech, however, phonetic coarticulation sometimes breaches the boundaries. In such cases the setting of the main lexical word affects that of the first element. In the stress group *+al-idi*, for example, the plain setting of the lexical word *'idi* may be extended to the first element, resulting in the realization [?al-'i:i:d̥i]. Likewise in the stress groups *mən-+úllul*, *lá-+xəllə* the emphatic setting of the second word can spread to the first: [m<sup>ə</sup>n<sup>ə</sup>-?<sup>ə</sup>u<sup>ə</sup>ll<sup>ə</sup>u<sup>ə</sup>ll<sup>ə</sup>], [<sup>l</sup><sup>ə</sup>a<sup>ə</sup>-x<sup>ə</sup>əll<sup>ə</sup>ə<sup>ə</sup>]. Since this is a phonetic coarticulatory phenomenon, it is not marked in the transcription.

When a particle consisting of a single consonant is syllabified with an emphatic word, it regularly takes on the setting of the main word. This applies, for example, to the particle *b* before verbs and nouns. There are arguments on other phonotactic grounds that this particle is grammatically more closely bound to the verb than to the noun (§ 1.15.2.). The emphasis spread from the verb will be considered to be phonological but from the noun it will be considered to be phonetic. In the transcription the *b* is written together with the verb without a hyphen and represented as being within the domain of emphasis, whereas it is connected to a noun by a hyphen and represented as being outside the domain of emphasis, thus:

<i>+bətlabəla</i>	[b <sup>ə</sup> t <sup>ə</sup> l <sup>ə</sup> a:b <sup>ə</sup> t <sup>ə</sup> l <sup>ə</sup> a]	'he is requesting'
<i>b-+tunta</i>	[b <sup>ə</sup> t <sup>ə</sup> u <sup>ə</sup> n <sup>ə</sup> t <sup>ə</sup> ŋ <sup>ə</sup> a]	'with fruit'

A further difference between these two constructions is that the epenthetic vowel after the particle *b* has been fully phonologized as a short vowel nucleus before verbs and is, therefore, marked in the transcription (§ 1.15.2.).

A case similar to the preposition *b-* before nouns is the habitual particle *ci-*, which is contracted to *c-* before verbs beginning with //, e.g.

<i>c-+axəl</i>	[c <sup>ə</sup> a:x <sup>ə</sup> əl <sup>ə</sup> ]	'he eats'
----------------	--	-----------

Here too the boundary of the phonological domain of emphasis is after the *c-* and the spread of emphasis onto the particle is phonetic. The occurrence of the boundary of the emphasis domain after *b-* in *b-+tunta* and *c-* in *c-+axəl* is due to the fact that they are less grammatically bonded than the *bə* in the verbal form *+bətlabəla*. This is reflected by the fact that a hesitation can occur between the former two particles, e.g.

<i>bí ... kəsəl</i>	'with wood' (B 2:6)
<i>cí ... +marχ̩ivalun</i>	'They used to crush them.' (B 12:2)

Such hesitations are not possible after the *bə* in a verbal form such as *+bəʃlabəʃə*.

### 1.5.3 *Earlier Treatments of Emphasis in the C. Urmi Dialect*

Stoddard (1855), who was the first to write a description of the dialect, distinguished differences in quality in his transcription of *a* and short *i* vowels (equivalent to /a/ and /ə/ in my transcription), which corresponds to my own findings by instrumental analysis. He attributed the quality difference to the presence of particular consonants, notably *t*, *s*, *x*, *č*, *q* and also to some extent *b*, *m*, *r*. He states that *ī*, *ē*, *ū* and *ō* are rarely affected by the adjacent consonants.

Nöldeke's grammar (1868) and other studies of the dialect were largely based on written sources and in his discussions of emphasis depended on the methods of transcription used by other scholars, notably by Stoddard and Müller (1864b). He identifies the development of a historically plain consonant into an emphatic ones in certain environments and transcribes them as emphatic segments, e.g. *tlā* 'three' (1882, 671), *yat̪tin* 'I know' (1868, 45).

Murre-van den Berg (1999, 180–184) has shown that the literary form of the C. Urmi dialect that was written at the end of the 19th century reflected some signs of suprasegmental emphasis. Although the historical emphatic consonants were generally represented according to the traditional Syriac orthography in such texts, some deviations can be found. Of particular interest is the occasional use of the letter { } in a non-etymological position in an emphatic word, e.g. {ba'rā}¹⁰ 'light' < \**bahrā* (= +*bara*), {ākil} 'he eats' (= +*axəl*). This seems to be an attempt to represent the pharyngalization of the adjacent vowels.

Prym and Socin (1881, xxviii–xxix) develop a complex system of diacritics to distinguish fine distinctions in vowel quality in Turoyo, which Socin (1882) uses in his transcription of the C. Urmi dialect. This system recognizes three variants of vowels: Umlaut (a), Mittelstufe (a) and einfache Vocal (a). In addition vowels undergoing 'Trübung' ('darkening') are marked with a separate diacritic (a) and these may have an Umlaut variant. An examination of the texts reveals that the diacritical signs do not mark a clear division between plain and emphatic words, nor are they used consistently. The 'darkening' diacritic is written only under a few emphatic words (*rāba* 'much' = +*raba*, *tāmā* 'there' = +*tama*), but not consistently (*rāba rāmā* = +*raba* +*rama* 'very high'). A simple vowel without a diacritic appears both in emphatic and plain words (*nāša* = *naša* 'man', *dānat* = +*danət* 'time of'). Umlaut diacritics are used in some plain words but not

---

10 Curly brackets enclose the graphic symbols used in the writing system.

in others (*málka* = *malca* 'king', *jáldi* = *jaldə* 'quick', but *alpī* = *'alpə*, *íman* = *'iman*). The complex system reflects the perception of a range of allophonic vowel qualities. The historical emphatic segments *t* and *s* are marked in the transcription.

Kalashev (1894a; 1894b), who gathered material on the C. Urmi dialect in the Caucasus, transcribes the dialect with the 'Russian Linguistic Alphabet' which was used by various Russian linguists at that period (Polotsky 1961, 3). He distinguishes in his transcription between front and back variants of the vowels *a*, *i*, *o* and *u*. He distinguishes regularly between the two variants of *a* and short *i* in plain and emphatic words, e.g. (using a romanized form of his Cyrillic transcription): *näšä* (= *naša*) 'person', *raba* (= *+raba*) 'many', *min* (= *mən*) 'from', *palit* (= *+palət*) 'he goes out'. Final *-a* in plain words is, inconsistently, represented as *-ə* e.g. *brätə* (= *brata*) 'girl'. The marking of the front variant of *o* and *u* in plain words, however, is not consistent, e.g. *motə* (= *mota*) 'death', *sötzə* (= *sota*) 'old woman', *bigrasoli* (= *+bəgrašolə*) 'he pulls her', *yumä* (= *yuma*) 'day', *tüniilə* (= *tunila*) 'she said', *śudraxli* (= *+śudraxlə*) 'he sent us'. Whereas previous scholars had interpreted the phonology as consisting of the historical Aramaic emphatics *t*, *s*, *q*, Kalashev distinguishes in his transcription between series of aspirated and unaspirated voiceless stops and affricates: *ń* (= */p̪/*), *ńń* (= */p/*), *ńk* (= */ç/*), *ńńk* (= */c/*), *ńt* (= */t̪/*), *ńńt* (= */t/*), *ńč* (= */č/*), *ńńč* (= */ç/*).

Maclean (1895, para. 4–6) refers to change in the quality of long and short *a* and that of short *i* after emphatic consonants *t*, *s* as well as pharyngals, *q* and *m*.

Osipoff (1913), who was in contact with the phonetician William Jones, provides a transcription of a specimen of C. Urmi using IPA symbols. He distinguishes between front and back qualities of all vowels except long *i*. Like Kalashev he also distinguishes between all aspirated and unaspirated stops, marking as unaspirated also aspirates that are deaspirated after fricatives, e.g. [ʃatjan] 'I (f) drink' but [ʃsta:ja] 'to drink'. He transcribes historical \**k* and \**g* as palatal stops [c'] and [j] and \**q* as an unaspirated velar [k].

Marogulov in his grammar of the dialect written in the Latin-based transcription system known as the Noviy Alfavit (1935, para. 11; French translation by Kapeliuk 1976) divides all consonants and vowels into 'hard' (*qṣita*) and 'soft' (*məkixta*). The sounds of a word are said to be uniformly either all hard or all soft by a rule of 'synharmonism'. The Noviy Alfavit distinguishes between the hard and soft pronunciation of a word by marking quality distinctions for the vowels /a/ vs. +/a/ (viz. {ə} vs. {a}) and /ə/ vs. +/ə/ (viz. {i} vs. {y}). These vowels have the function of pronunciation differentiating letters (*pərṣijrbtma*), since most words contain one of the sounds, e.g. *mata* (= +*mata*) 'pustule' vs. *mətə* (= *mata*) 'village', *makruzylb* (= +*makruzələ*) 'he announces' vs. *təluqili* (= *talukələ*) 'he loses'. The decision to mark distinctions only in these vowels results in an

economical form of transcription, since all vowels are said to change quality according to whether the word is hard or soft. It should be noted that it is precisely these vowels that, according to my acoustic analysis, exhibit the greatest distinctions in quality in plain and emphatic words. Friedrich (1959, 56) in his study of this writing system states that the vowels {o} and {u} stand 'in der Mitte zwischen hell und dunkel' ('in the middle between clear and dark'). He presumably makes this hypothesis on the basis of the fact that these vowels occur in both plain and emphatic words. The Noviy Alfavit distinguishes tense /t/ from lax /t/ (viz. {t̪} vs. {t}) and treats historical \*s as /s/ {s}, its 'hardness' in hard words being a result of synharmonism. The tense /k/ is represented by {q}. Friedrich notes that in loanwords from Russian the unaspirated Russian *k* was represented by {q} and the unaspirated Russian *t* was often, but not regularly, represented by {t̪} (Friedrich 1959, 55). Unlike the transcription of Kalashev and Osipov, however, the Noviy Alfavit does not distinguish the other tense stops and affricates, i.e. those corresponding to /p̪/, /ç/, /χ/ in my transcription. The question as to whether such symbols should be introduced had, however, been discussed in a Conference on Questions on Assyrian Orthography held in 1933 (Polotsky 1961, 7).

Yushmanov (1938) made a study of synharmonism in the C. Urmî dialects and, like Marogulov, stated that it affected all vowels, which, within a word, had either 'dark' or 'clear' timbres. The consonants were likewise articulated either 'dark' or 'clear' in harmony with the adjacent vowels. My own study has shown that some varieties distinguish plain and emphatic qualities in more vowels than other varieties, but the high front vowels /i/ and /e/ tend to be only marginally affected in their main body. The differences perceived by Yushmanov and Marogulov in the quality of such vowels may be due to a low F<sub>2</sub> in their onset and offset in contact with pharyngalized consonants but not necessarily a significant change of quality of the whole body of the vowel. One should also be cautious of the claim of Yushmanov that the consonants harmonize with the adjacent vowels. In a loanword such as *+dīvan* 'court', for example, in which the source of pharyngalization is a long back ā in Persian (*dīvān*), the initial /d/ is pharyngalized although the following /i/ is not affected by pharyngalization. In his article, Yushmanov also presents a series of words which, he claims, are pronounced either dark or clear. It is likely that this is referring to regional varieties rather than free alternants in a single variety of the dialect. As shown above (§1.3.5.), there is some regional variation in the distribution of pharyngalization in the lexicon.

Polotsky (1961) makes a study of the various transcription systems of the C. Urmî dialect and shows that the transcriptions used in the dictionary of Oraham (1943) reflect differences in the quality of /a/, /o/ and /u/ vowels in

plain and emphatic words. In Oraham's dictionary the entries are written in Syriac script and transcription. The Syriac script represents historical *t*, *s* and *q* according to the traditional orthography and does not mark distinctions in aspiration in other stops or in the affricates in either the Syriac script or the transcription.

Tsereteli published numerous studies on the variety of the C. Urmi dialect that was spoken in Georgia (see in particular Tsereteli 1961, 252–255; Tsereteli 1978b, 27–29). Following the proposals of Yushmanov, he held that synharmonism was based on vowel timbres. Unlike Yushmanov, however, he distinguishes three 'timbres' of vowels ('hard', 'middle' and 'soft') and maintains that there was harmony of one particular timbre across all vowels of a word, just like in Turkish vowel harmony. The examples he cites of words with hard timbre corresponds to emphatic words in my analysis, those of middle timbre correspond to either emphatic or plain words, and those with soft timbres correspond to plain words e.g.

hard:	<i>håså</i> (= <i>+xasa</i> )	'back'
	<i>tåirå</i> (= <i>+terा</i> )	'bird'
middle:	<i>pagra</i> (= <i>+pagra</i> )	'guest'
	<i>qalpa</i> (= <i>kalpa</i> )	'peel'
soft	<i>mälkä</i> (= <i>malca</i> )	'king'
	<i>därtä</i> (= <i>darta</i> )	'courtyard'

Hard timbre is found in the environment of historical \**t*, the historical emphatics \**t*, \**s*, and \**l* and \**r*. Middle timbre is found in the environment of the laryngals ' and *h*, the 'post-velars' *g*, *x*, *q* and the 'abruptives', i.e. glottalized *t*, *k*, *p*, *c*, *č*. Elsewhere the timbre is soft. The category of middle timbre appears to be a means of classifying the allophonic scatter of vowel qualities. Tsereteli (1961, 252) cites cases of phonemic opposition between hard and soft words, e.g. *tälä* 'mousetrap' vs. *tålä* 'fox', but not between middle and the other categories. It is unclear, therefore, whether he attached any phonological significance to the middle timbre category. He states that vowels of affixes normally harmonize with vowels of the stem, e.g. *mä-täv-tä* (soft) 'to put' vs. *må-qält-tå* (hard) 'to murder', but in some cases the stem harmonizes with the affix, e.g. *brünix* (soft) 'my son' but *brūnohun* (middle). The latter is only significant phonologically if it can be demonstrated that there is a phonemic opposition between soft and middle timbres, which he does not offer.

Tsereteli notes, furthermore, that there is occasionally a lack of harmony of vowel timbres in some words, e.g. a final /a/ vowel in hard words such as *hådva* 'milk' (with hard å but middle a), and the /i/ vowel in hard words such as *tåšilič*

'he hides me'. This would be compatible with acoustic measurements, which show that final unstressed /a/ vowels often have a different range of qualities from stressed vowels and that /i/ is not affected by emphasis (§1.3.4., §1.3.2.). The vowels *o* and *u* are also said to have the middle timbre in some soft words after labials, e.g. *mótväjä* 'Soviet' (with middle ö and soft ä), *büsämä* 'pleasure' (with middle ü and soft ä). Like Yushmanov, he claims that the pronunciation of the consonants is dependent on the timbre of the vowels. Hard timbre vowels condition 'abruptive' consonants and soft timbre conditions aspirated consonants. The 'abruptive' consonants, also referred to by Tsereteli as 'glottalized', are said to be similar to the corresponding glottalized Georgian and Armenian consonants (Tsereteli 1972; 1976; 1978b, 28). This is an imprecise description since the glottalized Georgian consonants are ejectives while the Armenian consonants, at least in Armenian spoken outside of Georgia, are realized as tense unaspirates. Although such consonants may sometimes be conditioned by the pharyngalization of the word, this is not always the case.

The analysis of Tsereteli was adopted by Younansardaroud (2001, 19–63) in her description of the dialect of the village of Sardarid, which is a southern variety of C. Urmi. Like Tsereteli, she identifies three timbres of vowels (soft, middle and hard) that harmonize throughout a word, and uses a detailed system of diacritics in her transcription based on that of Tsereteli. The phonological significance of this three-way analysis is not, however, demonstrated. In particular there is no demonstration of a phonological opposition between the middle and hard timbre. She gives one opposition: <sup>m</sup>ta:ma 'there' vs. <sup>h</sup>ṭå:må 'taste'. My acoustic analysis has shown that the vowel quality is not significantly different in these two words and that they are distinguished phonologically by the laryngeal setting of the initial consonant rather than by a suprasegmental feature, viz. <sup>+</sup>tama vs. <sup>+</sup>ṭama.

The study of verbal morphology of C. Urmi by Hetzron (1969) includes an introduction on phonology, in which he uses the terms 'labial' and 'palatal' to refer to emphatic and plain words respectively. This is infelicitous terminology, especially 'labial', since labialization is only an incidental feature of pharyngalization, which is the primary articulation process in emphasis. He claims that the realizations of historical \**k* and \**g* include *t<sup>y</sup>*, *c*, *k<sup>y</sup>* for the former and *d<sup>y</sup>*, *g<sup>y</sup>*, *g<sup>y</sup>* for the latter and that the front allophones of these groups occur in palatal words and the *k<sup>y</sup>* and *g<sup>y</sup>* in labial words. This does not correspond to my own analysis and seems to be a confusion of different phonemes. He states that all 'voiceless consonants are aspirated' and that /t/ and /k/ are 'half voiced'. Voicing of the tense stops is attested in some village dialects. Among the consonants he distinguishes between the phonemes /s/ and /ʂ/. It is necessary to identify the latter, he claims, since it is not restricted to 'labial' words but occurs in the

‘palatal’ word *sura* ‘small’. It is not clear what the background of this claim is. I have not detected any pharyngalization of the sibilant in this word, but it is pronounced with a degree of lip-rounding in preparation for the pronunciation of the following /u/.

Odisho (1988) in his analysis of the sound system of the Assyrian Iraqi koine, which is closely related to C. Urmī, considers pharyngalization a suprasegmental feature. He treats the historical emphatic as an unaspirated [t] segment that contrasts with aspirated [t<sup>h</sup>] only in its lack of aspiration. This is close to the analysis adopted in this grammar. The Iraqi koine contains other unaspirated stops and affricates, corresponding to the tense series in C. Urmī. It preserves the uvular realization of historical \*q unlike C. Urmī, in which it has moved forward to the post-velar position. Odisho claims that in the koine all vowels are affected by pharyngalization, including the high front vowels. This does not correspond to my acoustic analysis of C. Urmī.

## 1.6 Phonetic Processes Relating to Voicing

Word-final voiced stops, fricatives and affricates are devoiced. Voiced stops are devoiced to aspirated unvoiced stops. Examples:

<i>mágjəb</i>	[‘mayyip <sup>h</sup> ]	‘he loves’
<i>’ávəd</i>	[‘a:vit <sup>h</sup> ]	‘he does’
<i>bárəz</i>	[‘ba:ris]	‘it dries’
<i>javaj</i>	[‘dʒa:vit <sup>h</sup> ]	‘it moves’

This applies to loanwords, both those that are phonologically integrated with regard to emphasis domain and stress position (transcribed in italics) and also to those that are not phonologically integrated with regard to these features (transcribed in roman), e.g.

<i>+xíyávand</i>	[x <sup>c</sup> i: <sup>c</sup> ja: <sup>c</sup> vá <sup>c</sup> n <sup>c</sup> t <sup>h<sup>c</sup></sup> ]	‘road’ (Pers.)
<i>+kássab</i>	[k <sup>c</sup> a <sup>c</sup> ss <sup>c</sup> a <sup>c</sup> p <sup>h<sup>c</sup></sup> ]	‘butcher’ (Pers. < Arab.)
<i>+casəb</i>	[c <sup>c</sup> a <sup>c</sup> s <sup>c</sup> ə <sup>c</sup> p <sup>h<sup>c</sup></sup> ]	‘poor’ (Pers. < Arab.)
<i>+sárbaz</i>	[s <sup>c</sup> a <sup>c</sup> r <sup>c</sup> b <sup>c</sup> a <sup>c</sup> s <sup>c</sup> ]	‘soldier’ (Pers.)
<i>dūz</i>	[du:s]	‘true’ (Azer.)
<i>+’ötäg</i>	[’i <sup>c</sup> o: <sup>c</sup> t <sup>h<sup>c</sup></sup> a <sup>c</sup> x <sup>c</sup> ]	‘room’ (Pers. < Turk.)
<i>+’arálləg</i>	[’i <sup>c</sup> a <sup>c</sup> r <sup>c</sup> a <sup>c</sup> ll <sup>c</sup> ə <sup>c</sup> x <sup>c</sup> ]	‘between’ (< Azer.)
<i>darāmád</i>	[dara: <sup>c</sup> mat <sup>h</sup> ]	‘income’ (Pers.)

When inflectional or derivative affixes are attached to the end of phonologically integrated loanwords the consonants retain their voicing, e.g.

<i>'avádva</i>	[?a:'vídva]	'he used to do'
<i>barázva</i>	[ba:'rízva]	'it used to dry'
<i>+xiyavánda</i>	[x <sup>v</sup> i:já:v <sup>v</sup> a <sup>v</sup> n <sup>v</sup> d <sup>v</sup> ə <sup>v</sup> ]	'roads'
<i>+kassábə</i>	[k <sup>v</sup> a <sup>v</sup> s <sup>v</sup> s <sup>v</sup> a <sup>v</sup> b <sup>v</sup> ə <sup>v</sup> ]	'butchers'
<i>+otájə</i>	[?o:v <sup>v</sup> t <sup>v</sup> a:v <sup>v</sup> y <sup>v</sup> ə <sup>v</sup> ]	'rooms'
<i>+sarbázan</i>	[s <sup>v</sup> a <sup>v</sup> r <sup>v</sup> b <sup>v</sup> a:v <sup>v</sup> z <sup>v</sup> a <sup>v</sup> n <sup>v</sup> ]	'our soldier'
<i>duzíyta</i>	[du:'zujt <sup>v</sup> ha]	'truth'

The transcription of the final consonant in such forms is phonological and represents it as voiced in all contexts, as can be seen from the examples above. In some cases a loanword that ends in an unvoiced consonant in the source language is pronounced with a voiced consonant before affixes by analogy with the words in which a final voiced consonant has been devoiced, e.g.

<i>káppas</i> ['kapp <sup>v</sup> as]	<i>kappázə</i> [kap'p <sup>v</sup> ha:zi]	'cage' (Azeri qəfəs)
<i>šabbət</i> ['sibbit <sup>v</sup> ]	<i>šabbídi</i> [ʃib'b <sup>v</sup> i:di:]	'dill' (Pers. šebbet)
<i>čacuč</i> ['t <sup>v</sup> ha:cut <sup>v</sup> h]	<i>cacújə</i> [t <sup>v</sup> ha:'cu:dʒi]	'hammer' (Kurd. çakûç)

When clitics are attached to the end of the words, the final consonant remains unvoiced, e.g.

<i>+sárbaž-ilə</i>	[s <sup>v</sup> a <sup>v</sup> r <sup>v</sup> b <sup>v</sup> a <sup>v</sup> sə'l <sup>v</sup> ə <sup>v</sup> ]	'he is a soldier'
<i>+sárbaž-da</i>	[s <sup>v</sup> a <sup>v</sup> r <sup>v</sup> b <sup>v</sup> a <sup>v</sup> s <sup>v</sup> d <sup>v</sup> ə <sup>v</sup> ]	'also a soldier'

Notice that the stress does not shift, as it does in forms with inflectional and derivational affixes, but remains in the position it has when there is no clitic. The domains of word-final devoicing and stress are the main word excluding enclitic elements. This differs, therefore, from the domain of emphasis which includes the enclitics.

When a voiced and unvoiced consonant are in contact with each other within a word regressive assimilation generally takes place, in that a voiced consonant becomes devoiced before an unvoiced one and vice versa, e.g.

<i>bšállə</i>	['pʃillə]	'it cooked'
<i>+z<sub>k</sub>karta</i>	[s <sup>v</sup> k <sup>v</sup> a <sup>v</sup> r <sup>v</sup> t <sup>v</sup> ə <sup>v</sup> ]	'weaving'
<i>šábta</i>	['ʃapt <sup>v</sup> ə <sup>v</sup> ]	'week'
<i>xzílxux</i>	['χzil <sup>v</sup> ox]	'you saw'

<i>xdílə</i>	[ <i>'ydi:lə</i> ]	'he rejoiced'
<i>+bəxdárələ</i>	[ <i>b<sup>v</sup>əd<sup>v</sup>árlə</i> ]	'he is wandering'

These assimilations in adjacent consonants may occur across word boundaries, e.g.

<i>'ax-jasùsəl</i>	[ <i>?aydʒa:'su:sı</i> ]	'like spies' (A 1:25)
<i>b-riš-jànił</i>	[ <i>bri'z'dža:nıç</i> ]	'upon myself' (A 3:45)

These phonetic processes of assimilation do not affect the underlying phonological form of the consonants, which surfaces in inflections of the words cited above where the two consonants are separated by a vowel, e.g.

<i>bášəl</i>	[ <i>'baʃıl</i> ]	'it cooks'
<i>+zákər</i>	[ <i>z<sup>v</sup>a:kər<sup>v</sup></i> ]	'he weaves'
<i>šabátə</i>	[ <i>ʃa:bə:tı</i> ]	'weeks'
<i>xázə</i>	[ <i>'xa:zi</i> ]	'he sees'
<i>+xádər</i>	[ <i>x<sup>v</sup>a:dər<sup>v</sup></i> ]	'he wanders'

The consonants that undergo assimilations of this type are transcribed phonologically without taking into account the phonetic processes. In a few cases, however, the assimilation has become phonemicized and the voicing of a consonant has been generalized in all inflections, e.g. *jupta* (pl. *jupyata*) 'cheese' (< \**gubta* 'cheese'; cf. Syr. *gbettā* < \**gbentā*), *+rdx* (< \**rth*) 'to boil' (*+rdixa* 'boiled', *+radəx* 'it boils', etc.), *+xzd* (< *ḥṣd*) 'to harvest' (*+xzadla* 'he harvested', *+xazəd* 'he harvests', etc.), *žgš* (< \**šgš*) 'to be disturbed' (*žgiša* 'disturbed', *žagaš* 'he becomes disturbed', etc.), *ždy* (< *šdy*) 'to tease (wool)', *zgd* (< *sjd*) 'to worship' (*zjadələ* 'he is worshipping', *zagəd* 'he worships', etc.), *+zrč* (< \**srt*) 'to scratch' (*+zrəqlə* 'he scratched', *+zarəq* 'he scratches', etc.). Lexicalized assimilations such as these are represented in the transcription.

Before the laryngal /*h*/ the voiced stops /*b*/ or /*d*/ are devoiced and the sequences /*p*/ and /*t*/ are reanalysed as the tense stops /*t̪*/ and /*p̪*/ (§1.4.1.). These are, therefore, marked in the transcription:

<i>ŷ-ida</i>	< * <i>b-’ida</i>	'by hand'
<i>ŷ-ilə</i>	< * <i>d-’ilə</i>	'that he is'
<i>+ŷata</i>	< * <i>+d’ata</i> < * <i>+d’ata</i>	'sweat'

Between vowels unvoiced consonants are sometimes pronounced voiced. This is commonly encountered in the /*x*/ of the second person singular pronominal suffix before the copula, e.g.

*b-nòšux=ivət<sup>1</sup>* [bi-'no:ʃøyi'vit<sup>h</sup>] ‘you are by yourself’ (A 37:14)

*á mút +šùlux=ilə?* [ʃ'u:l'øy'irlə<sup>h</sup>] ‘what is your job?’ (A 37:18)

This voicing is not represented in the transcription. In some cases the voicing between vowels has become phonemicized and appears in all inflections. This is represented in the transcription, e.g.

*magjábta* ‘loving’ (< \*maxxabta)

*maggúbə* ‘to love’

*mágjəb* ‘he loves’

*rīja* ‘servant, housekeeper’ < *rica* < Pers. *rekā*

## 1.7 Vowel Length

The length of vowels is conditioned to a large extent by syllable structure, stress position and speed of the utterance.

### 1.7.1 The Vowels /i/, /e/, /a/, /o/, /u/

#### 1.7.1.1 Stressed Open Syllables

The vowel phonemes /i/, /e/, /a/, /o/ and /u/ tend in principle to be pronounced long in stressed open syllables. The relative length of the long vowels depends of the speed of utterance, but the duration is regularly well above 100ms in citation forms bearing the nuclear stress of an intonation group and followed by an intonation group boundary, e.g.

*bita<sup>1</sup>* ['bi:tʰa] ‘egg’

*bèta<sup>1</sup>* ['be:tʰa] ‘house’

*màta<sup>1</sup>* ['ma:tʰa] ‘village’

*mòta<sup>1</sup>* ['mo:tʰa] ‘death’

*mùxa<sup>1</sup>* ['mu:xa] ‘brain’

The default position of word stress is on the penultimate syllable. It occurs on the final syllable only in monosyllabic words and a few exceptional forms, such as the 3pl. pronominal suffix -é, which has developed historically from a form with original penultimate stress such as \*-éhən and the stress became word-final after the elision of the final syllable. The stressed vowels /i/, /e/, /a/, /o/ and /u/ in word-final position are also, in principle, pronounced long in citation forms, e.g.

<i>šti</i> [ʃti:]	'drink!'
<i>betē</i> [be'the:]	'their house'
<i>lā</i> ['la:]	'no'
<i>ð</i> ['ðo:]	'that one'
<i>kù</i> [ku:]	'get up!'

The duration of vowels in open syllables that bear a non-nuclear stress in a word that is not at the final boundary of the intonation group sometimes drops below 100ms and should be characterised as half-long, e.g.

- +*rába* [r<sup>o</sup>a<sup>·</sup>s(85ms)b<sup>o</sup>a<sup>o</sup>] *lipəva* | 'He was very learned' (A 3:1)  
*ína* ['i:(70ms)na] *yála l̩twalə* | 'but he did not have children' (A 3:2)  
*malúpula* [ma'l<sup>o</sup>lu'(86ms)pulr] *kát ...* | 'he teaches him that ...' (A 3:5)  
*ju-dreté* [dre'th'e:(80ms)] ... | 'in their scattering' (A 3:11)  
*ví* [vi:(85ms)] *vx-tùyta* | 'Be like a mulberry' (A 3:12)

Word-final vowels have a tendency to be glottalized, especially when stressed. This is common in particular with a stressed word-final /a/. The result is that a long vowel sounds short, the voiced offset being truncated by constriction of the glottis.

Glottalization is very frequent in the stressed vowels of certain monosyllabic words that are attached to another word in a stress group. These, therefore, tend to be of shorter audible duration than when they stand independently, measuring considerably lower than 100ms. The glottalization clearly marks the word-division within the phrase. This is found in particular with the indefinite particle *xa*, the interrogative particle *mu*, and negative particles, e.g.

- xa*(80ms)-*yuma* | 'one day' (A 3:3)  
*xa*(60ms)-*məndi* | 'something' (A 3:45)  
*xá*(55ms)-*məndi* 'something' (A 3:5)  
*lá*(80ms)-*vilə* ... | 'there was not ...' (A 3:3)  
*lá*(70ms)-*ví* ... | 'do not be' (A 3:12)  
*mù*(57ms)-+*bayyat* ódat? | 'What do you want to do?' (A 5:4)  
*mù*(60ms)-+*'amsat* 'What can you do' (A 5:3)  
*lè*(50ms)-*'avilux brúnal* 'You will not have a son' (A 3:5)

Examples are found, however, in which the duration is over 100ms, e.g.

- lè*(140ms)-*pas* 'It will not remain' (A 3:11).  
*lā*(105ms)-+*katta*. | '(that) it is not cut off' (A 3:36)

In strongly stressed words the glottal stricture is occasionally realized as a clear glottal stop, e.g.

*yá' àlaha* | 'Oh God' (A 43:8)

The glottalized monosyllabic words are occasionally expanded by the attachment of an addition syllable. In such cases the glottal stricture is clearly perceptible, e.g.

*xá'a bàxta* | 'a woman' (A 39:10)

*xá'a mən-* + *tālyātan* | 'one of the games' (B 9:3)

Sporadically a strongly stressed internal long vowel in other words is realized as short vowel + glottal stop, e.g.

*lè'va* ['le?va] + *myásə* 'He was not able' (A 49:1) < *lèva* ['le:va] + *myasa*

Short vowels are occasionally found in open syllables elsewhere, notably in the words *mádənxə* 'east', *tāyəmna* 'south', *má'ərva* 'west' and *mádəbxa* 'altar'. The explanation here is that the following /ə/ is an epenthetic vowel and at an underlying level the vowel is in a closed syllable: /mad.n.xə/, /tay.m.na/, /mad.b.xə/ (§ 1.14.). The vowel length and stress position are based on the underlying form. Variants are found with the vowel lengthened, e.g. *mádənxa* 'dawn' (A 47:9).

The stressed vowel in an penultimate open syllable of a number of words used as discourse markers and words used with interpersonal communicative function is often, though not obligatorily, shortened, e.g.

*bína* ['bi:na ~ 'bina] 'excuse me (please repeat what you said)'

*xína* ['xi:na ~ 'xina] 'discourse marker and connective'

*búna* ['bu:na ~ 'bóna] 'son' (also used to address an animal)

Here the shortening of the vowel is apparently due to phonetic attrition resulting from its frequent use in non-focal positions in the discourse. The shortened syllables of these forms can, nevertheless, be considered to be long at an underlying level.

#### 1.7.1.2 Pretonic Open Syllables

In an open syllable before the word stress a vowel from this set is generally realized half-long with a duration in the range of 70ms–100ms, e.g.

<i>bitèl</i> [bi'té:]	'their egg'
<i>jibànəl</i> [ji'ba:nɪ]	'sides'
<i>betèl</i> [be'the:]	'their house'
<i>mešàtał</i> [me'sʃatʰɪ]	'woods'
<i>matèl</i> [ma'tʰe:]	'their village'
<i>šap̄ırał</i> [ʃa'pi:ra]	'beautiful'
<i>motèl</i> [mo'tʰe:]	'their death'
<i>honànał</i> [ho'na:na]	'clever'
<i>muleł</i> [mu'le:]	'their barn'
<i>yumànał</i> [ju'ma:ni]	'days'

Unstressed monosyllabic words that are combined with a following word beginning with a stressed syllable generally have a short vowel, e.g.

<i>xa</i> (50ms)- <i>brùnał</i> 'a son' (A 3:5)
<i>xa</i> (70ms)-+ <i>xábra</i> 'a word' (A 3:3)
<i>ka</i> (45ms)- <i>jánux</i> 'for yourself' (A 3:6)
<i>ka</i> (50ms)- <i>brùnul</i> 'to his son' (A 3:8)
<i>ka</i> (75ms)- <i>dìyyux</i> 'to you' (A 3:21)

Contrast *ka-dìyyux* [ka(75ms)'dijjox] 'to you', in which the /a/ vowel is pronounced short, with *katóxun* [ka'(100ms)'tʰo'xún] (A 6:12), in which the pretonic syllable is within the word and is pronounced semi-long.

### 1.7.1.3 Pro-Pretonic Open Syllables

A vowel from this set in open syllables two places before the main word stress is also realized as half-long with broadly the same range of duration (75ms–100ms), e.g.

<i>sniķuyàtał</i> [sní'ku'ja:tʰɪ]	'needs'
<i>lelavàtał</i> [le'la'va:tʰɪ]	'nights'
<i>babavàtał</i> [ba'bá'wa:tʰɪ]	'fathers'
<i>šopatèł</i> [ʃo'pʰa'tʰe:]	'their places'
<i>yumanèł</i> [ju'ma'ne:]	'their days'

### 1.7.1.4 Vowels in Post-Stress Open Syllables

When the vowels /a/, /e/, /o/ and /u/ occur in open syllables after the stress, they are in principle short when the word occurs within the body of the intonation group. If it occurs at the end of an intonation group the duration of post-stress vowels is generally extended, especially those in a word-final open syllable.

<i>málca</i> ['malca]	<i>màlca</i> ['malca:]	'king'
<i>bétu</i> ['be:t <sup>h</sup> u]	<i>bètu</i> ['be:t <sup>h</sup> u:]	'his house'
<i>béto</i> ['be:t <sup>h</sup> o]	<i>bèto</i> ['be:t <sup>h</sup> o:]	'her house'
<i>túrvante</i> ['t <sup>h</sup> urvinte]	<i>tùrvante</i> ['t <sup>h</sup> urvinte:]	'both of them'

Pausal lengthening of vowels does not regularly occur at every intonation group boundary. It is often more dependent on syntactic or discourse structure than prosodic structure. This is illustrated by the following example in which the final vowel is lengthened only at the end of the syntactic unit:

- (1) *'u- +'Axiqar! xaccíma máruna(50ms),| xaccíma +yán lipa(150ms).| 'Axiqar,  
they call him the wise man, the wise man, that is the learned man.'* (A 3:1)

Word-final unstressed vowels tend to undergo glottalization of some kind. This is particularly identifiable in those in pause before intonation group boundaries. In this position the glottalization may manifest itself in the form of creaky voice or breathiness, e.g.

*màlca* ['maltʃa:] (A 22:1) (creaky voice)  
*kàtu* ['ka:t<sup>h</sup>u<sup>h</sup>] (A 3:37) (breathiness)

When an /i/ occurs in a final unstressed open syllable in pause at the end of an intonation group, rather than being lengthened its offset tends to be realized as an unvoiced palatal fricative. This can be regarded as the manifestation of glottalization in the form of a kind of breathiness with a closure homorganic with the vowel, e.g.

*béti* ['be:t<sup>h</sup>i]   *bèti* ['be:t<sup>h</sup>iç]   'my house'

Neither the pausal lengthening of /a/, /e/, /o/ and /u/ nor the pausal fricative offset of /i/ is marked in the transcription.

Sporadically the offset of a historically long \**ī* vowel develops into a palatal consonant in word-internal position. This is found in the word

*'elacta* [ʔe'lict<sup>h</sup>a ~ ʔe'litʃt<sup>h</sup>a]   'fat of a sheep's tail'   < \**elītā*

In some varieties of the dialect this word is pronounced without the palatal offset, viz. *'elita*. In the variety of the dialect spoken in Abdullacande N and in the C. Salamas dialect this process is found also in the form *mdəcta* < *mdīta* 'town'.

### 1.7.1.5 Closed Syllables

In the group of vowels /a/, /e/, /i/, /o/ and /u/, only /a/ and /u/ occur in closed syllables that are not the result of contraction.

An /a/ in a non-final closed syllable is always short, whether stressed or unstressed, unless the syllable is the result of contraction of two syllables by the elision of a weak segment, in which case it is always long and is marked in the transcription with a macron, e.g.

<i>xálta</i> ['xalt <sup>h</sup> a]	'aunt'
<i>maplóxxa</i> [map'líxxa]	'she uses'
<sup>+</sup> <i>tálta</i> ['ta:lt <sup>h</sup> a]	'game' (< *ta'alta)
<sup>+</sup> <i>tälté</i> [ta:l't <sup>h</sup> e:]	'their game'

A /u/ vowel in a non-final closed syllable is always short, e.g.

<sup>+</sup> <i>šúpра</i> [ʃ <sup>c</sup> úp <sup>c</sup> r <sup>c</sup> a <sup>c</sup> ]	'beauty'
<i>muplóxlə</i> [mʊp <sup>h</sup> lɪxlɪ]	'he used'

When an /a/ vowel occurs in a stressed closed final syllable that is not the result of contraction of two syllables, it is short if within the body of an intonation group but long if in prosodic pause at the end of an intonation group. This applies to monosyllabic words, e.g.

<i>kát</i> [ka(65ms)t <sup>h</sup> ]	'that' (A 3:3)
<i>kàtl</i> [ka(130ms)t <sup>h</sup> ]	'that' (A 3:48)

When the stressed closed syllable is the result of contraction of two syllables, the vowel is always long and is marked in the transcription with a macron. Any of the vowels of the group /a/, /e/, /i/, /o/, /u/ can occur as long vowels in this context: e.g.

<sup>+</sup> <i>dár</i> ['d <sup>c</sup> a: <sup>c</sup> r <sup>c</sup> ]	'he returns' (< <sup>+</sup> <i>dayər</i> )
<sup>+</sup> <i>där</i> ['d <sup>c</sup> a: <sup>c</sup> r <sup>c</sup> ]	

<sup>?</sup> <i>itva</i> [?i:t <sup>h</sup> va]	'you were' (< <sup>?</sup> <i>ivətva</i> )
<sup>?</sup> <i>itval</i> [?i:t <sup>h</sup> va:]	

<i>dút</i> [du:t <sup>h</sup> ]	'there you are' (< <i>duvət</i> )
<sup>?</sup> <i>düt</i> [du:t <sup>h</sup> ]	

When such forms are deprived of stress in a stress group and do not occur at an intonation group boundary, their vowel is pronounced short, e.g.

*lè-paš* ['le:pa(75ms)f] 'it will not remain (<*payəš*)' (A 3:11)

A /u/ vowel in a stressed word-final closed syllable is short when occurring in the body of the intonation group but long when occurring in pause at the end of an intonation group, e.g.

*xúš* ['xu[60ms]f] 'go!' (A 3:70)  
*xùš!* ['xu:[330ms]f] (A 3:37)

When a vowel that is long in an open syllable is followed by an enclitic beginning with a consonant, the length of the vowel is maintained, since a clitic does not alter the syllable structure of the word to which it is attached (§ 1.14.), e.g.

*é=t* ['?e:[120ms]t<sup>h</sup>] 'she who' (A 39:15)  
*ó=t* ['?o:[146ms]t<sup>h</sup>] 'that of' (B 14:4)

#### 1.7.1.6 Post-Stress Final Closed Syllable

A vowel in a word-final closed syllable that occurs after the stress is short within the body of an intonation group but is generally lengthened when immediately followed by an intonation group boundary, e.g.

*+Axíkar* [?'a·x'i:ká(60ms)r<sup>f</sup>] (A 3:2)  
*+Axíkar!* [?'a·x'i:ká:(180ms)r<sup>f</sup>] (A 3:1)  
*Nátan* ['na:t<sup>h</sup>a(50ms)n] (A 3:15)  
*Nátan!* ['na:t<sup>h</sup>a:(150ms)n] (A 3:94)  
*ka-jánux* [ka'dža:nó(60ms)x] (A 3:6)  
*šòpux?* [ʃo:p<sup>h</sup>u:(150)x] (A 3:14)

When, however, an enclitic is attached to the end of the word before an intonation group boundary, the final vowel of the clitic rather than of the main word is lengthened and the vowel of the unstressed closed syllable of the main word remains short, e.g.

*šómmu Nátan-íva!* ['na:t<sup>h</sup>a(55ms)niva:] 'His name was Natan' (A 3:6)  
*+dòstux-ína!* ['d'o:s'tóu:(55ms)yín'a:] 'they are your friends' (A 3:9)

### 1.7.2 *The Vowel /ə/*

The vowel /ə/ is derived historically from short \*i, long \*ī or long \*ē. It is basically a short vowel, though its duration is increased under certain prosodic conditions. It occurs in closed syllables and post-stress open syllables.

In unstressed closed syllables it is regularly pronounced short, e.g.

- pátəx* [p<sup>h</sup>a:t<sup>h</sup>ix] ‘he opens’  
*šəmmé* [ʃim'me:] ‘their name’

In stressed closed syllables it is pronounced short, e.g.

- ptóxli* ['p<sup>h</sup>tixli] ‘I opened’  
*dámma* ['damma] ‘blood’

Pretonic syllables containing /ə/ are always closed, in some cases by secondary gemination (§ 1.13.2.3.), e.g. *mapləxxáva* ‘she used to use’. In post-stress open syllables, where /ə/ is a contraction of an original \*ē, its default pronunciation is short, but the duration is often increased immediately before an intonation group boundary, e.g.

- šátə* ['ʃa:t<sup>h</sup>i]      *šátə|* ['ʃa:t<sup>h</sup>i:]      ‘he drinks’  
*bétələ* ['be:t<sup>h</sup>lɪ]      *bétələ|* ['be:t<sup>h</sup>r:ɪ]      ‘it is a house’

These increases in duration conditioned by prosodic position are not represented in the transcription. A short /ə/ in a closed syllable is replaced by long /i/ in an open syllable in the inflection of some forms, e.g.

- |                 |                   |                |                   |
|-----------------|-------------------|----------------|-------------------|
| <i>'armólta</i> | ‘widow’           | <i>'armíla</i> | ‘widower’         |
| <i>šapórta</i>  | ‘beautiful (fs.)’ | <i>šapíra</i>  | ‘beautiful (ms.)’ |
| <i>nšókla</i>   | ‘he kissed’       | <i>nšíkálə</i> | ‘he kissed her’   |
| <i>+cásəb</i>   | ‘poor man’        | <i>+casíbə</i> | ‘poor people’     |

These are systematic morphophonemic changes and are represented in the transcription.

Short unstressed /ə/ in a word-final open syllable sometimes loses intensity and is not audible. This can be interpreted as a manifestation of the general tendency to glottalize word-final vowels. This occurs in particular when the final /ə/ is separated from the preceding stress by an intervening open syllable. It commonly occurs in particular in the pronunciation of the 3ms copula suffix, e.g.

- márəl* < *márələ* 'he says'  
*vádəl* < *vádələ* 'he does'

### 1.8 Diphthongs

After the vowels /a/ and /u/ a syllable offset can be formed by the semivowel /y/. These sequences, /ay/ and /uy/, in which the /y/ is syllable final, will be considered diphthongs.

In the diphthongs /ay/ and /uy/ the semi-vowel /y/ segment is in principle articulated with less energy and acoustic intensity than the nuclear vowel. This can be seen in the following waveforms, which also show above the wave the intensity contour:

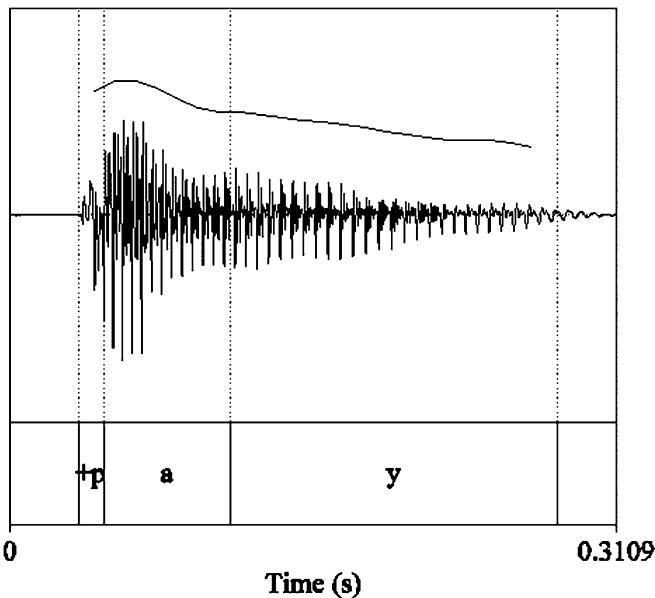

FIGURE 52 +spay 'good'

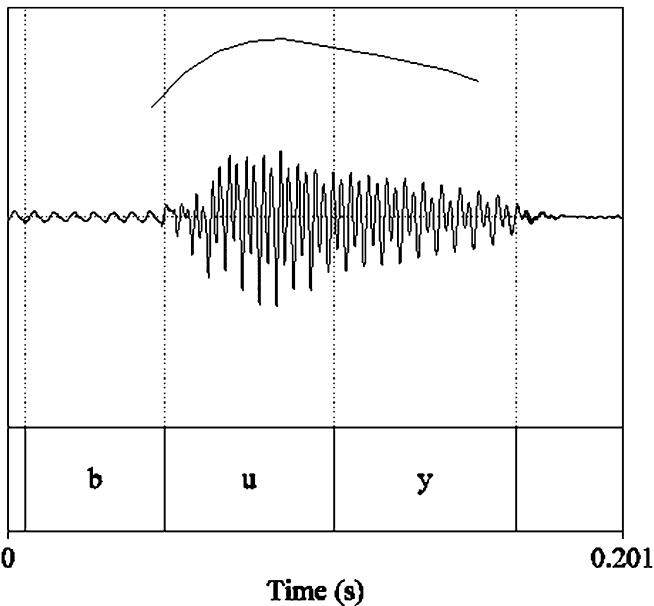

FIGURE 53 Second syllable of *sebuytux* 'your old age'

On some occasions there is not a steady drop in acoustic intensity but rather there is a second smaller rise in intensity on the semi-vowel /y/. This can be seen in the following waveforms:

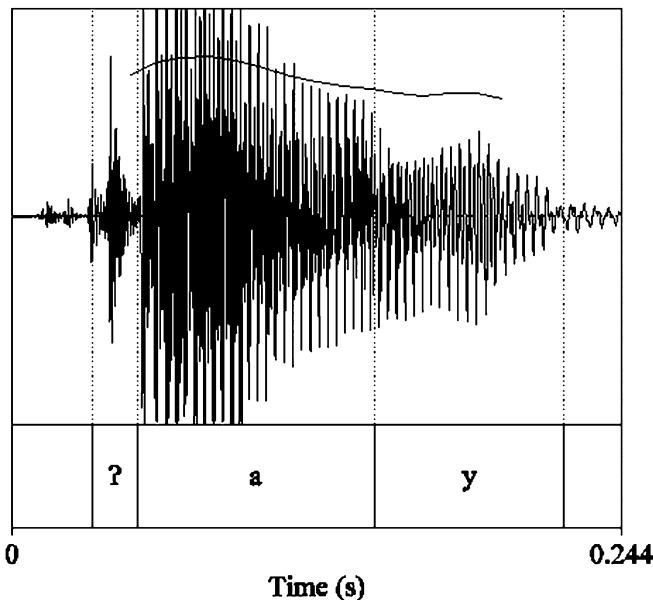

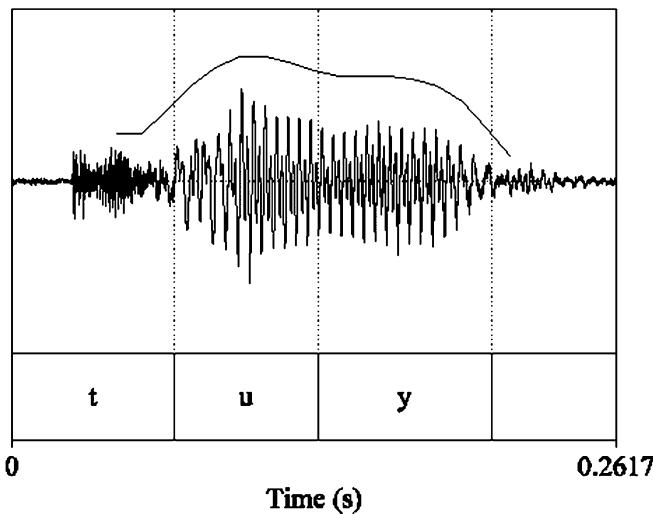

FIGURE 54 'ay 'she'

FIGURE 55 First syllable of *túa* 'berry'

The diphthong may sometimes consist of two clear intensity peaks with that of the initial half of the diphthong only marginally higher than the second, as seen in fig. 56.

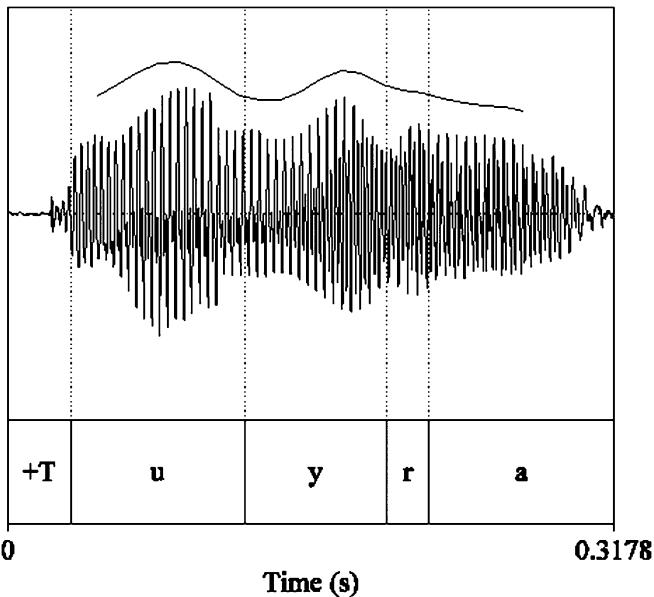

FIGURE 56   *+túra* 'mountain'

Near equal intensity peaks may, in principle, justify interpreting the sound as a series of two adjacent vowels rather than a diphthong, but it is regularly represented as a diphthong /uy/ in the transcription.

The /u/ segment of the /uy/ diphthong is often considerably fronted, especially in plain words. In such cases the quality movement within the diphthong is lessened. The plot in Fig. 57 shows the quality movement between the two segments of the diphthong in a selection of tokens.

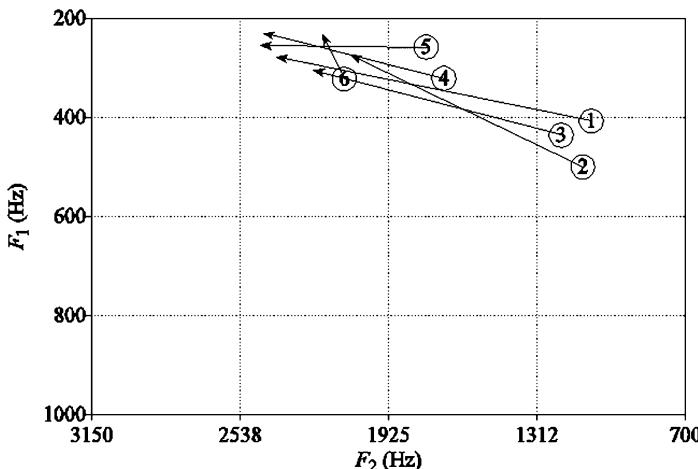

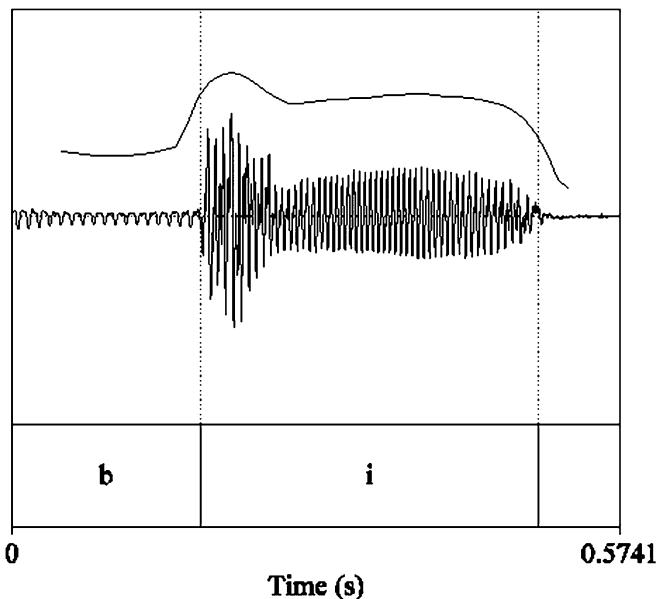

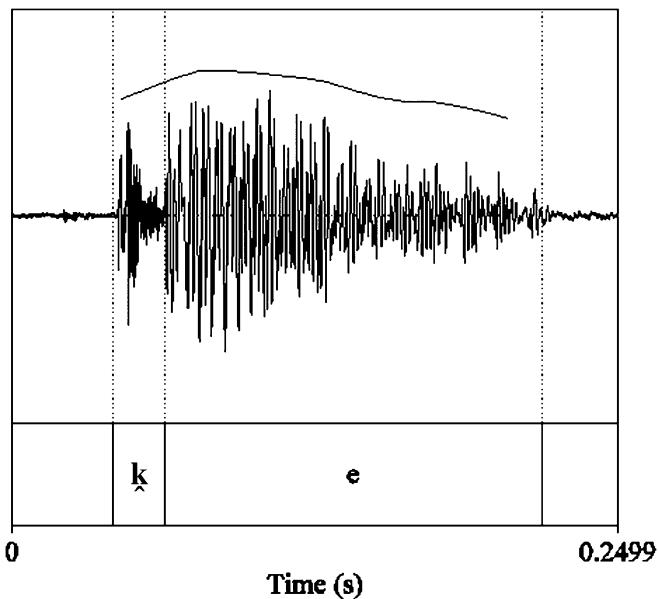

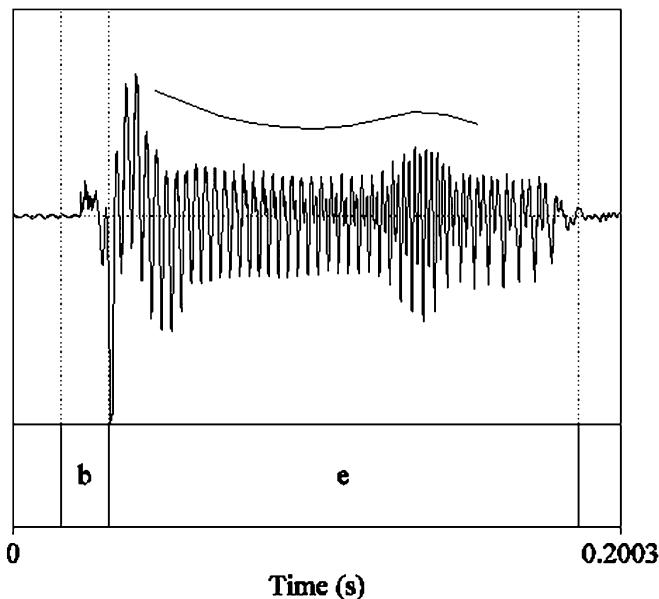

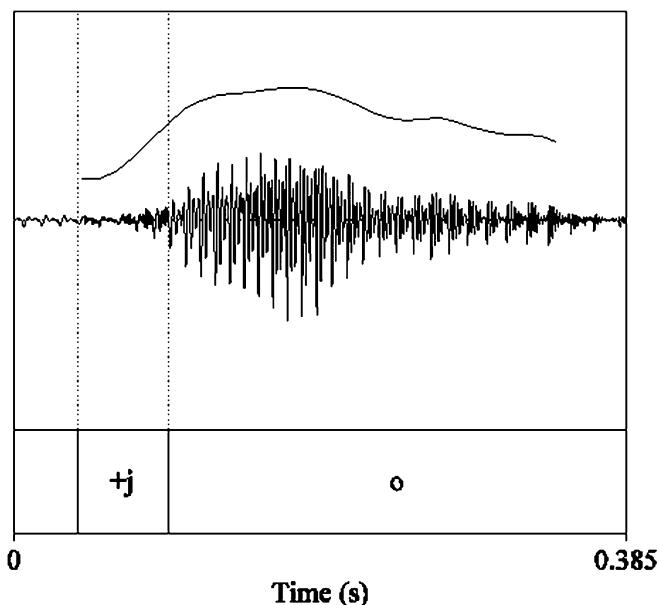

FIGURE 57

1. *+’íydaɬ* ‘each other’
2. *+túyra* ‘mountain’
3. *+núyɬa* ‘oil’
4. *túyta* ‘berry’
5. *malcúyta* ‘kingdom’
6. *zúyza* ‘money’

For the patterns of occurrence of diphthongs and their historical background see § 1.12.

The contour of the distribution of acoustic energy in long monophthongs is generally similar to that of diphthongs, in that it is not a steady state of intensity, but rather a peak at the onset of the segment followed by a reduced intensity at its offset. In some cases there is even a secondary lesser peak in the offset portion of the segment. This can be seen in the waveforms of long monophthongs shown in figs. 58–63.

FIGURE 58 *bita* 'egg'FIGURE 59 *+kéta* 'summer'

FIGURE 60 *béta* 'house'FIGURE 61 *+jóra* 'husband'

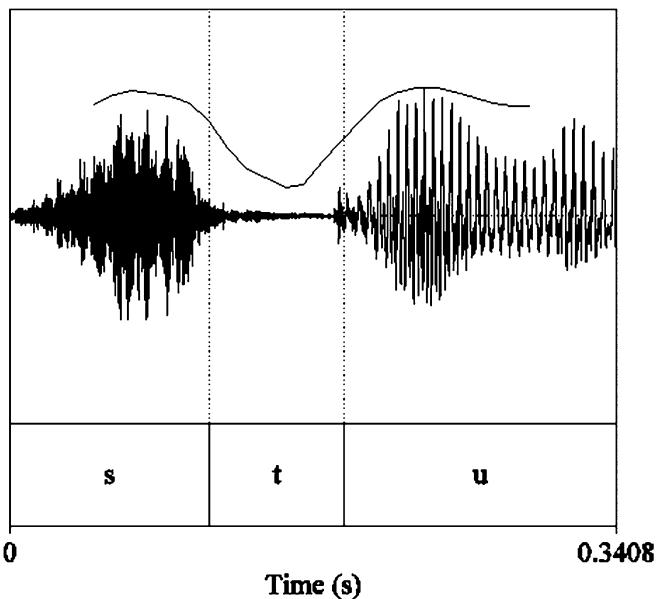

FIGURE 62 stúna 'post'

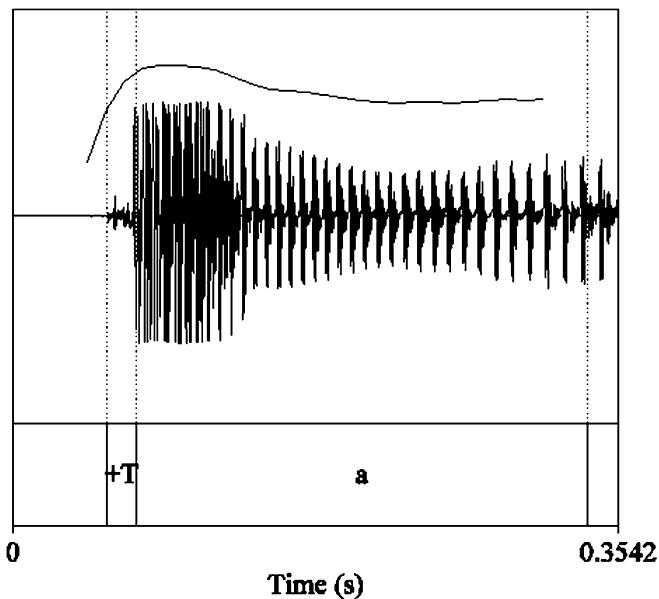

FIGURE 63 +tála 'she plays'

From the point of view of distribution of acoustic energy, therefore, long monophthongs are equivalent to diphthongs and they differ from the latter only in the lack of quality shift in their offset. This acoustic contour of monophthongs could, in theory, be represented in a narrow transcription thus: *bíta* (or *biyta*), *beeta*, *stuuna*, *+jogra*, *+taala*. A simpler transcription has, however, been adopted, which does not represent this phonetic profile of long vowels. When a high long vowel such as /i/ is preceded by an emphaticized consonant the F2 drop in the offglide after the consonant is in the segment of the vowel with the most acoustic energy, which may give it the phonetic contour of a diphthong of changing quality, e.g. *+tina* [+'tiina] 'mud'. In the environment of labials the offglide from a pharyngalized consonant before /i/ may become labialized. This is particularly conspicuous in some varieties of the dialect and is represented in the transcription, e.g. *+buybar* (Canda) = *+bibar* (Urmī) 'pepper'; *+muyra* (Canda) = *+mira* (Urmī) 'spade', *+rabuya* (Canda) = *+rabita* (Urmī) 'teacher (f.)'.

This feature of long vowels is likely to be the background to the practice of representing long /i/ as a diphthong in some transcription systems, e.g. Noviy Alvanfit ij, ѫ, Osipov (1913) ii, ii (see Polotsky 1961; Murre-van den Berg 1999, 166–168), which is followed also by Tsereteli (1978b) and Younansardaroud (2001). There does not seem, however, to be acoustic evidence for restricting such transcriptions to long /i/. The practice may have been motivated by the observation that in pause final long /i/ has a palatal fricative offset [iç] (§ 1.7.1.4.), whereas other vowels have no such fricative offset in pause.

The whole duration of the diphthong /uy/ is generally over 100ms. Its component onset [u] and offset [j] are, however, usually below 100ms in duration. It behaves like a long monophthong with regard to its distribution, in that it tends to be restricted to syllables where monophthong vowels are typically long or at least half-long, i.e. open stressed or pretonic syllables, e.g.

- |                |             |
|----------------|-------------|
| <i>+túyra</i>  | 'mountain'  |
| <i>tuyrána</i> | 'mountains' |

It is found in stressed monosyllabic words, such as *túy* 'sit!'. In pause before the intonation group boundary the [j] offset in this context is devoiced to the palatal [ç], as is the case with /i/ in pause (§ 1.7.1.4.):

*túy!* ['tuç] 'sit!'

In post-stress syllables it is rarely found, but is occasionally heard in unstressed final open syllables in pause, which is a context in which monophthongs are typically lengthened, e.g.

<sup>+</sup>ká<sub>t</sub>u [k<sup>c</sup>a:<sup>c</sup>t<sup>c</sup>u]    <sup>+</sup>ká<sub>t</sub>uy| [k<sup>c</sup>a:<sup>c</sup>t<sup>f</sup>uy]    ‘cat’

In the lexeme *luya* ‘udder’ the palatal glide offset of the diphthong is strengthened to /c/ in some varieties of the dialect, e.g. Ardišay (S) *lucta* [lot<sup>h</sup>ta]. In the far north of the Urmi plain in the village of Abdullacande this word has the form *luxta*, with a fricative offset, which corresponds to the form found in C. Gawilan and C. Salamas further north.

The diphthong /ay/ has no restriction on distribution and freely occurs, though rarely, in post-stress syllables, e.g.

*xa-*<sup>+</sup>*kólay* <sup>+</sup>*bàra* ...| ‘a slight light’ (A 39:9)

## 1.9 Historical Background of Consonants

### 1.9.1 *The BGDKPT Consonants*

The erstwhile post-vocalic fricative allophones of the *bgdkpt* consonants have undergone various developments. In all cases the reflex of the earlier fricative is a fossilized vestige from an earlier period and is now treated as a phoneme different from the homorganic stop.

#### 1.9.1.1 \**b*

The reflex of the fricative allophone of \**b* in earlier Aramaic is /v/, e.g.

<i>ctava</i>	‘book’	< *ktābā
<i>švava</i>	‘neighbour’	< *šbābā
<sup>+</sup> <i>xalva</i>	‘milk’	< *halbā
<i>dava</i>	‘gold’	< *dahbā
<i>jinava</i>	‘thief’	< *gannābā
<i>davək</i>	‘he seizes’	< *dābəq

This has led to the merger of the reflexes of \**b* (> /v/) and \**w* (> /v/), which has created homonyms, e.g.

<i>javəl</i>	‘he fashions’	< *gābəl
<i>javəl</i>	‘he vomits’	< *gāwəl

The sequence \**ab* has contracted to /o/ when it stands in the coda of a syllable before a consonant, e.g.

<sup>+</sup> <i>jora</i>	'husband'	< * <i>gabրā</i>
<sup>+</sup> <i>xora</i>	'friend'	< * <i>habրā</i>
<sup>+</sup> <i>xola</i>	'rope'	< * <i>habլā</i>
<sup>+</sup> <i>kora</i>	'grave'	< * <i>qabրā</i>

When *\*b* was preceded by *\*u*, the sequence *\*ub* contracted to *\*ū*, which subsequently diphthongized to /uy/, e.g.

<i>tuya</i>	'straw'	< * <i>tubnā</i>
<i>duyša</i>	'honey'	< * <i>dubšā</i>
<sup>+</sup> <i>ruya</i>	'Friday'	< * <i>arubtā</i>

On some occasions the reflex of an original sequence *\*ab* is /u/ or /uy/. In such cases the /u/ is a development of an earlier *\*o* vowel (§ 1.11.6.), which in turn had developed from *\*ab*, e.g.

<sup>+</sup> <i>jura</i>	'big'	< * <i>gora</i> < * <i>gabրā</i>
<i>bət-</i> <sup>+</sup> <i>kuyra</i>	'grave'	< * <i>bēt-qora</i> < * <i>bēt-qabրā</i>

The /o/ in these words is found in NENA dialects that have preserved the diphthong /aw/ elsewhere as the reflex of *\*ab*, e.g. Barwar:

Barwar	C. Urmi
<i>gawra</i>	<sup>+</sup> <i>jora</i>
	'man'
<i>gora</i>	<sup>+</sup> <i>jura</i>
	'big'
<i>qawra</i>	<sup>+</sup> <i>kora</i>
	'grave'
<i>bəθ-qora</i>	<i>bət-</i> <sup>+</sup> <i>kuyra</i>
	'cemetery'

The reflex of *\*b* in the coda of a syllable after /ə/ is /v/, e.g.

<i>dəvxa</i>	'sacrifice'	< * <i>dibhā</i>
<i>ctəvta</i>	'written (fs.)'	< * <i>kłibtā</i>

In a number of words of native Aramaic stock, the stop /b/ occurs after a vowel. These may be classified as follows:

(i) Cases where the /b/ was originally geminated, e.g.

<i>xabuysa</i>	'apple'	< * <i>habbūšā</i>
<i>dabaša</i>	'bee'	< * <i>dabbāšā</i>

- šabta* ‘week’ < \**šabb<sup>a</sup>tā*  
*zabən* ‘he sells’ < \**nzabben*

(ii) Where the preceding vowel is an epenthetic, e.g.

- caləbta* ‘bitch’ cf. *calba* ‘dog’

(iii) Where the /b/ was originally preceded by a vowelless consonant, which has now been elided, e.g.

- sebuuya* ‘old age’ < \**sa’buθa*

(iv) Where a word beginning with /b/ is combined in a stress group with a preceding word ending in a vowel, e.g.

- ju-beta* ‘in the house’

(v) In various verbal roots in which /b/ deriving from ungeminated \**b* has been fixed as a radical and occurs in all inflections, e.g.

- barəc* ‘he kneels’ < \**brk*  
*mabrəc* ‘he causes to kneel’

An unvoiced tense /p/ has developed from the sequence \**b* + \*, e.g.

- +*arp̥a* < \**arb’ā* < \**arb’ā* ‘four’  
+*sup̥p̥a* < \**ṣəb’ā* < \**ṣəb’ā* ‘finger’  
*p̥urta* < \**b’urta* < *b’urta* ‘dung of sheep’  
*p̥-ida* < *b’ida* ‘by hand’

The devoicing of \**b* by regressive assimilation of a following unvoiced stop has become lexicalized in all inflections of the word *jupta* (< \**gubta* ‘cheese’; cf. Syr. *g̥bettā* < \**g̥bentā*).

#### 1.9.1.2      \**p*

The reflex of \**p* is, as a general rule, the stop /p/, including in post-vocalic positions, e.g.

- cipa* ‘stone’ < \**kēpā*  
*’upra* ‘soil’ < \**ap̥rā*

<i>səptə</i>	'lip'	< * <i>sep̪θā</i>
<i>napəl</i>	'he falls'	< * <i>nāpel</i>
<i>naxəp</i>	'he is ashamed'	< * <i>nākəp̪</i>

The words *noš-* 'oneself', *+t̪loxa* 'lentils' and *+ruyša* 'shoulder' appear to be exceptions to this, since in the attested literary forms of eastern Aramaic these contain *\*p̪* (cf. Syr. *nap̪šā*, *tlaþhē*, *raþšā*). The easiest explanation is that the NENA forms *noš-*, *+t̪loxa* and *+ruyša* are descended from a proto-form with a voiced *\*b̪*. This would have formed a diphthong with a preceding vowel, which became monophthongized before a consonant (§ 1.9.1.1., § 1.11.5.): *noš-* < \**nawš* < \**nab̪š-*, *+t̪loxa*, *\*tlawšē* < \**tlab̪šē*, *+ruyša* < \**rub̪šā*.

In some words an original aspirated stop *\*p* has shifted to a tense unaspirated stop /p̪/. This has occurred in both emphatic and plain words, e.g.

<i>+p̪aləš</i>	'he fights'
<i>+p̪armuya</i>	'to understand'
<i>+p̪aþuxta</i>	'animal dung'
<i>+p̪čila</i>	'crooked'
<i>+t̪up̪purta</i>	'fingernail'
<i>p̪əçxa</i>	'blossom'
<i>p̪ək̪ka</i>	'frog'
<i>p̪ak̪kə</i>	'it splits'
<i>saþəs</i>	'it decays'
<i>šap̪əl</i>	'he becomes paralyzed'
<i>xap̪ək̪</i>	'he embraces'
<i>xap̪ər</i>	'he digs'

In some cases it has arisen due to coalescence of /b/ with a following laryngal, e.g.

<i>p̪urta</i>	'droppings of sheep' < * <i>b̪urta</i> (cf. Syr. <i>bā'ūra</i> 'droppings')
<i>p̪-ida</i>	'by hand' < <i>b-’ida</i>

The tense stop is found in several loanwords. In some cases the stop is unaspirated in the source language but in other cases it is not and the tenseness of the consonant is an innovation of the C. Urmī dialect. It is found in both emphatic and plain words, e.g.

<i>+p̪uza</i>	'snout' (cf. Kurd. <i>poz</i> , Pers. <i>pūz</i> )
<i>p̪aþçən</i>	'it rots' (< Kurd. <i>pûç</i> 'useless, unuseable')

<i>+kopala</i>	'stick' (< Kurd. <i>koþal</i> )
<i>paltəç</i>	'to stutter' (< Azer. <i>pəltəkləmək</i> )
<i>+paltun</i>	'overcoat' (< Russ. <i>пальто</i> <i>pálto</i> [< French <i>paletot</i> ], Pers. <i>páltō</i> )
<i>laþatka</i>	'shovel' (< Russ. <i>лопатка</i> <i>laþatka</i> )
<i>kənnoþka</i>	press-stud (< Russ. <i>кнопка</i> )

In the case of the Russian loanwords the unaspirated /p/ has been taken over from the source language, since unvoiced stops in Russian are unaspirated.<sup>11</sup> In the case of loanwords from other languages, the tense stop often appears to have developed within NENA. Emphasis could have been a conditioning factor. In the case of plain words sound symbolism played a role, as it may have done also in the case of native plain words such as *pəkkə* etc. (§ 1.10.).

Words with unaspirated stops may form minimal or near minimal pairs with words containing the lax aspirated stop, e.g.

<i>parmi</i>	'they cut'	<i>+parmi</i>	'they understand'
<i>+paltun</i>	'take out (pl.)!'	<i>+paltun</i>	'jacket'

The stop /p/ often appears in loanwords where the source language has the fricative /f/, reflecting a process analogous to that of hardening of the fricative \**p̪* in Aramaic words, e.g.

<i>+tapavut</i>	'difference'	< Pers. (< Arab.) <i>tafāvut</i>
<i>sapar</i>	'journey'	< Pers. (< Arab.) <i>safar</i>
<i>+supra</i>	'tablecloth'	< Pers. <i>sofre</i> , Azer. <i>süfrə</i>
<i>napas</i>	'breath'	< Pers. (< Arab.) <i>nafas</i>
<i>+pəllan</i>	'so-and-so'	< Pers. (< Arab.) <i>folān</i>
<i>pərsat</i>	'opportunity'	< Pers. (< Arab.) <i>fursat</i>
<i>sap</i>	'queue'	< Pers. (< Arab.) <i>saf</i>
<i>maptul</i>	'wire'	< Pers. (< Arab.) <i>maftūl</i>
<i>+murapa</i>	'lawsuit'	< Pers. (< Arab.) <i>morūfa’ā</i>
<i>kəppəl</i>	'lock'	< Azeri (< Arab.) <i>qifil</i>
<i>kappas</i>	'cage'	< Azeri (< Arab.) <i>qəfəs</i>
<i>lxepa</i>	'quilt'	< Kurd. (< Arab.) <i>lihēf</i>

<sup>11</sup> Cf. Tsereteli (1978b, 28). Friedrich (1959, 55) notes that unaspirated /k/ and /t/ in Russian loans are rendered mostly by <q> and (less often) by <t> in Novij Alfavit.

1.9.1.3      *\*t*

The original interdental fricative allophone of this consonant has merged with the stop allophone and so both *\*t* and *\*t̪* have the reflex of the stop /t/, e.g.

<i>+atra</i>	'land'	< <i>*atrā</i>
<i>mata</i>	'village'	< <i>*mātā</i>
<i>xmata</i>	'mother-in-law'	< <i>*hmātā</i>
<i>ctava</i>	'book'	< <i>*ktābā</i>
<i>šabta</i>	'week'	< <i>*šabtā</i>

In a few cases an original fricative *\*t̪* is weakened after a vowel and is elided. This occurs in the numerals 'three' and 'thirty'

<i>+t̪la</i>	'three'	< <i>*tlātā</i>
<i>tlay</i>	'thirty'	< <i>*tlātī</i>

It also occurs in plural endings, in which the element *-atə* often contracts, optionally, to *-ay*, e.g.

<i>'axunváta</i> ~ <i>'axunváy</i>	'brothers'
<i>xatváta</i> ~ <i>xatváy</i>	'sisters'
<i>matváta</i> ~ <i>matváy</i>	'villages'

The consonant is elided in all inflections of the verb *mayyə* 'to bring', which is historically the causative of the root *\*-t̪-y* 'to come', e.g.

<i>mayyə</i>	'he brings'
<i>mayyəla</i>	'he is bringing'
<i>muuyyila</i>	'he brought'

In the root *+r-d-x* 'to boil' (< *\*r-t̪-h*) the voicing of an original *\*t* radical has been fixed lexically and occurs in all inflections:

<i>+radəx</i>	'it boils'
<i>+mardəx</i>	'he causes to boil'

An original *\*t* has developed into the tense consonant /t/ in a number of words. In emphatic words this has been brought about by pharyngalization. In plain words it appears to have arisen by a process of sound symbolism to express a diminutive (§ 1.10.):

<sup>+</sup> <i>tla</i>	'three'	< * <i>tl̥a</i> < * <i>tlātā</i>
<sup>+</sup> <i>pərt̥ana</i>	'flea'	< * <i>purtānā</i> < * <i>purta'na</i>
<i>t̥elpa</i>	'eyelash'	< * <i>t̥elpa</i>
<i>tuvvulta</i>	'worm'	< * <i>tawältā</i> (cf. C. Botan <i>tawla</i> , J. Sanandaj <i>tolta</i> , J. Amedia <i>tole'g̊a</i> )
<i>taþt̥əþ</i>	'he blinks'	< * <i>tapt̥əþ</i> (cf. C. Barwar <i>tarəp</i> , <i>mtarpəθ</i> , <i>rapəθ</i> )

In loanwords from Russian /*t̥*/ corresponds to Russian τ, which is unaspirated, e.g.

<i>čot̥ka</i>	'paintbrush'	< Russ. щетка
<i>truba</i>	'pipe'	< Russ. труба
<i>motor</i>	'motor'	< Russ. мотор

#### 1.9.1.4      *\*d*

As is the case with *\*t*, the original interdental fricative allophone of *\*d* has merged with the stop allophone and so both *\*d* and *\*d̥* have the reflex of the stop /d/, e.g.

<i>ida</i>	'hand'	< * <i>idā</i>
<i>huydaya</i>	'Jew'	< * <i>yhūdāyā</i>
<i>flida</i>	'frozen'	< * <i>glīdā</i>
<i>kdala</i>	'neck'	< * <i>qdālā</i>
<i>mdita</i>	'town'	< * <i>mdīttā</i>
<i>rakəd</i>	'he dances'	< * <i>rāqəd</i>

The sequence *\*d + \** has coalesced to the unvoiced tense stop /*t̥*/ in a number of cases. In some forms the *\** is ultimately derived from the pharyngal *\*c* and the word is emphatic. Examples:

<sup>+</sup> <i>tata</i>	'sweat'	< * <i>d'ata</i> < * <i>d'ātā</i>
<sup>+</sup> <i>tasta</i>	'to thrust'	< * <i>d'asta</i> < <i>d'asta</i>
<sup>+</sup> <i>taxta</i>	'to subside'	< <i>d'axta</i> < <i>d'axta</i>
<sup>+</sup> <i>yatt̥a</i>	'she knows'	< * <i>yad'a</i> < * <i>yād'ā</i>
<i>t-ilə</i>	'the he is'	< * <i>d-</i> ile
<i>t-atə</i>	'he will come'	< <i>bəd-</i> atə

The form <sup>+</sup>*uydalə* (< \**hdādē*) 'each other' exhibits an irregular shift of *\*d* to /l/.

1.9.1.5      \**k*

The stop \**k* has been palatalized to /c/ [c<sup>h</sup>] ~ [tj<sup>h</sup>], e.g.

*ctava*    'book'    < \**ktābā*

*malca*    'king'    < \**malkā*

The fricative allophone of post-vocalic \**k* has been preserved in many cases, e.g.

*baxə*    'he weeps'                          < \**bākē*

*naxəp*    'he becomes ashamed'    < \**nākəp̥*

*laxxa*    'here'                                  < \**l-ākā*

The fricative /x/ occurs also where a diphthong has contracted to a vowel, e.g.

*coxva*    'star'    < \**kawlk<sup>h</sup>ba*

The reflex of the stop \**k*, i.e. /c/, sometimes occurs after a vowel in words of Aramaic stock. These cases may be classified as follows:

(i) Where the consonant was originally geminated, e.g.

*racixa*    'soft'    < \**rakkūkā*

*ducta*    'place'    < \**dukk<sup>h</sup>gā*

*cica*    'tooth'    < \**kakkā*

(ii) When the preceding vowel is an epenthetic, e.g.

*maləcta*    'queen'    cf. *malca* 'king'

(iii) When the preceding vowel belongs to an originally separate particle that has become bonded onto a word beginning with \**k*, e.g.

*xacma*    'some'    < \**xa + kma*

The word *'ica* 'where' may possibly fall into this category (< \**ē-kā*).

(iv) In various verbal roots, e.g.

- |              |              |                  |
|--------------|--------------|------------------|
| <i>racəv</i> | 'he rides'   | < * <i>rākeb</i> |
| <i>racəx</i> | 'it softens' | < * <i>rākek</i> |
| <i>jaxəc</i> | 'he laughs'  | < * <i>gāhek</i> |

The historical root *\*p-r-k* has developed into two doublet roots, one with a stop /c/ (*p-r-c*) and the other with a fricative /x/ (*p-r-x*):

- |              |                  |                  |
|--------------|------------------|------------------|
| <i>parəc</i> | 'it bursts open' | < * <i>pārek</i> |
| <i>parəx</i> | 'he rubs'        | < * <i>pārek</i> |

The palatal /c/ occasionally weakens to a palatal glide /y/. This is found, for example, in variant realizations of the following words:

- |                                       |               |
|---------------------------------------|---------------|
| <i>ducta ~ tuyta</i>                  | 'place'       |
| <i>sæcta ~ sita</i> (< <i>siyta</i> ) | 'ploughshare' |
| <i>zœcta ~ zita</i>                   | 'bud, pod'    |

In loanwords that have been integrated into the dialect a /k/ in the source language is realized as /c/, e.g.

- |               |           |               |
|---------------|-----------|---------------|
| <i>cotac</i>  | 'beating' | < Pers. kotak |
| <i>'ordac</i> | 'duck'    | < Azer. ördək |

#### 1.9.1.6      *\*g*

The stop *\*g* has been palatalized to /j/ [j] ~ [dʒ], e.g.

- |              |           |                  |
|--------------|-----------|------------------|
| <i>jəšra</i> | 'bridge'  | < * <i>gəšra</i> |
| <i>þjora</i> | 'husband' | < * <i>gawra</i> |

The palatal /j/ is sporadically weakened to the palatal glide /y/. This takes place mainly after /ə/ in a closed syllable. The final /j/ at the end of the modal particle *jarəc* 'must' is frequently weakened, resulting in the form *jari*. Other cases occur sporadically, e.g. *sparəʃla ~ sparila* (Canda) 'quinces' (cf. C. Salamas *sparilə*). The /j/ in the verb *taybər* 'he manages' is optionally weakened in all inflections, e.g.

- |                            |              |
|----------------------------|--------------|
| <i>taybər ~ taybər</i>     | 'He manages' |
| <i>tuybərri ~ tuybərri</i> | 'I managed'  |

The fricative allophone  $^*\bar{g}$  has in most cases been reduced to zero and left a vestige in the word in the form of suprasegmental pharyngalization. This can be explained by assuming that the velar fricative  $^*\bar{g}$  shifted to a pharyngal before being lost, thus:  $^*\bar{g} > ^*c > ^*$  >  $\emptyset$  (cf. Tsereteli 1990), e.g.

$^+šada$	'almond'	< $^*\check{š}a\bar{g}dā$
$^+tata$	'cockscomb'	< $^*ta\bar{g}tā$
$^+pulla$	'radish'	< $^*pu\bar{g}lā$
$^+lama$	'bridle'	< $^*la\bar{g}mā$
$^+lina$	'jar'	< $^*l\bar{g}ina$ (cf. Syr. <i>l̄gīnā</i> )
$^+pallə$	'he divides'	< $^*pālə\bar{g}$
$^+narra$	'axe'	< $^*nar\bar{g}a$ (cf. Syr. <i>nārḡā</i> )

When it occurred between vowels, it is generally replaced by the glide /y/ or the two vowels coalesce, e.g.

$^+rayəš ~ +rāš$	'he wakes up'	< $^*rā\bar{g}əš$
$^+šayər ~ +šār$	'he stokes'	< $^*\check{š}ā\bar{g}ər$
$^+šayəš ~ +šāš$	'he rocks'	< $^*\check{š}ā\bar{g}əš$
$^+šraya ~ +šra$	'lamp'	< $^*\check{š}rā\bar{g}ā$

The velar fricative realization /g/ is preserved in a few isolated words, e.g.

$^+pa\bar{g}ra$	'body'	< $^*pa\bar{g}rā$
$\check{ž}\bar{g}aša$	'to be disturbed'	< $^*\check{š}\bar{g}āšā$
$z\bar{g}ada$	'to worship'	< $^*s\bar{g}āda$

It appears in some words that are loans from Classical Syriac, e.g.

$^+dar\bar{g}a$	'rank'	< <i>dargā</i>
-----------------	--------	----------------

In loanwords that have been integrated into the dialect a /g/ in the source language is realized as /ʃ/, e.g.

<i>sarhang</i>	'colonel'	< Pers. <i>sarháng</i>
----------------	-----------	------------------------

### 1.9.2 Pharyngals and Laryngals

#### 1.9.2.1 $^*h$

The unvoiced pharyngal  $^*h$  has in most cases shifted to the velar fricative /x/, e.g.

<i>xmara</i>	'ass'	< * <i>hmārā</i>
<i>kamxa</i>	'flour'	< * <i>qamhā</i>
<i>xamša</i>	'five'	< * <i>hamšā</i>
<i>p-t-x</i>	'to open'	< * <i>p-t-h</i>
<i>x-l-l</i>	'to wash'	< * <i>h-l-l</i>

This has led to the merger of the reflexes of \**h* (> /x/) and \**k* (> /x/), which has created homonyms, e.g.

<i>parəx</i>	'he flies'	< * <i>pārəh</i>
<i>parəx</i>	'he rubs'	< * <i>pārək</i>

In the case of the verb *+šatə* 'it collapses' the reflex of \**h* is zero, apparently to distinguish it from a doublet derived historically from the same root:

<i>+šatə</i>	'it collapses'	< * <i>šātəh</i>
<i>+šatəx</i>	'he stretches out'	< * <i>šātəh</i>

The form *rəkka* (< \**rəħqā*) may have developed by a similar process, with the /k/ neutralizing the emphasis. The word is, in fact, emphatic in the Jewish Urmî dialect: *+rəqqā* (Khan 2008a, 33). It may also be a contraction of the form *rəxka*, with a velar fricative, which is found in the northern variety of the dialect.

Several loanwords ultimately deriving from Arabic that had a pharyngal \**h* in Arabic have entered the dialect, mainly, it seems, from Persian. As in Persian the reflex of the historical \**h* is /h/. This does not of itself bring about emphasis in the dialect. Loanwords of this type which are emphatic have acquired emphasis due to a long back \**ā* in the word in the Persian source language, e.g.

<i>hamla</i>	'attack'	< Pers. hamle	< Arab. ḥamla
<i>halqa</i>	'ring'	< Pers. halqe	< Arab. ḥalqa
<i>+hazər</i>	'ready'	< Pers. hāzər	< Arab. ḥādir
<i>+heyvan</i>	'animal'	< Pers. hēyvān	< Arab. ḥaywān

### 1.9.2.2      \*<sup>c</sup>

The voiced pharyngal \*<sup>c</sup> has been weakened to zero in all contexts. In many cases there is a vestige of the pharyngal in the form of suprasegmental emphasis of the word, e.g.

<i>+’amra</i>	'wool'	< * <i>’amrā</i>
<i>+’akərva</i>	'scorpion'	< * <i>aqr<sup>c</sup>ba</i>

<sup>+</sup> <i>ayna</i>	'eye'	< * <sup>č</sup> <i>aynā</i>
<sup>+</sup> <i>ayva</i>	'cloud'	< * <sup>č</sup> <i>aybā</i>
<sup>+</sup> <i>əkra</i>	'root'	< * <sup>č</sup> <i>qrā</i>
<sup>+</sup> <i>šāl</i>	'he coughs'	< * <sup>šā</sup> <i>čl</i>
<sup>+</sup> <i>dəmma</i>	'tear'	< * <sup>č</sup> <i>dəmā</i>
<sup>+</sup> <i>tarra</i>	'door'	< * <sup>č</sup> <i>tarā</i>
<sup>+</sup> <i>baluta</i>	'throat'	< * <sup>č</sup> <i>bālōtā</i>
<sup>+</sup> <i>arpa</i>	'four'	< * <sup>č</sup> <i>arbā</i>
<sup>+</sup> <i>šamma</i>	'she hears'	< * <sup>č</sup> <i>šāmā</i>

When the pharyngal occurred between vowels, it is replaced by a glide or the two vowels coalesce, e.g.

<sup>+</sup> <i>bəšmaya</i> ~ <sup>+</sup> <i>bəšma</i>	'hearing'	< * <i>b-šmāčā</i>
<sup>+</sup> <i>tayən</i> ~ <sup>+</sup> <i>tān</i>	'he bears'	< * <i>tāčen</i>

Emphatic words with a historical pharyngal usually also contain other letters that are prone to bring about emphasis, such the sonorants, /r/ and // or the labials /b/ and /m/.

There are several words in which the pharyngal is lost without the word acquiring suprasegmental emphasis, e.g.

<sup>č</sup> <i>upra</i>	'soil'	< * <sup>č</sup> <i>aprā</i>
<i>bita</i>	'egg'	< * <sup>č</sup> <i>bētā</i>
<sup>č</sup> <i>avəd</i>	'he does'	< * <sup>č</sup> <i>ābəd</i>
<i>xamma</i>	'it (f) ferments'	< * <sup>č</sup> <i>xāmā</i>
<sup>č</sup> <i>pakka</i>	'it (f.) splits'	< * <sup>č</sup> <i>pāq'a</i>
<sup>č</sup> <i>akla</i>	'leg'	< * <sup>č</sup> <i>aqlā</i>
<sup>č</sup> <i>akubra</i>	'mouse'	< * <sup>č</sup> <i>aqubrā</i>
<sup>č</sup> <i>ərba</i>	'sheep'	< * <sup>č</sup> <i>ərba</i>
<sup>č</sup> <i>raka</i>	'to run'	< * <sup>č</sup> <i>raqa</i>

A pharyngal in loanwords that are ultimately derived from Arabic is also reduced to zero, e.g.

<sup>+</sup> <i>jamma</i>	'she gathers'	< * <sup>č</sup> <i>mjam'a</i> (< Arab. <i>j-m-</i> <sup>č</sup> )
---------------------------	---------------	--

This loanword exists in some NENA dialects in Iraq with the original pharyngal (e.g. C. Qaraqosh, J. Amedia *j-m-*<sup>č</sup>) and it may have entered C. Urmia through NENA.

1.9.2.3      *\*h*

The laryngal *\*h* has been preserved in many cases in word initial and postvocalic position, e.g.

<i>huydaya</i>	'Jew'	< <i>yhūdāyā</i>
<i>hona</i>	'intelligence'	< <i>hawnā</i>
<i>hammunə</i>	'to believe'	< <i>ha'mōnē</i>
<i>'alaha</i>	'God'	< <i>'alāhā</i>

When it originally closed a syllable, it is elided, e.g.

<i>dava</i>	'gold'	< <i>dahbā</i>
<i>sada</i>	'witness'	< <i>sāhdā</i>
<i>+sara</i>	'moon'	< <i>sahrā</i>
<i>+bara</i>	'light'	< <i>bahrā</i>

When it was originally a verbal radical, it has been omitted when clustering with other consonants, e.g.

<i>vaya</i>	'to be'	< <i>*hwāyā</i>
<i>yava</i>	'to give'	< <i>*yhābā</i>

This omission may be generalized to other paradigms of the verb where there is no clustering, e.g.

<i>'avə</i>	'(that) he is'	< <i>hāwē</i>
-------------	----------------	---------------

1.9.2.4      *\*'*

A laryngal /'/ occurs at the beginning of words before a vowel in words that contained an etymological initial *\*'* and also those that contained an etymological initial pharyngal *\*'',* e.g.

<i>+axəl</i>	'he eats'	< <i>*'āxəl</i>
<i>'ət</i>	'there is'	< <i>*'it</i>
<i>'arək</i>	'he runs'	< <i>*'ārəq</i>

Since /'/, whether derived from *\*'* or *\*'',* does not occur in any other context, it is likely that that the /'/ in word initial position is a non-etymological phonetic addition (see § 1.15.2.).

1.9.3 \**t*

Emphatic \**t* has in most cases become reanalysed as tense /t/ with suprasegmental emphasis (§ 1.5.1.), e.g.

+ <i>tina</i>	'mud'	< <i>tīnā</i>
+ <i>tuyra</i>	'mountain'	< <i>tūrā</i>
+ <i>kēta</i>	'summer'	< <i>qayṭā</i>
+ <i>palət</i>	'he goes out'	< <i>pālət</i>

In some cases words containing a historical \**t* do not have suprasegmental emphasis. In such cases the reflex of the \**t* is either tense /t/ or lax /t/, e.g.

<i>tup̩ra</i>	'tail'	< * <i>tupra</i>
šaṭəx	'he spreads out'	< *šaṭeḥ
<i>taxana</i>	'miller'	< * <i>tahḥānā</i>
<i>talək</i>	'it disappears'	< * <i>tāleq</i>
<i>tapə</i>	'it sticks'	< * <i>tāpe</i>
<i>tarə</i>	'it becomes wet'	< * <i>tāre</i>

Occasionally the suprasegmental emphasis is retained but the reflex of the historical \**t* is the lax /t/, e.g.

+ <i>taktək</i>	'to knock (at the door)'	< * <i>taqtəq</i> (cf. Barwar <i>mṭaqtəq</i> )
+ <i>taptəp</i>	'to tap'	< * <i>taptəp</i> (cf. Barwar <i>mṭaptəp</i> )

The reflex of historical \**t* is sporadically the tense affricate /č/ with suprasegmental emphasis, e.g.

+ <i>čyama</i>	'to close'	< * <i>t-y-m</i> < * <i>t-m-m</i>
+ <i>kčaya</i>	'to pick'	< * <i>q-t-</i> č
+ <i>kčapa</i>	'to cut off'	< * <i>q-t-p</i>
+ <i>kačkučə</i>	'to cut to pieces'	< * <i>q-tq-t</i>
+ <i>zrača</i>	'to scratch'	< * <i>s-r-t</i>
+ <i>karmučə</i>	'to wrinkle'	< * <i>q-rm-t</i>

The word +*buča* 'dried ball of tree sap' appears to be cognate with JBA בועתא *abcess* (Mutzafi 2005a). The original non-emphatic stop /t/ is preserved in J. Amedia *bo'ta*. It must be assumed that this shifted to \**t* under the influence of the adjacent pharyngal \*č before shifting to /č/.

**1.9.4 \*ṣ**

The historical emphatic \*ṣ has been reanalysed phonologically as /s/ with suprasegmental emphasis (§ 1.5.1.), e.g.

<sup>+</sup> <i>sala</i>	'he descends'	< <i>ṣālē</i>
<sup>+</sup> <i>msaya</i>	'to be able'	< <i>mṣāyā</i>
<sup>+</sup> <i>soma</i>	'fast'	< <i>ṣawmā</i>

**1.9.5 \*q**

The reflex of \*q is the tense post-velar stop /k/, e.g.

<i>karta</i>	'cold'	< * <i>qartā</i>
<sup>+</sup> <i>keṭa</i>	'summer'	< * <i>qayṭā</i>
<i>praka</i>	'to finish'	< * <i>prāqā</i>
<i>nšaka</i>	'to kiss'	< * <i>nšāqā</i>

The reflex of a historical \*q is the lax palatal /c/ or the tense palatal /č/ in a few words, e.g.

<sup>+</sup> <i>catra</i>	'knot'	< * <i>kətra</i> < * <i>qəṭrā</i>
<i>pəçxa</i>	'blossom'	< * <i>pəqxa</i>

It has been weakened to a palatal glide /y/ in:

<i>puydana</i>	'command'	< * <i>puqdānā</i> (cf. Diyana-Zariwaw <i>pučdana</i> (Napiorkowska 2015))
----------------	-----------	--

The /k/ in the verb *hakkuya* 'to narrate' is ultimately derived from \*k in the Arabic source language (< \**hky*). This must have taken place at a remote historical period when the initial radical was still a pharyngal and the forebear of /k/, i.e. \*q, was still an emphatic segment (§ 1.5.1.).

The sound /k/ corresponds to Arabic \*ǵ in Arabic loanwords that have come into the dialect through Persian, e.g. *ḳalat* < Arab. *ǵalāt* 'mistake', *ḳaribaya* 'foreigner' < Arab. *ǵarīb* (§ 1.9.8.).

In loanwords from Russian a /k/ corresponds to Russian κ, which is unaspirated, e.g.

<i>laþatka</i>	'shovel'	< Russian лопатка
<i>čotka</i>	'paintbrush'	< Russian щетка
<i>kuruška</i>	'mug'	< Russian кружка
<i>yupka</i>	'skirt'	< Russian юбка

### 1.9.6 /č/, /j/, /\x/

The affricate phoneme /č/ has in some cases developed from a fusion of \*t and \*š. This applies to *čiríyə* ‘autumn’ < \*čeri < \*tšeri < \*tešri. The affricate also in the verb *mačuxə* ‘to find’ should be explained in this way, although the \*š clustered originally with a \*k rather than with a \*t in the root (cf. Syr. ɬeškaħ). It must be assumed that the cluster \*šk shifted to \*št by partial assimilation of the velar \*k to the palato-alveolar \*š. This is, indeed, what is found in the J. Urmi form of this root, viz. *maštoxe*. The cluster \*št would then have been metathesized to /tš/ resulting in *mačuxə*. The /č/ in the verb *nčala* ‘to pick (fruit, flowers), to tear off’ may also fall into this category, if the historical root of this is identified as \*n-t-š (cf. Syr. *ntaš* ‘to pluck, to tear’) with the addition of a non-etymological /l/.

The /j/ in the verb *jlaxa* ‘to peel’ (intr.), *jaluxə* ‘to peel’ (tr.) has developed from \*š, which is still preserved in the doublet verbs of the same meaning *šlaxa*, *šaluxə*.

Examples of emphaticized \*č > /č/ include <sup>+</sup>əčča ‘nine’ < \*əčča < \*ətš'a < \*təš'a. In some words /č/ with emphasis has developed from an original \*š. For example, in <sup>+</sup>maččuyə ‘to smooth’ (< \*maščøyē) an original \*š has shifted to č with suprasegmental emphasis due to contact with a pharyngal, the historical root being \*š- - - .

The root <sup>+</sup>p-č-l (<sup>+</sup>pčala ‘to become crooked’, <sup>+</sup>pčila ‘crooked’) is derived from \*p-š-l (cf. Syr. *p-š-l* ‘to twist’) by emphaticization. The second /č/ in the verb *čačča* ‘to wither’ is derived from the \*š in its etymological root \*k-m-š. The initial /č/ has developed from \*k, by an unusual shift, no doubt by assimilation to the third radical. In some cases /č/ with emphasis has developed from \*š, e.g. <sup>+</sup>čəlpa ‘crack’ (cf. Syr. *selpa* ‘crack’). For examples of the shift \*t > /č/ with emphasis see §1.9.3.

The tense /č/ occurs in a number of plain words, e.g.

<i>čočuyə</i>	‘to chirp’
<i>čaččə</i>	‘weapons’
<i>čačurča</i>	‘grasshopper’
<i>čanjurə</i>	‘to jingle, to clink’
<i>čančuna</i>	‘to tinkle, to make a shrill sound, to tingle’
<i>čapula</i>	‘paw’
<i>čarčurə</i>	‘to scream shrilly’
<i>čilaza</i>	‘slim’
<i>čita</i>	‘calico cloth’

**1.9.7 /r/**

A non-etymological /r/ is occasionally added at the end of the final syllable of the particle *'ita* ‘then, so’ (cf. Syr. *'itā* < Greek εἶτα). This is found in pausal position before an intonation group boundary, e.g. *'itar<sup>l</sup>* (B 10:16).

**1.9.8 /g/**

The voiced velar fricative /g/ occurs mainly in loans from Azeri Turkish and Persian. In the standard orthography of Azeri the sound in the source word is represented by the letters {ğ} or {q} in word-medial or word-final position, e.g.

<i>buğum</i>	‘joint’	< Azer. <i>buğum</i>
<i>+kaburğa</i>	‘rib’	< Azer. <i>qabırğı</i>
<i>+dussağ</i>	‘prison’	< Azer. <i>dustaq</i>
<i>+kəvraq</i>	‘quick’	< Azer. <i>qıvraq</i>

Loans from Persian have the letters {ğ} (غ) or {q} (ق) in the standard orthography of the source word, e.g.

<i>+tajar</i>	‘cauldron’	< Pers. <i>tağār</i> تغار
<i>irişul</i>	‘plumb-line’	< Pers. <i>šāqūl</i> شاقول

In some cases words with /g/ are ultimately of Arabic origin, e.g.

<i>+dabbağ</i>	‘tanner’	< Azer. <i>dabbağ</i> , Pers. <i>dabbāğ</i> دباغ < Arab. <i>dabbāğ</i>
----------------	----------	--

The word *tagala* ‘spleen’ with medial /g/, which is ultimately derived from Arab. *tīħāl* with medial /ħ/, appears to have entered C. Urmi through Kurdish (*teħl*); cf. C. Barwar *tahela*, in which the pharyngal is preserved. The reflex of the pharyngal in Kurdish appears here, irregularly, as a velar fricative.

Sporadically /g/ occurs in lexemes of Aramaic origin. These occurrences are exceptional vestiges of an original voiced velar fricative (the fricative allophone of \**g*), which in the vast majority of cases has a reflex of zero (§ 1.9.1.6.), e.g.

<i>+pağra</i>	‘body’	< * <i>pağrā</i>
<i>zağəd</i>	‘he worships’	< * <i>sāğed</i>
<i>žağəš</i>	‘he is disturbed’	< * <i>šāğeš</i>

In a few cases the voicing of an originally unvoiced /x/ by assimilation to adjacent vowels or voiced consonants has become lexicalized as /g/, e.g.

- maǵgəb* ‘he loves’ < \**maxxəb*  
*šəǵda* ‘good news’ < \**šəxda*

### 1.9.9 /ž/

The voiced palato-alveolar sibilant /ž/ occurs predominantly in loanwords from Kurdish. It corresponds to {j} in Kurmanji orthography, e.g.

- dəžmən* ‘enemy’ < Kurd. *dijmin*  
*dəžvar* ‘wild’ < Kurd. *dijwar*  
*miz* ‘fog’ < Kurd. *mij*  
*jažžana* ‘dizzy’ < Kurd. *gēj*

The phoneme is found in a few words of Aramaic origin in which an original unvoiced \*š in contact with a voiced consonant has become lexicalized as /ž/, e.g.

- xəžbuna* ‘calculation’ < \**xəšbuna*  
*tažbəx* ‘to glorify’ < \**tašbəx*

When it has become lexicalized in verbal roots it occurs in all inflections, even in those where it is not in contact with a voiced consonant, e.g.

- ždilə* ‘he teased (wool)’ < \**šdilə*  
*žadə* ‘he teases (wool)’ < \**šadə*  
*žadaya* ‘teaser of wool’ < \**šadaya*
- žgəšlə* ‘he was disturbed’ < \**šgəšlə*  
*žajəš* ‘he is disturbed’ < \**šajəš*

The sound /ž/ occurs in the exceptional gentilic (§ 5.9.7.) form *urməžnaya* ‘man from Urmi’. This possibly reflects the origin of the name in the divine name Ormazd, the Middle Persian form of Ahuramazda (Yohannan 1900, vi).

### 1.9.10 /f/

The phoneme /f/ is marginally attested in loanwords from Persian, some of them ultimately of Arabic origin, e.g. *+farsaya* ‘Persian’, *+farsət* ‘Persian (language)’, *fark* ‘difference’, *fur'un* ‘Pharaoh’, *cif* ‘purse’. An original /f/ in many loanwords from Persian and Arabic has shifted to /p/, e.g. *napas* ‘breath’ < Pers. < Arab. *nafas* (§ 1.9.1.2.). In some cases there is variation, e.g. *tapək* I ~ *tafək* I ‘to meet’ (< Arab. *'ittafaqa*).

### 1.10 Sound Symbolism

In a number of cases sound symbolism appears to have played a role in conditioning the phonological shape of words. Sound symbolism is a phenomenon that has been documented in many languages of the world (Reay 2006; Childs 2014). This goes beyond the simple imitation of sounds (onomatopoeia) and involves also the correspondence between sound and meaning. Particular sounds, clusters of sounds or phonological features may be associated with a particular domain of meaning. Such phonological features have been termed ‘ideophones’ (Voeltz and Kilian-Hatz 2001) or ‘phonesthemes’ (Reay 2006). One of the consequences of this phenomenon is that groups of words develop that share sounds and their associated meaning. The sound symbolism facilitates such proliferation of ‘constellations’ of words (Bolinger 1965), due to the aid it gives to learning and comprehension of new words (Childs 2014, 6). In English, for example, initial *sl-* is associated with sliding movement and has spread to a series of words expressing this semantic domain, such as *slalom, sledge, sleigh, slick, slide, slip, slither*, etc.

In C. Urmi one area in which sound symbolism can be identified is in phonological developments that express some kind of diminutive meaning. The sound shifts that are exploited to symbolize the diminutive involve two basic features: (i) increasing pitch and (ii) strengthening of consonants.<sup>12</sup> This is achieved by processes such as making an originally emphatic word plain by removing the emphasis, strengthening lax stops and affricates to the corresponding tense consonants, and affricating stops and sibilants.

Suprasegmental emphasis has been removed from a number of words that express small objects and creatures (§ 1.5.1.), e.g.

<i>tupra</i>	‘tail’ < * <i>tupra</i> (cf. Syriac <i>teprā</i> , C. Qaraqosh <i>bar-tupra</i> ‘strap for securing saddle behind the tail’)
<i>səpra</i>	‘sparrow (m.)’ < * <i>ṣəpra</i> (cf. Syriac <i>ṣəppərā</i> , Anhar <sup>+supra</sup> <i>ṣəpra</i> , C. Qaraqosh <i>ṣəpra</i> )
<i>kəmsa</i>	‘locust, grasshopper; dragon-fly’ < * <i>qamṣa</i> (cf. Syriac <i>qamṣā</i> , C. Barwar <i>qamṣa</i> )

The original emphasis has been removed from the verb *šaṭəx* I ‘to spread out (a light object, e.g. washing on a line)’ to distinguish it from the doublet <sup>+</sup>*šaṭəx* I

<sup>12</sup> Similar sound shifts to express a diminutive function have been identified in various other languages, e.g. Nichols (1971) who drew attention to this phenomenon in North American Indian languages.

'to stretch out (a person on the ground), to knock down (a person with force)', which preserves the original emphasis. The form *šatəx* with the emphasis removed expresses a lighter, less forceful action than the emphatic <sup>+</sup>*šatəx*. Another verb that seems to have had its emphasis removed for ideophonic purposes to express a small sound is *tançən* 'to hum softly'. This is likely to be a loan from Arabic *tanna* 'to hum'. The emphasis is retained in the variety of the C. Urmi dialect spoken in the village of Dizatacyā (<sup>+</sup>*tançən*) and the word *čena* 'mosquito' in C. Barwar, with an emphatic affricate, is likely to be ultimately related to this root.

The lack of emphasis in the following loanwords from Persian may also perhaps be explained as being conditioned by sound symbolism:

- |               |  |
|---------------|--|
| <i>nazuc</i>  | 'thin' < Pers. nāzok   |
| <i>mazrak</i> | 'stick with cushion for sticking dough to oven' < Pers.<br>mazrūq 'javelin' (< Arab. mizrāq) |
| <i>məskal</i> | 'small unit of weight' < Pers. mesqāl  |

A loanword that contains a long /ā/ in Persian is normally emphatic (§ 1.5.1.). The removal of emphasis of *mazrak* is evidently due to the fact that the stick in question is shorter than a full-length javelin. Alternatively one could identify here the use of a diminutive construction to express a figurative or virtual form of the entity denoted by the source word. There are parallels to this in the diminutive use of the feminine marker suffixes (§ 5.5.3.). An emphatic pronunciation <sup>+</sup>*məskal* has been identified in the speech of speakers from the village of Piğabayluvvə (N).

A number of loans from Azeri, which have back vocalism in the source language but are plain in the C. Urmi dialect, may also be cases of the same phenomenon, e.g.

- |               |                      |
|---------------|----------------------|
| <i>karğa</i>  | 'crow' < Azeri qarğā |
| <i>kəppəl</i> | 'lock' < Azeri qıfil |

In some varieties of C. Urmi, however, these words are emphatic, e.g.

- |                            |   |
|----------------------------|---|
| <sup>+</sup> <i>karğa</i>  | Ardishay (S), Dizatacyā (S), <sup>+</sup> Spurğan (N) |
| <sup>+</sup> <i>kəppəl</i> | Siri (S)  |

The emphasis in some minimal, or near minimal, pairs of verbs that are distinguished only by the feature of suprasegmental emphasis can be given an ideophonic interpretation, in that the member of the pair with emphasis expresses

a stronger action than the one expressed by the plain verb. Some of these pairs may be doublets, as is the case with the pair *šatəx*—<sup>+</sup>*šatəx* discussed above, e.g.

- zakzək* QI ‘to throb (with pain)’  
<sup>+</sup>*zakzək* QI ‘to shiver (from cold)’

- čanjar* QI ‘to jingle’  
<sup>+</sup>*čanjar* QI ‘to scratch with a paw’

The contrast may be principally based on the level of sound, in that the emphatic member expresses a louder sound or a sound with a lower resonance, e.g.

- parpər* QI ‘to flap (flag)’  
<sup>+</sup>*parpər* QI ‘to blow (one’s nose) loudly’

- čarčər* QI ‘to scream’  
<sup>+</sup>*čarčər* QI ‘to creak (door)’

In varieties of the dialect in which the doublets *brita* and *brata* (< \**brattā*) exist, the former with the vowel of higher pitch, is used with connotations of greater endearment in the sense of ‘daughter’ while the latter means ‘girl’ in general. One may compare this to the use of the diminutive derivational suffix *-una* to express endearment (§ 5.9.9.):

- brita* ‘daughter’ (Canda)  
*brata* ‘girl’ (Canda)

In nouns expressing small items, particles expressing smallness, or verbs expressing actions of inherently short duration or diminutive sound, unvoiced stops and affricates that were originally lax aspirates are in some cases made tense unaspirates. This is found in words that are NENA in origin and also loanwords from Azeri, in which the unvoiced stops are aspirated in the source language, e.g.

- tarpa* ‘eyelash’ < \**tarpa* (cf. Syriac *tallīpē*, Turoyo *tlafine*)  
<sup>+</sup>*tapṭəp* QI ‘to blink; to flicker’ < \**taptəp* (cf. C. Barwar *tarəp*, *mtarpəθ*, *rapəθ*  
‘to blink’)  
<sup>+</sup>*pərtuxə* ‘crumbs’ < \**pərtuxə* (cf. *partəx* ‘to crumble’, C. Barwar *pərtoxə*)

<i>pər̥ta</i>	'crumb' < * <i>pərta</i> (cf. C. Barwar <i>pərtika</i> 'splinter')
<i>pəl̥təç</i> QI	'to stutter' < Azeri pəltəkləmək
<i>pəçpəç</i> QI	'to whisper' cf. Azeri piçldamaq
<i>pərça</i>	'a little, a crumb' cf. Azeri parça
<i>xaçça</i>	'a few, a small amount' < * <i>had</i> + Turkic suffix -ča

The word *çočə* QI 'to twitter' (< \**şawşə*), which expresses a small high pitched sound, has lost the emphasis of the original \**s* and the resulting plain sibilant has been hardened to a tense affricate /č/.

In plain words the unaspirated stop /t/ is occasionally affricated to /č/ by an ideophonic process to increase the pitch and express the diminutive. This is identifiable in the following pair of verbs, which are likely to be doublets, the form with the affricate expressing a sound of higher pitch:

<i>tançən</i> QI	'to hum'
<i>čançən</i> QI	'to tinkle (bell)'

It is also found in the following pair of synonymous doublets, both of which express a high pitched soft sound:

<i>pətʃpət</i> QI	'to whisper'
<i>pəçpəç</i> QI	'to whisper'

The anomalous tense /p/ in the adjective *šapıra* 'beautiful' (contrast, e.g., C. Barwar *šapira*) may have developed by a similar process of diminutive sound symbolism, in this case the diminutive being associated with endearment. As remarked above, diminutive and endearment are related concepts.

We should include here the anomalous occurrence of a tense /t/ in the feminine ending of the adjective *sura*:

<i>surtə</i>	'small (fs.)'
--------------	---------------

There is no phonetic reason why the /t/ should become an unaspirated stop after the sonorant /r/. The motivation is undoubtedly diminutive sound symbolism. The initial /s/ in the adjective *sura* is the result of the devoicing of an original voice *z* (< \**z'ora*). This also is likely to have been motivated by a sound symbolism, whereby the pitch of the consonant was raised in the form of a strident sibilant. Finally it is probably not by chance that this word is plain, symbolizing smallness, whereas the word for 'big', *tjura*, which has the same pattern and also contains an /r/, is emphatic.

In pairs of verbs containing sibilants of closely related phonological form that express sounds, the member of the pair that has an unvoiced sibilant /s/ expresses a higher pitched sound than a corresponding form with voiced /z/, e.g.

<sup>+</sup>*vasvəs* QI ‘to squeak (mouse)’

<sup>+</sup>*vazvəz* QI ‘to buzz (bee)’

*sarsər* QI ‘to scream shrilly’

<sup>+</sup>*zarzər* QI ‘to utter a loud harsh cry, to bray (donkey)’

The affrication of an original unvoiced /tʃ/ in verbs with an emphatic suprasegmental setting has the effect of expressing a greater degree of force or hardness. It is noteworthy that affrication in plain words, by contrast, is an ideophonic expression of a diminutive. Examples of emphatic /č/ expressing greater force is seen clearly in a number of doublets where in one verb of the pair the /tʃ/ has been preserved while in the other it has shifted to /č/, e.g.

<sup>+</sup>*taxtəx* QI ‘to pound’

<sup>+</sup>*čaxčəx* QI ‘to smash to pieces’

<sup>+</sup>*xarxač* QI ‘to gnaw’

<sup>+</sup>*xarxač* QI ‘to gnash (teeth)’

<sup>+</sup>*kattə* I ‘to cut’

<sup>+</sup>*kaččə* I ‘to pull off (with greater force)’

<sup>+</sup>*zarət* I ‘to score (a board)’

<sup>+</sup>*zarəč* I ‘to scratch (with nails and break skin)’

<sup>+</sup>*kamət* I ‘to twist, to tighten (rope); to squeeze’

<sup>+</sup>*kaməč* I ‘to pinch, to nip’

<sup>+</sup>*karmač* QI ‘to have stomach cramps’

<sup>+</sup>*karmač* QI ‘to wrinkle, to crumple’

A similar sound symbolism is identifiable in the following doublets, in which the verb expressing the more forceful action is distinguished from the other member of the pair by being emphatic and exhibiting the affrication of the sibilant /s/ to /č/:

*baləs* I ‘to bruise’

+*baləč* I ‘to crush, to mash (with fist)’

Affrication of stops and sibilants in emphatic settings have developed in a number of other verbs expressing forcefulness or hardness, e.g.

+*χaləp* I ‘to split, to cleave’ < \**šaləp* (cf. Syriac *šlapā*)

+*marəč* I ‘to squash’ < \**marəs* (cf. Syriac *mras*)

+*χayəm* I ‘to push closed (door)’ < \**ṭayəm* (cf. Syriac *ṭam*)

+*χaməč* I ‘to wither’ < \**kaməš* (cf. Syriac *kmaš*)

In the light of the foregoing discussion the following increasing scale of ideo-phonic strength of alveolars may be identified, the sounds to the left expressing greater forcefulness or magnitude than those to the right:

+*χ* > +*t*/*s* > *t*/*s* > *χ*

So far we have been concerned with the role sound symbolism has played in bringing about phonological changes. Sound symbolism also conditions the development of groups of words with a shared phonological feature that corresponds to a shared semantic feature. Many groups of verbs exhibiting sound symbolism are reduplicative quadrilaterals, as can be seen in the following examples.

The sound -x is found at the end of several verbs expressing heavy impact. In reduplicative quadrilateral verbs this occurs at the end of each syllable:

+*χaxχax* QI ‘to smash’

+*taxtəx* QI ‘to crush, to pound’

*pampəx* QI ‘to break up (ground)’

+*paṭax* I ‘to spread by pressing on sth.’

+*ṭavəx* I ‘to crush, to break to pieces’

+*ṭapəx* I ‘to smash’

*kaməx* I ‘to be crushed, to be flattened (corn)’

*karpx* QI ‘to bang on the head; to shock’

+*χalbəx* QI ‘to beat with a stick’

*jambəx* QI ‘to cave in; to cause to cave in’

A final -k occurs in several verbs expressing a lighter impact, e.g.

- +taktək* QI ‘to knock (at the door)’  
*dakdək* QI ‘to chop finely’  
*laklək* QI ‘to loosen (tr. and intr.) by banging’  
*šarpək* QI ‘to crack’  
*šakšək* QI ‘to clatter, to rattle’

Final *-k* occurs also in verbs expressing vibrations or vibrating noises, e.g.

- čakčək* QI ‘to rattle; to chatter (teeth)’  
*+zakzək* QI ‘to shiver (from cold)’  
*zakzək* QI ‘to throb (with pain)’  
*bačbač* QI ‘to bubble’  
*vakvək* QI ‘to quack (duck)’  
*naknək* QI ‘to stammer’

The sound *-x* or *-h* is found at the end of several non-emphatic verbs expressing ‘panting’ or ‘heavy breathing’. In reduplicative quadrilateral verbs this occurs at the end of each syllable, e.g.

- laxləx* QI ‘to pant (dog when thirsty)’  
*naxnax* QI ‘to pant’  
*lahləh* QI ‘to puff, to pant’  
*napəx* I ‘to blow, to pant, to breathe’

Final *-s* or *-š* is also found in verbs expressing ‘heavy breathing’, ‘hissing’ or ‘hissing-like’ noises, e.g.

- +xasxəs* QI ‘to breathe heavily’  
*+paspəs* QI ‘to breathe hard; to wheeze’  
*tarxəs* QI ‘to pant’  
*+vasvəs* QI ‘to squeak (mouse); to hiss’  
*+pašpəš* QI ‘to hiss’  
*xašxəš* QI ‘to rustle (leaves), to hiss’

Several verbs expressing disgust or complaint end in *-z*, e.g.

- lazləz* QI ‘to feel disgust’  
*zaləz* II ‘to feel disgust’  
*janjəz* QI ‘to show disgust’  
*jazjəz* QI ‘to whine’  
*+naznəz* QI ‘to whine’

Several reduplicative quadriliteral verbs with syllables beginning with an unvoiced dorsal and ending in a voiced sibilant express 'sputtering', 'sizzling', or related noises, e.g.

*čazčəz* QI 'to sputter, to sizzle' (meat in a frying pan)

*kažkəž* QI 'to sizzle, to rattle (rain)'

Several verbs expressing sustained sounds end in *-r*, e.g.

*+xarxər* QI 'to snore'

*+marmər* QI 'to growl'

*+xanzər* QI 'to growl threateningly'

*čarčər* QI 'to scream'

*sarsər* QI 'to hiss'

Initial *n-* is found in verbs expressing nasal sounds, e.g.

*+namnəm* QI 'to speak through one's nose'

*+narnər* QI 'to bellow (buffalo)'

*+naznəz* QI 'to whine (child)'

Initial *l-* is found in verbs expressing actions with the tongue:

*lacəx* I 'to lick; to lick up'

*lakə* I 'to lap up, to guzzle'

*lapə* I 'to lap up, to gobble up'

Some verbal roots of related meaning share two radicals, or sometimes three radicals in the case of quadriliteral verbs. These may be consecutive or discontinuous (i.e. separated by other radicals), e.g.

*xarbəs* QI 'to push, to urge (a person)'

*xarzəp* QI 'to push; to push over (a person)'

*balləs* QI 'to chew (with mouth closed)'

*+lasləs* QI 'to chew (with mouth open)'

*+zarəč* I 'to scratch'

*+jarəč* I 'to scratch'

<i>jarəp</i> I	'to slip (on ground, ice)'
<sup>+</sup> <i>jarət</i> I	'to stumble, to slip (from a height)'
<sup>+</sup> <i>šaršət</i> QI	'to slide'

<i>zalək</i> I	'to rip, to tear apart'
<i>zaləp</i> I	'to rip, to tear (a piece from clothes)'
<i>zanbəl</i> QI	'to rip, to tear (into strips)'

<sup>+</sup> <i>bambəl</i> QI	'to stagger'
<i>čambəl</i> QI	'to hang (forwards), to sag'
<i>jambəl</i> QI	'to tumble, to stumble'
<i>jambəx</i> QI	'to cave in'

<i>marək</i> I	'to suck strongly with lips; to suck out'
<i>šarək</i> I	'to suck (especially a whole egg)'

<sup>+</sup> <i>laməs</i> I	'to absorb'
<sup>+</sup> <i>mayəs</i> I	'to suck'

<sup>+</sup> <i>karmač</i> QI	'to crumple'
<sup>+</sup> <i>karmat</i> QI	'to have stomach cramps'
<sup>+</sup> <i>karnəz</i> QI	'to coil up'

<i>nacnəc</i> QI	'to groan'
<i>naknək</i> QI	'to grunt, to grumble'
<i>naxnəx</i> QI	'to pant'

## 1.11 Historical Background of Vowels

### 1.11.1 /i/

(i) This may derive from long \**ī*, e.g.

<i>basíma</i>	'pleasant (ms.)'	< * <i>bassimā</i>
<i>yámmi</i>	'my mother'	< * <i>yimmi</i>
<i>’ásri</i>	'twenty'	< * <i>’asrīn</i>
<i>ptíxa</i>	'open'	< * <i>ptihā</i>
<i>xzí</i>	'see!'	< * <i>hzī</i>

(ii) It is the regular reflex of an original long \**ē* in word internal position, e.g.

<i>rīša</i>	'head'	< * <i>rēšā</i>
<i>cípa</i>	'stone'	< * <i>kēpā</i>
<i>xzílan</i>	'we saw'	< * <i>hzēlan</i>

(iii) It occasionally derives from a short high vowel in syllables that were originally closed but have now become open. This applies to such vowels in a syllable originally closed by a pharyngal or laryngal. For the sake of convenience, this vowel can be represented here as \**ə*. The gemination of the /y/ is a secondary phenomenon (§1.13.2.3.3.) e.g.

<sup>+</sup> <i>síyya</i>	'thirsty'	< * <i>siyya</i> < * <i>ṣəhyā</i>
---------------------------	-----------	-----------------------------------

It is also attested in the closed syllable of loanwords that are opened by the addition of inflectional elements, e.g.

<sup>+</sup> <i>cásəb</i>	'poor man'	pl. <sup>+</sup> <i>casíbə</i>	< Azer. <i>kasıb</i> < Arab.
<i>káləb</i>	'mould for cheese'	pl. <i>kalíbə</i>	< Azer. <i>qilib</i> < Arab.
<i>čátər</i>	'umbrella'	pl. <i>čatírə</i>	< Pers. čater

(iv) In a few words /i/ in an open syllable has developed by raising from \**a* in an originally closed syllable, usually before a geminated consonant, e.g.

<i>cíca</i>	'tooth'	< * <i>kakkā</i>
<sup>+</sup> <i>míra</i>	'spade'	< * <i>marra</i>
<sup>+</sup> <i>píra</i>	'lamb'	< * <i>parrā</i>
<i>šíta</i>	'year'	< * <i>śattā</i>
<i>císa</i>	'stomach'	< * <i>karsa</i> (+Mawana <i>časa</i> )
<i>zýja</i>	'bell'	< * <i>zaggā</i>
<i>jináva</i>	'thief'	< * <i>gannābā</i>
<i>jíváya</i>	'beggar'	< * <i>gawwāyā</i>
<i>ricáva</i>	'horseman'	< * <i>rakkābā</i>
<i>xó-šiba</i>	'Sunday'	< * <i>xa-b-śabbā</i>

The likely development of this phenomenon is as follows:

\**kakkā* > *kəkka* > *keka* > *cica*

The *\*a* was originally centralized in the closed syllable then this was lengthened to *\*ē* when the syllable opened. Finally *\*ē* shifted to /i/ by the normal process. Evidence for this reconstruction is found in dialects where the shift *\*ē* > /i/ has not taken place, e.g. Sat, where the cognate word has the form *keka* (Mutzafi 2008a, 22).

In Canda (Georgia) a doublet has developed from the word *\*brattā* ‘girl, daughter’:

- bráta* ‘girl’  
*brítā* ‘daughter’

(v) The vowel /i/ is the result of raising from *\*a* also before the palatal glide /y/ in a few isolated cases, e.g.

- míyya* ‘water’ < *\*maya*  
*'adíyya* ‘now’ < *\*hā + daya* < *\*daha*

### 1.11.2 /e/

(i) In most cases this is the result of contraction of the diphthong *\*ay*, e.g.

- béta* ‘house’ < *\*baytā*  
*+kéta* ‘summer’ < *\*qaytā*  
*calbé* ‘their dog’ < *\*kabáyhən*

In a few cases it appears to have resulted from the contraction of *\*ə*, e.g.

- +aréta* ‘patch’ < *\*+arə'ta*  
*+mayréta* ‘razor’ < *\*+magrə'ta*  
*sebúyta* ‘old age’ < *\*sə'būta* (cf. Syr. *s-*-*b*)

In *\*arə'ta* the *\*ə* appears to be an epenthetic. The word *+mayréta* derives historically from the determined form of the *əp'el* active participle (*\*maqtältā*).

### 1.11.3 /a/

This derives from an original short *\*a* or long *\*ā*, though the length of the vowel in the dialect is determined by syllable structure and stress and not by its historical derivation from an original short or long vowel, e.g.

- pátxa* ['patxa] ‘she opens’ < *\*pā thā |*  
*+tálā* [tʰa:<sup>f</sup>l'a:<sup>f</sup>] ‘fox’ < *\*ta'lā*  
*+sára* [s'a:<sup>f</sup>r'a:<sup>f</sup>] ‘moon’ < *\*sahrā*

## 1.11.4 /ə/

(i) This may derive from an original short high vowel, which, for the sake of convenience we may represent here with the same symbol \*ə, e.g.

<i>pátəx</i>	'he opens'	< * <i>pātəx</i>
<i>lábba</i>	'heart'	< * <i>lábba</i>

(ii) It results from the shortening of \*ɪ in a closed syllable, e.g.

<i>šapórta</i>	'beautiful (fs.)'	< * <i>šappírtā</i> (cf. <i>šápira</i> ms.)
<i>ptáxli</i>	'I opened'	< * <i>ptíxlī</i>
<i>’átxva</i>	'there was'	< * <i>tl̥wā</i>

(iii) In post-stress syllables it is the result of shortening of an original \*ē, e.g.

<i>nášə</i>	'people'	< * <i>nāšē</i>
<i>baxtáto</i>	'women'	< * <i>baxtātē</i>
<i>+šadúrə</i>	'to send'	< * <i>mšaddōrē</i>
<i>patxálə</i>	'she opens it (m.)'	< * <i>pātxálē</i>
<i>xázə</i>	'he sees'	< * <i>xázē</i>
<i>xázən</i>	'I see'	< * <i>pātxēn</i>

A long /ē/ vowel is retained in some cases in slow speech, especially at the end of an intonation group, but this is not marked in the transcription.

(iv) The vowel /ə/ occurs in some syllables where it is ultimately derived from \*ay, e.g. post-stress open syllables:

<i>bétxə</i>	'it is a house'	< * <i>bētēlē</i> < * <i>baytaylē</i>
<i>+táməva</i>	'he was there'	< * <i>támēwā</i> < * <i>tāmaywā</i>

and closed syllables such as

<i>bétváto</i>	'houses'	< * <i>bētvätē</i> < * <i>baytvätē</i>
----------------	----------	--

In these contexts a long /ē/ vowel is occasionally retained in some cases in slow speech, but is not marked in the transcription.

(v) It occurs in stressed and post-stress closed syllables containing a contracted form of the copula, e.g.

- l̩n* ‘I am not’ < *levən* < \**laywēn*  
*vídən* ‘I have done’ < *vidəvən* < \**widaywēn*

A long /ē/ is retained in some cases, especially in stressed syllables, e.g. in forms of the negative copula such as *l̩n* ‘I am not’. In the transcription, therefore, the /ē/ has been normalized in the negative copula (§ 3.4.).

- (vi) Final -ə in singular nouns is generally derived from an original \*-yā, e.g.

- lélə* ‘night’ < \**laylyā* (Syr. *lelyā*)  
<sup>+</sup>*árxə* ‘water-mill’ < \**rahyā* (Syr. *rahyā*)

### 1.11.5 /o/

This derives from the diphthong \*aw, in some cases deriving ultimately from *ab*, e.g.

- |                          |                  |                  |
|--------------------------|------------------|------------------|
| <i>móta</i>              | ‘death’          | < * <i>mawtā</i> |
| <sup>+</sup> <i>sóma</i> | ‘fast’           | < * <i>sawmā</i> |
| <i>óya</i>               | ‘(that) she be’  | < * <i>hāwyā</i> |
| -o                       | fs. suffix       | < * <i>aw</i>    |
| <sup>+</sup> <i>kóra</i> | ‘grave’          | < * <i>qabrā</i> |
| <sup>+</sup> <i>þóra</i> | ‘man’            | < * <i>gabrā</i> |
| <i>ódi</i>               | ‘(that) they do’ | < * <i>'abdī</i> |

### 1.11.6 /u/

- (i) In closed syllables this derives from an original short \*u, e.g.

- úrxa* ‘road’ < \**urhā*  
*dúcta* ‘place’ < \**dukk<sup>2</sup>tā*

- (ii) In the environment of labials an original short /ə/ may sometimes be realized with labialization, resulting in qualities in the region of [ø] in plain words, e.g. *pómma* [pʰømma] ‘mouth’ and [v] in emphatic words, e.g. <sup>+</sup>*ávən* [<sup>+</sup>?a:vvn] ‘he’. The degree of labialization varies across speakers and tokens. It is sufficient, however, to justify transcribing such words with /u/, viz. *pumma*, <sup>+</sup>*avun*.

- (iii) In stressed open syllables /u/ is a reflex of an original long \*ō, e.g.

- <sup>+</sup>*naṭúra* ‘guard’ < \**nāṭōrā*  
*carúba* ‘angry’ < \**kārōbā*

<i>súra</i>	'small'	< * <i>sōrā</i> < * <i>zōrā</i>
+ <i>šadúrə</i>	'to send'	< * <i>mšaddōrē</i>

In some cases it is ultimately derived from \**aw* or \**ab* (§ 1.9.1.1.), e.g.

<i>mú</i>	'what'	< * <i>mō</i> < * <i>maw</i>
<i>dúlə</i>	'there he is'	< * <i>dōlē</i> < * <i>dawlē</i>
+ <i>júra</i>	'big'	< * <i>gora</i> < * <i>ga<b>r</b>a</i>

(iv) In final open unstressed syllables it is a reflex of an original \**ū*, e.g.

+ <i>kátu</i>	'cat'	< *+ <i>qatū</i>
- <i>u</i>	3ms suffix	< - <i>ū</i>

(v) In stressed open syllables and open syllables standing before the stress /u/ sometimes occurs as a reflex of an original long \**ū*. In these contexts it occurs in free variation with diphthong /uy/ (§ 1.12.1.), e.g.

<i>malcúta</i> ~ <i>malcúyta</i>	'kingdom'	< * <i>maklūtā</i>
<i>suráya</i> ~ <i>suyráya</i>	'Assyrian'	< * <i>sūrāyā</i>
<i>hudáya</i> ~ <i>huydáya</i>	'Jew'	< * <i>yhūdāyā</i>

## 1.12 Historical Background of Diphthongs

### 1.12.1 /uy/

The diphthong /uy/ is derived from an original long \**ū*, e.g.

<i>xabiýša</i>	'apple'	< * <i>habbūšā</i>
+ <i>túyra</i>	'mountain'	< * <i>tūrā</i>
<i>núyra</i>	'fire'	< * <i>nūrā</i>
<i>suyráya</i>	'Assyrian'	< * <i>sūrāyā</i>
<i>huydáya</i>	'Jew'	< * <i>yhūdāyā</i>

The shift \**ū* > /uy/ is a palatalization process that was no doubt motivated by a push-chain effect after \**ō* shifted to long /u/.

In some cases the long \**ū* was derived ultimately from a diphthong, e.g.

<i>túyna</i>	'straw'	< * <i>tubnā</i>
<i>díyša</i>	'honey'	< * <i>dubšā</i>
+ <i>rúyša</i>	'shoulder'	< * <i>rubšā</i>

The diphthongization of  $*\bar{u}$  does not take place in native Aramaic words if the vowel is followed by the dorsal consonants /x/ and /χ/, which block the palatalization process, e.g.

$^{+}rúxa$	'spirit'
$\check{súka}$	'market'
$rúkə$	'spit'

Some loanwords, however, exhibit diphthongization before dorsals, e.g. *sandúyka* 'box, coffin' (Pers. sandúq < Arab. šandūq), *čaruyxə* 'sandals' (Kurd. çarox).

As remarked (§ 1.11.6.), the diphthong /uy/ alternates with /u/. The realization of  $*\bar{u}$  as /uy/ occurs most frequently in stressed syllables. The reflex /u/ is more common in pretonic unstressed syllables, e.g. *hudáya* 'Jew'. In post-stress syllables /u/ is the norm, e.g.  $^{+}kátu$  'cat', though the diphthong is occasionally attested, e.g.  $^{+}kátuy$  (Canda). This suggests that vowel length is one of the conditioning factors of the diphthong, since the vowel is longer in a stressed syllable. The realization of  $*\bar{u}$  as /u/ rather than /uy/ even in stressed syllables is particularly common in the speech of people who have been educated in the literary language, where it is avoided. This applies in particular to the vowel of the abstract derivational suffix *-uta* ~ *-uyta*, which is frequently realized as /u/, e.g. *malcuta* 'kingdom'. The norms of the literary language, therefore, have had an impact on this vowel in speech. In the transcription of the texts the vowel is transcribed as it is pronounced by the speaker, either as /u/ or /uy/ without normalization. In citation forms and lexical entries some degree of normalization has been applied and the diphthong /uy/ is written in stressed syllables.

There are sporadic cases where /u/ deriving from  $*\bar{o}$  is palatalized to /uy/. This is occasionally heard, for example, in the word *bət-<sup>+kúra</sup> ~ bət-<sup>+kúyra</sup>* 'cemetary' (< *bet-qora*). Note also the variants *<sup>+xóra</sup> ~ <sup>+xúyra</sup>* 'friend' <  $*\bar{xawra}$  < *xabra*.

In dialects spoken in the highlands to the west of Urmi, such as  $^{+}\text{Mawana}$ , the palatalization process of  $*\bar{u}$  has resulted in the front rounded monophthong /ü/ [IPA Y], e.g. *xabiüša* 'appled', *füda* 'wall', but this is blocked, as in C. Urmi, before dorsals, e.g. *ruqe* 'spit'. In C. Salamas and C. Gawilan the equivalent results in a velar fricative off-glide, e.g. *xabuxša* 'apple', *juğda* 'wall', but, again, is blocked before dorsals, e.g. *šuka* 'market', *ruxa* 'spirit'.

### 1.12.2 *The Diphthong /ay/*

The diphthong /ay/ is the reflex of an original diphthong in a number of emphatic words, e.g.

- +*ayna* ‘eye’      \*‘*aynā*  
+*ayva* ‘cloud’      \*‘*aybā*

It is the reflex of an original diphthong in the independent 3fs pronoun:

‘*ay* ‘she’ < \**hay*

In the fs. attributive demonstrative, however, the diphthong is contracted: ‘*e* (< \*‘*ay*) ‘that’; cf. +*av* ‘he’ but attributive demonstrative ‘*o* ‘that’.

### 1.12.3 Diphthongs Resulting from Contractions

Elsewhere diphthongs have resulted from various types of contractions of segments. These include the following:

Due to the elision of the \**t* in the numeral ‘thirty’ and in plural forms:

- tlay* ‘thirty’ < \**tlātī*  
*xatvay* ‘sisters’ variant of *xatvata*  
*matvay* ‘villages’ variant of *matvata*

Due to the elision of intervocalic /n/:

- tay* ‘tell!’ variant of *tani*  
*may* ‘who?’ variant of *mani*

Due to the elision of intervocalic /d/:

- muy* ‘what’ variant of *mudi*

Due to the weakening of the palatals /c/ and /ʃ/ to /y/ in some forms, e.g.

- duyta* ‘place’ a variant of *ducta*  
*tuybərri* ‘I looked after’ a variant of *tuybərri*  
‘*a-yba* ‘*o-yba* ‘this side that side’ variants of ‘*a-jiba* ‘*o-jiba*

When a palatal is weakened to /y/ after /ə/, these two segments coalesce to /i/, e.g.

- fari* ‘must’ a variant of *farəc*

Diphthongs also occur due to secondary gemination of /y/ in word-medial position (§ 1.13.2.3.3.).

### 1.13 Gemination of Consonants

#### 1.13.1 *Distribution of Gemination*

All consonant phonemes may be geminated except for the laryngal /'. Attested examples include the following:

/b/	<i>ləbba</i>	'heart'
/c/	<sup>+</sup> <i>accara</i>	'farmer'
/ç/	<i>yaççana</i>	'only son'
/č/	<i>kərkəččə</i>	'sunflower seeds'
/᷑/	<sup>+</sup> <i>əččə</i>	'nine'
/d/	<sup>+</sup> <i>maddə</i>	'he informs'
/f/	<i>b-fur'un</i> [biffor'vn]	'by Pharaoh'
/ѓ/	<i>maѓgabta</i>	'love'
/h/	<i>b-həlma</i> [bihhilma]	'in steam'
/j/	<i>navəjja</i>	'grandson'
/j/	<sup>+</sup> <i>ajjəb</i>	'he is surprised'
/k/	<i>þəkka</i>	'frog'
/l/	<i>cəllita</i>	'kidney'
/m/	<i>yəmma</i>	'mother'
/n/	<i>čannita</i>	'chin'
/p/	<i>səppatə</i>	'lips'
/᷑/	<sup>+</sup> <i>su᷑p̪a</i>	'finger'
/r/	<sup>+</sup> <i>šudərrə</i>	'he sent'
/s/	<sup>+</sup> <i>kəssa</i>	'forehead'
/š/	<i>xəšša</i>	'suffering'
/t/	<i>hakyattu</i>	'his story'
/᷑/	<sup>+</sup> <i>yattə</i>	'he knows'
/v/	<sup>+</sup> <i>avva</i>	'that'
/x/	<i>laxxa</i>	'here'
/y/	<sup>+</sup> <i>mayyə</i>	'he churns'
/z/	<sup>+</sup> <i>bəzza</i>	'hole'
/᷑/	<i>kəžžakəž</i>	'rattling'

#### 1.13.2 *The Origin of Consonant Gemination*

Consonant gemination in the dialect has various origins.

##### 1.13.2.1 Assimilation of Consonants

This applies to assimilation of the /l/ of L-suffixes in various verbal inflections, e.g.

<i>šaklátta</i>	'You take it'	< *šaklāt + <i>la</i>
<i>šaklónna</i>	'I take it'	< *šaklān + <i>la</i>
<i>cpánna</i>	'He became hungry'	< *cpān + <i>la</i>
<i>+sudárra</i>	'He sent'	< *+sudər + <i>la</i>

It is also found sporadically with other consonants, e.g.

*matta* 'she places' < *matva*

### 1.13.2.2 Gemination Inherited from Morphological Patterns

In words of Aramaic stock, the original consonant gemination of nominal patterns that are found in earlier Aramaic has been preserved in the dialect after an original short front high vowel,<sup>13</sup> e.g.

<i>labbā</i>	'heart'
<i>'azzā</i>	'nanny-goat'
<i>cəssaya</i>	'lid (of oven)'
<i>ʃəddala</i>	'thread'
<i>səmmalta</i>	'ladder'
<i>səppərtā</i>	'small bird'

It has also been preserved after /u/ in some words, e.g.

*xubba* 'love'  
*pumma* 'mouth'

Gemination is in principle weakened within words of other patterns after vowels other than original short \*ə, e.g.

<i>+raba</i>	'much'	< *rabbā
<i>xabíyša</i>	'apple'	< *habbūšā
<i>basíma</i>	'pleasant'	< *bassīmā
<i>catáva</i>	'writer'	< *kattābā
<i>šadíúrə</i>	'to send'	< *mšaddōrē
<i>+bukára</i>	'question'	< *buqqārā
<i>+puzálla</i>	'he forgave'	< *mpuxxəl-lēh

<sup>13</sup> I have found no basis for the claim by Tsereteli (1978b, 30) that gemination has been lost in these words in the C. Urmī dialect, including in the varieties spoken in Georgia.

The original gemination has been preserved in a few isolated cases, e.g.

- +*accara* ‘farmer’
- +*jabbara* ‘hero’
- kaddiša* ‘saint’
- jaddiša* ‘stook of wheat or grass’
- šladda* ‘corpse’
- šmayya* ‘sky, heaven’

In cases where an original \**a* developed into \**ə* before a geminated consonant the gemination was still lost and the reflex of the vowel is long /i/ in an open syllable (§ 1.11.1.):

- cica* ‘tooth’ < \**keka* < \**kəkka* < \**kakkā*
- jinava* ‘thief’ < \**genava* < \**gənnava* < \**gannābā*

In loanwords gemination has in many cases been taken from the source language:

- +*hammam* ‘bath’ < Pers. hammām < Arab.
- +*kassab* ‘butcher’ < Azer. qəssab /Pers. qassāb < Arab.
- +*najjar* ‘carpenter’ < Pers. najjār < Arab.
- +*nakkaš* ‘painter’ < Pers. naqqāš
- +*dabbağ* ‘tanner’ < Azer. dabbağ
- +*murabba* ‘jam’ < Azer. mürəbbə/Pers. morabba < Arab.
- lacca* ‘stain’ < Pers. lakke
- kubba* ‘dome’ < Azer. qübbə < Arab.
- +*čakkal* ‘jackal’ < Azer. çaqqal

### 1.13.2.3 Secondary Gemination after Short Vowels

In words of Aramaic stock this has taken place in the following circumstances.

#### 1.13.2.3.1 After a Short Vowel in an Open Syllable

In conditions where vowels in open syllables are long, short vowels are not tolerated in open syllables. The clearest case of this is in stressed open syllables, in which vowels would normally be pronounced fully long (§ 1.7.1.1.). So if by a phonetic process a short vowel would appear in an open stressed syllable, the syllable is closed by geminating the following consonant. This applies, for example, to the opening of syllables due to the loss of a pharyngal in the sequence \*VCV, e.g.

<sup>+</sup> šámma	'she hears'	< *šáma < *šām'ā
<sup>+</sup> tárra	'door'	< *tára < *tar'ā
<sup>+</sup> dómma	'tear'	< *dóma < *dóm'ā
<sup>+</sup> køtta	'piece'	< *qøta < *qøt'ā

We may include here perhaps the demonstrative pronouns <sup>+</sup>ávva 'that' (m.) and <sup>+</sup>áyya 'that' (f.) and the adverbial <sup>+</sup>támma 'there', in which the gemination may have developed secondarily by a similar process due to the elision of a laryngal:

<sup>+</sup> ávva	'that' (m.)	< *áwa	< *awhā
<sup>+</sup> áyya	'that' (f.)	< *áya	< *ayhā
<sup>+</sup> támma	'there'	< *táma	< *támhā

If a pharyngal or laryngal are lost in the sequence *\*V'CV*, the preceding vowel is generally lengthened, e.g.

<sup>+</sup> tála	'fox'	< *tá'lā
<sup>+</sup> šáda	'almond'	< *ša'da < *šaǵdā
dáva	'gold'	< *dahbā
<sup>+</sup> šúla	'job'	< *šu'lā < *šuǵlā

When the syllable contains a high vowel in structures such as these, the vowel is generally kept short and so the following consonant is geminated, e.g.

<sup>+</sup> púlla	'radish'	< *pu'lā < *puǵlā
rákka	'distant'	< *rəhqā

This applies to the numerals 11–19. When the '10' element *\*sar* is preceded by an /a/ vowel, this vowel is lengthened, e.g.

<sup>+</sup> xamšásar	'15'	< *xamšá'sar
<sup>+</sup> əštásar	'16'	< *əstá'sar

When the preceding vowel is high, however, the vowel is short and the following /s/ is geminated, e.g.

taryóssar	'12'	< *taryá'sar
tmanássar	'18'	< *tmaná'sar

If a short vowel appears in an open syllable due to a morphophonemic process, the syllable likewise is closed by gemination. This applies, for example, to the addition of inflectional endings to the base *maCCəC*- in pattern III verbs (§ 4.3.3.3.):

*mapláxxa* ‘she uses’ < \**mapləx* + *a*

Another example is the gemination of the initial radical that results from the imposition of the pattern III template *maCCəC* on weak roots, e.g.

*mákkəm* ‘he causes to stand’ < \**maķəm* < \**maqīm*  
*márrək* ‘he causes to run’ < \**marək* < \**ma'rəq*

In loanwords an open syllable containing a short vowel is likewise not tolerated and is closed by gemination, e.g.

<i>zábbun</i>	‘weak’	< Azer. zəbun
<i>mácca</i>	‘maize’	< Azer. məkə
<i>+kádda</i>	‘disaster’	< Azer. qada < Arab.
<i>čákku</i>	‘knife’	< Sorani Kurd. çeqo
<i>+júvvab</i>	‘answer’	< Pers. javāb
<i>cúllunj</i>	‘crowbar’	< Azer. külüng
<i>+čúbbux</i>	‘tobacco pipe’	< Azer. çubuq/Pers. čopoq
<i>+pállan</i>	‘so-and-so’	< Azer. filan/Pers. folān
<i>képpəl</i>	‘lock’	< Azeri qıflı < Arab.
<i>jódda</i>	‘spear’	< Azer. cida
<i>šábbət</i>	‘dill’	< šebet
<i>+čəkkúrta</i>	‘hole’	< Azer. cukur

In all verbal forms from loaned nouns the gemination is introduced also when a short /a/ is found in the source, e.g.

<i>+ájjəb</i>	‘he is surprised’	< Arab. ‘ajiba
<i>támməz</i>	‘he cleans’	< Azer. təmiz
<i>jávvəb</i>	‘he answers’	< Pers. javāb
<i>báxxəl</i>	‘he is jealous’	< Pers. baxıl < Arab.

A geminated consonant following a vowel in a pretonic syllable has a slightly reduced gemination just as a vowel in an open pretonic syllable is slightly shorter in duration (§ 1.7.1.2.). The gemination in such cases is still marked in the transcription, e.g.

*+šammáva* ‘she used to hear’

*mapləxxáva* ‘she used to use’

### 1.13.2.3.2 After an Epenthetic \*ə

This applies to a stressed epenthetic breaking a word-initial cluster in mono-syllabic nouns, e.g.

*dámma* ‘blood’ < \*dəmā < \*dmā.

*šánnə* ‘years’ < \*šənē < \*šnē

This must have occurred at a considerable historical depth in NENA, since initial consonant clusters in C. Urmi are now pronounced without an epenthetic splitting to the two consonants (§ 1.15.1).

Gemination occurs also after the prefixed preposition *bə-* in progressive verbal forms such as:

*bərráxšəla* ‘he is going’ < bə + rəxšəla

*+bəššášəla* ‘he is shaking’ < bə + +šášəla

*+bəddáyən* ‘I know’ < bə + +dayən

The /ə/ in the form *bə-* here originated as an epenthetic vowel in verbal stems with an initial consonant cluster *CC* such as:

*bəptáxəla* ‘he is opening’ < b + ptaxəla

This was then extended by analogy to verbal stems beginning with an open syllable and the resulting *bəCV* sequence was resolved as *bəCCV*.

### 1.13.2.3.3 ŢC > VCC

In some circumstances the sequence of a long vowel followed by a consonant is replaced by a short vowel followed by a geminated consonant. This type of gemination is particularly common with the sequences /īy/ and /ūv/, e.g.

*míyya* ‘water’ < \*mīya

*díyux* ‘yours’ < \*dīyux

*‘adíyya* ‘now’ < \*hadīya

*+karúvva* ‘cock’ < \*qarūva < \*qārō'a

*+xalúvva* ‘maternal uncle’ < \*xalūva < \*xalū-a

*puvvórrə* ‘he yawned’ < \*pūvərrə < \*pūhərrə

When /*ūv*/ shifts to /*uvv*/ in the past template and resultative participles of verbs, the geminated /*vv*/ is extended to other paradigms where it is preceded by other vowels, e.g.

- pávvər* ‘he yawns’  
*pavvúrələ* ‘he is yawning’

A consonant in the sequence  $\bar{V}C$  freely alternates with  $VCC$  in a few sporadic cases, e.g.

- jášəq* ~ *jáššəq* ‘he looks’  
*xazə* ~ *xazzə* ‘he sees’

In a few cases gemination that has developed in this way has become fixed lexically e.g.

- jamməšta* ‘buffalo’ < \**gāməštā*, cf. Syriac *gāmūšā*.

Gemination of this type has arisen in a few words that consist of two elements that have become bonded, e.g.

- mújjur* ‘how’ < \**mu* ‘what’ + *jur* ‘kind’ (Pers. *jūr*)  
*laxxa* ‘here’ < \**l-hāxā*

#### 1.13.2.3.4 Gemination of Word-initial Consonant

Occasionally the first consonant of a word is geminated when preceded by a word ending in an unstressed vowel (i.e. the common form of word-ending). This is heard in particular when the second word in the sequence occurs at the end of an intonation group. This type of gemination is not marked in the transcription:

- súsa súra* [‘su:sa ‘ssu:ra] ‘a small horse’  
*máxi bìyyi* [‘ma:xi ‘bbijji] ‘they strike me’

#### 1.14 Syllable Structure

At the beginning of a word the onset of a syllable may consist of a single consonant *C* or a cluster *CC*, e.g.

- pá.təx* ‘he opens’  
*ptáx.lə* ‘he opened’

A consonant cluster at the beginning of a word is generally not split by an epenthetic vowel. Some examples of epenthetics between the consonants, however, are found. This occurs, for example, after a tense dorsal /k/, e.g.

- kdála* [kə'da:la] ‘neck’

This would have the following syllable structure:

- kda.la.*

Initial clusters may be of decreasing sonority, e.g.

- npállə* ‘he fell’  
*rxátlə* ‘he ran’

Clusters at the onset of a syllable are expected to exhibit rising sonority onsets (Ewen and van der Hulst 2001, 136–141, 147–150). The fact that the clusters can be of decreasing sonority, beginning with sonorants, suggests that in such cases the first consonant of a cluster should be analysed as extra-syllabic, thus:

- n.pállə* ‘he fell’

Word-initial strings with decreasing sonority such as *npállə* are often pronounced with epenthetic prosthetic vowels, which is evidence for this analysis of the syllable structure, e.g.

<i>nšáklə</i>	[in'ʃíklɪ]	‘He kissed him’
<i>+ntúrrə</i>	[u <sup>ŋ</sup> n <sup>ŋ</sup> t <sup>ŋ</sup> rr <sup>ŋ</sup> ə <sup>ŋ</sup> ]	‘Guard it!’
<i>rjádlə</i>	[ɪr'jɪdlɪ]	‘He trembled’
<i>+rxátlə</i>	[ə <sup>ŋ</sup> r <sup>ŋ</sup> x <sup>ŋ</sup> ə <sup>ŋ</sup> t <sup>ŋ</sup> l <sup>ŋ</sup> ə <sup>ŋ</sup> ]	‘He ran’
<i>lvaxta</i>	[ɪ'lvaxta]	‘to flame’
<i>lvəšta</i>	[ɪ'lvišta]	‘attire’
<i>spadítə</i>	[ispə'di:tʰə]	‘pillow’
<i>švíkáli</i>	[ɪsvi:káli:]	‘I left her’

Epenthetics occasionally occur elsewhere to break up a cluster, e.g.

- +kra* [ə<sup>r</sup>kr<sup>a</sup>] ‘turtle’  
*dbišəna* [əd'bi:ʃəna] ‘they have stuck’

The prefixing of a prosthetic vowel is a permanent feature of several words that are historically monosyllabic, in which the originally epenthetic vowel has been reanalysed as a syllable nucleus. The prosthesis is exploited to augment the word to two syllables. These prosthetic vowels, which bear the stress, are represented in the transcription. Note that in all cases the cluster is of falling sonority, which disfavours syllable onset formation, e.g.

- 'ärxa* ‘water-mill’ < \*rxe < \*rahyā  
*'äšta* ‘six’ (m.) < \*štā  
*'ältax* ‘below’ < \*l-tēx

When a prefixed element consisting of one consonant is attached to a word beginning with a cluster *CC*, a cluster consisting of three consonants is created in the onset *CCC*. An epenthetic is obligatorily placed between the particle and the remaining consonants, e.g.

- d-tré* [di'tre:] ‘the second’  
*d-+flá* [də'tf<sup>l</sup>ā:] ‘the third’

In a case such as the ones cited, the stress position demonstrates that the vowel is an epenthetic. The monosyllabic word *tre* takes final stress although a vowel exists after the /d/. If the vowel after the initial /d/ were a syllable nucleus, one would expect the stress placement to take it into account and the stress would be placed on this syllable due to its penultimate position, the canonical place for stress. It should be interpreted, therefore, as an epenthetic.

Enclitic elements that are attached to the end of a host word may have a zero syllabic onset, e.g.

- +úllul.i.lə* (= +úllul-ilə) ‘He is above’  
*dóž.mən.i.lə* (= dóžmən-ilə) ‘He is an enemy’

By contrast, when affixes beginning with a vowel are added to equivalent words that end in a consonant, they must have a C onset, which is achieved by geminating the final consonant of the host word, e.g.

- dóžmən + an* > *dóžmónnan* ‘our enemy’

The zero syllabic onset of the copula enclitic *ilə* is permitted since it does not occur in word-initial position. Zero onsets are not tolerated at the beginning of a word in the phonetic form of the word, although at an underlying level words sometimes have a zero onset. Such words acquire an initial laryngal /', which fills the zero onset slot, e.g.

<i>/Øilə/</i>	>	<i>'ilə</i>	'He is'
<i>/+Øaxəl/</i>	>	<i>+axəl</i>	'He eats'

The rhyme of a syllable may consist of a vowel nucleus only or may consist of a vowel nucleus and a following consonant. As has been described in § 1.7., the phonetic duration of vowels varies according to the position in a word. There is reason to believe, however, that on a phonological level syllable rhymes should be analysed as VV or VC, i.e. they have the weight of two moras.

In an open stressed syllable a vowel is long. A syllable with a short vowel nucleus in the same conditions has to have the same weight of rhyme, i.e. VC:

<i>pá.təx</i>	'he opens'
<i>CVV.CVC</i>	

<i>+šám-max</i>	'we hear'
<i>CVC-CVC</i>	

It can be assumed, therefore, that open and closed syllables are of the same phonological moraic weight also in other conditions, although the phonetic duration of the vowel or of a geminated consonant may be reduced due to the prosody of the utterance. Although a word-final open syllable is phonologically long (bimoraic), the second vowel mora tends to lose audibility due to glottalization. This applies in particular to stressed word-final syllables in stress groups such as *xà-yuma* 'one day' (§ 1.19.2.). In such cases the glottalization fills the timing of the second mora (marked here with the symbol ?).<sup>14</sup> The symbol # is used to mark a word boundary:

<i>[xə?-ju:ma:]</i>	<i>xà.-yu.ma?</i>
<i>CVV.#CVV.CVV#</i>	

---

<sup>14</sup> For a similar phonological interpretation of word-final glottalization in Italian see Vayra (1994).

Glottalization of word-final vowels can be regarded as essentially the same phenomenon as devoicing of word-final consonants (§ 1.6.). Occasionally the syllable ends in an audible glottal stop in these contexts, e.g. *xá'-dana* ‘a single’ (A 39:10).

In their citation form and in pause at the end of the intonation group a word-final vowel is generally long (§ 1.7.1.4.), and within intonation groups their duration is reduced. These may be a prosodic phenomenon independent of their phonological length.

<i>pát.xa</i>	[ <i>p<sup>h</sup>at<sup>h</sup>.xa</i> ]	‘she opens’
<i>CVC.CVV#</i>		

<i>pát.xax</i>	[ <i>p<sup>h</sup>at<sup>h</sup>.xax</i> ]	‘we open’
<i>CVC.CVC#</i>		

<i>pat.xí.va</i>	[ <i>p<sup>h</sup>at<sup>h</sup>.'xi:.va</i> ]	‘they used to open’
<i>CVC.CVV.CVV#</i>		

<i>+šam.mí.va</i>	[ʃ <sup>h</sup> a <sup>h</sup> m <sup>h</sup> .m <sup>h</sup> i:.v <sup>h</sup> a <sup>h</sup> ]	‘they used to hear’
<i>CVC.CVV.CVV#</i>		

As described in § 1.7.1.1. the vowel in the stressed *xá* in such cases is sometimes phonetically short. The bimoricity of such word-final vowels is demonstrated by the fact that they are clearly phonetically long when they take the stress in word-internal position after the attachment of a suffix, e.g.

<i>pat.xá.va</i>	[ <i>p<sup>h</sup>at<sup>h</sup>.'xa:.va</i> ]	‘she used to open’
<i>CVV.CVV.CVV#</i>		

Other evidence for their bimoricity is the fact that the second mora of final *-i* surfaces as the palatal [ç] in pause before an intonation group boundary due to glottalization:

<i>bè.ti'</i>	[ <i>'be:.t<sup>h</sup>iç</i> ]	‘my house’
<i>CVV.CVV#</i>		

The vowel of penultimate post-stress syllables also reduces in phonetic duration when not in pause at the end of the intonation group, e.g.

*bé.tə.lə* [be:t<sup>h</sup>i.li] ‘it is a house’  
*CVV.CVV.CVV#*

The rhyme VC occurs also in final closed syllables, e.g.

*ptúx* [pt<sup>h</sup>ux] ‘open!’  
*CCVC#*

Before intonation group boundaries the vowel of a word-final CVC syllable is often extended phonetically, but this need not affect the analysis of its phonological mora weight since it is likely to be a prosodic phonomenon independent of the syllable's phonological weight. Its bimoricity is demonstrated by the fact that when it is put in word-internal position by the addition of a suffix, it is always phonetically short:

*p.túx.lə*  
*C.CVC.CVV#*

Certain words contain a long vowel in closed syllables even when a suffix is added. These forms have developed by contraction of two syllables into one, e.g. <sup>+</sup>tāl ‘he plays’, <sup>+</sup>tālta ‘game’. The syllable structure of these forms can be analysed thus:

<sup>+</sup>tāl ‘he plays’  
*CVV.C#*

<sup>+</sup>tā.lta ‘game’  
*CVV.C.CVV#*

Here the consonant following the long vowel is extrasyllabic and does not affect the bimoric weight of the syllable. Evidence for this analysis is that the contracted syllable can be optionally restored, e.g.

<sup>+</sup>tá.l ~ <sup>+</sup>tá.vol ‘he plays’  
*CVV.C#*      *CVV.CVC#*

A CC cluster may occur in the onset of a syllable that occurs word-internally, e.g.

*+pur.tkal.ta* ‘orange’

CVC.CCVC.CV#

*+xər.tman.ta* ‘chickpea’

CVC.CCVC.CV#

If the second consonant of the word-internal sequence *CCC* is more sonorant than the third, the syllabification *C.CC* is not favoured, since the onset would have falling rather than rising sonority. In such cases one finds forms such as *mădənxa* ‘east’, *tăyəmna* ‘south’, *mădəbxa* ‘altar’. These exhibit several apparently irregular properties, a short stressed vowel in an open syllable and the incidence of stress two syllables back from the end of the word instead of in the canonical position on the penultimate syllable. The explanation is that the /ə/ is an epenthetic vowel and at an underlying level the initial syllable is closed:

*mădənxa*

/mad.n.xa/

CVC.C.CVV

The vowel length and the stress placement were determined by the underlying syllable structure. The fact that the epenthetic occurs before the /n/ is evidence that this consonant is not in the onset of the final syllable. As indicated, the /n/ would be extra-syllabic, just as it is in a form such as *n.pál.la* ‘he fell’, in which the marked sonority sequencing is resolved in the same way.

Many short vowels that were originally epenthetics have become phonologized as syllable nuclei in C. Urmi. This applies, for example, to words such as

*calábta* ‘bitch’ cf. *cálba* ‘dog’

*šaráxta* ‘heifer’ cf. *šárxa* ‘calf’

In the related C. Salamas dialect these words have the form *cəlba* ‘dog’, *cilábta* ‘bitch’; *šərxa* ‘calf’, *širóxta* ‘heifer’. In the history of the C. Salamas dialect there was a shift of short /a/ > /ə/ in closed syllables. It can be assumed that originally a word such as *calabta* had a syllable structure such as that of *mădənxa*, i.e. /cal.b.ta/, which would have been realized as \**cáləbta* in C. Urmi and *cáləbta* in C. Salamas, since the epenthetic before the /b/ would have been ignored and the first syllable would have been closed at an underlying level and the vowel short. Subsequently the epenthetic became analysed as a syllable nucleus. As

a result the stress shifted onto it and the initial syllable was opened, resulting in the lengthening of the vowel: C. Urmi *caləbta* [cʰa:lɪptʰa], C. Salamas *ciləbta* [cʰi:lɪptʰa].

It should be noted that in C. Urmi variants of forms such as *mádənxa* are attested with a lengthened vowel in the stressed syllable, e.g. *mádənxa* (A 47:9) and also with stress on the epenthetic, e.g. *mádənxa* (B 1:27). These can be regarded as the first stages of the phonologization of the epenthetic. Variant forms also exist in which the epenthetic occurs in a different position, e.g. *tāyməna* 'south' (B 1:20).

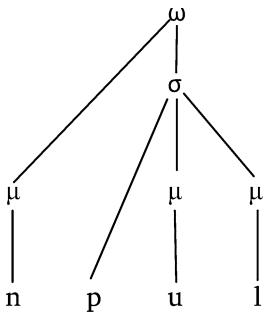

In pattern III and quadrilateral verbs an original epenthetic between the two final radicals has likewise become phonologized, with the result that it takes the stress and is treated as a syllable nucleus with canonical rhyme length achieved by geminating the following consonant, e.g.

\**ham.zma* > *ham.zóm.ma* ‘She speaks’

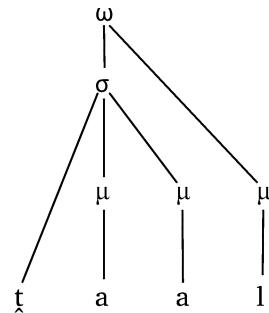

Some loanwords end in an consonantal cluster, e.g. <sup>+</sup>*dost* ‘friend’, <sup>+</sup>*xiyavand* ‘road’. These clusters only occur in word-final position and the last consonant can be regarded as extrasyllabic, so the syllable is bimoraic:

<sup>+</sup>*dós.t* ‘friend’  
<sup>+</sup>*xi.yá.van.d* ‘road’

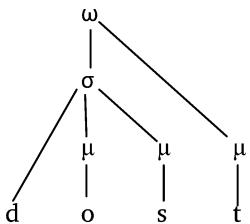

Following the analysis by Kiparsky (2003) of Arabic syllable structure, we may say that such unsyllabifiable consonants in forms such as *n.pul* ‘fall!’, <sup>+</sup>*ṭā.l* ‘he plays’, *mádənxa* ‘east’ and <sup>+</sup>*dos.t* ‘friend’ are licensed by moras adjoined to the higher node of the prosodic word rather than the syllable node. Kiparsky refers to these consonants as ‘semisyllables’. In the following trees  $\omega$  = word node,  $\sigma$  = syllable node,  $\mu$  = mora. In the phonological transcriptions of the trees in slanted brackets syllables are enclosed in rounded brackets and consonants left outside of the rounded brackets are extrasyllabic:

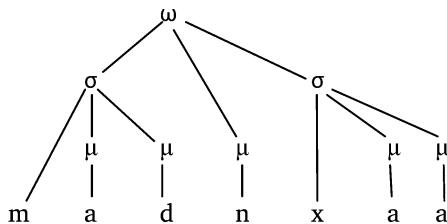

/n.(púl)#+/

/(táa).l#+/

/(dós).t#+/

/(mád).n.(xaa)#/ ['madənxa']

Loanwords that remain unadapted to the phonological and morphological system of the NENA dialect exhibit the syllable structure of the source language. In loanwords that are adapted to the phonology of the dialect short open syllables are generally changed to bimoraic CVV syllables, either by geminating the consonant after the vowel or lengthening the vowel, e.g.

*tám.məz* ['tʰammız] ‘clean’ < Azer. təmiz  
CVC.CVV

*pá.rí* ['pa:rí] ‘fairy’ < Pers. parī  
CVV.CVV

Short back rounded vowels in open syllables in the source language may be lengthened and be realized as the bimoraic diphthong /uy/, e.g.

*+kúymar* ['kujm̥aʳr̥] ‘gambling’ < Pers. (< Arab.) qomār  
CVV.CVC

A few loanwords exhibit partial adaptation to the phonological system of the NENA dialect, in that they have penultimate stress, but an open syllable with a short vowel remains unadapted. These include particles and nouns without an Aramaic inflectional ending, e.g.

<i>mājar</i>	'surely'	< Pers. magár
<i>jārəc, jāri</i>	'must'	< Azer. gərék
<i>ājar</i>	'if'	< Pers. agár
<i>sābab</i>	'because'	< Pers. (< Arab.) sabáb
<i>dáranj</i>	'late'	< Kurd. dereng

Occasionally, however, these syllables are adapted to the canonical bimoraic weight and the vowel is pronounced long, e.g. *jārəc* > *járəc* [já:rəc], or the following consonant is geminated, e.g. *dáranj* > *dárranj*.

When the prefixed particle *b*, which consists of a single consonant, creates an initial CC cluster, a vowel often splits the cluster to ensure that the particle is kept distinct from the following word. The inserted vowel may be short [i] or [ə], in which case the following consonant is generally geminated, or the vowel may be long /i/, e.g.

<i>b-rišux</i> ['bri:ʃʊx]	'on your head' (A 3:22)
<i>b-sila</i> [bis'si:la]	'with sand' (A 3:73)
<i>b-+t̪ina</i> [bi:t̪i:n'aŋ]	'with mud' (B 2:18)

The syllabification of the forms with the inserted vowel can be interpreted as the phonologization of an epenthetic as a vowel nucleus. As a result of this the syllable rhyme has to have the canonical bimoraic weight, which is achieved by geminating the following consonant or lengthening the vowel. The realization with the lengthened vowel, such [bi:t̪i:n'aŋ] can be regarded as reflecting a looser connection of the preposition with the noun than is the case with the other realizations. Since various syllabifications are attested, including the clustering of the *b* with the following consonant, the transcription has been normalized to *b-* in all contexts. This includes where the *b-* is followed by two consonants and is regularly followed by an epenthetic, e.g.

*b-prázla* [bprázla] 'with iron'

An epenthetic keeps the particle *b* distinct before labial consonants, e.g.

- b-bàxtu* [bib'baxtu] ‘on his wife’ (A 5:3)  
*b-momítal* [bimmo:'mi:t<sup>h</sup>a] ‘with an oath’ (A 3:63)

In some sporadic cases stress is placed on the epenthetic vowel of the preposition, in which case the vowel is represented in the transcription. This applies, for example, to the following fixed expression:

- +bùssahat* (< *b-<sup>+</sup>sahat*) ‘at once’ (A 45:9)

The preposition *b* can be separated from a noun by a hesitation, in which case it is followed by a long vowel, e.g.

- bí ... kèsə* [bi: ... 'ke:sr:] ‘with wood’ (B 2:6)

The phonotactics of *b* are different before progressive verbal forms. If the *b* is followed by a single non-labial consonant, this consonant is regularly geminated and the realization with a lengthened vowel, reflecting a looser connection, is not permitted. Nor can the *b* be separated from the verb by a hesitation. The epenthetic has been phonologized as a short vowel nucleus and has, indeed, also been grammaticalized, in that it is treated as a component of the morphological pattern of the progressive verbal form rather than an affix. The gemination and epenthetic, therefore, are regularly represented in the transcription. The *b* is always in the domain of emphasis of the verb, which is not regularly the case with *b* before nouns. Hyphens, therefore, are not used in the transcription, e.g.

- bərrákələ* ‘he is running’ (< *b + rakələ*)  
*+bəddáyələ* ‘he knows’ (< *b + <sup>+</sup>daya*)

Likewise, the epenthetic after the particle *b* before CC clusters in such progressive verbal forms is represented in the transcription, e.g.

- +bətlábələ* ‘he is requesting’

In such verbal constructions, however, the *b* is not kept distinct before labials and it is elided, e.g.

- báxyələ* ‘he is weeping’ (< *b + bəxyələ*)  
*vádələ* ‘he is doing’ (< *b + vadələ*)  
*páyələ* ‘he is baking’ (< *b + payələ*)  
*márələ* ‘he is saying’ (< *b + marələ*)

This reflects the higher functional load of the particle *b* before nouns than in these verbal constructions before the infinitive stem. It also demonstrates that at some stage of the derivation the particle *b* must have been in contact with the initial labial without an intervening vowel. Since there are grounds for arguing that the epenthetic in forms such as *bərrakələ* and *+bətlabələ* has now been phonologized as a vowel nucleus and is a component of the morphological pattern of the verbal base, the contact in question is best considered to have existed at some earlier historical period rather than to exist synchronically at an underlying level of derivation.

When the particle *b* in verbal progressive constructions is followed by a *CC* cluster beginning with a labial, the *b-* is optionally omitted, e.g.

<i>mxáyələ ~ bəmxáyələ</i>	'he is hitting' (< <i>b</i> + <i>mxayələ</i> )
<i>prákələ ~ bəprákələ</i>	'he is finishing' (< <i>b</i> + <i>prakələ</i> )
<i>ptáxələ ~ bəptáxələ</i>	'he is opening' (< <i>b</i> + <i>ptaxələ</i> )
<i>+mṭáyələ ~ +bəmṭáyələ</i>	'he is arriving' (< <i>+b</i> + <i>mṭayələ</i> )

Speakers regard the forms with the *b-* as higher register. This is no doubt under the influence of the literary language, in which the *b-* is regularly used.

When the initial consonant of the verb is not a labial, the /*b*/ is regularly preserved in the sequence *CCC* and followed by an epenthetic, e.g.

<i>+bəkráyələ</i>	'he is reading'
<i>+bərdáxələ</i>	'it is boiling'

The foregoing behaviour of *b* before a labial does not apply to the combination of *b* with a noun, in that it is always kept distinct before a noun beginning with a sequence of labial + *C*, reflecting its greater functional load, e.g.

<i>b-+mxáṭa</i> [b <sup>ə</sup> m <sup>ə</sup> x <sup>ə</sup> a <sup>ə</sup> t <sup>ə</sup> a <sup>ə</sup> ]	'with a needle'
<i>b-+pláša</i> [b <sup>ə</sup> p <sup>ə</sup> l <sup>ə</sup> a <sup>ə</sup> ʃ <sup>ə</sup> a <sup>ə</sup> ]	'by war'

This applies also to verbal nouns, which behave like nouns in this respect rather than verbs, e.g.

<i>b-prákta</i> [bip'rak <sup>ə</sup> t <sup>ə</sup> a]	'at the end' (noun)
<i>prákələ ~ bəprákələ</i>	'he is finishing' (verb)

Another aspect to this analysis is the location of word divisions in these two constructions. There is evidence that the phonotactics interpreted the word

division (#) differently (see § 1.15.2. for details), in that the *b* is a component of the morphological pattern of the verbal stem rather than an affix:

- b-práktə* < /b#prákta/  
*bəprákələ* < /#bəprákələ/

The future preverbal particle sometimes has the form of a single labial segment *b* or *p*, which are shortened forms of *bət*. These behave differently from the progressive preverbal particle *b*, in that there is no restriction on the clustering of the particle with an initial labial, e.g.

- b-bášlan* ['bbaʃln] 'I shall cook' (A 36:14)  
*p-parákli* [ppʰa:'rikli] 'he will finish me off' (A 4:10)

This can be interpreted as reflecting that, unlike in progressive constructions, there is a word division between the particle and the verb and at an underlying level it does not cluster in the onset of the first syllable of the verb. One could posit an underlying form of the particle *bət* which reduces phonetically to a single segment late in the derivation, viz.

- /bət#bašlan/ > [b#baʃln]  
*/bət#parákli/ > [p#pʰa:rikli]*

This analysis is supported by the fact that the particle *bət* can be separated from the verb by a hesitation, e.g.

- bót ... +`axəl mənné* 'he will eat them' (A 37:3)

Gemination of the syllable onset at the beginning of a word in cases such as *súsa súra* ['su:sa 'ssu:ra] 'a small horse' (§ 1.13.2.3.4.) is most likely a prosodic phenomenon that does not affect the phonological syllable structure of the word.

## 1.15 Phonotactics

### 1.15.1 Consonantal Clusters

The phonotactics of word-initial consonant clusters in the closely related Assyrian koine dialect have been studied in detail by Odisho (1988, 62–78) and Tosco (2002, 744–746). The principles that they have identified apply to the C. Urmî

dialect. There are a number of constraints on the combination of consonants. Clusters of consonants of closely related places of articulation are avoided. The sonorants /l/, /r/ and nasal /n/, however, can be combined with plosives, fricatives and affricates of a similar place of articulation, e.g.

<sup>+</sup> <i>rdixa</i>	'boiled'
<i>dreta</i>	'to pour'
<sup>+</sup> <i>tleta</i>	'to sleep'
<sup>+</sup> <i>l̥teta</i>	'to scrape up, lap up'
<i>tmeta</i>	'to repeat'
<sup>+</sup> <i>n̥tarta</i>	'to guard'

There are constraints on the clustering of stops of different laryngal settings in that these tend to be avoided. Some clusters of tense unvoiced unaspirated stops with voiced stops are occasionally found, e.g.

<i>k̥dala</i>	'neck'
<i>k̥balta</i>	'to be accepted'
<sup>+</sup> <i>t̥beta</i>	'to sink'

In such cases, however, the initial stop is either separated from the second one by an epenthetic or becomes voiced, e.g.

*k̥dala* [k̥ða:la] ~ [gda:la] 'neck'

Clusters of unvoiced lax aspirated stops with unvoiced tense unaspirated stops or with voiced stops are rarely encountered. In roots where a lax unvoiced stop clusters with a tense voiceless stop, the former is deaspirated, e.g.

<i>p̥keta</i>	'to split'	< * <i>p-q-</i> <sup>c</sup>
<i>p̥taxta</i>	'to spread out'	< * <i>p-t-h</i>
<sup>+</sup> <i>p̥čalta</i>	'to become crooked'	< * <i>p-š-l</i>
<i>t̥kalta</i>	'to weigh'	< * <i>t-q-l</i>

The unaspirated /p̥/ has been lexicalized in these roots, which have /p̥/ in all inflections, e.g. *pak̥kə* 'it splits', <sup>+</sup>*p̥ačəl* 'it becomes crooked'. The deaspiration of /t/ in *t̥kalla*, however, is context dependent and the aspirated /t/ appears when not in a cluster, e.g. *tak̥əl* 'he weighs', so the transcription of this

verbal root has been normalized with /t/ in all inflections. Exceptions are occasionally found with initial /k/, e.g.

*kpilos* ‘he grabbed’

Likewise when an initial unaspirated /t/ in a verbal root is followed by aspirated /p/, various repair strategies take place, e.g.

+*t̪axta* ‘to smash’ < \**t-p-h*  
*t̪eta* ‘to stick’ < \**t-p-y*

In +*t̪axta* the original lax \**p* has been made tense, and this has been lexicalized in all inflections of the root, e.g. +*taþəx* ‘he smashes’. In *t̪eta* the conflict has been resolved by making the initial consonant lax. The emphasis has also been removed from this root (§ 1.5.1). Similar processes may have given rise to the verb +*ctarta* ‘to knot’, which is derived historically from \**q-t-r*. An original /k/ (< \**q*) evidently shifted to the corresponding lax consonant /c/ when the original \**t* shifted to lax /t/. It is not clear, however, why the \**t* underwent this initial shift.

Where conflicts in voicing could occur in clusters formed in the inflection of verbal roots, the difference is levelled by regressive assimilation (§ 1.6.):

*bášəl* ‘it cooks’   *bšállə* ['pʃillɪ] ‘it cooked’  
*xázət* ‘you see’   *xzílux* ['yzi:lox] ‘you saw’

Clusters occur in the onset of syllables also in word-internal position in some cases (§ 1.6.), e.g.

+*pur.tka.lə* ‘oranges’ < Pers. porteqāl  
+*xər.tma.nə* ‘chickpeas’

The following nouns have variant forms, one of the alternants having a consonantal cluster:

*ɟdiša* ~ *ɟəddiša* ‘pile of leaves’  
*ɟdala* ~ *ɟəddala* ‘thread’

In these forms the cluster appears to be original (cf. Syr. *gdīšā*, *gdālā*). The variants with the initial *ɟədd-* are likely to have developed by the insertion of an epenthetic vowel breaking the cluster of the palatal and alveolar consonants,

which was phonologized with consequential gemination of the following consonant /d/ to achieve canonical bimoraic syllable structure.

### 1.15.2 Phonotactic Boundaries

We have seen (§1.5.2., §1.6.) that a ‘word’ in an informal sense consists of a number of different phonological domains the boundaries of which do not necessarily coincide. The domain of suprasegmental emphasis, for example, includes following enclitic elements, but the domain of the word-final devoicing rule and the word-stress placement rule recognize boundaries between the main word and clitics, e.g.

${}^+sárbaz=ilə$  ['s<sup>s</sup>ɑ<sup>r</sup>b<sup>s</sup>ɑ<sup>s</sup>ə'ləs'] ‘he is a soldier’

In this example the final consonant of  ${}^+sárbaz$  has been devoiced, although followed by an enclitic and the stress placement also ignores the enclitic.

Differences in phonotactic boundaries within similar looking constructions can result in different phonological form. Consider the pairs

$\mathring{t}\text{-}ilə$  ‘which is’   *do*   ‘of that’

In both forms the initial consonant is historically the voiced annexation particle  $*d$ . In the first form  $\mathring{t}\text{-}ilə$  the particle has become an unvoiced tense /t̪/. This is the result of a coalescence of  $*d$  with a following laryngal:  $d + 'ilə > \mathring{t}\text{-}ilə$ . The copula has this initial laryngal when standing independently:  $'ilə$  ‘he is’. The fact that the particle in *do* has not been devoiced shows that it was combined with the following demonstrative without an intervening laryngal:  $d + o$ , despite the fact that the demonstrative has an initial laryngal when it does not have the annexation particle:  $o$  ‘that’. This can be explained by the hypothesis that the initial laryngal is not part of the word at some underlying level of the derivation but is added by a phonotactic rule that requires word-initial vowels to be preceded by a minimum laryngal onset, thus:

#Øilə > #'ilə

According to this rule, therefore, there is no word boundary after the initial particle in *do* but rather the form is treated like a single word and the *d* is an inflectional element of the word. The form  $\mathring{t}\text{-}ilə$ , however, is treated by this rule as two words combined in a single stress group, since the word-initial laryngal placement rule operated on the  $'ilə$  before it was combined with the particle *d*. The lack of phonotactic boundary in *do* is reflected in the transcription by

the lack of a hyphen. We can summarize this as follows using the symbol # to indicate the phonotactic boundary:

$d + \# \emptyset ilə > t\text{-}ilə \quad \#d + o > do$

The phonetic rule that adds a laryngal /’/ to the front of words that have a zero onset vowel does not apply to a word that is attached to a preceding word as an enclitic, e.g.

- $^{+}úllul\text{-}ilə$  ‘He is above’  
 $^{+}sárbaz\text{-}ilə$  ‘He is a soldier’

Such enclitics are included within the domain of emphasis of the word to which they are attached (§ 1.5.2.) but they are not integrated into the word with regard to the features of stress placement and word-final devoicing (§ 1.6.). The syllable structure of the host word, furthermore, ignores their presence. This is seen by the fact that in a form such as  $^{+}úllul\text{-}ilə$ , the final syllable of *úllul* continues to be treated as a closed syllable with a VC rhyme after the addition of the enclitic beginning with a vowel ( $^{+}ul.lul.i.lə$ ). The syllable structure is not adjusted by lengthening the vowel or geminating the final consonant of this syllable.

Another issue of phonotactics is illustrated by forms such as the following:

- $b\text{-}^{+}xálta$  ‘with eating’  
 $^{+}bixálələ$  ‘He is eating’

The first form consists of a preposition *b* and a verbal noun. Such a phrase is realized phonetically in a variety of ways: [b<sup>c</sup>x<sup>c</sup>a<sup>c</sup>l<sup>c</sup>t<sup>h</sup>a<sup>c</sup>], [b<sup>c</sup>ə<sup>c</sup>xx<sup>c</sup>a<sup>c</sup>l<sup>c</sup>t<sup>h</sup>a<sup>c</sup>], [bi:x<sup>c</sup>a<sup>c</sup>l<sup>c</sup>t<sup>h</sup>a<sup>c</sup>]. When the *b* clusters with the initial consonant of *+xalta* or is syllabified with the initial consonant through the gemination of this consonant, the *b* is emphatic. When the *b* is more independent from the following word in the realization [bi:x<sup>c</sup>a<sup>c</sup>l<sup>c</sup>t<sup>h</sup>a<sup>c</sup>], it tends not to be pronounced emphatic. The long [i:] in this form is a lengthened epenthetic. Due to these various realizations, the transcription of the preposition in such contexts before nouns has been normalized to *b-* in all contexts. In the similar looking form  $^{+}bixálələ$ , on the other hand, which developed historically from the combination of the preposition *b* with the infinitive, the initial /b/ is always followed by long /i/. The explanation is that the verbal root in question at some stage of historical development was treated as initial /y/: *^y-x-l* and the infinitive was originally *\*+yxala*. The /y/ of the verb was elided in word initial position before a consonant, e.g. *+xala* ‘to eat’, *+xalta* ‘eating, food’, *+xállə* ‘he ate’, and the root came to

be interpreted as  ${}^+\emptyset\text{-}x\text{-}l$ . The /y/ was preserved, however, when not in word-initial position, e.g. in the noun  ${}^+mixúltə$  ‘food’. This would apply to  ${}^+bixálələ$ , in that the word boundary is interpreted as falling before the /b/ whereas the word-boundary of b- ${}^+xalta$  is after the /b/, since the /b/ in  ${}^+bixálələ$  is now analysed as a component of its morphological pattern rather than as an affix, just as is the case with the /m/ in the noun  ${}^+mixulta$ :

*b #  ${}^+xalta$  #  ${}^+b$  ixalələ*

The domain of emphasis regularly includes the *b* in the verbal form  ${}^+bixalələ$ , as is the case with  ${}^+mixulta$ .

One word may be annexed to the following word by the annexation clitic *-ət*, e.g.

*'idət málca* ‘the hand (*'ida*) of the king (*malca*)’

On some occasions the annexation particle is omitted and the first word is combined more tightly with the second:

*'id-málca*

In this phrase the vowel of the form *'id* remains long, as if it were still in an open syllable. It is transcribed by a macron, since vowels in closed syllables would normally be expected to be short. The syllable structure of *'idət* and *'id* would be, therefore:

<i>'i.dət</i>	<i>'i.d</i>
<i>CVV.CVC</i>	<i>CVV.C</i>

The final consonant is extrasyllabic, or a ‘semi-syllable’, to use Kiparsky’s (2003) terminology. One can compare this to the syllabification of forms such as  ${}^+tāl$  (CVV.C), which is a contraction of  ${}^+təvəl$  (CVV.CVC). One may say that the underlying form of *'id* is *'idət*. When after the loss of the annexation particle the first word ends in a voiced stop, it does not devoice, e.g.

*'id-málca* [i:d'malca] ‘the hand of the king’ < *'idət málca*

One can interpret this as reflecting that the rule of word-final devoicing operates on the underlying form *'idət*, in which the /d/ is not word-final, and so does not devoice.

## 1.16 Elision of Consonants and Vowels

### 1.16.1 *Elision of Consonants*

Consonants are elided in a variety of contexts with subsequent contraction of a syllables and loss of vowels. In general this takes place after a stressed syllable.

When the laryngals /'/, /h/ occur between two identical vowels, these consonants may be elided and the vowels coalesce. This is attested in the following forms:

<sup>+</sup> sá'at ~ <sup>+</sup> sát	'hour'
'álaħa ~ 'ála	'God'
'áħa ~ á	'this'
<i>f</i> náħa ~ <i>f</i> ná	'crime, fault'

The glide /y/ is elided word-internally in a number of cases:

#### Nouns

<sup>+</sup> šräya ~ <sup>+</sup> šrá	'lamp'
<sup>+</sup> kráya ~ <sup>+</sup> krá	'turtle; tortoise'

The noun <sup>+</sup>šräya is derived historically from \*šra'a (< \*šra'a < \*šrāgā). In the word <sup>+</sup>kráya the /y/ appears to be a secondary addition; cf. Syriac *raqqā*. Word-final-aya elsewhere in nouns and adjectives does not generally contract in the Urmī region, but in the Caucasus speakers sometimes contract the ending -aya (and its plural -ayə) in gentilic forms, e.g.

<sup>+</sup> urusnà (B 16:3)	'Russians'	< <sup>+</sup> urusnáyə
'arəmná (B 16:12)	'Armenian'	< 'arəmnáyə

#### Verbs

Progressive bases of final /y/ roots:

<i>lélə bədrá</i> ~ <i>lélə bədráya</i>	'he is not pouring'
<i>lélə bitá</i> ~ <i>lélə bitáya</i>	'he is not coming'

Marginally in final /y/ infinitives:

- va ~ vaya* ‘to be’  
*+jra ~ +jraya* ‘to flow’

In middle weak verbs:

- kām ~ k̥ayəm* ‘he rises’  
*+šalta ~ +šyalta* ‘coughing’

The consonant /n/ is optionally elided between vowels in some common grammatical words and inflections of the common verb *tanə* II ‘to say’, e.g.

- may ~ máni* ‘who?’  
*tay ~ tání* ‘say!’  
*táyan ~ táyan* ‘I (f.) say.’  
*day ~ dáni* in expressions such as *babi dani ~ babi day*  
‘my father and his family members’ (§ 11.1.11.)

The initial /n/ of the verb *napəl* I ‘to fall’ is optionally elided in inflections in which it is in contact with the following consonants, e.g.

- npálə ~ pálla* ‘He fell’  
*npíla ~ píla* ‘fallen’

The consonant /t/ is optionally elided in some grammatical morphemes. These include the word-final sequence *atə* in plural endings, which contracts to *ay* (§ 5.13.4.). Such a contraction is particularly common in the Caucasus, e.g.

- 'akláy ~ 'aklátə* ‘legs’  
*susaváy ~ susavátə* ‘horses’

The elision of /t/ in these plural endings takes place in principle only when the /a/ is stressed and the /t/ is followed by /ə/ or the high vowel of the 1s. suffix -i. If the plural endings have suffixes with other vowel qualities or a stressed suffix, the /t/ remains in place in all varieties of the dialect, e.g.

- 'aklátu* ‘his legs’  
*'aklaté* ‘their legs’

The elision of /t/ is found also in the prepositional phrase *kat* with pronominal 1s and 2s suffixes (§ 8.4.18.), e.g.

- kay ~ káti* ‘to me’  
*kax ~ kátx, kátax* ‘to you (ms., fs.)’

The word-final annexation element *-ət* is optionally elided in a number of cases (§ 1.15.2., § 5.14.), e.g.

*brūn malca ~ brunət malca* ‘the son of the king’

The consonant /d/ is optionally elided in the grammatical word *mudi*:

*muy ~ müdi* ‘what?’

The consonant /r/ is omitted in the hypocoristic forms of the kinship terms *bruna* ‘son’ and *brata* ‘daughter’. This involves the simplification of a consonantal cluster in a pre-stress syllable, e.g.

- búni* ‘my son’ < *brúni*  
*báti* ‘my daughter’ < *bráti*

The initial syllable of the form *'axuni* ‘my brother’ is elided in the vocative:

*xúni* ‘my brother!’

### 1.16.2 Elision of Final Vowels

The word-final central vowel /ə/ is elided in some circumstances. This is found mainly in the 3ms copula of compound verbal forms (§ 4.8.), in which the preceding consonant is the sonorant /l/, e.g.

- +tlibəl* ‘He has requested’ (A 2:24) < *+tlibəla*  
*dmíxəl* ‘He has gone to sleep’ (A 36:12) < *dmíxəla*

In the Caucasus this elision is more widespread and is found also in other grammatical forms, including nouns and verbs, predominantly where the preceding consonant is a sonorant, e.g.

<i>baxčanān̩l</i>	‘gardens’ (B 17:37)	<i>baxčanána</i>
<i>+hayvān̩l</i>	‘animals’ (B 17:54)	<i>+hayvána</i>
<i>+tarrán̩l</i>	‘doors’ (A 42:9)	<i>+tarránə</i>
<i>kuxān̩l</i>	‘piles’ (A 48:4)	<i>kuxána</i>
<i>yumán̩l</i>	‘days’ (A 45:15)	<i>yumána</i>

+šulán	'things' (A 47:20)	+šulána
+alulán	'streets' (B 17:29)	+alulána
bnún	'sons' (A 50:3)	bnúna
kál	'sounds' (A 47:11)	kálə
yálsúr	'children' (A 49:1)	yála súra
+čál	'hole' (A 47:18)	+čálə
+janjúr	'he is suffering' (B 16:13)	janjúra
nás	'people' (A 47:14)	násə
+más	'beans' (B 17:13)	másə
áv	'may it be' (A 48:22)	áva
+otág	'rooms' (A 42:10)	+otágə

A word-final *-i* is elided in a few cases in the Caucasus. This has been identified in the following forms:

mán	'who' (A 42:2)	máni
áxún!	'brother!' (A 45:5)	áxuni!

In the Caucasus word-final *-a* is elided in the following form:

yá álah! 'oh God!' (A 45:9) ya álaha

### 1.16.3 Elision across Word Boundaries

The laryngal /'|/ at the beginning of a word is often elided when a vowelless particle is prefixed to it, e.g.

m-íca (< m-'ica)	from where?
m-áxxa (< *m-'axxa)	'from here'

The particles *b-* and *d-* shift to the tense voiceless stops *þ-* and *t̪-* respectively, e.g.

þ-ida (< *b-’ida)	'by hand'
t̪-ilə (< *d-’ilə)	'that he is'

It may seem that these are clusters of a stop and a laryngal /p'/, /t'/, which would be phonetically similar to the tense stops /þ/ and /t̪/. There are grounds, however, for favouring interpreting them as tense stops. Firstly /'|/ is elided before other consonants. Secondly a consonant can cluster with the tense /t̪/ that arises when followed by /'|/, e.g. in the future prefix:

*þt-azən ~ t-azən < bəd-’azən* ‘I shall go’

The sequence /bt’/ would not be permitted in the onset of the syllable without an epenthetic /bat’/. This demonstrates that /t/ in such contexts is analysed as a unitary segment. The tense stops /þ/ and /t/ no doubt arose before /’/ due to their phonetic similarity with /p’/ and /t’/ and, crucially, because these tense segments existed in the consonant system of the C. Urmi dialect. In NENA dialects that do not have the tense stops in their consonant inventory, the /’/ is elided and the consonant unchanged, e.g. Qaraqosh *b-iða* ‘by hand’, *d-aðə* ‘he will come’. In fact, the voiced *b*- is occasionally encountered in the recordings of some C. Urmi speakers, e.g. *b-ùrxa* ‘on the road’ (A 47:7).

Before demonstrative pronouns and the interrogative particles *’əm* ‘which’ and *’iman* ‘when’, however, the *d*- remains voiced in C. Urmi and should be regarded as an inflectional element added to an underlying stem without an initial laryngal rather than a particle prefixed to words with an initial laryngal (§ 1.15.2.). This is seen in these examples in which the oblique forms with *d* are the complement of the preposition *hal* ‘until’:

- |                     |                      |
|---------------------|----------------------|
| <i>hal do-beta</i>  | ‘until that house’   |
| <i>hal dəm-beta</i> | ‘until which house?’ |
| <i>hal diman?</i>   | ‘until when?’        |

When a *d*- particle is added to a verb form beginning with a laryngal it shifts to tense /t’/ but when the *c*- preverbal particle is attached to such forms it does not shift to the corresponding tense /ç/:

- |                                |                     |
|--------------------------------|---------------------|
| <i>t-azən (&lt; bəd-’azən)</i> | ‘I shall go’        |
| <i>c-azən</i>                  | ‘I go (habitually)’ |

The explanation is that the particle *c*- is a contraction of the fuller original form *ci*- . The latter is used in slow careful speech:

*ci-’azən > c-azən*

When a *b* particle clusters with the laryngal /h/, the laryngal is either elided or coalesces with the *b* to form an aspirated /p/, e.g.

- |  |
|--|
| <i>b-hōn-nàšəl</i> [bo'n'na:ʃr:] ‘for the mind of people’ (A5:4)                                       |
| <i>p-<sup>+</sup>hayyərràxlux<sup>l</sup></i> [p <sup>h</sup> aŋjə'raxloŋ] ‘we shall help you’ (A1:23) |

The preposition *b-* often has the realization [br] and the following consonant is geminated (§ 1.15.2.), e.g.

*b-síla* [bis'si:la] ‘with sand’

Since it shifts to the tense stop /p̪/ before a laryngal (e.g. *p̪-ida* ‘by hand’), we should conclude that the /i/ in the alternant *bi-* is a lengthened epenthetic and not an original vowel. The /i/ in *ci-*, by contrast, is an original vowel. One may posit that it exists underlyingly in the derivation of forms with *c-* but not in forms with *p̪-*, e.g.

*c-azən* < /ci-azən/  
*p̪-ida* < /b-ida/

Further evidence for this underlying /i/ in *c-*, other than the lenited form *ci-*, is the negated form *le-azən* ‘I do not go’, which must be derived from \**la-i-azən*.

In general, there are grounds for positing that initial /ʃ/ does not exist at the beginning of words at an underlying level, but rather is the post-lexical default consonant, which is inserted to provide an onset for an otherwise vowel-initial syllable.<sup>15</sup> We have seen evidence for this in the case of oblique forms of pronouns such as *do*, in which the *d* has been combined with the *o* at an underlying level where the *o* has no initial /ʃ/, as it does when it stands independently. The /ʃ/ is added at a word boundary (#), viz. #’*o*. Another case is the enclitic copula. When standing independently the copula has an initial /ʃ/, e.g. #’*ilə* ‘he is’, #’*ivət* ‘you are’. As we have seen, when this is combined with the annexation particle, the resulting shift of *d* > *t* indicates that it has been added to the independent form with the initial laryngal, thus:

*d-#’ilə* > *t-’ilə* ‘that he is’

When, however, the copula is an enclitic, no such tense consonants develop, which indicates that the copula has been combined without an initial laryngal, e.g.

+*ràhat=’ilə* ‘He is comfortable’ (A 1:9)

---

<sup>15</sup> The same applies to the laryngal /ʃ/ in Arabic; cf. Watson (2007, para. 4.4.1.2., 9.1.2.3.).

There is evidence from the root structure of verbs, moreover, that an initial /’/ before vowels in verbal forms such as *+axəl* ‘he eats’, *’arək* ‘he runs’ is not part of the root, but rather is added by a separate phonotactic rule (§ 1.15.2.).

A word-initial laryngal /’/ is sometimes elided when the word is closely connected prosodically with a preceding word that ends in a vowel. When the laryngal occurs between two identical vowels, these vowels coalesce with consequential resyllabification, e.g.

*’äklu mattila* *+al-’jarəl* [mat'tʰi:lal'dʒa:ri:] ‘he puts his foot on the roof’ (A 1:26)  
*lä-’avilux* [la:vi:lux] *+šùla*.<sup>1</sup> ‘Do not have concern (= Do not worry)’ (A 3:57)

When the two vowels adjacent to the laryngal are different, either a diphthong is produced or one vowel replaces the other, e.g.

*ju-’idat* [dʒujdr] *dìyyux*.<sup>1</sup> ‘in your hands’ (A 3:15)  
*+narahát lä-’oyat* [la:ja:tʰ] ‘do not be uncomfortable’ (A 1:14)  
*le-’odiləl* [le:dilɪ] ‘They do not do it’ (A 5:1)  
*lè-’orən* [le:rɔ:n̩] ‘I shall not enter’ (A 5:12)  
*lè-’avədləl* [le:vədlɪ] ‘he does not do’ (A 5:2)  
*hällə* *+al-’idi* [hällɪ l-’i:diç] ‘Give him into my hand’ (A 3:87)

### 1.17 Strong and Weak Forms

A number of frequently occurring particles, words and phrases have variant pronunciations that exhibit features of lenition such as loss of friction of fricatives, centralization of vowels, shortening of vowels, loss of emphasis and elision of segments. These are not represented in the normalized transcription. Some examples are as follows:

#### Normalized transcription    Phonetic form

		Strong	Weak
<i>+áv</i>	‘he’	[’?a:’v̥]	[’?aw]
<i>+’ávva</i>	‘this’	[’?a:’v̥va:’]	[’?a:wa]
<i>’an-</i>	‘those’	[’?an]	[’?ən]
<i>+al-</i>	‘upon’	[’?a:’l̥]	[’?al], [’əl]
<i>díyyi</i>	‘of me’	[’di:jɪ:’]	[’di:]
<i>lén</i>	neg. copula (ic)	[’le:n]	[’lən], [’lan]
<i>ci-</i>	habitual part.	[cʰi:]	[cʰə], [cʰ]
<i>’ána-da</i>	‘I also’	[’?a:nada]	[’?anda]

We should mention here also the sequence transcribed as *-uvv-*, which occurs in words such as *+karuvva* 'rooster', *+baṭuvva* 'flake of baked bread', *+čuvva* 'smooth', etc. The strong realization of this is [vvv], but it is often weakened to [u:w], e.g. *+karuvva* [ka<sup>ə</sup>·r<sup>ə</sup>vv<sup>ə</sup>a<sup>ə</sup>] ~ [ka<sup>ə</sup>·r<sup>ə</sup>u:<sup>ə</sup>w<sup>ə</sup>a<sup>ə</sup>].

## 1.18 Word Stress

### 1.18.1 Preliminary Remarks

The position of word stress is largely predictable. Since, however, there is some variation, the place of stress is marked in the transcription of the texts on all words that bear it. The transcription of the recorded texts also marks the boundaries of intonation groups by a short vertical sign |. Intonation contours are not represented, but a distinction is made between the nuclear stress of the intonation group and non-nuclear stress. The nuclear stress, which is the most prominent stress of the intonation group, is marked by a grave accent (᷑) and the non-nuclear stress is marked by an acute accent (᷒), e.g.

- (1) *'a-Nàtan| ᷑átval xa-᷑axiúna| +Axìkar| xùbba maxzíva ḁa-dá ḁaxiúna|* 'This Natan had a brother. Axiqar showed love to this brother' (A 3:17)

In principle, there is only one nuclear stress in an intonation group. Occasionally, however, two intonation groups are linked together without any perceptible boundary by a process of sandhi and two nuclear stresses occur in what appears to be a single intonation group (cf. Cruttenden 1986: 43), e.g.

- (2) *+tàjər mórre ḁa-cačàla|* 'The merchant said to the bald man.' (A 1:3)  
 (3) *+ávəyála +bəddàyələ ᷑ína áyya bráta ḁátə +byàyələ|* 'The lad knows that the girl loves him.' (A 34:5)

In words that consist of more than one syllable, the general position for the placement of stress is on the penultimate syllable. Deviations from this canonical position occur for a number of reasons. The various grammatical categories of words exhibit some differences in stress patterns, so they will be dealt with separately in what follows.

### 1.18.2 Pronouns

Independent personal and demonstrative pronouns generally take the stress on the penultimate syllable, e.g.

- 'ána 'T  
'áha 'this'

Some forms of the far deixis demonstratives take the stress on the final syllable. In such forms an original final syllable has been elided and what was originally the stressed penultimate became the final syllable. The form with penultimate stress exists in the dialect as a less common variant:

+*avvó* 'that over there' < +*avvóha*

In the reciprocal pronoun +*uydalə* and the interrogative pronoun *əmn-* with pronominal suffixes the stress is placed on the initial syllable:

- +*úydalə* 'each other'  
*əmnoxun* 'which of you?'  
*əmne* 'which'

### 1.18.3 Nouns and Adjectives

In principle the stress falls on the penultimate syllable in both singular and plural forms, e.g.

- béta* 'house'  
+*xvára* 'white'  
*basíma* 'pleasant'  
+*tárra* 'door'  
+*tarrána* 'doors'

In a few forms that contain an internal epenthetic, the epenthetic is ignored by the stress (§ 1.14.), e.g.

*mădənxa* 'east'

When a final -ə is elided from the end of plural forms, the stress falls on the final syllable, e.g.

*'axunváy* 'brothers' < \**axunváyə* < \**axunvátə*

Forms with pronominal suffixes have penultimate stress, with the exception of the 3pl. suffix, which takes the stress on the final syllable, e.g.

<i>béti</i>	'my house'
<i>betóxun</i>	'your (pl.) house'
<i>beté</i>	'their house'

The word final stress in the forms with the 3pl. suffix can be explained by the fact that this suffix has developed historically from a form *\*-áyhən*, with stress on the penultimate.

Many loanwords that are stressed on the final syllable in the source language and have not been adapted to Aramaic morphology by attaching an inflectional ending are nevertheless usually adapted to the canonical stress pattern by retracting the stress to the penultimate syllable, e.g.

<i>+sárbaž</i>	'soldier'	< Pers. <i>sarbáz</i>
<i>sárhāŋ</i>	'colonel'	< Pers. <i>sarháng</i>
<i>cótac</i>	'beating'	< Pers. <i>koták</i>
<i>+čóban</i>	'shepherd'	< Azer. <i>çobán</i> , Pers. <i>čopán</i>
<i>+čáydan</i>	'tea kettle'	< Azer. <i>çaydán</i>
<i>+karáváš</i>	'handmaid'	< Azer. <i>qarabás</i>
<i>+astícan</i>	'cup'	< Pers. <i>istakán</i> , Azer. <i>stékán</i>

In trisyllabic nouns the stress is shifted to the antepenultimate syllable when it is functioning as a vocative, e.g.

- (1) *'àxuni!* 'My brother!' (A 39:15)
- (2) *+màmuni!* 'My uncle!' (A 42:7)
- (3) *+Àxiqar!* 'Axiqar!' (A 3:14)
- (4) *yá 'àlaha!* 'Oh God!' (A 3:46)

In some cases this can lead to contraction, as in the two words for 'uncle':

<i>+mámu</i>	'(paternal) uncle'	< <i>+mámuni</i>
<i>+xálu</i>	'(maternal) uncle'	< <i>+xáluvvi</i>

In the Caucasus the final vowel of other words is sometimes elided in vocative forms:

- (5) *'àxún!* 'brother!' (A 45:5) < *'áxuni!*
- (6) *yá 'àlah!* 'oh God!' (A 45:9) < *ya álaha*

### 1.18.4 Verbs

Different patterns of stress are exhibited by (i) verbal forms derived from present and past templates, (ii) imperative forms and (iii) compound verbal forms containing a copula enclitic.

#### 1.18.4.1 Verbal Forms Derived from Present and Past Templates

These templates are inflected with various different suffixes, which include S-suffixes, L-suffixes and the past converted suffix *va*. The stress placement takes account of the S-suffixes and the stress regularly falls on the penultimate syllable, e.g.

S-suffixes

<i>pátəx</i>	'he opens'
<i>pátxa</i>	'she opens'
<i>pátxən</i>	'I open'
<i>patxítun</i>	'you (pl.) open'

There is a constraint, however, that prevents the stress from moving onto an L-suffix or a *va* suffix, e.g.

<i>ptóx-lə</i>	'he opened'
<i>ptóx-loxun</i>	'you (pl.) opened'
<i>patóx-va</i>	'he used to open'
<i>ptóx-va-lə</i>	'he had opened'
<i>ptixá-va-lə</i>	'he had opened it (f.)'
<i>patóx-va-lə</i>	'he used to open it (m.)'

The 2pl. forms also deviate from the canonical stress position in that the stress is constrained to remain on the penultimate syllable of the subject inflection suffix *-itun* even when additional suffixes are added, e.g.

<i>patxítunva</i>	'you (pl.) used to open'
<i>patxitunlə</i>	'you (pl.) open it (m.)'
<i>patxitunvalə</i>	'you (pl.) used to open it (m.)'

These two constraints can be collapsed into one, namely that the stress has to remain on a syllable that contains a radical of the verbal root.

In the Caucasus present stems occasionally retain the stress on the initial syllable when suffixes are added. The attested examples are found at the end of intonation groups, e.g.

- (1) *ci-mattívalə ju-míyya mèlxal yánət lá xàrəvva.* (xàrəv + va, canonical: xàrəvva) ‘They used to put in salt water so that it would not rot.’ (B 17:48)
- (2) *xá mátra ... mən-mátra zòda c-áviva.* (c-ávə + va, canonical: c-avíva) ‘It was a metre or more than a metre high.’ (B 17:50)
- (3) *’ána mú-tahar xàmənnoxun?* (xàmən + loxun, canonical: xamənnoxun) ‘How can I provide for you?’ (A 43:18)

#### 1.18.4.2 Imperative Forms

In imperative forms of verbs the stress is generally placed on the initial syllable of the form irrespective of how many syllables back it is from the end of the word, e.g.

<i>ptúx</i>	‘open!’ (sing.)
<i>ptúxun</i>	‘open!’ (pl.)
<i>ptúxunlə</i>	‘open (pl.) it (m.)!’
<i>+šádər</i>	‘send! (sing.)’
<i>+šádərrə</i>	‘send (sing.) it (m.)!’
<i>mápləxxun</i>	‘use! (pl.)’
<i>mápləxxunlə</i>	‘use (pl.) it (m.)!’

This principle of stress placement on imperative forms in some cases distinguishes them from an otherwise homophonous form derived from the present template, e.g.

<i>+šádərrə</i>	‘send it!’ (imperative)
<i>+šadárrə</i>	‘he sends it’ (present template)

For compound verbal forms containing a copula enclitic see § 1.18.17.

#### 1.18.5 Numerals

When cardinal numerals occur independently they regularly have penultimate stress, e.g.

<i>xámša</i>	‘five’
<i>’arbásar</i>	‘fourteen’
<i>xámši</i>	‘fifty’
<i>’ámma</i>	‘a hundred’
<i>’arbómma</i>	‘four hundred’

When they qualify a following noun, however, the stress is generally placed on the final syllable, e.g.

<i>'aští baxtātə</i>	'sixty wives' (A 3:2)
<i>+ar̪à cilóyəl</i>	'four kilos' (A 11:1)
<i>šavvà šánnəl</i>	'seven years' (A 38:13)
<i>+əsrá yumána</i>	'ten days' (A 2:18)
<i>ar̪í yumánəl</i>	'forty days' (A 3:53)
<i>təryəssər̪ 'úrzəl</i>	'twelve men' (A 2:5)
<i>'əmmə +dinárə</i>	'a hundred dinars' (A 31:2)
<i>xamšammə +dinárə</i>	'five hundred dinars' (A 7:12)
<i>'alpə +dinárə</i>	'a thousand dinars' (A 14:1)

In compound numerals the stress is placed in final position on the last element of the compound, which is adjacent to the noun, e.g.

*'árpi xamšà dákikəl* 'forty-five minutes' (B 12:5)

If two numerals are combined before a noun, two patterns of stress are attested. Either both numerals have final stress or only the numeral adjacent to the noun has final stress, e.g.

<i>+ar̪á xamšá dəccanána</i>	'four or five shops' (A 34:6)
<i>+árpa xamšá məndyána</i>	'four or five things' (A 3:39)

The motivation for this shift from the canonical stress position appears to be to give prominence to the numeral.

The ordinal *kamaya* 'first' and its polar opposite *+xaraya* 'last' are generally stressed on the initial syllable:

<i>náša kámaya</i>	'first man'
<i>báxta kámēta</i>	'first woman'

<i>náša +xáraya</i>	'last man'
<i>báxta +xáreta</i>	'last woman'

The same applies to collective numeral expressions such as the following:

<i>túrvəntən</i>	'the two of us'
<i>+túlvəntən</i>	'the three of us'
<i>+árphəntən</i>	'the four of us'

### 1.18.6 *Adverbial Particles*

Bisyllabic adverbial particles are stressed on the penultimate syllable, e.g.

<i>láxxa</i>	'here'
<i>+táma</i>	'there'
<i>+úllul</i>	'above'
<i>váddar</i>	'outside'

When, however, a final vowel has been elided, they are stressed on the final syllable,

<i>javáy</i>	'inside'	< * <i>javáyə</i>
<i>kamáy</i>	'at first'	< * <i>kamáyə</i>
<i>+baráy</i>	'behind'	< * <i>+baráyə</i>

Trisyllabic adverbials sometimes also take canonical penultimate stress, e.g.

<i>'adíyya</i>	'now'
----------------	-------

The stress, however, is retracted to the antepenultimate syllable in some particles, e.g.

<i>kédamta</i>	'in the morning'
<i>móriša</i>	'in the morning'
<i>+bérašə</i>	'in the evening'
<i>láxxanə</i>	'around here, nearby'
<i>+támmanə</i>	'around there'

This applies also to adverbials consisting of the combination of two elements in a single stress group, e.g.

<i>yumá-xina</i>	'the day after tomorrow'
<i>'á-šita</i>	'this year'
<i>bí-nisana</i>	'Spring'

Some place names also exhibit retraction of stress, probably due to the fact that they are typically used with adverbial function, e.g.

<i>+Múšava</i>	'Mušava'
<i>Ármanəs-<sup>+</sup>tan</i>	'Armenia'
<i>Júrjəs-<sup>+</sup>tan</i>	'Georgia'

### 1.18.7 Words with Enclitics

When enclitic grammatical particles are attached to the end of a word, they are ignored by the stress placement rule and the stress remains on the penultimate syllable of the base word. This applies to (i) the copula and (ii) the inclusive particles *da* and *zə*, e.g.

<i>bétan</i>	'our house'	<i>bétan-ilə</i>	'it is our house'
		<i>bétan=da</i>	'also our house'

These enclitics may be combined together, the copula being placed nearest the base word and the inclusive particle after the copula. The stress remains on the penultimate syllable of the base word, e.g.

<i>bétan-ilə-da</i>	'it is also our house'
---------------------	------------------------

Examples of combined enclitics from the text corpus include:

- (1) *çùrəva=da*.<sup>1</sup> (= *cura + iva + da*) 'He was also blind.' (A 39:32)
- (2) *'axúna +júrələ=zə kató*.<sup>1</sup> (= *'cura + ilə + zə*) 'He is, indeed, the eldest brother in relation to them.' (A 37:15)

In compound verbal forms, which are a combination of a resultative participle or infinitive base with an auxiliary copula element, the stress placement only takes account of the base and falls on the penultimate syllable of the base irrespective of any additional elements, e.g.

<i>ptíxələ</i>	'he has opened'	< <i>ptíxa+ ilə</i>
<i>ptóxtələ</i>	'she has opened'	< <i>ptáxta+ ila</i>
<i>ptíxəva</i>	'he had opened'	< <i>ptíxa+ iva</i>
<i>+šúdrələ</i>	'he has sent'	< <i>+šúdra + ilə</i>
<i>+šudárta</i>	'she has sent'	< <i>+šudárta + ila</i>
<i>xázyuxlə</i>	'he has seen you'	< <i>xázyux + ilə</i>
<i>bəptáxələ</i>	'he is opening'	< <i>bəptáxa + ilə</i>
<i>+šadúrlə</i>	'he is sending'	< <i>+šadúrə + ilə</i>
<i>+šadúruxlə</i>	'he is sending you'	< <i>+šadúrux + ilə</i>

### 1.18.8 Discourse Motivated Stress Shifts

Stress is occasionally moved from its normal position to perform some kind of discourse function.

On some occasions the stress is shifted to the end of the word in order to perform the function of binding the clause closely with what follows. Many of the attested examples of this phenomenon are in the protasis of a conditional or temporal construction, or clauses with a similar function, e.g.

- (1) *cút +šrá tapà| 'at-jarìma.* | 'Whoever lights a lantern (= if anybody lights a lantern), there is a fine.' (A 2:2)
- (2) *'ájar 'aláha lá +rxəmlà,| mújári òdax 'áxnan?* | 'If God is not merciful, what should we do?' (A 35:2)
- (3) *savúni-da é-+dān 'azálva +árra xapərvälà,| nùynə ci-+pal̄t́va m-jàvo.* | 'When my grandfather went to dig the field, fish came out of it.' (A 36:15)
- (4) *bas-'ən-xamšámma 'zštámma cilomətrənà| ba-mújjurra susavátət márat díyyi +támá hehehé hurhəmlun,| susavátət díyyux làxxa| murxəšlun?* | 'But if (the distance) is five hundred or six hundred kilometres, how is it that the horses of my master neighed there and your horses here aborted?' (A 3:82–83)

The shift is also commonly found in questions that lay the ground for what is presented by the speaker in the following discourse, e.g.

- (5) *+xámra mújjurra vaduxvà?* | 'How did we make wine?' (B 17:14)
- (6) *+bəddáyət kəssàttət báxtət +tajòr| mən-+hàji?* | 'Do you know the story of the wife of the merchant with the pilgrim?' (A 1:34)

It is sometimes found in vocative expressions when the speaker wishes to gain the attention of the hearer for what follows:

- (7) *mára bruni| +bəddàyət mu-ítən?* | 'My son, do you know what? Everybody is married.' (A 44:1)

On some occasions it is used to enhance the expression of a wish, e.g.

- (8) *b-+salámat 'atèt.* | 'May you return safely.'

Stress is shifted from its normal position also in some constructions where a word form is repeated, the second occurrence exhibiting a variation in stress position from the first occurrence, e.g.

- (9) *m-púmmət málca! bæctávəl ctáva! ka-+Axíkar! ka-+Àxikar! fur'un! hàmla vádəl +'állan.* ‘He writes a letter to Axiqar “To Axiqar, Pharaoh is making an attack against us.”’ (A 3:24)
- (10) *'á yóm̥mi +xánəm yám̥mi! kám 'átxa vítala?* ‘This mother of mine, the lady my mother, why has she become like this?’ (A 44:5)

The stress is occasionally shifted from its canonical position when two verbal forms are closely linked, either since they are in a close sequential relationship (11) or because they overlap temporally (12)

- (11) *ci-+raxṭàva! ci-maxivalà.* (canonical: *ci-maxivàla*) ‘It ran and they shot it.’ (B 4:4)
- (12) *'ídu barxivalə! ríša basám̥ta b-yavvívàla.* (canonical: *b-yavvívala*) ‘They would wish him a happy Easter and offer him their condolences.’ (B 5:6)

Stress shift is used sometimes to give prominence to items that are put in contrastive opposition to another item, e.g. *janán* (< canonical *jánan*) in (13):

- (13) *'o-várda ju-baxčòxun-lə! +byáyəvax jabàxlə! labláxlə ju-baxč-janàn.* ‘That flower is in your garden. We want to pick it and bring it to our garden.’ (B 8:3)

## 1.19 Stress Groups

### 1.19.1 Preliminary Remarks

Occasionally a short word is combined with another word in a single stress group and only one of the words bears stress. The stress may fall on either the first or second word, depending on the nature of the component words and on their relative informational importance. Such stress groups occasionally consist of more than two words. In most cases each of the component words can bear its own stress and examples of this can be found in other contexts.

When words are combined in such stress groups, they are joined in the transcriptions by a hyphen. Combinations of words in stress groups should be distinguished from the bonding of clitic elements to a word, which is marked by a double hyphen -. The components of stress groups have autonomous domains of emphasis whereas clitics are included in the domain of emphasis of the word with which they are combined (§ 1.5.2.).

Some of the most common types of words that are combined with other words in stress groups are as follows.

### 1.19.2 *Numeral + Counted Nominal*

The stress falls either on the nominal following the numeral or on the numeral. When the numeral is ‘two’ and above it is more frequently placed on the numeral than on the noun. The distribution of the stress in groups containing the numeral ‘one’ (*xa*) depends on various factors such as whether the numeral is functioning as a cardinal or as an indefinite article and what information value is conveyed by the noun. These will be discussed in greater detail in § 9.1. Suffice it to say here that if the numeral functions as a cardinal it tends to take the stress, as is the case with the other cardinals. When numerals contain more than one syllable, the stress is regularly put on the final syllable:

#### 1.19.2.1 Stress on the Nominal

Examples: *xa-bàxta* ‘a woman’ (A 3:10), *xa-čàraz* ‘a wine-press’ (B 12:2), *xa-<sup>+</sup>bázza* ‘a hole’ (A 3:36), *tre-yárxa* ‘two months’ (A 1:3), *’əšta-pàlja* ‘six and a half’ (A 6:6).

#### 1.19.2.2 Stress on the Numeral

Examples: *xá-taxta* *ya-trè-taxta* ‘one plot (of land) or two plots’ (B 12:1), *xá-yuma* ‘one day’ (B 11:5), *trè-yarxa* ‘two months’ (A 1:5), *+tlá-yarxa* ‘three months’ (A 1:25), *+arþá-<sup>+</sup>sa’attə*, *xamzá-<sup>+</sup>sa’attə* ‘four hours, five hours’ (A 22:4), *+šavvá-<sup>+</sup>šənna* ‘seven years’ (A 7:17). This is commonly the case before the count particle *dana* (§ 9.1., § 9.14.): *’əští-danə baxtātə* ‘sixty wives’ (A 3:2), *+arþá-danə apəskúpə* ‘four bishops’ (B 2:15).

#### 1.19.2.3 Stress on both Components

Examples: *tré +parsúpə* ‘two gentlemen’ (B 2:12), *+tlá xabùyšə* ‘three apples’ (A 37:22), *+tlá yumána* ‘three days’ (A 3:94), *+arþá +háčə* ‘four supports’ (B 2:6).

### 1.19.3 *Negator + Verb/Nominal/Adverbial*

In stress groups the default position of the stress is on the negator. It is only rarely placed on the negated item instead of the negator. The distribution of stress in negative constructions is examined in more detail in § 17.7.14.1.

#### 1.19.3.1 Stress on the Negator

*lá-’avət +rába šaxina.* | *lá-’avət +rába +kàyra.* | ‘Do not be very hot. Do not be very cold.’ (A 3:9)

*lá-’azət +bár +šúpра.* | ‘Do not go after beauty.’ (A 3:11)

*’ána là-+msən ’a-+šúla ’odánnə.* | ‘I cannot do this job.’ (A 2:35)

*kát là-+ajjəzva +págru.* | ‘so that his body would not be damaged.’ (A 2:14)

### 1.19.3.2 Stress on the Negated Item

*cōc nàkva la-šòkət.* ‘Do not leave the stock of female kind (alive).’ (A 2:11)

*+bəzdàyəna xóšu la-’atya.* ‘They fear he would not be happy.’ (A 41:17)

*kat-jinávə la-’avívə* ‘so that there would not be thieves’ (B 2:6)

*+hála la-hamzùmə* ‘while not speaking’ (A 6:8)

### 1.19.3.3 Stress on Both Components

*làjorátlə.* ‘Do not marry her.’ (A 3:10)

*+bayyíva +katlıvalə* *’ína ’ána là +ktállyi.* ‘They wanted to kill him, but I did not kill him.’ (A 3:34)

*’ita ka-díyyan là pöšlun xína móñ dán xabúyšə* ‘so none remains for us of those apples’ (A 37:22)

## 1.19.4 *Attributive Demonstrative + Nominal*

These demonstratives are often combined with the nominal in a stress group, especially when they are monosyllabic. The stress is put either on the nominal or on the demonstrative pronoun. The factors that determine the position of the stress are discussed in further detail in § 9.2.

### 1.19.4.1 Stress on the Nominal

Examples: *’a-ctàva* ‘this book’ (A 3:21), *’o-náša* ‘that man’ (A 3:36), *e-mzída* ‘that waterskin’ (A 37:15).

### 1.19.4.2 Stress on the Demonstrative

Examples: *’á-məndi* ‘this thing’ (A 3:54), *’é-+dana* ‘at that time’ (A 3:64), *’á-sapar* ‘this time’ (A 3:89), *har-’ó-baba* ‘the same father’ (A 3:92), *’ó-yuma xína* ‘the next day’ (A 2:27).

### 1.19.4.3 Stress on Both Components

This is found only sporadically when the attributive demonstrative is in its short default form, but is the norm when it is one of the longer morphologically heavier sets: *’ó nišánkət ’ána müttun* ‘the sign that I placed’ (A 2:10), *’áha məndi* ‘this thing’ (A 3:76), *’áha málca* ‘this king’ (A 3:81), *’ánnə míyya* ‘this water’ (A 37:20), *’ánnə jülla* ‘these clothes’ (A 3:86).

## 1.19.5 *Quantifier + Complement*

Stress groups of this type are mainly found with the monosyllabic quantifiers *cul* and *cut* ‘each, every’. The stress is put either on the quantifier or on its complement.

### 1.19.5.1 Stress on the Nominal

Examples: *cul-nàšə* 'every (kind of) people' (A 3:42), *cul-+dánta* 'every time' (A 4:15), *cul-víyya vìyyələ|* 'everything that has been has been' (A 3:54), *cut-macòxlə|* 'whoever finds it' (A 26:1).

### 1.19.5.2 Stress on the Quantifier

Examples: *cúl-məndi* 'everything' (A 3:7), *cúl-yum* 'every day' (A 37:18), *cùt-yum* 'every day' (B 2:19), *cúl-lelə šìma* 'the whole night' (A 1:40), *cúl-našə* 'everybody' (A 1:4), *cúl-məndit +bàyyət* 'everything you want' (A 1:8).

### 1.19.5.3 Stress on Both Components

Examples: *cúl bëta* 'every house' (B 2:11), *cúl yùma* 'every day' (B 2:19), *cùt bëta* 'every house' (B 12:2), *cùt +beràšə* 'every evening' (A 4:12). This is the norm with the bisyllabic quantifier *cullə*, e.g. *cúllə báta* 'all the houses' (B 2:11), *cúllə +tuyràna* 'all the mountains' (B 2:14), *cúllə dûnya* 'the whole world' (A 37:1), *cúllə +págri* 'the whole of my body' (A 2:33).

## 1.19.6 Prepositions and Prepositional Phrases

### 1.19.6.1 Stress on Complement of Preposition

Monosyllabic prepositions are generally combined with the item that follows them in a single stress group and the stress is placed on the second item. Examples: *mən-+àtril* 'from my land' (A 3:40), *'ax-tùyta|* 'like a mulberry' (A 3:12), *kam-málca|* 'before the king' (A 2:20), *+al-bərcàcu|* 'on his knees' (A 3:46), *ju-màta|* 'in the village' (A 2:1), *ka-sebúytux|* 'for your old age' (A 3:6), *+bar-+sèda|* 'after prey' (A 37:14).

### 1.19.6.2 Stress on Preposition and Complement

Examples: *mán +Nuxadnàsər|* 'from Nebuchadnezzar' (A 3:44), *+bár +šùp̄ra|* 'after beauty' (A 3:11), *kám +tàrra|* 'before the (front-)door' (A 3:36).

## 1.19.7 Stress Groups Consisting of more than Two Words

Two monosyllabic words are occasionally combined with a third word in a stress group, e.g.

*mən-xa-bàxta|* 'with a woman' (A 3:10)

*+al-xá-našə* 'for a man' (A 3:14)

*ka-xá-mənne* 'for one of them' (A 3:17)

*'ax-xa-+jòra.|* 'like a husband' (A 3:91)

*xa-tre-+tlá dánə=za* 'one, two or three more' (A 37:3)

## Pronouns

### 2.1 Independent Personal Pronouns

3ms.	<i>+áv, +ávun</i>
3fs.	<i>áy, áyən</i>
3pl.	<i>áni</i>
2s.	<i>át, átən</i>
2pl.	<i>áxtun, áxtóxun, axnóxun</i>
1s.	<i>ána</i>
1pl.	<i>áxnan</i>

The pronouns *+áyən* (3fs) and *átən* (2s) have been formed by the addition of the augment *-ən* to the basic form. The pronoun *+avun* (3ms.) has been formed by the same augment, which has acquired a rounded vowel /u/ on account of the pharyngalization of the word.

The 2pl. form is used as a polite means of addressing a single person, under the influence of Persian 2pl. šomā, which likewise is used as a polite form of addressing a single person. The 2s form is used to address children or as a familiar means of addressing adults. In dialogues in the text corpus singular addressees are almost exclusively addressed by the 2s pronoun.

### 2.2 Demonstrative Pronouns

The demonstrative pronouns can be classified into four series (near deixis, medium deixis, far deixis, default). In each series the pronouns have two different forms, which are called here the nominative and the oblique. The oblique form has an initial *d* element, which is derived historically from the Aramaic genitive particle. In the synchronic state of the dialect, however, it has coalesced with the pronoun (§ 1.15.2.). The oblique form is used when the pronoun is the complement of a noun or a preposition (see § 5.14., § 8.4. for details). Some differences in forms exist, furthermore, between demonstrative pronouns used independently and those that are combined with a noun attributively.

### 2.2.1 *Independent Near Deixis Pronouns*

	Nominative	Oblique
ms.	’áha, ’a-	dáha, da
fs.	’áha, ’a-	dáha, da
pl.	’ánnə	dánnə

The form *’áha* is derived historically from *\*hādā*, with a weakening of the medial *\*d*. This consonant has been preserved as the stop /d/, the normal reflex of historical *\*d*, in the fixed expressions *’ád-lelə* ‘tonight’ and *’údyum/’údyu* (< *\*ad-yum*) ‘today’. The form *’aha* is used also in C. Baz and C. Jilu dialects in eastern Turkey. Forms of the pronoun are found in this region that preserve an alveolar reflex of the original interdental consonant, e.g. C. Sat *da*, C. Bədyəl *’ačča*, both of which are likely to be derived historically from *\*hādā*. In Iraq many dialects, mostly in the north-western region, preserve an alveolar or interdental, e.g. C. Qaraqosh *’ada*, C. Alqosh *’adi*, C. Ankawa *’adi*. In between this western periphery in Iraq and the eastern periphery represented by C. Urmī there are numerous dialects that have an innovative form of the near deixis pronoun that has been formed from the middle and far deixis pronouns, e.g. C. Barwar *’awwa* (< *\*’aw-ha*), C. Haşsan, C. Derabun *’oha* (< *\*’aw-ha*).

Some speakers in Guylasar (Armenia) use the forms *’yyá*, *’yyáha* and *’ayyá* in addition to *’áha* and *’a* for the singular independent near demonstrative, e.g. *’ayyá cílla +bəxláso ju-da-ķupšənta* ‘squeezing all of this in this pot’ (B 15:5). These are sometimes reduced to *ya* in the singular attributive near deixis (§ 2.2.5.). The forms have developed by adding the element *’i-* to the normal demonstrative *’aha/’a*. The form *’ayyá* presumably has arisen by harmonizing the vowels. The element *’i-* is prefixed to near demonstrative forms in other NENA dialects, e.g. J. Barzan, J. Challa *’iya*, J. Arbel, J. Nerwa *’yya*, J. Rustaqqa *’iyaha*, J. Urmī *ya*, C. Sanandaj *’ya*, C. Tisqopa *’iyay*. The particle *’i-* is used as a demonstrative element added to adverbials in some dialects, e.g. C. Qaraqosh (Khan 2002, 82) *’i-’axa* ‘here’, *’i-hadax* ‘like this’.

### 2.2.2 *Independent Medium Deixis Pronouns*

	Nominative	Oblique
ms.	+’ávva	+dávva
fs.	’áyya	dáyya
pl.	’ánnə	dánnə

The forms <sup>+</sup>*avva* and *'ayya* have developed from the augmentation of the default deixis forms with the suffix \*-ha, viz. \**aw-ha* and \**ay-ha* respectively.

### 2.2.3 *Independent Far Deixis Pronouns*

	Nominative	Oblique
ms.	<sup>+</sup> <i>avvó</i> , <sup>+</sup> <i>avvóha</i> , <sup>+</sup> <i>avvóxa</i>	<sup>+</sup> <i>davvó</i> , <sup>+</sup> <i>davvóha</i> , <sup>+</sup> <i>davvóxa</i>
fs.	<i>'ayyé</i> , <i>'ayyéha</i> , <i>'ayyéxa</i>	<i>dayyé</i> , <i>dayyéha</i> , <i>dayyéxa</i>
pl.	<i>'anní</i> , <i>'anné</i> , <i>'anníhi</i>	<i>danní</i> , <i>danné</i> , <i>danníhi</i>

The word-final stress in the forms <sup>+</sup>*avvó*, *'ayyé* and *'anní* can be explained by the assumption that an original final suffix has been elided in these forms, as in the longer forms <sup>+</sup>*avvóha* etc. The /o/ in <sup>+</sup>*avvó* is most likely the result of labialization consequential upon an enhanced degree of pharyngalization. In some other NENA dialects far deixis demonstratives are pronounced with pharyngalization, e.g. J. Amedia *'awáhə* (ms.), *'ayáhə* (fs.), *'anáhə* (pl.).

The forms with the final -ha, -xa (sing.) or -hi (pl.) elements are used only marginally. The /x/ can be regarded as the result of strengthening of an original /h/. This strengthening of /h/ is the norm in the demonstrative system of some NENA dialects, e.g. C. Bødyøl independent far deixis: *'óxa* (ms.), *'éxa* (fs.), *'anyóxa* (pl.).

### 2.2.4 *Independent Default Demonstrative Pronouns*

	Nominative	Oblique
ms.	<sup>+</sup> <i>áv</i> , <sup>+</sup> <i>ávun</i>	<sup>+</sup> <i>dáv</i> , <sup>+</sup> <i>davun</i>
fs.	<i>'áy</i> , <i>'áyən</i>	<i>dáy</i> , <i>dáyən</i>
pl.	<i>'áni</i>	<i>dáni</i>

The independent default demonstrative pronouns serve as third person pronouns in the paradigm of independent personal pronouns.

### 2.2.5 *Attributive Near Deixis Pronouns*

	Nominative	Oblique
ms.	<i>'áha</i> , <i>'a-</i>	<i>dáha</i> , <i>da-</i>
fs.	<i>'áha</i> , <i>'a-</i>	<i>dáha</i> , <i>da-</i>
pl.	<i>'ánnə</i>	<i>dánnə</i>

Examples: *áha náša* ‘this man’, *mán dáha náša* ‘with this man’, *áha báxta* ‘this woman’, *mán dáha báxta* ‘with this woman’, *ánnə nášə* ‘these people’, *mán dánnə nášə* ‘with these people’.

In Guylasar (Armenia) some speakers use the form *ya* for the nominative singular attributive near demonstrative, e.g. *yá málca* ‘this king’ (A 45:1), *yá 'úrxa* ‘this path’ (B 16:8). The oblique form used by this informant was *da*, e.g. *ju-da-[kupšənta]* ‘in this pot’ (B 15:5).

An archaic near deixis demonstrative pronoun with a /d/ element is preserved in some adverbs, e.g. *'ád-lələ* ‘tonight’, *'údyu* ‘today’ (< \**ad-yom*).

### 2.2.6 Attributive Medium Deixis Pronouns

	Nominative	Oblique
ms.	+ <i>ávva</i>	+ <i>dávva</i>
fs.	<i>áyya</i>	<i>dáyya</i>
pl.	<i>ánnə</i>	<i>dánnə</i>

### 2.2.7 Attributive Far Deixis Pronouns

	Nominative	Oblique
ms.	+ <i>avvó</i>	+ <i>davvó</i>
fs.	<i>ayyé</i>	<i>dayyé</i>
pl.	<i>anni</i>	<i>danni</i>

The forms with the final *-ha* (sing.) or *-hi* (pl.) elements are not used when the far deixis pronoun is used attributively.

### 2.2.8 Attributive Default Demonstrative Pronouns

	Nominative	Oblique
ms.	<i>o</i>	<i>do</i>
fs.	<i>e</i>	<i>de</i>
pl.	<i>an</i> (Urmi)	<i>dan</i>
	<i>én</i> (Urmi N, Caucasus)	<i>dén</i>

Two forms of the plural attributive default demonstrative are attested. The form *an* is used throughout the Urmi region. The form *én* (oblique *dén*) is used by some informants originating in villages in the northern Urmi plain and regularly by speakers from the Caucasus. In the Caucasus the form *eni* is marginally used in place of *én*, e.g. *éni bnáto* ‘those girls of hers’ (A 43:23).

In the Caucasus there is marginal use of another series of default attributive pronouns, which may be termed 'strong default', since they are typically used to give enhanced prominence to the referent in various contexts, such as contrastive oppositions (§ 9.2.4.6.). Only the singular forms are attested:

#### Attributive strong default demonstrative (Caucasus)

	<b>Nominative</b>	<b>Oblique</b>
ms.	<i>'oxa</i>	<i>doxa</i>
fs.	<i>'exa</i>	<i>dexa</i>

In a speech situation, the near deixis demonstratives point to an item near to the speaker, e.g. *'áha ctáva láxxa* 'this book here'.

The medium deixis demonstratives point to an item that is visible in the environment but is at a distance from the speaker and the hearer.

The distinction between the near and medium deixis is neutralized in the plural, in that the form *'ánnə* is used for both.

The far deixis forms are used to point to an item in the far distance, remote from both the speaker and the hearer.

The default demonstratives do not point to any specific place in the environment but rather register that the referent in question is identifiable. The most common means of identification is through its occurrence earlier in the discourse history. In such cases, therefore, the default demonstratives have the function of anaphoric pronouns and the referent is absent from the environment of the speech situation.

For further details of the use of the demonstratives see § 9.2.

### 2.3 Pronominal Genitive Suffixes on Nouns and Prepositions

The pronominal genitive suffixes that are attached to nouns and prepositions are:

3ms.	<i>-u</i>
3fs.	<i>-o</i>
3pl.	<i>-é</i>
2ms.	<i>-ux</i>
2fs.	<i>-ax</i>
2pl.	<i>-oxun</i>
1s.	<i>-i</i>
1pl.	<i>-an, -eni</i>

The long form of the 1pl. suffix *-eni* is attested in the text corpus only in texts recorded in the Caucasus. In the village of Siri on the southern periphery of the Urmi area the 3ms suffix is *-ə* rather than *-u*. The 3ms suffix *-ə* is found in the neighbouring mountain dialect of Tazacand. It is also found in a few fossilized expressions in all varieties of C. Urmi such as *xa palyə* 'one and a half' (originally: 'one and its half'), *mən-'adiyya +al-+barə* 'from now to what is after it' (i.e. 'from now onwards') and, it seems, *culla* 'all' (originally: 'all of it').

When these suffixes are attached to a noun ending in *-a*, they take the place of this vowel, e.g.

*beta* 'house'

3ms.	<i>bétu</i>	'his house'
3fs.	<i>béto</i>	'her house'
3pl.	<i>beté</i>	'their house'
2ms.	<i>bétux</i>	'your (ms.) house'
2fs.	<i>bétax</i>	'your (fs.) house'
2pl.	<i>betóxun</i>	'your (pl.) house'
1s.	<i>béti</i>	'my house'
1pl.	<i>bétan, beténi</i>	'our house'

When a noun ends in *-ə*, the suffix replaces the ending, e.g.

*jarə* 'roof'

3ms.	<i>járu</i>	'his roof'
3fs.	<i>járo</i>	'her roof'
3pl.	<i>jaré</i>	'their roof', etc.

When a noun ends in *-i*, the suffix may be used, but the *-i* is generally retained and the glide /yy/ inserted before the suffix, e.g.

*cursi* 'chair'

3ms.	<i>cursíyyu</i>	'his chair'
3fs.	<i>cursíyyo</i>	'her chair'
3pl.	<i>cursíyyé</i>	'their chair', etc.

In nouns with the ending *-u* this ending is replaced by the fuller ending *-unt-* before suffixes, e.g.

<sup>+</sup> kátu	'cat'	<sup>+</sup> ka <u>túnti</u>	'my cat'
cálu	'bride'	ca <u>lúnti</u>	'my bride'
šálku	'chickenpox'	šal <u>kúnti</u>	'my chickenpox'
čákku	'knife'	ča <u>kkúnti</u>	'my knife'

Loanwords that end in a consonant without an Aramaic singular inflectional vowel may take suffixes. If the vowel before the final consonant is in an open syllable after the addition of a pronominal suffix, this vowel is lengthened, even if it is short in the source language, e.g.

<sup>+</sup> héyvan	'animal'	<sup>+</sup> heyvánu	'his animal'
vázzər	'minister'	vazzíru	'his minister'
kályun	'pipe'	ka <u>lýunu</u>	'his pipe'
nápas	'breath'	na <u>pásu</u>	'his breath'

The short /a/ in the feminine ending *-at*, derived ultimately from the Arabic *tā' marbūṭa*, behaves differently and is kept short when the suffix is added by geminating the /t/, e.g.

hákyat	'story'	ha <u>kýáttu</u>	'his story'
<sup>+</sup> karávat	'bed'	<sup>+</sup> ka <u>raváttu</u>	'his bed'
násyat	'advice'	na <u>sýáttu</u>	'his advice'

In certain constructions numerals take pronominal suffixes (§ 7). In numerals from 'four' (<sup>+</sup>ar̄pa) upwards the *-a* of the numeral is replaced by the suffix, as in nouns, e.g.

<sup>+</sup> ar̄pa	'four'	xa mən- <sup>+</sup> ar̄pu	'one of four (parts) of it'
xamša	'five'	xa mən-xamšu	'one of five (parts) of it'

In the numerals *tre* 'two' and <sup>+</sup>tla the final vowel is preserved before the suffix and a glide /y/ is inserted between the two vowels, e.g.

tre	'two'	xa mən-treyu	'one of two (parts) of it'
<sup>+</sup> tla	'three'	xa mən- <sup>+</sup> tlayu	'one of three (parts) of it'

## 2.4 The Independent Genitive Particle

The particle *diyy-* takes pronominal suffixes and is used to express a pronominal genitive complement of a noun or a complement of a preposition (§ 9.10.1.):

3ms.	<i>diyyu</i>
3fs.	<i>diyyo</i>
3pl.	<i>diyyé</i>
2ms.	<i>diyyux</i>
2fs.	<i>diyyax</i>
2pl.	<i>diyyóxun</i>
1s.	<i>diyyi</i>
1pl.	<i>diyyan, diyyéni</i>

## 2.5 Reflexive Pronoun

The reflexive pronoun is formed by attaching pronominal suffixes to the base *jan-* (< Kurd. *gan*):

3ms.	<i>jánu</i>	'himself'
3fs.	<i>jáno</i>	'herself'
3pl.	<i>jané</i>	'themselves', etc.
2ms	<i>jánux</i>	
2fs.	<i>jánax</i>	
2pl.	<i>janóxun</i>	
1s.	<i>jáni</i>	
1pl.	<i>jánan, janéni</i>	

## 2.6 Pronoun of Isolation

The form *noš-* is inflected with pronominal suffixes to function as a pronoun of isolation in prepositional phrases with *b-* as follows:

3ms.	<i>b-nošu</i>	'by himself'
3fs.	<i>b-nošo</i>	'by herself'
3pl.	<i>b-nošé</i>	'by themselves', etc.
2ms	<i>b-nošux</i>	
2fs.	<i>b-nošax</i>	

- 2pl. *b-nošóxun*  
 1s. *b-nóši*  
 1pl. *b-nóšan, b-nošéni*

For the syntax of these phrases see § 9.4.

## 2.7 Reciprocal Pronoun

The reciprocal pronoun is the invariable form <sup>+</sup>*úydalə*, which normally has the stress on the initial syllable. On some occasions speakers use the form <sup>+</sup>*údalə* with a long monophthong /u/ rather than a diphthong /uy/. This pronoun has developed historically from <sup>\*</sup>*xdādē*. For its syntax see § 9.5.

## 2.8 Interrogative Pronouns

- mani, may* ‘who?’  
*mu, mudi, tuy* ‘what?’  
 ’*əm* ‘which?’

The form *may* is a contraction of *mani*. The form *muy* may be a contraction of the form *mudi* and the form *mu* may have arisen by a further contraction. Alternatively *muy* could have arisen by a false morphological division of *mu* + the copula *ilə* in the phrase *mu-ilə* ‘What is it?’. The form *mudi* is derived historically from <sup>\*</sup>*ma-məndi* ‘what thing?’ (cf. C. Barwar *modi*, *mawdi*, C. Bebede *mandi*). Examples:

- (1) *màni tílə?* ~ *mày tílə?* ‘Who has come?’
- (2) *mù vádət?* ~ *mìy vádət?* ~ *mùdi vádət?* ‘What are you doing?’
- (3) *mùdilə?* ~ *mìy-lə?* ‘What is it?’
- (4) *’əm-béta ’ət-dìyyox-lə?* ‘Which house is yours?’
- (5) *’əm ’úrxa bərráxšəla* <sup>+</sup>*al-màta?* ‘Which road goes to the village?’

The interrogative determiner ‘which’ may take pronominal suffixes. When it takes suffixes, it has the base *’əmn-*. The stress is regularly placed on the initial syllable. As a result the 3pl. suffix *-e* is not stressed, as is the norm elsewhere:

- 'ámne? 'which of them?'  
 'ámnoxun? 'which of you?'  
 'ámnan? 'which of us?'

The interrogative particle *mudi* may take pronominal suffixes in certain idiomatic expressions, e.g. *mudyux-lə?* This may mean 'What is the matter with you?' or 'How is he related to you?'

The interrogative particles may also form generic heads of relative clauses, e.g.

- (1) *máni +byáyələ 'átə mònni,| 'ázax.* 'Whoever wants to come with me, let's go.'
- (2) *'ámnoxun +báyyə 'átə mònni,| 'ázax.* 'Whichever of you wants to come with me, let's go.'
- (3) *'ám - +jora +báyyə 'àtə,| 'àtə.* 'Whichever man wishes to come with me, let him come.'

# Copula

## 3.1 Present Copula

The basic present copula has the following forms:

3ms. *'ilə*

3fs. *'ila*

3pl. *'ina*

2ms. *'ivət*

2fs. *'ivat*

2pl. *'itun*

1ms. *'ivən*

1fs. *'ivan*

1pl. *'ivax*

Speakers from Tabriz optionally pronounce the 1st person singular forms with final *-m* instead of final *-n*:

	<b>Urmi</b>	<b>Tabriz</b>
1ms.	<i>'ivən</i>	<i>'ivəm</i>
1fs.	<i>'ivan</i>	<i>'ivam</i>

All forms in the paradigm contain an /i/ element. The 3ms and 3fs forms have inflections containing /l/, viz. *-lə* and *-la*, which are identical to the so-called L-suffixes (§ 4.3.2.). The 3pl. form is inflected with the element *-na*. This is likely to have derived historically from \*-la, \*l having shifted to /n/ to distinguish it from the 3fs. form. Some NENA dialects, e.g. Barwar, use the form *-ila* for both the 3fs and 3pl. copula. Alternatively it may be a survival of the 3pl. pronominal enclitic (cf. Turoyo *-ne*). The 1st and 2nd person forms have a /v/ element in their inflection, with the exception of the 2pl. in which this does not appear.

The copula is generally placed after the predicate. It may stand independently with its own stress, e.g.

- +*úllul* 'ilə 'He is upstairs'  
 +'ltəx 'ila 'She is downstairs'  
*láxxa* 'ína 'They are here'

In most cases, however, the copula is attached to the preceding predicate as a clitic (connected to the host word by the symbol - in the transcription). When the predicate ends in a consonant, the copula is attached uncontracted but without an initial /'. The stress remains on the predicate item in the same position as it is without the copula. The clitic is included within the domain of emphasis of the word to which it is attached (§ 1.5.2.), e.g.

- +*úllul-ilə* 'He is upstairs'  
 +*úllul-ila* 'She is upstairs'  
 +*úllul-ina* 'They are upstairs'

There are grounds for regarding this form of the copula without the initial /' as the basic underlying form, the /' being an addition on the phonetic level to ensure that a word-initial syllable begins with a consonant (§ 1.15.2.).

When the predicate ends in the vowels /ə/ or /i/, the /i/ of the enclitic copula is generally assimilated to these:

- |                      |                     |                         |
|----------------------|---------------------|-------------------------|
| <i>jarə</i> 'roof'   | + <i>al-járələ</i>  | 'He is on the roof'     |
|                      | + <i>al-járəla</i>  | 'She is on the roof'    |
|                      | + <i>al-járəna</i>  | 'They are on the roof'  |
| <i>cúrsi</i> 'chair' | + <i>al-cúrsilə</i> | 'He is on the chair'    |
|                      | + <i>al-cúrsila</i> | 'She is on the chair'   |
|                      | + <i>al-cúrsina</i> | 'They are on the chair' |

The combination of final /a/ with the /i/ of the copula contracts to /e/, which is shortened to /ə/ in post-stress position (§ 1.7.1.4.), e.g.

- |                     |                 |                      |
|---------------------|-----------------|----------------------|
| <i>láxxa</i> 'here' | <i>láxxələ</i>  | 'He is here'         |
|                     | <i>láxxəla</i>  | 'She is here'        |
|                     | <i>láxxəna</i>  | 'They are here'      |
|                     | <i>láxxəvət</i> | 'You (ms.) are here' |
|                     | <i>láxxəvət</i> | 'You (fs.) are here' |
|                     | <i>láxxətun</i> | 'You (pl.) are here' |
|                     | <i>láxxəvən</i> | 'I (m.) am here'     |
|                     | <i>láxxəvən</i> | 'I (f.) am here'     |
|                     | <i>láxxəvəx</i> | 'We are here'        |

When the predicate ends in the vowel /u/ or /o/, the /i/ of the copula is assimilated to this, e.g.

<i>cálu</i>	'bride'	<i>cálula</i>	'She is the bride'
<i>mánno</i>	'with her'	<i>mánnolə</i>	'He is with her'

Assimilation regularly does not take place to the final vowel of certain mono-syllabic forms, e.g.

<i>xá</i>	'one'	<i>xá-ina</i>	'They are one'
<i>+tlə</i>	'three'	<i>+tlá-ina</i>	'They are three'
<i>tre</i>	'two'	<i>tre-ina</i>	'They are two'
<i>mu</i>	'what?'	<i>mu-ilə?</i>	'What is it?'

Other contractions of the copula clitic take place in fast speech. The initial /i/ element is sometimes elided when the word to which the copula is attached ends in a consonant, e.g.

<i>'áltəx-lə</i>	'He is downstairs'
<i>'áltəx-la</i>	'She is downstairs'
<i>'áltəx-na</i>	'They are downstairs'
<i>'áltəx-vət</i>	'You (ms.) are downstairs'
<i>'áltəx-vat</i>	'You (fs.) are downstairs'
<i>'áltəx-tun</i>	'You (pl.) are downstairs'
<i>'áltəx-vən</i>	'I (m.) am downstairs'
<i>'áltəx-van</i>	'I (f.) am downstairs'
<i>'áltəx-vax</i>	'We are downstairs'

The /v/ element may be contracted when the copula is suffixed to words ending in a vowel:

<i>láxxət</i>	'You (ms.) are here'
<i>láxxət</i>	'You (fs.) are here'
<i>láxxətun</i>	'You (pl.) are here'
<i>láxxən</i>	'I (m.) am here'
<i>láxxən</i>	'I (f.) am here'
<i>láxxəx</i>	'We are here'

Examples:

- (1) *'átən raxmànət.* | *'át xubbànət.* | 'You are merciful. You are loving.' (A 3:92)
- (2) *'átən ò-našət.* | 'You (ms.) are that person.' (A 4:6).
- (3) *'ána xditən.* | 'I (f.) am happy.' (A 4:2)

In some constructions the copula is placed before the predicate with its own stress. In such cases no contractions take place, e.g.

- (4) *xá mən-cačálə* *'íla +tājər.* | 'One of the bald men is the merchant.' (A 1:30)
- (5) *'ána 'tvən +Axíkar.* | 'I am Axiqar.' (A 3:67)

In some isolated cases the augment suffix *-ni* is added to forms of the enclitic copula in the variety of the dialects spoken in the Caucasus, e.g.

- (6) *+'ámma, jášək hənnəlani.* | 'But he sees it is something.' (A 43:5, = *hənna* + *ila* + *ni*)
- (7) *marələnɪ* 'she says' (A 43:9 = *mara* + *ila* + *ni*)

### 3.2 Past Copula

The 3rd person past copula is formed by attaching the suffix *va* to the /i/ element of the present copula without any further inflectional ending:

- |              |             |             |             |
|--------------|-------------|-------------|-------------|
| <i>'i-lə</i> | <i>+ va</i> | <i>&gt;</i> | <i>i-va</i> |
| <i>'i-la</i> | <i>+ va</i> | <i>&gt;</i> | <i>i-va</i> |
| <i>'i-na</i> | <i>+ va</i> | <i>&gt;</i> | <i>i-va</i> |

In the 1st and 2nd person the *va* is added to contracted forms of the copula, which do not distinguish gender in the singular. The full paradigm is as follows:

3ms.	<i>'íva</i>
3fs.	<i>'íva</i>
3pl.	<i>'íva</i>
2ms.	<i>'ítva</i>
2fs.	<i>'ítva</i>
2pl.	<i>'ítunva</i>
1ms.	<i>'ínva</i>

1fs.	<i>'i̯nva</i>
1pl.	<i>'ixva</i>

Since the /i/ vowel is long in closed syllables in this paradigm, the forms must derive from a contraction of syllables (§ 1.14.), viz. *itva* < *i̯vətva*, etc.

When these forms are attached as clitics to a word ending in a consonant, the /i/ is elided and the /i/ is optionally elided from the 3rd person and 2pl. forms, in which it is in an open syllable:

<i>'áltəx-íva</i> ~ <i>'áltəx-va</i>	'He was downstairs'
<i>'áltəx-íva</i> ~ <i>'áltəx-va</i>	'She was downstairs'
<i>'áltəx-íva</i> ~ <i>'áltəx-va</i>	'They were downstairs'
<i>'áltəx-itva</i>	'You (ms.) were downstairs'
<i>'áltəx-itva</i>	'You (fs.) were downstairs'
<i>'áltəx-itunva</i> ~ <i>'áltəx-tunva</i>	'You (pl.) were downstairs'
<i>'áltəx-ínva</i>	'I (m.) was downstairs'
<i>'áltəx-ínva</i>	'I (f.) was downstairs'
<i>'áltəx-íxva</i>	'We were downstairs'

When the past copula is suffixed to words ending in a vowel, the /i/ assimilates to the final vowel of the word in the same way as the present copula:

<i>láxxa</i>	'here'	<i>láxxəva</i>	'He was here'
		<i>láxxəva</i>	'She was here'
		<i>láxxəva</i>	'They were here'
		<i>láxxətva</i>	'You (ms.) were here'
		<i>láxxətva</i>	'You (fs.) were here'
		<i>láxxətunva</i>	'You (pl.) were here'
		<i>láxxənva</i>	'I (m.) was here'
		<i>láxxənva</i>	'I (f.) was here'
		<i>láxxəxva</i>	'We were here'

In the speech of speakers from Tabriz who pronounce *-m* at the end of the inflection of the 1st singular forms of the copula, the /v/ of the *va* is assimilated to this /m/, resulting in the following forms:

Urmī	Tabriz
<i>láxxənva</i>	<i>láxxəmma</i>
<i>láxxənva</i>	<i>láxxəmma</i>

'I (m.) was here'  
'I (f.) was here'

### 3.3 Deictic Copulas

#### 3.3.1 Near Deictic Copula

A near deictic copula, which points to referents in the speech situation, is formed by combining the present copula clitic with the element *du-*. Some of the forms are contracted in fast speech:

3ms.	<i>dúla</i>
3fs.	<i>dúla</i>
3pl.	<i>dúna</i>
2ms.	<i>dívæt, dút</i>
2fs.	<i>dívat, dút</i>
2pl.	<i>díytun, dútun</i>
1ms.	<i>dívæn, dún</i>
1fs.	<i>dívan, dún</i>
1pl.	<i>dívax, dúx</i>

#### 3.3.2 Far Deictic Copula

The far deictic copula, which is used to point out referents far from the speech situation, is formed with an initial *ve-* element. This has apparently developed by the combination of a presentative particle *va-* with the clitic copula:

3ms.	<i>vela</i>
3fs.	<i>vela</i>
3pl.	<i>vena</i>

Many speakers use this copula only in the 3rd person, but forms inflected for other persons are sporadically encountered, e.g. *vén* (1ms) (A 48:8), *véx* (1pl.) (B 10:5).

### 3.4 Negative Present Copula

This is formed by combining the negator *la* with the present copula clitic with the resultant contraction of the adjacent /a/ and /i/ vowels to /e/. The /v/ element of the 1st and 2nd person forms is often contracted with further vowel coalescence that eliminates distinctions in gender.

3ms.	<i>lélə</i>
3fs.	<i>lélə</i>

3pl.	<i>léna</i>
2ms.	<i>lévət, lét</i>
2fs.	<i>lévat, lét</i>
2pl.	<i>létun</i>
1ms.	<i>lévən, lén</i>
1fs.	<i>lévan, lén</i>
1pl.	<i>lévax, léx</i>

In closed syllables the /e/ is long in slow speech at the end of intonation groups, since it has developed from a contraction of syllables (§1.14.), but it is elsewhere generally shortened to the quality of [ɪ], e.g. *lén* [lm]. The short [ɪ] is sometimes lowered to [a], especially when strongly stressed, e.g. *lèx* [lax] *béta* ‘we are not at home’ (A 37:14). The transcription ē with a macron has been normalized.

### 3.5 Negative Past Copula

The negative past copula is formed by combining the negative particle with the past copula. The combination of /a/ and /i/ contracts to /e/. In closed syllables the vowel remains long in slow speech, since it is a contraction of syllables (e.g. *lētva* < *levətva*), although it is generally shortened to /ə/ elsewhere. The transcription with ē has been normalized. This distinguishes it from *lətva* ‘there was not’, in which the vowel is always short:

3ms.	<i>léva</i>
3fs.	<i>léva</i>
3pl.	<i>léva</i>
2ms.	<i>lētva</i>
2fs.	<i>lētva</i>
2pl.	<i>létunva</i>
1ms.	<i>lénva</i>
1fs.	<i>lénva</i>
1pl.	<i>léxva</i>

# Verbs

## 4.1 Verbal Roots

Verbal inflections are formed by mapping abstract verbal roots onto non-concatenative morphological templates. The morphological templates have slots for three radicals and the abstract roots consist of three or four radicals. When the root has four radicals a cluster of the two medial radicals of the root is mapped onto the slot of the second radical of the template, e.g.

*bašəl* II 'He cooks' (root *b-š-l*)

Radical slot	1	2	3
Surface form	b	a	š
Root	b		š
Template	C <sub>1</sub>	u	C <sub>2</sub> C <sub>3</sub>

*faryəš* Q1 'He drags' (root *f-ṛj-š*)

Radical slot	1	2	3
Surface form	f	a	rj
Root	f		rj
Template	C <sub>1</sub>	a	C <sub>2</sub> C <sub>3</sub>

One or more of the radicals may be weak, in that they are the semi-vowel /y/ or zero /Ø/. When a root containing /Ø/ is mapped onto a morphological template, the slot of /Ø/ is filled in the surface form of the verb by some other element or the /Ø/ is elided. If the /Ø/ is in root-initial position and occurs in the initial slot of the template followed by a vowel, the place filler is /', e.g.

*arək* I 'he flees' (root Ø-*r-k*)

Root	Ø	r	k
Template	C	a	C
Surface form:	'	a	r

If the /Ø/ occurs elsewhere adjustments are made to ensure that the surface form has a legitimate syllable structure by either filling the place of the /Ø/ or by deleting it. If it is immediately preceded by a consonant that is not word-initial, this consonant is geminated to fill its position, e.g.

*pakka* I 'It (fs.) splits' (root *p-k*-Ø)

Root	<i>p</i>	<i>k</i>	Ø
Template	C	a	C C a
Surface form:	<i>p</i>	a	<i>k k a</i>

In forms such as these the geminate consonant spans two syllables *pak.ka*.

If the /Ø/ clusters with another consonant in the onset of a syllable, it is deleted. This applies whether it precedes or follows this other consonant, e.g.

*raka* I 'to flee' (root Ø-r-k)

Root	Ø	r	<i>k</i>
Template	C	C a	C a
Surface form:	<i>r</i>	a	<i>k a</i>

<sup>+</sup>*dara* I 'to return' (root <sup>+</sup>*d*-Ø-r)

Root	<sup>+</sup> <i>d</i>	Ø	r
Template	C	C a	C a
Surface form:	<sup>+</sup> <i>d</i>	a	r a

If /Ø/ follows a vowel in the template, either the preceding vowel is lengthened or the /Ø/ is deleted, whichever achieves the canonical bimoraic syllable structure, e.g.

*maləp* 'He teaches', *malpa* 'She teaches' (root *m*-Ø-*l-p*)

Root	<i>m</i>	Ø	<i>l</i>	<i>p</i>
Template	<i>m</i>	a	C C a	C
Surface form:	<i>m</i>	a	a <i>l a p</i>	

Root	<i>m</i>	$\emptyset$	<i>l</i>	<i>p</i>
Template	<i>m</i>	<i>a</i>	<i>C</i>	<i>C C a</i>
Surface form:	<i>m a</i>	—	<i>l p</i>	<i>a</i>

Roots are either marked or unmarked for suprasegmental emphasis, e.g. *+p-l-č* ‘to go out’, *+x-d-r* ‘to go round’ vs. *p-t-x* ‘to open’, *n-š-č* ‘to kiss’. Templates are neutral with regard to emphasis. They do not contain an inherent setting and take on the setting of the root. The setting of the root is retained in all derivatives of the root, e.g. *+x-d-r*: *+xadər* (present) ‘he goes round’, *+xdərrə* (past) ‘he went round’, *+xdarta* (verbal noun) ‘going round’. In some cases a verbal root and a lexically related form are of different settings, e.g. the verb *j-v-r* ‘to marry’ vs. *+jora* ‘husband’, the verb *k-v-r* ‘to bury’ vs. the noun *+kora* ‘grave’, the verb *š-xl-p* ‘to change’ vs the noun *+xlapa* ‘change, substitute’. This shows that the noun is not derived from the verbal root, and indeed the noun does not have an abstract root at any level of its derivational morphology. Rather the noun consists of a stem and an external inflectional affix, e.g.

Stem	affix
<i>+kor</i>	<i>+ a</i>

*+kora* ‘grave’

Inflectional affixes such as the nominal ending *-a*, like templatic morphological patterns, are neutral with regard to emphasis and take on suprasegmental emphasis that is inherent in the stem.

A verbal root may be ‘extracted’ from a noun. Such verbal roots do not necessarily have the same setting as the noun, in particular roots that are extracted from emphatic nouns may be plain, e.g.

*javvəb* QI ‘to answer’ (root *j-vv-b*) < *+júvvab* ‘answer’

The difference in setting between the verbal root and the noun is likely to have been a strategy to make a clear distinction between the two categories, since they are otherwise phonetically very similar in shape. This same strategy may be the cause of difference in setting between other lexically related sets of verbs and nouns, such *k-v-r* ‘to bury’ vs. *+kora* ‘grave’, *j-v-r* ‘to marry’ vs. *+jora* ‘husband’. It is noteworthy that in such cases it is regularly the verbal root that is the plain member of the pair.

Most examples of extracted verbal roots derive from verbs or words of other categories that have their source in another language. The noun *+juvvab*, for example, is taken from Persian *javāb* and is ultimately of Arabic origin. The geminate /vv/ in the extracted verbal root *j-vv-b* suggests that the verb was

derived from the form the noun has in the C. Urmi NENA dialect rather than directly from Persian *javāb*. Other examples of verbal roots that are likely to have been extracted from loanwords within the NENA dialect include:

- tamməz* QI ‘to clean’ (root *t-mm-z*) < *tamməz* adj.ms. ‘clean’ < Azer. təmiz  
*zabbən* QI ‘to become weak’ (root *z-bb-n*) < *zabbun* ‘weak’ < Azer. zəbun  
*baxxəl* QI ‘to become jealous’ (root *b-xx-l*) < *baxxila* ‘jealous’ < Pers. baxıl (< Arab.)  
*sak्कət* QI ‘to cripple’ (root *s-kk-t*) < *sak्कat* adj.invar. ‘crippled’ < Pers. saqat (< Arab.)  
*nazəl* I ‘to fester’ (root *n-z-l*) < *nəzla* n.m. ‘pus’ < Pers. nazlat (< Arab.)

Some verbal roots seem to have been extracted directly from another language, e.g.

- þalþəç* QI ‘to stammer’ (root *þ-lt-ç*) < Azer. pəltək ‘stammerer’, pəltəkləmək ‘to stammer’  
*tayac* I ‘to plant’ (root *t-y-c*) < Azer. tikmek ‘to erect, build’

The attested verbal roots that are extracted directly from Azeri verbs or nouns that have a back setting in Azeri are all emphatic, e.g.

- |   |                                    |
|---|------------------------------------|
| <sup>+</sup> <i>alda</i> QI ‘to cheat’ (root <sup>+</sup> <i>Ø-lđ-y</i> )     | < Azer. aldatmaq                   |
| <sup>+</sup> <i>čalləš</i> QI ‘to try’ (root <sup>+</sup> <i>č-ll-š</i> )     | < Azer. çalışmaq                   |
| <sup>+</sup> <i>daldən</i> QI ‘to shelter’ (root <sup>+</sup> <i>d-lđ-n</i> ) | < Azer. dalda ‘shelter’            |
| <sup>+</sup> <i>kandəx</i> QI ‘to swaddle’ (root <sup>+</sup> <i>k-nd-x</i> ) | < Azer. qundaq ‘swaddling clothes’ |
| <sup>+</sup> <i>dağğən</i> QI ‘to brand’ (root <sup>+</sup> <i>d-ğğ-n</i> )   | < Azer. dağlamaq                   |

All of the Azeri source words contain dorsal consonants and/or /l/, which undergo backing with the vowels (§1.5.1.). The root consonants extracted from these words would have, therefore, included some that have a back setting and this, it seems, gave rise to the back emphatic setting of the C. Urmi verbal root.

The attested verbal roots that seem to have been extracted directly from Persian words include the following:

- sazʃər* QI ‘to agree’ (root *s-zʃ-r*) < Pers. sāzgār ‘agreeing’  
*sarsəm* QI ‘to cause a headache’ (root *s-rs-m*) < Pers. sarsām ‘delirium’

It should be noted that these two verbal roots are plain, despite the fact that the source word in Persian contains a long /ā/ vowel. The presence of this vowel in

a word normally triggers the emphatic setting of the word when it is borrowed into the C. Urmi NENA dialect together with its vowels (§ 1.5.1.). The explanation may be that, unlike in the Azeri verbs above, the consonants in the Persian words do not get backed in the source language and the consonants that are extracted have a plain setting. The same argument could apply to the plain setting of the verb *j-wv-b* ‘to answer’ if it were, in fact, extracted directly from Persian *javāb* rather than C. Urmi *+juvvab*.

Some verbal roots with an emphatic setting appear to have been loaned directly from Arabic at an early period and the emphasis was triggered by the original presence of a pharyngal consonant in the root, e.g.

- +ajjəb* QI ‘to be surprised’ (root  $+\emptyset\text{-}jj\text{-}b$ ) < Arab. ‘ajiba
- +ajjəz* QI ‘to annoy’ (root  $+\emptyset\text{-}jj\text{-}z$ ) < Arab. ‘ajjaza
- +jammə* I ‘to gather’ (root  $+j\text{-}m\text{-}\emptyset$ ) < Arab. jama‘a

The various inflections of a single lexical verb may be derived from more than one root. Several verbs have two or even three variant roots each for particular inflections. These roots are suppletive of one another but are, in most cases, closely related and usually different only in the position of a weak radical, e.g. *+yásar* ‘he ties’ (< *+y-s-r*), *bəsyárələ* ‘he is tying’ (< *+s-y-r*). One should make a distinction between morphologically suppletive roots such as *+y-s-r* and *+s-y-r*, i.e. different manifestations of the same lexical verb, and lexical suppletion of verbs. Lexical suppletion is found in the inflections of some verbs (e.g. ‘to go’ § 4.14.1. and ‘to say’ § 4.14.2.) in that some inflections are expressed by one lexical verb and others by a different one, e.g. *ńázəl* ‘he goes’ but *xášla* ‘he went’. The existence of suppletive morphological roots is a feature of verbal inflections in pattern I, the basic unmarked verbal pattern. Morphological suppletion is in principle not found across the inflections of verbs in the derived patterns II and III. In § 4.15. it is argued that some verbal paradigms exhibit features that are characteristic of stem and affix morphology rather than a root and template system. This applies, for example, to some weak verbs where the identity of the root is often opaque due to the proliferation of the number of their suppletive roots. In the presentation of the various weak verbal forms below an attempt is, nevertheless, made to identify the possible roots.

## 4.2 Verbal Patterns

### *Pattern I*

*p-t-x* I ‘to open’

Present template	<i>patəx-</i>
Past template	<i>ptix-</i>
Resultative participle	<i>ptixa</i>
Imperative	<i>ptux</i>
Infinitive	<i>ptaxa</i>
Progressive	<i>bəptaxa</i>
Verbal noun	<i>ptaxta</i>
Active participle	<i>patxana</i>

The progressive base has developed historically from the combination of the infinitive with the preposition *b-*, but in the current synchronic state of the dialect these two elements have become bonded together as a single integral stem, which should, therefore, be distinguished from the infinitive (§ 1.15.2.). In some verbs of pattern I, moreover, the progressive has a different shape from that of the infinitive.

### *Pattern II*

*b-s-m* II ‘to heal’

Present template	<i>basəm-</i>
Past template	<i>busəm-</i>
Resultative participle	<i>busma</i>
Imperative	<i>basəm</i>
Infinitive	<i>basumə</i> (marginal: <i>basuma</i> )
Progressive	<i>basumə</i> (marginal: <i>basuma</i> )
Verbal noun	<i>basamta</i>
Active participle	<i>basmana</i>

*Pattern III*

*m-dm-x* III 'to cause to sleep'

Present template	<i>madməx-</i>
Past template	<i>mudməx-</i>
Resultative participle	<i>mudməxxa</i>
Imperative	<i>madməx</i>
Infinitive	<i>madmuxə</i> (marginal: <i>madmuxa</i> )
Progressive	<i>madmuxə</i> (marginal: <i>madmuxa</i> )
Verbal noun	<i>madmaxta</i>
Active participle	<i>madməxxana</i>

*Quadrilateral I*

*f-rj-š* QI 'to drag'

Present template	<i>jarjəš-</i>
Past template	<i>jurjəš-</i>
Resultative participle	<i>jurjəšša</i>
Imperative	<i>jarjəš</i>
Infinitive	<i>jarjušə</i> (marginal: <i>jarjuša</i> )
Progressive	<i>jarjušə</i> (marginal: <i>jarjuša</i> )
Verbal noun	<i>jarjašta</i>
Active participle	<i>jarjəššana</i>

*Quadrilateral II*

*mf-rj-š* QII 'to cause to be dragged'

Present template	<i>mfarjəš-</i>
Past template	<i>mfurjəš-</i>
Resultative participle	<i>mfurjəšša</i>
Imperative	<i>mfarjəš</i>
Infinitive	<i>mfarjušə</i> (marginal: <i>mfarjuša</i> )
Progressive	<i>mfarjušə</i> (marginal: <i>mfarjuša</i> )
Verbal noun	<i>mfarjašta</i>
Active participle	<i>mfarjəššana</i>

Pattern I is the descendant of the *pə'el* pattern of earlier Aramaic, pattern II corresponds to the erstwhile *pa"el* and pattern III to the erstwhile *'ap̄el*. There are no patterns that are direct descendants of the intransitive T-patterns *'etpə'el*, *'etpa"al* and *'ettaþ'el*. Some of these coalesced with the surviving patterns due to the loss of the /t/ element, in particular pattern I and quadriliteral I, with the result that many verbs in these latter patterns are labile, i.e. they have both a transitive and an intransitive function (§ 4.25.). Various forms derived from the T-patterns of earlier Aramaic have been introduced into the speech of educated speakers from the literary language, e.g. *+mat'axlana* 'edible', *məšta'lana* 'responsible', *+mat'orana* 'crossable (river); dispensable'. There are also sporadic fossilized survivals of a /t/ element in verbal roots, e.g. *šattəš* 'to found', apparently derived from a T-pattern of the historical root \*-š-š with metathesis, and the verb *+šavħər* 'to be proud' (cf. Syriac *meštabħar*), which is treated as a quadriliteral verb with the root *+št-vh-r*, the first two consonants clustering in the first radical slot and the second two consonants in the second radical slot.

Pattern I has a progressive stem (*bəptaxa*) which is distinct in form from the infinitive (*ptaxa*). In the other patterns the progressive and infinitive stems are identical in form.

Pattern II lacks an *m*-prefix in all its forms, including those that had *m*- in earlier Aramaic, such as the present and past templates, which are derived historically from the *pa"el* active and passive participles respectively. The loss of *m*- is likely to be the result of a phonetic process due to its contact with the following consonant without an intervening vowel (\**mCaCəC* > *CaCəC*). This template has become grammaticalized in pattern II verbs, including those that begin with /ʃ/, which would be expected to be elided after a consonantal *m*- and so preserve the prefix, e.g. *+aməl* II 'he works on, he processes'. There are two pattern II verbs in the spoken dialect that are regularly used with the prefixed *m*-, viz. *mhada* 'he guides' and *+myakər* 'he respects'. This may be due to the impact of the literary language. Sporadically other verbs or verbal adjectives with *m*- are encountered in the text corpus, which also are likely to originate in the literary language, e.g. *+mhádər* 'prepare!' (A 3:31), *mhùmna* 'pious' (A 1:4).

Conversely, the *m*- prefix occurs in all inflections of pattern III, including forms that did not have *m*- in the *'ap̄el* stem of earlier Aramaic, such as the imperative. In the modern C. Urmi dialect, as in most other NENA dialects, the prefix has been extended by analogy to all parts of the verb. Following Goldenberg (2005, 16; 2013, 127), the /*m*/ can be considered an augment to the radicals of the root. The result is a root with the same structure as a quadriliteral root, the two medial radicals clustering together in the second of the three radical slots of templatic patterns:

- Pattern I: root: *b-r-z* ‘to dry’  
 Pattern III root: *m-br-z* ‘to cause to dry’  
 Quadrilateral I root: *r̩-r̩-š* ‘to drag’

*mabrəz* III ‘He causes to dry’ (root *b-š-l*)

Radical slot	1	2	3
Surface form	m	a	br      ə    z
Root	m		br      z
Template	C <sub>1</sub>	a	C <sub>2</sub> C <sub>3</sub> ə    C <sub>4</sub>

The lack of a prefixed *m-* in all inflections of the basic quadrilateral verb (QI) is also an innovation of the C. Urmi dialect. As in pattern II, its elision is likely to be due to its contact with the following consonant without an intervening vowel (\**mCaCCəC* > *CaCCəC*). The morphological templates of quadrilateral verbs are identical to those of pattern III. There is a derived set of quadrilateral verbs (QII) that attach an *m-* as an augment to the root, effectively making them quinquilaterals. This is a secondary development, which took place after the aforementioned elision of the original *m-* by analogy with the *m-* of pattern III verbs. Such derived quadrilaterals have a causative function as do pattern III verbs (§ 4.25.3., § 4.25.4.7.). The initial *m-* clusters with the following radical in the first radical slot thus:

*myarjəš* QII ‘He causes to be dragged’ (root *my-r̩-š*)

Radical slot	1	2	3
Surface form	mj	a	r̩      ə    š
Root	mj		r̩      š
Template	C <sub>1</sub> C <sub>2</sub>	a	C <sub>3</sub> C <sub>4</sub> ə    C <sub>5</sub>

A group of verbs have a medial geminated consonant and are conjugated with the pattern of quadrilateral verbs. Many such verbs are derived from borrowed nouns and adjectives, and occasionally originate in verbs of other languages. This class of verbs exhibit functional differences from pattern II verbs and so it is preferable to classify them as quadrilateral verbs, with the geminated consonant counting as two radicals in a quadrilateral root, rather than a subgroup of pattern II verbs (§ 4.25.2.). Verbs of this type may be derived from a loaned adjective or noun that is in use in the dialect, e.g. *t-mm-z* ‘to clean’ < *támməz* ‘clean’ (< Azer. *təmiz*, Pers. *tāmīz*), *j-vv-b* ‘to answer’ < *\*juvvab* ‘answer’ (< Persian [*Arabic*] *javāb*). It should be recalled that since a short

vowel in an open syllable is not tolerated in the syllable structure of the C. Urmi dialect, the consonant after the short vowel in such loaned adjectives and nouns is geminated. Such verbs are related to the source nouns and adjectives by association and imitation of their phonetic profile such as the short vowel after the first radical and gemination of the second radical (*tamməz* ‘he cleans’ < *tamməz* ‘clean’). This is likely to be the explanation for the existence of gemination of the second radical of verbs borrowed from Arabic, which in their original Arabic form had a short vowel after the first radical (e.g. <sup>+</sup>*ajjəb* QI ‘to be surprised’ < Arab. *ajiba*) or a short vowel and geminated consonant (<sup>+</sup>*ajjəz* QI ‘to annoy’ < Arab. *ajjaza*). This pattern of verb is also found in native Aramaic verbs, e.g. *h-mm-n* ‘to believe’, *š-dd-n* ‘to become mad, to cause to become mad’, *x-ll-n* ‘to become strong’, *+x-ll-l* ‘to wash’.

*t-mm-z* QI ‘to clean’

Present template	<i>tamməz-</i>
Past template	<i>tumməz-</i>
Resultative participle	<i>tumməzza</i>
Imperative	<i>tamməz</i>
Infinitive	<i>tammuza</i> (marginal: <i>tammuza</i> )
Progressive	<i>tammuza</i> (marginal: <i>tammuza</i> )
Verbal noun	<i>tammazta</i>
Active participle	<i>tamməzzana</i>

### 4.3 Inflectional Suffixes

The present and past templates are inflected with two sets of suffixes, which may be termed S-suffixes and L-suffixes.

#### 4.3.1 S-Suffixes

These inflectional suffixes are attached to the present template of all verbs in order to express the grammatical subject. They are used as inflections of the past template of transitive verbs in order to express the undergoer of the action. The S-suffixes exist in two paradigms. One, designated here as ‘default’, is used by all speakers. In the other all the suffixes are extended by an additional syllable. This is done by adding a particle, which has the form *-ni* after vowels and *-ən* after consonants, with the exception of 1st person singular and 2nd person plural suffixes, which are extended by the vowel *-a*. This ‘long’ paradigm is used optionally by speakers from some villages on the Urmi plain and the

villages in the Caucasus. These extended forms of the S-suffixes are not used when an additional suffix is added to the verb, such as the past-coverter suffix *-va* (§ 4.4.5.) or a pronominal object suffix.

	<b>Default</b>	<b>Long</b>
3ms.	<i>-Ø</i>	<i>-Øni</i>
3fs.	<i>-a</i>	<i>-ani</i>
3pl.	<i>-i</i>	<i>-ini</i>
2ms.	<i>-ət</i>	<i>-itən</i>
2fs.	<i>-at</i>	<i>-atən</i>
2pl.	<i>-itun</i>	<i>-ituna</i>
1ms.	<i>-ən</i>	<i>-ina</i>
1fs.	<i>-an</i>	<i>-ana</i>
1pl.	<i>-ax</i>	<i>-axən</i>

Speakers from Tabriz optionally pronounce the 1st person singular forms with final *-m* rather than *-n*:

	<b>Urmī</b>	<b>Tabriz</b>
1ms.	<i>-ən</i>	<i>-əm</i>
1fs.	<i>-an</i>	<i>-am</i>

#### 4.3.2 *L-Suffixes*

These suffixes are attached to the past template in order to express the grammatical subject.

	<b>Urmī and Armenia</b>	<b>Georgia and Armenia</b>	<b>Siri S</b>
3ms.	<i>-lo</i>		
3fs.	<i>-la</i>		
3pl.	<i>-lun</i>	<i>-le</i>	<i>-lu</i>
2ms.	<i>-lux</i>		
2fs.	<i>-lax</i>		
2pl.	<i>-loxun</i>		
1s.	<i>-li</i>		
1pl.	<i>-lan</i>		

The 3pl. suffix *-le* is regularly used in the village of Canda in Georgia. In the villages in Armenia this 3pl. suffix is occasionally used alongside the more frequent 3pl. suffix *-lun*. In the village of Siri on the southern periphery of the Urmī plain the form of the 3pl. suffix is *-lu*, which corresponds to the form used in the neighbouring mountain dialect of Tazacand.

### 4.3.3 *Inflection of the Present Template with S-Suffixes*

This construction has a wide functional range including present habitual, future and irrealis. These functions are examined in greater detail in § 10.2.

#### 4.3.3.1 Pattern I

*p-t-x* I ‘to open’

	Default	Long
3ms.	<i>pátəx</i>	<i>patáxni</i> ‘He opens’
3fs.	<i>pátxa</i>	<i>patxáni</i> ‘She opens’
3pl.	<i>pátxi</i>	<i>patxíni</i> ‘They open’, etc.
2ms.	<i>pátxət</i>	<i>patxítən</i>
2fs.	<i>pátxa</i>	<i>patxátən</i>
2pl.	<i>patxítun</i>	<i>patxítun</i>
1ms.	<i>pátxən</i>	<i>patxína</i>
1fs.	<i>pátxan</i>	<i>patxána</i>
1pl.	<i>pátxax</i>	<i>patxáxən</i>

In this paradigm the /a/ after the first radical is short when it is in a closed syllable, i.e. throughout the paradigm except in the 3ms form. In the 3ms form it is in an open syllable and is long in order to achieve the canonical bimoraic weight of syllable rhymes (§ 1.14.). The vowel length is not inherent in the template. It is only in the 3ms form that a /ə/ occurs after the second radical. It is best not to consider this as an epenthetic, since it is taken into account by the stress when suffixes are added, e.g. *patáxva* ‘he used to open’. Moreover if the base were *CaCC* and an epenthetic were inserted, one would expect the vowel to remain short as is the case in a form like *mádənxə*, where the vowel remains short after the insertion of the epenthetic /ə/ (§ 1.14.).

#### 4.3.3.2 Pattern II

*b-s-m* II ‘to cure’

	Form
3ms.	<i>básəm</i> ‘He cures’
3fs.	<i>básma</i> ‘She cures’
3pl.	<i>básmi</i> ‘They cure’, etc.
2ms.	<i>básət</i>
2fs.	<i>básmat</i>

- 2pl. *basmítun*  
 1ms. *básman*  
 1fs. *básman*  
 1pl. *básmax*

## 4.3.3.3 Pattern III

*m-dm-x* ‘to cause to sleep’

**Form**

- |      |                    |                             |
|------|--------------------|-----------------------------|
| 3ms. | <i>mádmáx</i>      | ‘He causes to sleep’        |
| 3fs. | <i>madmáxxa</i>    | ‘She causes to sleep’       |
| 3pl. | <i>madmáxxi</i>    | ‘They cause to sleep’, etc. |
| 2ms. | <i>madmáxxat</i>   |                             |
| 2fs. | <i>madmáxxat</i>   |                             |
| 2pl. | <i>madmáxxítun</i> |                             |
| 1ms. | <i>madmáxxən</i>   |                             |
| 1fs. | <i>madmáxxan</i>   |                             |
| 1pl. | <i>madmáxxax</i>   |                             |

As remarked above (§ 4.2.), the *m-* element is best considered an augment to the root rather than an element of the morphological template. The vowel /ə/ which is placed before the final radical throughout the paradigm originated, in all cases except the 3ms., as an epenthetic breaking up an internal cluster. The underlying template of the 3fs. form *madmáxxa*, for example, can be identified as *C<sub>1</sub>aC<sub>2</sub>C<sub>3</sub>C<sub>4</sub>a*, which parallels the template of pattern I and pattern II verbs, viz. 3fs. *C<sub>1</sub>aC<sub>2</sub>C<sub>3</sub>a*. The middle two radicals of pattern III cluster in the 2nd radical slot, as shown in the following table:

Radical slot	1	2	3		
Pattern I	<i>C<sub>1</sub></i>	<i>a</i>	<i>C<sub>2</sub></i>	<i>C<sub>3</sub></i>	<i>a</i>
Pattern II	<i>C<sub>1</sub></i>	<i>a</i>	<i>C<sub>2</sub></i>	<i>C<sub>3</sub></i>	<i>a</i>
Pattern III	<i>C<sub>1</sub></i>	<i>a</i>	<i>C<sub>2</sub>C<sub>3</sub></i>	<i>C<sub>4</sub></i>	<i>a</i>

The epenthetic is absent in some weak verbs, e.g. *+maxla* ‘she feeds’ (root *+Ø-x-l*). In strong verbs, however, the epenthetic has become phonologized and treated like a vowel nucleus. For this reason it is stressed, when penultimate, and the following consonant is geminated to make the syllable bimoraic. This gemination is weakened phonetically to some extent when it is not preceded by the stress, but is regularly represented in the orthography of the transcription.

When the third radical of pattern III verbs is a sonorant a different syllabification is occasionally attested to avoid having decreasing sonority in the onset cluster of the following syllable, e.g. *macərbàxlə* ‘we upset him’ (A 37:12) (root *m-cr-b* III ‘to upset’).

#### 4.3.3.4 Quadriliteral

*rj-rj-š* QI ‘to drag’

	<b>Form</b>	
3ms.	<i>jarjəš</i>	‘He drags’
3fs.	<i>jarjóss̥a</i>	‘She drags’
3pl.	<i>jarjóss̥i</i>	‘They drag’, etc.
2ms.	<i>jarjóss̥at</i>	
2fs.	<i>jarjóss̥at</i>	
2pl.	<i>jarjóss̥ítun</i>	
1ms.	<i>jarjóss̥ən</i>	
1fs.	<i>jarjóss̥an</i>	
1pl.	<i>jarjóss̥ax</i>	

*my-rj-š* QII ‘to cause to be dragged’

	<b>Form</b>	
3ms.	<i>myarjəš</i>	‘He causes to be dragged’
3fs.	<i>myarjóss̥a</i>	‘She causes to be dragged’
3pl.	<i>myarjóss̥i</i>	‘They cause to be dragged’, etc.
2ms.	<i>myarjóss̥at</i>	
2fs.	<i>myarjóss̥at</i>	
2pl.	<i>myarjóss̥ítun</i>	
1ms.	<i>myarjóss̥ən</i>	
1fs.	<i>myarjóss̥an</i>	
1pl.	<i>myarjóss̥ax</i>	

As in pattern III, the short vowel /ə/ is a phonologized epenthetic in all cases except the 3ms. and is followed by a geminated consonant before inflectional endings.

Quadriliteral verbs with identical 2nd and 3rd radicals such as *t-mm-z* ‘to clean’ have the same pattern of conjugation (§ 4.25.4.1):

3ms.	<i>támməz</i>	'He cleans'
3fs.	<i>tammázza</i>	'She cleans'
3pl.	<i>tammázzzi</i>	'They clean', etc.
2ms.	<i>tammázzat</i>	
2fs.	<i>tammázzat</i>	
2pl.	<i>tamməzzítun</i>	
1ms.	<i>tammázzən</i>	
1fs.	<i>tammázzan</i>	
1pl.	<i>tammázzax</i>	

In quadrilateral roots such as  $^+x\text{-ll}\text{-l}$  'to wash', in which the third radical is identical with the medial cluster, optional contractions occur:

3ms.	$^+x\acute{a}lləl$	'He washes'
3fs.	$^+xall\acute{a}lla \sim ^+x\acute{a}lla$	'She washes'
3pl.	$^+xall\acute{a}lli \sim ^+x\acute{a}lli$	'They wash', etc.
2ms.	$^+xall\acute{a}llət \sim ^+x\acute{a}llət$	
2fs.	$^+xall\acute{a}llat \sim ^+x\acute{a}llat$	
2pl.	$^+xall\acute{a}llítun \sim ^+xallítun$	
1ms.	$^+xall\acute{a}llən \sim ^+x\acute{a}llən$	
1fs.	$^+xall\acute{a}llan \sim ^+x\acute{a}llan$	
1pl.	$^+xall\acute{a}llax \sim ^+x\acute{a}llax$	

#### 4.3.4 Inflection of the Past Template with L-Suffixes

The most common function of this construction is the expression of the past perfective (§ 10.3.1.).

##### 4.3.4.1 Pattern I

*p-t-x i* 'to open'

3ms.	<i>ptáx-lə</i>	'He opened'
3fs.	<i>ptáx-la</i>	'She opened'
3pl.	<i>ptáx-lun</i>	'They opened', etc.
2ms.	<i>ptáx-lux</i>	
2fs.	<i>ptáx-lax</i>	
2pl.	<i>ptáx-loxun</i>	
1s.	<i>ptáx-li</i>	
1pl.	<i>ptáx-lan</i>	

The /i/ of the past template *ptix-* is shortened to /ə/ in the closed syllables before the L-suffix throughout this paradigm. In final weak roots in which the past template ends in a vowel, the /ə/ of the 3ms suffix is occasionally elided, e.g. *xzíl* 'he saw' (A 10:2) < *xzílo*.

#### 4.3.4.2 Pattern II

*b-s-m* II 'to cure'

3ms.	<i>busám-lə</i>	'He cured'
3fs.	<i>busám-la</i>	'She cured'
3pl.	<i>busám-lun</i>	'They cured', etc.
2ms.	<i>busám-lux</i>	
2fs.	<i>busám-lax</i>	
2pl.	<i>busám-loxun</i>	
1s.	<i>busám-li</i>	
1pl.	<i>busám-lan</i>	

#### 4.3.4.3 Pattern III

*m-dm-x* III 'to cause to sleep'

3ms.	<i>mudmóx-lə</i>	'He caused to sleep'
3fs.	<i>mudmóx-la</i>	'She caused to sleep'
3pl.	<i>mudmóx-lun</i>	'They caused to sleep', etc.
2ms.	<i>mudmóx-lux</i>	
2fs.	<i>mudmóx-lax</i>	
2pl.	<i>mudmóx-loxun</i>	
1s.	<i>mudmóx-li</i>	
1pl.	<i>mudmóx-lan</i>	

#### 4.3.4.4 Quadrilateral

*f-rj-š* QI 'to drag'

3ms.	<i>jurjéš-lə</i>	'He dragged'
3fs.	<i>jurjéš-la</i>	'She dragged'
3pl.	<i>jurjéš-lun</i>	'They dragged', etc.
2ms.	<i>jurjéš-lux</i>	
2fs.	<i>jurjéš-lax</i>	

- 2pl. *furjáš-loxun*  
 1s. *furjáš-li*  
 1pl. *furjáš-lan*

#### 4.3.4.5 Roots Ending in /n/ or /r/

When the verbal root ends in /n/ or /r/, assimilatory processes take place. In verbs ending in /n/, the /l/ of the L-suffix is optionally assimilated to the /n/, resulting in the geminate sequence /nn/, e.g.

- cpánla* ~ *cpánnə* ‘He became hungry’  
*txənlə* ~ *txánnə* ‘He ground’  
*zubánlə* ~ *zubánnə* ‘He bought’  
*tuxmánlə* ~ *tuxmánnə* ‘He thought’

In some northern varieties of the dialect the /l/ of the suffix assimilates the /n/ regressively, e.g. *cpállə* ‘he became hungry’.

When the verb ends in /r/, the /l/ of the L-suffix is regularly assimilated to it:

- +xdárrə* ‘He went around’ < \**+xdərlə*  
*+šudárrə* ‘He sent’ < \**+šudərlə*  
*+funjárrə* ‘He suffered’ < \**+funjərlə*

The gemination of /r/ in such forms is often phonetically reduced in fast speech: *+šudárrə* [ʃ'udárrə] ~ [ʃ'udárrə] ~ [ʃ'udárrə]. It is regularly represented in the transcription.

#### 4.3.5 Inflection of the Past Template with S-Suffixes

The past template of transitive verbs may be inflected with S-suffixes in order to express the object of the action.

There is one difference between the paradigm of S-suffixes used as the inflection of the present template and the one used to express the object on the past template, in that on the present template the 3pl. suffix is *-i* whereas on the past template the object 3pl. suffix has the form *-e*. This has arisen by analogy with the form of the pronominal suffix that is attached to nouns, e.g. *beté* ‘their house’. Such ‘adnominal’ suffixes are used to express the direct pronominal object on resultative participles and infinitives in compound verbal forms (§ 4.8.) and it is presumably by analogy with such compound forms that it has entered the past template paradigm.

The agent in constructions with object S-suffixes is expressed by L-suffixes.

In what follows full paradigms of object S-suffixes are given on forms with a 3ms agent, which is expressed by the L-suffix *-lə*:

#### 4.3.5.1 Pattern I

*+kt̪-t-l I* ‘to kill’

##### Object

3ms.	<i>+kt̪ál-lə</i>	‘He killed him’
3fs.	<i>+kt̪ilá-lə</i>	‘He killed her’
3pl.	<i>+kt̪ilé-lə</i>	‘He killed them’
2ms.	<i>+kt̪ilát-lə</i>	‘He killed you (ms.)’
2fs.	<i>+kt̪ilát-lə</i>	‘He killed you (fs.)’
2pl.	<i>+kt̪ilítun-lə</i>	‘He killed you (pl.)’
1ms.	<i>+kt̪ilán-lə</i>	‘He killed me (m.)’
1fs.	<i>+kt̪ilán-lə</i>	‘He killed me (f.)’
1pl.	<i>+kt̪iláx-lə</i>	‘He killed us’

When the L-suffix is attached to the past template *+kt̪il-* without any intervening inflectional vowel, the /i/ of the base is in a closed syllable and so is shortened and realized as the short vowel /ə/. This is the case when the base has the 3ms S-suffix, which is realized as zero (§ 4.3.1.). When followed by a vowel, the /i/ of the pattern I is in an open syllable and is preserved.

The /l/ of the L-suffix is sporadically assimilated to the consonant of the S-suffix, e.g. *+kt̪ilán-na* < *+kt̪ilán-lə* ‘He killed me’.

The expression of pronominal objects by S-suffixes can be identified as a type of ergative alignment. S-suffixes are morphologically less marked than L-suffixes, since they include Ø as a marker of the 3ms and generally less morphological material than L-suffixes. The expression of the patient by unmarked suffixes and the agent by marked suffixes is a characteristic feature of ergative alignment. This must, however, be considered to be a hybrid type of ergative alignment, since an intransitive subject of past template verbs is expressed by L-suffixes, just as is a transitive subject, and so the marking of a patient and an intransitive subject are not identical as in canonical ergative systems. The hybrid type of ergativity in past template verbs in C. Urmî, which shares features with both canonical ergative alignment (use of unmarked suffixes to express the patient) and also with canonical accusative alignment (use of the same suffixes for both transitive and intransitive subjects) may be termed ‘extended ergative’ (Doron and Khan 2012; Khan 2015). This extended ergative alignment is found only with past template verbs.

In principle S-suffixes of any person may occur in this position. Many speakers, however, prefer to avoid the expression of 1st and 2nd person objects in this way and use other constructions (§ 4.17.). All speakers freely use S-suffixes to express 3rd person objects. This situation demonstrates that the expression of the object by S-suffixes is indeed an ergative construction and not a passive construction, i.e. the S-suffixes have the grammatical role of object and are not the subjects of passive verbal forms. There is no constraint on the person in subjects expressed by S-suffixes on present template verbs. For an explanation of the constraint on person in the ergative construction see § 10.18.1.

#### 4.3.5.2 Pattern II

*b-s-m* II 'to cure'

##### Object

3ms.	<i>busóm-lə</i>	'He cured him'
3fs.	<i>busmá-lə</i>	'He cured her'
3pl.	<i>busmé-lə</i>	'He cured them'
2ms.	<i>busmát-lə</i>	'He cured you (ms.)'
2fs.	<i>busmát-tə</i>	'He cured you (fs.)'
2pl.	<i>busmítun-lə</i>	'He cured you (pl.)'
1ms.	<i>busmán-lə</i>	'He cured me (m.)'
1fs.	<i>busmán-lə</i>	'He cured me (f.)'
1pl.	<i>busmáx-lə</i>	'He cured us'

#### 4.3.5.2 Pattern III

*m-dm-x* III 'to cause to sleep'

##### Object

3ms.	<i>mudmáx-lə</i>	'He caused him to sleep'
3fs.	<i>mudmáxxá-lə</i>	'He caused her to sleep'
3pl.	<i>mudmáxxé-lə</i>	'He caused them to sleep'
2ms.	<i>mudmáxxát-lə</i>	'He caused you (ms.) to sleep'
2fs.	<i>mudmáxxát-lə</i>	'He caused you (fs.) to sleep'
2pl.	<i>mudmáxxítun-lə</i>	'He caused you (pl.) to sleep'
1ms.	<i>mudmáxxán-lə</i>	'He caused me (m.) to sleep'
1fs.	<i>mudmáxxán-lə</i>	'He caused me (f.) to sleep'
1pl.	<i>mudmáxxáx-lə</i>	'He caused us to sleep'

### 4.3.5.3 Quadrilateral

*ʃ-ṛj-š* QI ‘to drag’

#### Object

3ms.	<i>jurjáš-lə</i>	‘He dragged him’
3fs.	<i>jurjáššá-lə</i>	‘He dragged her’
3pl.	<i>jurjáššé-lə</i>	‘He dragged them’
2ms.	<i>jurjáššát-lə</i>	‘He dragged you (ms.)’
2fs.	<i>jurjáššát-lə</i>	‘He dragged you (fs.)’
2pl.	<i>jurjáššítun-lə</i>	‘He dragged you (pl.)’
1ms.	<i>jurjáššán-lə</i>	‘He dragged me (m.)’
1fs.	<i>jurjáššán-lə</i>	‘He dragged me (f.)’
1pl.	<i>jurjáššáx-lə</i>	‘He dragged us’

In quadrilateral roots such as *+x-ll-l* ‘to wash’, in which the third radical is identical with the medial cluster, optional contractions occur:

#### Object

3ms.	<i>+xullál-lə</i>	‘He washed it (m.)’
3fs.	<i>+xullallá-lə ~ +xullá-lə</i>	‘He washed it (f.)’
3pl.	<i>+xullallé-lə ~ +xullé-lə</i>	‘He washed them’

## 4.4 Particles Combined with Verbs Derived from the Present and Past Templates

### 4.4.1 Habitual Particle

A particle with the form *ci-* is optionally prefixed to inflected forms of the present template to express realis habituality, e.g. *ci-patəx* ‘he opens’. This has developed historically from the combination of the two preverbal particles *\*k* + *i*. In some dialects the habitual is expressed by one of these by itself, e.g. Qaraqosh *k-paθəx* ‘he opens’, Barwar *i-paθəx* ‘he opens’. In normal fast speech the vowel of the particle *ci-* is often elided and the *c-* clusters with the first consonantal radical of the verb: *ci-patəx* [cʰpʰa:tʰix]. In such cases the prefix is voiced when the first radical is voiced by the normal process of regressive voice assimilation (§ 1.6.), e.g. *ci-madmx* ['jmadmix ~ 'dʒmadmix] ‘he puts to sleep’. In both these cases the transcription is normalized as *ci-*. When the particle is prefixed to initial /Ø/ verbs that have word-initial /ʔ/ on the phonetic surface, e.g. *'atə* ‘he comes’ (< /Øatə/), the /ʔ/ is often elided in fast speech, e.g. *c-atə* ‘he

comes' (<*ci-’atə*). The fact that the lax *c-* does not shift to a tense *ç-*, in the way that the particles *d-* and *b-* become tense *t-* and *p-* before /’/ (e.g. *t-ilə* < *d-’ilə* ‘that he is’, *p-ida* < *b-’ida* ‘by hand’), shows that the underlying morphophonemic form of *c-ata* is *ci-’atə*, in which the /c/ is separated from the /’/ by a vowel (§ 1.15.2.). This uncontracted form is, in fact, sporadically attested in speech, e.g. *kámxa ci-’odívala* ‘They used to make flour’ (B 10:9), *ci-’azívá* ‘They used to go’ (B 11:4). The particle can be uttered in a separate intonation group from the verb, e.g. *cíl janvívala* ‘They used to steal her’ (B 10:25).

Some speakers of the northern variety of the dialect sporadically use a habitual particle with the form *’i-* rather than *ci-*, e.g. *’ó +bər-+zárra i-daráxlə +támə* ‘We would put the seed there’ (B 3:23), *mástə i-dokíval +cárra i-dokíval* ‘They used to produce yoghurt, they used to produce butter’ (B 2:10), *nipúxta i-bašlíva* ‘They would cook molasses’ (B 3:13), *ja-dén míyya jáldə i-barzíval* ‘They quickly dried in that water’ (B 3:14). This suffix is used in the dialects of the mountains to the west of the Urmī plain, e.g. <sup>+</sup>Mawana *i-patəx*. According to Maclean (1895, 82) this was the normal preverbal prefix in the C. Salamas dialect at the period in which he was writing, whereas *ci-* was only rarely used in this dialect. According to my own fieldwork, the surviving speakers of C. Salamas now regularly use *ci-*.

Speakers who use the form *’i-* also use the form *ci-*, so the form *’i-* may have resulted from the elision of the initial *c-* by phonetic attrition. Alternatively the form could be regarded as a morphological variant.

#### 4.4.2 Future Particle

The future may be expressed by prefixing the particle *bət-* to an inflected form of the present template, e.g. *bət-pátəx* ‘he will open’, *bət-’áta* ‘he will come’. This is a fossilized and phonetically reduced form of a volitive expression such as *\*bāē d-* ‘he wants to’. In slow careful speech the particle stands outside the domain of emphasis of an emphatic verb, as in *bət-+kətəl* ‘he will kill’ and so the construction should be analysed as two words combined in a stress group. The particle is, therefore, connected to the verb in the transcription by a single hyphen. The /t/ of the particle *bət* is, in fact, the result of the word-final devoicing rule (§ 1.6.). The particle may, indeed, carry its own stress, e.g. *bót +’áxəl* ‘he will eat’ (A 37:3). In fast speech the particle is contracted. Before a consonant it is reduced to *b-*, e.g. *b-dára* ‘he will pour’. When the following consonant is voiceless, the particle is devoiced, e.g. *p-šalxànnəl* [p<sup>h</sup>sal'xnn̩r] ‘I shall flay him’ (A 1:33). If the following consonant is an unvoiced tense stop, the particle is the tense *p-*, e.g. *p-+kətəlli* [p<sup>h</sup>k<sup>h</sup>a<sup>h</sup>·t<sup>h</sup>əll̩iç] ‘he will kill me’ (A 4:10), since clusters of stops generally share the same glottal setting (§ 1.15.1.). The single consonant of the particle is heard even before a labial,

e.g. *p-parəkli* [pp<sup>ha:</sup>riklɪ] 'he will finish me off' (A 4:10). A cluster of two homorganic consonants in the onset of a syllable is not licit (§ 1.15.1.), which suggests that we should posit that in the underlying form of all these contracted constructions the particle has the form *bət-* and the contraction is a post-lexical process, e.g. *bət-parək* > *p-parək*. When the verb begins with /t/, the /t/ of the particle coalesces with the /t/ and becomes a tense /t/ and the particle contracts to either *þt-* or simple *t-*, e.g. *þt-azən* ~ *t-azən* < *bət-azən* 'I shall go', *þt-+axlən* ~ *t-+axlən* < *bət-+axlən* 'I shall eat'. Within the framework of lexical phonology, there are grounds for holding that the /t/ at the beginning of such verbs is added by a post-lexical process and is not present at an underlying level of derivation (§ 1.14.). The fact that the particle coalesces with the /t/, therefore, shows that this also must have occurred post-lexically and is a further argument for positing that the underlying form of constructions such as *t-azən* is *bət-azən*.

#### 4.4.3 Deontic Particles

A wish may be expressed by combining the imperative forms *xuš* 'go' or *šuk*/ *šuk* 'leave, allow' with a present template verb, e.g. *xuš-pátəx* 'may he open', *šuk-áta* 'let him come.' The two may be combined by placing *šuk* before *xuš*, but not vice versa, e.g. *šuk xuš áta* 'let him come'.

#### 4.4.4 Past Converter Prefix *kam-*

The particle *kam* is attached to the present template when it has a pronominal object suffix and gives it a past time reference with perfective aspect, e.g. *kam-patáxla* 'he opened it'.<sup>1</sup> It is used in the northern varieties of the dialect and also is a feature of the dialects of Gawilan, Jamalawa and Salamas spoken further to the North. In the southern dialects the particle is rarely used and other means of expressing pronominal object suffixes on past perfective verbs are employed (§ 4.17.).

#### 4.4.5 Past Converter Suffix *-va*

The particle *-va*, a fossilized form of the verb form \**hvā* in earlier Aramaic, is suffixed to verbs derived from present and past templates. For more details concerning the function of these verbal constructions see § 10.2. and § 10.3.

##### 4.4.5.1 Present Template Verbs

The suffixed particle is attached after the S-suffix inflectional endings:

---

<sup>1</sup> For the historical background of this form see Fassberg (2015).

- 3ms. *patáxva* 'He used to open'  
 3fs. *patxáva* 'She used to open'  
 3pl. *patxíva* 'They used to open', etc.  
 2ms. *patxátva*  
 2fs. *patxátva*  
 2pl. *patxítunva*  
 1ms. *patxánva*  
 1fs. *patxánva*  
 1pl. *patxáxva*

In the speech of speakers from Tabriz who pronounce 1st person singular S-suffixes with final *-m*, the initial /v/ of the converter suffix is assimilated to this /m/, resulting in the following forms:

	Urmi	Tabriz
1ms.	<i>patxónva</i>	<i>patxómma</i>
1fs.	<i>patxánva</i>	<i>patxámma</i>

#### 4.4.5.2 Past Template Verbs

The particle is placed between the past template and the L-suffix expressing the subject.

- 3ms. *ptáxvalə* 'He had opened'  
 3fs. *ptáxvala* 'She had opened'  
 3pl. *ptáxvalun* 'They had opened', etc.  
 2ms. *ptáxvalux*  
 2fs. *ptáxvalax*  
 2pl. *ptáxvaloxun*  
 1s. *ptáxvali*  
 1pl. *ptáxvalan*

If the past template is inflected with an S-suffix, expressing the object of the verb, the *va* follows this. In what follows full paradigms of object S-suffixes are given on forms with a 3ms agent, which is expressed by the L-suffix *-lə*:

- 3fs. *+ktılávalə* 'He had killed her'  
 3pl. *+ktılévalə* 'He had killed them'  
 2ms. *+ktılátvalə* 'He had killed you (ms.)'  
 2fs. *+ktılátvalə* 'He had killed you (fs.)'  
 2pl. *+ktılíturvalə* 'He had killed you (pl.)'

- 1ms. *+kt̪iláñvalə* ‘He had killed me (m.)’  
 ifs. *+kt̪ilánvalə* ‘He had killed me (f.)’  
 1pl. *+kt̪iláxvalə* ‘He had killed us’

#### 4.5 Inflection of the Imperative

The imperative has a singular and a plural form. In verbs with a strong final radical the plural is formed by attaching the suffix *-un* to the singular. The stress is placed on the initial syllable in all forms, even when this is more than one syllable back from the end of the word.

##### 4.5.1 *Pattern I*

- sing. *ptúx* ‘Open!’  
 plural *ptúxun* ‘Open!’

##### 4.5.2 *Pattern II*

The /ə/ of the singular base is elided after the attachment of the plural ending:

- sing. *básəm* ‘Cure!’  
 plural *básmun* ‘Cure!’

##### 4.5.3 *Pattern III*

The final radical is geminated before the vowel of the plural ending, though this is phonetically reduced in fast speech:

- sing. *mádməx* ‘Put to sleep!’  
 plural *mádməxxun* ‘Put to sleep!’

##### 4.5.4 *Quadrilateral*

As in pattern III, the final radical is geminated before the plural ending:

- sing. *járjəš* ‘Drag!’  
 plural *járjəššun* ‘Drag!’

In quadrilateral roots such as *+x-ll-l* ‘to wash’, in which the third radical is identical with the medial cluster, an optional contraction occurs in the plural form:

- sing.    *+xálləl*                      'Wash!'  
 plural    *+xálləllun ~ +xállun*    'Wash!'

#### 4.6 Inflection of the Resultative Participle

The resultative participle is historically derived from the passive participle in the determined state in earlier Aramaic. It is used in compound verbal forms expressing the resultative perfect (§ 4.8.1.) or as an adjectival form (§ 4.25.). It has ms., fs. and plural inflectional endings:

- ms.    -*a*  
 fs.    -*ta*  
 pl.    -*ə*

The addition of the fs. ending *-ta* to the base of the resultative participle brings about various changes in syllabification.

##### 4.6.1 *Pattern I*

- ms.    *ptíxa*  
 fs.    *ptáxta*  
 pl.    *ptíxə*

##### 4.6.2 *Pattern II*

- ms.    *búsma*  
 fs.    *busámta*  
 pl.    *búsmə*

##### 4.6.3 *Pattern III*

- ms.    *mudmáxxa*  
 fs.    *mudmáxta*  
 pl.    *mudmáxxə*

##### 4.6.4 *Quadriliteral*

- ms.    *furjóss̥a*  
 fs.    *furjóštə*  
 pl.    *furjóss̥ə*

In quadrilateral roots such as <sup>+x</sup>-ll-l ‘to wash’, in which the third radical is identical with the medial cluster, optional contractions occur:

- ms. <sup>+x</sup>*ullólla* ~ <sup>+x</sup>*úlla*
- fs. <sup>+x</sup>*ullólta*
- pl. <sup>+x</sup>*ullólla* ~ <sup>+x</sup>*úllə*

#### 4.7 Inflection of the Active Participle

The active participle is formed by attaching the affix *-an-* to the present template. It is inflected for ms., fs. and plural with endings that are historically the endings of nominal forms in the determined state. The derivation of active participles is not completely productive across all verbal roots. It is used as a noun or adjective describing a characteristic, time-stable property of a referent.

##### 4.7.1 *Pattern I*

- ms. *patxána* ‘opener’
- fs. *patxánta* ‘opener’
- pl. *patxánə* ‘openers’

##### 4.7.2 *Pattern II*

- ms. *basmána* ‘curer’
- fs. *basmánta* ‘curer’
- pl. *basmánə* ‘curers’

##### 4.7.3 *Pattern III*

- ms. *madməxxána* ‘one who puts to sleep’
- fs. *madməxxánta* ‘one who puts to sleep’
- pl. *madməxxánə* ‘those who put to sleep’

##### 4.7.4 *Quadrilateral*

- ms. *jarjəššána* ‘dragger’
- fs. *jarjəššánta* ‘dragger’
- pl. *jarjəššánə* ‘draggers’

## 4.8 Compound Verbal Forms Containing the Verb 'to be'

### 4.8.1 *Copula Combined with Resultative Participle*

#### 4.8.1.1 Present Perfect

The realis resultative perfect of verbs is expressed by a compound construction consisting of the resultative participle combined with the present enclitic copula or a deictic copula:

The full paradigm of the perfect is as follows:

	<b>Enclitic copula</b>	<b>Near deictic</b>	<b>Far deictic</b>	
3ms.	<i>ptíxəla</i>	<i>dúlə ptíxa</i>	<i>vélə ptíxa</i>	'He has opened'
3fs.	<i>ptáxtəla</i>	<i>dúla ptáxta</i>	<i>véla ptáxta</i>	'She has opened'
3pl.	<i>ptíxəna</i>	<i>dúna ptíxə</i>	<i>véna ptíxə</i>	'They have opened', etc.
2ms.	<i>ptíxəvət</i>	<i>dívət ptíxa</i>		
2fs.	<i>ptáxtəvət</i>	<i>dívət ptáxta</i>		
2pl.	<i>ptíxətun</i>	<i>dútun ptíxə</i>		
1ms.	<i>ptíxəvən</i>	<i>dívən ptíxa</i>		
1fs.	<i>ptáxtəvən</i>	<i>dívən ptáxta</i>		
1pl.	<i>ptíxəvax</i>	<i>dívəx ptíxə</i>		

The attachment of the enclitic copula does not affect the position of the stress, which remains on the penultimate syllable of the participle.

The final *-ə* of the copula in the 3ms form *ptíxəla* is sometimes elided, resulting in the form *ptíxəl* (§ 10.10.1.4.).

#### 4.8.1.2 Past Perfect

The past perfect is formed by combining the resultative participle with the past copula:

3ms.	<i>ptíxəva</i>	'He had opened'
3fs.	<i>ptáxtəva</i>	'She had opened'
3pl.	<i>ptíxəva</i>	'They had opened', etc.
2ms.	<i>ptíxətva</i>	
2fs.	<i>ptáxtətva</i>	
2pl.	<i>ptíxətunva</i>	
1ms.	<i>ptíxənva</i>	
1fs.	<i>ptáxtənva</i>	
1pl.	<i>ptíxəxva</i>	

#### 4.8.1.3 Irrealis Perfect

The irrealis perfect is formed by combining the resultative participle with the irrealis present template form of the verb *'avə* I. The *'avə* auxiliary form is placed before the participle:

3ms.	<i>'ávə ptíxa</i>	'He may have opened'
3fs.	<i>'óya ptáxta</i>	'She may have opened'
3pl.	<i>'ávi ptíxə</i>	'They may have opened', etc.
2ms.	<i>'ávat ptíxa</i>	
2fs.	<i>'óyat ptáxta</i>	
2pl.	<i>'avítun ptíxə</i>	
1ms.	<i>'ávən ptíxa</i>	
1fs.	<i>'óyan ptáxta</i>	
1pl.	<i>'ávax ptíxə</i>	

#### 4.8.1.4 Irrealis Past Perfect

The irrealis past perfect is formed by adding the past converter suffix *-va* to the form of the verb *'avə* I:

3ms.	<i>'avíva ptíxa</i>	'He might have opened'
3fs.	<i>'oyáva ptáxta</i>	'She might have opened'
3pl.	<i>'avíva ptíxə</i>	'They might have opened', etc.
2ms.	<i>'avátva ptíxa</i>	
2fs.	<i>'oyátva ptáxta</i>	
2pl.	<i>'avítunva ptíxə</i>	
1ms.	<i>'avən ptíxa</i>	
1fs.	<i>'oyánva ptáxta</i>	
1pl.	<i>'aváxva ptíxə</i>	

#### 4.8.2 *Copula Combined with Progressive Stem*

##### 4.8.2.1 Present Progressive

The present progressive is expressed by combining the present enclitic copula or deictic copula with the progressive stem (I *bəptaxə*, II *basumə*, III *madmuxə*, QI *jarjušə*), e.g. *bəptáxələ* 'He is opening'. Historically this was a locative phrase containing the locative preposition *b-*: \**b-ptaxə* 'he is in opening'. The /b/ has been preserved in the pattern I progressive, but in the synchronic state of the dialect this is analysed as an integral component of the progressive stem. The full paradigm is as follows:

Enclitic copula	Near deictic	Far deictic
3ms. <i>bəptáxələ</i>	<i>dúla bəptáxa</i>	<i>vélə bəptáxa</i> 'He is opening'
3fs. <i>bəptáxəla</i>	<i>dúla bəptáxa</i>	<i>véla bəptáxa</i> 'She is opening'
3pl. <i>bəptáxəna</i>	<i>dúna bəptáxa</i>	<i>véna bəptáxa</i> 'They are opening, etc.'
2ms. <i>bəptáxəvət</i>	<i>dívət bəptáxa</i>	
2fs. <i>bəptáxəvət</i>	<i>dívət bəptáxa</i>	
2pl. <i>bəptáxətun</i>	<i>dítun bəptáxa</i>	
1ms. <i>bəptáxəvən</i>	<i>dívən bəptáxa</i>	
1fs. <i>bəptáxəvən</i>	<i>dívan bəptáxa</i>	
1pl. <i>bəptáxəvəx</i>	<i>dívax bəptáxa</i>	

The attachment of the enclitic copula does not affect the position of the stress, which remains on the penultimate syllable of the participle.

The *b-* element is only used with pattern I infinitives. Even in pattern I it is commonly, though not obligatorily, elided where the initial radical is a labial, e.g.

<i>bšálələ</i> ~ <i>bəbšálələ</i>	'He is maturing'
<i>prákələ</i> ~ <i>bəprákələ</i>	'He is finishing'
<i>mxáyələ</i> ~ <i>bəmxáyələ</i>	'He is hitting'
<i>+mtáyələ</i> ~ <i>+bəmtáyələ</i>	'He is arriving'

Some verbs in pattern I form a progressive stem from a verbal noun of a different pattern from the infinitive, which is used without an initial *b-*. These include:

<i>p-l-x</i> I 'to work'	<i>pəlxana</i>	<i>pəlxánələ</i>	'He is working'
<i>f-x-c</i> I 'to laugh'	<i>fəxca</i>	<i>jáxcələ</i>	'He is laughing'
<i>b-x-y</i> I 'to weep'	<i>bəxya</i>	<i>báxyələ</i>	'He is weeping'

Regular progressive stems may also be formed for these verbs, e.g. *bəpláxələ*, *bəxácələ*, *bəbxáyələ*.

In pattern II, pattern III and quadrilateral verbs the *b-* is regularly elided, e.g.

#### Pattern II

<i>+amúlələ</i>	'He is processing'
<i>bašúlələ</i>	'He is cooking'
<i>+palútələ</i>	'He is taking out'
<i>+jammúyələ</i>	'He is gathering'

- +*šadírələ* 'He is sending'  
 +*salúyələ* 'He is praying'  
*šalúxələ* 'He is stripping'

### Pattern III

- madmúxələ* 'He is causing to sleep'  
*malyúzələ* 'He is hurrying'  
*maplúxələ* 'He is using'  
 +*makrútələ* 'He is cutting'

### Quadrilateral

- barbúzələ* 'He is scattering'  
*taxmúnələ* 'He is thinking'  
*čarčúrələ* 'He is screaming'  
 +*tartúmələ* 'He is annoying'

#### 4.8.2.2 Past Progressive

The past progressive is formed by combining the past copula with the progressive stem:

- |      |                     |                           |
|------|---------------------|---------------------------|
| 3ms. | <i>bəptáxəva</i>    | 'He was opening'          |
| 3fs. | <i>bəptáxəva</i>    | 'She was opening'         |
| 3pl. | <i>bəptáxəva</i>    | 'They were opening, etc.' |
| 2ms. | <i>bəptáxətva</i>   |                           |
| 2fs. | <i>bəptáxətva</i>   |                           |
| 2pl. | <i>bəptáxətunva</i> |                           |
| 1ms. | <i>bəptáxənva</i>   |                           |
| 1fs. | <i>bəptáxənva</i>   |                           |
| 1pl. | <i>bəptáxəxva</i>   |                           |

#### 4.8.2.3 Progressive Constructions with the Verb *'avə* I

The copula in the progressive construction can be replaced by various forms of the verb *'avə* I 'to be' (§ 4.14.8.). The most common construction is a double progressive consisting of the progressive of the verb *'avə* (*vayələ*) placed before the progressive of the lexical verb. This is used to express circumstantial actions (§ 10.13.15.):

3ms.	<i>váyəla bəptáxa</i>	'He is opening'
3fs.	<i>váyəla bəptáxa</i>	'She is opening'
3pl.	<i>váyəna bəptáxa</i>	'They are opening, etc.'
2ms.	<i>váyəvət bəptáxa</i>	
2fs.	<i>váyəvət bəptáxa</i>	
2pl.	<i>váyəvətun bəptáxa</i>	
1ms.	<i>váyəvən bəptáxa</i>	
1fs.	<i>váyəvən bəptáxa</i>	
1pl.	<i>váyəvəx bəptáxa</i>	

#### 4.9 Negation of Verbal Forms

The verbal forms are negated as follows.

##### 4.9.1 *la*

The most widely used verbal negator is the particle *la*. This negates present template verbal forms, e.g.

##### Positive Negated form

<i>patəx</i>	<i>la patəx</i>	'He does not open'
<i>patəxva</i>	<i>la patəxva</i>	'He used not to open'

It negates all verbal forms derived from the past template, e.g.

##### Positive Negated form

<i>ptəxlə</i>	<i>la ptəxlə</i>	'He did not open'
<i>ptəxvalə</i>	<i>la ptəxvalə</i>	'He had not opened'

It negates all imperatives, e.g.

##### Positive Negated form

<i>ptux</i>	<i>la ptux</i>	'Do not open!'
<i>ptuxun</i>	<i>la ptuxun</i>	'Do not open!'

A deontic construction containing the imperative *švuk*/*šuk* 'leave, allow' (§ 4.4.3.) may be negated by placing the negator *la* before the imperative, e.g.

##### Positive Negated form

<i>šuk patəx</i>	<i>la šuk patəx</i>	'May he not open'
------------------	---------------------	-------------------

By contrast, the negative particle is not placed before deontic constructions introduced by *xuš*. These must be negated by constructions with *šuk*:

**Positive      Negated form**

<i>xuš patəx</i>	<i>la šuk patəx</i>	'May he not open'
------------------	---------------------	-------------------

#### 4.9.2    *le*

The particle *le* is derived historically from a coalescence of the negator *la* and a particle *i*. As remarked (§ 4.4.1.), the particle *i* can be identified as a component of the habitual particle *ci-*. When a habitual verb is negated the *c-* element of the particle is removed. This negative habitual construction is also used to negate future verbs that in the positive have the future particle *bət-*:

**Positive      Negated form**

<i>ci-patəx</i>	<i>le patəx</i>	'He does not kill (habitually)'
<i>bət-patəx</i>	<i>le patəx</i>	'He will not kill'

Before a verb beginning with /y/ the vowel of *le* is often raised to /i/, e.g. *liyatʃən* 'I do not know.'

#### 4.9.3    *Negative Copula*

Compound verbal forms that combine the copula with the resultative participle or progressive stem are negated by replacing the positive copula with the negative copula. The negative copula is regularly placed before the participle or progressive stem, e.g.

**Positive      Negated form**

<i>ptíxələ</i>	<i>lélə ptíxa</i>	'He has not opened'
<i>bəptáxələ</i>	<i>lélə bəptáxa</i>	'He is not opening'

#### 4.10    Weak Verbs in Pattern I

It is a feature of many verbs with weak radicals that the morphological root exhibits variations across their various inflections (§ 4.1., § 4.15.). This applies mainly to the position of the weak radicals. For this reason from now on the present template will be used as the primary citation form of the verb with an indication of its pattern (I, II, III, QI, QII) rather than one particular form of the root, which may not apply to all inflections.

#### 4.10.1 *Verba Primae /Ø/*

Verbs in this category include *'arək* I ( $\emptyset$ -r-k) 'to run, to flee', *+aməd* I ( $+\emptyset$ -m-d) 'to be baptized', *+aməl* I ( $+\emptyset$ -m-l) 'to process, to put together', *+amər* I ( $+\emptyset$ -m-r) 'to reside', *+azəl* I ( $+\emptyset$ -z-l) 'to spin (wool)'. These verbs are historically initial \**c*.

##### 4.10.1.1 Present Template

An initial /'/ appears in the present template of verbs of this category:

- 3ms. *'árək* 'He flees'
- 3fs. *'árka* 'She flees'
- 3pl. *'árki* 'They flee'

The /'/ is added to ensure that the initial syllable has a consonant (§ 1.14.):

*/Øarək/ > +'axəl*

When the habitual particle *ci-* is prefixed, the /'/ is optionally elided, e.g.

*ci-'arək ~ c-arək* 'He flees'

The future particle *bət-* is optionally contracted to *þt-* or *t-*:

*bət-'arək ~ þt-arək ~ t-arək* 'He will flee'

The initial *a-* syllable is sometimes elided after a negative particle *la* or *le* in fast speech, e.g.

*lé-'arək ~ lé-rək* 'He will not flee'

##### 4.10.1.2 Past Template

- 3ms. *rik-*

In a closed syllable before L-suffixes the /i/ is shortened to /ə/ by the regular rule, e.g. *rəklə* 'He fled'.

#### 4.10.1.3 Resultative Participle

ms. *rík<sub>a</sub>*

fs. *rákta*

pl. *rík<sub>ə</sub>*

Compound form (perfect, inflected with a copula)

3ms. *ríkələ* ‘He has fled’

3fs. *rák<sub>t</sub>la* ‘She has fled’

3pl. *ríkəna* ‘They have fled’

#### 4.10.1.4 Imperative

sing. *rúk* ‘Flee!’

pl. *rúkun* ‘Flee!’

#### 4.10.1.5 Infinitive

*ráka*

#### 4.10.1.6 Progressive

*bərrák<sub>a</sub>*

Compound form (progressive pattern inflected with a copula)

3ms. *bərrák<sub>ələ</sub>* ‘He is fleeing’

3fs. *bərrák<sub>əla</sub>* ‘She is fleeing’

3pl. *bərrák<sub>əna</sub>* ‘They are fleeing’

The gemination of the /r/ in the progressive may have arisen by analogy with the pattern of the strong verb, i.e. *bəptáxa* (*bəCCÁCa*). It is also possible that these forms are derived from a suppletive root of the form *r-Ø-k*, and so correspond to the progressive of middle /Ø/ roots such as <sup>+</sup>*d-Ø-r* ‘to return’, progressive: <sup>+</sup>*bəddára* (§ 4.10.3.).

#### 4.10.1.7 Verbal Noun

*rákta*

#### 4.10.1.8 Active Participle

As in the present template, an initial /'/ is added to ensure that the initial syllable has a consonant:

- ms.    *'arkána*    'one who flees'  
 fs.    *'arkánta*    'one who flees'

Some differences are found in the morphology of this category across the varieties of the dialect. In Siri (S), for example, the present of 'to spin' is inflected as medial /y/, e.g. *+zayəl* 'he spins', *+zəlla* 'he span', *+bəzzaləla* 'he is spinning.'

#### 4.10.2 *Verba Primae* /Ø/ ~ *Primae* /y/

Verbs in this category include *'amər* I ( $\emptyset$ -m-r, y-m-r) 'to say', *+axəl* I ( $+\emptyset$ -x-l,  $+y$ -x-l) 'to eat'. They are historically initial \*.

##### 4.10.2.1 Present Template

An initial /'/ appears in the present template:

- 3ms.    *+áxəl*    'He eats'  
 3fs.    *+áxla*    'She eat'  
 3pl.    *+áxli*    'They eat'

The /'/ is added to ensure that the initial syllable has a consonant:

*/+Øaxəl/ > +axəl*

When the habitual particle *ci-* is prefixed, the /'/ is optionally elided, e.g.

*ci-+axəl ~ c-+axəl*    'He eats'

The future particle *bət-* is optionally contracted to *þt-* or *t-*:

*bət-+axəl ~ þt-+axəl ~ t-+axəl*    'He will eat'

The initial 'a- syllable is sometimes elided after a negative particle *la* or *le* in fast speech, e.g.

*lé-+axəl ~ l-+axəl*    'He will not eat'

#### 4.10.2.2 Past Template

- 3ms.   <sup>+</sup>*xil-*  
 3fs.   <sup>+</sup>*xila-*  
 3pl.   <sup>+</sup>*xile-*

Examples: <sup>+</sup>*xállə* 'He ate', <sup>+</sup>*xilállə* 'He ate it (f.)'

#### 4.10.2.3 Resultative Participle

- ms.   <sup>+</sup>*xíla*  
 fs.   <sup>+</sup>*xálta*  
 pl.   <sup>+</sup>*xilə*

Compound form (perfect, inflected with a copula)

- 3ms.   <sup>+</sup>*xílələ*   'He has eaten'  
 3fs.   <sup>+</sup>*xálta*   'She has eaten'  
 3pl.   <sup>+</sup>*xiləna*   'They have eaten'

#### 4.10.2.4 Imperative

- sing.   <sup>+</sup>*xúl*   'Eat!'  
 pl.   <sup>+</sup>*xúlun*   'Eat!'

#### 4.10.2.5 Infinitive

<sup>+</sup>*xála*

#### 4.10.2.6 Progressive

<sup>+</sup>*bixála*

Compound form (progressive, inflected with a copula)

- 3ms.   <sup>+</sup>*bixálələ*   'He is eating'  
 3fs.   <sup>+</sup>*bixáləla*   'She is eating'  
 3pl.   <sup>+</sup>*bixáləna*   'They are eating'

The /i/ vowel after the initial /b/ reflects the fact that the progressive construction is derived from the suppletive variant root  $+y\text{-}x\text{-}l$ . An initial /y/ radical is also identifiable in the noun  $+mixúlta$  ‘food’ (< \**møyxulta*) (§ 1.15.2.).

#### 4.10.2.7 Verbal Noun

$+xálta$

#### 4.10.2.8 Active Participle

As in the present template, an initial /’/ is added to ensure that the initial syllable has a consonant:

- |     |            |               |
|-----|------------|---------------|
| ms. | $+axlána$  | ‘(big) eater’ |
| fs. | $+axlánta$ | ‘(big) eater’ |

### 4.10.3 *Verba Mediae* /Ø/ ~ *Mediae* /y/

This category contains verbs that had a medial pharyngal \* $\cdot$  at some earlier stage of their development:  $+čayəd$  I ( $+č\text{-}\emptyset\text{-}d$ ,  $+č\text{-}y\text{-}d$ ) ‘to pare, hew’ (< \**g*- $\cdot$ *d*),  $+dayəl$  I ( $+d\text{-}\emptyset\text{-}l$ ,  $+d\text{-}y\text{-}l$ ) ‘to be sightless’,  $+dayər$  I ( $+d\text{-}\emptyset\text{-}r$ ,  $+d\text{-}y\text{-}r$ ) ‘to return’ (< \**d*- $\cdot$ *r*),  $+layəs$  I ( $+l\text{-}\emptyset\text{-}s$ ,  $+l\text{-}y\text{-}s$ ) ‘to chew’ (< \**l*- $\cdot$ *s*),  $+nayəs$  I ( $+n\text{-}\emptyset\text{-}s$ ,  $+n\text{-}y\text{-}s$ ) ‘to sting’ (< \**n*- $\cdot$ *s*),  $+rayəš$  I ( $+r\text{-}\emptyset\text{-}š$ ,  $+r\text{-}y\text{-}š$ ) ‘to wake’ (< \**r*- $\cdot$ *š* < \**r*-*g*-*š*),  $+sayən$  I ( $+s\text{-}\emptyset\text{-}n$ ,  $+s\text{-}y\text{-}n$ ) ‘to have darting pains’,  $+šayəl$  I ( $+š\text{-}\emptyset\text{-}l$ ,  $+š\text{-}y\text{-}l$ ) ‘to cough’ (< \**š*- $\cdot$ *l*),  $+šayər$  I ( $+š\text{-}\emptyset\text{-}r$ ,  $+š\text{-}y\text{-}r$ ) ‘to stoke a fire’ (< \**š*- $\cdot$ *r* < \**š*-*g*-*r*),  $+šayəš$  I ( $+š\text{-}\emptyset\text{-}š$ ,  $+š\text{-}y\text{-}š$ ) ‘to shake’ (< \**š*- $\cdot$ *š* < \**š*-*g*-*š*),  $+tayət$  I ( $+t\text{-}\emptyset\text{-}t$ ,  $+t\text{-}y\text{-}t$ ) ‘to sweat’ (< \**d*- $\cdot$ *t*),  $+tayəm$  I ( $+t\text{-}\emptyset\text{-}m$ ,  $+t\text{-}y\text{-}m$ ) ‘to taste’ (< \**t*- $\cdot$ *m*),  $+tayən$  I ( $+t\text{-}\emptyset\text{-}n$ ,  $+t\text{-}y\text{-}n$ ) ‘to bear’ (< \**t*- $\cdot$ *n*),  $+tayəp$  I ( $+t\text{-}\emptyset\text{-}p$ ,  $+t\text{-}y\text{-}p$ ) ‘to fold’ (< \**t*- $\cdot$ *p*),  $+tayəs$  I ( $+t\text{-}\emptyset\text{-}s$ ,  $+t\text{-}y\text{-}s$ ) ‘to stick in, thrust’ (< \**d*- $\cdot$ *s*),  $+tayəx$  ( $+t\text{-}\emptyset\text{-}x$ ,  $+t\text{-}y\text{-}x$ ) ‘to subside’ (< \**d*- $\cdot$ *x*). All inflections of these verbs except the progressive are derived from the suppletive roots with medial /y/. Their progressives exhibit variant forms, one derived from a medial /Ø/ root and one from a medial /y/ root.

#### 4.10.3.1 Present Template

In all inflections except the 3ms the medial /y/ is contracted, resulting in the occurrence of the vowel /e/ between the first and third radicals. In the 3ms the /y/ is optionally retained in the template *CayəC*, which corresponds to that of the strong verb. The 3ms. template *CayəC* is sometimes contracted to *CāC*, with a long /a/ rather than /e/ as in the rest of the paradigm:

- 3ms. +šáyəš ~ +šāš 'He shakes'  
 3fs. +šeša 'She shakes'  
 3pl. +šeši 'They shake'

#### 4.10.3.2 Past Template

- ms. +šiš-  
 fs. +šiša-  
 pl. +šiše-

Examples: +šášlə 'He shook', +šišálə 'He shook her', +šišélə 'He shook them'.

#### 4.10.3.3 Resultative Participle

- ms. +šiša  
 fs. +šešta  
 pl. +šišə

Compound form (perfect, inflected with a copula)

- 3ms. +šišələ 'He has shaken'  
 3fs. +šeštəla 'She has shaken'  
 3pl. +šišəna 'They have shaken'

#### 4.10.3.4 Imperative

- sing. +šúš 'Shake!'  
 pl. +šušun 'Shake!'

#### 4.10.3.5 Infinitive

+šyáša (< +š-y-š)

#### 4.10.3.6 Progressive

+bəššáša (< +š-Ø-š) ~ +bəšyáša (< +š-y-š)

Compound form (progressive, inflected with a copula)

- 3ms.  $+bəššášələ \sim +bəšyášələ$  ‘He is shaking’  
 3fs.  $+bəššášəla \sim +bəšyášəla$  ‘She is shaking’  
 3pl.  $+bəššášəna \sim +bəšyášəna$  ‘They are shaking’

#### 4.10.3.7 Verbal Noun

$+šyášta$

#### 4.10.3.8 Active Participle

- ms.  $+šešána$  ‘shaker’  
 fs.  $+šešánta$  ‘shaker’

### 4.10.4 *Verba Mediae /y/*

This category includes: *čayəd* I (*č-y-d*) ‘to invite’, *čayəl* I (*č-y-l*) ‘to flick (with hand)’, *cayəl* I (*c-y-l*) ‘to measure’, *cayəm* I (*c-y-m*) ‘to become black’, *cayəp* I (*c-y-p*) ‘to bend down’, *cayəš* I (*c-y-š*) ‘to be settled (a debt)’, *dayən* I (*d-y-n*) ‘to judge’, *dayəš* I (*d-y-š*) ‘to tread’, *kayəm* I (*k-y-m*) ‘to rise’, *kayət* I (*k-y-t*) ‘to knock’, *kayəx* I (*k-y-x*) ‘to dry (grass)’, *layəm* I (*l-y-m*) ‘to blame’, *mayəj* I (*m-y-j*) ‘to dissolve’, *mayət* I (*m-y-t*) ‘to die’, *nayəm* I (*n-y-m*) ‘to snooze’, *nayəx* I (*n-y-x*) ‘to go to one’s rest, to die’, *payəc* I (*p-y-c*) ‘to become tasteless’, *payəx* I (*p-y-x*) ‘to become cool’, *rayək* I (*r-y-k*) ‘to spit’, *šatəl* I (*š-t-l*) ‘to plant (seedlings)’, *šayəc* I (*š-y-c*) ‘to deflate’, *sayəl* I (*s-y-l*) ‘to copulate’, *sayəm* I (*s-y-m*) ‘to ordain’, *šayəp* I (*š-y-p*) ‘to rub’, *tayəc* I (*t-y-c*) ‘to plant’, *tayəm* I (*t-y-m*) ‘to finish’, *tayər* I (*t-y-r*) ‘to recover’, *xayəc* I (*x-y-c*) ‘to rub’, *xayəm* I (*x-y-m*) ‘to become on heat (sexually)’, *xayəp* I (*x-y-p*) ‘to wash, to shower’, *xayər* I (*x-y-r*) ‘to look’, *zayəd* I (*z-y-d*) ‘to increase’, *zayər* I (*z-y-r*) ‘to swell’, *+čayər* I (*+č-y-r*) ‘to take offense’, *+čayəm* I (*+č-y-m*) ‘to close (tr. and intr.)’, *+jayər* I (*+j-y-r*) ‘to urinate’, *+kayəs* I (*+k-y-s*) ‘to bruise’, *+layət* I (*+l-y-t*) ‘to curse’, *+mayəs* I (*+m-y-s*) ‘to suck’, *+rayəp* I (*+r-y-p*) ‘to roost (birds)’, *+rayəs* I (*+r-y-s*) ‘to sprinkle’, *+rayət* I (*+r-y-t*) ‘to break wind (noisily)’, *+sayəd* I (*+s-y-d*) ‘to hunt’, *+sayəm* I (*+s-y-m*) ‘to fast’, *+sayəp* I (*+s-y-p*) ‘to drain (intr.)’, *+šarət* I (*+š-r-t*) ‘to pull off’, *+xayət* I (*+x-y-t*) ‘to sew’.

Several of these verbs were historically final geminate, e.g. *+čayəm* I ‘to close’ I (< \*t-m-m), *+mayəs* I ‘to suck’ (< \*m-š-š), *xayəc* I ‘to rub’ (< \*kk).

#### 4.10.4.1 Present Template

In all inflections except the 3ms the medial /y/ is contracted, resulting in the occurrence of the vowel /e/ between the first and third radicals. In the 3ms the

/y/ is optionally retained in the template *CayəC*, which corresponds to that of the strong verb. The 3ms. template *CayəC* is sometimes contracted to *CāC*, with a long /a/ rather than /e/ as in the rest of the paradigm:

- |      |   |              |
|------|---|--------------|
| 3ms. | <sup>+</sup> <i>láyət̪</i> ~ <sup>+</sup> <i>lāt̪</i> | 'He curses'  |
| 3fs. | <sup>+</sup> <i>lēta</i>                              | 'She curses' |
| 3pl. | <sup>+</sup> <i>lēti</i>                              | 'They curse' |

#### 4.10.4.2 Past Template

- |     |                            |
|-----|----------------------------|
| ms. | <sup>+</sup> <i>lit̪-</i>  |
| fs. | <sup>+</sup> <i>lit̪a-</i> |
| pl. | <sup>+</sup> <i>lite-</i>  |

Examples: <sup>+</sup>*lētlə* 'He cursed', <sup>+</sup>*lit̪alə* 'He cursed her', <sup>+</sup>*lit̪elə* 'He cursed them'.

#### 4.10.4.3 Resultative Participle

- |     |                            |
|-----|----------------------------|
| ms. | <sup>+</sup> <i>lit̪a</i>  |
| fs. | <sup>+</sup> <i>lətt̪a</i> |
| pl. | <sup>+</sup> <i>lit̪a</i>  |

Compound form (perfect, inflected with a copula)

- |      |                              |                    |
|------|------------------------------|--------------------|
| 3ms. | <sup>+</sup> <i>lít̪ələ</i>  | 'He has cursed'    |
| 3fs. | <sup>+</sup> <i>látt̪əla</i> | 'She has cursed'   |
| 3pl. | <sup>+</sup> <i>lít̪əna</i>  | 'They have cursed' |

#### 4.10.4.4 Imperative

- |       |                            |          |
|-------|----------------------------|----------|
| sing. | <sup>+</sup> <i>lút̪</i>   | 'Curse!' |
| pl.   | <sup>+</sup> <i>lút̪un</i> | 'Curse!' |

The verb *kym* is irregular in that the final radical /m/ is elided in the singular form:

- |       |              |         |
|-------|--------------|---------|
| sing. | <i>kú</i>    | 'Rise!' |
| pl.   | <i>kúmun</i> | 'Rise!' |

## 4.10.4.5 Infinitive

<sup>+</sup>*lyáṭa*

## 4.10.4.6 Progressive

<sup>+</sup>*bəlyáṭa*

Compound form (progressive, inflected with a copula)

- 3ms.   <sup>+</sup>*bəlyáṭələ*   ‘He is cursing’  
 3fs.   <sup>+</sup>*bəlyáṭəla*   ‘She is cursing’  
 3pl.   <sup>+</sup>*bəlyáṭəna*   ‘They are cursing’

## 4.10.4.7 Verbal Noun

<sup>+</sup>*lyáṭta*

## 4.10.4.8 Active Participle

- ms.   <sup>+</sup>*leṭána*   ‘curser’  
 fs.   <sup>+</sup>*leṭánta*   ‘curser’

4.10.5 *Verba Primae /y/, Mediae /∅/*

This category includes the verb <sup>+</sup>*yØr* ‘to dare’, the historical root of which had a medial pharyngal (\**y'r*).

## 4.10.5.1 Present Template

The inflections have a long /a/ throughout the paradigm. This differs from middle /∅/ verbs with strong first and third radicals, such as <sup>+</sup>*s-Ø-s* ‘to shake’, which are inflected like middle *y* verbs in the present:

- 3ms.   <sup>+</sup>*yár*           ‘He dares’   < *yaØr*  
        also <sup>+</sup>*yara*  
 3fs.   <sup>+</sup>*yára*           ‘She dares’   < *yaØra*  
 3pl.   <sup>+</sup>*yári*           ‘They dare’   < *yaØri*

## 4.10.5.2 Past Template

3ms. <sup>†</sup>*yir-*

Example: <sup>†</sup>*yórra* 'He dared'.

## 4.10.5.4 Resultative Participle

ms. <sup>†</sup>*yira*

fs. <sup>†</sup>*yørta*

pl. <sup>†</sup>*yirə*

Compound form (perfect, inflected with a copula)

3ms. *lélə* <sup>†</sup>*yíra* 'He has not dared'

3fs. *lélə* <sup>†</sup>*yórra* 'She has not dared'

3pl. *léna* <sup>†</sup>*yirə* 'They have not dared'

## 4.10.5.5 Imperative

sing. <sup>†</sup>*yúr* 'Dare!'

pl. <sup>†</sup>*yúrun* 'Dare!'

## 4.10.5.6 Infinitive

<sup>†</sup>*yára*

## 4.10.5.7 Progressive

<sup>†</sup>*bøyyára*

Compound form (progressive, inflected with a copula)

3ms. *lélə* <sup>†</sup>*bøyyára* 'He does not dare'

3fs. *lélə* <sup>†</sup>*bøyyára* 'She does not dare'

3pl. *léna* <sup>†</sup>*bøyyára* 'They do not dare'

## 4.10.5.8 Verbal Noun

<sup>†</sup>*yárta*

#### 4.10.6 *Verba Primae /Ø/, Mediae /y/*

This category includes the verbs *'ayək* I ( $\emptyset$ -y-k) 'to become tight, narrow' (< \*<sup>c</sup>-y-q) and *+ayəd* (+ $\emptyset$ -y-d) 'to weed' (< \*<sup>c</sup>-d-d), which are derived from roots with a historical initial pharyngal.

##### 4.10.6.1 Present Template

- |      |                           |             |
|------|---------------------------|-------------|
| 3ms. | <i>+áyəd</i> ~ <i>+ád</i> | 'He weeds'  |
| 3fs. | <i>+éda</i>               | 'She weeds' |
| 3pl. | <i>+édi</i>               | 'They weed' |

##### 4.10.6.2 Past Template

- 3ms. *+id-*

Example: *+ódlə* 'He weeded', *+idálə* 'He weeded it (f.)', *+idélə* 'He weeded them'.

##### 4.10.6.3 Resultative Participle

- |     |              |
|-----|--------------|
| ms. | <i>+ida</i>  |
| fs. | <i>+ətta</i> |
| pl. | <i>+idə</i>  |

Compound form (perfect, inflected with a copula)

- |      |                |                    |
|------|----------------|--------------------|
| 3ms. | <i>+ídələ</i>  | 'He has weeded'    |
| 3fs. | <i>+óttəla</i> | 'She has weeded'   |
| 3pl. | <i>+idəna</i>  | 'They have weeded' |

##### 4.10.6.4 Imperative

- |       |              |         |
|-------|--------------|---------|
| sing. | <i>+úd</i>   | 'Weed!' |
| pl.   | <i>+údun</i> | 'Weed!' |

##### 4.10.6.5 Infinitive

- +yáda*

#### 4.10.6.6 Progressive

*+bəyyáda*

Compound form (progressive, inflected with a copula)

- |      |                   |                    |
|------|-------------------|--------------------|
| 3ms. | <i>+bəyyádələ</i> | 'He is weeding'    |
| 3fs. | <i>+bəyyádəla</i> | 'She is weeding'   |
| 3pl. | <i>+bəyyádəna</i> | 'They are weeding' |

#### 4.10.6.7 Verbal Noun

*+yáttə*

#### 4.10.6.8 Active Participle

- |     |                 |          |
|-----|-----------------|----------|
| ms. | <i>+yedána</i>  | 'weeder' |
| fs. | <i>+yedánta</i> | 'weeder' |

### 4.10.7 *Verba Mediae /y/ ~ Primaе /Ø/*

This category includes *+ákər* I ( $+\emptyset\text{-}k\text{-}r$ ,  $+\text{k}\text{-}y\text{-}r$ ) 'to dig', *ákəš* I ( $\emptyset\text{-}k\text{-}\check{s}$ ,  $\text{k}\text{-}y\text{-}\check{s}$ ) 'to become cool' and *+arət* I ( $+\emptyset\text{-}r\text{-}\check{t}$ ,  $+\text{r}\text{-}y\text{-}\check{t}$ ) 'to break wind (noisily)'. The initial  $/\emptyset/$  root is found only in the present. In all other inflections the middle  $/y/$  root is used.

#### 4.10.7.1 Present Template

The verbs *+ákər* I 'to dig' and *+arət* 'to break wind' use forms derived from both roots in the present:

- |      |              |            |                   |            |
|------|--------------|------------|-------------------|------------|
| 3ms. | <i>+ákər</i> | 'He digs'  | <i>+káyər/kār</i> | 'He digs'  |
| 3fs. | <i>+ákra</i> | 'She digs' | <i>+kéra</i>      | 'She digs' |
| 3pl. | <i>+ákri</i> | 'They dig' | <i>+kéri</i>      | 'They dig' |

The verb 'to become cool' uses the root  $\emptyset\text{-}k\text{-}\check{s}$  in the present:

- |      |             |                     |
|------|-------------|---------------------|
| 3ms. | <i>ákəš</i> | 'He becomes cool'   |
| 3fs. | <i>ákša</i> | 'She becomes cool'  |
| 3pl. | <i>ákši</i> | 'They becomes cool' |

## 4.10.7.2 Past Template

Medial /y/

- 3ms.    +*kir-*  
 3fs.    +*kira-*  
 3pl.    +*kire-*

Examples: +*kárrə* 'He dug', +*királə* 'He dug it (f.)', +*kiréla* 'He dug them'.

## 4.10.7.3 Resultative Participle

Medial /y/

- ms.    +*kira*  
 fs.    +*kərta*  
 pl.    +*kirə*

Compound form (perfect, inflected with a copula)

- 3ms.    +*kíralə*    'He has dug'  
 3fs.    +*kártəla*    'She has dug'  
 3pl.    +*kírəna*    'They have dug'

## 4.10.7.4 Imperative

Medial /y/

- sing.    +*kúr*    'Dig!'  
 pl.    +*kúrun*    'Dig!'

## 4.10.7.5 Infinitive

Medial /y/

+*kyára*

#### 4.10.7.6 Progressive

Medial /y/

<sup>+</sup>bəkyára

Compound form (progressive, inflected with a copula)

- |      |                        |                    |
|------|------------------------|--------------------|
| 3ms. | <sup>+</sup> bəkyáralə | 'He is digging'    |
| 3fs. | <sup>+</sup> bəkyárla  | 'She is digging'   |
| 3pl. | <sup>+</sup> bəkyáraṇa | 'They are digging' |

#### 4.10.7.7 Verbal Noun

Medial /y/

<sup>+</sup>kyárta

#### 4.10.7.8 Active Participle

Medial /y/

- |     |                      |          |
|-----|----------------------|----------|
| ms. | <sup>+</sup> kerána  | 'digger' |
| fs. | <sup>+</sup> keránta | 'digger' |

### 4.10.8 *Verba Mediae /y/ ~ Primaе /y/*

A few verbs are conjugated as middle /y/ verbs in all forms except in the present template and the active participle, in which they are treated as initial /y/, e.g. *yakəd* I (*y-k-d*, *k-y-d*) 'to burn (intr.)', *yaləd* I (*y-l-d*, *d-y-l*) 'to give birth', *yaləp* I (*y-l-p*, *l-y-p*) 'to learn', *yarəx* I (<sup>+</sup>*y-r-x*, <sup>+</sup>*r-y-x*) 'to become long, to stretch out', *yasər* I (<sup>+</sup>*y-s-r*, <sup>+</sup>*s-y-r*) 'to tie', *yarəm* I (<sup>+</sup>*y-r-m*, <sup>+</sup>*r-y-m*) 'to get up and go'. The verb *'asək*, *yasək* I (*Ø-s-k*, *y-s-k*, *s-y-k*) 'to ascend' alternates between an initial /Ø/ root and an initial /y/ root in the present and active participle.

#### 4.10.8.1 Present Template

Initial /y/

- |      |              |              |
|------|--------------|--------------|
| 3ms. | <i>yáləp</i> | 'He learns'  |
| 3fs. | <i>yálpa</i> | 'She learns' |
| 3pl. | <i>yálpi</i> | 'They learn' |

Initial /Ø/ ~ initial /y/ 'to ascend'

- |      |               |   |               |               |
|------|---------------|---|---------------|---------------|
| 3ms. | <i>‘ásək</i>  | ~ | <i>yásək</i>  | 'He ascends'  |
| 3fs. | <i>‘áska</i>  | ~ | <i>yáska</i>  | 'She ascends' |
| 3pl. | <i>‘ás̥ki</i> | ~ | <i>yás̥ki</i> | 'They ascend' |

Some differences are found in the morphology of this category across the varieties of the dialect. In Guylasa (Armenia), for example, the present of 'tie' is inflected as medial /y/, e.g. *+sayər* 'he ties.'

#### 4.10.8.2 Past Template

Medial /y/

- |      |              |
|------|--------------|
| 3ms. | <i>lip-</i>  |
| 3fs. | <i>lipa-</i> |
| 3pl. | <i>lipe-</i> |

Examples: *lóplə* 'He learnt', *lipálə* 'He learnt it (f.)', *lipélə* 'He learnt them'.

#### 4.10.8.3 Resultative Participle

Medial /y/

- |     |              |
|-----|--------------|
| ms. | <i>lípa</i>  |
| fs. | <i>lópta</i> |
| pl. | <i>lípə</i>  |

Compound form (perfect, inflected with a copula)

- |      |                |                    |
|------|----------------|--------------------|
| 3ms. | <i>lípələ</i>  | 'He has learnt'    |
| 3fs. | <i>lóptəla</i> | 'She has learnt'   |
| 3pl. | <i>lípəna</i>  | 'They have learnt' |

#### 4.10.8.4 Imperative

Medial /y/

- |       |              |          |
|-------|--------------|----------|
| sing. | <i>lúp</i>   | 'Learn!' |
| pl.   | <i>lúpun</i> | 'Learn!' |

#### 4.10.8.5 Infinitive

Medial /y/

*lyápa*

#### 4.10.8.6 Progressive

Medial /y/

*bəlyápa*

Compound form (progressive, inflected with a copula)

- |      |                  |                     |
|------|------------------|---------------------|
| 3ms. | <i>bəlyápələ</i> | 'He is learning'    |
| 3fs. | <i>bəlyápəla</i> | 'She is learning'   |

#### 4.10.8.7 Verbal Noun

Medial /y/

*lyápta*

#### 4.10.8.8 Active Participle

Initial /y/

- |     |                 |           |
|-----|-----------------|-----------|
| ms. | <i>yalpána</i>  | 'learner' |
| fs. | <i>yalpánta</i> | 'learner' |

### 4.10.9 *Verba Tertiae /y/*

Verbs in this category include *bada* I (*b-d-y*) 'to become delirious', *balə* I (*b-l-y*) 'to wear out', *banə* I (*b-n-y*) 'to build, to count', *barə* I (*b-r-y*) 'to create, to be born', *baxə* I (*b-x-y*) 'to weep', *calə* I (*c-l-y*) 'to stop, to stand', *carə* I (*c-r-y*) 'to become short', *damə* I (*d-m-y*) 'to resemble', *dara* I (*d-r-y*) 'to pour', *daxə* I (*d-x-y*) 'to become pure', *jaba* I (*j-b-y*) 'to foam, boil over', *jalə* I (*j-l-y*) 'to reveal', *jana* I (*j-n-y*) 'to lean down; to set (sun)', *jasə* I (*j-s-y*) 'to vomit', *kalə* I (*k-l-y*) 'to become fried', *kana* I (*k-n-y*) 'to gain', *kapə* I (*k-p-y*) 'to gather; to seize; to catch', *kašə* I (*k-š-y*) 'to become thick', *lakə* I (*l-k-y*) 'to lap up (liquid)', *lapə* I (*l-p-y*) 'to devour

greedily, to gulp', *malə* I (*m-l-y*) 'to fill', *manə* I (*m-n-y*) 'to count', *masə* I (*m-s-y*) 'to wash (clothes)', *mašə* I (*m-š-y*) 'to wipe', *maxə* I (*m-x-y*) 'to hit', *nada* I (*n-d-y*) 'to leap', *nahə* I (*n-h-y*) 'to have the heart to (do sth.)', *nakə* I (*n-k-y*) 'to gulp down', *palə* I (*p-l-y*) 'to delouse', *panə* I (*p-n-y*) 'to be annihilated', *parə* I (*p-r-y*) 'to burst out', *pašə* I (*p-š-y*) 'to fart (silently)', *pata* I (*p-t-y*) 'to become broad', *raja* I (*r-f-y*) 'to become tired', *rapə* I (*r-p-y*) 'to become loose', *šalə* I (*š-l-y*) 'to become quiet', *samə* I (*s-m-y*) 'to become blind', *šanə* I (*š-n-y*) 'to faint', *sanə* I (*s-n-y*) 'to hate', *sapə* I (*s-p-y*) 'to draw off (liquid)', *sara* I (*s-r-y*) 'to become bad, putrid', *šakə* I (*s-k-y*) 'to run away (out of fear)', *šatə* I (*š-t-y*) 'to drink', *saxə* I (*s-x-y*) 'to swim', *šry* I (*š-r-y*) 'to loosen', *tala* I (*t-l-y*) 'to hang', *tana* I (*t-n-y*) 'to repeat', *tapə* I (*t-p-y*) 'to stick', *tarə* I (*t-r-y*) 'to become wet', *xadə* I (*x-d-y*) 'to rejoice', *xama* I (*x-m-y*) 'to leaven (tr. and intr.)', *xanə* I (*x-n-y*) 'to be happy (with *b*-)', *xapə* I (*x-p-y*) 'to brood (hen), to crouch', *xara*, *+xara* I (*x-r-y*, *+x-r-y*) 'to defecate', *xasə* I (*x-s-y*) 'to castrate', *žadə* I (*ž-d-y*) 'to comb out (flax)', *zanə* I (*z-n-y*) 'to fornicate, to commit adultery', *zavə* I (*z-v-y*) 'to inflate (intr.)', *+jarə* I (*+j-ry*) 'to flow', *+kara* I (*+k-r-y*) 'to read, to study', *+masə* I (*+m-s-y*) 'to be able', *+maṭə* I (*+m-ṭ-y*) 'to arrive', *+pasə* I (*+p-s-y*) 'to be delivered', *+pašə* I (*+p-š-y*) 'to become lukewarm', *+rada* I (*+r-d-y*) 'to be pleased with', *+ramə* I (*+r-m-y*) 'to cast', *+salə* I (*+s-l-y*) 'to descend', *+sape* I (*+s-p-y*) 'to become clean', *+šatə* I (*+š-ṭ-y*) 'to collapse', *+satə* I (*+s-ṭ-y*) 'to swoop', *+tarə* I (*+ṭ-r-y*) 'to drive', *+tašə* I (*+ṭ-š-y*) 'to become hidden', *+xalə* I (*+x-l-y*) 'to become sweet', *+xatə* I (*+x-ṭ-y*) 'to sin'.

#### 4.10.9.1 Present Template

In addition to the default present inflection, the long forms are also given, which are used in some villages:

	<b>Default</b>	<b>Long</b>	
3ms.	<i>dárə</i>	<i>daríni</i>	'He pours'
3fs.	<i>dárya</i>	<i>daryáni</i>	'She pours'
3pl.	<i>dári</i>	<i>daríni</i>	'They pour', etc.
2ms.	<i>dárət</i>	<i>darítən</i>	
2fs.	<i>dáryat</i>	<i>daryátən</i>	
2pl.	<i>darítun</i>	<i>darítun</i>	
1ms.	<i>dárən</i>	<i>darína</i>	
1fs.	<i>dáryan</i>	<i>daryána</i>	
1pl.	<i>dárax</i>	<i>daráxən</i>	

When the past suffix *-va* is added to final /y/ verbs, the distinction between the 3ms and 3pl. is levelled, in that both have the vowel /i/ before the suffix:

3ms.	<i>daríva</i>	'He used to pour'
3fs.	<i>daryáva</i>	'She used to pour'
3pl.	<i>daríva</i>	'They used to pour', etc.
2ms.	<i>darátva</i>	
2fs.	<i>daryátva</i>	
2pl.	<i>darítunva</i>	
1ms.	<i>daránva</i>	
1fs.	<i>daryánva</i>	
1pl.	<i>daráxva</i>	

#### 4.10.9.2 Past Template

ms.	<i>dri-</i>
fs.	<i>darya-</i>
pl.	<i>dorye-</i>

Examples: *dríla* 'He poured', *daryálə* 'He poured it (f.)', *daryélə* 'He poured them'.

#### 4.10.9.3 Resultative Participle

ms.	<i>dárya</i>
fs.	<i>drítə</i>
pl.	<i>dáryə</i>

Compound form (perfect, inflected with a copula)

3ms.	<i>dáryələ</i>	'He has poured'
3fs.	<i>drítələ</i>	'She has poured'
3pl.	<i>dáryəna</i>	'They have poured'

#### 4.10.9.4 Imperative

The plural imperative has the ending *-mun* with an /m/ element intervening between the vowel of the base and the plural inflection *-un*:<sup>2</sup>

---

<sup>2</sup> According to Yushmanov (1935) this has arisen by analogy with the imperatives of the verb *kayəm* i 'to rise', in the singular of which the /m/ of the root is elided: *ku* 'rise!' (sing.), *kúmun* 'rise!' (pl.). Since the /m/ is not present in the singular imperative, the /m/ of the plural imperative is reanalysed, Yushmanov argues, as part of the inflectional ending rather than the root and this was then extended by analogy to other verbs that end in a vowel in the singular imperative.

- sing. *dri* 'Pour!'  
 pl. *drímun* 'Pour!'

In some NENA dialects a distinction is made in the form of the ms. and the fs. imperatives of final /y/ verbs, but this has been levelled in the C. Urmî dialect.

#### 4.10.9.5 Infinitive

*dráya*

#### 4.10.9.6 Progressive

*bədráya ~ bədrá*

The shortening of the ending in the form *bədrá* is a feature of the progressive base and rarely takes place in the infinitive. The short form is optionally used when the progressive base does not have an enclitic copula.

Compound form (progressive, inflected with a copula). When the copula is enclitic the progressive stem with final /y/ is used. When a form of the copula is placed before the infinitive both variants are used:

- 3ms. *bədráyələ* 'He is pouring'  
 3fs. *bədráyəla* 'She is pouring'  
 3pl. *bədráyəna* 'They are pouring', etc.

- 3ms. *lélə bədráya ~ lélə bədrá* 'He is not pouring'  
 3fs. *lélə bədráya ~ lélə bədrá* 'She is not pouring'  
 3pl. *léna bədráya ~ léna bədrá* 'They are not pouring'

The verb *bxy* 'to weep', optionally uses the irregular progressive stem *bəxyə*, which is a form of verbal noun (§ 5.2.1.14.):

- 3ms. *báxyələ* 'He is weeping'  
 3fs. *báxyəla* 'She is weeping'  
 3pl. *báxyəna* 'They are weeping'

#### 4.10.9.7 Verbal Noun

*dréta*

#### 4.10.9.8 Active Participle

- ms. *baxyána* ‘weeper’  
 fs. *baxyánta* ‘weeper’

#### 4.10.10 *Verba Primae /Ø/, Tertiae /y/*

This category includes the verb *'arə* *i* (*Ø-r-y*) ‘to set (liquid)’, which is historically initial \*<sup>c</sup>.

##### 4.10.10.1 Present

	Default	Long
3ms.	<i>'árə</i>	<i>'aríni</i>
3fs.	<i>'árya</i>	<i>'aryáni</i>
3pl.	<i>'ári</i>	<i>'aríni</i>

‘It (m.) sets’  
 ‘It (f.) sets’  
 ‘They set’

##### 4.10.10.2 Past Template

- ms. *ri-*

Example: *rila* ‘It (m.) set’.

##### 4.10.10.3 Resultative Participle

- ms. *'árya*  
 fs. *rítā*  
 pl. *'áryə*

Compound form (perfect, inflected with a copula)

- 3ms. *ríyyələ* ‘It (m.) has set’  
 3fs. *rítəla* ‘It (f.) has set’  
 3pl. *ríyyəna* ‘They have set’

##### 4.10.10.4 Infinitive

*ráya*

#### 4.10.10.5 Progressive

*bərráya* ~ *bərrá*

Compound form (progressive, inflected with a copula)

- |      |                  |                      |
|------|------------------|----------------------|
| 3ms. | <i>bərráyələ</i> | 'It (m.) is setting' |
| 3fs. | <i>bərráyəla</i> | 'It (m.) is setting' |
| 3pl. | <i>bərráyəna</i> | 'They are setting'   |

- 3ms. *lélə bərráya* ~ *lélə bərrá* 'It (m.) is not setting'

#### 4.10.10.6 Verbal Noun

*réta*

#### 4.10.11 *Verba Tertiae* /Ø/ ~ *Tertiae* /y/

Verbs in this category include *+ballə* I (+*b-l-*Ø, +*b-l-y*) 'to swallow', *+bazzə* I (+*b-z-*Ø, +*b-z-y*) 'to cleave, make a hole', *+čamma* I (+*č-m-*Ø, +*č-m-y*) 'to extinguish (intr.)', *+jamma* I (+*j-m-*Ø, +*j-m-y*) 'to gather (intr.)', *+jarra* I (+*j-r-*Ø, +*j-r-y*) 'to shave', *+kaččə* I (+*k-č-*Ø, +*k-č-y*) 'to pull off', *+kassə* I (+*k-s-*Ø, +*k-s-y*) 'to break off', *+kattə* I (+*k-t-*Ø, +*k-t-y*) 'to cut', *+marrə* I (+*m-r-*Ø, +*m-r-y*) 'to become ill', *+mazzə* I (+*m-z-*Ø, +*m-z-y*) 'to mix (liquid)', *+navvə* I (+*n-v-*Ø, +*n-v-y*) 'to spring up (water)', *+parra* I (+*p-r-*Ø, +*p-r-y*) 'to pay', *+passə* I (+*p-s-*Ø, +*p-s-y*) 'to step, march', *+savvə* I (+*s-v-*Ø, +*s-v-y*) 'to become sated', *+šamma* I (+*š-m-*Ø, +*š-m-y*) 'to hear', *+tabbə* I (+*t-b-*Ø, +*t-b-y*) 'to obey', *+tabbə* I (+*t-b-*Ø, +*t-b-y*) 'to sink', *+tallə* I (+*t-l-*Ø, +*t-l-y*) 'to sleep', *+tamə* I (+*t-m-*Ø, +*t-m-y*) 'to taste', *+tavvə* I (+*t-v-*Ø, +*t-v-y*) 'to print', *+zallə* I (+*z-l-*Ø, +*z-l-y*) 'to split (intr. and tr.)', *+zarra* I (+*z-r-*Ø, +*z-r-y*) 'to cultivate', *čamma* I (*č-m-*Ø, *č-m-y*) 'to scorch', *þakkə* I (*þ-k-*Ø, *þ-k-y*) 'to split (intr.)', *xammə* I (*x-m-*Ø, *x-m-y*) 'to ferment', *xazzə* I (*x-z-*Ø, *x-z-y*) 'to see'.

These verbs originally had a voiced pharyngal \*<sup>c</sup> as final radical, e.g. *+jarra* 'to shave' (< \**g-r-*<sup>c</sup>), *+marrə* 'to become ill' (< \**m-r-*<sup>c</sup>), *+šamma* 'to hear' (< *š-m-*<sup>c</sup>). This pharyngal has now been reduced to zero. The process would have involved an initial weakening to a laryngal (\*<sup>c</sup> > \*<sup>v</sup> > Ø). The laryngal still exists in the paradigms of these verbs in some NENA dialects, e.g. C. Qaraqosh *šama* 'to hear' (Khan 2002, § 8.8.3.). The historical presence of the pharyngal has left its mark in the emphatic setting of most verbs of this category. Note, however, that a few words have a plain setting, e.g. *þakkə* 'to split', *xammə* 'to ferment'. The verbs of this category have become assimilated to the category of final /y/ verbs in most

of their inflections. In the present template, however, they exhibit patterns that differ from final /y/ verbs and reflect the historical presence of the pharyngal. These verbs, therefore, have two suppletive roots, final /Ø/ in the present and final /y/ in other inflections. This overlap in the inflectional patterns of final /Ø/ and final /y/ verbs facilitated the reanalysis of the originally final /y/ verb \**x-z-y* ‘to see’ as belonging to this category.

#### 4.10.11.1 Present

##### Final /Ø/

3ms.	+šámmə	‘He hears’
3fs.	+šámma	‘She hears’
3pl.	+šámmi	‘They hear’, etc.
2ms.	+šámmat	
2fs.	+šámmat	
2pl.	+šammítun	
1ms.	+šámmən	
1fs.	+šámmən	
1pl.	+šámməx	

These forms have developed as follows. In all of the paradigm except the 3ms form the /a/ vowel after the first radical was originally in a closed syllable due to the presence of the laryngal \*<sup>ʔ</sup>. The laryngal was elided and the syllable structure was adjusted by geminating the second radical after the short /a/:

\*šam<sup>č</sup>a > \*šam<sup>č</sup>a > \*+šáma > +šamma

The pattern of the base *CaCC-* was then extended by analogy to the 3ms form, in which the /a/ was historically never in a closed syllable and so was not shortened due to its original syllabic structure (\*šama'). The morphological root of all forms except the 3ms can be identified as š-m-Ø. The 3ms +šámma has the same pattern as final /y/ quadriliteral verbs (§ 4.13.1.) and so its root can be identified as +š-mm-y or +š-mØ-y. The less abstract root form +š-mm-y is opted for here.

In the remaining inflectional paradigms, all verbs with a historical final laryngal have become assimilated to the patterns of trilateral final /y/ verbs (+š-m-y). If the morphological root of the 3ms present form is included, verbs of this category can be said to have three suppletive roots rather than two, e.g. +šamma I (+š-m-Ø, +š-mm-y, +š-m-y).

The verb *+zadə* ‘to fear’, which had an original final pharyngal, \**zd'*, is treated as a triliteral final /y/ verb in all forms, including the inflections of the present template, e.g. *+zadə* (3ms.), *+zadya* (3fs.), etc. The verb ‘to see’ is inflected in the present template in two alternative forms, one derived from the historical final /y/ root *x-z-y* and the other derived from the secondary root *x-z-Ø*:

- |      |              |              |                  |
|------|--------------|--------------|------------------|
| 3ms. | <i>xázə</i>  | <i>xázzə</i> | ‘He sees’        |
| 3fs. | <i>xázya</i> | <i>xázza</i> | ‘She sees’       |
| 3pl. | <i>xázi</i>  | <i>xázzi</i> | ‘They see’, etc. |

When the past suffix *-va* is added to final /Ø/ verbs, the distinction between the 3ms and 3pl. is levelled, in that both have the vowel /i/ before the suffix:

- |      |                    |                           |
|------|--------------------|---------------------------|
| 3ms. | <i>+šammíva</i>    | ‘He used to hear’         |
| 3fs. | <i>+šammáva</i>    | ‘She used to hear’        |
| 3pl. | <i>+šammíva</i>    | ‘They used to hear’, etc. |
| 2ms. | <i>+šammátva</i>   |                           |
| 2fs. | <i>+šammátva</i>   |                           |
| 2pl. | <i>+šammítunva</i> |                           |
| 1ms. | <i>+šammánva</i>   |                           |
| 1fs. | <i>+šammánva</i>   |                           |
| 1pl. | <i>+šammáxva</i>   |                           |

#### 4.10.11.2 Past Template

##### Final /y/

- |     |                |
|-----|----------------|
| ms. | <i>+šmi-</i>   |
| fs. | <i>+šəmya-</i> |
| pl. | <i>+šəmye-</i> |

Examples: *+šmílə* ‘He heard’, *+šəmyálə* ‘He heard her’, *+šəmyélə* ‘He heard them’.

#### 4.10.11.3 Resultative Participle

##### Final /y/

- |     |               |
|-----|---------------|
| ms. | <i>+š́mya</i> |
| fs. | <i>+šmítá</i> |
| pl. | <i>+š́myə</i> |

Compound form (perfect, inflected with a copula)

- 3ms.   <sup>+</sup>šámyələ   ‘He has heard’
- 3fs.   <sup>+</sup>šmítəla   ‘She has seen’
- 3pl.   <sup>+</sup>šámyəna   ‘They have heard’

#### 4.10.11.4 Imperative

Final /y/

- sing.   <sup>+</sup>smí           ‘Hear!’
- pl.      <sup>+</sup>smímun   ‘Hear!’

#### 4.10.11.5 Infinitive

Final /y/

<sup>+</sup>smáya

#### 4.10.11.6 Progressive

Final /y/

<sup>+</sup>bəšmáya ~ <sup>+</sup>bəšmá

Compound form (progressive, inflected with a copula). When the copula is enclitic the final /y/ form of the infinitive is used. When a form of the copula is placed before the infinitive both variants are used:

- 3ms.   <sup>+</sup>bəšmáyələ   ‘He is hearing’
- 3fs.   <sup>+</sup>bəšmáyəla   ‘She is hearing’
- 3pl.   <sup>+</sup>bəšmáyəna   ‘They are hearing’

- 3ms.   lélə +<sup>+</sup>bəšmáya ~ lélə +<sup>+</sup>bəšmá   ‘He is not hearing’
- 3fs.   lélə +<sup>+</sup>bəšmáya ~ lélə +<sup>+</sup>bəšmá   ‘She is not hearing’
- 3pl.   léna +<sup>+</sup>bəšmáya ~ léna +<sup>+</sup>bəšmá   ‘They are not hearing’

## 4.10.11.7 Verbal Noun

Final /y/

<sup>+š</sup>*méta*

## 4.10.11.8 Active Participle

Final /y/

- |     |                              |          |
|-----|------------------------------|----------|
| ms. | <sup>+š</sup> <i>amyána</i>  | 'hearer' |
| fs. | <sup>+š</sup> <i>amyánta</i> | 'hearer' |

4.10.12 *Verba Primae /y/, Tertiae /y/*

This category includes the verbs *yama* I (*y-m-y, m-y-y*) 'to swear' (a marginally used variant of the more usual pattern III form *mamma* 'to swear') and *yalə* (*y-l-y, l-y-y*) 'to mourn, to lament'. The initial /y/ is only retained in the present template and the active participle. The infinitive, progressive and verbal noun are treated as middle /y/.

## 4.10.12.1 Present

- |      |              |              |
|------|--------------|--------------|
| 3ms. | <i>yámə</i>  | 'He swears'  |
| 3fs. | <i>yámya</i> | 'She swears' |
| 3pl. | <i>yámi</i>  | 'They swear' |

## 4.10.12.2 Past Template

ms. *mi-*

Example: *mílə* 'He swore'.

## 4.10.12.3 Resultative Participle

- |     |               |
|-----|---------------|
| ms. | <i>yóm̥ya</i> |
| fs. | <i>mítə</i>   |
| pl. | <i>yóm̥yə</i> |

## 4.10.12.4 Imperative

- sing. *mí* ‘swear!’  
 pl. *mímun* ‘swear!’

## 4.10.12.5 Infinitive

*myáya*

## 4.10.12.6 Progressive

*bəmyáya*

Compound form (progressive, inflected with a copula)

- 3ms. *bəmyáyələ* ‘He is swearing’  
 3fs. *bəmyáyəla* ‘She is swearing’  
 3pl. *bəmyáyəna* ‘They are swearing’

## 4.10.12.7 Verbal Noun

*myéta*

## 4.10.12.8 Active Participle

- ms. *yamyána* ‘swearer’  
 fs. *yamyánta* ‘swearer’

**4.10.13 Miscellaneous Verbs with a Final Weak Radical and a Second Weak Radical**

Various verbs containing two weak radicals of which one is in final position share patterns of inflection. These verbs contained various combinations of pharyngal, laryngals and \*y in their historical roots, but now have almost identical inflections. The set of inflections for each verb are derived from various suppletive roots in which the weak radicals are in different orders. Each of the verbs concerned are listed here separately.

- (i) *+bayyə* I ‘to want’ (< \*b-<sup>c</sup>-y). Present: *+báyyə* (3ms.), *+báyya* (3fs.), *+báyyi* (3pl.) (root *+b-y-Ø*). Past template: *+bi-* (ms.), *+biyya-* (fs.), *+biyye-* (root *+b-y-Ø* or *+b-Ø-y*). Resultative participle: *+býyya* (ms.), *+bítta* (fs.), *+býyyə* (pl.) (root *+b-y-Ø* or

$+b\text{-}\emptyset\text{-}y$ ). Imperative:  $+bí$  (sing.),  $+bímun$  (pl.) (root  $+b\text{-}y\text{-}\emptyset$  or  $+b\text{-}\emptyset\text{-}y$ ). Infinitive, progressive:  $+byáya$  (root  $+b\text{-}y\text{-}y$ ), e.g.  $+byáyələ$  'he wants'. Verbal noun:  $+byéta$  (root  $+b\text{-}y\text{-}y$ ).

(ii)  $+šayya$  I 'to stick' (<  $*š\text{-}č\text{-}č$ ). Present:  $+šáyyə$  (3ms.),  $+šáyya$  (3fs.),  $+šáyyi$  (3pl.) (root  $+š\text{-}y\text{-}\emptyset$ ). Past template:  $+ši\text{-}$  (ms.),  $+šiyya\text{-}$  (fs.),  $+šiyye\text{-}$  (root  $+š\text{-}y\text{-}\emptyset$  or  $+š\text{-}\emptyset\text{-}y$ ). Resultative participle:  $+šýya$  (ms.),  $+šítə$  (fs.),  $+šýyə$  (pl.) (root  $+š\text{-}y\text{-}\emptyset$  or  $+š\text{-}\emptyset\text{-}y$ ). Imperative:  $+ší$  (sing.),  $+šímun$  (pl.) (root  $+š\text{-}y\text{-}\emptyset$  or  $+š\text{-}\emptyset\text{-}y$ ). Infinitive:  $+šyáya$  (root  $+š\text{-}y\text{-}y$ ),  $+šaya$  (root  $+š\text{-}\emptyset\text{-}y$ ). Progressive:  $+bəšyáya$  (root  $+š\text{-}y\text{-}y$ ),  $+bəššaya$  (root  $+š\text{-}\emptyset\text{-}y$ ), e.g.  $+bəšyáyələ$ ,  $+bəššáyələ$  'he is sticking'. Verbal noun:  $+šyéta$  (root  $+š\text{-}y\text{-}y$ )  $+šéta$  (root  $+š\text{-}\emptyset\text{-}y$ ).

(iii) *xayya* I 'to live' (<  $*h\text{-}y\text{-}y$ ). Present: *xáyyə* (3ms.), *xáyya* (3fs.), *xáyyi* (3pl.) (root  $x\text{-}y\text{-}\emptyset$ ). Past template: *xi\text{-}* (ms.) (root  $x\text{-}y\text{-}\emptyset$  or  $x\text{-}\emptyset\text{-}y$ ). Resultative participle: *xíyya* (ms.), *xítə* (fs.), *xíyyə* (pl.) (root  $x\text{-}y\text{-}\emptyset$  or  $x\text{-}\emptyset\text{-}y$ ). Imperative: *xí* (sing.), *xímun* (pl.) (root  $x\text{-}y\text{-}\emptyset$  or  $x\text{-}\emptyset\text{-}y$ ). Infinitive: *xyáya* (root  $x\text{-}y\text{-}y$ ), *xaya* (root  $\emptyset\text{-}x\text{-}y$ ). Progressive: *bəxyáya* (root  $x\text{-}y\text{-}y$ ), *bəxxáya* (root  $x\text{-}\emptyset\text{-}y$ ), e.g. *bəxxáyələ* 'he is living'. Verbal noun: *xyéta* (root  $x\text{-}y\text{-}y$ ).

(iv) *payya* I 'to bake' (<  $*y\text{-}p\text{-}y$ ): Present: *páyyə* (3ms.), *páyya* (3fs.), *páyyi* (3pl.) (root  $p\text{-}y\text{-}\emptyset$ ). Past template: *pi\text{-}* (ms.), *piyya\text{-}* (fs.), *piyye\text{-}* (root  $p\text{-}y\text{-}\emptyset$  or  $p\text{-}\emptyset\text{-}y$ ). Resultative participle: *píyya* (ms.), *pítə* (fs.), *píyyə* (pl.) (root  $p\text{-}y\text{-}\emptyset$  or  $p\text{-}\emptyset\text{-}y$ ). Imperative: *pí* (sing.), *pímun* (pl.) (root  $p\text{-}y\text{-}\emptyset$  or  $p\text{-}\emptyset\text{-}y$ ). Infinitive, progressive: *pyaya* (root  $p\text{-}y\text{-}y$ ), e.g. *pyáyələ* 'he is baking'. Verbal noun: *pyeta* (root  $p\text{-}y\text{-}y$ ). Active participle: *payyana* ms. (*payyanta* fs.), also *yapyana* ms. (*yapyanta* fs.).

(v)  $+mayya$  'to churn' (\**m-y-č*): Present:  $+máyyə$  (3ms.),  $+máyya$  (3fs.),  $+máyyi$  (3pl.) (root  $+m\text{-}y\text{-}\emptyset$ ). Past template:  $+mi\text{-}$  (ms.),  $+miyya\text{-}$  (fs.),  $+miyye\text{-}$  (root  $+m\text{-}y\text{-}\emptyset$  or  $+m\text{-}\emptyset\text{-}y$ ). Resultative participle:  $+míyya$  (ms.),  $+mítə$  (fs.),  $+míyyə$  (pl.) (root  $+m\text{-}y\text{-}\emptyset$  or  $+m\text{-}\emptyset\text{-}y$ ). Imperative (root  $+m\text{-}y\text{-}\emptyset$ ):  $+mí$  (sing.),  $+mímun$  (pl.). Infinitive, progressive:  $+myaya$  (root  $+m\text{-}y\text{-}y$ ), e.g.  $+myáyələ$  'he is churning'. Verbal noun:  $+myeta$  (root  $+m\text{-}y\text{-}y$ ).

(vi)  $+rayya$  I 'to rain' (< \**r-y-č*), impersonal verb: Present:  $+ráyyə$  (3ms.),  $+ráyya$  (3fs.),  $+ráyyi$  (3pl.) (root  $+r\text{-}y\text{-}\emptyset$ ). Past template:  $+ri\text{-}$  (ms.) (root  $+r\text{-}y\text{-}\emptyset$  or  $+r\text{-}\emptyset\text{-}y$ ). Resultative participle:  $+ríyya$  (ms.),  $+rítə$  (fs.),  $+ríyyə$  (pl.) (root  $+r\text{-}y\text{-}\emptyset$  or  $+r\text{-}\emptyset\text{-}y$ ). Imperative:  $+rí$  (sing.),  $+rímun$  (pl.) (root  $+r\text{-}y\text{-}\emptyset$  or  $+r\text{-}\emptyset\text{-}y$ ). Infinitive:  $+raya$  (root  $+r\text{-}\emptyset\text{-}y$ ). Progressive:  $+bərraya$  (root  $+r\text{-}\emptyset\text{-}y$ ), e.g.  $+muṭra$   $+bərráyələ$  'it is raining'. Verbal noun:  $+reta$  (root  $+r\text{-}\emptyset\text{-}y$ ).

(vii) *layyə* I ‘to burn’ (< \**l-h-y*): Present: *láyyə* (3ms.), *láyya* (3fs.), *láyyi* (3pl.) (root *l-y-*Ø). Past template: *li-* (ms.), *liyya-* (fs.), *liyye-* (root *l-y-*Ø or *l-*Ø-*y*). Resultative participle: *líyya* (ms.), *lítā* (fs.), *líyyə* (pl.) (root *l-y-*Ø or *l-*Ø-*y*). Imperative: *lí* (sing.), *límun* (pl.) (root *l-y-*Ø or *l-*Ø-*y*). Infinitive: *láya* (root Ø-*l-y*). Progressive: *bəlláya* (root *l-*Ø-*y*), e.g. *bəlláyələ* ‘it is burning’. Verbal noun: *leta* (root Ø-*l-y*).

(viii) <sup>+</sup>*sayyə* ‘to become thirsty’ (< \**š-h-y*): Present: <sup>+</sup>*sáyyə* (3ms.), <sup>+</sup>*sáyya* (3fs.), <sup>+</sup>*sáyyi* (3pl.) (root <sup>+</sup>*s-y-*Ø). Past template: <sup>+</sup>*si-* (ms.) (root <sup>+</sup>*s-y-*Ø or <sup>+</sup>*s-*Ø-*y*). Resultative participle: <sup>+</sup>*síyya* (ms.), <sup>+</sup>*sítā* (fs.), <sup>+</sup>*síyyə* (pl.) (root <sup>+</sup>*s-y-*Ø or <sup>+</sup>*s-*Ø-*y*). Imperative: <sup>+</sup>*sí* (sing.), <sup>+</sup>*símun* (pl.) (root <sup>+</sup>*s-y-*Ø or <sup>+</sup>*s-*Ø-*y*). Infinitive: <sup>+</sup>*syáya* (root <sup>+</sup>*s-y-y*), <sup>+</sup>*saya* (root <sup>+</sup>Ø-*s-y*). Progressive: <sup>+</sup>*bəsyáya* (root <sup>+</sup>*s-y-y*), <sup>+</sup>*bəssaya* (root <sup>+</sup>*s-*Ø-*y*), e.g. <sup>+</sup>*bəsyáyələ*, <sup>+</sup>*bəssáyələ* ‘he is becoming thirsty’. Verbal noun: <sup>+</sup>*syéta* (root <sup>+</sup>*s-y-y*) <sup>+</sup>*seta* (root <sup>+</sup>Ø-*s-y*).

(ix) *kayyə* I ‘to smart (after eating something sour or pungent)’ (< \**q-č-y?*): Present: *káyyə* (3ms.), *káyya* (3fs.), *káyyi* (3pl.) (root *k-y-*Ø). Past template: *ki-* (ms.) (root *k-y-*Ø or *k-*Ø-*y*). Resultative participle: *kíyya* (ms.), *kítā* (fs.), *kíyyə* (pl.) (root *k-y-*Ø or *k-*Ø-*y*). Infinitive: *kaya* (root Ø-*k-y*). Progressive: *bəkkáya* (root *k-*Ø-*y*), e.g. *bəkkáyələ* ‘it is smarting’. Verbal noun: *kéta* (root *k-*Ø-*y*).

(x) <sup>+</sup>*jayyə* I ‘to bell (stag, deer)’ (< \**g-č-y*): Present: <sup>+</sup>*záyyə* (3ms.), <sup>+</sup>*záyya* (3fs.), <sup>+</sup>*záyyi* (3pl.) (root <sup>+</sup>*j-y-*Ø). Past template: <sup>+</sup>*ji-* (ms.) (root <sup>+</sup>*j-y-*Ø or <sup>+</sup>*j-*Ø-*y*). Resultative participle: <sup>+</sup>*jíyya* (ms.), <sup>+</sup>*jítā* (fs.), <sup>+</sup>*jíyyə* (pl.) (root <sup>+</sup>*j-y-*Ø or <sup>+</sup>*j-*Ø-*y*). Infinitive: <sup>+</sup>*jaya* (root <sup>+</sup>Ø-*j-y*). Progressive: <sup>+</sup>*bəffáya* (root <sup>+</sup>*j-*Ø-*y*), e.g. *bəffáyələ* ‘it is belling’. Verbal noun: <sup>+</sup>*jéta* (root <sup>+</sup>*j-*Ø-*y*).

The gemination of the medial /y/ in the present template (<sup>+</sup>*bayyə*, <sup>+</sup>*šayyə* etc.) corresponds to the gemination of the middle radical in final /Ø/ roots such as <sup>+</sup>*š-m-*Ø (i.e. <sup>+</sup>*šamma*, <sup>+</sup>*šamma*, etc.). For this reason one may identify the root of these forms as having the pattern *C-y-*Ø. Infinitives of the pattern <sup>+</sup>*byaya* are clearly derived from roots of the pattern *C-y-y*. Progressives of the pattern <sup>+</sup>*bəššaya* can be assumed to derive from a root of the pattern *C-*Ø-*y* just as the progressive of <sup>+</sup>*d-*Ø-*r* ‘to return’ has the infinitive <sup>+</sup>*bəddara*. Infinitives and verbal nouns of the patterns <sup>+</sup>*šaya* and <sup>+</sup>*šeta* respectively can be assumed to derive from a root of the pattern Ø-*C-y* like the infinitive and verbal noun of Ø-*r-k* ‘to flee’, which have the forms *raķa* and *raķta*. The other inflections may be derived from either *C-y-*Ø or *C-*Ø-*y* roots, since these types of root would result in the surface forms in question.

#### 4.10.14 *Verba Mediae /v/*

This category includes *+navər* I (+*n-v-r*) ‘to startle (horse), to bolt’, *+ravəx* I (+*r-v-x*) ‘to become broad’, *+tavəx* I (+*t-v-x*) ‘to crush, to break to pieces’, *+xavər* I (+*x-v-r*) ‘to become white’, *+xavət* I (+*x-v-t*) ‘to mix (tr. and intr.)’, *cavəš* I (*c-v-š*) ‘to stuff (into)’, *davək* I (*d-v-k*) ‘to seize’, *davən* I (*d-v-n*) ‘to cement (crack)’, *davər* I (*d-v-r*) (i) to shut (door), (ii) to thresh’, *davəx* I (*d-v-x*) ‘to sacrifice, to dedicate’, *javəj* I (*j-v-j*) ‘to walk, to move’, *javəl* I (*j-v-l*) (i) to fashion; (ii) to vomit’, *javər* I (*j-v-r*) ‘to marry’, *javəx* I (*j-v-x*) ‘to cave in’, *kavəl* I (*k-v-l*) ‘to complain’, *kavər* I (*k-v-r*) ‘to bury’, *lavəš* I (*l-v-š*) ‘to put on (clothes)’, *lavəx* I (*l-v-x*) ‘to flare up, to flame’, *navəl* I (*n-v-l*) ‘to pine away’, *navəx* I (*n-v-x*) ‘to bark (dog)’, *šavək* I (*š-v-k*) ‘to leave, to allow’, *šavər* I (*š-v-r*) ‘to jump, to cross (stream)’, *tavən* I (*t-v-n*) ‘to become numb’, *xavəš* I (*x-v-š*) ‘to confine’, *zavən* I (*z-v-n*) ‘to buy’.

In the majority of cases the medial /v/ is derived historically from \**b*. In a few cases it derives from an original \**w*, e.g. *+xavər* ‘to become white’ < \**h-w-r* and *javəl* I ‘to vomit’ < \**g-w-l* (contrast the homophonous *javəl* ‘to fashion’ < \**g-b-l*).

##### 4.10.14.1 Present

The medial /v/ is retained in the 3ms form but contracted throughout the rest of the paradigm, resulting in the occurrence of the vowel /o/ between the first and third radicals.

- |      |              |              |
|------|--------------|--------------|
| 3ms. | <i>šávək</i> | ‘He leaves’  |
| 3fs. | <i>šóka</i>  | ‘She leaves’ |
| 3pl. | <i>šóki</i>  | ‘They leave’ |

##### 4.10.14.2 Past Template

The /v/ is retained as strong consonant:

- |     |               |
|-----|---------------|
| ms. | <i>švík-</i>  |
| fs. | <i>švíka-</i> |
| pl. | <i>švíke-</i> |

Examples: *šváklə* ‘He left’, *švíkálə* ‘He left her’, *švíkélə* ‘He left them’.

##### 4.10.14.3 Resultative Participle

- |     |               |
|-----|---------------|
| ms. | <i>švíka</i>  |
| fs. | <i>švíkta</i> |
| pl. | <i>švíkə</i>  |

Compound form (perfect, inflected with a copula)

- |      |                 |                  |
|------|-----------------|------------------|
| 3ms. | <i>švíkələ</i>  | 'He has left'    |
| 3fs. | <i>šváktəla</i> | 'She has left'   |
| 3pl. | <i>švíkəna</i>  | 'They have left' |

#### 4.10.14.4 Imperative

The /v/ is optionally retained, but is generally elided in fast speech:

- |       |                              |          |
|-------|------------------------------|----------|
| sing. | <i>švúk</i> ~ <i>šúk</i>     | 'Leave!' |
| pl.   | <i>švúkun</i> ~ <i>šúkun</i> | 'Leave!' |

#### 4.10.14.5 Infinitive

*šváka*

#### 4.10.14.6 Progressive

*bəšváka*

Compound form (progressive, inflected with a copula)

- |      |                  |                    |
|------|------------------|--------------------|
| 3ms. | <i>bəšvákələ</i> | 'He is leaving'    |
| 3fs. | <i>bəšvákəla</i> | 'She is leaving'   |
| 3pl. | <i>bəšvákəna</i> | 'They are leaving' |

#### 4.10.14.7 Verbal Noun

*švákta*

#### 4.10.14.8 Active Participle

- |     |                |          |
|-----|----------------|----------|
| ms. | <i>šokána</i>  | 'leaver' |
| fs. | <i>šokánta</i> | 'leaver' |

### 4.10.15 *Mediae /v/, Tertiae /y/*

This category includes the verbs: *+rava* I (+r-v-y) 'to become drunk', *cavə* I (c-v-y) 'to brand', *kavə* I (k-v-y) 'to become hard', *favə* I (f-v-y) 'to beg', *xavə* I (x-v-y) 'to become dark', *zavə* I (z-v-y) 'to inflate (intr.)'. They combine features of middle /v/ and final /y/ verbs in their inflections.

#### 4.10.15.1 Present

The sequence /av/ is contracted to /o/ when closing a syllable before the /y/ of the feminine singular forms:

- 3ms. *cávə* 'He brands'
- 3fs. *cóya* 'She brands'
- 3pl. *cávi* 'They brand'

#### 4.10.15.2 Past Template

- ms. *cví-*
- fs. *cəvya-* ~ *cuya-*
- pl. *cəvye-* ~ *cuye-*

Examples: *cvílə* 'He branded', *cəvyálə* 'He branded her', *cəvyélə* 'He left them'.

#### 4.10.15.3 Resultative Participle

- ms. *cávya* ~ *cíya*
- fs. *cvítə*
- pl. *cávyə* ~ *cíya*

Compound form (perfect, inflected with a copula)

- 3ms. *cávyałə* 'He has branded'
- 3fs. *cvítəłə* 'She has branded'
- 3pl. *cávyəna* 'They have branded'

#### 4.10.15.4 Imperative

- sing. *cví* 'Brand!'
- pl. *cvímun* 'Brand!'

#### 4.10.15.5 Infinitive

*cváya*

#### 4.10.15.6 Progressive

*bəcváya*

Compound form (progressive, inflected with a copula)

- 3ms. *bəcváyəla* ‘He is leaving’
- 3fs. *bəcváyəla* ‘She is leaving’
- 3pl. *bəcváyəna* ‘They are leaving’

#### 4.10.15.7 Verbal Noun

*cvéta*

#### 4.10.15.8 Active Participle

- ms. *coyána* ‘brander’
- fs. *coyánta* ‘brander’

### 4.10.16 *Mediae /v/, Tertiae /Ø/ ~ Tertiae /y/*

This category includes the verbs:  $+navva_1$  ( $+n\text{-}v\text{-}\emptyset$ ,  $+n\text{-}v\text{-}y$ ) ‘to spring up, bubble up’, and  $+sayya_1$  ( $+s\text{-}y\text{-}\emptyset$ ,  $+s\text{-}v\text{-}y$ ,  $+s\text{-}\emptyset\text{-}y$ ) ‘to become sated’. These verbs originally had a medial \**b* and final pharyngal \**c* ( $*n\text{-}b\text{-}c$ ,  $*s\text{-}b\text{-}c$ ), but they now have a variety of suppletive roots, which differ in type across the two verbs. The verb  $+sayya$ , in fact, has become partially assimilated to the form of verbs with two weak radicals described in § 4.10.13.

The present template of the verb  $+sayya_1$  has a medial geminated /y/ rather than /v/ and reflects a root of the structure  $+s\text{-}y\text{-}\emptyset$ . The infinitive has a variant form that reflects the root structure  $+s\text{-}\emptyset\text{-}y$ . Other forms contain a medial /v/ and are inflected like final /y/ verbs.

#### 4.10.16.1 Present

- |       |                                |                                |          |                      |
|-------|--------------------------------|--------------------------------|----------|----------------------|
| Root: | $+s\text{-}y\text{-}\emptyset$ | $+n\text{-}v\text{-}\emptyset$ |          |                      |
| 3ms.  | $+sayya$                       | ‘He is sated’                  | $+navva$ | ‘It (m.) springs up’ |
| 3fs.  | $+sayya$                       | ‘She is sated’                 | $+navva$ | ‘It (f.) springs up’ |
| 3pl.  | $+sayyi$                       | ‘They are sated’               | $+navvi$ | ‘They spring up’     |

#### 4.10.16.2 Past Template

Root:  $+s\text{-}v\text{-}y$ ,  $+n\text{-}v\text{-}y$

- ms.  $+svi-$ ,  $+nvi-$

Example:  $+svíla$  ‘He became sated’.

#### 4.10.16.3 Resultative Participle

Root:  ${}^+s\text{-}\nu\text{-}y$ ,  ${}^+n\text{-}\nu\text{-}y$

ms.	${}^+s\acute{a}vya$ ~ ${}^+s\acute{i}ya$	${}^+n\acute{a}vya$ ~ ${}^+nuya$
fs.	${}^+svita$	${}^+nvita$
pl.	${}^+s\acute{a}vya\theta$ ~ ${}^+s\acute{u}ya\theta$	${}^+n\acute{a}vya\theta$ ~ ${}^+nuya\theta$

Compound form (perfect, inflected with a copula)

3ms.	${}^+s\acute{a}vya\theta\lambda$	'He has become sated'
3fs.	${}^+s\acute{a}vya\theta la$	'She has become sated'
3pl.	${}^+s\acute{a}vya\theta na$	'They have become sated'

#### 4.10.16.4 Imperative

Root:  ${}^+s\text{-}\nu\text{-}y$ ,  ${}^+n\text{-}\nu\text{-}y$

sing.	${}^+svi$	'Be sated!'
pl.	${}^+svimun$	'Be sated!'

#### 4.10.16.5 Infinitive

Root:  ${}^+s\text{-}\nu\text{-}y$ ,  ${}^+n\text{-}\nu\text{-}y$

${}^+svaya$ ,  ${}^+nvaya$

#### 4.10.16.6 Progressive

Root:	${}^+s\text{-}\nu\text{-}y$	${}^+s\text{-}\emptyset\text{-}y$	${}^+n\text{-}\nu\text{-}y$
	${}^+b\acute{e}svaya$ ~	${}^+b\acute{e}ssaya$	${}^+b\acute{e}nvaya$

Compound form (progressive, inflected with a copula)

3ms.	${}^+b\acute{e}svaya\theta\lambda$	'He is becoming sated'
3fs.	${}^+b\acute{e}svaya\theta la$	'She is becoming sated'
3pl.	${}^+b\acute{e}svaya\theta na$	'They are becoming sated'

#### 4.10.16.7 Verbal Noun

<sup>+</sup>svéta, <sup>+</sup>nvéta

#### 4.10.17 Verba Primae /Ø/, Mediae /v/

This category includes *'avəd* I (<sup>+</sup>Ø-v-d) ‘to do’ (< \**bd*) and <sup>+</sup>*avər* I (<sup>+</sup>Ø-v-r) ‘to enter’ (< \**br*). A /’/ is added to fill the /Ø/ slot when it occurs at the beginning of a word and is followed by a vowel.

##### 4.10.17.1 Present

3ms.	<i>'ávəd</i>	‘He does’	<sup>+</sup> <i>ávər</i>	‘He enters’
3fs.	<i>'óda</i>	‘She do’	<sup>+</sup> <i>óra</i>	‘She enters’
3pl.	<i>'ódi</i>	‘They do’	<sup>+</sup> <i>óri</i>	‘They enter’

##### 4.10.17.2 Past Template

3ms.	<i>vid-</i>	<sup>+</sup> <i>vir-</i>
3fs.	<i>vida-</i>	
3pl.	<i>vide-</i>	

Examples: *vádlə* ‘He did’, *vidálə* ‘He did it (f.)’, *vidélə* ‘He did them’, <sup>+</sup>*várrə* ‘He entered’.

##### 4.10.17.3 Resultative Participle

ms.	<i>vída</i>	<sup>+</sup> <i>víra</i>
fs.	<i>vátta</i>	<sup>+</sup> <i>værtta</i>
pl.	<i>vídə</i>	<sup>+</sup> <i>vírə</i>

Compound form (perfect, inflected with a copula)

3ms.	<i>vídələ</i>	‘He has done’
3fs.	<i>váttəla</i>	‘She has done’
3pl.	<i>vídəna</i>	‘They have done’

##### 4.10.17.4 Imperative

sing.	<i>vúd</i>	‘Do!’
pl.	<i>vúdun</i>	‘Do!’

## 4.10.17.5 Infinitive, Progressive

*váda*   <sup>+</sup>*vára*

Compound form (progressive, inflected with a copula). The particle *b-* is omitted before the labial:

- |      |               |                  |
|------|---------------|------------------|
| 3ms. | <i>vádələ</i> | 'He is doing'    |
| 3fs. | <i>vádəla</i> | 'She is doing'   |
| 3pl. | <i>vádəna</i> | 'They are doing' |

## 4.10.17.6 Verbal Noun

*vátta*   <sup>+</sup>*várta*

## 4.10.17.7 Active Participle

- |     |                |        |
|-----|----------------|--------|
| ms. | <i>'odána</i>  | 'doer' |
| fs. | <i>'odánta</i> | 'doer' |

4.10.18 *Verba Tertiae /v/*

This category includes the verbs: *catəv* I (*c-t-v*) 'to write', *janəv* I (*j-n-v*) 'to steal', *janəv* I (*j-n-v*) 'to kidnap', <sup>+</sup>*karəv* I (<sup>+</sup>*k-r-v*) 'to take the host (in church)', *racəv* I (*r-c-v*) 'to ride', *sarəv* I (*s-r-v*) 'to reject', <sup>+</sup>*xaləv* (<sup>+</sup>*x-l-v*) 'to milk', *xarəv* I (*x-r-v*) 'to be destroyed, spoilt', *xašəv* I (*x-š-v*) 'to think'.

The /v/ radical remains uncontracted throughout all paradigms.

## 4.10.18.1 Present

- |      |              |              |
|------|--------------|--------------|
| 3ms. | <i>cátəv</i> | 'He writes'  |
| 3fs. | <i>cátva</i> | 'She writes' |
| 3pl. | <i>cátvi</i> | 'They write' |

## 4.10.18.2 Past Template

- |     |               |
|-----|---------------|
| ms. | <i>ctiv-</i>  |
| fs. | <i>ctiva-</i> |
| pl. | <i>ctive-</i> |

Examples: *ctóvlə* 'He wrote', *ctiválə* 'He wrote it (f.)', *ctivélə* 'He wrote them'.

#### 4.10.18.3 Resultative Participle

ms. *ctíva*

fs. *ctávta*

pl. *ctívə*

Compound form (perfect, inflected with a copula)

3ms. *ctívəla* ‘He has written’

3fs. *ctávtəla* ‘She has written’

3pl. *ctívəna* ‘They have written’

#### 4.10.18.4 Imperative

sing. *ctív*

pl. *ctívun*

In both of these forms the /v/ is realized as a bilabial [w] rather than as a labio-dental [v].

#### 4.10.18.5 Infinitive

*ctáva*

#### 4.10.18.6 Progressive

*bəctáva*

Compound form (progressive, inflected with a copula)

3ms. *bəctávəla* ‘He is writing’

3fs. *bəctávəla* ‘She is writing’

3pl. *bəctávəna* ‘They are writing’

#### 4.10.18.7 Verbal Noun

*ctávta*

#### 4.10.18.8 Active Participle

Available active participles from verbs in this category have the template *CaCaCa* or *CiCaCa*. Differences are attested also in the contraction of the /av/ sequence in the fs. form before the ending *-ta*, e.g.

ms.	<i>catáva</i>	'writer'
fs.	<i>catávta</i>	'writer'

ms.	<i>ricáva</i>	'rider'
fs.	<i>ricávta</i>	'rider'

ms.	<i>jináva</i>	'thief'
fs.	<i>jinóta</i>	'female thief'

#### 4.10.19 *Verba Primae /y/, Tertiae /v/*

This category includes the verb *yatəv* I (*y-t-v*, *t-y-v*) 'to sit'. The initial /y/ is only retained in the present template and the active participle. In the infinitive and progressive the root is treated as middle /y/ (*t-y-v*).

##### 4.10.19.1 Present Template

3ms.	<i>yátəv</i>	'He sits'
3fs.	<i>yátva</i>	'She sits'
3pl.	<i>yátvi</i>	'They sit'

##### 4.10.19.2 Past Template

ms.	<i>tiv-</i>
-----	-------------

Example: *távla* 'He sat down'.

##### 4.10.19.3 Resultative Participle

ms.	<i>tíva</i>
fs.	<i>távta</i>
pl.	<i>tívə</i>

##### 4.10.19.4 Imperative

sing.	<i>túy</i>
pl.	<i>túymun</i> ~ <i>túmun</i>

## 4.10.19.5 Infinitive

*tyáva*

## 4.10.19.6 Progressive

*bətyáva*

Compound form (progressive, inflected with a copula)

- 3ms. *bətyávəla* ‘He is sitting down’  
 3fs. *bətyávəla* ‘She is sitting down’  
 3pl. *bətyávəna* ‘They are sitting down’

## 4.10.19.7 Verbal Noun

*tyávta*

## 4.10.19.8 Active Participle

- ms. *yatvána* ‘sitter’  
 fs. *yatvánta* ‘sitter’

## 4.11 Weak Verbs in Pattern II

4.11.1 *Verba Primae /Ø/*

This category includes the verb *+áməl* II ( $\emptyset$ -m-l) ‘to work on, to process’. A laryngal /’/ is added on the phonetic surface at the beginning of all inflections:

## 4.11.1.1 Present Template

- 3ms. *+’áməl* ‘He processes’  
 3fs. *+’áməla* ‘She processes’  
 3pl. *+’ámli* ‘They process’

## 4.11.1.2 Past Template

3ms. +*uməl-*

Examples: +*umállə* 'He processed', +*umlála* 'He processed it (f.)', +*umléla* 'He processed them'.

## 4.11.1.3 Resultative Participle

ms. +*úmla*

fs. +*umáltə*

pl. +*úmlə*

Compound form (perfect, inflected with a copula)

3ms. +*úmləla* 'He has processed'

3fs. +*umáltəla* 'She has processed'

3pl. +*úmləna* 'They have processed'

## 4.11.1.4 Imperative

sing. +*áməl* 'Process!'

pl. +*ámlun* 'Process!'

## 4.11.1.5 Infinitive and Progressive

+*amúla*

Compound form (progressive, inflected with a copula)

3ms. +*amúləla* 'He is processing'

3fs. +*amúləla* 'She is processing'

3pl. +*amúləna* 'They are processing'

## 4.11.1.6 Verbal Noun

+*amálta*

#### 4.11.1.7 Active Participle

- ms.  ${}^+\!amlána$  ‘one who processes’  
 fs.  ${}^+\!amlánta$  ‘one who processes’

#### 4.11.2 *Verba Mediae* /Ø/

This category includes the verbs  ${}^+\!savər$  II ( $+s\text{-}\emptyset\text{-}r$ ) ‘to revile’,  ${}^+\!tavəl$  II ( $+t\text{-}\emptyset\text{-}l$ ) II ‘to play’, which are derived ultimately from  $*s\text{-}^{\circ}r$  and  $*t\text{-}^{\circ}l$  with a medial pharyngal. In some inflections the /Ø/ is replaced by /v/.

##### 4.11.2.1 Present Tempate

The historical  ${}^{\circ}$  is replaced optionally by medial /v/ in the 3ms. This may have developed by analogy with the past form  ${}^+\!tuval\!\!\!ə$  (<  $*tu\text{-}alle$ ) in which the labial /v/ developed as a glide after the rounded vowel /u/. Elsewhere the inflections have medial /Ø/. The long vowel in the closed syllable of the alternative 3ms form  ${}^+\!tāl$  reflects contraction from  $*ta\emptyset\!\!\!əl$ :

- 3ms.  ${}^+\!távəl \sim {}^+\!tāl$  ‘He plays’  
 3fs.  ${}^+\!tálə$  ‘She plays’  
 3pl.  ${}^+\!tálɪ$  ‘They play’

##### 4.11.2.2 Past Template

- ms.  ${}^+\!tuval-$   
 fs.  ${}^+\!tula-$   
 pl.  ${}^+\!tule-$

Examples:  ${}^+\!tuval\!\!\!ə$  ‘He played’,  ${}^+\!tálta$   ${}^+\!tulálə$  ‘He played the game’,  ${}^+\!tavəlyátə$   ${}^+\!tulélə$  ‘He played the games’.

##### 4.11.2.3 Resultative Participle

- ms.  ${}^+\!túla$   
 fs.  ${}^+\!tuvalta$   
 pl.  ${}^+\!túlə$

Compound form (perfect, inflected with a copula)

- 3ms.  ${}^+\!túlələ$  ‘He has played’  
 3fs.  ${}^+\!tuvalta$  ‘She has played’  
 3pl.  ${}^+\!túləna$  ‘They have played’

## 4.11.2.4 Imperative

- sing.  ${}^+\mathring{t}\acute{a}l$  'Play!'  
 pl.  ${}^+\mathring{t}\acute{a}lun$  'Play!'

## 4.11.2.5 Infinitive and Progressive

${}^+\mathring{t}av\acute{u}la$

Compound form (progressive, inflected with a copula)

- 3ms.  ${}^+\mathring{t}av\acute{u}ləla$  'He is playing'  
 3fs.  ${}^+\mathring{t}av\acute{u}ləla$  'She is playing'  
 3pl.  ${}^+\mathring{t}av\acute{u}ləna$  'They are playing'

In this pattern of the infinitive the /Ø/ of the root is replaced by the glide /v/:  
 ${}^+\mathring{t}a\emptyset u\acute{l}a > {}^+\mathring{t}av\acute{u}la$ .

Occasionally the infinitive/progressive of verbs of this category is contracted, e.g.  ${}^+\mathring{t}\grave{a}v\acute{l}əla$  'He is playing' (A 31:1),  $v\acute{u}la$   ${}^+s\grave{a}ra$  'She started reviling' (A 54:3).

## 4.11.2.6 Verbal Noun

${}^+\mathring{t}av\acute{u}ltə$ ,  ${}^+\mathring{t}\acute{a}lta$

## 4.11.2.7 Active Participle

- ms.  ${}^+\mathring{t}alána$  'player'  
 fs.  ${}^+\mathring{t}alánta$  'player'

4.11.3 *Verba Tertiae /y/*

Verbs in this category include *banə* II (*b-n-y*) 'to prepare food', *casə* II (*c-s-y*) 'to cover', *damə* II (*d-m-y*) 'to compare', *daxə* II (*d-x-y*) 'to purify', *hajə* II (*h-j-y*) 'to spell; to analyse', *haķə* II (*h-k-y*) 'to narrate', *jabə* II (*j-b-y*) 'to gather, to select', *jadə* II (*j-d-y*) 'to dirty (tr.)', *jalə* II (*j-l-y*) 'to disclose', *kalə* II (*k-l-y*) 'to fry', *mhadə* II (*mh-d-y*) 'to guide', *nabə* II (*n-b-y*) 'to prophesy', *panə* II (*p-n-y*) 'to exterminate', *sapə* II (*s-p-y*) 'to deliver', *šanə* II (*š-n-y*) 'to transfer', *tanə* II (*t-n-y*) 'to tell', *tapə* II (*t-p-y*) '(i) to stick, (ii) to kindle', *xama* II (*x-m-y*) 'to preserve', *+'arə* II (*+Ø-r-y*) 'to patch', *+'darə* II (*d-r-y*) 'to winnow', *+'pasə* II (*+p-s-y*) 'to be saved', *+'salə* II (*+s-l-y*) 'to pray', *+'sapə* II (*+s-p-y*) 'to filter', *+'šarə* II (*+š-r-y*) 'to begin', *+'tašə* II (*+t-š-y*) 'to hide (tr.)'.

The verb *mhadə* retains the *m-* of the historical *pa<sup>“</sup>el* participle. Since this occurs in all inflections it should be considered to belong to the root, the initial */mh/* clustering in the first radical slot in all patterns.

#### 4.11.3.1 Present Template

3ms.	<i>jábə</i>	'He gathers'
3fs.	<i>jábya</i>	'She gathers'
3pl.	<i>jábi</i>	'They gather', etc.
2ms.	<i>jábət</i>	
2fs.	<i>jábyat</i>	
2pl.	<i>jabitun</i>	
1ms.	<i>jábən</i>	
1fs.	<i>jábyan</i>	
1pl.	<i>jábax</i>	

#### 4.11.3.2 Past Template

ms.	<i>jubi-</i>
fs.	<i>jubyā-</i>
pl.	<i>jubyē-</i>

Examples: *jubilə* 'He gathered (it m.)', *jubyálə* 'He gathered it (f.)', *jubyéłə* 'He gathered them'.

#### 4.11.3.3 Resultative Participle

ms.	<i>júbya</i>
fs.	<i>jubítə</i>
pl.	<i>júbyə</i>

Compound form (perfect, inflected with a copula)

3ms.	<i>júbyəłə</i>	'He has gathered'
3fs.	<i>jubítəla</i>	'She has gathered'
3pl.	<i>júbyəna</i>	'They have gathered'

#### 4.11.3.4 Imperative

The plural imperative has the ending *-mun* with an */m/* element intervening between the vowel of the base and the plural inflection *-un*:

sing. *jábi* ‘Gather!’

pl. *jábimun* ‘Gather!’

#### 4.11.3.5 Infinitive and Progressive

*jabúya*

Compound form (progressive, inflected with a copula)

3ms. *jabúyələ* ‘He is gathering’

3fs. *jabúyəla* ‘She is gathering’

3pl. *jabúyəna* ‘They are gathering’

In the northern variety of the dialect, the glide after the /u/ vowel is /v/: *jabuvə*. In conformity with the usual phonological process (§ 1.13.2.3.3.), the /v/ after the /u/ is often geminated, especially in slow speech: *jabuvvə*. These forms are regularly represented with geminate /v/ in the transcription.

#### 4.11.3.6 Verbal Noun

*jabéta*

#### 4.11.3.7 Active Participle

ms. *jabyána* ‘gatherer’

fs. *jabyánta* ‘gatherer’

### 4.11.4 *Verba Mediae /v/, Tertiae /y/*

Verbs in this category include *šavə* II (š-v-y) ‘to upholster, to make a bed’, and *+čavə* II (+č-v-y) ‘to roast’.

#### 4.11.4.1 Present Template

3ms. *šávə* ‘He upholsters’

3fs. *šóya* ‘She upholsters’

3pl. *šávi* ‘They upholster’, etc.

2ms. *šávət*

2fs. *šóyat*

2pl. *šavítun*

1ms. *šávən*

1fs. šóyan

1pl. šávax

#### 4.11.4.2 Past Template

ms. šuvi-

fs. šuya-

pl. šuye-

Examples: šuvíla 'He upholstered (it m.)', šuyála 'He upholstered it (f.)', šuyéla 'He upholstered them'.

#### 4.11.4.3 Resultative Participle

ms. šúya

fs. šuvítā

pl. šúyə

Compound form (perfect, inflected with a copula)

3ms. šíyala 'He has upholstered'

3fs. šuvítala 'She has upholstered'

3pl. šúyəna 'They have upholstered'

#### 4.11.4.4 Imperative

The plural imperative has the ending *-mun* with an /m/ element intervening between the vowel of the base and the plural inflection *-un*:

sing. šávi 'Upholster!'

pl. šávimun 'Upholster!'

#### 4.11.4.5 Infinitive and Progressive

šavúyə

Compound form (progressive, inflected with a copula)

3ms. šavúyəla 'He is upholstering'

3fs. šavúyəla 'She is upholstering'

3pl. šavúyəna 'They are upholstering'

## 4.11.4.6 Verbal Noun

*šavéta*

## 4.11.4.7 Active Participle

- ms. *šoyána* ‘upholsterer’  
 fs. *šoyánta* ‘upholsterer’

4.11.5 *Verba Tertiae /Ø/ ~ Tertiae /y/*

This category includes the verbs *+jammə* II (*+j-m-Ø*, *+j-mm-y*) ‘to gather (tr. and intr.)’, *+pallə* II (*+p-l-Ø*, *+p-ll-y*) ‘to divide’ (tr. and intr.), *+rappə* II (*+r-p-Ø*, *+r-pp-y*) ‘to throw’, *+tavvə* II (*+t-v-Ø*, *+t-vv-y*) ‘to seek’.

Two root structures can be identified for the inflections of these verbs. One is triradical with final /Ø/ (e.g. *+j-m-Ø*) and one has identical second and third radicals and a final /y/ radical, making the root quadrilateral (e.g. *+j-mm-y*). Some of the verbs contained a pharyngal \*<sup>c</sup> at some stage of their historical development, e.g. *+jammə* (< \**j-m-*<sup>c</sup>), *+pallə* (< \**p-l-*<sup>c</sup> < \**p-L-ğ*). Others were historically final *y* but have shifted to the category of final /Ø/. The verb *+tavvə* ‘to seek’ is derived historically from \**t-*<sup>c</sup>*-y*, the /v/ having developed secondarily under the influence of an adjacent /u/ vowel in some of its inflections. The /Ø/ final radical in these verbs is reflected in the gemination of the middle radical in the present:

Root: *p-l-Ø* > *+palØa* > *+palla* ‘She divides’.

This gemination has been extended to all other inflections. Many of the inflections reflect the presence of an additional final /y/ radical, with a result that the inflections have largely taken on the form of final /y/ quadrilateral verbs (§ 4.13.1), as if the geminated medial radical were treated as two radicals, e.g. *+pallýya*, the root of which can be identified as either *+p-ll-y* or *+p-lØ-y*. The less abstract *+p-ll-y* has been opted for here. This was facilitated by the fact that many forms in the paradigm of the present are ambiguous with regard to the identity of their root, e.g. *+pallət* ‘You (ms.) divide’ could have the root *+p-l-Ø* (*+palØat* > *+pallət*) or *+p-ll-y* (*+pallyat* > *+pallət*).

## 4.11.5.1 Present Template

- 3ms. *+pállə* (*+p-ll-y*) ‘He divides’  
 3fs. *+pálla* (*+p-l-Ø*) ~ *+pallýya* (*+p-ll-y*) ‘She divides’

3pl.	<sup>+</sup> pálli (+p-l-∅ or +p-ll-y)	'They divide', etc.
2ms.	<sup>+</sup> pállat (+p-l-∅ or +p-ll-y)	
2fs.	<sup>+</sup> pállat (+p-l-∅) ~ <sup>+</sup> pallíyat (+p-ll-y)	
2pl.	<sup>+</sup> pallítun (+p-l-∅ or +p-ll-y)	
1ms.	<sup>+</sup> pállən (+p-l-∅ or +p-ll-y)	
1fs.	<sup>+</sup> pállan (+p-l-∅) ~ <sup>+</sup> pallíyan (+p-ll-y)	
1pl.	<sup>+</sup> pállax (+p-l-∅ or +p-ll-y)	

The fs. forms have two alternative endings. One of these has the root *p-l-∅* and has developed directly from forms with final \*<sup>c</sup> (<sup>+</sup>pállea < \*pála < \*pal'a). The other ending has an inserted /y/ element, by analogy with final /y/ quadriliteral verbs (§ 4.13.1.). The gemination of the middle radical is preserved and stress falls on an epenthetic vowel before the /y/, by analogy with that of quadriliteral verbs (<sup>+</sup>pallíyya cf. *barbázza*). For the gemination of the /y/ see § 1.13.2. 3.3.

#### 4.11.5.2 Past Template

ms.	<sup>+</sup> pulli-
fs.	<sup>+</sup> pulla-
pl.	<sup>+</sup> pulle-

Examples: <sup>+</sup>pullíla 'He divided (it m.)', <sup>+</sup>pullálə 'He divided it (f.)', <sup>+</sup>pulléla 'He divided them'.

#### 4.11.5.3 Resultative Participle

ms.	<sup>+</sup> púlla ~ <sup>+</sup> pullíyya
fs.	<sup>+</sup> pullítā
pl.	<sup>+</sup> púllə ~ <sup>+</sup> pallíyyə

Compound form (perfect, inflected with a copula)

3ms.	<sup>+</sup> pullíyyələ	'He has divided'
3fs.	<sup>+</sup> pullítələ	'She has divided'
3pl.	<sup>+</sup> pullíyyəna	'They have divided'

## 4.11.5.4 Imperative

- sing.  ${}^+pálli$  ‘Divide!’  
 pl.  ${}^+pállimun$  ‘Divide!’

## 4.11.5.5 Infinitive and Progressive

${}^+pallúyə$

Compound form (progressive, inflected with a copula)

- 3ms.  ${}^+pallúyələ$  ‘He is throwing’  
 3fs.  ${}^+pallúyəla$  ‘She is throwing’  
 3pl.  ${}^+pallúyəna$  ‘They are throwing’

In the northern variety of the dialect, the infinitive/progressive has the form  ${}^+palluvva$ .

## 4.11.5.6 Verbal Noun

${}^+palléta$

## 4.11.5.7 Active Participle

- ms.  ${}^+palliyyána$  ‘divider’  
 fs.  ${}^+palliyyánta$  ‘divider’

## 4.12 Weak Verbs in Pattern III

The initial *m*- in the inflections of pattern III verbs should be regarded as an augment to the root (§ 4.2.). The reference to *primaे /Ø/*, *mediae /y/* etc. in what follows refers to the three remaining consonants of the root.

4.12.1 *Verba Primaе /Ø/*

Verbs in this category include: *maķəd* III (*m-Øk-d*) ‘to cause to burn’, *maləp* III (*m-Øl-p*) ‘to teach’,  ${}^+maxəl$  III ( ${}^+m-\emptyset x-l$ ) ‘to feed’,  ${}^+marəm$  III ( ${}^+m-\emptyset r-m$ ) ‘to raise’, *masək* III (*m-Øs-k*) ‘to cause to ascend’,  ${}^+mavər$  III (*m-Øv-r*) ‘to cause to enter’. These verbs have corresponding pattern I forms with a variety of weak patterns: *yakəd* I (*y-k-d*, *k-y-d*) ‘to burn (intr.)’,  ${}^+axəl$  ( ${}^+\emptyset x-l$ ,  ${}^+y-x-l$ ) ‘to eat’;

*yaləp* (*y-l-p*, *l-y-p*) ‘to learn’, <sup>+</sup>*yarəm* I (<sup>+</sup>*y-r-m*, <sup>+</sup>*r-y-m*) ‘to rise’, *'asək, yasək* I ( $\emptyset$ -*s-k*, *y-s-k*, *s-y-k*) ‘to ascend’. The pattern III of some of these verbs are formed also as medial / $\emptyset$ /, e.g. *mak̥kad* III (*m-k $\emptyset$ -d*) ‘to cause to burn’ (§ 4.12.3.).

The following verbs without correponding pattern I forms may also be interpreted as having initial / $\emptyset$ / roots: *madəv* III (*m- $\emptyset$ d-v*) ‘to manage (to do sth.)’, *mačəx* III (*m- $\emptyset$ č-x*) ‘to find’.

The / $\emptyset$ / in the root lengthens the preceding vowel if it is in an open syllable. In closed syllables the long vowel is shortened.

#### 4.12.1.1 Present Template

- |      |  |             |
|------|--|-------------|
| 3ms. | <sup>+</sup> <i>máxəl</i> (< <sup>+</sup> <i>ma<math>\emptyset</math>xəl</i> ) | ‘He feeds’  |
| 3fs. | <sup>+</sup> <i>máxla</i> (< <sup>+</sup> <i>ma<math>\emptyset</math>xla</i> ) | ‘She feeds’ |
| 3pl. | <sup>+</sup> <i>máxli</i> (< <sup>+</sup> <i>ma<math>\emptyset</math>xli</i> ) | ‘They feed’ |

In the verb <sup>+</sup>*mavər* ‘to cause to enter’ the medial /v/ contracts in the present: <sup>+</sup>*mávər*, <sup>+</sup>*móra*, <sup>+</sup>*móri* etc.

#### 4.12.1.2 Past Template

- |     |                            |
|-----|----------------------------|
| ms. | <sup>+</sup> <i>múxəl-</i> |
| fs. | <sup>+</sup> <i>múxla-</i> |
| pl. | <sup>+</sup> <i>múxle-</i> |

Examples: <sup>+</sup>*muxállo* ‘He fed (him)’, <sup>+</sup>*muxlála* ‘He fed her’, <sup>+</sup>*muxléla* ‘He fed them’.

#### 4.12.1.3 Resultative Participle

- |     |                             |
|-----|-----------------------------|
| ms. | <sup>+</sup> <i>múxla</i>   |
| fs. | <sup>+</sup> <i>muXLáta</i> |
| pl. | <sup>+</sup> <i>múxla</i>   |

Compound form (perfect, inflected with a copula)

- |      |                             |                 |
|------|-----------------------------|-----------------|
| 3ms. | <sup>+</sup> <i>múxləla</i> | ‘He has fed’    |
| 3fs. | <sup>+</sup> <i>muXLála</i> | ‘She has fed’   |
| 3pl. | <sup>+</sup> <i>múxla</i>   | ‘They have fed’ |

## 4.12.1.4 Imperative

- sing. *+máxəl* ‘Feed!’  
 pl. *+máxlun* ‘Feed!’

## 4.12.1.5 Infinitive and Progressive

*+maxúla*

Compound form (progressive, inflected with a copula)

- 3ms. *+maxúləla* ‘He is feeding’  
 3fs. *+maxúləla* ‘She is feeding’  
 3pl. *+maxúləna* ‘They are feeding’

## 4.12.1.6 Verbal Noun

*+maxálta*

## 4.12.1.7 Active Participle

- ms. *malpána* ‘teacher’  
 fs. *malpánta* ‘teacher’

4.12.2 *Verba Mediae /y/*

Verbs in this category include *mabyən* III (*m-by-n*) ‘to make appear; to appear’, *mabyət* III (*m-by-t*) ‘to abstain from all food’, *madyəl* III (*m-dy-l*) ‘to cause to be born’, *madyən* III (*m-dy-n*) ‘to lend; to borrow’, *madyəš* III (*m-dy-š*) ‘to tread on’, *majyən* III (*m-jy-n*) ‘to sprout’, *makyəm* III (*m-ky-m*) ‘to raise’, *makyən* III (*m-ky-n*) ‘to become green’, *mašyəp* III (*m-ky-p*) ‘to dispute’, *malyəz* III (*m-ly-z*) ‘to hasten (intr. and tr.)’, *mamyəl* III (*m-my-l*) ‘to become blue, to make blue’, *mamyət* III (*m-my-t*) ‘to cause to die (gradually)’, *manyəx* III (*m-ny-x*) ‘to rest; to allow to rest’, *mapyəx* III (*m-py-x*) ‘to cool (tr.)’, *maryəz* III (*m-ry-z*) ‘to organize’, *masyəl* III (*m-sy-l*) ‘to copulate’, *mašyəp* III (*m-šy-p*) ‘to cause to be erased’, *masyəv* III (*m-sy-v*) ‘to cause to age’, *matyəv* III (*m-ty-v*) ‘to cause to sit’, *maxyəm* III (*m-xy-m*) ‘to put on heat; to arouse (sexually)’, *mazyəd* III (*m-zy-d*) ‘to add’, *mazyər* III (*m-zy-r*) ‘to cause to swell’, *+mačyər* III (*+m-čy-r*) ‘to offend’, *+majyər* III (*+m-jy-r*) ‘to urinate’, *+malyəs* III (*+m-ly-s*) ‘to torment’, *+maryəs* III (*+m-ry-s*) ‘to sprinkle’, *+maryəx* (*+m-ry-x*) ‘to lengthen’, *+masyəd* III (*+m-sy-d*) ‘to track down’, *+mašyəl* III (*+m-šy-l*) ‘to cause to cough’, *+masyəp* III (*+m-sy-*

*p*) ‘to filter’, *+masyər* III (*+m-sy-r*) ‘to cause to be tied’, *+masyət* III (*+m-sy-t*) ‘to listen’, *+matyəp* III (*+m-ty-p*) ‘to cause to bend’, *+matyəx* III (*+m-ty-x*) ‘to flatten’.

The medial /y/ is treated as a strong radical in all forms. In the corresponding pattern 1 form of some of these roots the /y/ is the first radical in the present template, e.g. *+yarəx* (*+y-r-x*, *+r-y-x*) ‘It becomes long’, *yatəv* (*y-t-v*, *t-y-v*) ‘He sits’.

#### 4.12.2.1 Present Template

- 3ms. *máryəz* ‘He prepares’
- 3fs. *maryázza* ‘She prepares’
- 3pl. *maryázzi* ‘They prepare’

#### 4.12.2.2 Past Template

- ms. *muryəz-*
- fs. *muryəzza-*
- pl. *muryəzze-*

Examples: *muryázla* ‘He prepared (it m.)’, *muryəzzálə* ‘He prepared it (f.)’, *muryəzzélə* ‘He prepared them’.

#### 4.12.2.3 Resultative Participle

- ms. *muryázza*
- fs. *muryázta*
- pl. *muryázza*

Compound form (perfect, inflected with a copula)

- 3ms. *muryázzələ* ‘He has prepared’
- 3fs. *muryáztlə* ‘She has prepared’
- 3pl. *muryázzəna* ‘They have prepared’

#### 4.12.2.4 Imperative

- sing. *máryəz* ‘Prepare!’
- pl. *máryəzzun* ‘Prepare!’

## 4.12.2.5 Infinitive and Progressive

*maryúzə*

Compound form (progressive, inflected with a copula)

- 3ms. *maryúzələ* 'He is preparing'  
 3fs. *maryúzəla* 'She is preparing'  
 3pl. *maryúzəna* 'They are preparing'

## 4.12.2.6 Verbal Noun

*maryázta*

## 4.12.2.7 Active Participle

- ms. *maryəzzána* 'preparer'  
 fs. *maryəzzánta* 'preparer'

4.12.3 *Verba Mediae /Ø/*

Verbs in this category include *maccəš* III (*m-cØ-š*) 'to pay a debt', *maccəm* III (*m-cØ-m*) 'to blacken'; *maccəp* III (*m-cØ-p*) 'to bend (tr.)', *maccəs* III (*m-cØ-s*) 'to cover', *maǵǵəb* III (*m-ǵØ-b*) 'to like, to love', *makkəd* III (*m-kØ-d*) 'to cause to burn', *makkəm* III (*m-kØ-m*) 'to cause to rise', *makkəs* III (*m-kØ-s*) 'to cut', *makkəš* III (*m-kØ-š*) 'to make cold', *makkət* III (*m-kØ-t*) 'to cause to be hit', *mamməx* III (*m-mØ-x*) 'to smell, to sniff', *marrək* III (*m-rØ-k*) 'to cause to run', *massək* III (*m-sØ-k*) 'to cause to ascend' (also *m-Ø-s-k*), *massəm bala* III (*m-sØ-m*) 'to pay attention', *mavvəd* III (*m-vØ-d*) 'to make do', *mayyək* III (*m-yØ-k*) 'to make narrow, to squeeze', *+maččəm* III (*+m-čØ-m*) 'to cause to be closed', *+maddər* III (*+m-dØ-r*) 'to return (tr.); to vomit', *+makkər* III (*+m-kØ-r*) 'to cause to be dug (earth)', *+mamməd* III (*+m-mØ-d*) 'to baptise', *+mammək* III (*+m-mØ-k*) 'to deepen', *+mamməl* III (*+m-mØ-l*) 'to trade', *+mammər* III (*+m-mØ-r*) 'to build', *+mamməs* III (vn. *+m-mØ-s*) 'to cause to suck', *+marrəš* QI (*+m-rØ-š*) 'to wake (tr.)', *+matṭən* III (*+m-tØ-n*) 'to load', *+matṭəs* III (*+m-tØ-s*) 'to stick into, to shove into, to dip', *+matṭət* III (*+m-tØ-t*) 'to cause to sweat, to shame'.

The corresponding pattern I forms of these verbs have a variety of types of weak root. These include medial /y/, e.g. *kayəm* I (*k-y-m*) 'to rise', medial /y/ and medial /Ø/, e.g. *+tayən* (*+t-y-n*, *+t-Ø-n*) 'to carry', initial /Ø/, e.g. *'avəd* I (*Ø-v-d*) 'to do', or final /y/, e.g. *casə* I (*c-s-y*) 'to cover'. In all forms of pattern III the first radical of the verb is geminated to fill the empty slot of Ø, e.g.

/mak $\emptyset$ aC/ > mak $\ddot{k}\dot{k}\dot{\theta}m$   
 template /maCC $\emptyset$ C/

Some pattern III medial /y/ verbs have alternative forms with geminate consonants, e.g.

- mapyəx ~ mappəx* ‘to make cool’  
*mamyəl ~ mamməl* ‘to become blue’  
*mak $\ddot{y}\dot{\theta}m$  ~ mak $\ddot{k}\dot{k}\dot{\theta}m$*  ‘to raise’

These can be interpreted as reflecting alternating morphological roots with medial /y/ and medial /Ø/ respectively, viz. *m-py-x ~ m-pØ-x*.

#### 4.12.3.1 Present Template

- |      |   |              |                 |                    |
|------|---|--------------|-----------------|--------------------|
| 3ms. | <i>mákkəm</i>   | ‘He raises’  | <i>mávvəd</i>   | ‘He causes to do’  |
| 3fs. | <i>mak<math>\ddot{k}\dot{k}\dot{\theta}mma</math></i> | ‘She raises’ | <i>mavvódda</i> | ‘She causes to do’ |
| 3pl. | <i>mak<math>\ddot{k}\dot{k}\dot{\theta}mmi</math></i> | ‘They raise’ | <i>mavvóddi</i> | ‘They cause to do’ |

#### 4.12.3.2 Past Template

- |     |   |
|-----|---|
| ms. | <i>muk<math>\ddot{k}\dot{k}\dot{\theta}m-</math></i>    |
| fs. | <i>muk<math>\ddot{k}\dot{k}\dot{\theta}mm-a-</math></i> |
| pl. | <i>muk<math>\ddot{k}\dot{k}\dot{\theta}mm-e-</math></i> |

Examples: *muk $\ddot{k}\dot{k}\dot{\theta}mlə$*  ‘He raised (him)’, *muk $\ddot{k}\dot{k}\dot{\theta}mmálə$*  ‘He raised her’, *muk $\ddot{k}\dot{k}\dot{\theta}mméłə$*  ‘He raised them’.

#### 4.12.3.3 Resultative Participle

- |     |   |
|-----|---|
| ms. | <i>muk<math>\ddot{k}\dot{k}\dot{\theta}mma</math></i> |
| fs. | <i>muk<math>\ddot{k}\dot{k}\dot{\theta}mta</math></i> |
| pl. | <i>muk<math>\ddot{k}\dot{k}\dot{\theta}mmə</math></i> |

Compound form (perfect, inflected with a copula)

- |      |   |                    |
|------|---|--------------------|
| 3ms. | <i>muk<math>\ddot{k}\dot{k}\dot{\theta}mməłə</math></i> | ‘He has raised’    |
| 3fs. | <i>muk<math>\ddot{k}\dot{k}\dot{\theta}mtəłə</math></i> | ‘She has raised’   |
| 3pl. | <i>muk<math>\ddot{k}\dot{k}\dot{\theta}mmənə</math></i> | ‘They have raised’ |

Some examples are attested of forms without the /ə/ between the final two radicals, e.g. *ríšo múcsələ* 'Her head is covered'. This can be interpreted as reflecting an alternant initial /Ø/ root, viz. *m-Øc-s* (> *mucsa*) ~ *m-cØ-s* (> *mucəssa*).

#### 4.12.3.4 Imperative

- |       |                  |          |
|-------|------------------|----------|
| sing. | <i>mákkəm</i>    | 'Raise!' |
| pl.   | <i>mákkəmmun</i> | 'Raise!' |

#### 4.12.3.5 Infinitive and Progressive

*makkúmə*

Compound form (progressive, inflected with a copula)

- |      |                  |                    |
|------|------------------|--------------------|
| 3ms. | <i>makkúmələ</i> | 'He is raising'    |
| 3fs. | <i>makkúməla</i> | 'She is raising'   |
| 3pl. | <i>makkúməna</i> | 'They are raising' |

#### 4.12.3.6 Verbal Noun

*makkámta*

#### 4.12.3.7 Active Participle

- |     |                    |          |
|-----|--------------------|----------|
| ms. | <i>makkəmmána</i>  | 'raiser' |
| fs. | <i>makkəmmánta</i> | 'raiser' |

The gemination in the middle radical in the verb *hammuna* 'to believe' is likely to have arisen by a process similar to the one that took place in verbs of this category. The verb *hammuna* is historically a *hap'el* of the root \*'mn. The initial /h/ was originally the prefix of the *hap'el* template but is now interpreted as a radical and the verb is inflected as a quadriliteral verb like *tammuzə* 'to clean'. One may hypothesize that a process such as the following took place: \**mha'mən* > \**mhaØmən* > *hamØən* > *hammən*. One may compare this to *maØvəd* > *mavØəd* > *mavvəd* 'he causes to do'.

#### 4.12.4 *Verba Tertiae /y/*

Verbs in this category include *maḱšə* III (*m-ḱš-y*) ‘to harden’, *maḱvə* III (*m-ḱv-y*) ‘to strengthen; to construct’, *manšə* III (*m-nš-y*) ‘to forget’, *mantə* III (*m-nt-y*) ‘to be successful; to prosper’, *marjə* III (*m-rj-y*) ‘to ask, to beg’, *maslə* III (*m-sl-y*) ‘to despise, to reject, to deny (someone’s merit)’, *maštə* III (*m-št-y*) (i) ‘to give to drink’, (ii) ‘to arrange the warp’, *maxdə* III (*m-xd-y*) ‘to make enjoy, to amuse, to please’, *maxmə* III (*m-xm-y*) ‘to leaven’, *maxnə* III (*m-xn-y*) ‘to miss, to long after (*mən so.*)’, *maxpə* III (*m-xp-y*) ‘to turn over (tr.) (a cup etc.)’, *mazvə* III (*m-zv-y*) ‘to inflate (tr.)’, <sup>+</sup>*mačmə* III (<sup>+</sup>*m-čm-y*) ‘to extinguish’, <sup>+</sup>*mačrə* III (<sup>+</sup>*m-čr-y*) ‘to plaster’, <sup>+</sup>*makrə* III (<sup>+</sup>*m-kr-y*) ‘to teach (to read)’, <sup>+</sup>*mamṭə* (<sup>+</sup>*m-tm-y*) ‘to cause to arrive’, <sup>+</sup>*mapšə* III (<sup>+</sup>*m-pš-y*) ‘to make lukewarm’, <sup>+</sup>*mašmə* III (<sup>+</sup>*m-šm-y*) ‘to cause to be heard, to listen’, <sup>+</sup>*maṭbə* III (<sup>+</sup>*m-ṭb-y*) ‘to cause to sink’, <sup>+</sup>*matlə* III (<sup>+</sup>*m-ṭl-y*) ‘to put to sleep’, <sup>+</sup>*maṭmə* III (<sup>+</sup>*m-ṭm-y*) ‘to cause to be tasted’, <sup>+</sup>*maṭrə* III (<sup>+</sup>*m-ṭr-y*) ‘to drive, to ride (animal)’, <sup>+</sup>*maxlə* III (<sup>+</sup>*m-xl-y*) ‘to sweeten; to forgive’, <sup>+</sup>*mazdə* III (<sup>+</sup>*m-zd-y*) ‘to frighten, to intimidate, to threaten’.

The verbs are derived historically from both final \**y* and final \**c* roots and correspond to pattern I verbs with a final /y/ morphological root, e.g. *maštə* III, *śatə* I (*ś-t-y*) or alternating final /Ø/ and final /y/ roots, e.g. <sup>+</sup>*matlə* III, <sup>+</sup>*tallə* I (<sup>+</sup>*t-l-Ø*, <sup>+</sup>*t-l-y*). Unlike in pattern I, verbs from these two historical categories do not have a distinct conjugation in pattern III.

##### 4.12.4.1 Present Template

A stressed epenthetic is inserted before the /y/ of the fs. forms and the /y/ is geminated in accordance with a general phonological rule (§ 1.13.2.3.3.). An epenthetic is optionally inserted in some other forms of the paradigm by analogy:

3ms.	<sup>+</sup> <i>mázda</i>	‘He frightens’
3fs.	<sup>+</sup> <i>mazdíyya</i>	‘She frightens’
3pl.	<sup>+</sup> <i>mázdi</i> ~ <sup>+</sup> <i>mazdíyyi</i>	‘They frighten’, etc.
2ms.	<sup>+</sup> <i>mázdət</i> ~ <sup>+</sup> <i>mazdíyyət</i>	
2fs.	<sup>+</sup> <i>mazdíyyat</i>	
2pl.	<sup>+</sup> <i>mazdítun</i>	
1ms.	<sup>+</sup> <i>mázdən</i> ~ <sup>+</sup> <i>mazdíyyən</i>	
1fs.	<sup>+</sup> <i>mazdíyyan</i>	
1pl.	<sup>+</sup> <i>mázdex</i> ~ <sup>+</sup> <i>mazdíyyax</i>	

#### 4.12.4.2 Past Template

- ms. *+muzdi-*  
 fs. *+muzdiyya-*  
 pl. *+muzdiyye-*

Examples: *+muzdīlə* ‘He frightened (him)’, *+muzdiyyálə* ‘He frightened her’, *+muzdiyyélə* ‘He frightened them’.

#### 4.12.4.3 Resultative Participle

- ms. *+muzdíyya*  
 fs. *+muzdítā*  
 pl. *+muzdíyyə*

Compound form (perfect, inflected with a copula)

- 3ms. *+muzdíyyələ* ‘He has frightened’  
 3fs. *+muzdítəla* ‘She has frightened’  
 3pl. *+muzdíyyəna* ‘They have frightened’

#### 4.12.4.4 Imperative

The plural imperative has the ending *-mun* with an /m/ element intervening between the vowel of the base and the plural inflection *-un*:

- sing. *+mázdi* ‘Frighten!’  
 pl. *+mázdimun* ‘Frighten!’

#### 4.12.4.5 Infinitive and Progressive

*+mazdiyyə*

Compound form (progressive, inflected with a copula)

- 3ms. *+mazdíyyələ* ‘He is frightening’  
 3fs. *+mazdíyyəla* ‘She is frightening’  
 3pl. *+mazdíyyəna* ‘They are frightening’

In the northern variety of the dialect the infinitive has the form *+mazduvvə*.

#### 4.12.4.6 Verbal Noun

<sup>+</sup>*mazdéta*

#### 4.12.4.7 Active Participle

- |     |                                 |              |
|-----|---------------------------------|--------------|
| ms. | <sup>+</sup> <i>mazdiyyána</i>  | 'frightener' |
| fs. | <sup>+</sup> <i>mazdiyyánta</i> | 'frightener' |

#### 4.12.5 *Verba Mediae /Ø/, Tertiae /y/*

Verbs in this category include, *majjə* III (*m-jØ-y*) 'to tire (tr.)', *mallə* III (*m-lØ-y*) 'to cause to burn', *mammə* III (vn. *m-mØ-y*) 'to swear', *mappə* III (*m-pØ-y*) 'to cause to be baked', *marrə* III (*m-rØ-y*) 'to set (tr. and intr.) (yoghurt, boiled liquid)', *maxxə* III (*m-xØ-y*) 'to revive, to resurrect', <sup>+</sup>*maččə* III (<sup>+</sup>*m-čØ-y*) 'to smooth', <sup>+</sup>*marrə* III (<sup>+</sup>*m-rØ-y*) '(i) to patch, (ii) to graze (cattle), (iii) to cause to rain', <sup>+</sup>*maššə* III (<sup>+</sup>*m-šØ-y*), 'to cause to stick'.

These verbs have corresponding pattern I forms that belong to the category of verbs with two weak radicals described in § 4.10.13. The inflections of pattern I reflect various combinations of the /Ø/ and /y/ radicals (*C-y-Ø*, *C-Ø-y*, *C-y-y*). They include also pattern I initial weak roots such as *yamə* (*y-m-y*) 'to swear'. In the pattern III causative forms the /Ø/ is regularly placed after the first radical, which results in the gemination of the first radical throughout all inflections, e.g.

	/malØay/	> <i>mallə</i> 'He burns (tr.)'
template	/maCCəC/	

#### 4.12.5.1 Present Template

A stressed epenthetic is inserted before the /y/ of the fs. forms and the /y/ is geminated in accordance with a general phonological rule (§ 1.13.2.3.3.). An epenthetic is optionally inserted in some other forms of the paradigm by analogy:

- |      |                           |                         |
|------|---------------------------|-------------------------|
| 3ms. | <i>mállə</i>              | 'He burns (tr.)'        |
| 3fs. | <i>mallíyya</i>           | 'She burns (tr.)'       |
| 3pl. | <i>málli ~ mallíyyi</i>   | 'They burn (tr.)', etc. |
| 2ms. | <i>mállət ~ mallíyyət</i> |                         |
| 2fs. | <i>mallíyyat</i>          |                         |
| 2pl. | <i>mallítun</i>           |                         |
| 1ms. | <i>mállən ~ mallíyyən</i> |                         |

- ifs. *mallíyan*  
 1pl. *mállax* ~ *mallíyyax*

#### 4.12.5.2 Past Template

- ms. *mulli-*  
 fs. *mulliyya-*  
 pl. *mulliye-*

Examples: *mullíə* ‘He burnt it (m.)’, *mulliyyálə* ‘He burnt it (f.)’, *mulliyyélə* ‘He burnt them’.

#### 4.12.5.3 Resultative Participle

- ms. *mullíya*  
 fs. *mullíta*  
 pl. *mullíyyə*

Compound form (perfect, inflected with a copula)

- 3ms. *mullíyyála* ‘He has burnt’  
 3fs. *mullítəla* ‘She has burnt’  
 3pl. *mullíyyəna* ‘They have burnt’

#### 4.12.5.4 Imperative

The plural imperative has the ending *-mun* with an /m/ element intervening between the vowel of the base and the plural inflection *-un*:

- sing. *málli* ‘Burn!’  
 pl. *mállimun* ‘Burn!’

#### 4.12.5.5 Infinitive and Progressive

*mallíyə*

Compound form (progressive, inflected with a copula)

- 3ms. *mallíyələ* ‘He is burning’  
 3fs. *mallíyəla* ‘She is burning’  
 3pl. *mallíyəna* ‘They are burning’

In the northern variety of the dialect the infinitive has the form *mallúvvə*.

#### 4.12.5.6 Verbal Noun

*malléta*

#### 4.12.5.7 Active Participle

- ms. *malliyána* ‘burner’
- fs. *malliyánta* ‘burner’

### 4.12.6 *Verba Mediae /v/*

This category includes the verbs <sup>+</sup>*manvər* III (<sup>+</sup>*m-nv-r*) ‘to frighten away’, <sup>+</sup>*maxvər* III (<sup>+</sup>*m-xv-r*) ‘to make white’, *madvər* III (*m-dv-r*) ‘to cause to be closed’, *mavvər* III (*m-jv-r*) ‘to cause to be married; to give in marriage’. The /v/ is retained throughout all forms.

#### 4.12.6.1 Present Template

- 3ms. <sup>+</sup>*máxvər* ‘He makes white’
- 3fs. <sup>+</sup>*maxvárра* ‘She makes white’
- 3pl. <sup>+</sup>*maxvárri* ‘They make white’

#### 4.12.6.2 Past Template

- ms. <sup>+</sup>*muxvər-*
- fs. <sup>+</sup>*muxvərra-*
- pl. <sup>+</sup>*muxvərre-*

Examples: <sup>+</sup>*muxvárра* ‘He made (it m.) white’, <sup>+</sup>*muxvərrálə* ‘He made it (f.) white’, <sup>+</sup>*muxvərrélə* ‘He made them white’.

#### 4.12.6.3 Resultative Participle

- ms. <sup>+</sup>*muxvárра*
- fs. <sup>+</sup>*muxvárta*
- pl. <sup>+</sup>*muxvárri*

Compound form (perfect, inflected with a copula)

- 3ms. *+muxvárrələ* ‘He has made white’
- 3fs. *+muxvórtəla* ‘She has made white’
- 3pl. *+muxvárrəna* ‘They have made white’

#### 4.12.6.4 Imperative

- sing. *+máxvər* ‘Make white!’
- pl. *+máxvərrun* ‘Make white!’

#### 4.12.6.5 Infinitive and Progressive

*+maxvúrə*

Compound form (progressive, inflected with a copula)

- 3ms. *+maxvúrələ* ‘He is making white’
- 3fs. *+maxvúrəla* ‘She is making white’
- 3pl. *+maxvúrəna* ‘They are making white’

#### 4.12.6.6 Verbal Noun

*+maxvárta*

#### 4.12.6.7 Active Participle

- ms. *+maxvərránā*
- fs. *+maxvərránta*

#### 4.12.7 *Verba Tertiae /v/*

This category includes the verbs *mactəv* III (*m-ct-v*) ‘to cause to be written, to dictate’, *marcəv* III (*m-rc-v*) ‘to cause to mount’, *masyəv* III (*m-sy-v*) ‘to cause to age’, *matyəv* III (*m-ty-v*) ‘to cause to sit’, *maxrəv* III (*m-xr-v*) ‘to destroy’, *maxšəv* III (*m-xš-v*) ‘to cause to be thought, to pretend’.

The /v/ is retained throughout all forms.

#### 4.12.7.1 Present Template

- 3ms. *máctəv* ‘He dictates’  
 3fs. *mactóvva* ‘She dictates’  
 3pl. *mactóvvi* ‘They dictate’

#### 4.12.7.2 Past Template

- ms. *muctəv-*  
 fs. *muctəvv-*  
 pl. *muctəvv-*

Examples: *muctóvlə* ‘He dictated (it m.)’, *muctəvválə* ‘He dictated it (f.)’, *muctəvvélə* ‘He dictated them’.

#### 4.12.7.3 Resultative Participle

- ms. *muctóvva*  
 fs. *muctóvta*  
 pl. *muctóvvə*

Compound form (perfect, inflected with a copula)

- 3ms. *muctévvälə* ‘He has dictated’  
 3fs. *muctévtəla* ‘She has dictated’  
 3pl. *muctévvəna* ‘They have dictated’

#### 4.12.7.4 Imperative

- sing. *máctəv* ‘Dictate!’  
 pl. *máctəvvun* ‘Dictate!’

#### 4.12.7.5 Infinitive and Progressive

*mactúvə*

Compound form (progressive, inflected with a copula)

- 3ms. *mactúvələ* ‘He is dictating’  
 3fs. *mactúvəla* ‘She is dictating’  
 3pl. *mactúvəna* ‘They are dictating’

## 4.12.7.6 Verbal Noun

*mactávta*

## 4.12.7.7 Active Participle

- ms. *mactəvvána* ‘One who dictates’  
 fs. *mactəvvánta* ‘One who dictates’

## 4.13 Weak Quadriliteral Verbs

4.13.1 *Verba Quartae /y/ (i)*

This category includes the verbs: *+alda* QI ( $+\emptyset\text{-}ld\text{-}y$ ) ‘to cheat’, *+čalba* QI ( $+\check{c}\text{-}lb\text{-}y$ ) ‘to sting, to smart’, *+čalčə* QI ( $+\check{c}\text{-}l\check{c}\text{-}y$ ) ‘to strike with a rod’, *+čarčə* QI ( $+\check{c}\text{-}r\check{c}\text{-}y$ ) ‘to stain (intr. and tr.)’, *+karčə* QI ( $+\check{k}\text{-}r\check{t}\text{-}y$ ) ‘to roll up; to be rolled up’, *+p̄arma* QI ( $+\hat{p}\text{-}rm\text{-}y$ ) ‘to understand’, *+šaltə* QI ( $+\check{š}\text{-}lt\text{-}y$ ) ‘to run wild’, *+saxsə* QI ( $+\check{s}\text{-}xs\text{-}y$ ) ‘to investigate’, *balbə* QI ( $b\text{-}lb\text{-}y$ ) ‘to search around for sth.’, *bastə* QI ( $b\text{-}st\text{-}y$ ) ‘to feel at home’, *falda* QI ( $f\text{-}ld\text{-}y$ ) ‘to wipe away; to wear out’, *parpə* QI ( $p\text{-}rp\text{-}y$ ) ‘to rinse’, *parzə* QI ( $p\text{-}rz\text{-}y$ ) ‘to chop up’, *šarkə* QI ( $\check{š}\text{-}rk\text{-}y$ ) ‘to click (fingers, lips)’, *šaršə* QI ( $\check{š}\text{-}r\check{š}\text{-}y$ ) ‘to tire (intr. and tr.)’, *tarsə* QI ( $t\text{-}rs\text{-}y$ ) ‘to nourish’, *xalda* QI ( $x\text{-}ld\text{-}y$ ) ‘to burrow’, *xarda* QI ( $x\text{-}rd\text{-}y$ ) ‘to reel up’.

The inflections of verbs in this category have the same pattern as pattern III final /y/ verbs.

## 4.13.1.1 Present Template

A stressed epenthetic is inserted before the /y/ of the fs. forms. An epenthetic is optionally inserted in some other forms of the paradigm by analogy:

- |      |                           |                   |
|------|---------------------------|-------------------|
| 3ms. | <i>šáršə</i>              | ‘He tires’        |
| 3fs. | <i>šaršíya</i>            | ‘She tires’       |
| 3pl. | <i>šárši ~ šaršíyyi</i>   | ‘They tire’, etc. |
| 2ms. | <i>šáršət ~ šaršíyyət</i> |                   |
| 2fs. | <i>šaršíyyat</i>          |                   |
| 2pl. | <i>šaršítun</i>           |                   |
| 1ms. | <i>šáršən ~ šaršíyyən</i> |                   |
| 1fs. | <i>šaršíyyan</i>          |                   |
| 1pl. | <i>šáršax ~ šaršíyyax</i> |                   |

#### 4.13.1.2 Past Template

ms. *šurši-*

Examples: *šuršilə* 'He tired'.

#### 4.13.1.3 Resultative Participle

ms. *šuršýya*

fs. *šuršítə*

pl. *šuršýyə*

Compound form (perfect, inflected with a copula)

3ms. *šuršýyələ* 'He has tired'

3fs. *šuršítəla* 'She has tired'

3pl. *šuršýyəna* 'They have tired'

#### 4.13.1.4 Imperative

The plural imperative has the ending *-mun* with an /m/ element intervening between the vowel of the base and the plural inflection *-un*:

sing. *šárši* 'Tire!'

pl. *šáršimun* 'Tire!'

#### 4.13.1.5 Infinitive and Progressive

*šaršúyə*

Compound form (progressive, inflected with a copula)

3ms. *šaršúyələ* 'He is tiring'

3fs. *šaršúyəla* 'She is tiring'

3pl. *šaršúyəna* 'They are tiring'

In the northern variety of the dialect the infinitive/progressive has the form *šaršúvva*.

## 4.13.1.6 Verbal Noun

*šaršéta*

## 4.13.1.7 Active Participle

- ms. *šaršiyána* ‘one who tires’  
 fs. *šaršiyánta* ‘one who tires’

The verb *+alda* ‘to cheat’, which has an initial /Ø/ in the underlying morphological root, is inflected the same way, the /Ø/ being replaced by an initial // before vowels according to the usual rule (e.g. *+áldə* ‘he cheats’, *+uldíla* ‘he cheated’). Note that the verb *+parmə* ‘to understand’ forms a pattern III causative from the root *+m-þr-m* without a final /y/, e.g. *+maþrəm* ‘he causes to be understood’.

4.13.2 *Verba Quartae /y/ (2)*

A variant category of final /y/ quadrilaterals contains a weak second radical, which results in the initial sequence *CaC-* in verbs of the first category being replaced by *Co-* and the initial sequence *CuC-* being replaced by *Cu-*. The second radical of the root of these verbs can be identified as /v/, which is contracted in all inflections. Verbs in this category include the following, many of which express the sounds of animals: *čočə* QI (č-vč-y) ‘to chirp (young birds)’, *jofə* QI (f-vf-y) ‘to coo (doves)’, *kokə* QI (k-vk-y) ‘to croak (frogs)’, *modə* QI (m-vd-y) ‘to receive confession, to confess’, *nonə* QI (n-vn-y) ‘to implore’, *p̥op̥ə* QI (p̥-vþ-y) ‘to bleat (sheep)’, *zoza* QI (z-vz-y) ‘to howl (wolf, jackal)’, *+sosə* QI (+s-vs-y) ‘to beg’, *+momə* QI (+m-vm-y) ‘to purr (cat)’.

The verb *modə* is derived historically from an *ap̥el* causative, the initial *m-* being a prefix. In the synchronic state of the dialect, however, the verb has become assimilated to this class of quadrilaterals, there being no pattern III causative forms with an /o/ after the initial *m-*.

## 4.13.2.1 Present Template

A stressed epenthetic is inserted before the /y/ of the fs. forms. An epenthetic is optionally inserted in some other forms of the paradigm by analogy:

- |                              |                 |
|------------------------------|-----------------|
| 3ms. <i>módə</i>             | ‘He confesses’  |
| 3fs. <i>modíyya</i>          | ‘She confesses’ |
| 3pl. <i>módi ~ modíyyi</i>   | ‘They confess’  |
| 2ms. <i>módət ~ modíyyət</i> |                 |

- 2fs. *modíyyat*  
 2pl. *modítun*  
 1ms. *módən ~ modíyyən*  
 1fs. *modíyyan*  
 1pl. *módax ~ modíyyax*

#### 4.13.2.2 Past Template

ms. *mudi-*

Examples: *mudíla* 'He confessed'.

#### 4.13.2.3 Resultative Participle

- ms. *mudíyya*  
 fs. *mudíta*  
 pl. *mudíyyə*

Compound form (perfect, inflected with a copula)

- 3ms. *mudíyyələ* 'He has confessed'  
 3fs. *mudítələ* 'She has confessed'  
 3pl. *mudíyyəna* 'They have confessed'

#### 4.13.2.4 Imperative

The plural imperative has the ending *-mun* with an /m/ element intervening between the vowel of the base and the plural inflection *-un*:

- sing. *módi* 'Confess!'  
 pl. *módimun* 'Confess!'

#### 4.13.2.5 Infinitive and Progressive

*modíyyə*

Compound form (progressive, inflected with a copula)

- 3ms. *modíyələ* 'He is confessing'  
 3fs. *modíyələ* 'She is confessing'  
 3pl. *modíyəna* 'They are confessing'

In the northern variety of the dialect the infinitive/progressive has the form *modúvva*.

#### 4.13.2.6 Verbal Noun

*modéta*

#### 4.13.2.7 Active Participle

- |     |                  |             |
|-----|------------------|-------------|
| ms. | <i>modiyána</i>  | 'confessor' |
| fs. | <i>modiyánta</i> | 'confessor' |

In some varieties of C. Urmî verbs expressing the production of sounds such as *čočə* 'to chirp' have, at least optionally, an uncontracted form *čavčəv* (Siri S), which has the pattern of reduplicative quadrilateral verbs. This is also the case in C. Salamas and C. Gawilan. Verbal nouns expressing sounds with the pattern *CəCCa-CəC* (§ 4.25.4.8), which are formed from such roots, regularly have a reduplicative pattern in all varieties, e.g. *čəvva-čəv* 'chirping'.

### 4.14 Irregular and Defective Verbs

#### 4.14.1 'azəl I 'to go' (Ø-z-l, r-x-š)

This verb is expressed by the root Ø-z-l in the present template and in the active participle but by a lexically suppletive root in other forms. The suppletive root is derived historically from \*r-x-š, though the initial /r/ is elided in most forms and so from a synchronic point of view the underlying morphological root in such forms is more appropriately identified as Ø-r-š.

##### 4.14.1.1 Present Template

Root: Ø-z-l

- |      |                |                 |
|------|----------------|-----------------|
| 3ms. | <i>'ázəl</i>   | 'He goes'       |
| 3fs. | <i>'áza</i>    | 'She goes'      |
| 3pl. | <i>'ázi</i>    | 'They go', etc. |
| 2ms. | <i>'ázət</i>   |                 |
| 2fs. | <i>'ázat</i>   |                 |
| 2pl. | <i>'ázítun</i> |                 |
| 1ms. | <i>'ázən</i>   |                 |

- 1fs.      *'ázan*  
 1pl.      *'ázax*

When the shortened form of the habitual prefix *ci-* is attached, the initial /'/ may be elided, e.g. *ci-'azəl*, *c-azəl* 'He goes (habitually)'.

#### 4.14.1.2 Past Template

Root:  $\emptyset$ -*x-š*

*xəš-*

Examples: *xášla* 'He went', *xášla* 'She went', *xášlun* 'They went'.

#### 4.14.1.3 Resultative Participle

Root:  $\emptyset$ -*x-š*

- ms.      *xíša*  
 fs.      *xášta*  
 pl.      *xíšə*

Compound form (perfect, inflected with a copula)

- 3ms.    *xíšəla*    'He has gone'  
 3fs.    *xáštəla*    'She has gone'  
 3pl.    *xíšəna*    'They have gone'

#### 4.14.1.4 Imperative

Root:  $\emptyset$ -*x-š*

- sing.    *xúš*      'Go!'  
 pl.      *xúšun*    'Go!'

The imperative forms *si* and *se* 'go!' (sing., both common gender) are occasionally used, e.g.

- (1)    *si-dmùx.*<sup>1</sup> 'Go and sleep.' (A 3:77, <sup>+</sup>Hassar <sup>+</sup>Baba-čanja)  
 (2)    *'útən sè| xá dəccàna mátti.*<sup>1</sup> 'You go and open a shop.' (A 34:5, Barbari)

## 4.14.1.5 Infinitive

Root:  $\emptyset$ -x-š*xáša*

## 4.14.1.6 Progressive

This has the irregular pattern *bərraxša*, with the initial /r/ of the suppletive root retained.

Compound form (progressive, inflected with a copula)

- 3ms. *bərráxšələ* ‘He is going’
- 3fs. *bərráxšəla* ‘She is going’
- 3pl. *bərráxšəna* ‘They are going’

In some varieties of the dialect speakers tend to elide the /x/ in the progressive and the /š/ is geminated in compensation, e.g. *bərróššələ* ‘he is going’. In Armenia this is further contracted to *báššələ* (A 42:17, Guylasar Arm.). Another variant form of the progressive stem is *bərrəšxa*, e.g. *áha bərrəšxələ* ‘He goes’ (A 34:7, Barbari).

## 4.14.1.7 Verbal Noun

Root:  $\emptyset$ -x-š*xášta*

## 4.14.1.8 Active Participle

Root: *r*-x-š

- ms. *raxšána* ‘passer-by, traveller’
- fs. *raxšánta* ‘passer-by, traveller’

Root:  $\emptyset$ -z-l

- ms. *'azána* ‘going’
- fs. *'azánta* ‘going’

The active participle that is derived from the root  $\emptyset\text{-}z\text{-}l$  ('azana) is used with a verbal function in predicates to express an unscheduled future event, e.g. 'azánalə 'He will go (at some unknown point in the future).' The participle from the root  $r\text{-}x\text{-}\check{s}$  is used as a nominal.

#### 4.14.2 tanə II 'to say' (t-n-y II, $\emptyset\text{-m-r I}$ )

This is another verb with lexically suppletive roots. The original verbal root 'to say'  $\emptyset\text{-m-r I}$  has become restricted to the past form, resultative participle and progressive. The verb *tanə II* (*t-n-y*), which originally meant 'to recount (a tale)', has now developed the synonymous sense 'to say'. Unlike  $\emptyset\text{-m-r}$ , it is used in all inflections, so has replaced  $\emptyset\text{-m-r}$  in the present and imperative. It exists as an alternative to  $\emptyset\text{-m-r}$  in the past, resultative participle and progressive.

##### 4.14.2.1 Present Template

- 3ms. *tanə* 'He says'
- 3fs. *tanya* 'She says'
- 3pl. *tani* 'They say'

##### 4.14.2.2 Past Template

*mir-* *tuni-*

Examples: *márrə* 'He said', *tunílə* 'He said'.

##### 4.14.2.3 Resultative Participle

- ms. *míra* *túnya*
- fs. *mártəla* *túnítəla*
- pl. *mírəna* *túnyəna*

Compound form (perfect, inflected with a copula)

- 3ms. *mírlə* *túnyəle* 'He has said'
- 3fs. *mártəla* *túnítəla* 'She has said'
- 3pl. *mírəna* *túnyəna* 'They have said'

## 4.14.2.4 Imperative

The /n/ is optionally elided (§ 1.16.1.):

- |       |                                |        |
|-------|--------------------------------|--------|
| sing. | <i>táni</i> ~ <i>táy</i>       | 'Say!' |
| pl.   | <i>tánimun</i> ~ <i>táymun</i> | 'Say!' |

## 4.14.2.5 Infinitive

*tanúyə*

## 4.14.2.6 Progressive

*mára* ~ *tanúyə*

Compound form (progressive, inflected with a copula)

- |      |               |                 |                   |
|------|---------------|-----------------|-------------------|
| 3ms. | <i>márələ</i> | <i>tanúyələ</i> | 'He is saying'    |
| 3fs. | <i>márəla</i> | <i>tanúyəla</i> | 'She is saying'   |
| 3pl. | <i>márəna</i> | <i>tanúyəna</i> | 'They are saying' |

## 4.14.2.7 Verbal Noun

*tanéta*

## 4.14.2.8 Active Participle

- |     |                 |         |
|-----|-----------------|---------|
| ms. | <i>tanyána</i>  | 'sayer' |
| fs. | <i>tanyánta</i> | 'sayer' |

## 4.14.3 'atə I 'to come' (Ø-t-y, y-t-y)

This verb exhibits the inflections of initial /Ø/ and final /y/ verbs in most of its forms. There is some irregularity, however, in the imperative. The progressive form with prefixed *b-* derives from the variant root *y-t-y*.

## 4.14.3.1 Present Template

- |      |              |                   |
|------|--------------|-------------------|
| 3ms. | <i>’ítə</i>  | 'He comes'        |
| 3fs. | <i>’ítya</i> | 'She comes'       |
| 3pl. | <i>’áti</i>  | 'They come', etc. |
| 2ms. | <i>’ítət</i> |                   |

2fs.	<i>'átyat</i>
2pl.	<i>'átítun</i>
1ms.	<i>'átən</i>
1fs.	<i>'átyan</i>
1pl.	<i>'átax</i>

When the shortened form of the habitual prefix *ci-* is attached, the initial /' is elided, e.g. *ci-áta* ~ *c-áta* 'he comes (habitually)'.

#### 4.14.3.2 Past Template

*ti-*

Examples: *tíla* 'He came', *tíla* 'She came', *tílun* 'They came'.

#### 4.14.3.3 Resultative Participle

ms.	<i>tíyya</i>
fs.	<i>títa</i>
pl.	<i>tíyyə</i>

Compound form (perfect, inflected with a copula)

3ms.	<i>tíyyələ</i>	'He has come'
3fs.	<i>títəla</i>	'She has come'
3pl.	<i>tíyyəna</i>	'They have come'

#### 4.14.3.4 Imperative

sing.	<i>tá</i>	'Come!'
pl.	<i>témun</i>	'Come!'

#### 4.14.3.5 Infinitive

*táya*

#### 4.14.3.6 Progressive

*bitáya* ~ *bitá*

Compound form (progressive, inflected with a copula) derived from the variant root *y-t-y*

- 3ms. *bitáyələ* ‘He is coming’
- 3fs. *bitáyəla* ‘She is coming’
- 3pl. *bitáyəna* ‘They are coming’

- 3ms. *lélə bitáya ~ lélə bitá* ‘He is not coming’
- 3fs. *lélə bitáya ~ lélə bitá* ‘She is not coming’
- 3pl. *léna bitáya ~ léna bitá* ‘They are coming’

#### 4.14.3.7 Verbal Noun

*téta*

#### 4.14.3.8 Active Participle

- ms. *'atyána* ‘coming’
- fs. *'atyánta* ‘coming’

The active participle is used in predicates with a verbal function to express an unscheduled future event, e.g. *'atyánələ* ‘He will come (at some unknown point in the future).’

#### 4.14.4 *mayyə III 'to bring'*

This is derived historically from the causative of the verb ‘to come’ (\**ātē*) but the middle radical has lost its oral articulation.

##### 4.14.4.1 Present Template

One can posit that this paradigm, and also those of the past template and the resultative participle, have the root *m-yØ-y*, with the structure of roots such as *mallə III (m-lØ-ly)* ‘to cause to burn’ (§ 4.12.5.). This would explain the gemination of the /y/:

- 3ms. *máyyə* ‘He brings’
- 3fs. *máyya* ‘She brings’
- 3pl. *máyyi* ‘They bring’, etc.
- 2ms. *máyyət*
- 2fs. *máyyat*
- 2pl. *mayyítun*

- 1ms. *máyyən*  
 1fs. *máyyan*  
 1pl. *máyyax*

#### 4.14.4.2 Past Template

- ms. *muyyi-*  
 fs. *muyya-*  
 pl. *muyye-*

Examples: *muyyílə* ‘He brought (him)’, *muyyálə* ‘He brought her’, *muyyélə* ‘He brought them’.

#### 4.14.4.3 Resultative Participle

- ms. *múyya*  
 fs. *muyyítə*  
 pl. *múyyə*

Compound form (perfect, inflected with a copula)

- 3ms. *múyyələ* ‘He has brought’  
 3fs. *muyyítəla* ‘She has brought’  
 3pl. *múyyəna* ‘They have brought’

#### 4.14.4.4 Imperative

- sing. *mé* ‘Bring!’  
 pl. *mémun* ‘Bring!’

One may posit that the root of this contracted form is *m-ØØ-y*. When this is mapped onto the pattern III template *máCCəC*, the result would be *maØØay*, which contracts to *me*.

#### 4.14.4.5 Infinitive and Progressive

This has the template of a pattern I infinitive.

*máya*

Compound form (progressive, inflected with a copula)

- 3ms. *máyəla* 'He is bringing'
- 3fs. *máyəla* 'She is bringing'
- 3pl. *máyəna* 'They are bringing'

The root of the form *maya* can be identified as *m-Ø-y*. In the northern variety of the dialect the infinitive has the form *mava*. The /v/ is a vestige of the /u/ in the original pattern III infinitive template: \**matuyə* > \**mavuyə* > *mava*.

#### 4.14.4.6 Verbal Noun

*mayéta*

#### 4.14.4.7 Active Participle

- ms. *mayyána* 'bringer'
- fs. *mayyánta* 'bringer'

### 4.14.5 *yavvəl I* 'to give'

#### 4.14.5.1 Present Template

The historical root is \**y-h-b*, but the /h/ does not appear in any of the present inflections. The second radical /v/ is generally geminated throughout the paradigm. One may posit that the root is *y-v-Ø*, like +*š-m-Ø* 'to hear' (+*šammə* 'he hears', +*šamma* 'she hears'). A non-etymological /l/ is attached to the end of the 3ms, which is likely to be derived historically from the dative preposition \**l-*:

- 3ms. *yávvəl* 'He gives'
- 3fs. *yávvə* 'She gives'
- 3pl. *yávvı* 'They give', etc.
- 2ms. *yávvət*
- 2fs. *yávvat*
- 2pl. *yavvítun*
- 1ms. *yávvən*
- 1fs. *yávvən*
- 1pl. *yávvax*

#### 4.14.5.2 Past Template

This has the templatic pattern of quadrilateral verbs with a geminated middle radical, such as *tummózla* 'he cleaned', *hummónnə* 'he believed'. It appears that

this developed since the 3ms present form *yavvəl* was interpreted as having the pattern of verbs like *tamməz*. The /l/ is omitted in the fs. and pl. forms:

- ms. *yuvvil-*
- fs. *yuvva-*
- pl. *yuvve-*

Examples: *yuvvállə* 'He gave (it m.)', *yuvválə* 'He gave it (f.)', *yuvvélə* 'He gave them'.

#### 4.14.5.3 Resultative Participle

The template is again that of quadriliteral verbs. The /v/ is geminated in all forms. A non-etymological /l/ appears in the fs. form.

- ms. *yúvva*
- fs. *yuvválta*
- pl. *yúvvə*

Compound form (perfect, inflected with a copula)

- 3ms. *yúvvələ* 'He has given'
- 3fs. *yuvváltəla* 'She has given'
- 3pl. *yúvvəna* 'They have given'

#### 4.14.5.4 Imperative

A suppletive form is used, which has its historical origin in the imperative form \**hab* + the dative preposition \**l-*.

- sing. *hál* 'Give!'
- pl. *hállun* 'Give!'

#### 4.14.5.5 Infinitive and Progressive

*yáva*

This has the pattern of pattern i. One may posit that the root is *y-Ø-v*.

Compound form (progressive, inflected with a copula)

- 3ms. *yávələ* 'He is giving'

- 3fs. *yávəla* ‘She is giving’  
 3pl. *yávəna* ‘They are giving’

A marginal variant of the progressive base is *bayyava*.

#### 4.14.5.6 Verbal Noun

##### *yaválta*

This has the pattern of pattern II verbal nouns (*CaCCaCta*) and contains a non-etymological /l/.

#### 4.14.5.7 Active Participle

- ms. *yavána* ‘giver’  
 fs. *yavánta* ‘giver’

#### 4.14.6 <sup>+y</sup>*ttx* I ‘to know, to understand’ (+y-t-∅, +y-ttx-y, +d-∅-y)

This verb is derived historically from the root \*y-d-. The verb's inflection resembles that of other verbs with a historical final pharyngal such as <sup>+š</sup>*amma* I ‘to hear’ (< \*š-m-<sup>-c</sup>) (§ 4.10.11.). The medial voiced stop /d/ has shifted to /t/ in the inflection of the present template and active participle (roots <sup>+y</sup>-t-∅, <sup>+y</sup>-ttx-y). In all other inflections the initial /y/ radical is elided and the root can be identified as <sup>+d</sup>-∅-y.

#### 4.14.6.1 Present Template

- |      |                              |                   |
|------|------------------------------|-------------------|
| 3ms. | <sup>+y</sup> <i>áttə</i>    | ‘He knows’        |
| 3fs. | <sup>+y</sup> <i>áttə</i>    | ‘She knows’       |
| 3pl. | <sup>+y</sup> <i>átti</i>    | ‘They know’, etc. |
| 2ms. | <sup>+y</sup> <i>áttət</i>   |                   |
| 2fs. | <sup>+y</sup> <i>áttət</i>   |                   |
| 2pl. | <sup>+y</sup> <i>áttitun</i> |                   |
| 1ms. | <sup>+y</sup> <i>áttən</i>   |                   |
| 1fs. | <sup>+y</sup> <i>áttən</i>   |                   |
| 1pl. | <sup>+y</sup> <i>áttax</i>   |                   |

The /d/ has been replaced by an unvoiced tense /t/ due to its coalescence with a following laryngal \*' at some stage in its historical development, e.g. \*yād̥ā > \*yad'a > <sup>+</sup>yatt̥a 'She knows'. The synchronic morphological root can be identified as <sup>+</sup>y-t-∅ for most of the paradigm and <sup>+</sup>y-t̥-y in the 3ms. When the negative particle *le* is used before verbs of this paradigm, this is sometimes realized as *li*, e.g. *li-*<sup>+</sup>yatt̥a 'he does not know'.

#### 4.14.6.2 Past Template

Root <sup>+</sup>d-∅-y

<sup>+</sup>di-

Examples: <sup>+</sup>dīlə 'He knew', <sup>+</sup>dīlə 'She knew', <sup>+</sup>dīlun 'They knew'.

#### 4.14.6.3 Resultative Participle

Root <sup>+</sup>d-∅-y

- |     |                    |
|-----|--------------------|
| ms. | <sup>+</sup> díyya |
| fs. | <sup>+</sup> dít̥a |
| pl. | <sup>+</sup> díyyə |

Compound form (perfect, inflected with a copula)

- |      |                      |                   |
|------|----------------------|-------------------|
| 3ms. | <sup>+</sup> díyyələ | 'He has known'    |
| 3fs. | <sup>+</sup> dít̥əla | 'She has known'   |
| 3pl. | <sup>+</sup> díyyəna | 'They have known' |

#### 4.14.6.4 Imperative

Root <sup>+</sup>d-∅-y

- |       |                    |         |
|-------|--------------------|---------|
| sing. | <sup>+</sup> dí    | 'Know!' |
| pl.   | <sup>+</sup> dímun | 'Know!' |

## 4.14.6.5 Infinitive

Root  $+d\text{-}\emptyset\text{-}y$  $+d\acute{a}ya$ 

## 4.14.6.6 Progressive

Root  $+d\text{-}\emptyset\text{-}y$  $+b\acute{e}dd\acute{a}ya \sim +b\acute{e}dd\acute{a}$ 

Compound form (progressive, inflected with a copula)

3ms.  $+b\acute{e}dd\acute{a}y\acute{a}\rlap{\textit{la}}$  ‘He knows’3fs.  $+b\acute{e}dd\acute{a}y\acute{a}\rlap{\textit{la}}$  ‘She knows’3pl.  $+b\acute{e}dd\acute{a}y\acute{a}\rlap{\textit{na}}$  ‘They know’3ms.  $l\acute{e}l\acute{a} + b\acute{e}dd\acute{a}ya \sim l\acute{e}l\acute{a} + b\acute{e}dd\acute{a}$  ‘He does not know’3fs.  $l\acute{e}l\acute{a} + b\acute{e}dd\acute{a}ya \sim l\acute{e}l\acute{a} + b\acute{e}dd\acute{a}$  ‘She does not know’3pl.  $l\acute{e}n\acute{a} + b\acute{e}dd\acute{a}ya \sim l\acute{e}n\acute{a} + b\acute{e}dd\acute{a}$  ‘They do not know’

Occasionally a contracted form of the progressive is used, especially in the 2nd person when it is used as a discourse marker, e.g.  $+d\acute{a}y\acute{a}\rlap{\textit{t?l}}$  ‘Do you understand?’ (B 4:4).

## 4.14.6.7 Verbal Noun

Root  $+d\text{-}\emptyset\text{-}y$  $+d\acute{e}ta$ 

## 4.14.6.8 Active Participle

Root  $+y\text{-}\acute{t}\text{-}\emptyset$ ms.  $+yatt\acute{a}na$  ‘knower’fs.  $+yatt\acute{a}nta$  ‘knower’

**4.14.7   <sup>+</sup>maddə III ‘to cause to be known, to inform’ (<sup>+</sup>m-dØ-y)**

The inflections of this verb correspond to those of verbs such as *m-lØ-y* ‘to cause to burn’ (§ 4.12.5.).

**4.14.7.1   Present Template**

3ms.	<sup>+</sup> máddə	‘He informs’
3fs.	<sup>+</sup> maddíyya	‘She informs’
3pl.	<sup>+</sup> maddíyyi	‘They inform’, etc.
2ms.	<sup>+</sup> maddíyyat	
2fs.	<sup>+</sup> maddíyyat	
2pl.	<sup>+</sup> maddíyyítun	
1ms.	<sup>+</sup> maddíyyən	
1fs.	<sup>+</sup> maddíyyan	
1pl.	<sup>+</sup> maddíyyax	

**4.14.7.2   Past Template**

ms.	<sup>+</sup> muddi-
fs.	<sup>+</sup> muddíyya-
pl.	<sup>+</sup> muddíyye-

Examples: <sup>+</sup>muddílə ‘He informed (him)’, <sup>+</sup>muddíyyálə ‘He informed her’, <sup>+</sup>muddíyyéłə ‘He informed them’.

**4.14.7.3   Resultative Participle**

ms.	<sup>+</sup> muddíyya
fs.	<sup>+</sup> muddíta
pl.	<sup>+</sup> muddíyyə

Compound form (perfect, inflected with a copula)

3ms.	<sup>+</sup> muddíyyələ	‘He has informed’
3fs.	<sup>+</sup> muddítəla	‘She has informed’
3pl.	<sup>+</sup> muddíyyəna	‘They have informed’

**4.14.7.4   Imperative**

sing.	<sup>+</sup> máddi	‘Inform!’
pl.	<sup>+</sup> máddimun	‘Inform!’

#### 4.14.7.5 Infinitive and Progressive

*+maddíyə*

Compound form (progressive, inflected with a copula)

- |      |                   |               |
|------|-------------------|---------------|
| 3ms. | <i>+maddíyəla</i> | 'He informs'  |
| 3fs. | <i>+maddíyəla</i> | 'She informs' |
| 3pl. | <i>+maddíyəna</i> | 'They inform' |

In the northern variety of the dialect the infinitive has the form *+maddívvə*.

#### 4.14.7.6 Verbal Noun

*+maddéta*

#### 4.14.7.7 Active Participle

- |     |                     |            |
|-----|---------------------|------------|
| ms. | <i>+maddíyyána</i>  | 'informer' |
| fs. | <i>+maddíyyánta</i> | 'informer' |

### 4.14.8 *'avə 'to be'* ( $\emptyset$ -v-y)

#### 4.14.8.1 Present Template

*Irrealis*

The historical root has an initial /h/ but this is regularly dropped and the resulting forms should be considered to be derived from the root  $\emptyset$ -v-y, the / $\emptyset$ / being filled by /'v/ when in initial position before a vowel:

- |      |         |                     |
|------|---------|---------------------|
| 3ms. | 'ávə    | 'He may be'         |
| 3fs. | 'óya    | 'She may be'        |
| 3pl. | 'ávi    | 'They may be', etc. |
| 2ms. | 'ávət   |                     |
| 2fs. | 'óyat   |                     |
| 2pl. | 'ávitun |                     |
| 1ms. | 'ávən   |                     |
| 1fs. | 'óyan   |                     |
| 1pl. | 'ávax   |                     |

Educated speakers occasionally use forms with an initial /h/, e.g. *havə*, *hoya*, *havi*, but these should be considered to be interferences from the literary language, where they are regularly used.

In the paradigm above, \*/av/ contracts to /o/ when the /v/ is in syllable-final position, e.g. \**avyat* > *'yat*. In Armenia some speakers contract /av/ in this verb elsewhere in the paradigm, resulting in forms such as *þt-ðət* 'you will be' (B 16:13) < *þt-avət* (future *bət* + *'avət*), and *'ini* 'They would be' (B 16:14) < *'avini* (*'avi* + augment *-ni*).

### *Habitual Realis*

When the habitual realis particle *ci-/c-* is prefixed, the initial /v/ is regularly elided:

- |      |              |            |
|------|--------------|------------|
| 3ms. | <i>c-ávə</i> | 'He is'    |
| 3fs. | <i>c-óya</i> | 'She is'   |
| 3pl. | <i>c-ávi</i> | 'They are' |

#### 4.14.8.2 Past Template

*vi-*

Examples: *víla* 'He became'.

#### 4.14.8.3 Resultative Participle

- |     |              |
|-----|--------------|
| ms. | <i>víyya</i> |
| fs. | <i>vítə</i>  |
| pl. | <i>víyyə</i> |

Compound form (perfect, inflected with a copula)

- |      |                |                  |
|------|----------------|------------------|
| 3ms. | <i>víyyələ</i> | 'He has been'    |
| 3fs. | <i>vítələ</i>  | 'She has been'   |
| 3pl. | <i>víyyənə</i> | 'They have been' |

#### 4.14.8.4 Imperative

- |       |              |       |
|-------|--------------|-------|
| sing. | <i>ví</i>    | 'Be!' |
| pl.   | <i>vímun</i> | 'Be!' |

#### 4.14.8.5 Infinitive

*váya*

#### 4.14.8.6 Progressive

*váya* ~ *va*

Compound form (progressive, inflected with a copula)

- 3ms. *váyələ* ‘He is’
- 3fs. *váyəla* ‘She is’
- 3pl. *váyəna* ‘They are’

- 3ms. *léla váya* ~ *léla vá* ‘He is not’
- 3fs. *léla váya* ~ *léla vá* ‘She is not’
- 3pl. *léna váya* ~ *léna vá* ‘They are’

A marginal variant of the progressive base is *bivaya*, with the pattern of *bitaya* and *+bixala*.

#### 4.14.8.7 Verbal Noun

*véta*

#### 4.14.9 mattə III ‘to place’

This verb is historically the causative of *\*y-t-b* ‘to sit’ (= *yatəv* I). It contains /v/ as the reflex of \**b* in some forms, but this tends to assimilate to the preceding /t/. It has the template of pattern III throughout its inflections. Note that a morphologically more transparent causative of *yatəv* I has developed with the form *matyəv* III (*m-ty-v*), which is used to express the sense of ‘to cause to sit’.

##### 4.14.9.1 Present Template

The final /v/ assimilates to the medial /t/ radical. It is optionally kept distinct from the /t/ in forms other than the 3ms. Where the /v/ appears one may posit the root to be *m-Øt-v*. Forms preserving the /v/ are probably the result of influence from the literary language. In forms where it is assimilated the structure of the root appears to be *m-Øt-Ø* or, in the 3ms, *m-tt-y*, the /t/ geminating to compensate for the following Ø according to the usual rule.

- |                                    |  |
|------------------------------------|--|
| 3ms. <i>máttə</i>                  | ‘He places’ ( <i>m-tt-y</i> )                        |
| 3fs. <i>máttə</i> ~ <i>mátvə</i>   | ‘She places’ ( <i>m-Øt-Ø</i> ~ <i>m-Øt-v</i> )       |
| 3pl. <i>mátti</i> ~ <i>mátví</i>   | ‘They place’ ( <i>m-Øt-Ø</i> ~ <i>m-Øt-v</i> ), etc. |
| 2ms. <i>máttət</i> ~ <i>mátvət</i> |  |

- 2fs. *máttat* ~ *mátvat*  
 2pl. *mattítun* ~ *matvítun*  
 1ms. *máttən* ~ *mátvən*  
 1fs. *máttan* ~ *mátvan*  
 1pl. *máttax* ~ *mátvax*

#### 4.14.9.2 Past Template

The final /v/ is optionally retained in the fs. and pl. forms of the past template (roots *m-Øt-Ø* or *m-Øt-v*).

- ms. *mutti-*  
 fs. *mutta-* ~ *mutva-*  
 pl. *mutte-* ~ *mutve-*

Examples: *muttíð* ‘He put (him)’, *muttálð* ~ *mutválð* ‘He put her’, *muttéld* ~ *mutvélð* ‘He put them’.

#### 4.14.9.3 Resultative Participle

- ms. *mútta* ~ *mútva* (*m-Øt-Ø* ~ *m-Øt-v*)  
 fs. *muttíta* ~ *muttávta* (*m-tt-y* ~ *m-tt-v*)  
 pl. *múttə* ~ *mútvə* (*m-Øt-Ø* ~ *m-Øt-v*)

Compound form (perfect, inflected with a copula)

- 3ms. *múttəlð* ‘He has put’  
 3fs. *muttítlə* ‘She has put’  
 3pl. *múttəna* ‘They have put’

#### 4.14.9.4 Imperative

- sing. *mátti* ‘Bring!’ (*m-tt-y*)  
 pl. *máttimun* ‘Bring!’ (*m-tt-y*)

#### 4.14.9.5 Infinitive and Progressive

*mattiúya* (*m-tt-y*)

Compound form (progressive, inflected with a copula)

- |      |                  |                    |
|------|------------------|--------------------|
| 3ms. | <i>mattúyələ</i> | 'He is putting'    |
| 3fs. | <i>mattúyəla</i> | 'She is putting'   |
| 3pl. | <i>mattúyəna</i> | 'They are putting' |

In the northern variety of the dialect the infinitive has the form *mattúvvə*.

#### 4.14.9.6 Verbal Noun

*mattéta* (*m-tt-y*) ~ *mattávta* (*m-tt-v*)

#### 4.14.9.7 Active Participle

- |     |                                   |  |
|-----|-----------------------------------|--|
| ms. | <i>mattána</i> ~ <i>matvána</i>   | 'putter' ( <i>m-Øt-Ø</i> ~ <i>m-Øt-v</i> ) |
| fs. | <i>mattánta</i> ~ <i>matvánta</i> | 'putter' ( <i>m-Øt-Ø</i> ~ <i>m-Øt-v</i> ) |

#### 4.14.10 'to be able'

This verb is expressed by the roots  $+m\text{-}s\text{-}y$ ,  $+\emptyset\text{-}m\text{-}s$  and  $+m\text{-}y\text{-}s$ . The first is the original root and appears in all inflections. The roots  $+\emptyset\text{-}m\text{-}s$  and  $+m\text{-}y\text{-}s$  appear as variants in some of its inflections. The verb is not used in the imperative.

#### 4.14.10.1 Present Template

3ms.	$+másə$	$+ámsəs$	$+máyəs$ / $+más$	'He is able'
3fs.	$+másya$	$+ámsa$	$+mésa$	'She is able'
3pl.	$+mási$	$+ámsi$	$+mési$	'They are able', etc.
2ms.	$+másət$	$+ámsət$	$+mésət$	
2fs.	$+másyat$	$+ámsat$	$+mésat$	
2pl.	$+masítun$	$+amsítun$	$+mesítun$	
1ms.	$+másən$	$+ámsən$	$+mésən$	
1fs.	$+másyan$	$+ámsan$	$+mésan$	
1pl.	$+másax$	$+ámsax$	$+mésax$	

When the present form is negated, the verb is frequently contracted resulting in forms such as *lá-+msən* 'I cannot'. This is likely to have been originally a contraction of *lá-+masən* ( $+m\text{-}s\text{-}y$ ) but was reanalysed as a contraction of *la-+amsən* ( $+\emptyset\text{-}m\text{-}s$ ).

#### 4.14.10.2 Past Template

${}^+msi \sim {}^+məs$

Examples:  ${}^+msílə \sim {}^+másłə$  'He was able'.

#### 4.14.10.3 Resultative Participle

ms.  ${}^+másya$

fs.  ${}^+msítə$

pl.  ${}^+másyə$

Compound form (perfect, inflected with a copula)

3ms.  ${}^+másyələ$  'He has been able'

3fs.  ${}^+msítələ$  'She has been able'

3pl.  ${}^+másyənə$  'They have been able'

#### 4.14.10.4 Infinitive

${}^+msaya$  ( ${}^+m\text{-}s\text{-}y$ ),  ${}^+masa$  ( ${}^+\emptyset\text{-}m\text{-}s$ ),  ${}^+myasa$  ( ${}^+m\text{-}y\text{-}s$ )

#### 4.14.10.5 Progressive

${}^+msaya$ ,  ${}^+msa$  ( ${}^+m\text{-}s\text{-}y$ ),  ${}^+masa$  ( ${}^+\emptyset\text{-}m\text{-}s$ ),  ${}^+myasa$  ( ${}^+m\text{-}y\text{-}s$ )

Compound form. This tends to be used only in negated constructions

3ms.  $lélə$   ${}^+msáya$  ~  $lélə$   ${}^+msá$  'He cannot'

3fs.  $lélə$   ${}^+msáya$  ~  $lélə$   ${}^+msá$  'She cannot'

3pl.  $léna$   ${}^+msáya$  ~  $léna$   ${}^+msá$  'They cannot'

#### 4.14.10.6 Verbal Noun

${}^+mséta$

#### 4.14.10.7 Active Participle

ms.  ${}^+masyána$  'able'

fs.  ${}^+masyánta$  'able'

#### 4.15 Further Discussion concerning Verbal Roots

There are a number of features of verbal roots in C. Urmi that deviate from the expected canonical form of roots and are less than optimal in a root and template model of morphology.

One of these features relates to the canonical non-concatenativity of Semitic roots. This is presented in the literature as being clearly distinct from a stem and affix model of morphology involving a concatenative base to which affixes are attached to express grammatical inflection and derivation (Goldenberg 2005; Goldenberg 2013, 116–129; Faust and Hever 2010).

When verbal inflections have suprasegmental emphasis (pharyngalization), e.g. *+xadər* ‘he goes round’, *+xdərrə* ‘he went round’, the suprasegmental emphasis must be identified as a feature of the root, viz. *+x-d-r* 1 ‘to go round’ (§ 4.1.). Verbal inflections that have a plain setting have plain roots, e.g. *patəx* ‘he opens’, *pṭaxlə* ‘he opened’, root: *p-t-x* 1 ‘to open’. The feature of suprasegmental emphasis has lexical significance, since two verbs that share the same consonants may be distinguished only by this feature, e.g.

*s-r-p* ‘to suck up’: *+s-r-p* ‘to smart’

So the feature should be regarded as an element in the lexical root. Templates are neutral with regard to emphasis. They do not contain an inherent setting and take on the setting of the root. So, the template CaCaC, which consists of the vowels *a—ə*, is emphatic in *+sarəp* ‘it smarts’ but plain in *sarəp* ‘it soaks up’. The suprasegmental feature of emphasis in roots is a concatenative property, in that it is not restricted to the separate radicals but is a feature also of the templatic elements. It could be argued that at root level it exists in the position of the templatic elements before the root is merged with the specific elements of the template. The position of the templatic elements can be represented at an abstract level as variables, which can be represented as X, thus:

	+emphasis		
Radical slots	1	2	3
Templatic elements	×	×	×

A representation of a root such as *+s-r-p* which would capture the concatenative nature of the emphasis is:

- (1) *+XsXrXpX*

The presence of emphasis in the templatic elements cannot be satisfactorily explained by the notion that emphasis is inherent in the phonological segments of the radicals and spreads to the merged elements. This is shown by the fact that emphasis occurs in suffixed elements after the high front vowel /i/, e.g.

- (2)   <sup>+k-t-l</sup> 'to kill'  
<sup>+katlivala</sup> [k<sup>α</sup>a<sup>β</sup>t<sup>γ</sup>]i<sup>δ</sup>v<sup>ε</sup>a<sup>γ</sup>l<sup>δ</sup>a<sup>ε</sup>  
 'They killed her'

The front high vowel /i/ is not affected by the suprasegmental emphasis. In NENA dialects spoken in Iraq, high front vowels block the spread of emphasis from emphatic consonants (Khan 2013). In C. Urmî, however, segments on both sides of /i/ are emphatic in an emphatic word. The emphasis in the affixes /vala/ of <sup>+katlivala</sup> should not, therefore, be regarded as the result of the spread of emphasis from emphatic root consonants, but rather to reflect the suprasegmental nature of the emphasis.

As has been remarked in § 4.1, in some cases a verbal root and a lexically related noun are of different settings, in that one is plain and one is emphatic, e.g.

- (3)   <sup>f-v-r</sup> 'to marry'   <sup>+jora</sup> 'husband'  
<sup>k-v-r</sup> 'to bury'   <sup>+kora</sup> 'grave'

This shows that the nouns are not derived from the verbal root, and indeed the nouns do not have an abstract root at any level of their derivational morphology but rather they are constructed by combining an inflection suffix with a concatenative stem that cannot be analysed into further morphological components:

- (4)   **Stem**           **Inflection**  
<sup>+kor-</sup>   +   <sup>a</sup>                   <sup>+kora</sup> 'grave'

When a verbal root differs in its phonological setting from a lexically related noun, in all cases the verbal root is plain and the noun is emphatic. There are no cases where the verbal root is emphatic and the noun is plain. This appears to reflect a greater degree of markedness of suprasegmental emphasis in verbal roots than in nominal stems and, consequently, a greater tendency for it to be eliminated. It may be proposed that this markedness arises from the fact that a concatenative suprasegmental feature is incompatible with the canonical form of a non-concatenative root.

Another feature of roots in C. Urmî that deviates from a canonical root and template morphological system is the less than optimal transparency of the identity of the root in certain paradigms. Transparency of the identity of the root is important for an economical functionality of the root and template system. Opacity of the identity of the root leads to the necessity to memorize surface forms and treat them as stems. Stem-memorization is the normal procedure in languages with stem and affix morphology. Features that result in the transparency of root-identity are listed in the table below, alongside the corresponding features that contribute to the opacity of root-identity:

	<b>Transparent</b>	<b>Opaque</b>
(i)	Root radicals are discernible on the surface in all paradigms of a particular derivational pattern.	Not all root radicals are discernible on the surface.
(ii)	All paradigms of a verb in a particular derivational pattern are derived from the same root.	The paradigms of a verb in a particular derivational pattern are derived from different roots.
(iii)	The paradigms of a verb in a particular derivational pattern are derived from the same root as the paradigms of the same verb in another pattern.	The paradigms of a particular verb are derived from one root in one derivational pattern, but from another root in another derivational pattern.
(iv)	The templates of the paradigms of a verb in a particular derivational pattern correspond to those of other verbs in the same derivational pattern.	The template of certain inflections of certain roots coincides with those of other roots in some cases but differ in others.
(v)	No further morphological processes apply to the output form other than the root and template morphology.	The form of some inflections of a verb in one particular paradigm is changed by a process of analogical paradigm regularization.

Feature (i) relates to the opacity of root identity in the inflections of some weak verbs on account of the fact that some inflections of different roots coincide in surface form. This is due to the operation of phonetic processes which have eliminated various weak radicals in the historical root, e.g.

Inflection	Possible roots	Historical root
<i>p<sup>t</sup>ax-lə</i> 'he opened'	<i>p-t-x</i>	* <i>p-t-h</i>
<i>+šmi-lə</i> 'he heard'	<i>+š-m-Ø,</i> <i>+š-m-y</i>	* <i>š-m-</i> <sup>č</sup>
<i>xzi-lə</i> 'he saw'	<i>x-z-Ø,</i> <i>x-z-y</i>	* <i>x-z-y</i>
<i>+xəl-lə</i> 'he ate'	<i>+Ø-x-l,</i> <i>+y-x-l,</i> <i>+x-Ø-l,</i> <i>+x-y-l</i>	* <sup>č</sup> - <i>k-l</i>
<i>+sər-rə</i> 'he tied'	<i>+Ø-s-r,</i> <i>+y-s-r,</i> <i>+s-Ø-r,</i> <i>+s-y-r</i>	* <sup>č</sup> - <i>s-r</i>
<i>kəd-lə</i> 'it burnt'	<i>Ø-k-d,</i> <i>y-k-d,</i> <i>k-Ø-d,</i> <i>k-y-d</i>	* <i>y-q-d</i>
<i>+rəš-lə</i> 'he awoke'	<i>+Ø-r-š,</i> <i>+y-r-š,</i> <i>+r-Ø-š,</i> <i>+r-y-š</i>	* <i>r-č-š &lt; r-č-š</i>
<i>kəm-lə</i> 'he arose'	<i>Ø-k-m,</i> <i>y-k-m,</i> <i>k-Ø-m,</i> <i>k-y-m</i>	* <i>q-y-m</i>

The list of possible roots of these inflections of weak verbs includes the historical root. These various roots are distinguished in some of the other inflections of the verb and these show in some cases that the root of the verb has been interpreted as being one that is not the historical one, e.g.

- (5) *+yasər* 'he ties' < *+y-s-r* (historical *\*-s-r*)  
*kyada* 'to burn' < *k-y-d* (historical *\*y-q-d*)

The source of this reinterpretation is the opacity of root-identity in inflections such as those shown in the table above.

The opacity feature (ii) is a consequence of feature (i). Some weak verbs that are opaque as to their root-identity in one inflection, exhibit different roots across the inflectional paradigms, e.g.

- |     |             |                |             |                                  |
|-----|-------------|----------------|-------------|----------------------------------|
| (6) | Past:       | <i>+šmi-lə</i> | 'he heard'  | < <i>+š-m-Ø</i> or <i>+š-m-y</i> |
|     | Participle: | <i>+šəmya</i>  | 'heard'     | < <i>+š-m-y</i>                  |
|     | Imperative: | <i>+šmi!</i>   | 'hear!'     | < <i>+š-m-y</i>                  |
|     | Infinitive: | <i>+šmaya</i>  | 'to hear'   | < <i>+š-m-y</i>                  |
|     | Present:    | <i>+šamma</i>  | 'she hears' | < <i>+š-m-Ø</i>                  |
- 
- |     |             |                |           |  |
|-----|-------------|----------------|-----------|--|
| (7) | Past:       | <i>+sər-rə</i> | 'he tied' | < <i>+Ø-s-r, +y-s-r, +s-Ø-r</i> or <i>+s-y-r</i> |
|     | Participle: | <i>+sira</i>   | 'tied'    | < <i>+Ø-s-r, +y-s-r, +s-Ø-r</i> or <i>+s-y-r</i> |
|     | Imperative: | <i>+sur!</i>   | 'tie!'    | < <i>+Ø-s-r, +y-s-r, +s-Ø-r</i> or <i>+s-y-r</i> |
|     | Infinitive: | <i>+syara</i>  | 'to tie'  | < <i>+s-y-r</i>                                  |
|     | Present:    | <i>+yasər</i>  | 'he ties' | < <i>+y-s-r</i>                                  |

As can be seen from (6) and (7), when there is variation of roots across paradigms, the present paradigm is typically the odd one out. In (6) all paradigms except the present are or could potentially be interpreted as being derived from *+š-m-y*, whereas the present can only be derived from *+š-m-Ø*. Likewise in (7) the past, participle and present could potentially be derived from *+s-y-r*, the infinitive is explicitly derived from *+s-y-r*, whereas the present paradigm is derived from *+y-s-r*.

In a few cases the present exhibits two variant forms derived from different roots, e.g.

- |     |             |                |           |  |
|-----|-------------|----------------|-----------|--|
| (8) | Past:       | <i>+kər-rə</i> | 'he dug'  | < <i>+Ø-k-r, +y-k-r, +k-Ø-r</i> or <i>+k-y-r</i> |
|     | Participle  | <i>+kira</i>   | 'dug'     | < <i>+Ø-k-r, +y-k-r, +k-Ø-r</i> or <i>+k-y-r</i> |
|     | Imperative  | <i>+kur!</i>   | 'dig!'    | < <i>+Ø-k-r, +y-k-r, +k-Ø-r</i> or <i>+k-y-r</i> |
|     | Infinitive: | <i>+kyara</i>  | 'to dig'  | < <i>+k-y-r</i>                                  |
|     | Present:    | <i>+akər</i>   | 'he digs' | < <i>+Ø-k-r</i>                                  |
|     |             | <i>+kayər</i>  | 'he digs' | < <i>+k-y-r</i>                                  |

In (8) the past, participle and imperative could potentially be derived from *+k-y-r*, the infinitive is explicitly derived from *+k-y-r*, and one of the variant forms

of the present is explicitly derived from  ${}^+k\text{-}y\text{-}r$ . The odd one out is the variant present form  ${}^+akər$ , which is derived from  ${}^+\emptyset\text{-}k\text{-}r$ .

The verbs discussed above can be considered to form their paradigms by a family of suppletive roots. The relationship between these roots is lexical rather than directly morphological. A few verbs, which are used frequently, exhibit lexically unrelated suppletive roots in different paradigms of one particular derivational pattern. As with families of suppletive roots discussed above, it is typically the present that is the odd one out, e.g.

- |     |             |               |           |  |
|-----|-------------|---------------|-----------|--|
| (9) | Past:       | <i>xəš-lə</i> | 'he went' | < $\emptyset\text{-}x\text{-}\check{s}$ , $y\text{-}x\text{-}\check{s}$ , $x\text{-}\emptyset\text{-}\check{s}$ or $x\text{-}y\text{-}\check{s}$ |
|     | Participle: | <i>xiša</i>   | 'went'    | < $\emptyset\text{-}x\text{-}\check{s}$ , $y\text{-}x\text{-}\check{s}$ , $x\text{-}\emptyset\text{-}\check{s}$ or $x\text{-}y\text{-}\check{s}$ |
|     | Imperative: | <i>xuš</i>    | 'go!'     | < $\emptyset\text{-}x\text{-}\check{s}$ , $y\text{-}x\text{-}\check{s}$ , $x\text{-}\emptyset\text{-}\check{s}$ or $x\text{-}y\text{-}\check{s}$ |
|     | Infinitive  | <i>xaša</i>   | 'to go'   | < $\emptyset\text{-}x\text{-}\check{s}$ or $x\text{-}\emptyset\text{-}\check{s}$   |
|     | Present:    | <i>'azəl</i>  | 'he goes' | < $\emptyset\text{-}z\text{-}l$  |

In (9) the past, participle, imperative and infinitive could potentially be derived from various weak roots sharing the two radicals /x/ and /š/. The present, however, is derived from a different root,  $\emptyset\text{-}z\text{-}l$ .

The opacity of root-identity in feature (iii) includes examples such as the following:

- |          |   |  |
|----------|---|--|
| (10)     | Pattern I                                       | Pattern III  |
| Present: | <i>kayəm</i> 'he rises' < $k\text{-}y\text{-}m$ | <i>makkəm</i> 'he raises' < $m\text{-}k\emptyset\text{-}m$ |

Here the causative pattern III verb is not formed by the straightforward addition of the augment *m*- to the root *k-y-m* of pattern I, but rather the causative consists of the addition of the augment to the root *k-Ø-m*. As a result the relationship between pattern I and pattern III is not directly morphological but rather lexical.

Feature (iv) relates to the fact that in root and template morphology one particular templatic pattern of a particular paradigm would be expected to apply to all verbs of the same derivational pattern, taking into account morphophonological adjustments due to the weakness of consonants. So, for example, the template CaCəC of the present form *patax* 'he opens' is identifiable also in other verbs in the simplex derivational pattern I, e.g.  ${}^+\alpha xəl$  'he eats' ( ${}^+\emptyset\text{-}x\text{-}l$ ), *kayəm* 'he arises' (*k-y-m*), *šatə* 'he drinks' (*š-t-y*). There are some examples of opacity in this respect. One case is the form of the progressive across different verbs of pattern I. The normal template for the progressive in pattern I is *bəCCaCa*. Some verbs, however, exhibit a different form, e.g.

- (11) (a) *bəptaxa* ‘opening’ cf. *patəx* ‘he opens’ (*p-t-x*)  
 (b) *+bəktala* ‘killing’ cf. *+kaṭəl* ‘he kills’ (*+k-t-l*)  
 (c) *bərraka* ‘running’ cf. *arək* ‘he runs’ (*Ø-r-k*)  
 (d) *+bixala* ‘eating’ cf. *+axəl* ‘he eats’ (*+Ø-x-l*)  
 (e) *+bəššaša* ‘shaking’ cf. *+šayəš* ‘he shakes’ (*+š-y-š*)  
 (f) *jəxca* ‘laughing’ cf. *jaxəc* ‘he laughs’ (*j-x-c*)  
 (g) *pəlxana* ‘working’ cf. *paləx* ‘he works’ (*p-l-x*)  
 (h) *bərrəxša* ‘going’ cf. *azəl* ‘he goes’ (*Ø-z-l*)

The forms in (11f)–(11h) clearly have a different morphological shape from the forms in (11a)–(11e) and, indeed, the forms in (11f)–(11h) differ among themselves. Also in the forms (11c)–(11e) there is some opacity. Whereas forms (11a) and (11b) transparently share a root with other inflections of these verbs, the distinct forms of (11c)–(11e) do not transparently share a root with the other inflections of these verbs.

It is problematic to claim that the progressive forms (11f)–(11h), and indeed also (11c)–(11e), were formed by root and template morphology, since one would have to assume that they exhibit a template that is particular to one particular lexical root. It is easier to regard these as stems which speakers memorize for these particular verbs.

The /b/ element at the front of the progressive forms is also problematic from the point of view of root and template morphology. Although this originated historically as a preposition *b-* that was combined with a following infinitive, there are grounds for considering that it has become morphologically integrated with the verbal form and is no longer functional as a preposition. This is shown, for example, by the fact that the compositionality of progressive forms into *b + infinitive* is not always transparent. This is seen in the verb ‘to eat’:

- Progressive:    *+bixala* ‘eating’  
 Infinitive       *+xala* ‘to eat’  
 Verbal noun:   *+xalta* ‘eating’, *b-+xalta* ‘with eating’

Whereas the compositionality of the phrase *b-+xalta* is transparent (preposition *b + +xalta*), this is not the case with *+bixala*, since there is an unaccounted for insertion of an /i/ vowel. The /b/ of progressive forms are, therefore, transcribed without a following hyphen and considered an integral part of the verbal form. Another argument for considering the /b/ in progressive forms to be different from the preposition /b/ is that it is elided in the progressive form of several verbs. This applies in particular when it is followed by a labial consonant, e.g.

- Progressive: *praka* ‘finishing’  
 Infinitive: *praka* ‘to finish’  
 Verbal noun: *prakta* ‘end’, cf. *b-prakta* ‘in the end’

but also occasionally where there is no clear phonological conditioning, e.g.

- Progressive: *fjæxca* ‘laughing’  
 Infinitive: *fjaca* ‘to laugh’  
 Verbal noun: *fjacta* ‘laughing’, cf. *b-fjacta* ‘with laughing’

If the /b/ is an integral element of the verbal form, it would have to be considered to belong to the template in a root and template type of derivation, but this would be problematic since its distribution in progressive forms is not regular or fully predictable.

An example of opacity of root-identity arising from paradigm regularization, feature (v), is the present paradigm of the verb ‘to hear’:

3ms.	<sup>+š</sup> ámma	‘He hears’
3fs.	<sup>+š</sup> ámma	‘She hears’
3pl.	<sup>+š</sup> ámmi	‘They hear’, etc.
2ms.	<sup>+š</sup> ámmat	
2fs.	<sup>+š</sup> ámmat	
2pl.	<sup>+š</sup> ammítun	
1ms.	<sup>+š</sup> ámmən	
1fs.	<sup>+š</sup> ámmən	
1pl.	<sup>+š</sup> ámməx	

All forms except the 3ms of this paradigm can be derived transparently from the root <sup>+š</sup>-m-∅. The gemination of the medial radical in the surface forms would be the result of the spreading of the consonant to fill the place of an adjacent empty slot, as has already been remarked above:

(12) <sup>+š</sup>-m-∅ ‘to hear’: Pattern I <sup>+š</sup>amma ‘she hears’

Radical slot	1	2	3
Root	<sup>+š</sup>	<i>m</i>	∅
Template		<i>a</i>	<i>a</i>
Surface form	<sup>+š</sup> amma		

The gemination of the medial radical of the 3ms form  $^{+}\check{s}ammə$ , however, cannot be derived directly by the application of such a root and template morphology, since the /Ø/ radical is not adjacent to the medial *m* radical in the template of the 3ms present:

(13) Radical slot	1	2	3
Root	$^{+}\check{s}$	<i>m</i>	Ø
Template	<i>a</i>	<i>ə</i>	
Predicted surface form	$^{+}\check{s}amə$		

The gemination of the *m* radical in this form has arisen by analogical levelling with the surface forms of the rest of the paradigm. As a result the identity of its abstract root is opaque. This could be possibly identified as *š-mm-Ø* (§ 4.10.11.). The paradigm would be more easily processed as one based on a surface stem with the form  $^{+}\check{s}amm-$  to which are attached personal markers in the form of affixes. This can be regarded as the result of a tension between phonetic processes that result in structural irregularities in the paradigm and the pressure of the morphology to produce paradigm regularity. The adjustments made to regularize the morphology have the consequence of making the inflections more easily processed as stem + affix rather than root + template.

Verbs that are historically final \*' such as  $^{+}\check{s}amma$  I (\**š-m-*') have merged with final /y/ verbs in all inflections except the present (§ 4.10.11.). Faithfulness to the historical root in the present leads to opacity of the root, since the reflex of \*', i.e. /Ø/, is not perceptible on the phonetic surface and since the 3ms would have a form that is ambiguous as to its root, viz.  $^{+}\check{s}amə$ , which would be potentially analysable as being derived from  $^{+}\check{s}-m-\emptyset$  or  $^{+}\check{s}-m-y$ . Two potential repair mechanisms could be applied. One would be to extend the final /y/ root to the whole present paradigm, bringing it into line with other inflections. This, in fact, is what happened with the verb  $^{+}zadə$  I 'to fear', which is historically final \*\* (\**z-d-*') but is now treated as final /y/ in all inflections including the present. The other strategy would be to change to a stem + affix system of inflection, which does not entail the existence of underlying abstract roots. It appears that this latter repair mechanism has been applied to the paradigm of  $^{+}\check{s}ammə$ , which can be easily processed as stem ( $^{+}\check{s}amm-$ ) + affix, but can only be accommodated into a root and template model by assuming the proliferation of innovative roots ( $^{+}\check{s}-m-\emptyset$ , *š-mm-y*).

In a similar manner, faithfulness to the historical root in progressive forms such as  $^{+}bixala$  (< \**y-x-l*) and  $^{+}bəššaša$  (< \**š-č-š*) results in opacity of the identity of the root in a root and template system. A possible repair mechanism would be to reanalyse the forms as the output of a stem and affix system. This, indeed,

is what seems to have happened. It was argued above that there are grounds for interpreting the progressive as a stem rather than the result of the merger of a root and pattern in a variety of other verbs, including the contracted forms such as *praka* (< *bəpraka*) and irregular forms such as *jəxca* etc. The contracted forms such as *praka*, which have undergone a phonetic process, produce opacity of the morphological template rather than the root. Reanalysis of the form as a stem rather than the output of a root and template system would again be a repair mechanism for opacity. A progressive form such as *jəxca*, which has an irregular structure, is clearly a stem rather than the output of a root and template process, but in this case there is no need for a repair mechanism. The regular form *bəjxaca*, which in fact is available as an alternative, does not create opacity of either root or template in a root and template system. Rather the substitution of the regular form by *jəxca* is a reflection of the reanalysis of the progressive in general as a stem. The suppletive substitution was facilitated, no doubt, by the high frequency of use of the verb.

The prerequisite for the reanalysis of a paradigm as stem-based rather than root-based is that the component of the lexical verb before the affixes of the person markers is invariable in form throughout the paradigm. This applies to the progressive and it is achieved in the paradigm of the present of verbs like *+šamma* by a repair mechanism.

Root opacity is a feature found in defective and irregular verbs (§ 4.14.), which are also among the most frequently used verbs in the language. An extreme case is that of the verb *matta* III ‘to place’ (§ 4.14.9.). In the section on this verb above, an attempt is made to identify the various possible underlying roots for the different inflections. The surface forms of some of the paradigms have been regularized by a repair mechanism, which makes the identification of roots even more opaque but, crucially, makes the identification of a paradigm stem more transparent, e.g.

(14) Present		Root?	Stem	+	Affix
3ms.	<i>máttə</i>	<i>m-tt-y</i>	<i>matt-</i>	-ə	
3fs.	<i>máttə</i>	<i>m-Øt-Ø</i>	<i>matt-</i>	-a	
3pl.	<i>mátti</i>	<i>m-Øt-Ø</i>	<i>matt-</i>	-i	
2ms.	<i>máttət</i>	<i>m-Øt-Ø</i>	<i>matt-</i>	-ət	
2fs.	<i>máttat</i>	<i>m-Øt-Ø</i>	<i>matt-</i>	-at	
2pl.	<i>mattítun</i>	<i>m-Øt-Ø</i>	<i>matt-</i>	-itun	
1ms.	<i>máttən</i>	<i>m-Øt-Ø</i>	<i>matt-</i>	-ən	
1fs.	<i>máttan</i>	<i>m-Øt-Ø</i>	<i>matt-</i>	-an	
1pl.	<i>máttax</i>	<i>m-Øt-Ø</i>	<i>matt-</i>	-ax	

	<b>Resultative participle</b>	<b>Root?</b>	<b>Stem</b>	<b>+</b>	<b>Affix</b>
ms.	<i>mútta</i>	<i>m-Øt-Ø</i>	<i>mutt-</i>		<i>-a</i>
fs.	<i>muttíta</i>	<i>m-tt-y</i>	<i>mutt-</i>		<i>-ita</i>
pl.	<i>mútta</i>	<i>m-Øt-Ø</i>	<i>mutt-</i>		<i>-ə</i>

By way of comparison, it is worth noting that other NENA dialects exhibit various other forms of paradigm regularization, which, likewise, obscure a root and template derivation. In the Jewish trans-Zab dialects, for example, the 3ms present of middle weak roots is formed by analogy with surface forms of the rest of the paradigm rather than by the application of the template for the 3ms present, e.g.

(15) Jewish Arbel

	<i>q-t-l</i> 'to kill'	<i>d-y-q</i> 'to crush'	Template
3ms	<i>qăṭəl</i>	<i>deq</i> (predicted <i>dayəq</i> )	CăCəC
3fs	<i>qăṭla</i>	<i>deqa</i> (< <i>dayqa</i> )	CaCCa
3pl	<i>qăṭli</i>	<i>deqi</i> (< <i>dayqi</i> )	CaCCi

The present paradigm of *d-y-q* in the Jewish Arbel dialect, therefore, is most easily processed as being based on a surface stem with the form *deq-*.

In sum, we see that in C. Urmi several of the verbal paradigms exhibit features that are problematic from the point of view of canonical root and template morphological derivation. In some cases where such opacity of root-identity exists it is possible that the paradigm is processed as one that is based on surface stems. There are particularly strong arguments for this with regard to the progressive forms and also in the present paradigm of some weak verbs. Stem-based derivation is the norm for nouns in C. Urmi and it seems that it has made inroads also into some areas of the verbal system. The existence of suprasegmental emphasis in verbal roots, furthermore, weakens the strictly non-concatenative nature of the root, and can be regarded as a concatenative property, making the root quasi-concatenative. A factor that may have been operative in this process of change is the contact of C. Urmi with neighbouring non-Semitic languages that have a stem and affix type of morphology. This applies in particular to Azeri Turkish, which is rigorously agglutinative in its typology.

It should be noted, however, that if some of the verbal forms exhibit stem-like properties, there are constraints on the form of such putative stems. In general all forms in verbal paradigms still must have a shape that could in principle

be derived from a root with three radical slots. The verbal morphology of the dialect has not developed so far towards a stem and affix typology that it allows integrating the stem of borrowed verbs into the inflectional paradigms without adaptation, unlike, for example, Maltese, where forms such as *iddownlowdja* 'he downloaded' (from English *download*) and *irrakkomanda* 'he recommended' (from Italian *raccomandare*) are possible (Hoberman and Aronoff 2003; Rubin 2010, 44). All borrowed verbs in C. Urmi undergo morphological adaptation such that their inflected forms can be interpreted as being based on three radical slots.

#### 4.16 Pronominal Direct Objects on Present Template Verbs

The pronominal direct object of verbs derived from the present template (<sup>+</sup>*kat̪əl*) is expressed by L-suffixes.

3ms. verb with direct pronominal objects

3ms.	<sup>+</sup> <i>kat̪əllə</i>	'He kills him'
3fs.	<sup>+</sup> <i>kat̪əlla</i>	'He kills her'
3pl.	<sup>+</sup> <i>kat̪əllun</i>	'He kills them', etc.
2ms.	<sup>+</sup> <i>kat̪əllux</i>	
2fs.	<sup>+</sup> <i>kat̪əllax</i>	
2pl.	<sup>+</sup> <i>kat̪əlloxun</i>	
1s.	<sup>+</sup> <i>kat̪əlli</i>	
1pl.	<sup>+</sup> <i>kat̪əllan</i>	

In accordance with the rules of stress placement (§ 1.18.4.), the stress falls on the verbal base throughout this paradigm, including when the base has the 2pl. L-suffix *-loxun*, which consists of two syllables.

The /l/ of the L-suffix is optionally assimilated to a final /n/ and regularly assimilated to a final /r/ of the verbal root:

<i>zabónla</i> ~ <i>zabónna</i>	'He sells it'
<sup>+</sup> <i>šadórra</i>	'He sends it'

The /l/ of the suffix is optionally assimilated to the final /t/ or /n/ of the 1st and 2nd person inflectional suffixes, resulting in the gemination of these consonants.

Verb paradigm with 3ms. direct pronominal object

3ms.	<sup>+</sup> <i>katállə</i>	'He kills him'
3fs.	<sup>+</sup> <i>katlálsə</i>	'She kills him'
3pl.	<sup>+</sup> <i>katlílə</i>	'They kill him', etc.
2ms.	<sup>+</sup> <i>katlátlə</i> ~ <sup>+</sup> <i>katláttə</i>	
2fs.	<sup>+</sup> <i>katlátlə</i> ~ <sup>+</sup> <i>katláttə</i>	
2pl.	<sup>+</sup> <i>katlítunlə</i>	
1ms.	<sup>+</sup> <i>katlánlə</i> ~ <sup>+</sup> <i>katlánnə</i>	
1fs.	<sup>+</sup> <i>katlánlə</i> ~ <sup>+</sup> <i>katlánnə</i>	
1pl.	<sup>+</sup> <i>katláxlə</i>	

When L-suffixes are added to final /y/ and final /Ø/ verbs, the distinction between the 3ms and 3pl. is levelled, in that both have the vowel /i/ before the suffixes:

3ms.	<i>xazílə</i>	'He sees him'
3fs.	<i>xazyálə</i>	'She sees him'
3pl.	<i>xazílə</i>	'They see him', etc.
2ms.	<i>xazátlə</i>	
2fs.	<i>xazyátlə</i>	
2pl.	<i>xazítunlə</i>	
1ms.	<i>xazánlə</i>	
1fs.	<i>xazyánlə</i>	
1pl.	<i>xazáxlə</i>	
3ms.	<sup>+</sup> <i>šammílə</i>	'He hears him'
3fs.	<sup>+</sup> <i>šammálə</i>	'She hears him'
3pl.	<sup>+</sup> <i>šammílə</i>	'They hear him'

#### 4.17 Pronominal Direct Objects on Past Template Verbs

The pronominal object of verbs derived from the past template (<sup>+</sup>*ktil-*) may be expressed in one of two ways, by the inflection of the verbal template by S-suffixes or by an independent prepositional phrase.

##### 4.17.1 Inflection by S-Suffixes (Ergative)

The use of S-suffixes to express the object is a feature that is characteristic of ergative alignment (§ 4.3.5.). As indicated in § 4.3.5., in principle, such suffixes

may be used to express a pronominal object of any person. In practice, however, speakers tend to prefer the expression of the 1st and 2nd person objects by independent prepositional phrases.

Verbs from roots ending in a strong consonant

### Object

3ms.	<i>+ktál-lə</i>	'He killed him'
3fs.	<i>+ktilá-lə</i>	'He killed her'
3pl.	<i>+ktilé-lə</i>	'He killed them'
2ms.	<i>+ktilát-lə</i>	'He killed you (ms.)'
2fs.	<i>+ktilát-lə</i>	'He killed you (fs.)'
2pl.	<i>+ktilítun-lə</i>	'He killed you (pl.)'
1ms.	<i>+ktilán-lə</i>	'He killed me (m.)'
1fs.	<i>+ktilán-lə</i>	'He killed me (f.)'
1pl.	<i>+ktiláx-lə</i>	'He killed us'

Verbs from final /y/ roots

3ms.	<i>xzí-lə</i>	'He saw him'
3fs.	<i>xəzyá-lə</i>	'He saw her'
3pl.	<i>xəzyé-lə</i>	'He saw them'
2ms.	<i>xəzyát-lə</i>	'He saw you (ms.)'
2fs.	<i>xəzyát-lə</i>	'He saw you (fs.)'
2pl.	<i>xəzyítun-lə</i>	'He saw you (pl.)'
1ms.	<i>xəzyán-lə</i>	'He saw me (m.)'
1fs.	<i>xəzyán-lə</i>	'He saw me (f.)'
1pl.	<i>xəzyáx-lə</i>	'He saw us'

In both paradigms the inflectional S-suffixes have an identical form. The 3pl. suffix -e differs from the form of the 3pl. S-suffix that is used in the inflection of the present template, viz. -i.

#### 4.17.2 *Independent Prepositional Phrase*

A pronominal object of a past template verb can be expressed by an independent prepositional phrase consisting of the preposition *ka-*, which also serves to express a dative relation (§ 11.4.). This is freely used with objects of all persons. There are variant forms of the pronominal prepositional phrases with *ka*:

3ms.	<sup>+</sup> ktállə kátu / ka-díyyu / ka- <sup>+</sup> dáv	'He killed him'
3fs.	<sup>+</sup> ktállə kátó / ka-díyyo / ka-dáy	'He killed her'
3pl.	<sup>+</sup> ktállə katé / ka-díyyé / ka-dáni	'He killed them'
2ms.	<sup>+</sup> ktállə kátux / ka-díyyux	'He killed you (ms.)'
2fs.	<sup>+</sup> ktállə kátax / ka-díyyax	'He killed you (fs.)'
2pl.	<sup>+</sup> ktállə katóxun / ka-díyyóxun	'He killed you (pl.)'
1s.	<sup>+</sup> ktállə káti / ka-díyyi	'He killed me'
1pl.	<sup>+</sup> ktállə kátan / ka-díyyan	'He killed us'

Educated speakers occasionally use prepositional phrases consisting of the preposition *'əl-* to express the object, e.g. <sup>+</sup>ktállə 'állu 'He killed him'. This appears to be a borrowing from the literary language, in which this preposition is regularly used to mark direct objects. In the spoken language phrases with the preposition *ka-* are the norm. Moreover the preposition *'əl-* has merged with *+al-* in the spoken language.

Independent pronominal object phrases are moveable and may be placed before the verb:

*katu* <sup>+</sup>ktállə ~ <sup>+</sup>ktállə *katu* 'He killed him'

The expression of a direct pronominal object by a *ka*-phrase is avoided with verbs that express a dative action. With such verbs a *ka*-phrase normally expresses only the dative object, whereas an S-suffix on the verbal base can express either the direct or dative object:

*yuvválla kato* 'He gave to her' / \*'He gave her (direct object)'  
*yuvvála* 'He gave her (direct object or dative object)'

#### 4.18 Pronominal Direct Objects on Imperatives

On imperatives the pronominal object is expressed by L-suffixes. The /l/ of the L-suffix is assimilated to the final /n/ of the plural inflection. In general the stress remains on the first syllable in both singular and plural forms.

Pattern I verbs

sing.	<sup>+</sup> ktúlle	'Kill him!'
plural	<sup>+</sup> ktúlunna	'Kill him!'

### Pattern II verbs

- sing.    *+páxəllə*    'Forgive him'  
 plural    *+páxlunnə*    'Forgive him'

### Quadrilateral verbs

- sing.    *mádməxələ*    'Put him to sleep'  
 plural    *mádməxxunnə*    'Put him to sleep'

Occasionally the /n/ of the plural inflectional suffix assimilates to the /l/ of the L-suffix, e.g. *kàlpulla!* 'peal it' (<*kalpun + lə* A 35:17)

When the final radical of the verb is /n/, the /l/ of the L-suffix optionally assimilates to this in the singular imperative:

*zábənlə ~ zábənnə*    'Sell it!'

When the final radical is /r/, there is regular assimilation of the /l/ of the L-suffix:

*+šádərrə*    'Send it!'

### 4.19 Pronominal Direct Objects on Compound Verbal Forms

Compound verb forms consisting of a resultative participle or progressive stem combined with the copula or the verb *'avə* express a pronominal direct object by the paradigm of pronominal genitive suffixes that is attached to nouns and prepositions. The genitive suffix is placed directly on the participle or progressive stem before an enclitic copula. When an enclitic copula is attached, the stress remains on the penultimate syllable of the phrase consisting of the participle/progressive stem and bound genitive suffix, e.g.

Near deictic copula:    *dúlə +<sup>k</sup>tlíl-o*    'He has killed her'

Far deictic copula:    *véle +<sup>k</sup>tlíl-o*

Enclitic copula:    *+<sup>k</sup>tlíl-o-lə*

#### 4.19.1 Compounds with the Resultative Participle

##### 4.19.1.1 Present Perfect

Full verb paradigm with enclitic copula and 3ms. object. Contracted forms of the copula (§ 3.1.) are frequently used:

3ms.	$+ktílulə$	'He has killed him'
3fs.	$+któltula$	'She has killed him'
3pl.	$+ktíluna$	'They have killed him'
2ms.	$+ktíluvət \sim +ktílут$	'You (ms.) have killed him'
2fs.	$+ktáltuvat \sim +któltut$	'You (fs.) have killed him'
2pl.	$+ktílutun$	'You (pl.) have killed him'
1ms.	$+ktíluvən \sim +ktílun$	'I (m.) have killed him'
1fs.	$+ktáltuvan \sim +któltun$	'I (f.) have killed him'
1pl.	$+ktíluvəx \sim +ktílux$	'We have killed him'

3ms. verb with full object suffix paradigm

3ms.	$+ktílulə$	'He has killed him'
3fs.	$+ktílolə$	'He has killed her'
3pl.	$+ktílélə$	'He has killed them'
2ms.	$+ktílux-ilə \sim +ktílux=ilə$	'He has killed you (ms.)'
2fs.	$+ktílxax-ilə \sim +ktílxax=ilə$	'He has killed you (fs.)'
2pl.	$+ktílóxun-ilə \sim +ktílóxun=ilə$	'He has killed you (pl.)'
1s.	$+ktílilə$	'He has killed me'
1pl.	$+ktílan-ilə \sim +ktílan=ilə$	'He has killed us'

##### 4.19.1.2 Past Perfect

Pronominal direct objects on the compound past perfect are, likewise, expressed by placing genitive suffixes on the participle before the copula.

Full verb paradigm with 3ms. object

3ms.	$+ktíluva$	'He had killed him'
3fs.	$+któltuva$	'She had killed him'
3pl.	$+ktíluva$	'They had killed him'
2ms.	$+ktílutva$	'You (ms.) had killed him'
2fs.	$+ktáltutva$	'You (fs.) had killed him'
2pl.	$+ktílutənva$	'You (pl.) had killed him'
1ms.	$+ktílunva$	'I (m.) had killed him'
1fs.	$+ktáltunva$	'I (f.) had killed him'
1pl.	$+ktíluxva$	'We had killed him'

## 3ms. verb with full object suffix paradigm

2pl.	<i>+bəktálutunva</i>	'You (pl.) were killing him'
1ms.	<i>+bəktálunva</i>	'I (m.) was killing him'
1fs.	<i>+bəktálunva</i>	'I (f.) was killing him'
1pl.	<i>+bəktáluxva</i>	'We were killing him'

## 3ms. verb with full object suffix paradigm

3ms.	<i>+bəktáluva</i>	'He was killing him'
3fs.	<i>+bəktálova</i>	'He was killing her'
3pl.	<i>+bəktaléva</i>	'He was killing them'
2ms.	<i>+bəktálux-iva ~ +bəktálux-və</i>	'He was killing you (ms.)'
2fs.	<i>+bəktálax-iva ~ +bəktálax-və</i>	'He was killing you (fs.)'
2pl.	<i>+bəktalóxun-iva ~ +bəktalóxun-və</i>	'He was killing you (pl.)'
1s.	<i>+bəktáliva</i>	'He was killing me'
1pl.	<i>+bəktálan-iva ~ +bəktálan-və</i>	'He was killing us'

## 4.20 Pronominal Indirect Objects

### 4.20.1 Present Template Verbs

The pronominal indirect object on present template verbs that expresses a dative relation may be expressed either by L-suffixes or by independent prepositional phrases consisting of the prepositions *ka*-:

- yavvállə* 'He gives to him'  
*yávvəl kátu* 'He gives to him'

### 4.20.2 Past Template Verbs

The indirect pronominal object of past template verbs is expressed by independent prepositional phrases consisting of the prepositions *ka*-:

- yuvvállə kátu* 'He gave to him'

The indirect object may also be expressed by S-suffixes on the past template. This construction is used when the clause has no direct object or an indefinite direct object:

- miráli* 'I said to her'  
*yuvváli +rába məndiyána* 'I gave her many things'  
*várda myuyánla* 'He brought me (f.) flowers'  
*+šudrálə xa-ctava* 'He sent me a book'

If the clause has a definite direct object, the S-suffix on the past template would be interpreted as agreeing with the direct object rather than referring to a dative object, e.g.

- +šudrálə 'e-júpta* 'He sent that cheese'

This can be expressed by the following selection hierarchy:

- S-suffix ACC > DAT  
*ka*-phrase DAT > ACC

### 4.20.3 Imperatives

The pronominal indirect object on imperative verbs may be expressed either by L-suffixes or by independent prepositional phrases consisting of the preposition *ka*-:

- hállə!* ‘Give him!’  
*hál kátu!* ‘Give to him!’

#### 4.20.4 Compound Verbal Forms

Compound constructions consisting of a resultative participle or a progressive stem combined with the copula or verb *'avə* express a dative pronominal object by an independent *ka*-phrase:

##### Present Perfect

- 3ms. *yúvvələ kátu* ‘He has given to him’  
 3fs. *yuvváltəla kátu* ‘She has given to him’  
 3pl. *yúvvəna kátu* ‘They have given to him’

##### Present Progressive

- 3ms. *yávələ kátu* ‘He is giving to him’  
 3fs. *yávələ kátu* ‘She is giving to him’  
 3pl. *yávəna kátu* ‘They are giving to him’

If the clause has no direct object or an indefinite direct object, the indirect object may alternatively be expressed by a genitive pronominal suffix attached to the participle or progressive stem:

##### Present Perfect

*yúvvvolə xa-ctava* ‘He has given her a book’

##### Present Progressive

*yávvolə xa-ctava* ‘He is giving her a book’

#### 4.21 Combination of Direct and Indirect Object Pronominal Suffixes

When both the direct and the indirect object are pronominal, the normal constructions with the various verbal forms are as follows.

#### 4.21.1 *Present Template Verbs*

The direct object is expressed by an L-suffix and the indirect object by a *ka*-phrase:

*yavvóllo kátu* ‘He gives it (m.) to him’

#### 4.21.2 *Past Template Verbs*

The direct object is expressed by an S-suffix on the past template and the indirect object by a *ka*-phrase:

*yuvválə káti* ‘He gave it (f.) to me’

*yuvvánnun kátu* ‘They gave me (f.) to him’

In such cases where a *ka*-phrase expresses an indirect object, the direct object is not expressed by a *ka*-phrase:

\**yuvvällun káti kátu* ‘They gave me to him’

#### 4.21.3 *Imperatives*

The direct object is expressed by an L-suffix and the indirect object by a *ka*-phrase:

*hállə káti* ‘Give it (m.) to me!’

#### 4.21.4 *Compound Verbal Forms*

The direct object is expressed by a genitive pronominal suffix and the indirect object by a *ka*-phrase:

*yúvvulə káti* ‘He has given it (m.) to me’

*yávula káti* ‘He is giving it (m.) to me’

### 4.22 Comparative Excursus on Compound Verbal Forms

The enclitic copula element in compound verbal forms in C. Urmi is not indissolubly fixed in its position after the participle or progressive stem. It may optionally be moved from this position and placed on another element in the clause that expresses some kind of prominence. The copula may be moved, for example, onto an interrogative particle:

*mù vádəvət?* ~ *mù=ivət váda?* ‘What are you doing?’

Some NENA dialects, such as C. Barwar, exhibit a more regular movement of the copula onto a prominent constituent, including not only interrogative particles but also items in contrastive focus (Khan 2008b, 634–635), e.g.

#### C. Barwar

*'ati-t gráša!* ‘You (not me) are pulling’  
*mòdi-t wáða?* ‘What are you doing?’

In C. Urmī the copula is not normally moved onto an item in contrastive focus:

*'at +bəfrášəvət!* ‘You (not me) are pulling’

In both C. Urmī and dialects such as C. Barwar the copula is regularly moved onto the negative particle:

#### C. Urmī

*lélə +bəfráša!* ‘He is not pulling’

#### C. Barwar

*lélə gráša!* ‘He is not pulling’

Some NENA dialects reflect a greater degree of bonding of the copula enclitic in that it cannot be moved in any circumstances. This is the case, for example, with the J. Urmī dialect (Khan 2008a, 146), e.g.

*àt garošét!* ‘You are pulling’  
*mà garošét?* ‘What are you pulling?’  
*lá garošèt!* ‘You are not pulling’

With regard to freedom of movement, therefore, C. Urmī exhibits a typology intermediate between dialects such as C. Barwar, in which movement is regular, and J. Urmī, in which movement is not possible.

There are typological differences across the dialects also in the expression of the pronominal object of the compound constructions. In C. Urmī the pronominal object is expressed by a type of genitive pronominal suffix that is

attached to nouns rather than a type that is attached to other verbal forms. This is found also in numerous other Christian dialects, e.g.

C. Alqosh (Coghill 2003, 181)

*bəθəħ* ‘his house’  
*wole b-grašəħ* ‘He is pulling him’

C. Sāt (Mutzafi 2008a)

*baytew* ‘his house’  
*haydole xəzyəw* ‘He has seen him’

In some dialects the pronominal object of compound constructions is expressed in the same way as it is expressed in verbal forms, namely by pronominal suffixes consisting of the prepositional element *l-*. Within this group of dialects there are differences in the positioning of the object suffixes, which reflect different degrees of bonding of the copula enclitic to the participle or progressive stem. In some dialects, such as C. Ashitha, the object suffix is placed before the copula suffix:

C. Ashitha (Borghero 2006, 114)

*grašəllele* (= *graša-əlla-ile*) ‘He is pulling her’

In C. Barwar the object suffix is generally placed after the copula element, though this position is not completely fixed and it is sporadically placed before the copula, as in C. Ashitha (Khan 2008b, 286–287):

C. Barwar

*grašəlla* (= *graša-ile-la*) ‘He is pulling her’  
*grašəllele* (= *graša-əlla-ile*)

In J. Urmī, which exhibits a greater degree of bonding of the copula enclitic, the pronominal object suffixes are obligatorily placed after it:

J. Urmi

- garošella* (= *garoše-la*) ‘He is pulling her’  
*garošalle* (= *garoša-le*) ‘She is pulling him’

With regard to the marking of pronominal objects, therefore, C. Urmi should be classified with dialects that exhibit a nominal typology with genitive suffixes rather than those that exhibit a verbal typology with verbal suffixes.

#### 4.23 The Existential Particle

##### 4.23.1 Positive

The positive existential particle exists in variant forms:

###### Short form Long form

'ət	'áttən, 'ítən	‘There is/are’
-----	---------------	----------------

The short /ə/ of the form *'ət* has developed from an originally long /i/ in a closed syllable. When the form was expanded by the suffix *-ən*, in one of the variants, which is prevalent in the Urmi region, the short /ə/ of the base form was retained and the following consonant was geminated, in accordance with the usual rule with regard to short vowels in open syllables. The historical long vowel occurs in the variant form *'ítən*, which is prevalent in the Caucasus.

A past form of the particle is formed by attaching the past converter suffix *-va*:

'ətva	‘There was/were’
-------	------------------

##### 4.23.2 Negative

The present negative particle has short and long variants, as is the case with the positive form:

###### Short form Long form

<i>lət, lít</i>	<i>láttən, lítən</i>	‘There is/are not’
-----------------	----------------------	--------------------

The variants *lít* and *litən*, with a long medial vowel, occur sporadically in the Urmi region, e.g. *lít* | ‘it is not (to be found)’ (A 29:1), *báxtux litən* | ‘your wife is missing’ (A 1:30). They are used more frequently in the Caucasus.

The past form is:

*lətva* ‘There was/were not’

#### 4.24 Possessive Constructions

Possessive constructions are formed by combining the existential particles with the L-suffixes:

'ətlə	‘He has’
<i>lətlə</i>	‘He has not’
'ətvalə	‘He had’
<i>lətvalə</i>	‘He had not’

In certain contexts the existential particle in these constructions is replaced by a form of the verb *'avə* i ‘to be’. In compound verbs consisting of the resultative participle *víyya* or the progressive stem *vaya*, the pronominal possessor is expressed by a genitive suffix before a copula, e.g.

*víyyan-ilə* ‘we had’  
*vayan-ilə* ‘we have’

In the attested examples in the text corpus the copula is 3ms.:

- (1) *ctávə 'atíkə=zə kət-víyyan-lə| bərráxšəna cílla bəxzayèna.* ‘They go and see all the old books that we have.’ (B 2:15)
- (2) *bərráxšəna 'albáttá bətfákəna b-cmá 'apəskúpa kət-vàyan-lə,| +árþa xamšá 'apəskúpa.* ‘They go and, of course, meet some of the bishops that we have (during that time), four or five bishops.’ (B 2:14)

When the perfective form of *'avə* i is used, the *ptəxlə* verb form has a 3fs. L-suffix and this is combined with another L-suffix expressing the possessor, e.g.

- (3) *vilálan xámša yàlə.* ‘We had five children.’ (*vi-la-lan*)

## 4.25 General Remarks on the Verbal Patterns

In this section we shall examine the various functions of the verbal patterns. The basic insights of Doron (2003; 2008) with regard to the function of the verbal patterns in the Hebrew verbal system apply to their equivalent patterns in C. Urmî. The derived, morphologically marked, patterns II and III (equivalent to the Hebrew *pi'el* and *hif'il* respectively) have a systematic meaning when they contrast with a verb of the same root in pattern I. In such cases pattern II expresses the subject's role as agent and pattern III as its cause. The agent is the active initiator of an event, typically a human, who is closely involved with it. The cause is not necessarily so closely involved in the event and can be remote from it and bring about the event indirectly. It does not necessarily put so much energy into its initiation and can, unlike an agent, be inanimate (e.g. the wind) or abstract (e.g. old age). The basic pattern I is semantically unmarked. It functions as a default and is neutral as to the subject's role. When there is no such contrast and a verbal root occurs, for example, only in pattern II or only in pattern III, then the derived stem patterns do not necessarily express such a clear-cut semantic role of the subject.

### 4.25.1 Pattern I Verbs

As remarked, this is semantically unmarked as to the semantic role of the grammatical subject. Verbs in pattern I, therefore, express a variety of semantic roles. The following types can be identified.

#### 4.25.1.1 Intransitive Unaccusative

The subject is presented as the affectee of the event expressed by the verb and does not actively initiate it. The affectee subject undergoes a change of state and is equivalent semantically to the object (accusative) of a transitive verb. A feature of verbs of this category is that they do not grammatically encode an agent or cause but rather are encoded as spontaneous, or 'inchoative' according to the terminology of Haspelmath (1993), e.g.

<i>baləs</i> I	'to bruise'
<i>barəz</i> I	'to become dry'
<i>bašəl</i> I	'to cook (intr.)'
<i>basəm</i> I	'to recover (from an illness)'
<i>capən</i> I	'to become hungry'
<i>carəv</i> I	'to become angry'
<i>cayəm</i> I	'to become black'
<i>davək</i> I	'to become blocked'

- našəp* I ‘to drain off’  
*naxəp* I ‘to become ashamed’  
*þaçəx* I ‘to blossom’  
*pašər* I ‘to melt (intr.)’  
*patəx* I ‘to open (intr.)’  
*sakal* I ‘to become beautiful’  
*samək* I ‘to become red’  
*talək* I ‘to become lost, perish’  
*tavən* I ‘to become numb’  
*xamək* I ‘to become rotten’  
*xanək* I ‘to drown’  
*xarəp* I ‘to become sharp’  
*xarəv* I ‘to become putrid’  
*xarəx* I ‘to singe’  
<sup>+č</sup>*čaləp* I ‘to split’  
<sup>+č</sup>*čaməč* I ‘to wither’  
<sup>+č</sup>*kattə* I ‘to be cut off’  
<sup>+č</sup>*pačəl* I ‘to become crooked’  
<sup>+č</sup>*radəx* I ‘to boil’  
<sup>+č</sup>*šamət* I ‘to break (intr.)’  
<sup>+č</sup>*tarəs* I ‘to be mended’  
<sup>+č</sup>*tarəs* I ‘to become fat’  
<sup>+č</sup>*xaməs* I ‘to become sour’  
<sup>+č</sup>*xasər* I ‘to diminish’  
<sup>+č</sup>*xavər* I ‘to become white’

The resultative participle of such verbs denote a time-stable resultant property of the affectee and can generally be used adjectivally, e.g.

- <sup>+č</sup>*xəttə brızəna* ‘The wheat is dry’  
<sup>+č</sup>*xəttə briza* ‘dry wheat’

- <sup>+č</sup>*tárra ptixələ* ‘The door is open’  
<sup>+č</sup>*tarra ptixa* ‘an open door’

- <sup>+č</sup>*áklu þčəltəla* ‘His leg is crooked’  
<sup>+č</sup>*akla þčəlta* ‘a crooked leg’

- míyya* <sup>+č</sup>*rdixəna* ‘The water is boiling’  
<sup>+č</sup>*míyya rdixə* ‘boiling water’

- 'o-náša +trisələ|* ‘That man is fat’  
*naša +trisa* ‘a fat man’

- bíyyə xriwəna|* ‘The eggs have gone off’  
*bíyyə xriwə* ‘rotten eggs’

In some cases a different adjectival pattern is used, especially where a permanent property is intended, rather than one that has resulted from a specific event, e.g. *baruyza* ‘dry’, *+xamuysa* ‘sour’, *+xvara* ‘white’.

This category also includes verbs of movement, which express a change in relational state, i.e. a change in the relation of the affectee to something else, e.g.

- 'atə I* ‘to come’  
*'azəl I* ‘to go’  
*calə I* ‘to stand, to stop’  
*napəl I* ‘to fall’  
*yatəv I* ‘to sit’  
*+palət I* ‘to go out’  
*+ṭabbə I* ‘to sink (into water)’  
*+ṭamər I* ‘to sink (into the ground)’

The resultative participles of these verbs, which do not express a time-stable change in the inherent property of the affectee but rather a change in location, are generally not used adjectivally. This is because adjectives tend not to be locational but rather configurational. Being ‘somewhere’ is not lexicalized as much as ‘being something’. An adjectival function of the participle is used when the verb denotes a change in configurational posture as well as position, e.g.

- 'avvó náša tivələ|* ‘That man is sitting’  
*naša tiva* ‘A sitting man’

Several intransitive unaccusative verbs of pattern I are labile, in that they can also be used transitively without changing their morphological form. Labile verbs include the following

- baləs I* ‘to bruise’  
*čarət I* ‘to fire (a gun)’  
*davək I* ‘to block/be blocked’  
*davor I* ‘to close’

<i>malə</i> I	'to fill'
<i>parəm</i> I	'to slaughter/be slaughtered'
<i>patəx</i> I	'to open'
<i>šalək</i> I	'to cook by boiling (tr. and intr.)'
<i>taləx</i> I	'to destroy/be destroyed'
<i>xanək</i> I	'to drown'
<i>xarək</i> I	'to wreck'
<i>xarəx</i> I	'to singe'
<i>xayəc</i> I	'to rub/to itch'
+ <i>čaləp</i> I	'to split'
+ <i>čayəm</i> I	'to close'
+ <i>kattə</i> I	'to cut off/be cut off'
+ <i>nayəs</i> I	'to bite/be bitten'
+ <i>pətəx</i> I	'to flatten/be flattened'
+ <i>šamət</i> I	'to break'
+ <i>zalla</i> I	'to crack'

Examples:

+ <i>tárra ptəxlə</i>	'The door opened' (unaccusative)
<i>póxa +tárra ptəxlə</i>	'The wind opened the door' (causative)
<i>cípa +šmətlə</i>	'The stone broke' (unaccusative)
<i>čácuč cípa +šmətlə</i>	'The hammer broke the stone' (causative)
+ <i>súppi bləsla</i>	'My finger bruised' (unaccusative)
<i>cípa +súppi blisələ</i>	'The stone bruised my finger' (causative)
<i>jámi xrəkla</i>	'The ship was wrecked' (unaccusative)
+ <i>buran jámi xərkəla</i>	'The storm wrecked the ship' (causative)
+ <i>mástu xrəxla</i>	'His hair singed' (unaccusative)
<i>núyra +mástu xrixələ</i>	'The fire singed his hair' (causative)
<i>napásu +ktılə</i>	'His breath was cut off' (unaccusative)
+ <i>xola napásu +kətyələ</i>	'The rope cut off his breath' (causative)
<i>'urxátə dvəklun</i>	'The roads were blocked' (unaccusative)
<i>tálja 'urxátə dvikılə</i>	'The snow blocked the roads' (causative)

<i>béta tlàxlə </i>	'The house collapsed' (unaccusative)
<i>tlóxlux bëta </i>	'You destroyed the house' (causative)

<i>túp čròtla </i>	'The gun went off' (unaccusative)
<i>túp čritàlə </i>	'He fired the gun' (causative)

Labile verbs of this type are sometimes classified as 'lexical causatives', in that they express a causative without any morphological process, such as affixation or change of pattern. Rather a single lexeme is used in either a causative or a non-causative function (Dixon 2000, 38). Another type of lexical causative is when there are two unrelated lexical items that appear to be in a causative relation. One example is *mayət* i 'to die' and *+katəl* i 'to kill', which may be considered to be the causative *mayət* i, just as there is a causative relationship between *die* and *kill* in English.

Causatives are regarded by some linguists as expressing complex events that can be decomposed into a causing microevent and a caused microevent with a dependency relationship between the two (Shibatani 1976; Comrie 1981, 158–177; Kulikov 2001; Song 2006). The semantic structure of causatives can be represented as follows (Van Valin 2006):<sup>3</sup>

CAUSE (x, [EVENT (y, (z))])

where x is the subject of the causative verb, y and z are participants in the caused event. There may be different numbers of participants in the caused event according to the lexical verb. Participant y corresponds to the subject of the non-causative verb and participant z corresponds to its object. The intransitive and transitive alternants of labile verbs would be represented in this formalism as follows:

<i>patəx</i> i (intr.)	OPEN (y)
<i>patəx</i> i (tr.)	CAUSE (x[OPEN (y)])

Dixon (2000, 30) prefers to characterize a causative as an increase in valency involving 'the specification of an additional argument, a causer, onto a basic clause'.

The events expressed by the intransitive alternants of labile verbs result in a change of configurational state that is conceptualized as typically com-

---

<sup>3</sup> This formalism derives ultimately from the decompositional system of Dowty (1979).

ing about through the direct involvement of an external cause, i.e. the transitive form can be regarded as the primary one. In the intransitive alternants, nevertheless, the event is presented as spontaneous or an event with a de-emphasized external cause. In either case the external cause is not grammatically encoded. When the event is not spontaneous but the agent is cognitively peripheral, the agent is typically non-specific and the verb refers to a generic or habitual situation, which increases the non-specificity of the agent, e.g.

- (1) *+bar-náša ... járəc +násni.* | 'A human being must be bitten.' (A 47:6, *+nayəs*  
I 'to bite')
- (2) *č-+dān 'atíva nášə,* | *+búsra parómva ju-màta.* | 'When people came, meat  
would be slaughtered.' (B 7:5)

The historical forebears of many of these intransitive alternants had the form of an anticausative T-stem (*'etpə'el*), i.e. a formally detransitivizing morphological pattern. Such T-stems have been lost in NENA.

Intransitive unaccusative verbs that are not labile include verbs expressing events that have an internal cause, although not grammatically encoded, e.g. *þaçəx* I 'to blossom', *+čaməč* I 'to wither', *+tarəs* I 'to become fat'<sup>4</sup> and verbs expressing events that are conceptualized as typically spontaneous, e.g. *barəz* I 'to become dry', *samək* I 'to become red', *pašər* I 'to melt'. Intransitive verbs of movement, which are generally considered to have unaccusative subjects (Levin and Rappaport Hovav 1995), are, likewise, never labile.

#### 4.25.1.2 Transitive Agentive

Such verbs express an activity and the subject is its agent, i.e. its active initiator, typically a human, and the activity has a patient that is affected by the event. The degree to which the patient is affected depends on the nature of the activity, e.g.

<i>kavər</i> I	'to bury'
<i>maxə</i> I	'to hit'
<i>taxən</i> I	'to grind (flour etc.)'
<i>xašəl</i> I	'to pulverize'
<i>+jarəš</i> I	'to pull'
<i>+katal</i> I	'to kill'

---

4 For the notion of internal cause see Alexiadou, Anagnostopoulou, and Schäfer (2006).

<sup>+</sup>*marəč* I ‘to mash’

<sup>+</sup>*nayəs* I ‘to sting’

The agent initiates the event and is closely involved with it, so the event cannot be expressed as occurring without the agent unless a passive construction is used. A passive implies the involvement of an agent even if it is not expressed, e.g.

*taxána kámxa txənnəl* ‘The miller ground flour’

\**kámxa txənnəl* ‘The flour ground’

*taxána kámxa txìnələl* ‘The miller has ground flour’

\**kámxa txìnələl* ‘The flour has become ground’

Passive (implying an agent)

*kámxa pəšlə txìna* ‘The flour was ground’

*kámxa pišələ txìna* ‘The flour has become ground’

The resultant participle of such verbs can be used as an adjective of the patient noun of the activity only if it has been fundamentally affected and acquired a new time-stable property, which was the target of the activity, e.g.

*kámxa txìnələl* ‘The flour is ground’

*kamxa txina* ‘ground flour’

<sup>+</sup>*xáttə xšiləna* ‘The wheat is pulverized’

<sup>+</sup>*xəttə xšilə* ‘pulverized wheat’

When the activity affects the patient to a lesser extent and/or does not result in a time-stable change of configurational state relating to the activity of the verb, but only affects the patient temporarily and superficially, then the participle generally cannot be used adjectivally, e.g.

\**o-náša məxyələl* ‘The man is hit’

\**naša məxyə* ‘a hit man’

\**o-náša +nìsələl* ‘The man is stung’

\**naša +nisa* ‘a stung man’

\**o-náša +jrišələ|* ‘The man is pulled’

*\*naša +jriša* ‘a pulled man’

Constructions such as *o-náša +jrišələ|* can only be interpreted as an active perfect ‘The man has pulled’.

Some transitive agentive verbs are used without specifying a patient referent, e.g.

*tarək* I ‘to button’

*tarúkta trikàli.|* ‘I buttoned the button’

*járəc tárkət +spày.|* ‘You must button up well’

In such cases it should be assumed that the patient slot exists in the semantic structure but is left unspecified.

#### 4.25.1.3 Intransitive Agentive Unergative

A verb expressing an activity with an agentive subject who initiates it without an affected patient is termed unergative (Perlmutter 1978), e.g.

*barəc* I ‘to kneel’

*zamər* I ‘to sing’

*yalə* I ‘to lament, to wail’

The resultative participle cannot be used adjectively to qualify the subject argument of such verbs, since it is not an affectee of the action.

#### 4.25.1.4 Agentive Reflexive

In agentive reflexive verbs an agentive subject initiates the action and the affectee is the same referent as the subject. The reflexive affectee is inherent in the event and is not expressed by an independent object argument, e.g.

*xayəp* I ‘to wash’ *bábi xəplə|* ‘My father washed (himself)’

*lavəš* I ‘to dress’ *bábi lvəšlə|* ‘My father dressed (himself)’

The verb *xayəp* I ‘to wash’ may also be used as a regular transitive agentive, with an object argument expressing the affectee of the action, e.g.

*xəpli brùni|* ‘I washed my son’

Verbs of consumption such as *+axəl* I ‘to eat’ and *šatə* I ‘to drink’ exhibit a similar semantic structure, since the subject is the agent of the action and also its affectee, in that the agent is nourished by the food or drink that is consumed.

In some cases the resultative participle of agentive reflexive verbs can be used as adjectival qualifiers of the subject referent, e.g.

- +sarbáza šátyəna* ‘The soldiers are drunk’
- +sarbáza šátyə* ‘drunken soldiers’

#### 4.25.1.5 Transitive Experiential

These verbs express some kind of psychological internal process, such as ‘hearing’, ‘seeing’, ‘thinking’ and the subject is less agent-like than verbs expressing external activities. The object of such verbs is typically unaffected by the internal activity of the subject. This category includes verbs such as:

- +šamma* I ‘to hear’
- xazza* I ‘to see’
- +bayyə* I ‘to love’
- xašəv* I ‘to think’
- taxər* I ‘to remember’

The resultative participle of such verbs is generally not used as adjectival qualifiers of the subject or object arguments of such verbs, since they are usually not affectees of the event. In cases where the subject does acquire a new property as a result of the experience, on the other hand, the adjectival use of the participle is possible. This applies to verbs such as

- +karə* I ‘to read, to study’    *naša +kəryə* ‘an educated man’
- layəp* I ‘to learn’                *naša lipa* ‘a learned man’

#### 4.25.2 Pattern II

When a pattern II form exists for a root that is also used in pattern I, normally the pattern I form belongs to the category of intransitive verbs expressing inchoative activities with unaccusative subjects and the pattern II form is transitive with an agentive, typically human, subject who causes the event directly. In such cases, therefore, pattern II should be classified as a ‘morphological causative’, since it expresses the causative through a change of the morphological pattern of the verb, e.g.

<i>bašəl I</i>	'to cook (intr.)'	<i>bašəl II</i>	'to cook (tr.)'
<i>basəm I</i>	'to become well'	<i>basəm II</i>	'to cure'
<i>capəš I</i>	'to gather (intr.)'	<i>capəš II</i>	'to gather (tr.)'
<i>daxə I</i>	'to become pure'	<i>daxə II</i>	'to purify'
<i>jadə I</i>	'to become dirty'	<i>jadə II</i>	'to make dirty'
<i>jaləx I</i>	'to peel off (intr.)'	<i>jaləx II</i>	'to strip off (tr.)'
<i>kadəš I</i>	'to be consecrated'	<i>kadəš II</i>	'to consecrate'
<i>kalə I</i>	'to become parched'	<i>kalə II</i>	'to parch'
<i>kaləp I</i>	'to peel (intr.)'	<i>kaləp II</i>	'to peel (tr.)'
<i>panə I</i>	'to be exterminated'	<i>panə II</i>	'to exterminate'
<i>pašər I</i>	'to melt (intr.)'	<i>pašər II</i>	'to digest, to melt (tr.)'
<i>sakəl I</i>	'to become beautiful'	<i>sakəl II</i>	'to make beautiful'
<i>sapək I</i>	'to empty (intr.)'	<i>sapək II</i>	'to empty (tr.)'
<i>šaləp I</i>	'to become dislocated'	<i>šaləp II</i>	'to dislocate (tr.)'
<i>šapəx I</i>	'to pour out (intr.)'	<i>šapəx II</i>	'to pour out (tr.)'
<i>talək I</i>	'to become lost'	<i>talək II</i>	'to lose, destroy'
<i>tapə I</i>	'to become stuck'	<i>tapə II</i>	'to stick (tr.)'
<i>tapə I</i>	'to light (fire, intr.)'	<i>tapə II</i>	'to light (fire, tr.)'
<i>tapəx I</i>	'to spill (intr.)'	<i>tapəx II</i>	'to spill (intr.)'
<i>zarəz I</i>	'to become ready'	<i>zarəz II</i>	'to prepare'
<i>+basər I</i>	'to diminish'	<i>+basər II</i>	'to reduce (tr.)'
<i>+bažəl I</i>	'to become idle'	<i>+bažəl II</i>	'to make idle'
<i>+palət I</i>	'to go out'	<i>+palət II</i>	'to put out'
<i>+tamər I</i>	'to become buried'	<i>+tamər II</i>	'to bury (tr.)'
<i>+taməš I</i>	'to be dipped'	<i>+taməš II</i>	'to dip (tr.)'
<i>+tarəs I</i>	'to mend (intr.)'	<i>+tarəs II</i>	'to repair'
<i>+tašə I</i>	'to be hidden'	<i>+tašə II</i>	'to hide (tr.)'
<i>+tavə I</i>	'to be roasted'	<i>+tavə II</i>	'to roast (tr.)'

The causee, i.e. the grammatical subject of the intransitive verb, is made the grammatical object of the causative verb, e.g.

- (1) *míyya bət-šápxi +al-+àrra.* | 'The water will pour out on the ground.'  
 +'áv *bət-šapóxlun +míyya +al-+àrra.* | 'He will pour out the water on the ground.'

The relationship between such pairs of pattern I and pattern II forms is similar to that holding between the intransitive and transitive alternants of pattern I labile verbs, in that in labile verbs the intransitive is always unaccusative inchoative. Pattern II is not used to derive causatives from agentive intransi-

tives, or verbs of higher valencies (transitives or ditransitives). There are some isolated cases where the pattern I verb of the pair is unergative, but the pattern II verb does not causativize the event expressed by the pattern I verb, but rather increases its valency, e.g.

*pašək* I ‘to stretch (intr.), to stand upright’—*pašək* II ‘to stretch out (tr.) (e.g. a hand)’

The subject of the pattern II verb may be the cause of the event but is not necessarily acting willfully, e.g.

*talək* I ‘to become lost’    *talək* II ‘to lose’

Other verbs in pattern II, which do not have a corresponding pattern I with the same root, may be classified as follows.

#### Transitive agentive

<i>bajər</i> II	‘to nurture’
<i>basər</i> II	‘to rape (a virgin)’
<i>bazək</i> II	‘to scatter (seeds)’
<i>haʃə</i> II	‘to spell, to analyse, to study’
<i>hałə</i> II	‘to tell (a story)’
<i>labəl</i> II	‘to take (away)’
<i>mhadə</i> II	‘to guide’
<i>naxəm</i> II	‘to raise (the dead)’
<i>šabəx</i> II	‘to glorify’
<i>šapən</i> II	‘to flatten (ground)’
<i>sarəf</i> II	‘to saddle’
<i>šava</i> II	‘to spread’
<i>tarəf</i> II	‘to give up, to quit’
<i>xamə</i> II	‘to preserve, to keep’
<i>xarəj</i> II	‘to spend’
+ <i>aməl</i> II	‘to process’
+ <i>arə</i> II	‘to patch, to darn’
+ <i>badər</i> II	‘to pour, to scatter’
+ <i>barəx</i> II	‘to bless’
+ <i>barəx</i> II	‘to consecrate’
+ <i>baxər</i> II	‘to test, to examine’
+ <i>camər</i> II	‘to drive away’

- +daməg* II ‘to brand’
- +darə* II ‘to winnow’
- +hadər* II ‘to prepare’
- +hasəl* II ‘to give birth’
- +palla* II ‘to divide’
- +paməl* II ‘to ruin’
- +pasə* II ‘to save’
- +pasəl* II ‘to design’
- +paxəl* II ‘to pardon’
- +šadər* II ‘to send’
- +taləm* II ‘to chastise’
- +xapət* II ‘to encourage’

#### Intransitive agentive (unergative)

- dajəl* II ‘to lie’
- salə* II ‘to pray’
- tanəx* II ‘to sigh’
- +bakər* II ‘to ask’
- +šavər* II ‘to swear’
- +ṭavəl* II ‘to play’
- +ṭavrə* II ‘to search’

#### Experiential and psychological

- dayəl* II ‘to lie, to tell untruths’
- jašək* II ‘to look’
- kazəd* II ‘to stare’
- mačəx* II ‘to find’
- nabə* II ‘to predict, to foretell’
- šadəl* II ‘to fuss (over child); to flatter’
- šavət* II ‘to desire’
- zaləz* II ‘to recoil, to feel disgust’
- +myakər* II ‘to respect’

#### Control verbs

- madəv* II ‘to manage (to do sth.)’
- pačəd* II ‘to command’
- +bašər* II ‘to do skilfully, to be able to’

<sup>+</sup>*jarəb* II ‘to try, to attempt’

<sup>+</sup>*sarə* II ‘to begin’

The verb *šaləx* II ‘to strip off, to undress’ can be used as a transitive reflexive, without any object argument on the grammatical surface, or may be used as transitive agentive, with an object argument. This object argument may refer to the clothes or covering of the agent, in effect a reflexive object, or it may refer to a distinct participant, e.g.

‘ána šalùxəvən.’ ‘I am undressing.’

‘ána šaluxévən jùlli.’ ‘I am taking off my clothes.’

‘ána šalùxuvən.’ ‘I am undressing him.’

The verb *šanə* II ‘to transfer, to move’ may be used intransitively and should be regarded as a transitive reflexive with an internal reflexive object argument. The corresponding pattern I verb *šanə* I ‘to fade, to faint’ is intransitive unaccusative.

The verb <sup>+</sup>*tašə* II ‘to hide’ may have a reflexive affectee, but this must be explicitly expressed with a reflexive pronoun, e.g.

<sup>+</sup>*báyyə* <sup>+</sup>*tašíla* *jànu*. ‘He wants to hide (himself).’

<sup>+</sup>*báyyə* <sup>+</sup>*tašílə* *brùnu*. ‘He wants to hide his son.’

A small number have unaccusative subjects, e.g.

*xabəl* II ‘to become cold’

<sup>+</sup>*pašəm* II ‘to become sorry’

A few pattern II verbs have a corresponding pattern I form from the same root without any apparent difference in meaning, e.g.

*jalə* I, *jalə* II ‘to disclose’

<sup>+</sup>*pašəm* I, <sup>+</sup>*pašəm* II ‘to become sorry’

*pašəx* I, *pašəx* II ‘to pull to pieces’

*kadəm* I, *kadəm* II ‘to go in front’

*šatəl* I, *šatəl* II ‘to plant’

*xacəm* I, *xacəm* II ‘to rule’

The pattern I verb in such pairs may be labile, e.g.

*parəš* I ‘to separate (intr. and tr.)’—*parəš* II ‘to separate (tr.)’  
*šalək* I ‘to boil to cook (intr. and tr.)’—*šalək* II ‘to boil to cook’  
*tarək* I ‘to be buttoned, to button’—*tarək* II ‘to button’

A very small number of pattern II verbs can be identified as being labile. These include:

+*pallə* II ‘to divide (tr. and intr.)’  
+*šarə* II ‘to begin (tr. and intr.)’

Both of these verbs may be used intransitively to express spontaneous events. Sporadically a pattern II agentive transitive verb may be used intransitively to express an event that is not spontaneous but whose agent has been de-emphasized and is non-specific. This is attested for the verb +*jarəb* II ‘to test/be tested’. It is relevant to note that in the available example the verb refers to a generic situation, which increases the non-specificity of the agent:

(2) *únnə +šulánjárəc +járbi.* ‘These things have to be tested.’ (A 48:7)

In some cases the pattern II form of such pairs expresses greater intensity in that it is typically used with a multiplicity of affectees or greater degree of affectedness of the object:

*šaləx* I ‘to slough off (skin)’—*šaləx* II ‘to strip off (clothes), to strip (of possessions)’  
*tanə* I ‘to repeat’—*tanə* II ‘to tell, to tell a story’  
+*ṭaməš* I ‘to be dipped (intr.), to dip (tr.)’—+*ṭaməš* II ‘to immerse, to plate’

In the case of the verb *kabəl* I, II ‘to accept’ the difference is between an abstract and a concrete object:

*kabəl* I ‘to accept, to agree to’—*kabəl* II ‘to accept (in the hand), to receive’.

In some cases the meaning of a pattern II verb has undergone a metaphoric shift in relation to that of the corresponding pattern I verb, e.g.

*banə* I ‘to build’—*banə* II ‘to cook’  
*sapə* I ‘to draw off (liquid), to transfer from one vessel to another’—*sapə* II ‘to hand over, to deliver’  
*zavən* (< \**zabən*) ‘to buy’—*zabən* II ‘to buy’

Sometimes pattern I and pattern II are homonyms with no obvious semantic relationship, e.g.

*jabə* I ‘to foam, to boil over’—*jabə* II ‘to gather’

The class of verbs that have a geminated middle radical such as *tamməz* ‘to clean’ include a much larger proportion of non-agentive verbs than pattern II verbs (see the list in § 4.25.4.1.) and this reflects the fact that they belong to the category of QI quadrilateral verbs and do not constitute a subgroup of pattern II verbs.

### 4.25.3 Pattern III

#### 4.25.3.1 Morphological Causatives

Pattern III morphological causatives of triliteral verbs are more productive than pattern II causatives. They are used to derive causatives of both non-agentive (unaccusative and experiential) and agentive pattern I intransitive verbs, and also causatives of transitive verbs. Pattern II causatives, which are less productive than Pattern III causatives, tend to express more common, unmarked, i.e. conventional, situations (e.g. ‘to cook’, ‘to cure’) than pattern III:

##### Non-agentive pattern I

- barəz* I ‘to dry’ (unaccusative)
- carə* I ‘to become short’ (unaccusative)
- cayəš* I ‘to be paid (debt)’ (unaccusative)
- javəl* I ‘to feel nauseous’ (unaccusative)
- pk̥kə* I ‘to split’ (unaccusative)
- payəx* I ‘to become cool’ (unaccusative)
- raxək* I ‘to become distant’ (unaccusative)
- šapəx* I ‘to overflow’ (unaccusative)
- šarəz* I ‘to crack (intr.)’ (unaccusative)
- šaxən* I ‘to become warm’ (unaccusative)
- xajəl* I ‘to be startled’ (unaccusative)
- xarəp* I ‘to become sharp’ (unaccusative)
- yakəd* I ‘to burn’ (unaccusative)
- yasək* I ‘to ascend’ (unaccusative)
- zavə* I ‘to inflate (intr.)’ (unaccusative)
- zayər* I ‘to swell’ (unaccusative)
- +basər* I ‘to diminish’ (unaccusative)
- +čaməč* I ‘to wither’ (unaccusative)
- +jarət* I ‘to stumble’ (unaccusative)

##### Causative pattern III

- mabrəz* III ‘to cause to dry’
- macrə* III ‘to cause to become short’
- maccəš* III ‘to cause to be paid’
- majvəl* III ‘to cause to be nauseous’
- mapkə* III ‘to cause to split’
- mapyəx* III ‘to cool (tr.)’
- marxək* III ‘to cause to become distant’
- mašpəx* III ‘to cause to overflow’
- mašrəz* III ‘to crack (tr.)’
- mašxən* III ‘to cause to become warm’
- maxjəl* III ‘to startle (tr.)’
- maxrəp* III ‘to sharpen’
- makkəd* III ‘to cause to burn’
- masək* III ‘to cause to ascend’
- mazvə* III ‘to inflate (tr.)’
- mazyər* III ‘to cause to swell’
- +mabsər* III ‘to cause to diminish’
- +mačməč* III ‘to cause to wither’
- +majrət* III ‘to cause to stumble (tr.)’

**Non-agentive pattern I**

- +*pašə* I 'to become lukewarm' (unaccusative)
- +*sarəp* I 'to smart' (unaccusative)
- +*sayəp* I 'to drain' (unaccusative)
- +*ṭarəs* I 'to become fat' (unaccusative)
- +*xaləs* I 'to become firm' (unaccusative)
- +*šammə* I 'to hear' (experiential)
- xazzə* I 'to see' (experiential)
- xašəv* I 'to think' (experiential)
- taxər* I 'to remember' (experiential)

**Agentive pattern I**

- barəc* I 'to kneel' (unergetic)
- yamə* I 'to swear' (unergetic)
- patsl* I 'to twist, to turn' (unergetic)
- +*navər* I 'to bolt (horse)' (unergetic)
- taxən* I 'to grind' (transitive)
- maxə* I 'to hit' (transitive)

**Causative pattern III**

- +*mapšə* III 'to make lukewarm'
- +*masrəp* III 'to cause to smart'
- +*masyəp* III 'to cause to drain'
- +*matrəs* III 'to cause to be fat'
- +*maxləs* III 'to cause to be firm'
- +*mašmə* III 'to cause to be heard'
- maxzə* III 'to cause to be seen'
- maxšəv* III 'to cause to be thought'
- matxər* III 'to cause to be remembered'

**Causative pattern III**

- mabrəc* III 'to cause to kneel'
- mammə* III 'to cause to swear'
- maptal* III 'to cause to turn'
- +*manvər* III 'to cause to bolt'
- matxən* III 'to cause to be ground'
- mamxə* III 'to cause to be hit'

As is the case with pattern II, when intransitive verbs are made into causatives by pattern III, the causee, i.e. the grammatical subject of the intransitive verb, is made the grammatical object of the causative verb. This applies to both unaccusative subjects and agentive subjects of pattern I verbs, e.g.

*mabrəz* III 'to cause to dry'

(1) +*áv bət-mabrózlun +xəttə.* | 'He will cause the wheat to dry.'

*mabrəc* III 'to cause to kneel'

(2) +*áv bət-mabráclun nàšə.* | 'He will make the people kneel'

This syntax, whereby the subject of an intransitive is made the object of a causative verb, is the cross-linguistic norm. In many languages morphological causatives can be formed only from intransitive verbs (Dixon 2000, 45). The application of morphological causatives to transitive verbs with two arguments (subject and direct object) is less common cross-linguistically. When this occurs, moreover, various syntactic alignments of the arguments are attested in documented languages. These are summarized by Dixon (2000, 48) thus (where A = transitive subject, and O = object):

Type	Causer	Original A (causee)	Original O
(i)	A	special marking	O
(ii)	A	retains A-marking	O
(iii)	A	has O-marking	has O-marking
(iv)	A	O	non-core
(v)	A	non-core	O

The pattern III morphological causatives of transitive verbs in C. Urmî exhibit type (v) alignment, in that the original object of the transitive clause remains the object of the causative verb, but the original subject of the transitive clause is expressed by an adjunct prepositional phrase. When the subject of the original clause is agentive, the preposition of the adjunct is normally *b-* 'by', e.g.

Pattern I transitive *maxə* 'to hit'

- (3) *'o-náša bət-maxílun cálba.*! 'That man will hit the dogs.'

Pattern III causative *mamxə* 'to cause to be hit'

- (4) *bət-mamxílun cálba b-do-náša.*! 'He will cause the dogs to be hit by that man.'

On account of this alignment of the arguments of morphological causatives, it is more appropriate to translate a causative verb such as *mamxə* III 'to cause to be hit' rather than 'to cause to hit'.

If the subject of the transitive verb is an experiencer, the preposition of the adjunct is normally the dative preposition *ka-* 'to', e.g.

Pattern I transitive *xazzə* 'to see'

- (5) *bábu bət-xázzə ctáva.*! 'His father will see a book.'

Pattern III causative *maxzə* 'to cause to be seen'

- (6) *bət-máxzə ctáva ka-bábu.*! 'He will cause a book to be seen by his father.'  
(i.e. 'He will show a book to his father')

Pattern I transitive *+šamma* 'to hear'

- (7) *+xóru bət-+šámmə hák�at.* | 'His friend will hear a story.'

Pattern III causative *+mašmə* 'to cause to be heard'

- (8) *+áv bət-+mášmə hák�at ka-+xòru.* | 'He will cause a story to be heard by his friend.'

Pattern I transitive *+tamma* 'to taste'

- (9) *bət-+támmət xírrac.* | 'You will taste some food.'

Pattern III causative *+matmə* 'to cause to be tasted'

- (10) *bət-+matmónna 'a-xírrac kàtux.* | 'I shall cause this food to be tasted to you.'  
(i.e. 'I shall make you taste this food')

Comrie (1976) proposed that when causatives of transitives follow a type (v) alignment the causee, ousted from the subject position by the causer, is demoted to the highest (= leftmost) free position down a grammatical relations hierarchy, also known as 'noun phrase accessibility hierarchy', with the following form:

Subject > Direct object > Indirect object > Oblique object

C. Urmi constructions with experiential causees would conform to this principle, in that dative *ka*-phrases correspond formally to indirect objects. If the causee is non-experiential, however, it skips one place in the hierarchy since it is expressed as an oblique object in a *b*-phrase, which corresponds to the agentive adjunct of a passive construction. These differing degrees of demotion down the hierarchy of experiential and non-experiential causees can be correlated with the fact that experiential causees, although agents, are affected, whereas non-experiential causees are unaffected agents (Saksena 1980; Kulikov 2001, 890–891).

The pattern III causative *maxšəv* 'to cause to be thought' can take a proposition as its object:

- (11) *maxšúvalə +crəstyànələ.* | 'He causes to be thought that he is a Christian (= He pretends that he is a Christian)'

The causative of the locative verb <sup>+mattən</sup> ‘to load’ exhibits some peculiarities. The pattern I verb <sup>+tayən</sup> ‘to bear’ is used transitively in constructions such as:

- (12) *xmára bət-+tayən xa-jvàla.* | ‘The ass will bear a sack.’

The causative pattern III <sup>+mattən</sup> can take as its object either the object or subject of (12):

- (13) *bət-+mattənnánna jvála +al-xmára.* | ‘I shall load the sack on the ass.’

- (14) *bət-+mattənnánna xmára b-jvàla.* | ‘I shall load the ass with a sack.’

In (13) the subject of (12), ‘the ass’, is put in an adjunct phrase with a locative preposition, whereas in (14) it is made the object and the ‘sack’ is put in an adjunct phrase with an instrumental preposition. Such locative alternation is common in verbs of this type cross-linguistically. Within the typology of pattern III causatives in the C. Urmi dialect the alternation can be explained as follows. In (12) both the ‘ass’ and the ‘sack’ are affected arguments. The subject ‘ass’ is affected since it is burdened with ‘sack’. Both arguments, therefore, can be made the object of the causative verb.

There are several other verbs with two affected arguments expressing change of location that behave similarly with two alternative arrangements of the arguments, as is the case also in the English equivalents:

- (15) <sup>+mučrili jáj</sup> <sup>+al-jùyda. | ‘I smeared plaster on the wall.’</sup>

<sup>+mučrili júyda b-jàj. | ‘I smeared the wall with plaster.’</sup>

- (16) <sup>+muryásli míyya</sup> <sup>+al-</sup> <sup>+àrra. | ‘I sprinkled water on the ground.’</sup>

<sup>+muryászáli</sup> <sup>+árra b-míyya. | ‘I sprinkled the ground with water.’</sup>

- (17) *bət-malánnə vádra b-míyya* (or *mən-míyya*). | ‘I shall fill the bucket with water.’

*bət-malánnun míyya ju-vàdra.* | ‘I shall fill water into the bucket.’

- (18) *bət-sapkánnun míyya mən-xòda.* | ‘I shall empty the water from the basin.’

*bət-sapkónna xóda mən-míyya.* | ‘I shall empty the pool of water’

In (18) the prepositional phrases in each of the two alternants have the same preposition.

Pattern III may be used to produce causatives of the transitive alternants of labile pattern I verbs, e.g. *patəx* I ‘to open’ (tr. and intr.), <sup>+zalla</sup> I ‘to crack’ (tr. and intr.). These causatives have the same syntactic alignment with the causee expressed in an adjunct phrase.

Pattern I labile *patəx* ‘to open (intr. and tr.)’

- (19) *+tarránə bət-pàtxi.* | ‘The doors will open.’ (unaccusative intransitive)
- (20) *'o-náša +tarránə bət-patəxlun.* | ‘That man will open the doors.’ (transitive)

Pattern III causative *maptəx* ‘to cause to be opened’

- (21) *'ána +tarránə bət-maptəxxánlun b-do-náša.* | ‘I shall cause the doors to be opened by that man’ (causative)

Pattern I labile *+zallə* ‘to crack (intr. and tr.)’

- (22) *+šuyša +zllə.* | ‘The glass cracked.’ (unaccusative intransitive)
- (23) *cípa bət-+zalllə šuyša.* | ‘The stone will crack the glass.’ (transitive)

Pattern III causative *+mazlə* ‘to cause to crack (indirectly)’

- (24) *bət-+mazlónna šuyša b-cípa.* | ‘I shall cause the glass to crack by means of a stone.’ (causative)

Pattern I labile *mala* ‘to fill (intr. and tr.)’

- (25) *vádra bət-málə b-miyya.* | ‘The bucket will fill with water.’ (unaccusative intransitive)
- (26) *bət-malónna vádra b-miyya.* | ‘I shall fill the bucket with water.’ (transitive)

Pattern III causative *mamlə* ‘to cause to be filled (indirectly)’

- (27) *bət-mamlónna vádra biyyux.* | ‘I shall cause the bucket to be filled by you.’ (causative)

If the verb is unaccusative intransitive in pattern I and expresses a causative of the intransitive by pattern II, then, likewise, the pattern III form expresses a causative of the transitive:

<i>parək</i> I ‘to finish’ (intr.)	FINISH (y)
<i>parək</i> II ‘to finish’ (tr.)	CAUSE (x[FINISH (y)])
<i>maprək</i> III ‘to cause to be finished by so.’	CAUSE (x[FINISH (y, (z))])

<sup>+</sup> <i>palət</i> I 'to leave' (intr.)	LEAVE (y)
<sup>+</sup> <i>palət</i> II 'to eject' (tr.)	CAUSE (x[LEAVE (y)])
<sup>+</sup> <i>maprət</i> III 'to cause to be ejected by so.'	CAUSE (x[LEAVE (y, (z))])

<i>basəm</i> I 'to heal' (intr.)	HEAL (y)
<i>basəm</i> II 'to cure' (tr.)	CAUSE (x[HEAL (y)])
<i>mabsəm</i> III 'to cause to be cured by so.'	CAUSE (x[HEAL (y, (z))])

<i>sapək</i> I 'to empty' (intr.)	EMPTY (y)
<i>sapək</i> II 'to empty' (tr.)	CAUSE (x[EMPTY (y)])
<i>maspək</i> III 'to cause to be emptied by so.'	CAUSE (x[EMPTY (y, (z))])

<sup>+</sup> <i>sapə</i> I 'to become pure' (intr.)	BE PURE (y)
<sup>+</sup> <i>sapə</i> II 'to purify' (tr.)	CAUSE (x[BE PURE (y)])
<sup>+</sup> <i>maspə</i> III 'to cause to be purified by so.'	CAUSE (x[BE PURE (y, (z))])

<sup>+</sup> <i>tarəs</i> I 'to mend' (intr.)	MEND (y)
<sup>+</sup> <i>tarəs</i> II 'to mend' (tr.)	CAUSE (x[MEND (y)])
<sup>+</sup> <i>matrəs</i> III 'to cause to be mended by so.'	CAUSE (x[MEND (y, (z))])

If pattern I of a verb expresses an intransitive and there is no labile transitive alternant or transitive pattern II to express the causative of the intransitive, then pattern III of the verb expresses the causative either of the intransitive or of the corresponding transitive, e.g.

<i>calə</i> I 'to stand, to stop' (intr.)	STOP (y)
<i>maclə</i> III 'to stop' (tr.)	CAUSE (x[STOP (y)])
<i>maclə</i> III 'to cause to be stopped by so.'	CAUSE (x[STOP (y, (z))])

<i>kayəm</i> I 'to rise' (intr.)	RISE (y)
<i>makkəm</i> III 'to raise' (tr.)	CAUSE (x[RISE (y)])
<i>makkəm</i> III 'to cause to be raised by so.'	CAUSE (x[RISE (y, (z))])

<sup>+</sup> <i>salə</i> I 'to descend' (intr.)	DESCEND (y)
<sup>+</sup> <i>maslə</i> III 'to bring down' (tr.)	CAUSE (x[DESCEND (y)])
<sup>+</sup> <i>maslə</i> III 'to cause to be brought down by so.'	CAUSE (x[DESCEND (y, (z))])

<i>xarəv</i> I 'to be destroyed' (intr.)	BE DESTROYED (y)
<i>maxrəv</i> III 'to destroy' (tr.)	CAUSE (x[BE DESTROYED (y)])
<i>maxrəv</i> III 'to cause to be destroyed by so.'	CAUSE (x[DESTROY (y, (z))])

Pattern III is also used to form causatives of transitive pattern II verbs that have no pattern I, e.g.

*šavə* II ‘to lay (a carpet), to furnish’  
*mašvə* III ‘to cause to be furnished by so.’

Examples:

- (28) *máta xrəvla*.| ‘The village was destroyed.’  
*bət-*+*maxrəvla* *máta*.| ‘He will destroy the village.’  
*bət-*+*maxrəvla* *máta b-košuynu*.| ‘He will cause the village to be destroyed by his army.’
- (29) *bət-*+*sələt*.| ‘You will come down.’  
*bət-*+*maslənnux* ‘I shall bring you down (myself).’  
*bət-*+*maslənnux p-ídət* ‘*axuni*.| ‘I shall make you come down by the agency (literally: hand) of my brother.’

A pattern III verb is used to express the causative of an intransitive pattern II verb and a causative of the corresponding transitive, e.g.

<i>xabəl</i> II ‘to be cold’ (intr.)	BE COLD (y)
<i>maxbəl</i> III ‘to make cold’ (tr.)	CAUSE (x[BE COLD (y)])
<i>maxbəl</i> III ‘to cause to be made cold by so’	CAUSE (x[BE COLD (y, (z))])

The causee subject of a transitive verb can be left unspecified in morphological causative constructions, e.g.

- (30) *bət-mámxə nàšə*.| ‘He will cause people to be hit.’  
(31) *bət-máxza ctáva*.| ‘He will cause a book to be seen (= show a book).’  
(32) *bət-*+*mášmə hákayat*.| ‘He will cause a story to be heard’

A further variation of structure is a reflexive causative in which one of the arguments of the underlying transitive verb is coreferential with the subject of the causative verb. This is found in the experiential causative *maxzə* III ‘to cause to be seen’. The coreferential item is the reflexive direct object in the semantic structure, although not expressed on the surface, and the other participant must be expressed by a prepositional adjunct, e.g.

- (33) *bət-máxza ka-nàšə.* 'He will cause himself to be seen by people' (= 'He will show himself to people')  
 CAUSE ( $x_i[\text{SEE } (y_i)]$ )

This reflexive semantic structure of causatives is found also where the corresponding pattern I verb has an unaccusative subject, e.g. *majrəp* III, the causative of *jarəp* I 'to slip':

- (34) *bət-jàrəp.* 'He will slip (spontaneously).'  
 SLIP ( $y$ )
- (35) *bət-májrəp nàšə.* 'He will cause people to slip'  
 CAUSE ( $x_i[\text{SLIP } (y)]$ )
- (36) *bət-màjrəp.* 'He will cause himself to slip' = 'He will skate'  
 CAUSE ( $x_i[\text{SLIP } (y_i)]$ )

Other pattern III verbs that can be interpreted as having a latent reflexive argument include:

*manyəx* III 'to cause to rest'—'to take a rest (= cause oneself to rest).' Cf. *nayəx* I 'to go to one's rest, to die' (spontaneously)  
*mabsəm* III 'to cause to enjoy'—'to cause oneself to enjoy (= to have a good time). Cf. *basəm* I 'to become well, to be cured' (spontaneously)

Some verbs of this type have no corresponding pattern I verbs, e.g.

*mabyən* III 'to cause to appear'—'to cause oneself to appear, to make an appearance, to appear'.  
*mabyət* III 'to cause to abstain (from food)'—'to cause oneself to abstain (from food)'

When a pattern I verb has a reflexive semantic structure, such as *lavəš* I 'to dress (oneself)', in which the subject is both agent and affectee, the object of a causative pattern III from the same root can take as its direct object the item that is subject of the pattern I verb. This is permitted since the subject is the affectee and semantically equivalent to an object, e.g.

- (37) <sup>+</sup>*casíbə bət-lòši.* 'Paupers will get dressed.'
- (38) <sup>+</sup>*casíbə bət-lóši jùlla.* 'Paupers will get dressed in clothes.'
- (39) *bət-málvəš* <sup>+</sup>*casíbə.* 'He will dress paupers.'
- (40) *bət-málvəš* <sup>+</sup>*casíbə jùlla.* 'He will dress paupers in clothes.'

The argument denoting the clothing should be regarded as a form of adverbial complement rather than a core argument.

The same applies to verbs of consumption, such as *+axəl* ‘to eat’, *šatə* ‘to drink’, *+mayəs* ‘to suck (milk)’. The subject of the pattern I verb, which is both the agent and the affectee of the consumption, can be made the direct object of the corresponding pattern III causative, e.g.

- (41) *+rába nášə bət-+’áxli +rəz̥za.* | ‘Many people will eat rice.’
- (42) *bət-+máxəl +rába nášə +rəz̥za.* | ‘He will cause many people to eat rice (= He will feed many people rice)’

A similar semantic structure is exhibited by the transitive verb *+karə* ‘to study’, in which the subject is also the affectee of the activity, in that he becomes ‘learned’. The causative pattern III form *+maₖra* is used thus:

- (43) *bət-+kárət +rába məndyàna.* | ‘You will study many things.’  
*’ana bət-+maₖrónlux +rába məndyàna.* | ‘I shall cause you to study many things (= I shall cause you to be educated in many things).’

The verb *xayəp* I ‘to wash’ may be used intransitively with the semantic structure of an agentive reflexive, in that the subject is agentive but the referent of the subject is also the affectee of the action, though not expressed:

- (44) *bət-xayəp.* | ‘He will wash (himself).’

The verb may also be used as a transitive agentive with an explicit object:

- (45) *bət-xepála bràti.* | ‘She will wash my daughter.’

The pattern III form *maxyəp* is used to express the causative of the agentive transitive, with the affectee as the grammatical object and the causee agent optionally expressed in an adjunct phrase:

- (46) *bət-maxyópla brátu b-de-bàxta.* | ‘He will cause his daughter to be washed by that woman.’

The same applies to the verb *šaləx* I ‘to undress’, which may be used as an agentive reflexive or an agentive transitive. When used in the causative pattern III form, the object of the verb is the affectee of the agentive transitive and the causee agent is expressed by an optional adjunct phrase, e.g.

- (47) *bət-mašláxlə b-do-nàša.*! ‘He will cause him to be undressed by that man.’

So-called ‘inner objects’ of verbs behave differently from regular objects in causative constructions. An ‘inner object’ is typically a verbal noun or abstract noun derived from the same root as the verb. Unlike a regular object, an inner object is not a pre-existing entity that is affected by the action of the verb but rather comes about when the action takes place. In fact the verbal action and the inner object are one and the same thing (Ilani 2013), e.g.

- (48) *bət-zámər zmàrta.*! ‘He will sing a song.’  
 (49) *+šállə xa-+šyálta xelànta.*! ‘He cough a loud cough.’  
 (50) *tpáttə xa-tpáttə xelànta.*! ‘He sneezed a loud sneeze.’  
 (51) *puvvárrə xa-pavvárta +jùrta.*! ‘He yawned a big yawn.’

This is shown by the fact that an inner object nominal can occur with intransitive verbs that do not have a patient object slot in their semantic structure, e.g.

- (52) *xílə xáyyə +yarìxə.*! ‘He lived a long life.’

The causative of *zamər* I ‘to sing’, *mazmər* III, may take the subject of the embedded event (i.e. the one who sings) rather than the inner object as the direct object. The inner object may optionally follow the regular object of the causative, e.g.

- (53) *bət-mázmər xa-náša zmàrta.*! ‘He will cause somebody to sing a song.’  
 (54) *+búybar bət-+mašyálláli +šyálta xelànta.*! ‘The pepper will make me cough a big cough.’  
 (55) *hamzámtu mupvárrónna xa-pavvárta +jùrta.*! ‘His speech made me yawn a big yawn.’

Alternatively the inner object can be made the object of the causative verb and the subject put in a prepositional adjunct, as in the regular causative construction, e.g.

- (56) *bət-mázmər zmárta b-xa-nàša.*! ‘I will cause a song to be sung by somebody.’

In some cases a pattern I form verb takes a complement in the form of a prepositional phrase, e.g.

- (57) *bət-xádə b-do-məndi.* ‘He will be happy with that thing.’
- (58) *bət-báləj b-do-+šúla.* ‘He will be busy with that job.’
- (59) *bət-tápək b-do-nàša.* ‘He will meet that man.’
- (60) *bət-dákər b-do-nàša.* ‘He will knock that man.’
- (61) *bət-káyət b-do-nàša.* ‘He will touch that man.’

In such cases the causative pattern III takes the subject of the pattern I verb as its object when the causee subject is non-agentive and the referent in the prepositional phrase is not affected by the event. This applies to the causative of (57)–(59) above:

- (62) *bət-maxdánlə b-do-məndi.* ‘I shall cause him to be happy with that thing.’
- (63) *bət-mabləjjánlə b-do-+šúla.* ‘I shall cause him to be busy with that job.’
- (64) *bət-matpəkkánlə b-do-nàša.* ‘I shall cause him to meet that man.’

Morphological causatives cannot be derived from constructions such as (60) and (61), in which the subject is agentive and the referent of the prepositional phrase is affected by the event. Although the referent of the prepositional phrase is an affectee, it is not a core object argument but an adjunct. A morphological causative of a transitive verb requires a core object argument, the adjunct slot being taken by the agent. Compare the following:

- (65) *bət-davəkla.* ‘He will seize her.’
- (66) *bət-dávək bìyyo.* ‘He will hold onto her.’

A pattern III morphological causative may be formed from (65) but not from (66):

- (67) *bət-madvəkkánla bìyyu.* ‘I shall cause her to be seized by him’

The pattern III causative verb *+mašmə* can be used in the sense of ‘to listen’, e.g.

- (68) *bət-+mášmə +'al-nàšə.* ‘He will listen to people.’

This may be interpreted as a construction with an underlying experiential, i.e. non-agentive, reflexive causee and a prepositional adjunct with a referent that is not affected by the event: ‘He will cause himself to hear to people’. It would, therefore, be analogous to constructions such as (57)–(59) above. Alternatively it could be interpreted as the use of a morphological causative

to express a valency-increasing construction with an oblique argument known as an ‘applicative’ (Dixon 2000, 31; Kulikov 2001, 894).

The causative pattern III of some verbs has undergone a metaphorical semantic shift, e.g.

- +karəm* I ‘to win’—*+maₖrəm* III ‘to cause to be won’ = ‘to lose’
- +karət* I ‘to bite, to lacerate’—*+maₖrət* III ‘to cause to be bitten (by scissors)’ = ‘to shear, cut (hair)’
- tanə* II ‘to speak’—*matnə* III ‘to bring to speaking terms, to make up a quarrel with’

In some verbs the metaphorical shift in meaning has considerably reduced the semantic transparency of the semantic relationship between the two patterns, e.g.

- +pašət* I ‘to stretch out’ (intr. and tr.)—*+mapšət* III ‘to see off, to guide’
- xanə* I ‘to be happy (b- with)’—*maxnə* III ‘to miss, to long after (*mən* so.)’
- +sayəd* I ‘to hunt’—*+masyəd* III ‘to watch out for, to watch (from a distance)’
- xapə* I ‘to brood (hen), to crouch’—*maxpə* III ‘to turn over (an object)’
- raxəš* I ‘to crawl’, *raxšələ* ‘he is going’—*marxəš* III ‘to miscarry’

A morphological causative verb cannot be used to form a causative of a ditransitive clause containing two affectee arguments, such as

- (69) *bət-tánə hákyat kàtux.* |‘I shall tell you a story.’

A morphological causative verb can, however, form a causative of compound verbal construction that consists of a noun and verb. e.g.

- +nala maxə* I ‘to shoe (a horse)’ (literally: ‘to strike shoe’)

- (70) *bət-maxánlun suysaváti +nàla.* |‘I shall shoe my horses.’

- (71) *bət-mamxánlun suysaváti +nála b-do-nàša.* |‘I shall cause my horses to be shod by that man.’

This is permitted because the noun that is combined with the verb in such compound constructions is not an affected argument of the verb but rather an unaffected complement. They, therefore, do not form true ditransitive constructions.

In some cases the pattern III form is directly related to the pattern I in a

causative relationship, whereas the pattern II form is more independent in its lexical meaning, e.g.

*xamə* I ‘to ferment’ (intr.)—*maxmə* III ‘to cause to ferment, to leaven’, vs.

*xamə* II ‘to look after; to preserve’

<sup>+</sup>*xabər* I ‘to become informed’—<sup>+</sup>*maxbər* III ‘to inform’, vs. <sup>+</sup>*xabər* II ‘to send regards, to visit’

*pašər* I ‘to melt’ (intr.)—*mapšər* III ‘to melt (tr.)’, vs. *pašər* II ‘to digest’

The lexical independence of pattern II from pattern I and pattern III is reflected by the distribution of emphasis in verbs from the historical root \*š-r-y:

*šarə* I ‘to untie; to dwell’

<sup>+</sup>*šarə* II ‘to begin’

*mašrə* III ‘to cause to untie; to cause to dwell’

The historical root had the basic meaning of ‘to untie’, which developed by a metaphorical process into the meaning of ‘to begin’ in pattern II. The pattern II verb subsequently was distinguished from pattern I phonologically by acquiring emphasis. Pattern III, which is more closely related to pattern I, is plain. Pattern III cannot be used to express the causative of ‘to begin’, but rather a periphrastic causative construction (§ 4.25.3.2.) must be used, e.g. *bett-mavváddən* <sup>+</sup>*šárət*.! ‘I shall cause you to begin.’

It may be said that the pattern III form is derived from the pattern I form, whereas the pattern II form is only associated with it. This would explain why a greater number of pattern I verb forms have corresponding pattern III forms than pattern II forms. When an intransitive unaccusative pattern I verb has a pattern II transitive, the pattern II transitive tends to express a more lexicalized, i.e. semantically less complex, activity than a pattern III causative. The transitive of <sup>+</sup>*tamər* I ‘to sink (into the ground)’, for example, is the pattern II form <sup>+</sup>*tamər* II ‘to bury’, which refers to a common, institutionalized activity, whereas the transitive of <sup>+</sup>*tabbə* I ‘to sink (into water)’ is the pattern III causative <sup>+</sup>*matbə* III ‘to cause to sink’, which is not an institutionalized activity. It is relevant to note that some pattern II forms have been formed from nouns or adjectives, or from words in other languages, rather than from pattern I verbs. This would be compatible with the analysis of their being produced by association rather by direct derivation (§ 4.1.). It should be noted, however, that this process is far more productive in quadrilateral verbs. Some examples of pattern II verbs of this nature are:

<i>dajəl</i> II 'to lie'	< <i>duyla</i> 'lie'
<i>sarəf</i> II 'to saddle'	< <i>sarja</i> 'saddle'
<sup>+</sup> <i>hadər</i> II 'to prepare'	< Arab. <i>haḍḍara</i>
<i>xabəl</i> II 'to become cold'	cf. Syriac <i>habbel</i> 'to travail' < <i>heblā</i> 'travail'

There are a number of pattern III verbs that exhibit a transitive—transitive alternation, e.g.

<i>mačən</i> III 'to become chapped (intr.)'	—'to cause to become chapped'
<i>majdəl</i> III 'to freeze (intr.)'	—'to cause to freeze'
<i>majyən</i> III 'to sprout'	—'to cause to sprout'
<i>makyən</i> III 'to become green'	—'to cause to become green'
<i>mamyəl</i> III 'to become blue'	—'to cause to become blue'
<i>manzəl</i> III 'to fester'	—'to cause to fester'
<i>marjəd</i> III 'to shiver'	—'to cause to shiver'

These intransitive alternants cannot be easily interpreted as having a latent reflexive object argument.

Some verbs in related semantic domains express the same causative—inchoative alternation morphologically by different patterns, e.g.

<sup>+</sup> <i>xavər</i> I 'to become white'	— <sup>+</sup> <i>maxvər</i> III 'to cause to become white'
<i>cayəm</i> I 'to become black'	— <i>maccəm</i> III 'to cause to become black'
<i>samək</i> I 'to become red'	— <i>masmək</i> III 'to cause to become red'

It is significant to note that the verbs relating to the primary colours 'white', 'black' and 'red' make this morphological distinction, whereas verbs relating to non-primary colours 'green' and 'blue' use the same pattern for both transitive and intransitive.

Some of the verbs that exhibit intransitive and transitive alternants in pattern III also have an intransitive pattern I verb with the same meaning as the intransitive pattern III alternant, e.g.

<i>nazəl</i> I 'to fester', <i>manzəl</i> III 'to fester, to cause to fester'	
<i>rajəd</i> I 'to shiver', <i>marjəd</i> III 'to shiver (intr.), to cause to shiver'	

The distribution of the two alternative intransitive verbs *rajəd* I and *marjəd* III is significant. The pattern III intransitive *marjəd* is only used with animate subjects, whereas inanimate subjects can only take the pattern I form, e.g.

*'o-náša marjúdələ mən-kàrta.<sup>1</sup> ~ 'o-náša bərjádələ mən-kàrta.<sup>1</sup>* ‘That man is shivering from the cold.’  
*+tarpa bərjádəna ju-pòxa.<sup>1</sup>* ‘The leaves are shivering in the wind.’

The pattern III reflects the conceptualization of the event as coming about through some internal cause within the man’s body, i.e. he is conceptualized as causing the muscular movements bringing about the act of shivering. Leaves, however, have no internal cause, and constitute an affected argument. In the light of this, it is reasonable to suggest that the intransitive alternants of the other pattern III verbs listed above are conceptualized as having an internal cause of some kind.

In a few sporadic cases a pattern III causative of a transitive verb may be labile, e.g. *maxnək* III ‘to cause to be throttled, to hang’ in (72):

(72) *jári maxnəkni vázzər.<sup>1</sup>* ‘The vizier must be hanged (literally: be caused to be throttled).’ (A 48:13)

Here the event is not spontaneous, but the agent is de-emphasized and is non-specific. The verb refers to a generic situation, which increases its non-specificity.

There is a residue of other pattern III verbs that have no corresponding pattern I and have a variety of argument structures:

#### Intransitive unaccusative

*macsal* III ‘to become lazy’  
*manta* III ‘to succeed’  
*mašcən* III ‘to swell’

#### Intransitive unergative

*mašrək* III ‘to whistle’  
*maķvəx* III ‘to shout’  
*+maķras* III ‘to argue’

#### Transitive agentive

*manxəl* III ‘to sieve (flour)’  
*manxəs* III ‘to reprove’  
*maryəz* III ‘to organize’

- maslə* III ‘to despise’  
*mašpər* III ‘to flatter’  
*mašxəd* III ‘to preach (the gospel)’  
*maxpəl* III ‘to refuse, to reject’  
<sup>+</sup>*mačrə* III ‘to plaster’  
<sup>+</sup>*maryəs* III ‘to sprinkle’  
<sup>+</sup>*masyət* III <sup>+'al-</sup> ‘to listen to’  
<sup>+</sup>*masxər* III *b-* ‘to mock’

### Transitive experiential

*manšə* III ‘to forget’

For some of these verbs resultative adjectives derived from pattern I exist, although the pattern I verb is not used, e.g. *nxila* ‘sieved’.

#### 4.25.3.2 Periphrastic Causatives

An alternative means of expressing the causative is the use of a biclausal periphrastic construction with the verb *mavvəd* III, which is the pattern III morphological causative of the verb *'avəd* I ‘to do’. The causer is made the subject of the verb *mavvəd*. The caused event is expressed by a following subordinate clause, e.g.

- (1) *bət-mavvəddən +šärət!* ‘I shall cause you to begin.’

The subordinate clause may be optionally introduced by the subordinator *'at* or *kat*. This demonstrates that the construction is biclausal and the head verb has not fused with the lexical verb and become an auxiliary verb, as is the case in periphrastic causatives in some languages (Kulikov 2001, 893), e.g.

- (2) *bət-mavvəddən kat-+šärət!* ‘I shall cause you to begin.’

These constructions are in conformity with the usual syntactic alignment of morphological causatives, in that the verb can be considered to have the meaning ‘cause to be done’ with its object, the subordinate clause, expressing what is done. On many occasions, however, the subject argument of the subordinate clause, i.e. the causee, is raised into the direct object position of the verb *mavvəd*, e.g.

- (3) *bət-mavvəddónlux kat-+šärət!* ‘I shall cause you to begin.’

In periphrastic causative constructions the original syntactic alignment of the caused clause is maintained in the subordinate clause. The subject of both intransitive and transitive clauses remains the subject of the subordinate clause, e.g.

- (4) *+térə bət-pàrxi.* 'The birds will fly.'
- (5) *bət-mavváddən kət-+térə pàrxi.* ~ *bət-mavváddánlun +térə kət-pàrxi.* 'I shall cause the birds to fly'
- (6) *+sarbázə bət-máxi nàšə.* 'The soldiers will hit people'
- (7) *bət-mavváddən kət-+sarbázə máxi nàšə.* ~ *bət-mavváddánlun +sarbázə kət-máxi nàšə.* 'I shall cause the soldiers to hit people'

There are no restrictions on the syntactic alignment of the caused embedded clause. So, the following types of clause, which cannot be made causative by a morphological causative, can be made causative by the periphrastic constructions:

Ditransitive clauses:

- (8) *bət-yavállun kàtux.* 'He will give them to you.'
- (9) *bət-mavváddánlə kət-yavállun kàtux.* 'I will make him give them to you.'

Clauses with verbs taking a prepositional complement the referent of which is an affectee, e.g.

- (10) *bət-dákər bìyyux.* 'He will knock you.'
- (11) *bət-mavváddánlə kət-dákər bìyyux.* 'I shall cause him to knock you'

The choice whether to express the causative by a pattern III verb or by a periphrastic causative affects the position of an instrumental or agentive adjunct phrase in the semantic structure. When a pattern III verb is used, the adjunct is in the higher event of causing, thus:

- (12) *mukkódlə núyra b-+nùyta.* 'He made the fire burn with oil'  
CAUSE (x[BURN (y)] instrument z)

When a construction with *mavvəd* is used, the adjunct is within the caused event, thus:

- (13) *muvvádlə nýyra yakádva b-+nýyta.* 'He made the fire burn with oil.'  
 CAUSE (x[BURN (y) instrument z])

Although pattern III morphological causatives are productive, they are not available for all verbs. If one is not available, the periphrastic causative must be used. This applies, for example, to the verb *yalə* 'to wail', which must form its causative periphrastically:

- (14) *bət-mavvəddánnux yálət.* 'I shall make you wail.'

The subject of *mavvəd* is in principle animate. If the cause is inanimate, other periphrastic causative constructions are available, e.g.

- (15) *jdíla sábab víla ýána +járən.* 'The ice caused me to slip (literally: The ice was the cause [that] I slip).'

#### 4.25.3.3 Semantic Parameters

Dixon (2000) has drawn attention to the importance of documenting not only the syntactic alignment of causative constructions but also various semantic parameters of the verb and verbal arguments. When a language has more than one causative mechanism, these are generally distinguished by different semantic parameters. The semantic parameters relate to the verb, the causer and the causee. The parameters identified by Dixon (2000, 62) that have been found to be relevant for distinguishing the semantics of the various Neo-Aramaic causatives are the following:

Verb      (1) actionality (state/action)  
 (2) transitivity

Causee    (3) control  
 (4) volition  
 (5) affectedness

Causer    (6) directness  
 (7) intention

##### 1. Actionality

Lexical causatives in the form of the transitive alternant of labile verbs always have an inchoative unaccusative intransitive alternant.

Morphological causatives formed by pattern II are derived from unaccusa-

tive intransitives. Causatives formed by pattern III, on the other hand, have no restriction as to actionality and may be derived from unaccusative verbs expressing a change of state and from agentive verbs expressing a dynamic action.

There are no restrictions with regard to actionality in periphrastic causatives.

## 2. Transitivity

**Lexical causatives.** The transitive alternant of a labile verb is by definition a causative of an intransitive.

**Morphological causatives.** Causatives from pattern II can be applied only to intransitive verbs. Causative from pattern III can be applied to intransitive and transitive verbs, but not to ditransitive verbs or verbs that express the affectee by means of a prepositional phrase.

**Periphrastic causatives.** These have no restrictions with regard to transitivity.

## 3. Control of the causee

**Lexical causative.** The causee object of the causative transitive alternant of labile verbs has no control.

**Morphological causative.** The same is the case with regard to the causee of morphological causatives of an intransitive verb expressed by pattern II and pattern III, in that the causee direct object does not have control. This applies both to the causative of non-agentive intransitives (e.g. *palət* II ‘to cause to go out’, *macrə* III ‘to cause to become short’) and agentive intransitives (e.g. *mabrəc* III ‘to cause to kneel’). The causee of the pattern III morphological causative of a transitive verb that is expressed by a prepositional adjunct, on the other hand, does have control, if the causee is agentive (e.g. *bət-mamxílun cálba b-do-nàša*.<sup>1</sup> ‘He will cause the dogs to be hit by that man’). Such agentive causees are typically human and introduced by the preposition *b-*. If the causee is an experiencer (e.g. *bət-máxzə ctáva ka-bàbu*.<sup>1</sup> ‘He will cause a book to be seen by his father’, i.e. ‘He will show a book to his father’), however, the causee is not in control. Prepositional *b*-phrases containing an inanimate noun in causative constructions such as

- (1) *bət-maxrəxxánla +mástu b-nìyra*.<sup>1</sup> ‘I shall cause his hair to singe with fire.’

do not express causees but are adverbial modifiers.

**Periphrastic causatives.** The causee of the verb *mavvəd* III must be animate and is in control, not only in a transitive clause but also in an intransitive one, e.g.

- (2) *bət-mavvəddilə ɻat-bàrəc.*! 'They will make him kneel.'

#### 4. Volition of the causee

This parameter is closely related to that of control. Whenever the causee is in control according to the description in the last section, it can be assumed that this involves the causee acting willingly. This is reflected by the fact that the semantic range of the head verb *mavvəd* in the periphrastic causative includes 'to persuade'. In several other NENA dialects, moreover, the verb 'to allow' is used in such constructions, e.g. C. Qaraqosh *šawəq* 'to let, to allow':

- (3) *bəd-ʃóqən banáyə d-torilə.*! 'I shall make the builders break it.'

#### 5. Affectedness of causee

It can be assumed that contexts in which the causee lacks control and volition, as described above, also involve a greater degree of affectedness of the causee. A significant semantic distinction can be identified, however, between the causee direct object of a lexical causative and pattern II causative, on the one hand, and the causee direct object of a morphological pattern III causative, on the other, in that in the former case the object is more affected than in the latter. This is shown by the fact that if a pattern III morphological causative of an unaccusative pattern I verb has a reflexive pronoun as the causee, the construction has the sense of 'pretending' rather than 'causing', e.g.

*mamyət* III 'to cause to die'

- (4) *bət-mamyátlə jànu.*! 'He will pretend to die.'

*mašnə* III 'to cause to faint'

- (5) *bət-mašnílə jànu.*! 'He will pretend to faint.'

<sup>+</sup>*matbə* III 'to cause to sink'

- (6) <sup>+</sup>*matbiyyálə jànu.*! 'He pretended to sink.'

This may be classified as a declarative type of causative (cf. Kulikov 2001, 892). Contrast this with a lexical causative with a reflexive causee, which expresses total affectedness of the causee:

- (7) *bət-<sup>+</sup>kaʃllə jànu.*! 'He will kill himself' (lexical causative of *myt* 'to die')

The objects of morphological causatives of transitive verbs, which do not express the causee, are, by contrast, fully affected, e.g.

- (8) *bət-<sup>+</sup>mak̚álla jánu b-do-<sup>+</sup>sàrbaz.* | ‘He will cause himself to be killed by that soldier.’

Declarative uses of pattern III expressing ‘pretending’ are not available for verbs that are agentive or labile in pattern I. This is because pattern III expresses an indirect causative in such cases:

*xanək* I ‘to drown (intr. and tr.)’, *maxnək* ‘to cause to be drowned by so.’

- (9) *muxnəkkálə jánu.* | ‘He caused himself to be drowned.’

Further examples of declarative uses of pattern III include the verb *maxšax* III ‘to consider worthy, to recommend’.

When a reflexive argument is made the object of a pattern II transitive, the object is always fully affected, e.g.

- (10) *<sup>+</sup>tušyálə jánu.* | ‘He hid himself.’

6. Does the causer act directly or indirectly?

(i) Lexical causative. When the causee is the direct object of a lexical causative, the causer acts directly upon the object by manipulating it without mediation, e.g.

- (11) *bət-<sup>+</sup>kat̚álla.* | ‘He will kill him’ (lexical causative of *mayət* I ‘to die’)

- (12) *bət-pat̚áxlə <sup>+</sup>tàrra.* | ‘He will open the door’ (labile verb)

(ii) Morphological causative: Likewise, when the causee of an intransitive clause is made the direct object of a morphological causative, the causer acts directly, e.g.

- (13) *bət-manp̚álla.* | ‘He will cause him to fall.’

The causer subject of a morphological causative of a transitive verb, on the other hand, does not act directly upon the object but through the mediation of the causee agent or instrument expressed by an adjunct prepositional phrase, e.g.

- (14) *bət-mamxílun b-do-nàša.*<sup>1</sup> 'He will cause them to be hit by that man.'

The causee may be implied and not explicitly expressed. This is seen in the contrast between (15a) with a pattern I verb and (15b) with a pattern III verb:

- (15) a. *+bətráyəvən xmàra.*<sup>1</sup> 'I am driving/riding a donkey (directly by sitting on it).'  
 b. *+maṛúyəvən xmàra.*<sup>1</sup> 'I am driving a donkey (indirectly from behind by using a stick).'

(iii) Periphrastic causative. The causer in a periphrastic construction does not necessarily act directly by manipulating the object. This applies to the causative of both intransitive and transitive clauses, e.g.

- (16) *bət-mavvaddílə b-yaváltat zíyza kat-+pàlət.*<sup>1</sup> 'They will cause him to come out by giving him money.'

7. Does the causer achieve the result accidentally or intentionally?

(i) Lexical causative: The causer of a lexical causative does not necessarily act intentionally, since it may be inanimate, e.g.

- (17) *póxa +tarrána bət-patəxlun.*<sup>1</sup> 'The wind will open the doors.'

(ii) Morphological causative. Likewise, the causer in a morphological causative of an intransitive verb does not necessarily act intentionally, since it may be inanimate, e.g.

- (18) *cipa bət-+matbíla ju-mìyya.*<sup>1</sup> 'The stone will make her sink in the water.'

- (19) *hákya t bət-majxəccálun.*<sup>1</sup> 'The story will make them laugh.'

The causer of a morphological causative of a transitive verb, on the other hand, is typically animate and so acts intentionally.

(iii) Periphrastic causative. The subject of the verb *mavvad* III in the periphrastic construction is typically animate, so acts intentionally, whether the following clause is transitive or intransitive.

In conclusion, we see that the syntactic and semantic properties of causative constructions in C. Urmi differ according to their degree of compactness, i.e. according to whether they are lexical, morphological or periphrastic causatives

and, within the category of morphological causatives, according to their degree of morphological complexity (pattern II being less complex than pattern III).

#### 4.25.3.4 Causatives in Contact Languages

Several aspects of causative constructions in C. Urmī have parallels in the non-Semitic languages of the region with which the dialect has been in contact.<sup>5</sup> The highly productive nature of the pattern III morphological causative and its ability to form causatives of transitive clauses can be compared to the productive morphological causative of Turkish and Azeri. In these languages morphological causatives are formed from transitive verbs. The syntactic organization of causatives of transitives also exhibits parallels with C. Urmī in that the object of the transitive clause remains the object and the agent of the transitive clause is given an oblique dative case-marking, corresponding to the adjunct prepositional phrase of C. Urmī, e.g.

#### Turkish

- (1) *Nuran Deniz-e kapi-yı aç-tır-dı*  
 Nuran Deniz-DAT door-ACC open-CAUS-PF  
 'Nuran made Deniz open the door' (Göksel and Kerslake 2005, 132)

#### Tabriz Azeri

- (2) *Muhammad Murad-a it-i vür-dür-atzax*  
 Muhammad Murad-DAT dog-ACC hit-CAUS-FUTURE  
 Muhammad will make Murad hit the dog

Turkish and Azeri may also form morphological causatives from ditransitive verbs, which, as we have seen, is not possible in the C. Urmī dialect. In such constructions the direct object and indirect object of the ditransitive clause retain their case-marking (accusative and dative respectively) and the agent is made an oblique adjunct, e.g.

---

<sup>5</sup> I gratefully acknowledge the help I have received for this section from Elisabetta Ragagnin and Asma Rezaei (Azeri), Ergin Öpengin (Kurdish) and Mahbod Ghaffari (Persian).

## Tabriz Azeri

- (3) *Häsän kişi-yä namä-ni ata-m tarafindan*  
 Häsän-NOM man-DAT letter-ACC father-POSS.1SG by  
*yaz-dır-dı*  
 write-CAUS-PST.3SG  
 'Hasan made my father write a letter to the man.' (Erfani 2014, 30)

In the Kurdish of the region causatives of transitives are formed peripherastically, but the syntactic organization of the clausal arguments is parallel to that of C. Urmî and Turkish/Azeri morphological causatives, in that the direct object remains the direct object of the causative verb and the agent of the transitive clause is given oblique case-marking, e.g.

- (4) *Rizgar dē kūçik-î bi Gurgînî bi-de-t-e firotin*  
 Rizgar FUT dog-OBL with Gurgin SUBJ-give.PRS-3SG-DRCT sell.INF  
 'Rizgar will make the dog sold by Gurgin (= Rizgar will make Gurgin sell the dog.)'

It is noteworthy that the agent in such Kurdish constructions is marked by the preposition *bi* which is homophonous with the preposition *b-* of the corresponding agent phrase in the NENA dialect.

In Persian morphological causatives exist for a few verbs but are not productive. Periphrastic causative constructions are the norm and are obligatory for causatives of transitive verbs. The periphrastic causatives have a syntactic organization that is similar to that of C. Urmî rather than Kurdish, in that the syntax of the original transitive verb is retained in an embedded clause, e.g.

- (5) *ānhā u-rā vādār kardand ke ān sag-rā be-zanad*  
 they he-ACC obliged made.3PL that that dog-ACC SUBJ-hit.3S  
 'They made him hit the dog'

The causer in such Persian constructions can also be expressed as the subject of other verbal expressions such as *ba'es šodan* 'to become the cause (that)', *majbur kardan* 'to make obliged (that).' It is worth noting that the syntax of (5) is not only parallel to that of C. Urmî periphrastic causatives but the expression *vādār kardan* has a certain phonetic resemblance to the C. Urmî verb *mavvəd* III, which is used to form periphrastic causatives. The NENA dialects of Iraq, by contrast, use other verbs, such as *šavəq* I (e.g. C. Qaraqosh). The expression

*ba'es šodan* has a close semantic correspondence to C. Urmi *săbab vila* 'was the cause (that)', which is an alternative way of forming a periphrastic causative.

The Turkish type of morphological causative is now losing ground to periphrastic causative constructions in the Azeri dialects of Iran under the influence of Persian (Erfani 2014). The morphological causative in C. Urmi is, in fact, now rather more productive than in Iranian Azeri. If, as is likely, the productivity of the C. Urmi morphological causative is due to the influence of Azeri, this must have been at an earlier historical period.

#### 4.25.4 Quadrilateral Verbs

Quadrilateral verbs either contain four strong consonants or a combination of strong and weak consonants. Quadrilateral roots with weak consonants that contract include final /y/ (§ 4.13.1) and second /v/ (§ 4.13.2.). The radicals /y/ and /v/ occur in other positions, e.g. *þyaðrən* QI 'to become heavy', *xayvən* QI 'to darken', *xayyad* 'to unite', *þvalvəl* QI 'to wail', *kavvol* QI 'to promise', *jarvən* QI 'to become leprous', but they behave like strong consonants and do not contract. Quadrilateral roots with strong consonants can be classified on structural grounds into the following categories:

##### 4.25.4.1 C<sub>a</sub>-C<sub>b</sub>C<sub>b</sub>-C<sub>c</sub> (geminated medial radical)

*balləs* QI 'to masticate, to chew (with mouth closed)'

*baxxəl* QI 'to be jealous'

*dalləl* QI 'to stroke'

*hajjəj* QI 'to encourage'

*hammən* QI 'to believe'

*jassəs* QI 'to spy'

*javvəb* QI 'to answer'

*jažžən* QI 'to become dizzy'

*kavvol* QI 'to promise'

*kavvəm* QI 'to happen'

*kazzəd* QI 'to stare'

*laccən* QI 'to blot'

*nammən* QI 'to become damp; to make damp'

*pavvər* QI 'to yawn'

*razzəl* QI 'to despise'

*sakkət* QI 'to cripple, to be crippled'

*sarrəf* QI 'to saddle'

*šaddən* QI 'to go mad; to grow profusely (plants)'

*šalləl* QI 'to become quiet'

- šannən* QI ‘to tame (wild animal), to be at peace’  
*šarrəc* QI ‘to share, to participate’  
*šattəš* QI ‘to found, to establish’  
*tamməz* QI ‘to clean; to become clean’  
*tavvəb* QI ‘to repent’  
*xaddət* QI ‘to renew’  
*xallən* QI ‘to strengthen’  
*xayyəd* QI ‘to unite’  
*zabbən* QI ‘to become weak’  
*zalləz* QI ‘to recoil’  
*zavvəj* QI ‘to join’  
<sup>+</sup>*ajjəb* QI ‘to wonder’  
<sup>+</sup>*ajjəz* QI ‘to annoy, to be annoyed’  
<sup>+</sup>*barrən* QI ‘to become light; to cause to become light’  
<sup>+</sup>*calləš* QI ‘to try, to attempt’  
<sup>+</sup>*darrən* QI ‘to roll with a rolling pin (<sup>+</sup>*dorana*)’  
<sup>+</sup>*hayyər* QI ‘to help’  
<sup>+</sup>*jarrəl* QI ‘to wallow’  
<sup>+</sup>*javvət* QI ‘to belch’  
<sup>+</sup>*karrəs* QI ‘to become stuck’  
<sup>+</sup>*lattən* QI ‘to become shallow, to make shallow’  
<sup>+</sup>*mamməz* QI ‘to become chilled; to chill’  
<sup>+</sup>*mazzəz* QI ‘to shiver; to have a fever’  
<sup>+</sup>*navvər* QI ‘to bolt (animal)’  
<sup>+</sup>*salləl* QI ‘to become sober’  
<sup>+</sup>*sarrəp* QI ‘to exchange money’  
<sup>+</sup>*savvən* QI ‘to fear, to be terrified’  
<sup>+</sup>*šarrər* QI ‘to confirm, to prove’  
<sup>+</sup>*ṭalləz* QI ‘to indulge’  
<sup>+</sup>*tamməm* QI ‘to finish’  
<sup>+</sup>*ṭammən* QI ‘to go off (food), to stink (meat)’  
<sup>+</sup>*xalləl* QI ‘to wash’

Some verbs of this category have alternative forms without a geminated middle radical and are inflected with the template of pattern I or pattern II, e.g.

- |   |             |
|---|-------------|
| <i>jaššək</i> QI ~ <i>jašək</i> II                          | ‘to look’   |
| <i>sarrəf</i> QI ~ <i>sarəf</i> II                          | ‘to saddle’ |
| <sup>+</sup> <i>navvər</i> QI ~ <sup>+</sup> <i>navər</i> I | ‘to bolt’   |

A triradical root is used to form the causatives of some quadrilaterals with a geminated medial consonant, e.g.

*pavvər* QI ‘to yawn’—*mapvər* III ‘to cause to yawn’

4.25.4.2 C<sub>a</sub>-C<sub>b</sub>C<sub>a</sub>-C<sub>b</sub> (1st radical identical with 3rd and 2nd radical identical with 4th)

*bajbəj* QI ‘to crawl, to creep’

*baķbəķ* QI ‘to bubble’

*balbal* QI ‘to become confused’

*barbəz* QI ‘to scatter (intr. and tr.)’

*camcəm* QI ‘to be smothered’

*caščəš* QI ‘to set (a dog on somebody); to chase away’

*catcət* QI ‘to crack open (due to dryness)’

*cazcəz* QI ‘to splutter; to cause to splutter’

*çarçər* QI ‘to become deaf, to buzz (ear)’

*čakčək* QI ‘to chatter; to rattle’

*čamčəm*, +*čamčəm* QI ‘to throw’

*čančən* QI ‘to clash a cymbal; to tingle, to buzz (ear)’

*čarčər* QI ‘to scream’

*čazčəz* QI ‘to hiss (fire); to sizzle’

*dacdəc* QI ‘to throb’

*dakdək* QI ‘to become fine; to chop finely’

*daldəl* QI ‘to become thin, sparse, widely spaced’

*damdəm* QI ‘to bleed (intr.), to draw blood (tr.)’

*dašdəš* QI ‘to trample’

*halhal* QI ‘to fall apart (e.g. overcooked vegetables)’

*hanhən* QI ‘to enjoy oneself’

*harhər* QI ‘to laugh loudly’

*jabjəb* QI ‘to foam’

*jalyəl* QI ‘to whirl’

*jamjəm* QI ‘to hum; to cause to hum’

*japjəp* QI ‘to foam, to foam up; to cause to foam’

*jarjəm* QI ‘to thunder, to roar’

*jarjər* QI ‘to make low roar (animals, water, avalanche)’

*jažjəž* QI ‘to spin (head), to become confused; to confuse’

*jazjəz* QI ‘to whine (dog)’

*janjən* QI ‘to rust; to cause to rust’

*kalkəl* QI ‘to lighten, to reduce; to remove shells (from walnuts, almonds)’

- kapkəp* QI ‘to cluck’  
*kaxkəx* QI ‘to cackle (turkey); to laugh loudly’  
*kažkəž* QI ‘to sizzle, to rattle (rain)’  
*labləb* QI ‘to talk to oneself’  
*lahləh* QI ‘to pant’  
*lajləj* QI ‘to glitter’  
*latlət* QI ‘to tear up’  
*laxləx* QI ‘to pant (dog when thirsty)’  
*lazləz* QI ‘to feel disgust’  
*mašməš* QI ‘to grope’  
*nacnəc* QI ‘to groan (in pain)’  
*naknək* QI ‘to grunt (pig); to grumble’  
*naxnəx* QI ‘to pant’  
*parpər* QI ‘to flap (flag); to turn (propeller)’  
*pašpəš* QI ‘to melt (intr. and tr.), to dissolve (intr. and tr.)’  
*patpət* QI ‘to card (wool), to come apart (wool)’  
*phačphač* QI ‘to whisper’  
*phaťphať* QI ‘to whisper’  
*phazphaz* QI ‘to squirt’  
*rakrək* QI ‘to become crinkled’  
*ratrət* QI ‘to tremble, to shiver’  
*sarsər* QI ‘to hiss’  
*šacšəc* QI ‘to shake’  
*šakšək* QI ‘to make a clattering noise’  
*šamšəm* QI ‘to feel nauseous’  
*šapšəp* QI ‘to grope; to rub’  
*tantən* QI ‘to smoke’  
*tartər* QI ‘to become pale’  
*tanťtan* QI ‘to sing quietly (to oneself), to hum; to play a tune’  
*taňtaňp* QI ‘to blink; to flicker; to cause to flicker’  
*vajvəj* QI ‘to coo (turtledove)’  
*vakvək* QI ‘to quack (duck)’  
*varvər* QI ‘to have diarrhoea’  
*vazvəz* QI ‘to buzz’  
*xamxəm* QI ‘to become feverish’  
*xaňxəňp* QI ‘to faint from a heat’  
*xašxəš* QI ‘to rustle (leaves), crackle (paper); to cause to rustle, crackle’  
*zaczəc* QI ‘to become pale or yellow; to become cracked with holes (ground)’  
*zakzək* QI ‘to throb (with pain)’  
*zamzəm* QI ‘to ring, to tinkle; to buzz’

- +*bakbək* QI ‘to bubble up’
- +*balbal* QI ‘to babble, to talk confusedly’
- +*barbər* QI ‘to roar (lion); to low (oxen)’
- +*bazbəz* QI ‘to prick’
- +*calcal* QI ‘to bubble (boiling water); to sob’
- +*čapčəp* QI ‘to splash in the water, to hit water with the palm; to clap; to chirp’
- +*čarčər* QI ‘to creak (door)’
- +*čaxčəx* QI ‘to hew, to smash to pieces (tr. and intr.)’
- +*karkər* QI ‘to croak, to caw; to gargle; to rumble (stomach)’
- +*kaščəš* QI ‘to making a cracking sound (e.g. wood)’
- +*katkət* QI (i) ‘to chop; to cut up’
- +*katkət* QI (ii) ‘to cluck (hen)’
- +*kaxkəx* QI ‘to laugh loudly, to cackle (partridge); to honk (goose)’
- +*laklək* QI ‘to splash (water) (intr. and tr.)’
- +*lamlam* QI ‘to mutter to oneself and complain’
- +*lasləs* QI ‘to chew (with mouth open), to gnaw’
- +*mačməč* QI ‘to kiss loudly; to make a sound with mouth’
- +*marmər* QI ‘to whine (cat); to growl’
- +*masməs* QI ‘to keep silent’
- +*namnəm* QI ‘to speak through one’s nose’
- +*narnər* QI ‘to bellow (buffalo)’
- +*naznəz* QI ‘to whine (child)’
- +*parpər* QI ‘to blow (one’s nose) loudly’
- +*paspəs* QI ‘to breathe hard; to hiss; to snuffle; to wheeze; to snore; to be asthmatic; to whistle’
- +*pašpəš* QI ‘to hiss; to jingle, clink’
- +*radrəd* QI ‘to darn’
- +*rajrəj* QI ‘to crawl, to creep (insect)’
- +*raprap* QI ‘to flap the wings’
- +*raxrax* QI ‘to sympathize; to desire’
- +*sarsər* QI ‘to chirp (cricket); to roar (lion)’
- +*šaršər* QI ‘to splash (water)’
- +*taktək* QI ‘to knock (at the door)’
- +*tamtəm* QI ‘to speak when nose is blocked; to mumble’
- +*taptəp* QI ‘to tap; to bash’
- +*taxťax* QI ‘to pound’
- +*vakyák* QI ‘to croak’
- +*valvəl* QI ‘to wail’
- +*vasvəs* QI ‘to squeak (mouse); to whine’
- +*vazvəz* QI ‘to buzz (bee)’

- <sup>+</sup>*xačxəč* QI 'to search around (for something); to rustle around'  
<sup>+</sup>*xalxəl* QI 'to erode (tr. and intr.)'  
<sup>+</sup>*xarxər* QI 'to snore'  
<sup>+</sup>*xasxəs* QI 'to breath heavily'  
<sup>+</sup>*zakzək* QI 'to clatter, to chatter (teeth, jaw)'  
<sup>+</sup>*zapzap* QI 'to beat, to bash'  
<sup>+</sup>*zarzər* QI 'to bray (donkey, ass)'

#### 4.25.4.3 C<sub>a</sub>-C<sub>b</sub>C<sub>a</sub>-C<sub>c</sub> (1st radical identical with 3rd)

- çançəš* QI 'to throw, to sling about'  
<sup>+</sup>*çarçət* QI 'to tickle'  
*dardax* QI 'to become sad, depressed; to cause to become sad, depressed'  
*harham* QI 'to neigh (horse)'  
*janjəz* QI 'to be disgusted with, to loathe'  
<sup>+</sup>*jarjəš* QI 'to drag'  
<sup>+</sup>*kambəč* QI 'to shake and squeeze in frustration'  
<sup>+</sup>*karkəš* QI 'to separate and gather (e.g. raisins from stalks)'  
*pampəx* QI 'to break up (ground)'  
*parpəl* QI 'to implore, to plead'  
*parpəs* QI 'to destroy'  
*sarsəm* QI 'to stun, to annoy'  
*tantər* QI 'to shake'  
*tantəs* QI 'to drizzle (rain)'  
*tartəb* QI 'to tack, to stitch, to baste'  
*tartəx* QI 'to recoil'  
*tavtəš* QI 'to investigate, to inspect'  
*xanxək* QI 'to strangle, to throttle'  
<sup>+</sup>*balbəs* QI 'to twinkle, to glisten'  
<sup>+</sup>*bambəč* QI 'to shake and squeeze in frustration'  
<sup>+</sup>*bambəl* QI 'to stagger'  
<sup>+</sup>*bazbək* QI 'to scatter, to disperse'  
<sup>+</sup>*čančəl* QI 'to become exhausted, to exhaust'  
<sup>+</sup>*čançər* QI 'to break off, to tear to pieces'  
<sup>+</sup>*dardək* QI 'to shatter'  
<sup>+</sup>*janjər* QI 'to suffer, to cause to suffer'  
<sup>+</sup>*karkət* QI 'to chew'  
<sup>+</sup>*karkəz* QI 'to get ready, to prepare'  
<sup>+</sup>*parpat* QI 'to bite (all around)'  
<sup>+</sup>*parpat* QI 'to tear'

- +*pampəl* QI ‘to stagger, to stumble’
- +*sansəl* QI ‘to drip down’
- +*sansəp* QI ‘to smart; to cause to smart’
- +*šaršət* QI ‘to sag; to hang down’
- +*tančəl* QI ‘to delay, to procrastinate’
- +*tartəm* QI ‘to grumble’
- +*xarxəč* QI ‘to gnash (teeth)’
- +*xarxət* QI ‘to gnaw (animal)’
- +*zarzəč* QI ‘to scribble’
- +*zarzəx* QI ‘to develop sores’

#### 4.25.4.4 C<sub>a</sub>-C<sub>b</sub>C<sub>c</sub>-C<sub>b</sub> (2nd radical identical with 4th)

- balməl* QI ‘to be untidy, entangled (hair); to be confused’
- čamxəm* QI ‘to be rough (with somebody by pushing about)’
- dabləb* QI ‘to change sides; to become duplicitous’
- hamzəm* QI ‘to speak’
- lanjən* QI ‘to limp; to cause to limp’
- šacləc* QI ‘to sew with plain stitch (*šucluca*)’
- šaklək* QI ‘to smart; to make smart’
- šakrək* QI ‘to empty out’
- šapləp* QI ‘to beg, to implore’
- taknək* QI ‘to make neatly, to make tidy’
- tašməš* QI ‘to perform burial service’
- +*sapləp* QI ‘to plead, to beg’
- +*satlət* QI ‘to stare, to gaze, to prick up (ears)’
- +*saxləx* QI ‘to have darting pains’

#### 4.25.4.5 Other Roots

- ’arjəj* QI ‘to become numb (from cold), to make numb’
- ’arkəl* QI ‘to delay (intr.)’
- ’arzən* QI ‘to become cheap’
- ’atkən* QI ‘to become antiquated, to wear out’
- balķən* QI ‘to become ripe (grapes)’
- banpər* QI ‘to flutter; to cause to flutter’
- barxəš* QI ‘to stir (tr.)’
- cačlən* QI ‘to become bald’
- candər* QI ‘to roll (tr. and intr.)’
- cankəš* QI ‘to throw, to sling’

- carməx* QI ‘to roll up (material); to wrap up’  
*carpəš* QI ‘to collect together (with a hand, with arms)’  
*catlən* QI ‘to tangle (hair), to wind, to contort (snakes)’  
*čabləz* QI ‘to tack, to baste (sewing)’  
*čambəl* QI ‘to hang (intr. and tr.)’  
*čanjəl* QI ‘to swing (on a swing)’  
*čanxəs* QI ‘to reprove’  
*čaplən* QI ‘to make into a scoundrel; to make unclean’  
*čaçbən* QI ‘to arm (with weapons) (intr. and tr.)’  
*čanjər* QI ‘to jingle’  
*daldən* QI ‘to settle (to live) (intr. and tr.)’  
*darbən* QI ‘to wound’  
*daykən* QI ‘to become small, fine’  
*jambəl* QI ‘to tumble; to cause to tumble’  
*jambəx* QI ‘to cave in; to cause to cave in’  
*jandəl* QI ‘to roll (intr. and tr.)’  
*farməl* QI ‘to wallow; to cause to wallow’  
*jarvən* QI ‘to become leprous’  
*jarvəs* QI ‘to grow up; to bring up’  
*karbən* QI ‘to approach; to cause to approach’  
*karpəx* QI ‘to bang on the head; to shock’  
*každər* QI ‘to dare’  
*manzəl* QI ‘to become infected, to inflect’  
*mardən* QI ‘to be brave; to make bold’  
*mascən* QI ‘to become poor; to make poor’  
*paltəš* QI ‘to rummage around, to grope around’  
*pandəm* QI ‘to dam up (water); to be dammed up and swell (water)’  
*pandən* QI ‘to grow like a candle (*punda*) dripping sap’  
*parčən* QI ‘to drive a wedge; to drive in nail clips’  
*partəl* QI ‘to spin, to twist (tr. and intr.)’  
*partəx* QI ‘to crumble, to powder (tr. and intr.)’  
*þačçən* QI ‘to decay, to rot’  
*þalṭəç* QI ‘to stammer’  
*þarṭəc* QI ‘to save; to be saved’  
*þartən* QI ‘to turn to crumbs, to become full of dandruff (hair)’  
*sarjəd* QI ‘to tremble, to cause to tremble’  
*sartən* QI ‘to become small’  
*saxbər* QI ‘to visit’  
*sazjər* QI ‘to become reconciled; to agree’  
*šaljəd* QI ‘to be exhausted’

- šamxən QI ‘to become musty; to make musty’  
 šaprən QI ‘to become beautiful; to make beautiful’  
 šarkəp QI ‘to crack’  
 šarpək QI ‘to crack, to break’  
 šaxlap QI ‘to change (tr. and intr.)’  
 šaxtən QI ‘to become dirty; to make dirty’  
 taybər QI ‘to manage, to oversee’  
 talməd QI ‘to make a disciple of; to chastise’  
 talməs QI ‘to shrink up, to wrinkle (intr. and tr.)’  
 tambəl QI ‘to become lazy’  
 tarbən QI ‘to become fat, to fatten’  
 tarkəl QI ‘to stumble, to make stumble’  
 tarşən QI ‘to be pickled; to turn pale (from an illness), to screw up (mouth)’  
 taxxəs QI ‘to pant’  
 taxmən QI ‘to think’  
 tažbəx QI ‘to glorify, to praise, to laud’  
 xandək QI ‘to make a ditch, to dig round’  
 xaþrəc QI ‘to dig little holes, to loosen earth that has been dug’  
 xarbəs QI ‘to push, to urge (a person)’  
 xarbaš QI ‘to become mixed up; to mix up in confusion’  
 xarzəp QI ‘to push; to push over (a person)’  
 xašcən QI ‘to become dark; to make dark’  
 xayvən QI ‘to get dark, to become dull’  
 xazdəf QI ‘to injure; to become injured’  
 xažbən QI ‘to calculate, to count’  
 zablən QI ‘to litter, to trash’  
 zambəl, zanbəl QI ‘to rip, to tear (into strips) (clothes)’  
 zanjər QI ‘to ring (a bell)’  
 zanpər, zampər QI ‘to swagger; to sway’  
 zardən QI ‘to become yellow; to make yellow’  
 zaxmən QI ‘to become powerful; to make powerful’  
 +ancər QI ‘to hesitate’  
 +'arbət QI ‘to writhe’  
 +'ayvən QI ‘to become cloudy’  
 +balkət QI ‘to dazzle; to be dazzled’  
 +barłən QI ‘to bud; to cause to bud’  
 +batrən QI ‘to become big, to grow fat; to cause to become big, grow fat’  
 +čalbəx QI ‘to ache; to beat with a stick’  
 +čambər QI ‘to tear (material, paper), to rip (tr. and intr.)’  
 +čanjər QI ‘to scratch with a paw or claw’

- +*darmən* QI ‘to apply medicine’
- +*darvəd* QI ‘to rock (cradle intr. and tr.)’
- +*kandəx* QI ‘to swaddle, to wrap up (a child)’
- +*kanṭər* QI ‘to bend (backwards)’
- +*karməč* QI ‘to wrinkle, to crumple’
- +*karmət* QI ‘to have colic, to have stomach cramps’
- +*karnəz* QI ‘to coil up’
- +*kaṭmən* QI ‘to cover in ash’
- +*kaṭrən* QI ‘to arch, to bow down (intr. and tr.)’
- +*mardən* QI ‘to become civilized’
- +*paršən* QI ‘to pave (with flat stones)’
- +*sandəl* QI ‘to stand upright, to sit upright’
- +*saxvən* QI ‘to become clear (weather)’
- +*šaxrən* QI ‘to become black (with soot); to make black (with soot)’
- +*štavhar* QI ‘to become proud’
- +*tarbət* QI ‘to move around aimlessly; to cause to move around aimlessly’
- +*taymən* QI ‘to rise in price, to raise the price’
- +*xanzər* QI ‘to threaten to fight; to strut’
- +*yakrən* QI ‘to become heavy; to cause to become heavy’
- +*zabtən* QI ‘to seize, to confiscate’
- +*zarbən* QI ‘to become strong; to make strong’

#### 4.25.4.6 Remarks on the Formation of Quadrilateral Roots

The number of quadrilateral roots has proliferated in the dialect. This is due to two main reasons. Firstly many innovative quadrilateral roots have been created from nouns, adjectives and trilateral verbs, and also from lexical items in other languages. Secondly the inventory of quadrilateral roots has expanded conspicuously by the process of ‘sound symbolism’, whereby families of roots develop with shared components of sound that share a similar meaning. The formation of quadrilaterals by these two processes has been far more productive than in trilateral roots. Sound symbolism has been discussed in § 1.10. Here we shall concentrate on the extraction of roots from other words.

Many quadrilateral roots have their source in nouns, adjectives and other verbs, either from items of these categories that are used in the C. Urmi dialect or directly from a word in another language. Different processes take place according to whether the source is (i) a noun, adjective in the dialect or verb in another language or (ii) a trilateral verb in the dialect.

*Quadrilateral Roots Derived from Nouns and Adjectives or from Verbs  
in Other Languages*

If the source word contains four strong consonants with the pattern CVCCVC, the general syllabic profile of the source word is preserved, e.g.

<i>labbən</i> QI	'to become courageous' < <i>labbana</i> 'courageous'
<i>baxxəl</i> QI	'to envy' < <i>baxxila</i> 'envious'
<i>tamməz</i> QI	'to clean' < <i>tamməz</i> 'clean'
<i>zabbən</i> QI	'to become weak' < <i>zabbun</i> 'weak'
<i>javvəb</i> QI	'to answer' < <sup>+</sup> <i>juvvab</i>
<sup>+</sup> <i>darmən</i> QI	'to apply medicine' < <sup>+</sup> <i>darmana</i> 'medicine'
<i>sazjər</i> QI	'to agree' < <i>sazjar</i> 'agreeable, in agreement'
<i>'arzən</i> QI	'to become cheap' < <i>'arzan</i> 'cheap'
<sup>+</sup> <i>ajjəz</i> QI	'to annoy, to be annoyed' < Arab. <i>'ajjaza</i>

In the following case a post-vocalic /t/ in the Azeri source appears as a weak /y/ radical, due to the weak articulation of /t/ in Azeri in this position:

<sup>+</sup> <i>alda</i> QI	'to cheat' < Azer. <i>aldat-maq</i>
-----------------------------	-------------------------------------

If the source word contains three strong consonants, a quadrilateral root may be formed by geminating the second consonant, e.g.

<i>xallən</i> QI	'to make strong' < <i>xelana</i> 'strong'
<sup>+</sup> <i>barrən</i> QI	'to enlighten' < <sup>+</sup> <i>barana</i> 'bright'
<i>šaddən</i> QI	'to go mad' < <i>šidana</i> 'mad'
<i>nammən</i> QI	'to dampen' < <i>nimana</i> 'damp'
<sup>+</sup> <i>darrən</i> QI	'to roll (dough)' < <sup>+</sup> <i>dorana</i> 'rolling pin'
<sup>+</sup> <i>salləl</i> QI	'to become sober' < <sup>+</sup> <i>salila</i> 'sober'
<sup>+</sup> <i>savvən</i> QI	'to be terrified' < <sup>+</sup> <i>savana</i> 'terrible'
<i>sarrəf</i> QI	'to saddle' < <i>sarja</i> 'saddle'
<sup>+</sup> <i>ajjəb</i> QI	'to wonder' < Arab. <i>'ajiba</i>

A long /i/ is occasionally interpreted as a strong /y/ radical of the quadrilateral root and, similarly, a long /u/ is occasionally interpreted as a strong /v/ radical, e.g.

<sup>+</sup> <i>taymən</i> QI	'to rise in price' < <sup>+</sup> <i>timana</i> 'expensive'
<i>fərvəs</i> QI	'to grow, to bring up' < <i>farusa</i> 'big'

A source form with the syllabic structure CVCC- may be accommodated into the quadriliteral system by a reduplication process, in that one of the radicals is repeated, e.g.

- çarçər* QI ‘to become deaf’ < *çarra* ‘deaf’  
*tantən* QI ‘to smoke’ < *tənna* ‘smoke’  
*lahləl* QI ‘to puff, to pant’ < Azer. ləhlə-mək

The verb *xayyəd* QI ‘to unite’, which is historically related to \**xad* (= *xa*) ‘one’, is likely to be a *pa“el* form that has been borrowed from the literary language.

An alternative process of incorporating source words with three consonants into the quadriliteral system of roots is to add a final /n/ to the root, e.g.

- +*ayvən* QI ‘to become cloudy’ < +'ayva ‘cloud’  
*atkən* QI ‘to become antiquated’ < 'atika ‘old’  
+'catrən QI ‘to knot’ < +'cətra ‘knot’  
*sartən* QI ‘to become small’ < *surta* ‘small (fs.)’  
*cačlən* QI ‘to become bald’ < *cačala* ‘bald’  
+'barən QI ‘to bud’ < +'bərta ‘bud’  
+'kaṭmən QI ‘to cover in ash’ < +'kəṭma ‘ash’  
+'şaxrən QI ‘to become black with soot’ < +'şaxra ‘soot’  
*harsən* QI ‘to become angry’ < Azer. hirs ‘anger’  
+'latṭən QI ‘to become shallow’ < +'latṭa ‘shallow’  
*lanjən* QI ‘to limp’ < *lanj* ‘limping’  
+'parşən QI ‘to cover with slabs’ < +'parşa ‘flat stone’  
*sarjən* QI ‘to saddle’ < *sarja* ‘saddle’  
<šapırən QI ‘to beautify’ < *šapıra* ‘beautiful’  
*darbən* QI ‘to wound’ < *darba* ‘wound’  
*pandən* QI ‘to grow like a candle’ < *punda* ‘candle’  
*tarbən* QI ‘to become fat’ < *tarba* ‘fat (noun)’  
*zardən* QI ‘to become yellow’ < *zarda* ‘yellow’  
*janjən* QI ‘to rust’ < *janj* ‘rust’

The same process is applied to source words with a middle geminated consonant, e.g.

- čaplən* QI ‘to spoil’ < *čappal* ‘spoiled’

The source of this process may be the stem of the noun that has a derivative suffix, such as in the following:

*+mardən* QI ‘to become civilized’ < *+marduya* ‘civilization’

This /n/ is likely to be associated with the adjectival derivational ending *-ana*, e.g. *šəxtana* ‘dirty’ < *šəxta* ‘dirty’. Such adjectives, indeed, form the source word for several quadriliteral verbal roots, e.g.

*šaxtən* QI ‘to become dirty’ < *šəxtana* ‘dirty’

*jarvən* QI ‘to become leprous’ < *ʃərvana* ‘leprous’

*kalmən* QI ‘to become lousy’ < *kalmana* ‘lousy’

It appears that the /n/ in quadriliteral roots such as these was extended by analogy to other roots that did not have an adjectival source word in *-ana*.

If there are only two strong consonants in the source word, the radical slots of the quadriliteral root may be filled by a process of reduplication to fill the radical slots resulting in roots of the patterns C<sub>a</sub>-C<sub>b</sub>C<sub>a</sub>-C<sub>b</sub> or C<sub>a</sub>-C<sub>b</sub>C<sub>b</sub>-C<sub>b</sub>, e.g.

*ʃažʃəž* QI ‘to spin (head)’ < Kurd. *gêj* ‘dizzy’

*daldəl* QI ‘to become thin, sparse’ < *dayla* ‘thin, sparse’

*daķdəķ* QI ‘to become small, to chop finely’ < *dayka* ‘fine’

*šalləl* QI ‘to become quiet’ < *šəlyə* ‘quiet’

*šannən* QI ‘to tame, to be tame’ < *šenaya* ‘tame’

Alternatively two consonants in the source word are accommodated in the quadriliteral root system by the pattern C<sub>a</sub>-C<sub>b</sub>C<sub>b</sub>-n, whereby the second consonant is geminated and a consonant /n/ is added as the final radical, e.g.

*+nallən* QI ‘to shoe a horse’ < *+nala* ‘horse shoe’

*+lallən* QI ‘to become dumb’ < *+lala* ‘dumb’

*ʃažžən* QI ‘to become dizzy’ < Kurd. *gêj* ‘dizzy’

*+dagğən* ‘to brand’ < *+dagj* ‘brand mark’

The same process applies to source words with the pattern C<sub>a</sub>VC<sub>b</sub>C<sub>b</sub>-, with a geminated final consonant, e.g.

*laccən* QI ‘to blot’ < *lacca* ‘blot’

#### *Quadriliteral Roots Derived from Trilateral Verbs*

If the trilateral root of the source verb has only two strong consonants, a quadriliteral may be created by a process of reduplication of these strong consonants resulting in roots of the pattern C<sub>a</sub>-C<sub>b</sub>C<sub>a</sub>-C<sub>b</sub>, e.g.

- dašdəš* QI ‘to trample’ < *dayəš* I ‘to tread down’  
*jabjəb* QI ‘to foam’ < *jabə* I ‘to foam, to boil over’  
<sup>+</sup>*katkət* QI ‘to chop’ < <sup>+</sup>*kattə* I ‘to cut’  
<sup>+</sup>*lasləs* QI ‘to gnaw’ < <sup>+</sup>*layəs* I ‘to chew’

The reduplicated quadriliteral typically expresses an intenser event involving a greater input of energy than the trilateral form.

In some cases the trilateral source verb is no longer used in the C. Urmī dialect, e.g.

- dakdək* QI ‘to chop finely’ < \**dayək* I  
<sup>+</sup>*radrəd* QI ‘to darn’ < \**rayəd*

Reduplicative quadriliteral verbs are associated also with trilateral roots with three strong radicals. They may be formed by reduplicating a sequence of two of these radicals, resulting in the pattern C<sub>a</sub>-C<sub>b</sub>C<sub>a</sub>-C<sub>b</sub>, e.g.

- lazləz* QI ‘to feel disgust’ < *zaləz* II ‘to feel disgust’

The first radical may be repeated after the second radical, resulting in the pattern C<sub>a</sub>-C<sub>b</sub>C<sub>a</sub>-C<sub>c</sub>, e.g.

- jarjəš* QI ‘to drag’ < *jarəš* I ‘to pull’  
<sup>+</sup>*bazbək* QI ‘to disperse’ < <sup>+</sup>*bazək* II ‘to scatter’  
<sup>+</sup>*parpət* QI ‘to tear’ < <sup>+</sup>*parət* I ‘to tear’  
<sup>+</sup>*zarzəč* QI ‘to scribble’ < <sup>+</sup>*zarəč* I ‘to scratch’  
*xanxək* QI ‘to strangle’ < *xanək* I ‘to choke (tr. and intr.)’

The trilateral root may be expanded by adding a consonant. A common process is to add an /r/ before the second radical (C-C-C > C-rC-C), e.g.

- <sup>+</sup>*karmət* QI ‘to have stomach cramps’ < <sup>+</sup>*kamət* I ‘to twist, to tighten (rope); to squeeze’  
<sup>+</sup>*karməč* QI ‘to wrinkle, to crumple’ < <sup>+</sup>*kaməč* I ‘to pinch, to nip’  
*partəl* QI ‘to spin’ < *patəl* I ‘to turn, to twist’

The pattern I form is not necessarily still used in the dialect, e.g.

- <sup>+</sup>*dardač* QI ‘to shatter’ < \**dayək* I

As we have seen, *\*dayək* is also the source for the QI verb *dakdək* ‘to chop finely’. The verb *+dardək* ‘to shatter’ with /r/ expresses a more forceful action than *dakdək*. The other QI verbs with the added /r/ can also be interpreted as expressing a more forceful action than that of the pattern I source verb.

An additional /r/ is found also in quadriliteral roots derived from nouns with an agentive template, which can be assumed to have been derived ultimately from a verbal root, e.g.

*barxəš* QI ‘to stir’ < *baxušta* ‘ladle’

In the following the added final /c/ adds a diminutive nuance and may be associated with the diminutive nominal suffix *-cca* (§ 5.10.2.2.):

*xaþrəc* QI ‘to dig little holes’ < *xaþər* I ‘to dig’

An example of an /m/ added after the second radical is:

*carməx* QI ‘to roll up’ < *carəx* I ‘to wind on (e.g. turban)’

In some sporadic cases in the variety of the dialect used in Georgia, a variant of a triliteral verb is used in some of the tokens of the verb which have the syllable structure of quadriliteral verbs with a geminated medial consonant, e.g.

- (1) *ci-+ṭaláxva mádrə tásma.* | *tásma ci-mattàxvalə* | *átxa* | *ódaxva xá* | *+yàzan,* |  
*+yàzan.* | *+ṭlá janáy javày-na* | *+ṭlá ju-* | *+tárrəna.* | *járət* | *é tásma mán dé* | *+yá-*  
*zán jannəvvəttə.* | ‘We also used to play “belt”. We used to place the belt like  
 this in order to make a circle, a circle. Three people are inside and three  
 our outside. You must steal the belt from the circle.’ (B 17:2)

The passage in (1) is a description of a game played in the village. The form *jannəvvəttə* ‘you steal’ is a variant of *janvət* (< *janəv* I). The extended form occurs in a pivotal position in the discourse expressing the object of the game.

#### *Inflectional Affixes Reinterpreted as Root Consonants*

The /t/ of some quadriliteral verbs are derived historically from the \*t affix of the detransitivizing verbal patterns of earlier Aramaic (*‘etpə‘el*, *‘etpa‘al*, *etta-ḥəl*). This applies to the verb *šattəš* ‘to establish’, which is apparently derived from a T-pattern of the historical root *\*-š-š* with metathesis, and the verb *+štavhər* ‘to be proud’ (cf. Syriac *meštahar*), which is treated as a quadriliteral verb with the root *+št-vh-r*, the first two consonants clustering in the first radical slot and the second two consonants in the second radical slot.

The initial sibilant /s/ in the verb *sarfəd* QI ‘to tremble’ is probably derived historically from the prefix of the non-productive verbal pattern *saf‘el* of earlier Aramaic. The pattern I form *rafəd* I is also used with the same meaning.

#### *Quadriliteral Verbs with Medial Geminated /vv/*

The geminated medial /v/ in verbs such as <sup>+</sup>*javvət* QI ‘to hiccup’, *kavvəl* QI ‘to promise’, *kavvəm* QI ‘to happen’, *pavvər* QI ‘to yawn’, *tavvəb* QI ‘to repent’ appears to have developed in the past form, e.g. *puvvárrə* ‘he yawned’, by the regular shift of /*tvv*/ > /*uvv*/ (§ 1.13.2.3.3.), and this has been generalized throughout the paradigm.

#### *Triliteral Roots with Identical 2nd and 3rd Radicals*

When a triliteral root has identical second and third radicals, the second radical is geminated as a result of a process to keep the last two radicals separated in all inflections, e.g. *sannən* I ‘to burn (food)’:

Present.	<sup>+</sup> <i>sánnən</i> , <sup>+</sup> <i>sannánna</i> , <sup>+</sup> <i>sannánni</i>
Past:	<sup>+</sup> <i>snánnə</i>
Participle:	<sup>+</sup> <i>snína</i>
Progressive:	<sup>+</sup> <i>bəsnánələ</i>
Verbal noun:	<sup>+</sup> <i>snánta</i>

As can be seen, in this pattern I verb the gemination is found only in the present. In the originally pattern II verb <sup>+</sup>*xalləl* ‘to wash’, however, the gemination has been extended to all inflections and it has been merged with the pattern of quadriliteral roots with a geminated medial radical. Alternative inflections of the original pattern II are, however, still available for some forms:

Present.	<sup>+</sup> <i>xálləl</i> , <sup>+</sup> <i>xallólla</i> / <sup>+</sup> <i>xálla</i> , <sup>+</sup> <i>xallálly</i> / <sup>+</sup> <i>xálli</i>
Past:	<sup>+</sup> <i>xullálly</i>
Participle:	<sup>+</sup> <i>xullálly</i> / <sup>+</sup> <i>xúlla</i>
Progressive:	<sup>+</sup> <i>xallúlələ</i> / <sup>+</sup> <i>xallúllə</i>
Verbal noun:	<sup>+</sup> <i>xallálta</i>

A similar process gave rise to the verb *xaddət* QI ‘to renew’, derived historically from a *pa“el* form (= pattern II) to avoid the contact of two homorganic consonants.

#### 4.25.4.7 Voice and Argument Structure of Quadrilateral Verbs

Many QI quadrilateral verbs are labile, in that they have transitive and intransitive alternants. These are semantically equivalent to labile verbs of pattern I. The subject of the transitive alternant is agentive whereas the intransitive alternant expresses an inchoative event with an unaccusative subject, e.g.

*+šaršər* QI ‘to pour’ (intr. or tr.)

*míyya +šuršárrun +àlli.*! ‘The water poured onto me.’

*’áha míyya +šarshúrələ ’àlli.*! ‘He is pouring water onto me.’

Other examples of labile QI verbs include:

*’arjəj* QI ‘to become numb (from cold), to make numb’

*banpər* QI ‘to flutter; to cause to flutter’

*candər* QI ‘to roll (intr. and tr.)’

*cazcəz* QI ‘to splutter; to cause to splutter’

*čambəl* QI ‘to hang (intr. and tr.)’

*čaqčən* QI ‘to arm (with weapons) (intr. and tr.)’

*dakdək* QI ‘to become fine; to chop finely’

*daldən* QI ‘to settle (to live) (intr. and tr.)’

*damdəm* QI ‘to bleed (intr.), to draw blood (tr.)’

*dardəx* QI ‘to become depressed; to cause to become depressed’

*jambəl* QI ‘to tumble; to cause to tumble’

*jambəx* QI ‘to cave in; to cause to cave in’

*jamjam* QI ‘to hum; to cause to hum’

*jandal* QI ‘to roll (intr. and tr.)’

*japʃəp* QI ‘to foam, to foam up; to cause to foam’

*farməl* QI ‘to wallow; to cause to wallow’

*jarvəs* QI ‘to grow up; to bring up’

*jažjəž* QI ‘to become confused; to confuse’

*janjən* QI ‘to rust; to cause to rust’

*karbən* QI ‘to approach; to cause to approach’

*lanjən* QI ‘to limp; to cause to limp’

*manzəl* QI ‘to become infected, to inflect’

*mardən* QI ‘to be brave; to make bold’

*mascən* QI ‘to become poor; to make poor’

*nammən* QI ‘to become damp; to make damp’

*pandəm* QI ‘to dam up (water); to be dammed up and swell (water)’

*partəl* QI ‘to spin, to twist (intr. and tr.)’

- patpət* QI ‘to card (wool); to come apart (wool)’  
*þarþac* QI ‘to save; to be saved’  
*sakkat* QI ‘to cripple, to be crippled’  
*sarjəd* QI ‘to tremble, to cause to tremble’  
*þaklək* QI ‘to smart; to make smart’  
*þamxən* QI ‘to become musty; to make musty’  
*þannən* QI ‘to tame (wild animal); to become tame’  
*þaprən* QI ‘to make beautiful; to become beautiful’  
*þaxləp* QI ‘to change (intr. and tr.)’  
*þaxtən* QI ‘to become dirty; to make dirty’  
*talməs* QI ‘to wrinkle (intr. and tr.)’  
*tamməz* QI ‘to clean; to become clean’  
*tarbən* QI ‘to become fat, to fatten’  
*tarkəl* QI ‘to stumble, to make stumble’  
*xarbəš* QI ‘to become mixed up; to mix up in confusion’  
*xašcən* QI ‘to become dark; to make dark’  
*xašxəš* QI ‘to rustle (leaves); to cause to rustle’  
*xazdəj* QI ‘to injure; to become injured’  
*zardən* QI ‘to become yellow; to make yellow’  
*zaxmən* QI ‘to become powerful; to make powerful’  
<sup>+</sup>*ajjəz* QI ‘to annoy, to be annoyed’  
<sup>+</sup>*balkət* QI ‘to dazzle; to be dazzled’  
<sup>+</sup>*barrən* QI ‘to become light; to cause to become light’  
<sup>+</sup>*barčən* QI ‘to bud; to cause to bud’  
<sup>+</sup>*batrən* QI ‘to become big, to grow fat; to cause to become big, grow fat’  
<sup>+</sup>*čančəl* QI ‘to become exhausted, to exhaust’  
<sup>+</sup>*darvəd* QI ‘to rock (cradle intr. and tr.)’  
<sup>+</sup>*janjər* QI ‘to suffer, to cause to suffer’  
<sup>+</sup>*katrən* QI ‘to bow down (intr. and tr.)’  
<sup>+</sup>*latṭən* QI ‘to become shallow, to make shallow’  
<sup>+</sup>*sansəp* QI ‘to smart; to cause to smart’  
<sup>+</sup>*šaxrən* QI ‘to become black (with soot); to make black (with soot)’  
<sup>+</sup>*þarbət* QI ‘to move around aimlessly; to cause to move around aimlessly’  
<sup>+</sup>*þaymən* QI ‘to rise in price, to raise the price’  
<sup>+</sup>*yaþrən* QI ‘to become heavy; to cause to become heavy’  
<sup>+</sup>*zarbən* QI ‘to become strong; to make strong’

The causative QII form of quadriliteral verbs with initial *m-* is used to derive causatives of intransitive verbs, transitive verbs and the transitive alternant of labile verbs. As with pattern III causatives of transitives verbs, the object of the

original verb remains the object and the causee subject is put in a peripheral position expressed by a prepositional phrase, e.g.

*'arkal* QI 'to become delayed', *markal* QII 'to cause to become delayed'

- (1) *'urkàlla.*! 'She has delayed/She is late.' (intransitive unaccusative)  
<sup>+</sup>*mútra murkàllala.*! 'The rain has delayed her.' (causative)

<sup>+</sup>*katkət* QI ‘to chop’, <sup>+</sup>*mkatkət* QII ‘to cause to be chopped’

- (2) *+búrsa bət-+kak̚kətt̚ila.* ‘They will chop the meat.’ (transitive)  
*+búrsa bət-+mkaṭkətt̚ila b-do-náša.* ‘They will cause the meat to be  
 chopped by that man’ (causative)

*jandəl* Q I ‘to roll’ (intr. and tr.), *mjandəl* QII ‘to cause to be rolled’

- (3) *jútta bət-jandàlla*.<sup>1</sup> 'The ball will roll' (unaccusative transitive)  
*jútta bət-jandəllila* 'They will roll the ball' (transitive)  
*bət-mjandəllila jútta b-do-nàša*.<sup>1</sup> 'They will cause the ball to be rolled by  
 that man' (causative)

When causatives are made of intransitive unaccusative QI verbs, the QII form with the initial *m-* is optional. The *m-* is often omitted and the QI verb is used as a labile form with intransitive and transitive alternants, e.g.

*čančən* QI ‘to tingle’—*mčančən* QII ~ *čančən* QI ‘to cause to tingle’

*jambəl* QI ‘to tumble’—*mjambəl* QII ~ *jambəl* QI ‘to cause to tumble’

*jarvəs* QI 'to grow'—*mjarvəs* QII ~ *jarvəs* QI 'to cause to grow'

*jažžən* QI ‘to become dizzy’—*mjažžən* QII ~ *jažžən* QI ‘to cause to become dizzy’

*xašcən* QI ‘to become dark’—*mxašcən* QII ~ *xašcən* QI ‘to cause to become dark’

<sup>+</sup>*čarčə* QI ‘to stain (intr.)’—<sup>+</sup>*mčarčə* QII ~ <sup>+</sup>*čarčə* QI ‘to stain’ (tr.)

When the QI intransitive begins with an initial /Ø/ radical, however, the QII form with the *m-* prefix is obligatory in the transitive:

*'arkəl* QI 'to become delayed'—*markəl* QII 'to delay (tr.)'

*'atkən* QI 'to become old'—*matkən* QII 'to cause to become old'

<sup>+</sup>*ajjəb* QI ‘to be amazed’—<sup>+</sup>*majjəb* QII ‘to amaze’

The QII form of such verbs is sometimes used intransitively, e.g. <sup>+</sup>*rába murkàlla* ‘He has delayed a lot’ (A 37:18). One may compare this to the intransitive use of pattern III verbs such as *marjəd* ‘to cause to tremble (tr.), to tremble (intr.)’.

A QII form with initial *m-* is obligatory in quadrilateral causatives of transitive verbs. Examples of QII causatives of transitive verbs include:

*mbarxəš* QII ‘to cause to be stirred’—*barxəš* QI ‘to stir (tr.)’

*mdamdəm* QII ‘to cause to be made to bleed’—*damdəm* QI ‘to bleed (intr.), to cause to bleed (tr.)’

*mfandəl* QII ‘to cause to be rolled’—*jandəl* QI ‘to roll (intr. and tr.)’

*mjarjəš* QII ‘to cause to be dragged’—*jarjəš* QI ‘to drag’

<sup>+</sup>*mdarvəd* QII ‘to cause to be rocked’—<sup>+</sup>*darvəd* QI ‘to rock (intr. and tr.)’

<sup>+</sup>*mkatkət* QII ‘to cause to be chopped’—<sup>+</sup>*katkət* QI ‘to chop’

The causative of the final /y/ QI verb <sup>+</sup>*parmə* ‘to understand’ is formed by pattern III of the trilateral verb <sup>+</sup>*maþrəm* III.

#### 4.25.4.8 Quadrilateral Verbs Expressing Sounds

Many quadrilateral verbs with the reduplicative pattern C<sub>a</sub>-C<sub>b</sub>C<sub>a</sub>-C<sub>b</sub> (§ 4.25.4.2.) express sounds, often involving a process of sound symbolism (§ 1.10.). For all such verbs a verbal noun of the pattern *CəCCa-CəC* is available.<sup>6</sup> This is best considered to be a compound consisting of two elements, since in some circumstances each element receives its own stress, e.g.

<sup>+</sup>*karkər* QI ‘to croak’—<sup>+</sup>*kərrá-*<sup>+</sup>*kər* ‘croaking’

<sup>+</sup>*katkət* QI ‘to cluck (hen)’—<sup>+</sup>*kəttá-*<sup>+</sup>*kət* ‘cluck’

<sup>+</sup>*barbər* QI ‘to roar’—<sup>+</sup>*bərrá-*<sup>+</sup>*bər* ‘roaring sound’

*jamjəm* QI ‘to hum’—*jəmmá-jəm* ‘humming’

*xašxəš* QI ‘to rustle (leaves)’—*xəššá-xəš* ‘rustling sound’

*kažkəž* QI ‘to sizzle, to rattle (rain)’—*kəžžá-kəž* ‘sizzling, rattling’

<sup>+</sup>*kaškəš* QI ‘to make a cracking sound’—<sup>+</sup>*kəššá-*<sup>+</sup>*kəš* ‘cracking sound’

*nacnəc* QI ‘to groan (in pain)’—*nəccá-nac* ‘groaning’

*jarjər* QI ‘to make a low roar’—*jərrá-jər* ‘low roar’

<sup>+</sup>*šaršər* QI ‘to splash (water)’—<sup>+</sup>*šərrá-*<sup>+</sup>*šər* ‘plashing sound’

<sup>+</sup>*bakbək* QI ‘to bubble’—<sup>+</sup>*bəkká-*<sup>+</sup>*bək* ‘bubbling sound’

6 Examples of this verbal noun in the Novi Alfabet texts are discussed by Polotsky (1961, 18–20).

- čakčək* QI ‘to chatter; to rattle’—*čəkká-čək* ‘sound of chattering’  
*čančən* QI ‘to buzz (ear)’—*čənná-čən* ‘sound of buzzing’  
*čarčər* QI ‘to become deaf’—*čərrá-čər* ‘buzzing (of ear)’  
<sup>+</sup>*marmər* QI ‘to whine (cat)’—<sup>+</sup>*mərrá-+mər* ‘whining sound’  
<sup>+</sup>*tarčəm* QI ‘to grumble’—<sup>+</sup>*tarčá-+təm* ‘grumbling’  
*þatþət* QI ‘to whisper’—*þəttá-þət* ‘whispering’  
<sup>+</sup>*taptəp* QI ‘to stamp’—<sup>+</sup>*təppá-+təp* ‘stamping sound’  
*harhər* QI ‘to laugh loudly’—*hərrá-hər* ‘loud laughing’  
*dacdəc* QI ‘to throb’—*dəccá-dəc* ‘throbbing’

When a pronominal suffix is added to these verbal nouns the final consonant is geminated and the form is generally split into two stressed units:

- hárra hárru* ‘his laughing’  
<sup>+</sup>*kóttá +kətté* ‘their clucking’

Quadriliteral verbs expressing sounds that have the pattern *čočə* QI ‘to twitter’ have verbal nouns with the pattern *Cəvvə-Cəv* with final /v/. This suggests that these verbs were originally reduplicative like other verbs expressing sounds with roots of the pattern *C-vC-v*. The final /v/ is what is reflected in some inflections of these in the northern variety of the dialect and in C. Salamas and C. Gawilan, e.g. the infinitive/progressive *čočuvvə* in contrast to the southern variety *čočuya*, and C. Salamas/C. Gawilan present template *čavčəv*. Examples:

- čočə* QI ‘to twitter’—*čəvvá-čəv* ‘twittering’  
*zozə* QI ‘to howl’—*zəvvá-zəv* ‘howling’

A rarer variant form of verbal noun expressing sound is one with the reduplicative pattern *C<sub>a</sub>əC<sub>b</sub>C<sub>c</sub>a-C<sub>a</sub>əC<sub>b</sub>C<sub>c</sub>*. This is available for triliteral verbs, e.g.

- <sup>+</sup>*marəč* I ‘to squeeze out’—<sup>+</sup>*mərčá-+mərč* ‘sound of sucking out (by lips)’

It is also used for some quadriliteral verbs, with the sequence of consonants adjusted and supplemented to fit the template, e.g.

- <sup>+</sup>*vasvəs* QI ‘to whine’—<sup>+</sup>*vəstá-+vəst* ‘sound of whining’  
<sup>+</sup>*tarčəm* QI ‘to grumble’—<sup>+</sup>*mərčá-+mərč* ‘grumbling’

Further variant structures are attested in the following forms:

*hrámma hràmmu* ‘its neighing’ (A 45:9), cf. *harhám* QI ‘to neigh’  
 +*táppa* +*tappé* ‘their galloping’ (A 45:9), cf. +*taptəp* QI ‘to pound’

The origin of these patterns of verbal noun expressing sound can be traced to Mukri Kurdish, in which the corresponding nouns have the pattern *CVCeCVC*, the vowels of the first and last syllable being variable, e.g. *qareqar* ‘screaming’, *bořebor* ‘lowing (of oxen)’, *šírešír* ‘plashing (of water)’. These do not all have corresponding verbs, but when they do the verbs are not reduplicative, e.g. *qîrîn* ‘to scream’.<sup>7</sup> It would appear, therefore, that the C. Urmi reduplicative quadrilateral verbs expressing sound are ultimately derived from the verbal nouns.

For the syntactic constructions used with these verbal nouns see § 12.1. 6.2.

#### 4.26 Phrasal Verbs

The C. Urmi dialect contains various ‘phrasal verbs’, which are compound constructions consisting of a finite inflected verb and a nominal element. The term ‘phrasal verb’ is used to distinguish them from compound verbal forms consisting of the resultative participle or progressive stem and the copula. Phrasal verbs are generally calques from parallel constructions in Persian, Kurdish or Azeri Turkish. The nominal element is generally retained from the source language with the finite verb being exchanged for an equivalent Aramaic ‘light’ verb such as *‘avəd* I ‘to do’, *yavvəl* I ‘to give’, *jarəš* I ‘to pull’, *davək* I ‘to hold’, *maxə* I ‘to hit’ for transitive verbs and *‘avə* I ‘to be’ for intransitive verbs. Some selected examples are as follows:

<i>hamla</i> <i>‘avəd</i>	‘to attack’	Pers. hamle kardan
+ <i>əmza</i> <i>‘avəd</i>	‘to sign’	Pers. emza kardan
+ <i>rəsva</i> <i>‘avəd</i>	‘to disgrace’	Pers. rosvā kardan
<i>sohbat</i> <i>‘avəd</i>	‘to converse’	Pers. sohbat kardan
<i>rad</i> <i>‘avəd</i>	‘to remove’	Pers. rad kardan
+ <i>hazər</i> <i>‘avəd</i>	‘to prepare’	Kurd. hâzir-î kirin
<i>sunnat</i> <i>‘avəd</i>	‘to circumcise’	Azer. sünnet etmek
+ <i>dussaq</i> <i>‘avəd</i>	‘to arrest’	Azer. dustaq etmek

<sup>7</sup> I am grateful to Ergin Öpengin for these data from Mukri Kurdish.

<i>+juvvab yavvəl</i>	'to reply'	Pers. <i>iovāb</i> dādan
<i>'azyat yavvəl</i>	'to distress'	Azer. əziyyət vermək
<i>zahmat yavvəl</i>	'to bother'	Azer. zəhmət vermək
<i>zahmatjarəš</i>	'to take trouble'	Pers. <i>zahmat</i> kašīdan
<i>+nāz jarəš</i>	'to spoil (a child)'	Pers. <i>nāz</i> kašīdan
<i>+karavuljarəš</i>	'to guard'	Azer. <i>qarovul</i> çəkmək
<i>'azyatjarəš</i>	'to suffer'	Azer. əziyyət çəkmək
<i>hujumjarəš</i>	'to attack'	Azer. <i>hüküm</i> çəkmək
<i>cərri davək</i>	'to rent'	Pers. <i>kerāye</i> gereftan
<i>cušti davək</i>	'to wrestle'	Pers. <i>kuštī</i> gereftan
<i>lağəm maxə</i>	'to undermine'	Azer. <i>lağım</i> vurmaq
<i>cort maxə</i>	'to doze'	Pers. čort zadan
<i>+basma maxə</i>	'to print'	Pers. bāsme zadan
<i>xam +'axəl</i>	'to take care'	Pers. ġam xordan
<i>majbur 'avə</i>	'to become forced'	Pers. <i>majbūr</i> šōdan
<i>+rəsvə 'avə</i>	'to be disgraced'	Pers. <i>rosvā</i> šōdan
<i>+tanəš 'avə</i>	'to become acquainted'	Azer. <i>tanış</i> olmaq
<i>muraxast 'avə</i>	'to leave'	Azer. <i>mürəxxəs</i> olmaq
<i>+cənnar 'azəl</i>	'to step aside'	Azer. <i>kənar</i> gəzmək

A number of phrasal verbs that calque those in other languages contain NENA nouns, e.g.

<i>+ayna maxə</i>	'to wink'	Azer. <i>göz</i> vurmaq/ Pers. čeşmak zadan
<i>ʃulpa maxə</i>	'to flap'	Pers. par zadan
<i>ptana 'avəd</i>	'to plough'	Pers. šoxm kardan
<i>xela maxə</i>	'to exert oneself'	Pers. zür zadan

# Nouns

## 5.1 Preliminary Remarks

Most nouns of Aramaic stock and loanwords that have been adapted to Aramaic morphology have in the singular the endings (i) *-a*, which is the reflex of the masculine singular determined state inflection of earlier Aramaic or (ii) *-ta*, which is the reflex of the feminine singular determined state inflection of earlier Aramaic. A classification is given below of the various morphological patterns of nouns in the dialect that have one of these inflectional endings in the singular. In this chapter stress is not marked when it occurs in its default penultimate position.

## 5.2 Nouns with *-a* Inflection

### 5.2.1 Bisyllabic Patterns

#### 5.2.1.1 *CaCa*

<i>baba</i>	'father'
<i>dava</i>	'gold'
<i>kala</i>	'voice'
<i>mana</i>	'vessel'
<i>nara</i>	'river'
<i>sada</i>	'witness'
<i>sala</i>	'basket'
<i>sava</i>	'old man'
<i>xana</i>	'lap'
<i>yama</i>	'sea'
<sup>+</sup> <i>dana</i>	'time'
<sup>+</sup> <i>kaša</i>	'priest'
<sup>+</sup> <i>sada</i>	'almond'
<sup>+</sup> <i>sara</i>	'moon'
<sup>+</sup> <i>tala</i>	'fox'
<sup>+</sup> <i>tama</i>	'taste'
<sup>+</sup> <i>tana</i>	'load'
<sup>+</sup> <i>xasa</i>	'back'

Some of the nouns of Aramaic stock had this as their pattern in an earlier stage of Aramaic, e.g. *kala* < \**qālā* ‘voice’, *sava* < \**sābā* ‘old man’. In some cases the second consonant was originally geminated, e.g. *xana* < \**ḥannā* ‘lap’, *yama* < \**yammā* ‘sea’. In other cases the pattern has arisen by the elision of a consonant that was originally present after the vowel. Such elided consonants include a pharyngal, e.g. *+tala* < \**ta'lā* ‘fox’, *+šada* < \**ša'da* < \**šaǵdā* ‘almond’, a laryngal, e.g. *dava* < \**dahvā* ‘gold’, or an *\*r*, e.g. *+xasa* < \**harṣā* ‘back’. In *+dana* ‘time’ an initial pharyngal has been lost (< \**iddānā*).

#### 5.2.1.2      *CeCa*

<i>beta</i>	‘house’
<i>kesa</i>	‘wood’
<i>leša</i>	‘dough’
<i>meša</i>	‘forest’
<i>šena</i>	‘peace’
<i>sepa</i>	‘sword’
<i>xela</i>	‘strength’
<i>zeta</i>	‘olive oil’
<i>+keṭa</i>	‘summer’

The /e/ in words of this pattern derives from the contraction of an original diphthong \*ay, e.g. *beta* < \**baytā* ‘house’.

#### 5.2.1.3      *CiCa*

<i>cica</i>	‘tooth’
<i>cipa</i>	‘stone’
<i>cisa</i>	‘belly’
<i>diva</i>	‘wolf’
<i>’ida</i>	‘hand’
<i>ſiba</i>	‘side’
<i>riša</i>	‘head’
<i>sila</i>	‘sand’
<i>sima</i>	‘silver’
<i>tina</i>	‘fig’
<i>+lina</i>	‘jar’
<i>+pira</i>	‘lamb’
<i>+siṭa</i>	‘span of hand’
<i>+ṭima</i>	‘value’
<i>+ṭina</i>	‘mud’

In some words of this pattern the /i/ is original, e.g. *’ida* ‘hand’, *+qina* ‘mud’. In the case of *+lina* ‘jar’ the pattern has arisen by the loss of a pharyngal: < \**l’ina* < \**lğ̃inā*. Some words had an original medial \*ē (§ 1.11.1. ii), e.g. *cipa* < \**kēpā* ‘stone’. Others had an original pattern \*CaCCa, the \*CC being either a geminated consonant or \*rC, e.g. *cica* < \**kakkā* ‘tooth’, *cisa* < \**karsā* ‘belly’.

#### 5.2.1.4 CoCa

<i>coca</i>	‘trunk (of tree)’
<i>joza</i>	‘walnut’
<i>loma</i>	‘blame’
<i>mota</i>	‘death’
<i>nora</i>	‘mirror’
<i>poxa</i>	‘wind’
<i>šopa</i>	‘place’
<i>tora</i>	‘ox’
<i>yona</i>	‘dove, pigeon’
<i>+jora</i>	‘man, husband’
<i>+sola</i>	‘shoe’
<i>+soma</i>	‘fast’
<i>+xola</i>	‘rope’

In words of Aramaic stock, the /o/ in this pattern is derived historically from the diphthong \*aw, e.g. *mota* < \**mawtā* ‘death’. In some cases the \*aw is, in turn, derived from \*ab, e.g. *+jora* < \**gabrā* ‘man’.

#### 5.2.1.5 CuCa

<i>bula</i>	‘stem of growing corn, hair of grass or corn’
<i>buma</i>	‘type of owl’
<i>cuxa</i>	‘pile’
<i>juja</i>	‘stock of vine’
<i>luxa</i>	‘tablet’
<i>muja</i>	‘bull calf’
<i>mula</i>	‘barn’
<i>muxa</i>	‘brain’
<i>sula</i>	‘pile of fertilizer’
<i>yuma</i>	‘day’
<i>zula</i>	‘line, stripe’
<i>+ruxa</i>	‘spirit’

<sup>+</sup>*šula* ‘work, matter’

<sup>+</sup>*tula* ‘revenge’

The /u/ in most words of this pattern is derived from \*o by a general sound shift in the dialect (§ 1.11.6. iii), e.g. *muxa* < \**moxa*. In the case of *yuma* the sound shift applied to an \*o, which had in turn developed from an original diphthong \*aw (\*yawmā).

#### 5.2.1.6 *CayCa*

<sup>+</sup>*ayba* ‘shame’

<sup>+</sup>*ayna* ‘eye’

<sup>+</sup>*ayva* ‘cloud’

The diphthong /ay/ is preserved only in a small set of emphatic words, which have a voiced labial or sonorant as third radical. Elsewhere the diphthong has contracted to /e/, resulting in the pattern *CeCa*. Other diphthongs are only marginally found in loanwords, e.g. <sup>+</sup>*øyma* ‘dress, skirt’.

#### 5.2.1.7 *CuyCa*

*duyša* ‘honey’

*juyba* ‘pit’

*juyda* ‘wall’

*nuyna* ‘fish’

*nuyra* ‘fire’

*suysa* ‘horse’

*tuyma* ‘garlic’

*tuyna* ‘straw’

*tuyra* ‘thin twig’

<sup>+</sup>*ruyša* ‘shoulder’

<sup>+</sup>*tuyra* ‘mountain’

<sup>+</sup>*xuyra* ‘friend’

The diphthong /uy/ has developed from a long \*ū, e.g. *nuyra* < \*nūrā ‘fire’ (§ 1.12.1.). In some cases the long \*ū had in turn developed from an original short \*u after the reduction of a following geminated consonant, e.g. *juyda* < \*gūdā < \*guddā ‘wall’, or the contraction of \*b, e.g. *duša* < \*dubšā ‘honey’.

5.2.1.8      *CCaCa*

<i>ctava</i>	'book'
<i>jnaha</i>	'fault'
<i>kdala</i>	'neck'
<i>šlama</i>	'peace'
<i>xmara</i>	'donkey'
<i>xpaka</i>	'bosom'
<i>+kraya</i>	'turtle'
<i>+šraya</i>	'lamp'

A final radical /y/ in this pattern is sometimes contracted, resulting in the monosyllabic pattern *CCa*, e.g. *+šra* < *+šraya* 'lamp', *+kra* < *+kraya* 'turtle', *jna* < *jnaha* 'crime'.

5.2.1.9      *CCiCa*

<i>criva</i>	'ploughed field'
<i>jdila</i>	'ice'
<i>jdiša</i>	'pile of leaves'
<i>jniva</i>	'eyebrow'
<i>jriva</i>	'calico'
<i>priza</i>	'field of stubble'
<i>scina</i>	'knife'
<i>škipa</i>	'canyon'
<i>šlixa</i>	'apostle, missionary'
<i>xmira</i>	'leaven, yeast'
<i>+ktira</i>	'hollow of hand'
<i>+sliva</i>	'cross'
<i>+spira</i>	'omelette'

5.2.1.10      *CCoCa*

<i>+tloxa</i>	'lentil'
---------------	----------

5.2.1.11      *CCuCa*

Most nouns of this pattern are associated with verbs and have meanings relating to that of the corresponding verb:

- cyula* ‘measuring, measurement’  
*kyuda* ‘burn’  
*rjuda* ‘trembling’  
*zyura* ‘swelling’  
<sup>+</sup>*xyuṭa* ‘sewing, stitch’

In some cases no corresponding verb is used in the dialect:

- jlula* ‘circle’  
<sup>+</sup>*tlula* ‘dew’

#### 5.2.1.12 *CCuyCa*

- btuyla* ‘bachelor’  
*stuyna* ‘wooden post’  
 $\check{s}$ *xuyna* ‘heat’  
*xzuyra* ‘pig’  
<sup>+</sup>*p̄čuyra* ‘ankle bone’  
<sup>+</sup>*xluyla* ‘wedding’

#### 5.2.1.13 *CaCCa*

- calba* ‘dog’  
*carma* ‘vineyard’  
*darba* ‘wound’  
*jarma* ‘bone’  
 $\check{k}$ *alma* ‘louse’  
 $\check{k}$ *amxa* ‘flour’  
*talja* ‘snow’  
<sup>+</sup>*katva* ‘knitting-needle’  
<sup>+</sup>*tarpa* ‘leaf’  
<sup>+</sup>*xabra* ‘word’  
<sup>+</sup>*xalva* ‘milk’  
<sup>+</sup>*xamra* ‘wine’

Some words of Aramaic stock have acquired this pattern by the secondary gemination of the second radical, e.g.

- <sup>+</sup>*arra* ‘ground’  
<sup>+</sup>*karra* ‘pumpkin’

<sup>+</sup> <i>marra</i>	'illness'
<sup>+</sup> <i>samma</i>	'wax'
<sup>+</sup> <i>tarra</i>	'door'
<sup>+</sup> <i>zarra</i>	'offspring'

Such words originally had a pharyngal as their third radical. After the elision of this the second radical was geminated to prevent the initial short vowel from occurring in an open syllable, e.g. *\*arā* > *\*ar'a* > *\*+ära* > *+arra*.

Gemination of the second radical is found elsewhere in loanwords, e.g.

<i>samma</i>	'poison' (Pers. < Arab.)
<sup>+</sup> <i>banna</i>	'builder' (Pers. < Arab.)

#### 5.2.1.14 CəCCa

<i>'ərba</i>	'sheep'
<i>dədva</i>	'fly'
<i>dəpna</i>	'side'
<i>jəlda</i>	'skin'
<i>jərva</i>	'leprosy'
<i>jəšra</i>	'bridge'
<i>məlxə</i>	'salt'
<i>pətva</i>	'width'
<i>šəbla</i>	'head of corn'
<i>šəmša</i>	'sun'
<i>xətna</i>	'groom'
<sup>+</sup> <i>cətra</i>	'knot'
<sup>+</sup> <i>kətma</i>	'ash'
<sup>+</sup> <i>muṭra</i>	'rain'
<sup>+</sup> <i>nədra</i>	'dedication'
<sup>+</sup> <i>šəxra</i>	'soot'

Several words with this pattern express nominals derived from pattern 1 verbs, e.g.

<i>bərza</i>	'dry land'	< <i>barəz</i> 'to dry'
<i>cəpna</i>	'hunger'	< <i>capən</i> 'to be hungry'
<i>cərxa</i>	'scroll'	< <i>carəx</i> 'to wind up'
<i>jəxca</i>	'laughing'	< <i>jaxəc</i> 'to laugh'
<i>nəzla</i>	'puss'	< <i>nazəl</i> 'to suppurate'

<i>pərsa</i>	'slaughter'	< <i>parəs</i> 'to slaughter'
<i>pətla</i>	'bend'	< <i>patəl</i> 'to bend, to twist'
<i>rəkda</i>	'dance'	< <i>rakəd</i> 'to dance'
<i>səkla</i>	'ornament'	< <i>sakəl</i> 'to decorate'
<i>sənda</i>	'support'	< <i>sanəd</i> 'to support'
<i>səpsa</i>	'decay'	< <i>sapəs</i> 'to decay'
<i>təpna</i>	'mould'	< <i>tapən</i> 'to become mouldy'
<i>təxra</i>	'memory'	< <i>taxər</i> 'to remember'
<i>xəmkə</i>	'stink'	< <i>xamək</i> 'to stink'
<i>xətra</i>	'pride'	< <i>xatər</i> 'to become proud'
<i>+kəmča</i>	'pinching'	< <i>+kaməč</i> I 'to pinch'
<i>+kərtə</i>	'bite'	< <i>+karət</i> 'to bite'
<i>+kətla</i>	'killing'	< <i>+kaṭəl</i> 'to kill'
<i>+pərṭa</i>	'tear'	< <i>+parəṭ</i> 'to tear'
<i>+xəkra</i>	'honour'	< <i>+xaķər</i> 'to honour'
<i>+xəmsa</i>	'acid'	< <i>+xaməs</i> 'to turn sour'
<i>+xərṭa</i>	'notch'	< <i>+xaraṭ</i> 'to make an incision'
<i>+zəlla</i>	'crack'	< <i>+zallə</i> 'to crack'
<i>+zərča</i>	'scratch'	< <i>+zarəč</i> 'to scratch'

The pattern contains forms with a geminated medial radical:

<i>dəbba</i>	'bear'
<i>dəmma</i>	'blood'
<i>jəlla</i>	'grass, plant'
<i>kənna</i>	'nest'
<i>ləbba</i>	'heart'
<i>ŷəkka</i>	'frog'
<i>šəmma</i>	'name'
<i>tənna</i>	'smoke'
<i>xəmma</i>	'heat'
<i>+bəzza</i>	'hole'
<i>+kəṭṭa</i>	'piece'
<i>+sup̪pa</i>	'finger'

In some cases the gemination is inherited from earlier Aramaic, e.g. *ləbba* 'heart', in other cases it has arisen secondarily, e.g. \**dəmā* > \**dəmma* 'blood', *+kəṭṭa* < \**qəṭṭā* 'piece' (§ 1.13.2.3.2.).

5.2.1.15 *CuCCa*

<i>'urxa</i>	'road'
<i>duyla</i>	'lie'
<i>jumla</i>	'camel'
<i>kunya</i>	'well'
<i>šumra</i>	'cobweb'
<i>tuþra</i>	'tail'
<i>+bukra</i>	'cattle'
<i>+busra</i>	'meat'
<i>+þupra</i>	'beauty'
<i>+xulma</i>	'dream'
<i>+yukra</i>	'weight, load'
<i>+yurxa</i>	'length'

This pattern contains forms with a geminated middle radical, e.g.

<i>pumma</i>	'mouth'
<i>xubba</i>	'love'
<i>xuvva</i>	'snake'
<i>+pulla</i>	'radish'
<i>+tuvva</i>	'gemstone'

In some cases the gemination has arisen secondarily after the elision of a radical, e.g. *+pulla* < \**pulga*, *+tuvva* < \**tub'a* 'gemstone', *xuvva* < \**xuvya* 'snake'.

5.2.1.16 *CoCCa*

This pattern is found only in loanwords:

<i>mohra</i>	'block of dried mud'
<i>+dolma</i>	'stuffed vine/cabbage leaves'
<i>+dorma</i>	'stepson'
<i>+sorba</i>	'soup'

5.2.1.17 *CCVCCa*

<i>prəzla</i>	'iron'
---------------	--------

### 5.2.2 Trisyllabic Patterns with Three Consonants

#### 5.2.2.1 CaCaCa

Words of Aramaic stock that have this pattern are mainly reflexes of the original \**CaCCāCā* pattern with gemination of the medial radical, which is used to designate people according to their profession or habitual activity, being, for the most part, derivatives of verbal roots. In some forms that had this historical pattern, the \**a* in the initial syllable has shifted to /i/ (see the pattern *CiCaCa* below).

<i>canaša</i>	'sweeper'
<i>catava</i>	'writer'
<i>dajala</i>	'liar'
<i>palaxa</i>	'worker'
<i>rakada</i>	'dancer'
<i>šamaša</i>	'deacon'
<i>taxana</i>	'miller'
<i>zamara</i>	'singer'
<i>žadaya</i>	'teaser of wool'
<i>+ravaya</i>	'drunkard'
<i>+saxaya</i>	'swimmer'
<i>+sayada</i>	'hunter'
<i>+xayaṭa</i>	'tailor'
<i>+xazada</i>	'harvester'
<i>+zakara</i>	'weaver'
<i>+zaraya</i>	'cultivator'

In some isolated instances the pattern is used as the name of an animal or instrument to designate their characteristic activity or application, e.g.

<i>dabaša</i>	'bee (honey-maker)'
<i>caraxa</i>	'rake for coal (raker around < <i>carəx</i> 'to surround')'
<i>sarada</i>	'sieve (siever < <i>sarəd</i> 'to sieve')'

The pattern is found in a few other words of Aramaic stock that do not derive from a verb, e.g.

<i>’alahā</i>	'God'
<i>kadala</i>	'pot'
<i>malaxa</i>	angel
<i>šamaya</i>	'palate, gums'

The pattern is also found in a number of loanwords, e.g.

<i>calama</i>	'cabbage'
<i>jadaja</i>	'male buffalo calf'
<i>kalama</i>	'pen'
<i>malapa</i>	'bed-sheet'
<i>maraca</i>	'hullabaloo'
<i>masala</i>	'story'
<i>tabačka</i>	'floor, storey'
<i>taǵala</i>	'spleen'
<i>varačka</i>	'paper'
+ <i>abara</i>	'raised water channel'
+ <i>daǵala</i>	'knave, cheat'
+ <i>daraja</i>	'degree; step'
+ <i>mamača</i>	'midwife'
+ <i>pavara</i>	'current, stream (of water)'
+ <i>šamama</i>	'small wild melon'
+ <i>tamaša</i>	'spectacle'

#### 5.2.2.2 *CaCiCa*

<i>'aliza</i>	'mud brick (Canda)'
<i>bašila</i>	'cantaloupe melon'
<i>calija</i>	'young buffalo'
<i>harisa</i>	'boiled crushed wheat'
<i>hasira</i>	'mat'
<i>jarima</i>	'fine, penalty'
<i>nadida</i>	'great-great-grandson'
<i>natija</i>	'great-grandson'
<i>naxira</i>	'nose'
<i>šarica</i>	'partner'
<i>sarida</i>	'sieve'
<i>tanina</i>	'dragon'
<i>xanika</i>	'rope tied under neck of oxen'
<i>xaziza</i>	'canary'
+ <i>baṭila</i>	'idle man'
+ <i>hasida</i>	'sweet cake filling'
+ <i>paṭira</i>	'round bread'
+ <i>varida</i>	'artery'
+ <i>xasina</i>	'axe'
+ <i>zarira</i>	'ray of light'

5.2.2.3 *CaCuCa*

Some words with this pattern are derived from verbal roots and designate the agent or instrument associated with the activity of the verb:

- jarupa* ‘spade for digging paddy fields’
- paruša* ‘bookmark’
- +*kaṭula* ‘murder’
- +*paluša* ‘fighter’
- +*raxuṭa* ‘racer’
- +*xatūra* ‘wooden beater (of washing)’

Some words that designate instruments have no corresponding verb in the current synchronic state of the dialect:

- naḱuša* ‘wooden bell’
- jaruma* ‘axle’
- +*karusa* ‘rake’

The pattern is found also in a number of other words:

- č*apula* ‘slap’
- š*akula* ‘ankle’
- yaluda* ‘young boy’
- +*alula* ‘street’
- +*ravula* ‘valley, gorge’

Words with this pattern of Aramaic stock had an original medial \*ō, e.g. +*katūla* < \*qāṭōlā ‘murderer’.

5.2.2.4 *CaCuyCa*

- tanuyra* ‘oven’
- xabuyša* ‘apple’
- yatuyma* ‘orphan’
- +*raxuyma* ‘lover’
- +*yamuyṣa* ‘young branch of vine’

5.2.2.5 *CiCaCa*

<i>'ilana</i>	'tree'
<i>lisana</i>	'tongue'
<i>ziyana</i>	'harm'
<i>+ijara</i>	'rent'
<i>+ijaza</i>	'permission'
<i>+ikara</i>	'honour'
<i>+jilasa</i>	'sweet cherry'
<i>+jizara</i>	'carrot'
<i>+zivana</i>	'weed'

Some nouns of this pattern of Aramaic stock are derived historically from the pattern *\*CaCCāCā* and exhibit the vowel shift *a > i* in the first syllable (§ 1.11.1. iv):

<i>jinava</i>	'thief'
<i>jivaya</i>	'beggar'
<i>ricava</i>	'rider'

5.2.2.6 *CuCaCa*

Many words with this pattern of Aramaic stock are deverbal nouns expressing an abstract or concrete referent. In some case the verbal root in question is not used as a finite verb in the dialect:

<i>bušala</i>	'stew'
<i>busama</i>	'pleasure'
<i>dubara</i>	'behaviour'
<i>huſaya</i>	'spelling'
<i>mušaxa</i>	'extent, size'
<i>nuxama</i>	'resurrection'
<i>pušaka</i>	'translation'
<i>šulama</i>	'termination'
<i>xušava</i>	'thought'
<i>+ujaba</i>	'amazement'
<i>+bukara</i>	'question'
<i>+buraxa</i>	'blessing'
<i>+duraša</i>	'argument'
<i>+pxalā</i>	'pardon'
<i>+subara</i>	'the Annunciation'

- <sup>+</sup>šuhara ‘pride’  
<sup>+</sup>suraya ‘beginning’

The pattern is found also in nouns of other categories, some of them loanwords, e.g.

- čučaya ‘blossoming flower’  
curaxa ‘shroud’  
dulaba ‘spool for winding wool’  
juvara ‘line (of vegetables, vines, bushes etc.)’  
<sup>+</sup>ušana ‘palm tree’  
<sup>+</sup>budala ‘simpleton’  
<sup>+</sup>curasa ‘quire of paper’  
<sup>+</sup>hurara ‘band of priest’s vestment’  
<sup>+</sup>murapa ‘lawsuit’  
<sup>+</sup>xulama ‘servant’

The /u/ in words of Aramaic stock with this pattern is sometimes realized as the diphthong /uy/, e.g. *cuyraxa* ‘shroud’. This is a feature of slow speech when the pretonic vowel is pronounced longer than normal (§ 1.12.1.).

#### 5.2.2.7 Other Vocalic Patterns

Other vocalic patterns, many in loanwords, are occasionally attested in the syllabic structure *CVCVCa*, e.g.

- pučeča ‘stalk of maize’ (Canda)  
kopala ‘walking-stick’  
došeca ‘mattress’  
hosala ‘patience’  
totava ‘refugee’  
coxaya ‘headman of village’  
moriša ‘morning’  
bebuna ‘camomile’

#### 5.2.3 Trisyllabic Patterns with Four Consonants

A number of nouns with three syllables, many of them loanwords, contain four consonants. These mostly have the pattern *CVCCVCa* or *CVCVCCa*:

5.2.3.1 *CaCCaCa*

Some nouns in this category are nouns preserving the historical gemination of the middle radical, e.g.

- dayyana* ‘judge’  
*zannaya* ‘fornicator, libertine’  
<sup>+</sup>*accara* ‘farmer’  
<sup>+</sup>*tabbara* ‘hero’  
<sup>+</sup>*xattaya* ‘sinner’

The majority of other nouns, without a geminated medial consonant, are loanwords:

- čambara* ‘ring of harvested corn’  
*janjapa* ‘playing card’  
*manyana* ‘vice, wooden press’  
*panjara* ‘window’  
<sup>+</sup>*barrana* ‘ram’  
<sup>+</sup>*čalxama* ‘agitation, hubbub; whirlwind, storm’  
<sup>+</sup>*darmana* ‘medicine’  
<sup>+</sup>*darvaza* ‘gate (of a city or courtyard)’  
<sup>+</sup>*masxara* ‘buffoon, joker’  
<sup>+</sup>*šahzada* ‘prince’  
<sup>+</sup>*tapmaja* ‘riddle’  
<sup>+</sup>*tarvada* ‘ladle’

5.2.3.2 *CaCCiCa*

- ’armila* ‘widower’  
*šabbiba* ‘pipe (woodwind instrument)’  
*talmida* ‘pupil, student, apostle’

Some forms in this category are nouns preserving the historical gemination of the middle radical, e.g.

- kaddiša* ‘saint’

5.2.3.3      *CaCCuyCa*

- bambuyla* ‘spout’  
*sanduyka* ‘box’  
*+čaryuyša* ‘square, quadrangle’

5.2.3.4      *CəCCaCa*

- 'ərbala* ‘sieve’  
*bərvana* ‘apron’  
*cəssaya* ‘lid’  
*dəccana* ‘shop’  
*ɟəddala* ‘thread’  
*kəkvana* ‘partridge’  
*səcvana* ‘ant’  
*+kərtala* ‘pannier basket’  
*+pərtana* ‘flea’  
*+rəzzaya* ‘will, free will’  
*+sənnara* ‘jaw, jawbone’

The form *ɟəddala* has arisen by the phonologization of an epenthetic breaking the initial consonantal cluster (§ 1.13.2.3.2.) and its alternatives with the bisyllabic pattern *ɟdala*.

5.2.3.5      *CəCCiCa*

- ɟəddiša* ‘pile of leaves’

This form has arisen by the phonologization of an epenthetic breaking the initial consonantal cluster (§ 1.13.2.3.2.) and its alternatives with the bisyllabic pattern *ɟdiša*.

5.2.3.6      *CəCCuCa*

- mərtuxa* ‘filling of cakes’  
*šəppula* ‘end of skirt or robe’  
*tərtuba* ‘stitch, tack’  
*xəžbuna* ‘calculation’  
*+nəpruza* ‘beak’

5.2.3.7 *CuCCaCa*

In words of Aramaic stock this pattern is used to form abstract nouns associated with quadrilateral verbal roots, some of them no longer in use in the dialect. It is equivalent to the pattern *CuCaCa*, which has a similar function:

- surjada* ‘calendar’  
*xuzdaja* ‘damage, harm’  
*+junjara* ‘anguish, torture’

The pattern is also used in other nouns, many of them loanwords

- duccana* ‘shop’  
*+bustana* ‘kitchen garden’  
*+sursara* ‘frost’  
*+tumbana* ‘trousers’

5.2.3.8 *CVCCVCa* with other Vocalism

A variety of other vocalisms of this pattern are attested:

- pərdesa* ‘paradise’  
*šucluca* ‘plain stitch’  
*šupnina* ‘turtledove’  
*+juljola* ‘bobbin’  
*+kunṭepa* ‘large bunch of grapes’  
*+sursina* ‘thistle’

5.2.3.9 *CaCaCCa*

- lavanda* ‘long sleeve’  
*mahalla* ‘quarter (of town)’  
*tašalla* ‘marble (ball)’

5.2.3.10 *CaCəCCa*

- marəjla* ‘metal pan’  
*+aķərvə* ‘scorpion’

5.2.3.11 *CaCuCCa*

- 'akubra* ‘mouse’  
*+camutra* ‘pear; pear tree’  
*+cavutra* ‘midday; lunch’

5.2.3.12 *CuCaCCa*

- mucabba* ‘cube’  
*mutacca* ‘long pillow’  
*šušanna* ‘lily’  
*+murabba* ‘jam’

5.2.3.13 *CuCəCCa*

- 'urədxa* ‘large metal needle’  
*čuratma* ‘trap, snare (for birds)’

5.2.4 *Patterns with Five Consonants*

- sparažla* ‘quince’  
*šambalila* ‘fenugreek’  
*balbaluka* ‘black cherry’  
*čərčərra* ‘device for scaring away birds’  
*pərpərra* ‘propeller’  
*məšməšša* ‘apricot; apricot tree’  
*+pəspəssa* ‘hissing’  
*+kurməčča* ‘wrinkle’

The trisyllabic pattern *CəCCəCCa* is found in nouns associated with quadriliteral verbs, e.g. *pərpərra* ‘spinning top’ (<*parpər* QI ‘to turn’), *čərčərra* ‘device for making sound to scare away birds’ (<*čarčər* QI ‘to scream’), *+pəspəssa* ‘hissing’ (<*+paspəs* QI ‘to hiss’). This is related to the triliteral pattern *CəCCa* (§ 5.2.1.14.), which is used for deverbal nouns. The quadriliteral root has evidently been imposed on the triliteral pattern *CəCCa* resulting in *CəCCəCCa* and an epenthetic /ə/ inserted after the third consonant, which in turn induces gemination, resulting in *CəCCəCCa*.

### 5.2.5 *Words with Final Geminated /y/ and /v/*

Some words ending in -CCa have a final /y/ or /v/, which has been geminated by the regular sound shift of /*īyV*/ > /*iyyV*/ and /*ūvV*/ > /*uvvV*/ (§ 1.13.2.3.3.), e.g.

<i>barriyya</i>	'desert'
<i>cusiyya</i>	'hat'
<i>neriyya</i>	'male sheep'
<i>pušiyya</i>	'woman's headscarf'
<i>rpupiyya</i>	'rash'
<i>sənjiyya</i>	'silver willow tree'
<i>toriyya</i>	'loofah (for washing)'
<sup>+</sup> <i>jarbiyya</i>	'north'
<sup>+</sup> <i>katīyya</i>	'shoot (of tree)'
<i>baduvva</i>	'poker'
<i>čarčuvva</i>	'frame'
<i>čarpuvva</i>	'dried shoot with leaves (used as fuel)'
<i>parduvva</i>	'lath (laid on timbers in roof)'
<i>zardačuvva</i>	'turmeric'
<sup>+</sup> <i>baṭuvva</i>	'flake of baked bread on floor of oven'
<sup>+</sup> <i>karuvva</i>	'cock' (literally 'caller')
<sup>+</sup> <i>ramuvva</i>	'funnel, syringe'
<sup>+</sup> <i>xaluvva</i>	'maternal uncle'

### 5.3 Nouns with the Feminine Ending *-ta*

#### 5.3.1 *Bisyllabic Patterns*

##### 5.3.1.1 *Cata*

<i>mata</i>	'village'
<i>nata</i>	'ear'
<i>pata</i>	'face'
<i>xata</i>	'sister'
<sup>+</sup> <i>mata</i>	'a single grape; spot (on skin)'
<sup>+</sup> <i>tata</i>	'crest of bird'
<sup>+</sup> <i>zata</i>	'young animal (f.)'

5.3.1.2      *Ceta*

*+meta* ‘churn’

5.3.1.3      *Cita*

*bita* ‘egg’

*šita* ‘year’

*+’ita* ‘church’

Words with the palatal /c/ before the ending *-ta* sometimes have the *Cita* pattern through the process of an optional weakening of the /c/ (§ 1.9.1.5.), e.g.

*sita* ‘ploughshare’ (~ *səcta*)

*zita* ‘bud, pod’ (~ *zəcta*)

5.3.1.4      *Cota*

*sota* ‘old woman’

*xota* ‘molar tooth’

5.3.1.5      *CaCta*

*banta* ‘sleeve’

*calta* ‘daughter-in-law’

*carta* ‘load (on back)’

*darta* ‘courtyard’

*ſanta* ‘garden’

*karta* ‘cold’

*laxta* ‘palm (of the hand)’

*marta* ‘mistress’

*parta* ‘sawdust, chaff’

*šabta* ‘week’

*salta* ‘small basket’

*xalta* maternal aunt

*xamta* ‘young woman’

*xasta* ‘lettuce’

*yamta* ‘lake’

*+’amta* ‘paternal aunt’

*+’arta* ‘rival wife’

- <sup>+</sup>*ṭamta* ‘breakfast’  
<sup>+</sup>*ṭapta* ‘cutting (from plant)’

This is the pattern of verbal nouns from various types of weak root:

- rakta* ‘running’  
*xašta* ‘going’  
<sup>+</sup>*xalta* ‘eating’

#### 5.3.1.6 *CāCta*

This pattern with a long /a/ vowel is found in nouns with a contracted middle radical (§1.14):

- <sup>+</sup>*ānta* ‘air-hole in oven’ (cf. <sup>+</sup>*ayna* ‘eye’)  
<sup>+</sup>*sārta* ‘curse’ (< \**ṣa‘arta*)  
<sup>+</sup>*ṭālta* ‘game’ (< \**ṭa‘alta*)

#### 5.3.1.7 *CəCta*

- əpta* ‘leather strap attaching yoke to plough’  
*cəcta* ‘tooth of a key or a comb’  
*cəsta* ‘bag’  
*jəpta* ‘vine’  
*kəšta* ‘bow’  
*məlta* ‘string of a bow’  
*səcta* ‘ploughshare, stake’  
*šənta* ‘sleep’  
*səpta* ‘lip’  
*təcta* ‘belt (sewn with threads)’  
*xəlta* ‘sheath, scabbard’  
*zəcta* ‘bud, pod’  
<sup>+</sup>*lənta* ‘small earthenware pot’  
<sup>+</sup>*sənta* ‘smell of burning food’  
<sup>+</sup>*ṭəzta* ‘small anus’

#### 5.3.1.8 *CuCta*

- curta* ‘pile of cakes of dung (<sup>+</sup>*paṭuxə*)’  
*čuxta* ‘basement; storeroom’  
*ducta* ‘place’

<i>jupta</i>	'cheese'
<i>kupta</i>	'large owl'
<i>nunta</i>	'fly of trousers'
<i>purta</i>	'droppings of sheep'
<i>sulta</i>	'manure heap'
<i>šurta</i>	'navel'
<i>susta</i>	'mare'
<i>xurta</i>	'white poplar'
<i>zulta</i>	'long stick'
<i>+rumta</i>	'hill'
<i>+rušta</i>	'shoulder blade, shovel'
<i>+surta</i>	'shape, image'
<i>+tunta</i>	'produce, fruit'

5.3.1.9     *CCata*

<i>brata</i>	'daughter'
<i>xmata</i>	'mother-in-law'

5.3.1.10    *CCeta*

<i>cseta</i>	'cover'
<i>cteta</i>	'hen'
<i>mreta</i>	'moth'

This is the pattern of verbal nouns from final /y/ roots, e.g.

<i>jneta</i>	'setting (of sun)'
<i>šteta</i>	'drink'
<i>xzeta</i>	'seeing'

5.3.1.11    *CCita*

<i>mdita</i>	'town'
<i>pšita</i>	'fart'
<i>švita</i>	'bed, mattress'
<i>+xčita</i>	'sin'

5.3.1.12     *CCuta*

- +sluta* ‘prayer’  
*+zruta* ‘cultivation, tillage’

5.3.1.13     *CCuyta*

- ctuyta* ‘handwriting’  
*+zduyta* ‘fear’

5.3.1.14     *CCaCta*

- nvalta* ‘tuberculosis’  
*spasta* ‘clover’  
*šavta* ‘neighbour (f.)’  
*xmarta* ‘she-ass’  
*+mralta* ‘gall’  
*+xlamta* ‘marshmallow’

This is the pattern of verbal nouns of strong pattern I verbs, e.g.

- ptaxta* ‘opening’  
*fjarta* ‘marrying, marriage’  
*prakta* ‘ending, end’  
*kvalta* ‘complaining, complaint’  
*zmarta* ‘singing, song’

5.3.1.15     *CCəCta*

- ctəvta* ‘writing’  
*lvəšta* ‘clothing’  
*nxəpta* ‘shame’  
*prəsta* ‘mat (made of threads)’  
*ptəlta* ‘wick’  
*scənta* ‘small knife’  
*šləpta* ‘blade’  
*xzəmta* ‘nose-ring’  
*+tləbta* ‘fiancée’  
*+xdərta* ‘top of shirt front’

5.3.1.16 *CCuCta*

<i>btulta</i>	'virgin'
<i>cnušta</i>	'synagogue'
<i>ctulta</i>	'hedgehog'
<i>ɬulta</i>	'circle'
<i>skupta</i>	'lintel, doorstep'
<i>šluxta</i>	'slough of a snake'
<i>šxumta</i>	'altar stone of church'
<i>šxunta</i>	'heat'
<i>šxurta</i>	'blackbird'
<i>t̪kulta</i>	'weight'
<i>xzurta</i>	'sow (female pig)'

5.3.2 *Trisyllabic Patterns with Strong Consonants*5.3.2.1 *CaCaCta*

This pattern is used as the feminine equivalent of the pattern *CaCaCa* to designate people or creatures according to their profession or habitual activity, e.g.

<i>dajalta</i>	'liar (f.)'
<i>palaxta</i>	'worker (f.)'
<i>paraxta</i>	'flying creature'
<i>zamarta</i>	'singer (f.)'

The pattern is used also in a number of other words:

<i>šamacta</i>	'palate'
<i>yavarta</i>	'young female buffalo'
<i>+jazarta</i>	'island'
<i>+šavalta</i>	'glue'

It is the pattern of verbal nouns of pattern II strong verbs, e.g.

<i>basamta</i>	'cure'
<i>+paxalta</i>	'forgiving, pardon'

5.3.2.2 *CaCəCta*

<i>caləbta</i>	'bitch'
<i>davəlta</i>	'wealth'
<i>lačəcta</i>	'head kerchief'
<i>majəsta</i>	'small sickle'
<i>maləcta</i>	'queen'
<i>nadətta</i>	'great-great-granddaughter'
<i>natəjta</i>	'great-granddaughter'
<i>navəjta</i>	'granddaughter'
<i>šarəxta</i>	'heifer'
<i>taləmta</i>	'small jug'
<i>taləsta</i>	'small sack'
<i>tavərta</i>	'cow'
<sup>+</sup> <i>karəlta</i>	'storage pot (Canda)'
<sup>+</sup> <i>najəxta</i>	'chopper, small axe'
<sup>+</sup> <i>savəlta</i>	'shoe'
<sup>+</sup> <i>yaləxta</i>	'handkerchief; napkin'

5.3.2.3 *CaCuCta*

A number of nouns with this pattern designate instruments. For some of these, but not all, there is a corresponding verb in the dialect.

<i>baxušta</i>	'ladle'
<i>canušta</i>	'broom'
<i>casuxta</i>	'trimming tool'
<i>jadušta</i>	'milking pale'
<i>jarusta</i>	'hand-mill'
<i>xašulta</i>	'mortar'
<sup>+</sup> <i>maxusta</i>	'instrument for extracting coals'

It is found also in several other nouns:

<i>caculta</i>	'forelock, scalp'
<i>čaculta</i>	'handful (in one hand)'
<i>čapulta</i>	'paw'
<i>dalupta</i>	'drop (from a leaking roof)'
<i>jabušta</i>	'type of grape used for raisins'
<i>jamusta</i>	'upset stomach, diarrhoea'
<i>parušta</i>	'parting (of hair)'

<i>paruxta</i>	'eczema on skin'
<i>pačučta</i>	'small flat bread, pita'
<i>xabušta</i>	'apple tree'
<sup>+</sup> <i>mazuzta</i>	'lizard'
<sup>+</sup> <i>parušta</i>	'small flat stone'
<sup>+</sup> <i>pasulta</i>	'step, pace'
<sup>+</sup> <i>paťuxta</i>	'animal dung'
<sup>+</sup> <i>ravulta</i>	'valley, gorge'
<sup>+</sup> <i>xavurta</i>	'girlfriend'

5.3.2.4 *CiCaCta*

<i>bilacta</i>	'wrist'
<i>'idamta</i>	'wife of the brother of husband'
<i>'isakta</i>	'ring'
<i>lišanta</i>	'reed (of musical instrument), uvula'
<i>nisarta</i>	'saw (with single handle)'
<sup>+</sup> <i>jilasta</i>	'sweet cherry'

5.3.2.5 *CuCaCta*

<sup>+</sup> <i>buxaxta</i>	'fat under chin'
<sup>+</sup> <i>kusarta</i>	'cooking pot'

5.3.2.6 *CoCaCta*

<i>'ojaxta</i>	'fireplace, hearth'
<i>cocarta</i>	'thin black clouds'
<i>kopasta</i>	'cover; cap (on teeth)'
<i>kořalta</i>	'short walking-stick'
<sup>+</sup> <i>popaxta</i>	'hat, head of seeds'

5.3.2.7 *CeCaCta*

<i>hemanta</i>	'trust'
<sup>+</sup> <i>sebarta</i>	'companionship'

5.3.2.8 *CaCCaCta*

This is the pattern of the verbal noun of pattern III and QI verbs. In some cases these are used to refer to tangible entities:

<i>çançašta</i>	'swing (for children)'
<i>hamzamta</i>	'speech'
<i>mašxatta</i>	'preaching; church collection'
<i>partalta</i>	'whirlpool'
<i>tantasta</i>	'drizzle'
<i>varvarta</i>	'watery excrement'
<i>xamxamta</i>	'fever'
<i>+ajiazta</i>	'vexation, annoyance'

The pattern is used in several other nouns, some of them loanwords:

<i>jallaxta</i>	'bark of a tree, skin of snake'
<i>tappacta</i>	'head of seeds'
<i>+bannayta</i>	'building work'
<i>+čarpanta</i>	'tool used to whack or swat'
<i>+rabbanta</i>	'nun'
<i>+šahzatta</i>	'princess'

#### 5.3.2.9 *CaCCəCta*

<i>’armalta</i>	'widow'
<i>jamməšta</i>	'she-buffalo'
<i>jardəlta</i>	'pot for storing wine'
<i>kannošta</i>	'earring'
<i>marjəlta</i>	'small metal saucepan'
<i>sarjəšta</i>	'story, anecdote'

#### 5.3.2.10 *CaCCuCta*

<i>darušta</i>	'cradle'
<i>zanjulta</i>	'stirrup'
<i>+’armunta</i>	'pomegranate'

#### 5.3.2.11 *CuCCuCta*

Nouns of this pattern have a geminated medial consonant:

<i>šulluxta</i>	'slough of a snake'
<i>julluxta</i>	'slough of a snake'
<i>šuxxurta</i>	'blackbird'
<i>čulluxta</i>	'cabin, hovel'

- jummurta* ‘burning coals’  
*kubbuxta* ‘group’  
*+tup̪purta* ‘fingernail, toenail’

In some cases the /u/ in the first syllable before the geminated consonant is elided and the word is pronounced with the pattern *CCuCta*, e.g. *šulluxta* ~ *šluxta*, *šuxxurta* ~ *šxurta*.

#### 5.3.2.12 *CuCCəCta*

- puppæcta* ‘wet rash’  
*šupnənta* ‘turtledove’  
*+kursəlta* ‘elbow’

#### 5.3.2.13 *CəCCaCta*

- dəlčacta* ‘uvula; tongue of a pipe or flute’  
*səmmalta* ‘ladder’  
*+kərt̪alta* ‘small pannier bag’

#### 5.3.2.14 *CəCCəCta*

Some nouns of this pattern have a geminated medial consonant:

- məttəlta* ‘story’  
*šəššalta* ‘chain’  
*šəxxərta* ‘kneecap’

In some cases the /ə/ of the first syllable before the geminated consonant is elided and the word is pronounced with the pattern *CCəCta*, e.g. *mattəlta* ~ *mtəlta*. This pattern is found also in nouns with a sequence of two different consonants in medial position:

- kərkəpta* ‘skull’  
*zənjərta* ‘small bunch of grapes’

#### 5.3.2.15 *CəCCuCta*

- cəndurta* ‘small musk melon’  
*pəssurta* ‘stomach, gizzard’  
*šəppulta* ‘lower hem of a dress’

- təžbuxta* ‘glorification’  
*+čəkcurta* ‘hole’

### 5.3.3 *Trisyllabic Patterns with Weak Final Consonants*

#### 5.3.3.1 *CaCita, CeCita, CuCita*

- šakita* ‘stream’  
*lačita* ‘headscarf’  
*+ašita* ‘avalanche’  
*+karita* ‘beam’  
*'elita* ‘fat of sheep’s tail’  
*cusita* ‘hat’

#### 5.3.3.2 *CaCeta, CiCeta*

These are used as the feminine equivalents of the patterns *CaCaya* and *CiCaya* to designate people according to their profession or habitual activity, e.g.

- fiveta* ‘beggar (f.)’  
*+raveta* ‘drunkard (f.)’  
*+saxəta* ‘swimmer (f.)’

The pattern *CaCeta* forms verbal nouns of pattern II verbs with a weak final radical, e.g.

- taneta* ‘speaking; word, expression’  
*+dareta* ‘winnowing’  
*+saleta* ‘praying’

The pattern *CaCeta* is also used in several nouns referring to tangible entities:

- 'apeta* ‘thick cloth for wrapping food (for picnic)’  
*gabeta* ‘hem of clothes’  
*maseta* ‘beam of scales’  
*taleta* ‘hanging bread basket’  
*+abeta* ‘(rough woolen) cloak’  
*+areta* ‘patch’  
*+daveta* ‘froth on melted butter’  
*+maleta* ‘layer of mud put on beams’  
*+nareta* ‘edible herb’

5.3.3.3 *CaCuta*

- <sup>+</sup>*baluta* ‘throat’  
<sup>+</sup>*šaruta* ‘snack in the afternoon’

5.3.3.4 *CaCota, CiCota*

These patterns are used as the feminine equivalent of the patterns *CaCava*, *CiCava* to designate people according to their profession or habitual activity, e.g.

- catota* ‘writer (f.)’  
*jinota* ‘thief (f.)’

5.3.3.5 *CaCCeta*

This is the pattern of verbal nouns of pattern III and QI verbs with a final /y/ radical. In some cases they refer to tangible entities, e.g.

- marreta* ‘rennet, yoghurt culture’  
*mašneta* ‘tranquillizer’  
*šaršeta* ‘becoming tired’  
<sup>+</sup>*aldetा* ‘trick’  
<sup>+</sup>*masleta* ‘slope (literally: causing to descend)’  
<sup>+</sup>*parmeta* ‘understanding’  
<sup>+</sup>*saxseta* ‘examination; interrogation’

It is occasionally found in other types of nouns, e.g.

- catleta* ‘meat cutlet’

5.3.3.6 *CaCCita*

- <sup>+</sup>*marrita* ‘pasture’  
<sup>+</sup>*taš'ita* ‘history’

5.3.3.7 *CəCCita*

- cəllita* ‘kidney’  
<sup>?</sup>*əšcita* ‘testicle’  
*fəssita* ‘vomiting, vomit’  
*sənjita* ‘fruit of the silver willow’

5.3.3.8     *CəCCeta*

*cəsseta* ‘small lid’

5.3.3.9     *CuCCita*

*cullita* ‘small pot for jajik’

5.3.4     *Patterns with Five Consonants*

<sup>†</sup>*jənnanarta* ‘sour cherry’

*canyalušta* ‘swing (on a tree)’

5.4     *Nouns with the Feminine Ending -ita*

In some cases, when a masculine form of a word exists, the corresponding feminine form is constructed by adding the ending *-ita*, with a supplementary */i/*. This forestalls any consequential resyllabification. It is used when the base of the form is monosyllabic and ends in a geminate consonant or consonantal cluster, e.g.

<i>'aryita</i>	‘lioness’	cf. <i>'arya</i> ‘lioness’
<i>'arbita</i>	‘female sheep’	cf. <i>'arba</i> ‘sheep’
<i>'ašcita</i>	‘testicle’	cf. <i>'ašcatə</i> ‘testicles’
<i>čacmita</i>	‘a boot, sideburn’	cf. <i>čacma</i> ‘boot’
<i>dəbbita</i>	‘female bear’	cf. <i>dəbba</i> ‘bear’
<i>jəppita</i>	‘small cave’	cf. <i>jəppa</i> ‘cave’
<i>jərvita</i>	‘sock’	cf. <i>jərvə</i> ‘socks’
<i>lappita</i>	‘split pea’	cf. <i>lappa</i> ‘split peas’
<i>maccita</i>	‘seed of maize’	cf. <i>macca</i> ‘maize’
<i>xəzmita</i>	‘female relative’	cf. <i>xəzma</i> ‘relative’
<sup>+</sup> <i>anvita</i>	‘grape’	cf. <sup>+</sup> <i>anvə</i> ‘grapes’
<sup>+</sup> <i>əzzita</i>	‘nanny-goat’	cf. <sup>+</sup> <i>əzza</i> ‘goat’
<sup>+</sup> <i>məstita</i>	‘hair’	cf. <sup>+</sup> <i>məsta</i> ‘hair’
<sup>+</sup> <i>nəmrīta</i>	‘tiger (f.)’	cf. <sup>+</sup> <i>nəmra</i> ‘tiger’
<sup>+</sup> <i>rəzzita</i>	‘grain of rice’	cf. <sup>+</sup> <i>rəzza</i> ‘rice’
<sup>+</sup> <i>suþþita</i>	‘little finger’	cf. <sup>+</sup> <i>suþþa</i> ‘finger’
<sup>+</sup> <i>urþita</i>	‘fart’	cf. <sup>+</sup> <i>arəþ</i> I ‘to fart’
<sup>+</sup> <i>xəttita</i>	‘grain of wheat’	cf. <sup>+</sup> <i>xəttə</i> ‘wheat’

It is also used with some monosyllabic bases that do not end in a consonant cluster, e.g.

<i>divita</i>	'she-wolf'	cf. <i>diva</i> 'wolf'
<i>tinita</i>	'small fig tree'	cf. <i>tina</i> 'fig, fig tree'
<i>xoxita</i>	'peach'	cf. <i>xoxa</i> 'peach'
<i>+buťita</i>	'small penis'	cf. <i>+buťa</i> 'penis'
<i>+kuťita</i>	'small vulva'	cf. <i>+kuťa</i> 'vulva'
<i>+sarita</i>	'grain of barley'	cf. <i>+sarə</i> 'barley'
<i>+šadita</i>	'almond'	cf. <i>+šada</i> 'almond'
<i>+talita</i>	'female fox'	cf. <i>+tala</i> 'fox'

It is added to some loanwords, e.g.

<i>čannita</i>	'chin' (Pers. čana)
<i>cardita</i>	'garden plot' (Pers. kard)
<i>kunjita</i>	'corner' (Azer. künc, Pers. konj)
<i>karjita</i>	'female crow' (Azeri qarğɑ)

It is found in a few words that have no corresponding masculine form, e.g.

<i>kurnita</i>	'corner'
<i>parxanita</i>	'butterfly'
<i>spadita</i>	'cushion'
<i>snunita</i>	'swallow'

This ending *-ita* has been transferred by analogy from nouns with historical roots containing final /y/, e.g. *švita* 'bed', *šakita* 'irrigation channel'.

## 5.5 Function of the Feminine Marker Suffixes *-ta* and *-ita*

When a corresponding masculine form of a word exists, the addition of a feminine marker suffix serves various functions.

### 5.5.1 *Marking Female Gender*

In the case of animate referents, it may designate the female counterpart of the masculine form, e.g.

<i>calba</i> 'dog'	<i>caləbta</i> 'bitch'
<i>tora</i> 'ox'	<i>tavərta</i> 'cow'
<i>šarxa</i> 'calf'	<i>šarəxta</i> 'heifer'
<i>+tala</i> 'fox'	<i>+talita</i> 'female fox'
<i>dəbba</i> 'bear'	<i>dəbbita</i> 'female bear'
<i>diva</i> 'wolf'	<i>divita</i> 'female wolf'
<i>barəxmaya</i> 'brother of wife'	<i>barəxmeta</i> 'sister of wife'
<i>navəʃja</i> 'grandson'	<i>navəʃta</i> 'granddaughter'
<i>xurja</i> 'step-son'	<i>xurəʃta</i> 'step-daughter'
<i>'amila</i> 'widower'	<i>'arməlta</i> 'widow'

In the case of some kinship terms, the relationship can be more complex as in:

*'ədma* 'brother of husband'    *'idamta* 'wife of brother of husband'

This distinction based on biological gender has been extended by analogy to the inanimate objects *xašula* 'pestle' and *xašulta* 'mortar'.

### 5.5.2 *Expressing Singularity*

The feminine ending may be used to express a single item of an entity that is usually referred to as a collectivity in the plural, e.g.

<i>baklušə</i> 'pebbles'	<i>baklušta</i> 'pebble'
<i>biyyə</i> 'eggs'	<i>bita</i> 'egg'
<i>čacma</i> 'boots'	<i>čacmita</i> 'boot'
<i>čančuyra</i> 'wild plums'	<i>čančurta</i> 'wild plum' (Canda)
<i>čaruyxə</i> 'boots'	<i>čaruxta</i> 'boot'
<i>cəšmišə</i> 'raisins'	<i>cəšməšta</i> 'raisin'
<i>jaxucə</i> 'dimples'	<i>jaxucta</i> 'dimple'
<i>jarjarə</i> 'large apricots'	<i>jarjarta</i> 'large apricot' (Canda)
<i>jørdeya</i> 'loaves'	<i>jørdetə</i> 'loaf'
<i>lappə</i> 'split peas'	<i>lappita</i> 'split pea'
<i>maccə</i> 'maize'	<i>maccita</i> 'seed of maize'
<i>þərtuxə</i> 'crumbs'	<i>þərtuxta</i> 'crumb'
<i>šəptiyə</i> 'watermelons'	<i>šəptita</i> 'watermelon'
<i>šərʃəmma</i> 'turnips'	<i>šərʃəmta</i> 'turnip'

<i>tambuyrə</i> 'large plums'	<i>tamburta</i> 'large plum' (Canda)
<i>xassə</i> 'lettuces'	<i>xasta</i> 'lettuce'
<i>xəmrə</i> 'beads'	<i>xəmmərtə</i> 'bead'
<sup>+</sup> <i>alujə</i>	<sup>+</sup> <i>aluyta</i> 'plum'
<sup>+</sup> <i>jənnanarə</i> 'sour cherries'	<sup>+</sup> <i>jənnanarta</i> 'sour cherry'
<sup>+</sup> <i>jərvə</i> 'socks'	<sup>+</sup> <i>jərvita</i> 'a sock'
<sup>+</sup> <i>jilasə</i> 'cherries'	<sup>+</sup> <i>jilasta</i> 'cherry'
<sup>+</sup> <i>kər̥topə</i> 'potatoes'	<sup>+</sup> <i>kər̥opta</i> 'potato'
<sup>+</sup> <i>lavašə</i> 'thin breads'	<sup>+</sup> <i>lavašta</i> 'a thin bread'
<sup>+</sup> <i>mašə</i> 'beans'	<sup>+</sup> <i>mašita</i> 'a bean'
<sup>+</sup> <i>pallacanə</i> 'stairs'	<sup>+</sup> <i>pallacanta</i> 'stair'
<sup>+</sup> <i>paṭuxə</i> 'dried animal dung'	<sup>+</sup> <i>paṭuxta</i> 'a piece of dried dung'
<sup>+</sup> <i>purṭkalə</i> 'oranges'	<sup>+</sup> <i>purṭkalta</i> 'orange'
<sup>+</sup> <i>šadə</i> 'almonds'	<sup>+</sup> <i>šadita</i> 'almond'
<sup>+</sup> <i>sarə</i> 'barley'	<sup>+</sup> <i>sarita</i> 'grain of barley'
<sup>+</sup> <i>solə</i> 'shoes'	<sup>+</sup> <i>savəlta</i> 'a shoe'
<sup>+</sup> <i>xəṛtmana</i> 'chickpeas'	<sup>+</sup> <i>xəṛtmanta</i> 'a chickpea'
<sup>+</sup> <i>xəṛtə</i> 'wheat'	<sup>+</sup> <i>xettita</i> 'grain of wheat'

In some cases a masculine singular is available in addition to the feminine singular formed from the plural, e.g.

*xuvvavə* 'snakes'    *xuvva*, *xuvvavita* 'snake'

Some nouns that have the singular in *-ta* have plurals in *-ə* and plurals in *-yatə* or *-atə*, e.g.

<sup>+</sup>*tuḍpurə*, <sup>+</sup>*tuḍpuryatə*, <sup>+</sup>*tuḍratə* 'fingernails'    <sup>+</sup>*tuḍpurta* 'fingernail'

Both alternative singular and plurals are available for some nouns, e.g.

<sup>+</sup> <i>šadə</i> , <sup>+</sup> <i>šadiyyatə</i> 'almonds'	<sup>+</sup> <i>šada</i> , <sup>+</sup> <i>šadita</i> 'almond'
<sup>+</sup> <i>paṭuxə</i> , <sup>+</sup> <i>paṭuxyatə</i> 'dung cakes'	<sup>+</sup> <i>paṭuxa</i> , <sup>+</sup> <i>paṭuxta</i> 'dung cake'

The collective may have a singular form, e.g.

<i>pəsta</i> 'pistachios'	<i>pəstita</i> 'a pistachio'
<sup>+</sup> <i>məsta</i> 'hair'	<sup>+</sup> <i>məstita</i> 'a single hair'
<sup>+</sup> <i>rəzza</i> 'rice'	<sup>+</sup> <i>rəzzita</i> 'a grain of rice'

### 5.5.3 Expressing a Diminutive

The addition of the feminine ending sometimes denotes the diminutive of the corresponding masculine form, e.g.

<i>cəssaya</i> 'lid'	<i>cəsseta</i> 'small lid'
<i>halka</i> 'ring'	<i>halakta</i> 'small ring'
<i>ʃəppa</i> 'cave'	<i>ʃəppita</i> 'small cave'
<i>kadala</i> 'open-necked pot'	<i>kadalta</i> 'small open-necked pot'
<i>kuča</i> 'pot'	<i>kučta</i> 'small pot'
<i>lišana</i> 'tongue'	<i>lišanta</i> 'uvular'
<i>lxepa</i> 'quilt'	<i>lxəpta</i> 'small quilt'
<i>marəfla</i> 'metal pan'	<i>marjəlta</i> 'small metal pan'
<i>matla</i> 'epic'	<i>məttəlta</i> 'story'
<i>pəndəkka</i> 'hazelnut'	<i>pəndəkta</i> 'small hazelnut'
<i>sala</i> 'basket'	<i>salta</i> 'small basket'
<i>talma</i> 'water jar'	<i>taləmta</i> 'small water jar'
<i>tina</i> 'fig, fig tree'	<i>tinita</i> 'small fig tree'
<i>tuþra</i> 'tail'	<i>tuþurta</i> 'small tail'
<i>xandaþ</i> 'ditch'	<i>xandaþta</i> 'small ditch'
<i>yama</i> 'sea'	<i>yamta</i> 'lake'
+ <i>alula</i> 'street'	+ <i>alulta</i> 'lane'
+ <i>karaluc</i> 'black plum'	+ <i>karalucta</i> 'small black plum'
+ <i>karusa</i> 'rake'	+ <i>karusta</i> 'small rake'
+ <i>kərþala</i> 'pannier bag'	+ <i>kərþalta</i> 'small pannier bag'
+ <i>koþala</i> 'walking-stick'	+ <i>koþalta</i> 'short walking-stick'
+ <i>lina</i> 'earthenware pot'	+ <i>lənta</i> 'small earthenware pot'
+ <i>maxusa</i> 'poker'	+ <i>maxusta</i> 'small poker'
+ <i>parša</i> 'flat stone'	+ <i>parušta</i> 'small flat stone'
+ <i>ruyša</i> 'shoulder'	+ <i>rušta</i> 'shoulder blade'
+ <i>šada</i> 'almond'	+ <i>šadita</i> 'small almond'
+ <i>suþþa</i> 'finger'	+ <i>suþþita</i> 'little finger'

In some cases where a masculine and feminine form of a noun exist, the referent of the feminine form is a figurative or virtual form of the entity denoted by the masculine noun. The feminine form is not necessarily physically smaller than that of the corresponding masculine form, but is nevertheless a derivative, secondary form. This applies to the following pairs of forms:

+ <i>ayna</i> 'eye'	+ <i>ānta</i> 'hole at the bottom of an oven for the intake of air'
<i>cica</i> 'tooth'	<i>cəcta</i> 'tooth of key'

<i>+ruyša</i> 'shoulder'	<i>+rušta</i> 'shovel with a head resembling a shoulder-blade'
<i>čacma</i> 'boot'	<i>čacmita</i> 'sideburn, side whiskers'
<i>zula</i> 'line, strip'	<i>zulta</i> 'long stick for shaking nuts from trees'
<i>lišana</i> 'tongue'	<i>lišanta</i> 'reed (of musical instrument)'

## 5.6 Nouns Ending in -ə

A few singular nouns of Aramaic stock end in -ə. They are either masculine or feminine in gender:

<i>'ərxə</i> f.	'watermill'
<i>'urə</i> f.	'manger'
<i>+berašə</i> m.	'evening'
<i>bí-nisanə</i>	'spring (season)'
<i>jarə</i> m.	'roof' (Canda: <i>jara</i> )
<i>lelə</i> m./f.	'night'
<i>musardə</i> m.	'seventh Sunday in Whitsuntide'
<i>suysə</i> m.	'horse' (~ <i>susa</i> )
<i>cavə</i> f.	'small window; upper room'
<i>čiriyyə</i> m.	'Autumn'
<i>xuvvə</i> m.	'snake' (~ <i>xuvva</i> )

In some case the -ə originates historically in a final \*-ya, which has become contracted (\*-ya > \*-ē > -ə), e.g. *'ərxə* (cf. Syr. *rahyā*), *'urə* (cf. Syr. *'uryā*), *lelə* (cf. Syr. *lelyā*), *susə* (cf. Syr. *sūsyā*), *xuvvə* (cf. Syr. *hewyā*). In other case the ending derives from an original plural form, e.g. *jarə* (cf. Syr. *'eggārē* 'roofs', sing. *'eggārā*), *cavə* (cf. Syr. *kawwē*, sing. *kawtā*), *+berašə* < \*bet-ramšə, *čiriyyə* < \*tešrī (cf. C. Barwar *čeri*), *bí-nisanə* < \*bet-nisanə. These are now interpreted as singular and have acquired new plural ending, viz. *jaravatə* 'roofs', *cavatə* 'windows', *+berašvanə* 'evenings', *čiriyyavatə* 'autumns'.

The ending -ə is also found in some loanwords of feminine gender:

<i>çəççə</i> f.	'girl in her teens, lass' (Kurd. keç)
<i>captə</i> f.	'meat-ball' (Azer. küftə)
<i>dunya</i> f.	'world' (Kurd. <i>dinya</i> , Azer. <i>dünya</i> < Arab.)
<i>nanna</i> f.	'cradle' (Azer. nənni)
<i>ninə</i> f.	'hen-roost' (Azer. nin)
<i>janna</i> f./m.	'patchwork blanket' (Arab. <i>junna</i> ?)
<i>+čalə</i> f.	'hole' (Kurd. <i>çal</i> , Azer. <i>çala</i> / Pers. čāle)

- <sup>+</sup>čaplə f. 'left side' (Kurd čep, Pers. čap)  
<sup>+</sup>rastə f. 'right side' (Kurd. rast, Pers. rāst)

Some of these words are of Kurdish origin and the -ə can perhaps be identified with the Kurdish feminine singular oblique nominal inflection -ē. It has been extended to some other words of feminine gender that do not come from Kurdish, as can be seen in the list above. The ending has also been transferred to the NENA word *kappa* f. 'brooding hen'; cf. Syr. *quppāpā*, C. Barwar *quuppe*. Some other NENA dialects inflect this word with the -u ending (§ 5.7.); cf. C. Qaraqosh: *qipu*.

Note that the word *çəççə* 'lass' adds the augment -nt before suffixes, e.g. *çəççəntu* 'his lass', *çəççənyata* 'lasses'. This can be compared to the -nt augment inserted before suffixes after the feminine ending -u (§ 5.7.).

In some words the -ə can be identified with the Azeri 3s. pronominal suffix of genitive compounds, e.g. <sup>+</sup>elajəsə m. 'master of ceremonies' < Azer. el-ağa-sı 'public its master' (i.e. 'master of the public'), *jejakušə* f. 'bat' < Azer. gecə-quş-u 'night-its bird' (i.e. 'bird of the night'). Note the lack of roundedness harmony in *jejakušə*.

### 5.7 Nouns Ending in -u

A few words of Aramaic stock end in -u. This appears to originate historically from the diminutive ending \*-ūn in the absolute state. All are feminine in gender:

<i>bulču</i>	'mashed material' (e.g. potato)
<i>calu</i>	'bride'
<i>jəbbu</i>	'froth'
<i>kətpu</i>	'pigweed (herb)'
<i>majju</i>	'balloon; swelling on skin'
<i>mandi</i> - <sup>+</sup> <i>təztu</i>	'bird that throws its behind upwards'
<i>meju</i>	'tray for kneading dried yoghurt'
<i>pərpərru</i>	'butterfly'
<i>šalku</i>	'chickenpox'
<i>xəblu</i>	'ivy'
<i>xərpu</i>	'hiccup'
<sup>+</sup> <i>ʃəndəmmu</i>	'type of red grape'
<sup>+</sup> <i>katu</i>	'cat'
<sup>+</sup> <i>xalsa</i> - <sup>+</sup> <i>xalsu</i>	'crush, crowd'

<sup>+</sup> <i>xmatu</i>	'type of bitter herb'
<sup>+</sup> <i>zallu</i>	'leech'

The ending is occasionally pronounced as a diphthong *-uy*, e.g. *kaṭuy*, which was heard in Canda.

The forms <sup>+</sup>*xalsa*-<sup>+</sup>*xalsu* and *mandi*-<sup>+</sup>*təztu* are compounds (§ 5.15.). The latter consisting of *mandi* 'thrower' and <sup>+</sup>*təzta* 'small anus', which does not have the *-u* outside of this compound.

The ending *-u* is replaced by the fuller ending *-unt-* before pronominal suffixes and the plural suffix, e.g.

<i>calunti</i>	'my bride'	<i>calunyatə</i>	'brides'
<sup>+</sup> <i>kaṭunti</i>	'my cat'	<sup>+</sup> <i>kaṭunyatə</i>	'cats'

This is extended by analogy to some loanwords ending in *-u*, e.g.

<i>čakku</i> (Pers. čāqū)	'knife'	<i>čakkunti</i>	'my knife'
<sup>+</sup> <i>zallu</i> (Pers. zālū)	'leech'	<sup>+</sup> <i>zallunyatə</i>	'leeches'

Although the ending originated as a diminutive, it is now not interpreted as a diminutive. This is shown by the fact that diminutives of some of the words ending in *-u* can be formed by adding the diminutive derivational ending *-unta* (§ 5.9.9.).

A few other nouns have an ending *-u* and *-uy* that is likely to be of a different origin, e.g.

<i>b-tapku</i>	'by chance' (absolute form of abstract <sup>?</sup> <i>-ūtā?</i> )
<i>kukku</i>	'cuckoo' (onomatopoeia)
<i>pu̯pu̯</i>	'hoopoe' (onomatopoeia)
<i>yalzu</i>	'hastily' (absolute form of abstract <sup>?</sup> <i>-ūtā?</i> )
<sup>+</sup> <i>xalu</i>	'maternal uncle' (vocative of <sup>+</sup> <i>xaluvva</i> )
<sup>+</sup> <i>yalsuy</i>	'distress'

## 5.8 Nouns of Aramaic Stock with No Inflectional Ending

Nouns in this category do not have a singular inflectional ending that is replaced by a plural ending or pronominal suffix. They include:

- məndi* ‘thing’  
*dəbbur* ‘gadfly, hornet’ (variant of *dəbburta*)

We should also include here *+rabi* ‘teacher’ and *+rabban* ‘monk’. The *-i* and *-an* were originally 1st person pronominal suffixes ('my teacher', 'our master'), but are now treated as part of the base of the noun, as shown by the fact that the words take plural endings (*+rabiyyə* 'teachers', *+rabbanə* 'monks') and also a feminine ending (*+rabita* 'female teacher', *+rabbanta* 'nun').

Proper nouns such as the names of people and the names the months (§ 7.6.) have no inflectional endings, e.g.

- Sarjis* m.  
*Šlimun* m.  
*Nargis* f.  
*+Šammíran* f.  
*+əšvaṭ* m. ‘February’  
*nisan* m. ‘April’  
*+ṭabbax* m. ‘August’

## 5.9 Derivational Affixes of Aramaic Background

### 5.9.1 m-, ma-

Derivational prefixes beginning with *m-* can be identified in some words, e.g.

<i>manšukta</i>	‘kiss’	cf. <i>našək</i> I ‘to kiss’
<i>maseta</i>	‘balance, scales’	cf. Syr. <i>massa'</i> <i>tā</i> < <i>n-s-y</i>
<i>məlxava</i>	‘winnowing fork’	
<i>məxxalta</i>	‘sieve for flour’	cf. <i>+naxəl</i> I ‘to sieve’
<i>momita</i>	‘oath’	cf. <i>yamə</i> I ‘to swear’
<i>mušruṭta</i>	‘whistle’	cf. <i>mašrək</i> III ‘to whistle’
<i>+mabbuwa</i>	‘fountain, source’	cf. <i>+navvə</i> I ‘to spring up’
<i>+majreta</i>	‘razor’	cf. <i>+jarrə</i> I ‘to shave’
<i>+mamla</i>	‘trade; deal’	cf. <i>+mamməl</i> III ‘to trade’
<i>+marduta</i>	‘culture’	cf. <i>+mardən</i> QI ‘to be cultured’
<i>+masarta</i>	‘wine-press, vat’	
<i>+mašaṣṭa</i>	‘children’s swing’	cf. <i>+maššəš</i> III ‘to swing’
<i>+maxusna</i>	‘groin’	
<i>+mazmura</i>	‘psalm’	cf. <i>zamər</i> I ‘to sing’
<i>+mazraya</i>	‘cultivated land’	cf. <i>+zarrə</i> I ‘to cultivate’

<i>+maxla</i>	'fodder'	
<i>+mixulta</i>	'food'	cf. <i>+axəl</i> I 'to eat'

This derivational prefix is not productive but only a historical relic. The nouns are not derived directly from verbal roots that are currently used in the dialect but only historically associated with them (§ 4.1.). This is shown by the fact that some nouns exhibit phonological differences from the current form of the verbal roots. In some cases, for example, there is a difference in setting between the noun and the associated verbal root, e.g. *maxxəltə* vs. *+naxəl* I, *+mazmura* vs. *zamər* I. Some nouns have different consonants, e.g. *+mabbuvva* vs. *+navvə* I. For several of the nouns there is no associated verbal root existing in the dialect. Some of the verbs listed above are likely to be denominal. This may apply to *mašrək* and certainly to *+mardən*.

In the word *+xmaṭa* 'needle' the *m-* has metathesized with the following /x/ (\**mxata* (cf. *+xayət* 'to sew')).

### 5.9.2 t-

This prefix, like *m-/ma-*, is not productive but only a historical relic that is found in a few nouns, e.g.

<i>tašvita</i>	'mattress'
<i>tašməšta</i>	'funeral'
<i>tažbuxta</i>	'glorification'
<i>todita</i>	'belief, religion'

### 5.9.3 -uta ~ -uyta

This suffix is derived historically from \*-ūtā and nouns with the suffix are feminine in gender. The form *-uyta* with diphthongization of the long /u/ vowel occurs interchangeably with the form *-uta* without diphthongization. It generally expresses an abstraction or an intangible phenomenon. Such nouns are derived productively from an existing noun or adjective form in the lexicon, including loanwords, or are independent lexical items that are not derived directly from an existing word in the lexicon, e.g.

#### (i) Derivative forms

<i>'amkuyta</i>	'depth'	< <i>'amku</i> 'deep'
<i>bad-baxtuyta</i>	'misfortune'	< <i>bad-baxt</i> 'unfortunate'
<i>betuyta</i>	'family'	< <i>beta</i> 'house'
<i>čaturuyta</i>	'difficulty'	< <i>čatun</i> 'difficult'

<i>cupuyta</i>	'lowness'	< <i>cupa</i> 'low'
<i>jiluyta</i>	'youth'	< <i>jil</i> 'young'
<i>jvančkuyta</i>	'youth'	< <i>janvčka</i> 'young man'
<i>malcuyta</i>	'kingdom'	< <i>malca</i> 'king'
<i>pøtyuyta</i>	'width'	< <i>pøtya</i> 'wide'
<i>šidanuyta</i>	'madness'	< <i>šidana</i> 'mad'
<i>smučkuyta</i>	'redness'	< <i>smuka</i> 'red'
<i>vazziruyta</i>	'viziership'	< <i>vazzər</i> 'vizier'
<i>xayuyta</i>	'life'	< <i>xaya</i> 'alive'
<sup>+</sup> <i>furyuta</i>	'bigness, size'	< <sup>+</sup> <i>fura</i> 'big'
<sup>+</sup> <i>ramuyta</i>	'height'	< <sup>+</sup> <i>rama</i> 'high'
<sup>+</sup> <i>xølyuyta</i>	'sweetness'	< <sup>+</sup> <i>xøly</i> 'sweet'

In the following the base is a feminine noun with the ending *-ta*, which is removed before the attachment of the abstract suffix:

*xamuyta* 'womanly physique' < *xamta* 'young woman'

In some sporadic cases the abstract noun is derived from bases from other categories than noun and adjective. In the following the base is a preposition and the particle of isolation respectively:

*darkuluyta* 'opposition' < *darkul* 'against'  
*nošuyta* 'loneliness' < *noš-* particle of isolation

In some cases the base is a word in another language which itself is not used in the NENA dialect, e.g.

*hanajuyta* 'joke' < Azer. hənək  
<sup>+</sup>*raptaruyta* 'behaviour, conduct' < Pers. raftār

Occasionally the suffix is added to a noun that itself expresses an abstract notion, without any or only minimal change in meaning, e.g.

<i>comacuyta</i>	'help'	< <i>comac</i> 'help'
<i>hačkuyta</i>	'pay, reward'	< <i>hač</i> 'salary'
<i>parkuyta</i>	'difference'	< <i>park</i> 'difference'
<i>šøtkuyta</i>	'silence'	< <i>šøtča</i> 'silence'
<i>xøscuyta</i>	'darkness'	< <i>xøšca</i> 'dark'
<sup>+</sup> <i>yurxuyta</i>	'length'	< <sup>+</sup> <i>yurxa</i> 'length'

## (ii) Independent lexicon items

<i>hemanuyta</i>	'belief, faith'	cf. <i>hammən</i> QI 'to believe'
<i>sebuyta</i>	'old age'	cf. <i>sayəv</i> I 'to become old'
<i>xaduyta</i>	'joy'	cf. <i>xadə</i> I 'to rejoice'
<i>xapuyta</i>	'nightmare, raving'	
<i>+ṭalabuyta</i>	'betrothal'	cf. <i>+ṭaləb</i> I 'to ask'
<i>+zduyta</i>	'fear'	cf. <i>+zadə</i> I 'to fear'
<i>+zruyta</i>	'agriculture'	cf. <i>+zarrə</i> I 'to cultivate'

In some forms the syllable /ay/ is inserted before the ending. This can be identified with the -aya gentilic derivational ending (§ 5.9.8.), e.g.

<i>dəžmnayuyta</i>	'enmity'	< <i>dəžmən</i> 'enemy'
<i>kurbayuyta</i>	'proximity'	< <i>kurba</i> 'near'
<i>rəxkayuyta</i>	'distance'	< <i>rəxka</i> 'distant'
<i>rijayuyta</i>	'service'	< <i>rija</i> 'servant'
<i>xərbayuyta</i>	'evil'	< <i>xərba</i> 'bad'
<i>xəzmayuyta</i>	'relationship'	< <i>xəzma</i> 'relation'
<i>+kuṭrayuyta</i>	'humpbackedness'	< <i>+kuṭra</i> 'humpbacked'

In the following the base is the historical form of the negative existential particle:

*leytayuyta* 'absence, need' < \**leyt* + *ay*

The ending -ayuyta/ sometimes contracts to -ayta:

<i>dəžmnayta</i>	'enmity'	< <i>dəžmən</i> 'enemy'
<i>xəzmayta</i>	'relationship'	< <i>xəzma</i> 'relation'
<i>+bannayta</i>	'building work'	< <i>+banna</i> 'builder'

Other syllables are occasionally elided, e.g.

*hammənnuyta* 'faithfulness' < *hammənnana*

In a few cases nouns with this ending refer to physically perceptible entities, e.g.

- šamašuyta ‘sunray’ < šəmša ‘sun’  
 +aryanuyta ‘rainy weather’ < +'aryana ‘rain’

#### 5.9.4 -uya

This is a rare suffix expressing abstraction that is attested sporadically, e.g.

- pərkuyna ‘end’ < parək I ‘to finish’

#### 5.9.5 Nouns Ending in -ya

A few nouns expressing abstract concepts associated with verbs have the pattern *CCuCya* with final -ya, e.g.

- žgušya ‘tumult’ cf. žaǵeš I ‘to be troubled’  
 šxunya ‘heat’ cf. šaxən I ‘to become hot’  
 cnušya ‘meeting’

A variant pattern is *CuCCunya* with suffix -unya:

- bušlunya ‘heat (of weather)’ cf. bašəl I ‘to cook (intr.)’  
 purkunya ‘salvation’ cf. parək II ‘to save’  
 tuxrunya ‘memory’ cf. taxər I ‘to remember’

In the following the second consonant is weak:

- zodunya ‘interest, usury’ cf. zayəd I ‘to increase’

These derivational patterns are not productively formed from verbal roots that are in use in the dialect and are historical relics. The form *cnušya*, in fact, has now no corresponding verbal root.

#### 5.9.6 -ana

This suffix is used productively to form active participles from the present template of verbs (fs. -anta). Many such participles are used as nouns with referents that are typically practitioners of professions, when animate, and instruments, when inanimate:

Animate

- basmana ‘healer’  
 dorana ‘doorman’ (lit. ‘closer’)

<i>ha᷍yana</i>	'storyteller'
<i>payana</i>	'baker'
<i>žadyana</i>	'teaser of wool'
<sup>+</sup> <i>jarrana</i>	'barber'
<sup>+</sup> <i>karyana</i>	'student'
<sup>+</sup> <i>ka᷍lana</i>	'murderer'
<sup>+</sup> <i>ṭalana</i>	'player, actor'
<sup>+</sup> <i>ṭaryana</i>	'driver; goadman'
<sup>+</sup> <i>xe᷍ana</i>	'sewer'
<i>taybərrana</i>	'manager, administrator'
<sup>+</sup> <i>hayyərrana</i>	'helper, assistant'
<sup>+</sup> <i>mamməssanta</i>	'wet nurse'
<i>malpana</i>	'teacher'
<i>ma᷍xəddana</i>	'preacher'
<sup>+</sup> <i>macrəzzana</i>	'preacher'
<sup>+</sup> <i>makriyyana</i>	'teacher'
<sup>+</sup> <i>mamṭiyana</i>	'informer, spy'

## Inanimate

<i>casxana</i>	'pruning scissors (for vine)'
<i>paršana</i>	'bookmark'
<sup>+</sup> <i>sapyana</i>	'strainer'
<sup>+</sup> <i>dam᷍jana</i>	'branding iron'
<sup>+</sup> <i>čalčiyyana</i>	'rod, birch'
<sup>+</sup> <i>tapṭəppana</i>	'implement for compressing ground'
<sup>+</sup> <i>makrəttana</i>	'clippers, snippers'
<sup>+</sup> <i>maxvərrana</i>	'whitening agent (for <i>nipuxta</i> )'

Participles referring to instruments are sometimes feminine, e.g.

<sup>+</sup> <i>čarpanta</i>	'tool used to whack or swat'
<i>patxanta</i>	'opener (of can, bottle etc.)'
<i>xa᷍ranta</i>	'trowel'
<i>ma᷍kəššanta</i>	'cooling system, air conditioning'

In a few cases the verbal root from which the participle is formed has become obsolete in the dialect, e.g.

- +amrana* 'inhabitant'
- +aryana* 'rain' (verbal form now used is *+rayya* 1)
- +dorana* 'rolling pin'
- +rodana* 'earthquake'

The suffix is occasionally found also in other nouns. It occurs in the patterns *CuCCana* and *CəCCana*, which express abstractions associated with verbal roots or tangible entities. In some cases the verbal root is no longer used in the dialect, or it has changed its form:

- kurbana* 'offering (especially the Eucharist)'
- pukdana* 'order, command'
- purkana* 'salvation'
- sunkana* 'need'
- yulpana* 'learning, doctrine; sect'
- +duxrana* 'memorial'
- +xusrana* 'loss'
  
- 'ərvana* 'charity, alms'
- kənyana* 'cattle'
- mənyana* 'number, calculation'
- pəlxana* 'work, labour'
- yəkdirana* 'fuel for burning, firewood'

The pattern *CəCCana* (fs. *CəCCanta*) occurs in some names of animals, e.g.

- kəkvana* 'partridge'
- šəcvana* 'ant'
- +cəxlanta* 'trout'

Some nouns have been formed by attaching *-ana* to another noun, e.g.

- duvana* 'cement, glue' < \**duhna* 'grease'
- rexana* 'wild thyme' < *rexa* 'odour'

The following has been formed by attaching *-ana* to a loaned numeral:

- yaççana* 'only son' < Kurd. *yek*, Pers. *yak* 'one'

Other nouns with *-ana* include:

*xəmyana* ‘father-in-law’

+*drana* ‘arm’

### 5.9.7 -naya (ms.), -neta (f.)

This suffix is a non-productive gentilic ending that is found in a few words that refer to national groups or regions. There is no direct correspondence between the form of the stem of the word and that of the name of the place name:

‘arəmnaya (m.)      ‘arəmneta (f.)      ‘from Armenia’ (*‘Armenəs-+tan*)

*salmasnaya* (m.)    *salmasneta* (f.)    ‘from Salamas’ (*Salamas*)

‘urməžnaya (m.)    ‘urməžneta (f.)    ‘from Urmī’ (*‘Urmī*)

+*urusnaya* (m.)    +*urusneta* (f.)    ‘from Russia’ (*+Rusya*)

Gentilic expressions referring to individual towns or villages, and some countries, are formed productively from compounds consisting of *bne* (< \**m-bne* ‘from the sons of’) and the place name, e.g.

*bne-Törəz-ilə* | ‘He is from Tabriz’

*bne-Törəz-ila* | ‘She is from Tabriz’

*bne-Javilan-ivən* | ‘I am from Gavilan’

*bne-+Mušəvəvax* | ‘We are from +Mušava’

*bne-+Azerbəyjan-ina* | ‘They are from Azerbaijan’

*xa naša bne Zumallan* ‘a man from Zumallan’

### 5.9.8 -aya (m.), -eta (f.)

This is likewise a non-productive gentilic ending that is found in a number of words, which refer to religious or national groups. These include:

*suraya* (m.)      *sureta* (f.)      ‘Assyrian Christian’

*hudaya* (m.)      *hudeta* (f.)      ‘Jew’

+*farsaya* (m.)      +*farseta* (f.)      ‘Persian’

*kurdaya* (m.)      *kurdeta* (f.)      ‘Kurd’

+*mavanaya* (m.)    +*mavaneta* (f.)    ‘from Mavana’

*jurjaya* (m.)      *jurjeta* (f.)      ‘Georgian’

*turcaya* (m.)      *turceta* (f.)      ‘Turkey’

+*iranaya* (m.)      +*iraneta* (f.)      ‘Iranian’

*həndavaya*           *həndaveta* (f.)      ‘Indian’

*činaya*                *čineta* (f.)      ‘Chinese’

### 5.9.9 -una (*m.*), -unta (*f.*)

In origin a diminutive suffix, this is a fixed feature of a number of common nouns expressing family relations:

<i>'axuna</i>	'brother'
<i>bruna</i>	'son'
<i>+mamuna</i>	'paternal uncle'
<i>savuna</i>	'grandfather'
<i>çaçcuna</i>	'father (Arzni Armenia)'

We can include here the following forms that are used to refer to a very small child or baby:

<i>suruna</i> m. ( <i>surunta</i> f.)	< <i>sura</i> 'small'
<i>daykuna</i> m. ( <i>daykunta</i> f.)	< <i>dayka</i> 'fine, small'

The suffix is used as a derivative hypocoristic suffix in a few nouns and nicknames, in most cases expressing endearment or jocularity rather than physical smallness:

<i>yaluna</i>	'boy'	< <i>yala</i>	'boy'
<i>cačaluna</i>	'baldy'	< <i>cačala</i>	'bald'

In many cases these are kinship terms that are typically used vocatively with 1st person suffixes, e.g.

<i>+joruni</i>	'my dear husband' < <i>+jora</i> 'husband'
<i>babuni</i>	'little father' (usually said to a child) < <i>baba</i> 'father'
<i>našuni</i>	'my little man' (said by wife to husband) < <i>naša</i> 'man'

The feminine form of the affix, *-unta*, is found as a fixed feature in:

<i>nanunta</i>	'grandmother'
----------------	---------------

Elsewhere it is used as a derivative hypocoristic suffix expressing endearment or jocularity, typically in vocative expressions with a 1st person suffix:

<i>bratunti</i>	'my little daughter' < <i>brata</i> 'girl'
<i>yəmmunti</i>	'my dear mother' < <i>yəmma</i> 'mother'
<i>baxtunti</i>	'my dear wife' < <i>baxta</i> 'wife'

- našunti* ‘my little woman’ < *naša* ‘person’  
*sotunti* ‘my dear old woman’ < *sota* ‘old woman’

When such diminutive forms of kinship terms are used vocatively without a pronominal suffix, the stem *-un-* and *-unt-* of the masculine and feminine endings respectively is in some cases reduced to *-u*, e.g.

- +*mamu* ‘uncle’ (paternal)  
+*amtu* ‘aunt’ (paternal)  
+*xalu* ‘uncle (maternal)’  
+*xaltu* ‘aunt’ (maternal)

The ending *-una* (fs. *-unta*) is sporadically used outside the category of kinship terms with diminutive force, e.g.

- ctavuna* ‘booklet’ < *ctava* ‘book’  
*matunta* ‘small village’ < *mata* ‘village’  
*xaččunta* ‘very little’ (quantifier) < *xačča* ‘a little’  
*nixunta* ‘very slowly’ (adverbial) < *nixa* ‘slowly’

In the case of feminine nouns that regularly have the ending *-u*, this ending is replaced by *-unt-* before pronominal suffixes (§ 2.3., § 5.7.). In such cases both the *-u* and *-unt-* suffixes are invariable features and do not have diminutive force, e.g.

- calu* ‘bride’ *calunti* ‘my bride’  
+*kačtu* ‘cat’ +*kačtunti* ‘my cat’

Some words that have the ending *-u* can take a functional diminutive ending *-unta*, e.g.

- føbbunta* ‘froth (on top of broth, small in extend)’ < *føbbu* ‘froth’  
*majjunta* ‘small balloon; small swelling on skin’ < *majju* ‘balloon’  
*šalkunta* ‘small rash of pox’ < *šalku* ‘pox’  
+*kačtunta* ‘small cat’ < +*kačtu* ‘cat’

### 5.9.10 -la (m.), -ta (f.)

These endings can be identified in a few words with the function of diminutive derivative suffixes, e.g.

<i>ctulta</i>	'porcupine'	cf. <i>cətva</i> 'prickle'
<i>çurçila</i>	'puppy dog'	< Kurd. ქურ ‘short’
<i>bibälta, bəbbəlta</i>	'pupil (of the eye)'	cf. C. Barwar <i>biba</i>
<i>čapulta</i>	'paw'	cf. <i>čappa</i> 'hand'
<i>zanjuyla, zanjulta</i>	'stirrup'	< Azer. üzəngi

## 5.10 Loaned derivational Suffixes

### 5.10.1 -či

The Azeri professional suffix *-či* is used productively in the dialect and is attached to a number of nouns of Aramaic origin, e.g.

<i>+bučrači</i>	'tender of animals'	< <i>+bučra</i> 'herd of animals'
<i>ərxac̥i</i>	'owner of water-mill'	< <i>ərxə</i> 'water mill'
<i>ərbac̥i</i>	'shepherd'	< <i>ərbə</i> 'sheep'
<i>urxači</i>	'wayfarer'	< <i>urxa</i> 'way'

It occurs in numerous loanwords from Azeri. It has the invariable form *-či* including where it is realized as *-ču* by vowel roundedness harmony in Azeri, e.g.

*+kulluxči* 'servant' < Azer. qulluqcu

This reflects the fact that it is a productive suffix within the C. Urmî dialect, which does not have roundedness harmony.

### 5.10.2 Diminutive Suffixes

A number of nouns have diminutive suffixes that are used productively in the contact languages (Kurdish, Azeri, Persian).

#### 5.10.2.1 -ča

This is found in a number of loanwords:

<i>+tiyanča</i> 'small pan, kettle'	cf. <i>+tiyan</i> 'large cauldron'
<i>+kazanča</i> 'copper saucepan'	cf. Azer. qazan
<i>+dolapča</i> 'cupboard'	cf. Azer. dolab
<i>baxča</i> 'kitchen garden'	cf. Kurd. bexçe, Azer. bağça, Pers. bāğče
<i>jolča</i> 'puddle'	cf. <i>jol</i> 'pool' (Azer. göl)
<i>xaliča</i> 'rug, little carpet'	cf. <i>+xali</i> 'carpet' (Kurd. xalî, Azer. xali, Pers. qâlî)

### 5.10.2.2 *-əcca, -əcta*

In loanwords these appear to have developed by the combination of the NENA inflectional endings *-a* and *-ta* with a diminutive suffix, e.g.

<i>dandəcta</i> 'a single grain'	cf. Kurd. <i>dendik</i>
<i>čannəcta</i> 'chin'	cf. Azer. <i>çənə</i>
<i>+bazəcca</i> 'stamen (of a flower)'	cf. Kurd. <i>bazik</i>

These suffixes are used productively in the C. Urmi dialect, as shown by the following examples, some of which are words of Aramaic stock:

<i>bavəcca, babəcca</i> 'male sparrow'	
<i>jamməcca</i> 'twins'	cf. <i>jammə</i> 'twins'
<i>savəcca</i> 'little old man'	cf. <i>sava</i> 'old man'
<i>zelucca</i> 'splinter'	
<i>ziləcca</i> 'straw, bit of dried herb'	cf. <i>zila</i> 'straw'
<i>+karrəcca</i> 'small melon'	cf. <i>+karra</i> 'marrow'

### 5.10.2.3 Negative *na-*

The Iranian negative prefix *na-* is found in various loanwords. Unlike the NENA negator *la*, the particle *na* is incorporated within the domain of emphasis of the word. For this reason it should be considered an integral part of the word and is not transcribed with a following hyphen, e.g.

<i>najəns</i> 'unclean'	< Pers. nā-jens
<i>namard</i> 'ignoble'	< Pers. nā-mard
<i>nanaʃəb</i> 'ignoble'	< Pers. nā-najīb
<i>nahak</i> 'unjust'	< Pers. nā-haqq
<i>+narahat</i> 'uncomfortable'	< Pers. nā-rāhat
<i>+narazi</i> 'displeased'	< Pers. nā-rāzī

## 5.11 The Morphological Adaptation of Loanwords

Loanwords that end in a consonant in the source language are sometimes adapted to Aramaic morphology by adding a final *-a* or *-ta* inflectional ending. Words with the ending *-ta* are all feminine, whereas those that have final *-a* are either masculine or feminine, e.g.

<i>həlma</i> m.	'steam, breath'	Kurd. hilm.
<i>cačala</i> m.	'bald man'	Azeri keçəl
<i>haccima</i> m.	'wise man'	Pers. (< Arab.) hakkīm
+ <i>p̪uza</i> m.	'snout'	Kurd. poz, Pers. pūz
+ <i>xulama</i> m.	'servant'	Kurd. xulam < Arab.
<i>došeca</i> f.	'mattress'	Kurd. doşeg; Azer. döşək
šəptiyə	'watermelon'	Kurd. şiftî
+ <i>tula</i> f.	'revenge'	Kurd. tol
+ <i>kop̪ala</i> f.	'walking-stick'	Kurd. kopâl
<i>bilacta</i>	'wrist'	Azer. bilək
<i>carta</i>	'load (on back)'	Kurd. kar
<i>jørdetə</i>	'thick bread'	Pers. gerde
<i>jıjarta</i>	'liver, lung'	Pers. jegar
<i>xzəmta</i>	'nose-ring'	Kurd. xizêm < Arab.
+ <i>ojaxta</i>	'fireplace'	Azeri ocaq
+ <i>yaləxta</i>	'headscarf'	Azer. yaylıq

The *-ta* ending of a feminine loanword is occasionally formed by adding *-a* to an existing *-at* ending, which in origin is an Arabic feminine ending, e.g.

*davəlta* 'wealth' Azer. dövlət, Pers. dowlat

When the loanword ends in *-ta* in the source language, this may be interpreted as the Aramaic feminine singular ending, as is shown by the plural of such words, e.g.

<i>taxta</i> f. (pl. <i>taxyatə</i> )	'wooden board' (Azer. taxta)
+ <i>balta</i> f. (pl. <i>balyatə</i> )	'axe' (Azer. balta)
+ <i>janta</i> f. (pl. + <i>janyatə</i> )	'bag' (Azer. çanta)

Note that the plural of the word *taxta* f. 'bed' is *taxtə*, although it is homophonous in the singular with *taxta* f. 'board'. This word has *-t* rather than *-ta* in the source language: Azer. taxt 'bed'.

In the following a glide is inserted after *-e* at the end of the word in the source language before the Aramaic inflectional ending, e.g.

*jørdeya* 'thick round bread' Pers. gerde

In Kurdish loanwords /r/ is regularly geminated when it is a reflex of the Kurdish trilled ū, e.g.

*parra* ‘feather’ Kurd. peř

If the word ends in -a in the source language, this may be reanalysed as the Aramaic inflectional ending, as is shown by the fact that it is replaced by plural morphemes, e.g.

<i>baxča</i> (pl. <i>baxčanə</i> )	‘garden’	Kurd. <i>baxçe</i> m.
<i>čacma</i> (pl. <i>čacmə</i> )	‘boot’	Azeri <i>çəkmə</i>
<i>karja</i> (pl. <i>karjə</i> )	‘crow’	Azeri <i>qarğɑ</i>
<i>+kondara</i> (pl. <i>+kondarə</i> )	‘shoe’	Kurd. <i>qondere</i>

Persian loanwords ending in -e are interpreted as final -a, e.g.

<i>hamla</i>	‘attack’	Pers. <i>hamle</i>
<i>tasma</i> f.	‘belt’	Pers. <i>tasme</i>
<i>zardačuvva</i>	‘turmeric’	Pers. <i>zardčube</i>

A final /t/ in a loanword may be reanalysed as the /t/ of the Aramaic feminine ending, e.g.

*dəšta* f. (pl. *dəšyatə*) ‘plain’ Pers./Kurd. dašt

The majority of loanwords are not morphologically adapted in that they are not given an Aramaic inflectional ending, e.g.

<i>košun</i>	‘army’	Azeri <i>koşun</i>
<i>+sarbaz</i>	‘soldier’	Pers. <i>sarbāz</i>

Many such words, however, are phonologically integrated, in that the stress is placed on the penultimate syllable and they may acquire suprasegmental emphasis (§ 1.5.1.). Loanwords that are neither morphologically nor phonologically integrated are normally Persian words. These are transcribed in roman script and enclosed in the symbols <sup>P</sup>...<sub>P</sub>, e.g.

- (1) <sup>P</sup>*báyyən xa-dána* <sub>P</sub>*sāxtumān*<sup>P</sup> | <sup>P</sup>*ýa ju-*<sup>P</sup>*hàva.* | ‘I want a building that is in the air.’ (A 3:70)

## 5.12 Gender

Nouns of Aramaic stock that end in *-ta* or its variants are feminine and most words that end in *-a* are masculine. Several nouns ending in *-a*, however, are feminine in gender. Some of these can be classified into semantic categories as follows:

### 5.12.1 *Parts of the Body*

<i>'akla</i>	'leg, foot'
<i>bərca</i>	'knee'
<i>cisa</i>	'belly'
<i>coda</i>	'lungs' (used by older generation)
<i>'ida</i>	'hand'
<i>kana</i>	'horn'
<i>šərma</i>	'buttocks'
<i>sladda</i>	'corpse'
<i>xərxərra</i>	'throat'
<sup>+</sup> <i>ayna</i>	'eye'
<sup>+</sup> <i>əṭma</i>	'thigh'
<sup>+</sup> <i>ruxa</i>	'spirit'
<sup>+</sup> <i>suƿƿa</i>	'finger'

Other parts of the body ending in *-a* are masculine, e.g. *bəzza* 'breast', *cica* 'tooth', *riša* 'head', <sup>+</sup>*ruyša* 'shoulder', *labba* 'heart', *naxira* 'nose', <sup>+</sup>*drana* 'upper arm', *təlpa* 'eyelash', <sup>+</sup>*tiza* 'anus', <sup>+</sup>*varida* 'artery, vein', *xut-xača* 'armpit'.

### 5.12.2 *Locations and Names of Countries*

<i>Amərca</i>	'America'
<i>Armanəs-<sup>+</sup>tan</i>	'Armenia'
<i>bara</i>	'ditch, channel'
<i>dəpna</i>	'side'
<i>duca</i>	'place'
<i>Jurjəs-<sup>+</sup>tan</i>	'Georgia'
<i>ķənna</i>	'nest'
<i>mādənxə</i>	'east'
<i>mula</i>	'barn'
<i>šmayya</i>	'sky, heaven'
<i>xakla</i>	'field'

<i>yama</i>	'sea'
<i>+’arra</i>	'land, ground'
<i>+’Azərbayjan</i>	'Azerbaijan'
<i>+budra</i>	'threshing floor'
<i>+’Iran</i>	'Iran'
<i>+máčərva</i>	'west'
<i>+Məsrən</i>	'Egypt'

### 5.12.3 Animals (predominantly small)

<i>’akərva</i>	'scorpion'
<i>buma</i>	'owl'
<i>dəbba</i>	'bear'
<i>kalma</i>	'louse'
<i>kəkvana</i>	'partridge'
<i>kupšina</i>	'quail'
<i>nuyna</i>	'fish'
<i>þəkkə</i>	'frog'
<i>yona</i>	'dove'
<i>+čučana</i>	'magpie'

### 5.12.4 Other Nouns

There is a residue of feminine nouns that cannot be grouped together into clear semantic categories. These include the following:

<i>bašila</i>	'musk melon'
<i>bərkə</i>	'lightning'
<i>bušala</i>	'stew'
<i>cima</i>	'the Pleiades'
<i>cuyra</i>	'kiln'
<i>’ərbala</i>	'sieve for wheat'
<i>ʃərva</i>	'leprosy'
<i>jurza</i>	'club'
<i>juyba</i>	'pit, ditch'
<i>katta</i>	'handle'
<i>məlxə</i>	'salt'
<i>məšna</i>	'whetstone'
<i>mzida</i>	'bag, waterskin'
<i>pərpərra</i>	'propellor, spinning top'
<i>ptana</i>	'plough'

<i>punda</i>	'candle'
<i>rumxa</i>	'spear'
<i>sepa</i>	'sword'
<i>šapna</i>	'instrument for flattening ground, file'
<i>šəmša</i>	'sun (heat of sun, masculine when referring to sun disk)'
<i>tina</i>	'fig'
<i>tuyta</i>	'mulberry'
<i>'urədxa</i>	'large needle'
<i>'urxa</i>	'road, way'
<i>xoxa</i>	'peach'
<i>+ayva</i>	'cloud'
<i>+cavutra</i>	'lunch'
<i>+dana</i>	'time'
<i>+kərtala</i>	'pannier basket'
<i>+muṭra</i>	'rain'
<i>+pulla</i>	'radish'
<i>+šada</i>	'almond'
<i>+šraya</i>	'oil-lamp'
<i>+ṭolla</i>	'shade, shadow'
<i>+ṭima</i>	'value'
<i>+vana</i>	'ewe'
<i>+xa-+ramša</i>	'dinner'
<i>+xmaṭa</i>	'needle'

A number of these feminine words are masculine in earlier Aramaic, e.g. Syriac *nūnā* m., *qūp̄šinā* m., *qaqbānā* m., *aybā* m., *arbālā* m., *'urdəkā* m., *garbā* m., *qarṭālā* m., *metrā* m., *puğlā* m., *tūtā* m., *ṭellālā* m., *mhaṭṭā* m. The feminine gender of some of the words in C. Urmi may have been influenced by the feminine gender of words of corresponding meaning in Kurmanji Kurdish, e.g. *masî* f. 'fish', *baran* f. 'rain', *ṭivir* f. 'radish', *ṭū* f. 'mulberry', *sî* f. 'shade', *derzî* f. 'needle'.

#### 5.12.5 *Gender of Loanwords*

When loanwords enter the dialect they are assigned a gender. When such words are found in Kurmanji Kurdish, which has a gender distinction in nouns, they predominantly, though not always, have the same gender as they do in Kurdish, e.g.

<i>parra</i> m.	'feather' (Kurd. m.)
<i>rany</i> m.	'colour' (Kurd. m.)

<i>čacuč</i> m.	'hammer' (Kurd. m.)
<i>camanča</i> f.	'violin' (Kurd. f.)
<i>carpəč</i> f.	'brick' (Kurd. f.)
<i>cuytan</i> f.	'plough' (Kurd. f.)
<i>dars</i> f.	'lesson' (Kurd. f.)
<i>huš</i> f.	'feeling, senses' (Kurd. m.)
<i>julla</i> f.	'bullet' (Kurd. f.)
<i>kalyun</i> f.	'pipe' (Kurd. f.)
<i>kappas</i> f.	'cage' (Kurd. f.)
<i>lavanda</i> m.	'long sleeve' (Kurd. lewendî m.)
<i>luləffa</i> f.	'pot put under cradle' (Kurd. lûle f. 'pipe')
<i>pašcaš</i> f.	'gift' (Kurd. f.)
+ <i>ambar</i> f.	'storeroom' (Kurd. f.)
+ <i>čaydan</i> f.	'teapot' (Kurd. f.)
+ <i>divan</i> f.	'court, reception room' (Kurd. f.)
+ <i>halav</i> f.	'flame' (Kurd. f.)
+ <i>xali</i> f.	'carpet' (Kurd. f.)
<i>čacma</i> f.	'boot' (Kurd. m.)
<i>čamča</i> m.	'ladle, spoon' (Kurd. f.)
<i>čanjal</i> m.	'fork' (Kurd. f.)
<i>davri</i> m.	'plate' (Kurd. f.)
<i>həlma</i> m.	'breath' (Kurd. f.)
<i>janj</i> m.	'rust' (Kurd. f.)
+ <i>badya</i> f.	'water pot' (Kurd. m.)
+ <i>čay</i> m.	'tea' (Kurd. f.)

Loanwords from Russian in principle are masculine when the word has the masculine or neuter gender in Russian, e.g.

<i>vadra</i> m.	'bucket' (Russian ведро n.)
+ <i>adyal</i> m.	'blanket' (Russian одеяло n.)
+ <i>paltun</i> m.	'overcoat' (Russian пальто n.)

Words ending in *-a* in Russian, which are feminine gender in Russian, are either feminine or masculine in the NENA dialect, e.g.

<i>čočka</i> f.	'paintbrush' (Russian щётка f.)
<i>laþatka</i> f.	'small spade' (Russian лопатка f.)
<i>kuruška</i> m.	'mug' (Russian кружка f.)
<i>truba</i> (Canda, Georgia) m.	'pipe' (Russian труба f.)

When the source is a language that does not have gender distinctions, such as Azeri, Turkish, Persian or Armenian, inanimate nouns are assigned either masculine or feminine gender. Feminine gender seems to be the default while masculine gender tends to be assigned to nouns of particular categories.

Words of the same meaning in Kurdish usually also have feminine gender, e.g.

<i>cərša</i> f.	'sledge' (Azer. kirşə; cf. Kurd. taxoğ f.)
<i>comur</i> f.	'coal' (Azer. kömür; cf. Kurd. komir f.)
<i>darza</i> f.	'sheaf of corn' (Azer. dərz; cf. Kurd. melû f.)
<i>hasira</i> f.	'mat' (Azer. həsir < Arab.)
<i>jardun</i> f.	'harvest cart' (Pers. gardüne)
<i>kaləb</i> f.	'mould (frame)' (Azer. qəlib < Arab.; contrast Kurd. qalib m.)
<i>koşun</i> f.	'army' (Azer. koşun, cf. Kurd. artêş f., ordî f. 'army')
<i>madan</i> f.	'mine, quarry' (Azer. mədən < Arab.; cf. Kurd. ḫan f.)
<i>manjana</i> f.	'vice, wooden press' (Azer. məngənə; cf. Kurd. cendere f.)
<i>marmar</i> f.	'marble' (Azer. mərmər; contrast Kurd. memer m.)
<i>mazrak</i> f.	'stick with cushion for sticking dough to oven' (< Pers. mazrāq 'javelin' < Arab. mizrāq)
<i>napas</i> f.	'breath' (Pers. < Arab.; cf. Kurd. bêhn f. 'breath')
<i>sapar</i> f.	'time, instance' (Pers. safar < Arab.; cf. Kurd. gav f. 'time')
<i>sēl</i> f.	'flood' (Pers. < Arab. seyl; cf. Kurd. lehî)
<i>tasma</i> f.	'belt' (Pers. tasme; cf. Kurd. qayış f. 'belt')
<i>təptəc</i> f.	'fluff, down' (Azer. tiftik)
<i>yalpuc</i> f.	'fan' (Azer. yelpik; cf. Kurd. baweşîn f.)
<sup>+</sup> <i>dastan</i> f.	'story' (Pers. dāstān; cf. Kurd. ḫîrok f.)
<sup>+</sup> <i>dinar</i> f.	'dinar' (Pers. dīnār)
<sup>+</sup> <i>kabar</i> f.	'blister' (Azer. qabar; cf. pek f.)
<sup>+</sup> <i>qalxan</i> f.	'shield' (Azer. qalxan; contrast Kurd. mertal m.)
<sup>+</sup> <i>karķara</i> f.	'reel, bobbin' (Azer. qarqara; cf. Kurd. balanî f.)
<sup>+</sup> <i>şuratan</i> f.	'gutter' (Armen. juratan; cf. Kurd. şurîł f.)
<sup>+</sup> <i>tiyan</i> f.	'cauldron' (Pers. tiyān; cf. Kurd. sîṭîl f.)
<sup>+</sup> <i>torba</i> f.	'bag' (Azer. torba)
<sup>+</sup> <i>yapəškan</i> f.	'glue' (Azer. yapışqan; cf. Kurd. zemq f.)
<sup>+</sup> <i>zogal</i> f.	'cornel, dogwood' (Azer. zoğal)

Most inanimate loanwords that are assigned masculine gender fall into one of the following categories:

## (i) Long entities or entities including a long component

<i>buxari</i> m.	'stove (with long chimney pipe)' (Pers. boxārī)
<i>calbatun</i> m.	'pincers' (Azeri kəlbətin)
<i>čamca</i> m.	'spoon' (Pers. čamče)
<i>čanjal</i> m.	'fork' (Kurd. čengal f., Azer, çəngəl, Pers. čangāl)
<i>čarja</i> m.	'threads on a loom' (Pers. čahār jā)
<i>čəlla</i> m.	'fine root' (Pers. čelle 'bow string, selvage')
<i>coca</i> m.	'stump, root' (Azer. kök)
<i>cullunj</i> m.	'crowbar, pickaxe' (Azer. külüng)
<i>dola</i> m.	'tall bin' (Pers. dohol, Kurd. dehol f. drum)
<i>kamči</i> m.	'lash, whip' (Azer. qamçı, Azer. qayçı)
<i>kand</i> m.	'loaf sugar' (Azer. qənd)
<i>kaya</i> m.	'large rock, (protruding) crag' (Azer. qaya)
<i>keči</i> , <i>kicci</i> m.	'scissors' (Pers. qēčī)
<i>kəppəl</i> m.	'lock' (Azeri qıfil)
<i>koša</i> m.	'double ditch dividing fields' (Azer. qoşa)
<i>lanyar</i> m.	'anchor' (Azer. ləngər, Pers. langar)
<i>luyla</i> m.	'pipe' (Pers. lüle)
<i>macca</i> m.	'maize' (Azer. məkə)
<i>makkas</i> m.	'shears; scissors' (Pers./Turk. makkas, Azer. maqqas < Arab.)
<i>manjər</i> m.	'cultivating fork' (Pers. minjar)
<i>manqāš</i> m.	'instrument for kindling fire' (Pers. manqāš < Arab.)
<i>maptul</i> m.	'wire' (Azer. məftil, Pers. maftūl)
<i>maša</i> m.	'tongs' (Azeri maşa)
<i>naštar</i> m.	'canine tooth' (Pers. ništar)
<i>surma</i> m.	'door-bar' (Azer. siyirmə)
<i>iriş</i> m.	'tap' (Pers. šīr)
<i>iriş</i> m.	'skewer' (Azer. şış)
<i>tira</i> m.	'dividing bank in paddy field' (Azer. tirə)
<i>zula</i> m.	'line; stripe on material' (Azer. zol)
+ <i>əstican</i> m.	'glass' (Pers. istikān)
+ <i>burğı</i> m.	'drill' (Azer. burğu)
+ <i>carduvar</i> m.	'spade and chain' (Pers. kārduvār)
+ <i>darcən</i> m.	'cinnamon (stick)'
+ <i>hača</i> m.	'forked stick' (Azer. haça 'fork')
+ <i>jəllav</i> m.	'reins of horse' (Azer. cilov, Pers. jalaw)
+ <i>frand</i> m.	'tap' (Azer. kran)
+ <i>kazma</i> m.	'pickaxe' (Turk. kazma)
+ <i>kuza</i> m.	'protuberance; spire' (Pers. qūz)

<i>+manqar</i> m.	'gouge' (Pers. manqār < Arab.)
<i>+məššar</i> m.	'large two-handled saw' (Pers. minšār < Arab.)
<i>+paya</i> m.	'prop' (Pers. pāye 'leg, base')
<i>+rubbun</i> m.	'ribbon' (Pers. rūbān)
<i>+səndan</i> m.	'anvil' (Pers. sendān)
<i>+sənjaq</i> m.	'pin' (Pers. sanjāq)
<i>+šallaq</i> m.	'lash, whip' (Pers. šallāq)
<i>+šlanq</i> m.	'hose pipe' (Azer. şlanq)
<i>+zaja</i> m.	'cave, grotto, lair' (Azer. zağa)
<i>+zivana</i> m.	'weed' (Pers. zavān)

## (ii) Flat entities

<i>banda</i> m.	'dam' (Azer. bənd)
<i>čol</i> m.	'steppe' (Azer. çöl)
<i>cursi</i> m.	'chair; seat over oven' (Pers. kursī < Arab.)
<i>davula</i> m.	'flat drum' (Azer. davul)
<i>kobi</i> m.	'bog, marshland' (Azer. qobe)
<i>lxepa</i> m.	'quilt' (Kurd. lihēf f. < Arab.)
<i>mešon, mišon</i> m.	'sheepskin, leather' (Pers. mīšīn, mešan)
<i>miz</i> m.	'table' (Pers. mīz, Azer. miz)
<i>pašaband</i> m.	'mosquito net' (Pers. paše-band)
<i>+baškab</i> m.	'saucer' (Pers. boşqāb)
<i>+darvaza</i> m.	'gate of city or courtyard' (Azer. darvaza, Pers. darvāze)
<i>+kaši</i> m.	'tile' ((Pers. kāšī)
<i>+palan</i> m.	'pack-saddle' (Azer. palan)
<i>+šāl</i> m.	'shawl' (Azer. şal, Pers. šāl)
<i>+supra</i> m.	'tablecloth' (Pers. sofre, Azer. süfrə)

## (iii) Non-countable entities (fabrics, materials and liquids)

<i>balzam</i> m.	'balm' (Azer. balzam < Arab.)
<i>brišəm</i> m.	'silk' (Azer. əbrişim, Pers. abrīšim)
<i>cəbrət</i> m.	'sulphur' (Azer. kibrit)
<i>cuylaš</i> m.	'thick straw' (Azer. küləş)
<i>hašya</i> m.	'woven material, edging of lace' (Azer. haşiyə < Arab.)
<i>jaj</i> m.	'gypsum' (Pers. gač)
<i>fıra</i> m.	'cream from raw milk' (Pers. gīrā)
<i>juvva</i> m.	'mercury' (Azer. civə, Pers. žīve)
<i>kəmpa</i> m.	'hemp' (Pers. qonnab)

<i>kurkušun</i> m.	'lead (metal)' (Azer. qurğuşun)
<i>marjumuš</i> m.	'arsenic' (Azer. mərgümüş)
<i>maxmar</i> m.	'velvet' (Azer. məxmər)
<i>mīs</i> m.	'copper' (Azer. mis)
<i>pān</i> m.	'stable litter' (Azer. peyin)
<i>rezən</i> m.	'rubber' (Pers. rezīn)
<i>šava</i> m.	'jet (stone)' (Azer. şəvə)
<i>šila</i> m.	'red coarse calico' (Azer. şilə)
<i>šīra</i> m.	'grape juice' (Pers. šīre)
<i>šuyša</i> m.	'glass' (Azer. şüşə)
<i>tanica</i> m.	'tin' (Kurd. teneke m.)
<i>təryac</i> m.	'opium' (Azer. tiryək, Pers. teryāk)
<i>zāğ</i> m.	'alum' (Pers. zāğ, Azer. zəy)
<i>zahar</i> m.	'poison' (Azer. zəhər)
<i>zira</i> m.	'cumin' (Pers. zīre)
+ <i>almas</i> m.	'diamond' (Azer. almaz)
+ <i>barut</i> m.	'gunpowder' (Turk. barut, Azer. barıt)
+ <i>cəxla</i> m.	'kohl' (Pers. kohl < Arab.)
+ <i>čay</i> m.	'tea' (Azer. çay, Pers. čāy)
+ <i>curra</i> m.	'mud, slime' (Pers. kūra)
+ <i>mahud</i> m.	'broadcloth' (Azer. mahud)
+ <i>māl</i> m.	'goods' (Azer. mal < Arab.)
+ <i>mət̪kal</i> m.	'calico' (Azer. mitkal)
+ <i>parča</i> m.	'large piece of cloth' (Azer. parça, Pers. pārče)
+ <i>paxər</i> m.	'verdigris, copper rust' (Azer. paxır)
+ <i>pulad</i> m.	'steel' (Azer. polad < Arab.)

#### (iv) Measures and abstractions

<i>dard</i> m.	'pain, grief' (Azer. dərd)
<i>hač</i> m.	'salary' (Azer. haqq < Arab.)
<i>hucma</i> m.	'authority, government' (Azer. hökm < Arab.)
<i>’iman</i> m.	'faith, belief' (Azer. iman < Arab.)
<i>jam</i> m.	'sum, total' (Azer. cəm < Arab.)
<i>maraca</i> m.	'crisis; hullabaloo' (Azer. mərəkə)
<i>məskal</i> m.	'small weight' (Pers. mesqāl < Arab.)
<i>šāns</i> m.	'chance, fortune' (Pers. < French chance)
<i>šar</i> m.	'law, rule' (Arab. šar‘)
<i>sər</i> m.	'secret, mystery' (Azer. sirr, Pers. serr < Arab.)
<i>şirinləx</i> m.	'celebration after betrothal' (Azer. şirinlik)

<i>soda</i> m.	'contentment' (Pers. sowdā)
<i>taçça</i> m.	'a single piece' (Pers. tekke)
<i>tica</i> m.	'small piece' (Azer. tikə; Pers. tīke)
<i>xēr</i> m.	'benefit' (Azer. xeyir, Pers. xeyr < Arab.)
<i>zarra</i> m.	'a little, a jot' (Azer. zərrə < Arab.)
<i>ziyana</i> m.	'harm, injury' (Azer. ziyan, Pers. ziyān)
<sup>+</sup> <i>hassab</i> m.	'account, reckoning' (Arab. ḥisāb)
<sup>+</sup> <i>kadağan</i> m.	'prohibition' (Azer. qadağan)
<sup>+</sup> <i>kanun</i> m.	'rule, law' (Azer. qanun)
<sup>+</sup> <i>moca</i> m.	'measure for rice'
<sup>+</sup> <i>xalvar</i> m.	'measure for wood'
<sup>+</sup> <i>zamun</i> m.	'bail, surety' (Azer. zamin < Arab.)
<sup>+</sup> <i>zulm</i> m.	'injustice' (Azer. zülm < Arab.)

(v) Powerful animals

A few loanwords denoting powerful animals are masculine:

<sup>+</sup> <i>čakkal</i> m.	'jackal' (Azer. çaqqal, Pers. šāgāl)
<sup>+</sup> <i>janavar</i> m.	'beast, predatory (animal); monster' (Azer. canavar 'wolf')
<sup>+</sup> <i>kaban</i> m.	'wild boar' (Azer. qaban)

Loanwords denoting less powerful animals, birds, insects and fish are generally feminine:

<i>'umri</i> f.	'large dove' (Pers. qumrī)
<i>bulbul</i> f.	'nightingale' (Azer. bülbül, Pers. bolbol)
<i>cərvəş</i> f.	'rabbit, hare' (Kurd. kērūşk)
<i>hənduška</i> f.	'turkey' (Azer. hinduşka)
<i>fanna</i> f.	'tick' (Azer. gənə)
<i>karğa</i> , <sup>+</sup> <i>karşa</i> f.	'crow' (Azer. qarğā)
<i>kəržala</i> f.	'crab' (Kurd. kevjal, Azer. xərçəng)
<i>laflay</i> f.	'stork' (Azer. leyłək, Pers. laklak)
<i>'ordac</i> f.	'duck' (Azeri ördək)
<i>þupþu</i> f.	'hoopoe' (Azer. hop-hop, Armenian hopop)
<i>saribalax</i> f.	'yellow fish' (Azer. sari 'yellow' + baliq 'fish')
<sup>+</sup> <i>hattar</i> f.	'hyena' (Azer. kaftar 'hyena, decrepit man' i.e. an animal that is decrepit in appearance)
<sup>+</sup> <i>jeýran</i> f.	'gazelle' (Azer. ceyran)
<sup>+</sup> <i>karabattux</i> f.	'small black duck' (Azer. qara 'black' + Pers. batak < Arab. 'duckling')

<sup>+</sup> <i>kaza</i> f.	'goose' (Azer. qaz, Pers. گاز)
<sup>+</sup> <i>kazalağ</i> f.	'lark' (Pers. گازالاگ)
<sup>+</sup> <i>zallu</i> , <i>zallu</i> f.	'leech' (Azer. zəli, Pers. زالو)

Phonologically unadapted Persian and English loanwords that are inanimate are generally assigned feminine gender, e.g.

- (1) <sup>+</sup>*báyyən xa-dána* <sup>P</sup>sāxtumān<sup>P|</sup> <sup>ó</sup>*ya ju-*<sup>+</sup>*hàva*.| 'I want a building that is in the air.' (A 3:70)
- (2) <sup>+</sup>*e-Papārtmān*<sup>P|</sup> 'that apartment' (A 39:10)
- (3) <sup>á</sup> <sup>P</sup>sābád<sup>P</sup> <sup>+</sup>*xòrməl b-yavónna kàtux*.| 'I shall give you this basket of dates.' (A 10:3)
- (4) <sup>+</sup>*śadúrul* <sup>E</sup>présent<sup>E</sup> <sup>+</sup>*rába* <sup>+</sup>*timànta*.| 'He sends him a very expensive present.' (A 1:15)
- (5) <sup>+</sup>*xá* <sup>E</sup>bóx<sup>E</sup> <sup>+</sup>*jùrta*| 'a big box' (B 10:8)

Long entities, however, are sometimes masuline, e.g.

- (6) <sup>E</sup>péncile *cùma* 'a black pencil' (A 41:17)

### 5.12.6 Differences in Gender in the Caucasus

In the variety of the dialect spoken in the Caucasus the gender of nouns sometimes differs from what is found in the variety spoken in the Urmi region. This is the case in particular in the variety spoken in Armenia. The following nouns that are masculine in the Urmi region have been noted as being used with feminine gender in the Armenian villages:

<i>julla</i> n.m. (Armenia n.f.)	'cloth'
<i>meymun</i> n.m. (Armenia n.f.)	'monkey'
<i>pulluš</i> n.m. (Armenia <i>pullu</i> n.f.)	'pulp; grape must'
<i>sama</i> n.m. (Armenia n.f.)	'share, portion'
<sup>+</sup> <i>maya</i> n.m. (Armenia n.f.)	'rennet'
<sup>+</sup> <i>rəzza</i> n.m. (Armenia n.f.)	'rice'
<sup>+</sup> <i>sətra</i> n.m. (Armenia n.f.)	'thyme, savoury'
<sup>+</sup> <i>xalva</i> n.m. (Armenia n.f.)	'milk'

### 5.13 Plural Forms

The plural of most nouns is formed by replacing the singular inflections *-a* and *-ta* with a plural inflection without any other changes to the morphology of the noun. There is no one-to-one correspondence between singular inflections and plural inflections and so the plural form of a singular noun is not predictable.

#### 5.13.1 *Plural Ending -ə*

This is the most common plural ending and is attached to a variety of singular forms, both animate and inanimate.

##### 5.13.1.1 Plurals in *-ə* from Singulars in *-a*

Such nouns are of both genders and have either animate or inanimate referents, e.g.

###### Singular      Plural

<i>'ilana</i> m.	<i>'ilana</i>	'tree'
<i>jniva</i> m.	<i>jnivə</i>	'eyebrow'
<i>kala</i> m.	<i>kala</i>	'voice'
<i>malca</i> m.	<i>malca</i>	'king'
<i>nuvva</i> m.	<i>nuvva</i>	'small branch'
<i>sada</i> m.	<i>sadə</i>	'witness'
<i>tora</i> m.	<i>torə</i>	'ox'
<i>xmara</i> m.	<i>xmarə</i>	'ass'
<i>+šada</i> m.	<i>+šadə</i>	'almond'
<i>+tarpa</i> m.	<i>+tarpa</i>	'branch'
<i>'arbala</i> f.	<i>'arbala</i>	'sieve'
<i>'urudxa</i> f.	<i>'urudxə</i>	'large needle'
<i>jørva</i> f.	<i>jørva</i>	'sock'
<i>kalma</i> f.	<i>kalma</i>	'louse'
<i>nuyna</i> f.	<i>nuyna</i>	'fish'
<i>ptana</i> f.	<i>ptana</i>	'plough'
<i>šladda</i> f.	<i>šladdə</i>	'corpse'
<i>tena</i> f.	<i>tenə</i>	'fig'
<i>tuya</i> f.	<i>tuya</i>	'mulberry'
<i>+cavutra</i> f.	<i>+cavutra</i>	'lunch'
<i>+lubya</i> f.	<i>+lubyə</i>	'bean'
<i>+tata</i> f.	<i>+tatə</i>	'cockscomb'
<i>+vana</i> f.	<i>+vana</i>	'ewe'

**Singular      Plural**

<i>+xasina</i> f.	<i>+xasinə</i>	'pickaxe'
<i>+xmaṭa</i> f.	<i>+xmaṭə</i>	'needle'

In the word *+tata* (pl. *+tatə*) the final *-ta* was originally the feminine ending (< \**taḡtā*), but is interpreted now as part of the base of the noun. The word *+cavutra* also has the plural *+cavutranə*.

The word *+rabi* 'teacher', which does not have a singular inflectional ending, forms its plural by adding the ending *-ə* directly to the base separated by a glide: *+rabīyyə*.

In the Caucasus the final *-ə* is frequently elided in such forms (§ 1.16.2.), e.g. *kāl* 'sounds' (A 47:11 < *kálə*), *+māš* 'beans' (B 17:13 < *mášə*).

**5.13.1.2      Plurals in *-ə* from Singulars in *-ta***

In such cases a feminine ending is used with an individuating function to express a single item from the collectivity of a plural in *-ə* (§ 5.5.2.), e.g.

**Singular      Plural**

<i>bita</i>	<i>biyyə</i>	'egg'
<i>baḵlušta</i>	<i>baḵlušə</i>	'pebble'
<i>cəšməšta</i>	<i>cəšmišə</i>	'raisin'
<i>+lavašta</i>	<i>+lavašə</i>	'thin bread'

In loanwords that have a short /a/ vowel in the base of the word in the source language, the shortness may be preserved by geminating the final consonant in the plural, e.g.

*xasta*    *xassə*    'lettuce' (Pers. *xas* < Arab.)

**5.13.2      *The Plural Ending -anə***

This ending forms plurals from singulars in *-a*. Nouns forming plurals with *-anə* are mostly inanimate:

**Singular      Plural**

<i>carma</i>	<i>carmanə</i>	'vineyard, plantation'
<i>duca</i>	<i>ducanə</i>	'place'
<i>duccana</i>	<i>duccanana</i>	'shop'
<i>juyda</i>	<i>juydanə</i>	'wall'
<i>móriša</i>	<i>morišanə</i>	'morning'
<i>noba</i>	<i>nobanə</i>	'turn'

Singular	Plural	
<i>parra</i>	<i>parranə</i>	'feather, propeller'
<i>ptana</i>	<i>ptanana</i>	'plough'
<i>pumma</i>	<i>pummanə</i>	'mouths'
<i>šəmma</i>	<i>šəmmanə</i>	'name'
<i>yuma</i>	<i>yumanə</i>	'day'
<i>+alula</i>	<i>+alulanə</i>	'street'
<i>+cavutra</i>	<i>+cavutranə</i>	'lunch'
<i>+jora</i>	<i>+jorana</i>	'husband, man'
<i>+pava</i>	<i>+pavanə</i>	'large branch'
<i>+ruyša</i>	<i>+ruyšanə</i>	'shoulder'
<i>+šula</i>	<i>+šulanə</i>	'job'
<i>+tarra</i>	<i>+tarranə</i>	'door'
<i>+tuyra</i>	<i>+tuyranə</i>	'mountain'

The nouns *+pava* and *+cavutra* also have the plurals *+pavə* and *+cavutra*. The noun *+jora* also has the plural *+joravato*. The inanimate generic word *məndi* 'thing', which has no singular inflectional ending, also forms its plural with this suffix, connected by a glide /yy/: *məndiyyanə* (sometimes contracted to *məndyanə*).

Occasionally this plural ending is reduplicated. This is found more commonly in the Caucasus than elsewhere, e.g.

<i>juyda</i>	<i>juydanə ~ juydananə</i>	'wall'
<i>beta</i>	<i>betanana</i> (Canda)	'house'
<i>juyba</i>	<i>juybananə</i> (Canda)	'pit'
<i>baxča</i>	<i>baxčanana</i> (Canda)	'kitchen garden'
<i>calba</i>	<i>calbananə</i> (Armenia)	'dog'

The noun *+berašə* 'evening', which ends in -ə in the singular, takes a variant of this plural ending -vanə:

Singular	Plural
<i>+berašə</i>	<i>+berašvanə</i> 'evening'

### 5.13.3 Plurals with the Reduplication of the Final Consonant

Most nouns that have this type of plural have in the singular the bisyllabic patterns CVCCa or CVCa. The reduplication consists of the repetition of the final radical. In the case of nouns with a geminated final radical, it is repeated ungeminated. All have inanimate referents.

Singular	Plural	
<i>bərcə</i>	<i>bərcacə</i>	'knee'
<i>bulə</i>	<i>bulalə</i>	'hairy top of corn'
<i>čəlla</i>	<i>čəllalə</i>	'root'
<i>jəlla</i>	<i>jəllalə</i>	'herb'
<i>nica</i>	<i>nicacə</i>	'hip'
<i>þəkkə</i>	<i>þəkkakə</i>	'frog'
<i>þərçə</i>	<i>þərçacə</i>	'piece'
<i>šəppula</i>	<i>šəppulalə</i>	'end of skirt'
<i>təlpə</i>	<i>təlpapə</i>	'eyelash'
<i>tica</i>	<i>ticacə</i>	'morsel'
<i>xuvva</i>	<i>xuvvavə</i>	'snake'
<i>+kətta</i>	<i>+kəttatə</i>	'piece'
<i>+kuča</i>	<i>+kučačə</i>	'thumb'

Some of these nouns also form plurals in *-ə*, e.g. *bulə*, *+kučə*, *šəppulə*.

#### 5.13.4 *The Plural Ending -atə/-áy*

Most nouns that have the plural ending *-atə* may also form a plural with the ending *-áy*, which is a contracted form of *-atə*, e.g. *’akläta* ~ *’akläláy* 'legs'. The contracted form is the norm in the varieties of the dialect spoken in the Caucasus. This contraction takes place in principle only when the /a/ is stressed and the /t/ is followed by /ə/ or the high vowel of the 1s. suffix *-i*. If the plural endings have suffixes with other vowel qualities or a stressed suffix, the /t/ remains in place in all varieties of the dialect, e.g. *’akläátu* 'his legs', *’aklälaté* 'their legs.' In the following lists only the ending *-atə* is indicated.

##### 5.13.4.1 Plurals in *-atə/-áy* from Singulars in *-a*

Nouns ending in *-a* that take the *-atə* ending in the plural are feminine in gender.

Singular	Plural	
<i>’akläla</i> f.	<i>’aklälatə</i>	'leg'
<i>’ida</i> f.	<i>’idatə</i>	'hand'
<i>’urxa</i> f.	<i>’urxatə</i>	'way'
<i>baxta</i> f.	<i>baxtatə</i>	'woman'
<i>cisa</i> f.	<i>cisatə</i>	'belly'
<i>dəpnə</i> f.	<i>dəpnatə</i>	'side'
<i>katta</i> f.	<i>kattatə</i>	'handle'
<i>ķonna</i> f.	<i>ķonnatə</i>	'nest'

Singular	Plural	
<i>meša</i> f.	<i>mešatə</i>	'forest'
<i>ptana</i> f.	<i>ptanatə</i>	'plough'
<i>səmma</i> f.	<i>səmmatə</i>	'hoof'
<i>šərma</i> f.	<i>šərmatə</i>	'buttocks'
<i>yama</i> f.	<i>yamata</i>	'sea'
<i>yəmma</i> f.	<i>yəmmatə</i>	'mother'
<i>yona</i> f.	<i>yonata</i>	'dove'
+ <i>arra</i> f.	+ <i>arratə</i>	'land'
+ <i>ayva</i> f.	+ <i>ayvatə</i>	'cloud'
+ <i>ətma</i>	+ <i>ətmatə</i>	'thigh'
+ <i>badya</i> f.	+ <i>badyatə</i>	'water pot'
+ <i>budra</i> f.	+ <i>budrate</i>	'threshing floor'
+ <i>dana</i> f.	+ <i>danata</i>	'time'
+ <i>kalla</i>	+ <i>kallatə</i>	'citadel'
+ <i>muṭra</i> f.	+ <i>muṭratə</i>	'rain'
+ <i>rumxa</i> f.	+ <i>rumxatə</i>	'spear'
+ <i>ruxa</i> f.	+ <i>ruxata</i>	'spirit'
+ <i>šraya</i> f.	+ <i>šrayatə</i>	'oil-lamp'
+ <i>sup̪pa</i> f.	+ <i>sup̪patə</i>	'finger'
+ <i>topa</i> f.	+ <i>topata</i>	'wheel'

Some of these nouns also have plurals in *-ə*, e.g. +*kallə*, +*rumxə*, *səmma*, *šərma*, *ptanana*.

#### 5.13.4.2 Plurals in *-atə/-áy* from Singulars in *-ta*

Singular	Plural	
<i>calta</i>	<i>calatə</i>	'daughter-in-law'
<i>darta</i>	<i>daratə</i>	'courtyard'
<i>janta</i>	<i>janatə</i>	'garden'
<i>kalta</i>	<i>kalatə</i>	'basket'
<i>ptulta</i>	<i>ptulata</i>	'virgin'
<i>šabta</i>	<i>šabatə</i>	'week'
<i>xamta</i>	<i>xamatə</i>	'young woman'
+ <i>ṭuvita</i>	+ <i>ṭuyata</i>	'roast meat, kebab'

Note that the medial /v/ in +*ṭuvita* contacts in the plural resulting in the form +*ṭuyata* (< \**ṭuvyata*).

A consonant that is assimilated to the /t/ of the singular ending is preserved

in some cases due to the intervening /a/ vowel of the plural ending. In the noun *mdita* an /n/ that is assimilated to the /t/ of the singular ending -*ta* when in contact with it (< \**mdinta*) appears in the plural form:

*mdita*   *mdinatə*   ‘town’

In some varieties of the dialect (e.g. Piğabayluvvə N and Guylasar Arm.) the /n/ has metathesized with the /d/ in this word and is preserved in the singular, viz. *məndita* (A 42:12 Guylasar, Arm.), pl. *məndiyatə*.

In the noun <sup>+</sup>*ita* (< \**īdtā*) ‘church’, the original /d/ is optionally preserved in the plural:

<sup>+</sup>*ita*   <sup>+</sup>*idatə* ~ <sup>+</sup>*itatə*   ‘church’

The sequence /ay/ in nouns with a final weak /y/ consonant contracts to /e/ before the singular -*ta* ending, e.g. *cteta* < \**ctayta*. The sequence remains uncontracted in the plural, e.g.

<i>cəsseta</i>	<i>cəssayatə</i>	‘small lid’
<i>cteta</i>	<i>ctayatə</i>	‘chicken’
<i>maseta</i>	<i>masayatə</i>	‘balance, scales’
<i>šteta</i>	<i>štayatə</i>	‘drink’
<sup>+</sup> <i>meta</i>	<sup>+</sup> <i>meyatə</i>	‘churn’

Such nouns with singulars ending in -*eta* may also form plurals ending in -*eyatə* by analogy with the singular, e.g.

<i>maseta</i>	<i>maseyatə</i>	‘balance, scales’
<sup>+</sup> <i>meta</i>	<sup>+</sup> <i>meyatə</i>	‘churn’
<sup>+</sup> <i>areta</i>	<sup>+</sup> <i>areyatə</i>	‘patch’

A noun with the abstract derivative ending -*uta/-uyta* can form a plural by replacing the -*ta* by -*atə*, as a result of which the preceding vowel becomes /v/, e.g.

*čatunuta* ~   *čatunvatə*   ‘difficulty’  
*čatunuyta*

5.13.4.3 Plurals in *-atə/-áy* from Singulars in *-ə*

- 'ərxə f. 'ərxatə 'water-mill'  
*cavə* f. *cavatə* 'small window'

5.13.5 *The Plural Ending -yatə/-yáy*

The contracted form *-yáy* is the norm in the varieties of the dialect spoken in the Caucasus.

5.13.5.1 Plurals in *-yatə/-yáy* from Singulars in *-ta*

The ending *-yatə* is the most common plural ending for feminine singulars in *-ta*.

Singular	Plural	
<i>canušta</i>	<i>canušyatə</i>	'broom'
<i>karkəpta</i>	<i>karkəpyatə</i>	'skull'
<i>lvəšta</i>	<i>lvəšyatə</i>	'clothing'
<i>nanunta</i>	<i>nanunyatə</i>	'grandmother'
<i>scənta</i>	<i>scənyatə</i>	'knife'
<i>səmmalta</i>	<i>səmmalyatə</i>	'ladder'
<i>susta</i>	<i>susyatə</i>	'mare'
<i>xmata</i>	<i>xmayatə</i>	'mother-in-law'
+ānta	+ānyatə	'air-hole at the bottom of oven'
+baluta	+baluyatə	'throat'
+jazarta	+jazaryatə	'island'
+kərtalta	+kərtalyatə	'small pannier bag'
+kusarta	+kusaryatə	'cooking pot'
+lənta	+lənyatə	'small earthenware pot'
+mixulta	+mixultyatə	'food'
+rušta	+rušyatə	'shovel'

When the noun stem ends in the vowel /i/, the plural has the ending *-iyatə*, e.g.

<i>šakita</i>	<i>šakiyyatə</i>	'stream'
<i>spadita</i>	<i>spadiyyatə</i>	'pillow'
<i>švita</i>	<i>šviyyatə</i>	'bed'
+karita	+kariyyatə	'beam'
+kurnita	+kurniyyatə	'corner (of room, street)'
+xṭita	+xṭiyyatə	'sin'

### 5.13.5.2 Plurals in *-yatə/-yáy* from Singulars in *-u*

Feminine nouns that end in *-u* (§ 5.7.) in the singular generally take the plural ending *-yatə/-yay* with a preceding /n/, i.e. *-unyatə/-unyay*, as if the singular ending were \**-unta*:

#### Singular    Plural

<i>calu</i>	<i>calunyatə</i>	'bride'
<i>meju</i>	<i>mejunyatə</i>	'kneading tray'
<sup>+</sup> <i>kaṭu</i>	<sup>+</sup> <i>kaṭunyatə</i>	'cat'
<sup>+</sup> <i>zallu</i>	<sup>+</sup> <i>zallunyatə</i>	'leech'

The noun <sup>+</sup>*kaṭu* also has the plural <sup>+</sup>*kaṭyatə*.

### 5.13.6 *The Plural Ending -vatə/-váy*

This is added to nouns of both genders, which include nouns referring to inanimate objects and kinship terms. The contracted form is the norm in the varieties of the dialect spoken in the Caucasus.

#### Singular    Plural

<i>beta</i> m.	<i>bətvatə</i>	'house'
<i>mata</i> f.	<i>matvatə</i>	'village'
<i>pata</i> f.	<i>patvatə</i>	'face'

#### Kinship terms

<i>xata</i> f.	<i>xatvatə</i>	'sister'
<i>yəmma</i> f.	<i>yəmvatə</i>	'mother'
<sup>’</sup> <i>axuna</i> m.	<sup>’</sup> <i>axunvatə</i>	'brother'
<i>savuna</i> m.	<i>savunvatə</i>	'grandfather'
<sup>+</sup> <i>mamuna</i> m.	<sup>+</sup> <i>mamunvatə</i>	'paternal uncle'

In the feminine nouns *pata* and *xata* the /t/, which is historically the feminine suffix, is treated as a radical. Vowels that are long in open syllables in the singular are sometimes preserved as half-long in the closed syllable of the plural, e.g. *beta* [‘be:tʰa] 'house', *bətvatə* [be:tʰva:tɪ]. In the plural of this word the vowel of the first syllable is sometimes pronounced as /a/, viz. *batvatə*. This may be by a phonetic process of vowel lowering or it could be a hybrid plural combining the form *bətvatə* with the irregular plural form *batə* (§ 5.13.8.). The noun *yəmma* also has the plural *yəmmata*. The noun *mata* also has the plural *mavatə*. The plural ending *-vatə* should probably be identified

also in the following, though the /v/ has coalesced with the preceding /vv/ cluster:

+*xaluvvva* m. +*xaluvvvatə* ‘maternal uncle’

### 5.13.7 *The Plural Ending -avatə/-aváy*

This ending is added to masculine and feminine nouns, which include nouns referring to inanimate entities and kinship terms. The contracted form *-aváy* is the norm in the varieties of the dialect spoken in the Caucasus:

Singular	Plural	
<i>'ida</i> f.	<i>'idavatə</i>	‘festival’
<i>móriša</i> m.	<i>morišavatə</i>	‘morning’
<i>mula</i> f.	<i>mulavatə</i>	‘barn’
<i>nara</i> m.	<i>naravatə</i>	‘river’
<i>'urxa</i> f.	<i>'urxavatə</i>	‘way’
<i>xela</i> m.	<i>xelavatə</i>	‘strength’
+ <i>'atra</i> m.	+ <i>'atrvatə</i>	‘land’
+ <i>keta</i> m.	+ <i>kētavatə</i>	‘summer’
+ <i>kora</i> f.	+ <i>koravatə</i>	‘grave’
+ <i>šara</i> m.	+ <i>šaravatə</i>	‘saint’s festival’

#### Kinship terms

<i>baba</i> m.	<i>babavatə</i>	‘father’
+ <i>jora</i> m.	+ <i>joravatə</i>	‘husband, man’
<i>xətna</i> m.	<i>xətnavatə</i>	‘son-in-law, groom’
+ <i>amtə</i> f.	+ <i>amtavatə</i>	‘paternal aunt’
<i>xalta</i> f.	<i>xaltavatə</i>	‘maternal aunt’

Closely related semantically to the latter group is the noun *malca*, which also has this plural:

*malca* m. *malcavatə* ‘king’

In the forms +*amtavatə* and *xaltavatə* the plural ending is attached to the feminine ending *-ta*, which is treated as part of the base of the singular noun. Some nouns mentioned above have other plurals, e.g. *'urxatə*, +*joranə*, *morišanə*, +*kētənə*, *malca*.

This plural ending is added also to nouns ending in *-ə*:

<i>'urə</i> f.	<i>'uravatə</i>	'manger'
<i>čiriyə</i> m.	<i>čiriyavatə</i>	'Autumn'
<i>jarə</i> m.	<i>jaravatə</i>	'roof'
<i>lelə</i> m./f.	<i>lelavatə</i>	'night'

### 5.13.8 Irregular Plurals

#### Singular      Plural

<i>beta</i> m.	<i>batə</i>	'house'
<i>brata</i> f.	<i>bnatə</i>	'girl'
<i>bruna</i> m.	<i>bnunə</i>	'sons'
<i>nata</i> f.	<i>natyatə</i>	'ears'
<i>šita</i> f.	<i>šənnə</i>	'year'
+ <i>sluta</i> f.	+ <i>slavatə</i>	'prayer'

The word *beta* also has the plurals *bətvatə/bətváy* and *betanənə*. The singular form *nata* is the historical reflex of the plural form *\*ednātā*, though this has now become reanalysed as a singular (Mutzafi 2005b).

### 5.13.9 Pluralia Tantum

<i>'avahatə</i>	'parents'
<i>'axrə</i>	'excrement'
<i>čuvvə</i>	'animal droppings'
<i>jərsa</i>	'cracked wheat'
<i>miyya</i>	'water'
<i>pudsə</i>	'mucus from nose'
<i>raxmə</i>	'mercy'
<i>rerə</i>	'saliva'
<i>rukə</i>	'spit'
<i>xayya</i>	'life'
<i>zvadə</i>	'supplies'
+ <i>davvə</i>	'yoghurt water'
+ <i>jurə</i>	'urine'
+ <i>kətpə</i>	'whey'
+ <i>mayə</i>	'intestine'

The noun *miyya* is treated as syntactically plural, the *-yya* ending being a fossilized relic of a plural ending in earlier Aramaic.

### 5.13.10 *The Plural of Loanwords*

When the singular form of a loanword is adapted to Aramaic morphology by adding the inflectional endings *-a*, *-ta* or *-ita* (§ 5.11.), they are treated like native Aramaic nouns in the formation of their plurals. A final *-a* that originally belonged to the base of the noun in the source language has in some cases been reanalysed as the Aramaic *-a* inflection and is replaced by a plural ending, e.g.

Singular	Plural	
<i>bukša</i> m.	<i>bukšə</i>	'knapsack' < Pers. buqša
+ <i>hača</i> m.	+ <i>hačə</i>	'forked stick' < Azer. haça
<i>tala</i> f.	<i>talə</i>	'trap' < Azer. tələ
<i>karǵa</i> f.	<i>karǵə</i>	'crow' < Azer. qarǵa
<i>baxča</i> f.	<i>baxčanə</i>	'garden' < Azer. bağça
<i>julla</i> f.	<i>jullata</i>	'fruit stone' < Azer. güllə
<i>tasma</i> f.	<i>tasmatə</i>	'belt' < Pers. tasme
+ <i>torba</i> f.	+ <i>torbatə</i>	'bag' < Azer. torba
+ <i>topa</i> f.	+ <i>topatə</i>	'wheel' < Azer. topa
<i>rīja</i> m.	<i>rījavatə</i>	'servant' < Pers. rēkā

Loanwords that have not acquired an Aramaic singular inflectional ending are nevertheless inflected in the plural with an Aramaic plural ending, which is regularly the ending *-ə*. This indicates that the *-ə* plural ending is the most productive pluralizing inflection.<sup>1</sup> Both loanwords that have been phonologically integrated into the dialect and also those that have not been phonologically integrated (§ 1.5.1.) form plurals by the ending *-ə*. Such loanwords are of both genders, a large proportion of inanimate loanwords being assigned feminine gender (§ 5.12.5.). This differs from feminine words that have the Aramaic inflectional ending *-a*, which often take the plural ending *-atə* (§ 5.13.4.1.).

Loaned nouns may be phonologically integrated without acquiring an Aramaic singular inflectional ending. The phonological integration is reflected by the penultimate stress position, the acquiring of suprasegmental emphasis and the devoicing of a final stop, fricative or affricate. When the plural ending *-ə* is added to nouns such as these that end in a consonant, the consonant retains its voice and the stress moves onto the vowel before the consonant:

<sup>1</sup> Cf. the remarks of Haspelmath (2002, 134) regarding the accommodation of loanwords into the morphology of languages.

Singular	Plural	
<i>+xiyavand</i>	<i>+xiyavandə</i>	'street' (Pers. xiyābān)
[x <sup>i</sup> i: <sup>h</sup> ja: <sup>s</sup> v <sup>a</sup> n <sup>t</sup> h <sup>g</sup> ]	[x <sup>i</sup> i: <sup>h</sup> ja: <sup>s</sup> v <sup>a</sup> n <sup>d</sup> ə <sup>s</sup> ]	
<i>+kassab</i> [k <sup>a</sup> s <sup>s</sup> s <sup>a</sup> p <sup>h</sup> ]	<i>+kassabə</i> [k <sup>a</sup> s <sup>s</sup> s <sup>a</sup> b <sup>ə</sup> ]	'butcher' (Pers. qassāb)
<i>+sarbaz</i> [s <sup>a</sup> r <sup>a</sup> r <sup>b</sup> a <sup>s</sup> ]	<i>+sarbazə</i> [s <sup>a</sup> r <sup>a</sup> r <sup>b</sup> a <sup>r</sup> z <sup>ə</sup> ]	'soldier' (Pers. sarbāz)

If the stressed vowel in the plural is in an open syllable and was originally long in the source language, it is pronounced long, e.g. *+sarbazə* [s<sup>a</sup>r<sup>a</sup>r<sup>b</sup>a<sup>r</sup>z<sup>ə</sup>] (Pers. sarbāz). Even when the vowel was short in the source language, it is often lengthened, e.g.

Singular	Plural	
<i>čardağ</i>	<i>čardağə</i>	'shed' (Azeri çardaq)
<i>+toxmağ</i>	<i>+toxmağə</i>	'wooden mallet' (Azer. toxmaq)
<i>+adyal</i>	<i>+adyalə</i>	'blanket' (Russian одеяло ad'yala)
<i>pašcaš</i>	<i>pašcašə</i>	'gift' (Pers. paškaš)
<i>čatər</i>	<i>čatirə</i>	'umbrella' (Azer. çətir, Pers. čater)
<i>kəppəl</i>	<i>kəppilə</i>	'lock' (Azeri qıflı)
<i>yeməš</i>	<i>yemişə</i>	'fruit' (Turk. yemiş)
<i>+casəb</i>	<i>+casibə</i>	'poor' (Azeri kasib)
<i>+top</i>	<i>+topə</i>	'cannon' (Azeri top)

When the vowel is /u/, this generally becomes the diphthong /uy/ when it is lengthened:

<i>havuz</i>	<i>havuyzə</i>	'pool' (Turk. havuz)
<i>jardun</i>	<i>jarduynə</i>	'harvest cart' (Pers. gardūn)
<i>kalyun</i>	<i>kaluyunə</i>	'pipe' (Pers. qalyūn)
<i>+karavul</i>	<i>+karavuylə</i>	'guard' (Azer. qarovul)

In some cases, however, original short *a* is retained in the stressed syllable and the following consonant is geminated to create a closed syllable. This applies in particular to loanwords with the ending *-at*:

Singular	Plural	
<i>kəssat</i>	<i>kəssattə</i>	'story' (Pers. qesse)
<i>+karavat</i>	<i>+karavattə</i>	'bed' (Ott. Turk. kerevet)
<i>nasyat</i>	<i>nasyattə</i>	'advice' (Pers. nasīhat)
<i>xallat</i>	<i>xallattə</i>	'gift' (Kurd. xelat, Azer. xələt)
<i>nəmcət</i>	<i>nəmcattə</i>	'sofa' (Pers. nīmkat)

This type of plural is occasionally found when nouns end in other consonants:

<i>matlab</i>	<i>matlabba</i>	'aim' (Pers. <i>matlab</i> )
<i>sanam</i>	<i>sanamma</i>	'idol' (Pers. <i>sanam</i> < Arab.)

Loaned nouns that have not been adapted to the phonology of the dialect are likewise made plural by adding the Aramaic plural suffix *-ə*. The stressed vowel in a syllable that has been opened by the addition of this suffix is generally pronounced long, even if short in the source language:

**Singular      Plural**

<i>Pjādujár<sup>P</sup></i>	<i>Pjādujárə<sup>P</sup></i>	'magician' (Pers.)
-----------------------------	------------------------------	--------------------

If a loanword ends in *-i* or *-ə*, a glide /yy/ is added between this and the plural suffix *-ə* resulting in both cases in the ending *-iyə*:

**Singular      Plural**

<i>buri</i>	<i>buriyyə</i>	'tap'
<i>cursi</i>	<i>cursiyyə</i>	'chair'
<i>darzi</i>	<i>darziyyə</i>	'tailor'
<i>davri</i>	<i>davriyyə</i>	'plate'
<i>jalandi</i>	<i>jalandiyyə</i>	'scythe'
<i>tunji</i>	<i>tunjıyyə</i>	'jug'
<i>+xali</i>	<i>+xaliyyə</i>	'carpet'
<i>+xnami</i>	<i>+xnamiyyə</i>	'relative on wife's side'
<i>janno</i>	<i>janniyyə</i>	'patchwork blanket'
<i>nanno</i>	<i>nannıyyə</i>	'cradle (rocked on legs)'

Loanwords ending in *-u* likewise insert the glide /y/ before the plural ending *-ə*, e.g.

<i>kukku</i>	<i>kukkuyə</i>	'cuckoo'
<i>puppu</i>	<i>puppuyə</i>	'hoopoe'

A few loanwords that have not been morphologically adapted in the singular, i.e. that do not end in *-a* or *-ta*, have plural endings other than *-ə*, e.g.

<i>jol</i> f.	<i>jolavatə, jolalə</i>	'pool, pond'
<i>nino</i> f.	<i>ninavata</i>	'chicken-roost'
<i>+čalə</i> f.	<i>+čalavatə</i>	'hole'

<i>jabbani</i> f.	<i>jabbanyatə</i>	'cook (woman)'
<i>çəččə</i> f.	<i>çəččənyatə</i>	'lass'
<i>puþþu</i> f.	<i>puþþunyatə</i>	'hoopoe'
<i>+zallu</i> f.	<i>+zallunyatə</i>	'leech'

All of these are of feminine gender. The plurals of *nina* and *+čala* have been formed by analogy with native nouns ending in *-ə* that take the plural ending *-avatə*, e.g. *'urə*, *'uravatə* 'manger' (§ 5.13.7.). The plural of the loanwords ending in *-u* have been formed by analogy with the plurals of native words ending in *-u*, e.g. *calu*, *calunyata* 'bride' (§ 5.13.5.2.). This is probably the background also of the plural ending of *çəččə*.

When other types of suffixes are added to the singular forms of loanwords, the same processes take place as have been described for the affixation of the plural suffix, e.g.

<i>cardak</i>	'shed'	<i>cardaku</i>	'his shed' (Azeri çardaq)
<i>kəppəl</i>	'lock'	<i>kəppilu</i>	'his lock' (Azeri qfil)
<i>bəznəs</i>	'business'	<i>bəznisu</i>	'his business' (Eng. business)
<i>kəssat</i>	'story'	<i>kəssattu</i>	'his story story'

#### 5.14 Annexation of Nouns

One nominal may be annexed to another in a genitive relationship by attaching the ending *-ət* to the head noun. The particle *-ət* replaces the final inflectional vowel, e.g.

*beta* 'house' + *malca* 'king'  
*betət malca* 'the house of the king'

In origin this ending is the genitive particle *d* of earlier Aramaic preceded, it seems, by a fossilized form of an archaic proleptic 3ms suffix *-ə* (< \**bētēh d-malkā* 'his house—of the king').<sup>2</sup> The *d* has become devoiced by the usual process of word-final devoicing (§ 1.6.). A fossilized vestige of the archaic 3ms pronoun *-ə* is found elsewhere, e.g. in the phrase *xa paljə* 'one its half' = 'one and a half' and in the quantifier *culla* 'all (of it)'.

<sup>2</sup> Cf. the remarks of Nöldeke (1865, 149) and Tsereteli (1965a, 230).

When the ending *-at* is attached to nouns, it is treated like an inflectional affix analogous in morphological status to that of pronominal suffixes. This can be seen, for example, in nouns ending in *-u* (§ 5.7.), in that they replace the ending *-u* by the ending *-unt-* before both the annexation element and pronominal suffixes:

<i>+kaₜu</i>	'cat'
<i>+kaₜuntu</i>	'his cat'
<i>+kantuntat malca</i>	'the cat of the king'

Nevertheless, the ending *-at* behaves in some other respects like an enclitic. The ending operates at the level of a noun phrase rather than of a word. It occurs at the right periphery of a noun phrase, unlike pronominal suffixes, which are restricted to the domain of the word. It has a greater freedom of host selection than pronominal suffixes, in that it can be attached to adjectives as well as to nouns. This is seen in the following examples:

<i>betat malca</i>	'the house of the king'
<i>betu</i>	'his house'
<i>beta surat malca</i>	'the small house of the king'
<i>betu sura</i>	'his small house'
<i>beta 'u-susat malca</i>	'the house and the horse of the king'
<i>betu 'u-susu</i>	'his house and his horse'

The ending is not always a bound form, but rather may also be a free form that can be detached from the head noun. In such cases the particle has the form *'at-* with an initial /', e.g.

*beta 'at-malca* 'the house of the king'

If there is a hesitation between the head noun and the annexed noun, the annexation particle is separated from the head noun by an intonation group boundary and attached to the annexed noun, e.g.

*+arabàna| 'at-suysavàtə| 'a carriage of horses' (A 1:38)*

The annexation element can be placed after a pronominal suffix, e.g.

<i>'isakta</i>	'ring'
<i>'isaktu</i>	'his ring'
<i>'isaktu-t dava</i>	'his ring of gold'

These features of behaviour are analogous to enclitic elements such as the copula, e.g.

<i>bètələ </i>	'It is a house'
<i>béta sùrələ </i>	'It is a small house'
<i>béta 'u-sùsənə </i>	'They are a house and a horse'
<i>bábu 'ilə +tājər </i>	'His father is a merchant'
<i>betu=la</i>	'It is his house'

In the case of the free-standing forms *'at* and *'ilə*, these can be considered to be cliticized at an underlying level to a zero pronominal element, thus:

*beta Øat malca* > *béta 'at-málca*  
 'house that-of the-king'

*babi Øilə +tajər* > *bábi 'ilə +tájər*  
 my-father he-is merchant

The /' / would be added at a phonetic level to fill the zero onset of the syllable (§ 1.14.). Evidence for such an analysis of *'at* is the devoiced /t/, which reflects that it is interpreted as a word-final element (*Øat*) rather than a prefix of the following word.

The behaviour of the annexation suffix at word-level, however, presents some difficulties with this analysis. As we have seen, when it is attached to words such as *+kaṭu* 'cat', the word has a different morphological shape, which is equivalent to the shape it has before pronominal suffixes. This is not the case when the enclitic copula is attached:

<i>+kaṭu</i>	'cat'
<i>+kaṭuntat malca</i>	'the cat of the king'
<i>+kaṭu-la</i>	'it is a cat'

When the word *+kaṭu*, however, is followed by additional material in the noun phrase, then it does not change its morphological shape, e.g.

*+kaṭu surtat malca* 'the small cat of the king'

Similarly loanwords ending in a consonant without the Aramaic inflection suffix *-a*, such as *+sárbaz* 'soldier', behave differently with the annexation ending and with the enclitic copula, in that the annexation ending is taken into

account by the stress, as are pronominal suffixes, but the copula is ignored in stress placement. When the annexation ending is added, moreover, the word-final devoicing is cancelled, whereas it is retained when a copula is added:

<sup>+</sup> sárbaž	[s <sup>ə</sup> a <sup>ə</sup> r <sup>ə</sup> b <sup>ə</sup> a <sup>ə</sup> s <sup>ə</sup> ]	'soldier'
<sup>+</sup> sárbaž-ilə	[s <sup>ə</sup> a <sup>ə</sup> r <sup>ə</sup> b <sup>ə</sup> a <sup>ə</sup> s <sup>ə</sup> l <sup>ə</sup> ə]	'he is a soldier'
<sup>+</sup> sarbázu	[s <sup>ə</sup> a <sup>ə</sup> r <sup>ə</sup> b <sup>ə</sup> a <sup>ə</sup> z <sup>ə</sup> u <sup>ə</sup> ]	'his soldier'
<sup>+</sup> sarbázət málca	[s <sup>ə</sup> a <sup>ə</sup> r <sup>ə</sup> b <sup>ə</sup> a <sup>ə</sup> z <sup>ə</sup> t <sup>ə</sup> ]	'the soldier of the king'

When, however, the word does not occur at the right periphery of the noun phrase, it retains its original shape, e.g.

<sup>+</sup>sárbaž [s<sup>ə</sup>a<sup>ə</sup>r<sup>ə</sup>b<sup>ə</sup>a<sup>ə</sup>s<sup>ə</sup>] *xelánət málca* 'the strong soldier of the king'

It also retains its original shape if the annexation element is detached from it, e.g.

<sup>+</sup>sárbaž [s<sup>ə</sup>a<sup>ə</sup>r<sup>ə</sup>b<sup>ə</sup>a<sup>ə</sup>s<sup>ə</sup>] *ət-málca* 'the soldier of the king'

This suggests that forms such as <sup>+</sup>katuntət and <sup>+</sup>sarbazət have the status of alloforms of the words <sup>+</sup>katu and <sup>+</sup>sarbaz with inflectional endings rather than forms that have been created by combining the independent form with an external enclitic element.

If the annexation ending is attached to the end of loanwords that are not phonologically integrated, the devoicing of a final consonant remains, e.g.

<sup>P</sup>darāmàd<sup>P-ət̪l̪</sup> [dara:<sup>ə</sup>math<sup>ɪθl̪</sup>] <sup>+ət̪ra</sup> 'the income of the land' (A 3:84)

The same applies, however, also to the attachment of a pronominal suffix to such loanwords, in that the devoicing remains, e.g.

<sup>P</sup>darāmàd<sup>P-ət̪o</sup> [dara:<sup>ə</sup>mat<sup>h</sup>o:] 'its (fs.) income'

This shows that alloforms with inflectional endings can only exist for phonologically integrated words. If the word is not phonologically integrated, all suffixes, including even pronominal suffixes, have the status of enclitics that are external to the word boundary reflected by the devoicing rule.

Occasionally also loanwords that have been phonologically adapted but without an Aramaic inflection ending treat the annexation ending as an enclitic, e.g.

- cómur* ‘coal’  
*cómur=ət késa* ‘coal of wood (charcoal)’

In such cases, where the stress is two syllables back from the annexation ending, the /ə/ of the ending is often elided:

*cómur=t késa*

If the annexation ending is placed on an adjective at the right periphery of a noun phrase, the stress placement on the adjective indicates that the ending is treated like an enclitic. This is seen, for example, when the adjective is a loanword ending in a consonant, in that the stress does not change position when the annexation ending is attached, e.g.

- béta támmaz* ‘clean house’  
*béta támmaz ’ət-yómmi* ‘the clean house of my mother’  
*béta támmaz-ət yámmi* ‘the clean house of my mother’

When the ending is attached to an adjective in this way, the /ə/ is often elided:

*béta támmaz=t yámmi.*

When a noun occurs at the right periphery of a noun phrase, however, this has an inflected annexation alloform, unless the annexation element is separated:

- +kássab ’u-+sárbaž* ‘the butcher and the soldier’  
*+kássab ’u-+sárbaž ’ət-málca* ‘the butcher and the soldier of the king’  
*+kássab ’u-+sarbázət málca* ‘the butcher and the soldier of the king’

The annexation particle is attached to pronominal heads, e.g.

- ’ō=t babi* ‘the one (m.) of my father’ (’ō + ət)  
*’ē=t babi* ‘the one (f.) of my father’ (’ē + ət)  
*’an=ət babi* ‘the ones of my father’ (’an + ət)

In such cases the annexation appears to be a clitic. This is reflected by the fact that the /a/ vowel of *’an=ət* remains short and the syllabification ignores the clitic. In fast speech this is often shortened to *’an=t*. This should be contrasted with annexation allomorphs such as *+sarbázət* in which the /a/ is lengthened.

The long vowel in *'ō=t* and *'ē=t* can likewise be explained by the fact that the syllabification ignores the clitic and treats the syllable as open.

An annexation particle is also used with some adverbial expressions and prepositions to connect them to a following noun. In such cases inflected alloforms are in free variation with invariable forms with an enclitic form of the annexation element, e.g.

*+ullul* 'above', *'ältəx* 'below'

*+ulliylat beta* ~ *+ullul-at beta* 'above the house'  
*'ältixat beta* ~ *'ältəx-at beta* 'below the house'

Hybrid forms are occasionally heard, such as *xatárət* 'for the sake of', in which the stress shifts to the penultimate syllable but the vowel is not lengthened.

In sum, there is evidence that *-at* has been reanalysed as an enclitic, which has a greater freedom of movement than inflectional suffixes, but nouns have annexation allomorphs in which the annexation element is treated like an inflectional suffix, with the same status as a pronominal suffix. One can say that the annexation ending exhibits a greater degree of morphological integration with nouns than with other categories, in that it has the status of an inflectional suffix in nouns but behaves as an enclitic elsewhere. Based on the data presented above, the degree of grammatical integration can be represented in the form of the following cline:

Noun > Adverb > Adjective

Pronouns do not behave like nouns in this respect, since the phonology of forms like *'ō=t*, *'ē=t* and *'an-at* indicates that the annexation particle has clitic status.

The historical genitive particle *d* retains its voice before demonstrative pronouns, the reciprocal pronoun, some interrogative particles and sporadically before the annexation particle *'at*, e.g.

<i>+dav</i>	'of him' ( <i>d + +av</i> )
<i>day</i>	'of her' ( <i>d + ay</i> )
<i>do naša</i>	'that man' ( <i>d + o</i> )
<i>+duydalə</i>	'of each other' ( <i>d + +uydalə</i> )
<i>dəm-'urxa</i>	'of which road' ( <i>d + əm</i> )
<i>datxa 'urxa</i>	'of such a road' ( <i>d + atxa</i> )
<i>hal diman</i>	'until when' ( <i>d + iman</i> )
<i>+al-dət-'arpi</i>	'at the fortieth' ( <i>d + 'at</i> )

There are arguments for regarding this *d* element as a grammaticalized component of the word rather than a proclitic (see §1.15.2. for the phonological arguments). For this reason they are written without a connecting hyphen. When these forms follow a head noun, the head noun still has the *-at* ending, e.g.

<i>betət +dav</i>	'his house'
<i>betət do naša</i>	'the house of that man'
<i>betət +duydalə</i>	'the house of each other'
<i>betət dəm-naša?</i>	'the house of which man?'

The *d* cannot, therefore, be identified as a variant form of the *-at* ending, but rather the two are independent phenomena. The *d* element is also found in the independent genitive particle *diyy-* (§ 2.4.). When this is placed after a head noun, the head noun, likewise, takes the *-at* ending,<sup>3</sup> e.g.

*betət diyyu* 'his house'

The forms with initial *d* such as *+dav* and *diyyu* should, therefore, be considered to have the status of oblique pronominal forms and not phrases consisting a genitive particle and pronoun. Another factor that has brought about these constructions is likely to be that the head *betət* has acquired the status of an alloform of *beta* rather than being analysed as a phrase consisting of the noun + genitive particle. One should identify, therefore, a nominative and an oblique series of pronouns and particles, thus (the list here is not exhaustive):

Nominative	Oblique	
<i>'aha</i>	<i>daha</i>	'this'
<i>+avva</i>	<i>+davva</i>	'that (deictic)'
<i>+av</i>	<i>+dav</i>	'that (anaphoric)'
<i>'ana</i>	<i>diyyi</i>	is
<i>'at</i>	<i>diyyux</i>	2ms
<i>+uydalə</i>	<i>+duydalə</i>	reciprocal
<i>'atxa</i>	<i>datxa</i>	'thus'

<sup>3</sup> The occurrence of an annexation morpheme before the genitive particle or before demonstratives with an initial *d-* is not found in the literary form of C. Urmi, either in Syriac script (Nöldeke 1868, 278) or in the New Alphabet (Marogulov 1976, 40–42). In the copies of New Alphabet texts made by Cerulli occasion spellings of the genitive particle with intial geminated *d* are found, e.g. is. *ddiyyij* (Pennacchietti and Tosco 1991, 27).

**Nominative      Oblique**

'əm	<i>dəm</i>	'which'
'ət	<i>dət</i>	'annexation particle'
'iman	<i>diman</i>	'when'

Occasionally one hears forms such as *beta +dav* and *beta diyyu*, without the *-at* ending. These may be the result of influence from the literary language, in which they are the norm.

A voiced /d/ is also found before numerals *tre* 'two' and *+tla* 'three' to express an ordinal number, e.g.

'o-naša d-tre ~ 'o-našət d-tre	'the second man'
'o-naša d-+tla ~ 'o-našət d-+tla	'the third man'
<i>brunu d-tre ~ brunu-t d-tre</i>	'his second son'
<i>brunu d-+tla ~ brunu-t d-+tla</i>	'his third son'

This /d/ is pronounced with a following epenthetic: [dr'tre:], [də'təl'a:s]. It is found only before these two numerals and seems to be a strategy to resolve the clash of the initial homorganic consonants of the annexation suffix and the onset of the numeral. This may have developed by an anomalous preservation of the original genitive *d-* prefix before the dependent numeral to perform this function. It is problematic to compare this to the oblique forms of demonstratives and interrogatives, since the /d/ is not used with other numerals (§ 7.2.). An additional /d/ is occasionally found elsewhere in places where the element *-at* is followed by a word beginning with /d/, e.g. *+xórət d-dvàklun* 'friend that they caught' (B 9:4).

The oblique form of the annexation particle is found sporadically in contexts where a head noun has been gapped and the remaining phrase is the complement of a preposition, e.g.

- (1) 'íp 'ón 'íva máx dát xīnə, | məššəlmànə, | 'ína 'íva +rába búš šáþərtə. | 'Al-though it was like that of the others, the Muslims, it was much more beautiful.' (B 1:40)
- (2) '+al-dət-'ärpi! mārrə 'ána xína šurštyyən. | 'At the fortieth (door) he said "Well I am tired." (A 42:9)

The *-at* ending is often elided in fast speech, especially if the following word begins with a consonant. In some cases it is completely lost. This tends to be restricted to some closely knit phrases, especially kinship relationships, e.g.

*brūn-xātu* ‘the son of his sister’ (A 3:7) < *brunət xatu*  
*brāt-málca* ‘the daughter of the king’ (A 34:3) < *bratət malca*  
*bax-+tājər* ‘the wife of the merchant’ (A 1:12) < *baxtət +tajər*  
*šəmšə-+sara* ‘moonlight’ < *šəmšət +sara* (‘the sun of the moon’)  
*kəštə-+maran* ‘rainbow’ < *+kəštət +maran* (‘the bow of our Lord’)

In cases such as these, the full form of the head noun (*brunət*, *bratət*, *baxtət*, etc.) is also possible. The forms *brūn* and *brāt* are formed by removing the *-ət* without shortening the vowel and the word can be regarded as having its full form *brunət* at an underlying level (§ 1.15.2.). The forms that end in consonantal clusters after the removal of the *-ət* resolve the cluster either by eliding the final consonant (*bax-* < *baxt-*) or by adding a final epenthetic (*šəmšə-* < *šəmš-*, *kəštə-* < *kəšt*).

### 5.15 Compound Nouns

In some cases a tightly knit phrase becomes grammaticalized into a fixed compound, the components of which are inseparable. Most such constructions are annexation phrases. The initial element of such compounds fall into various categories:

Historical derivatives of *\*bar* ‘son of’

- +bar-miyya* m. ‘small water plant’
- +bar-našə* m. (pl. *+bar-našə*) ‘son of man’ = ‘person, man’
- +bar-zoja* ‘son of couple’ = ‘partner’ (m. or f.)
- +bər-+zarra*, *+bar-+zarra* m. (pl. *+bər-+zarrə*, *+bar-+zarrə*) ‘son of seed’ = ‘seed’
- +bər-calba* (pl. *+bər-calbə*) ‘son of a dog (abusive)’

Historical derivatives of *\*brat* ‘daughter of’

- bra-’akulta* f. ‘daughter of trip’ = ‘trip, stumbling block’
- bra-dora* m. (pl. *bra-dorə*) ‘daughter of lock’ = ‘lock’
- bra-’ida* f. (pl. *bra-’idə*) ‘daughter of hand’ = ‘glove’
- bra-kala* m. (pl. *bra-kalə*) ‘daughter of voice’ = ‘echo’
- bra-kənna* f. (pl. *bra-kənnatə*) ‘daughter of nest’ = ‘egg put in nest to induce hen to lay’
- bra-kulta* f. (pl. *bra-kulyatə*) ‘daughter of trap’ = ‘trap’
- +bra-+jurta* f. (pl. *+bra-+juryatə*) ‘daughter of urine’ = ‘bladder’

<sup>+</sup>*bra-**'ayna* f. 'daughter of eyes' = 'spectacles'

<sup>+</sup>*bra-**sup̪pa* f. (pl. <sup>+</sup>*bra-**sup̪pə*) 'daughter of finger' = 'thimble'

Historical derivative of <sup>\*</sup>*m-bnay* 'from the sons of'

*bne-kyama* m. (pl. *bne-kyamə*) 'from the sons of treaty' = 'ally'

Historical derivatives of <sup>\*</sup>*baytā d-* or <sup>\*</sup>*bē* 'house of'

*bət-josa* m. (pl. *bət-josə*) 'house of refuge' = 'refuge, shelter'

*bət-yalda* m. 'house of birth' = 'birthday'

*bət-<sup>+</sup>kuyra* m. (pl. *bət-<sup>+</sup>kuyravatə*) 'house of grave' = 'grave' (pl. 'cemetery')

*bə-dyuyta*, *ba-dyuyta* f. 'house of ink' = 'inkwell', 'ink' (originally inkwell)

*bi-nisana* m. 'house of Spring' = 'Spring'

*bi-savuni*/<sup>+</sup>*mamuni* 'the family of my grandfather/uncle, etc.'

*pi-palja* m. 'house of half' = 'middle'

Historical derivatives of active participles in the construct state

*fanva-nuyna* n.f. (pl. *fanva-nuyna*) 'stealer of fish' = 'kingfisher'

*kalya-<sup>+</sup>dašə* f. 'cooker of stones' (Azer. daş) = 'liquid added to boiling water used to make *savzə* (blanched grapes)'

*mandi-<sup>+</sup>təztu* f. 'throwing anus' = 'a bird that throws its behind upwards'

*parxa-lelə* f. (pl. *parxa-lelə*) 'flyer of the night' = 'bat'

*xasra-kənna* f. 'decreasing the nest' = 'last hatched in the nest, last born in a family'

<sup>+</sup>*axəl məndiyə* m., <sup>+</sup>*axla məndiyə* f. 'eater of things' = 'somebody who eats another out of house and home'

<sup>+</sup>*azla-cušə* f. (pl. <sup>+</sup>*azla-cušə*, <sup>+</sup>*azla-cušiyə*) 'weaver of webs' = 'spider'

<sup>+</sup>*bazza-jozə* f. (pl. <sup>+</sup>*bazza-jozə*) 'borer of nuts' = 'type of bird that eats nuts'

<sup>+</sup>*bazza-kesə* f. (pl. <sup>+</sup>*bazza-kesə*) 'borer of wood' = 'woodpecker'

<sup>+</sup>*karṭa-<sup>+</sup>kuyṭə* f. 'biter of vulvas' = 'red biting insect'

<sup>+</sup>*mamṭiyə-məšməšə* f. (pl. <sup>+</sup>*mamṭiyə-məšməšə*) 'ripener of apricots' = 'coloured beetle that indicated when apricots were ripe'

<sup>+</sup>*naṭər-cursi* m. (fs. <sup>+</sup>*naṭrat-cursi*) 'guarder of throne' = 'successor of a throne'

<sup>+</sup>*samṭa-manə* f. (pl. <sup>+</sup>*samṭa-manə*) 'breaker of pots' = 'type of herb'

<sup>+</sup>*xalla-manə* f. (pl. <sup>+</sup>*xalla-maniyə*) 'washer of vessels' = 'dish cloth'

<sup>+</sup>*zakra-<sup>+</sup>bəzzazə* f. 'weaver of holes' = 'name of a game'

<sup>+</sup>*zakra-jardə* f. (pl. <sup>+</sup>*zakra-jardə*) 'weaver of webs' = 'spider'

### Other initial elements of annexation phrases

- <sup>+</sup>*xvār-dəkna* m. (pl. <sup>+</sup>*xvār-dəknə*) ‘white of bear’ = ‘old man’  
<sup>+</sup>*xa-*<sup>+</sup>*ramša* f. (pl. <sup>+</sup>*xa-*<sup>+</sup>*ramšanə*) ‘food (< <sup>+</sup>*xalət*) of evening’ = ‘dinner’  
*riš-*<sup>+</sup>*šīta* f. ‘head of year’ (*rišət šīta*) = ‘New Year’  
<sup>+</sup>*ful-maxə* pl. tantum ‘clothes of bedding’ (< *fullət dmaxa*) = ‘bedding’

### Juxtaposition of elements

- <sup>+</sup>*ʃəl-xaymə* pl. tantum ‘herb hot’ (< *ʃəlla-xaymə*) ‘mixture of spicy herbs’  
<sup>+</sup>*jarda-kuti* f. (pl. *jarda-kutiyə*) ‘net spider-web’ = ‘cobweb’  
<sup>+</sup>*kattə-*<sup>+</sup>*balla* f. (pl. <sup>+</sup>*kattə-*<sup>+</sup>*ballə*) ‘disaster disaster’ (Azer. *qada-bala* < Arab.)  
= ‘calamity’  
<sup>+</sup>*xalsa-*<sup>+</sup>*xalsu* f. ‘crushing crushing’ = ‘crush, crowd’

### Numerical as initial element

- <sup>'</sup>*ar̪pi-*<sup>+</sup>*aklə* f. (pl. <sup>'</sup>*ar̪pi-*<sup>+</sup>*aklə*) ‘forty legs’ = ‘centipede’  
<sup>'</sup>*alpa-*<sup>+</sup>*aklə* f. (pl. <sup>'</sup>*alpa-*<sup>+</sup>*aklə*) ‘thousand legs’ = ‘millipede’

In the case of *bət-*<sup>+</sup>*kuyra* and *bət-yalda* an original long vowel in a closed syllable is shortened (*bətət* > *bēt* > *bət*). These can be regarded as contracted at an underlying level unlike contracted heads of annexation constructions such as *brūn*, which are uncontracted at an underlying level (§ 1.15.2.). In <sup>+</sup>*xvār-dəkna* (< <sup>+</sup>*xvarət-dəknə*), however, the vowel is long.

In several cases the initial element is a vestige of the Aramaic construct case of a noun, e.g. <sup>+</sup>*bar* ‘son of’, *bra* < \**brat* ‘daughter of’, *bi*, *pi*, *ba* < \**bē* < \**bēt* ‘house of’. The active participles ending in *-a* derive historically from fs. construct forms, e.g. <sup>+</sup>*zakra* < \**zāqrat* ‘spinner (f.)’, <sup>+</sup>*šamṭa* < \**šāmṭat* ‘breaker’. Other participles derive from the ms. construct, e.g. <sup>+</sup>*naṭər*.

The meaning of the first element has become opaque in some cases. This applies in particular to the elements, <sup>+</sup>*bar*/<sup>+</sup>*bər*, <sup>+</sup>*bra* and *bət/bi*. This has resulted in semantic developments such as the use of *bə-**dyuyta* to refer to ‘ink’ as well as ‘inkwell’, and the use of <sup>+</sup>*bar*/<sup>+</sup>*bər*, <sup>+</sup>*bra* with inanimate objects.

Plural suffixes are added only to the final element of the compound. This applies both to compounds that have a singular and plural (e.g. *bət-*<sup>+</sup>*kuyra* ‘grave’, *bət-*<sup>+</sup>*kuyravata* ‘graves’; <sup>+</sup>*kattə-*<sup>+</sup>*balla* ‘calamity’, <sup>+</sup>*kattə-*<sup>+</sup>*ballə* ‘calamities’) and those that are pluralia tantum (e.g. *ful-maxə* ‘bedding’). It applies even to compounds consisting of noun + adjective as seen in *ʃəl-xaymə*, where the noun is singular but the adjective plural. In slow speech this is pronounced

*jølla-xaymə*. In the compounds with participles the second element is often a plural form, e.g. *janva-nuyna* 'kingfisher'. In most cases such compounds function as either singulars or plurals. Occasionally, however, speakers form a plural by adding an additional plural ending -ə, e.g. *+xalla-mana* 'dish cloth', *+xalla-maniyya* 'dish cloths'. The attachment of the plural ending to the second noun only is occasionally found in annexation phrases in which the dependent component is generic, e.g. *+otájət dmaxyàtəl* (B 1:41) 'bedrooms' (sing. *+otağət dmaxta*).

In cases where the two components of the compound have different genders, the gender of the compound is sometimes that of the final item, e.g. *rəš-šita* f. < *riša* m. + *šita* f., *bə-dyuyta* f. < *beta* m. + *dyuyta* f., *bra-ķala* m. < *brata* f. + *ķala* m. In other cases the gender of the compound is that of the initial element, e.g. *bət-+kuyra* m. < *beta* m. + *+kora* f. It appears that the second element controls the gender when the meaning of the first element is opaque. Compounds consisting of participles take their gender from the participle, e.g. *+natər-cursi*, m. *+azla-cušə* f. The meaning of the participle is always transparent. Compounds with initial numerals are feminine, e.g. *'arpi-'aklə* f.

As shown in §1.5.2., in most cases the two components constitute separate domains of emphasis when there is emphasis in the phrase. The component *bra*, however, is in the same domain of emphasis as the following word, and so is joined to it in the transcription by a double hyphen.

In the category of compound nouns should be included the names of the days of the week (§1.5.2., §7.4.), e.g.

*+tló-šiba* m. (pl. *+tlō-šibánə*) ‘three in the week’ = ‘Tuesday’

According to Haspelmath (2002, 156) a dependent noun in compounds cannot be referential but must be generic. In a compound such as *bra-’ida* f. ‘glove’ (literally ‘daughter of hand’), for example, the noun ‘hand’ never refers to a specific hand, even when a pronominal possessive suffix is added, e.g. *bra-’idi* ‘my glove’. Following this principle, several tightly-knit constructions that *prima facie* may seem to be compounds, should be considered rather to be phrases of discrete items. This applies, for example, to the phrases

*šəmšə-+sara* ‘moonlight’  
*ķəštə-+maran* ‘rainbow’

Here the dependent noun has a specific referent and so the phrases should be considered to be contracted annexation constructions (< *šəmšət +sara* ‘the sun of the moon’, *ķəštət +maran* ‘the bow of our Lord’). The same applies to kinship terms such as the following:

<i>bax-</i>	<i>+mamuna</i>	'wife of paternal uncle'
<i>bax-</i>	<i>+xaluvva</i>	'wife of maternal uncle'
<i>bax-</i>	<i>‘axuna</i>	'wife of brother'
<i>bax-</i>	<i>baba</i>	'step-mother'

The initial item *bax-* is a reduced form of *baxtat* 'wife of'. Although phonetic reduction is a feature of the first component of compounds, the dependent nouns in these expressions can be referential, e.g. *bax-*<sup>+</sup>*mamuni*, in which <sup>+</sup>*mamuni* would refer to a specific referent. The gender of such expressions is that of the head noun. Nevertheless, when these phrases are pluralized, the plural ending is placed on the second component only, which is a feature of compounds, e.g.

*bax-*<sup>+</sup>*mamuna* (sing.)    *bax-*<sup>+</sup>*mamunvata* (pl.)    'wife of paternal uncle'

There are also problems with including some phrases with the plural form *bne* 'sons of' (§ 5.9.7.) as the first element among compounds, e.g.

*bne-naša* 'sons of man' = 'people'  
*bne-*<sup>+</sup>*atra* 'sons of land' = 'natives of the land'

The form *bne* is derived from a historical construct form (\**bnay*), which, as we have seen, is a feature of some compounds. In true compounds, however, the plural is formed by inflecting the second item with a plural morpheme. The second element in the phrase *bne-*<sup>+</sup>*atra* is referential, e.g. *bne-*<sup>+</sup>*atri* 'natives of my land'. Other phrases with *bne-* exhibit different features. The number of the phrase *bne-kyama* ms. (pl. *bne-kyamə*) is marked on the second element, as is normal in compounds. The initial *bne* here has no bearing on number. This applies also to phrases such as *bne-*<sup>+</sup>*Urmi*, which can be singular or plural (§ 5.9.7.). In both these cases the *bne* may be derived historically from \**m-bnē* 'from the sons of'.

# Adjectives

## 6.1 Preliminary Remarks

Adjectives of Aramaic stock and loanwords that have been adapted to Aramaic morphology are inflected for gender and number. In addition to the basic masculine singular form they are inflected for the feminine singular and the plural. The plural forms are inflected only with the *-ə* suffix, which is the most productive plural morpheme.

Adjectives are closely related morphologically to nouns and most can, indeed, stand independently and function as nouns, in which case they become referential rather than attributive expressions. When they are used referentially, they generally require a pronominal head (§ 9.6.1.).

## 6.2 Adjectival Patterns

### 6.2.1 CaCa (ms.), CaCta (fs.), CaCə (pl.)

<i>xata</i>	'new'	<i>xatta</i> (fs.)	<i>xatə</i> (pl.)
<i>+rama</i>	'high'	<i>+ramta</i> (fs.)	<i>+ramə</i> (pl.)

### 6.2.2 Cava (ms.), Cota (fs.), Cavə (pl.)

<i>sava</i>	'old'	<i>sota</i> (fs.)	<i>savə</i> (pl.)
-------------	-------	-------------------	-------------------

### 6.2.3 Caya (ms.), Ceta (fs.), Cayə (pl.)

<i>naya</i>	'raw'	<i>neta</i> (fs.)	<i>nayə</i> (pl.)
<i>xaya</i>	'alive'	<i>xeta</i> (fs.)	<i>xayə</i> (pl.)
<i>+saya</i>	'thirsty'	<i>+seta</i> (fs.)	<i>+sayə</i> (pl.)

### 6.2.4 CuCa (ms.), CuCta (fs.), CuCə (pl.)

<i>cuma</i>	'black'	<i>cumta</i> (fs.)	<i>cumə</i> (pl.)
<i>sura</i>	'small'	<i>surta</i> (fs.)	<i>surə</i> (pl.)
<i>+jura</i>	'big'	<i>+jurta</i> (fs.)	<i>+jurə</i> (pl.)

The /t/ of the feminine ending of the adjective *sura* ‘small’ has shifted to the tense /ʃ/ through a process of diminutive sound symbolism (§ 1.10.).

### 6.2.5 CayCa (*ms.*), CaCta (*fs.*), CayCə (*pl.*)

<i>dayka</i>	‘thin’	<i>dakta</i> (fs.)	<i>daykə</i> (pl.)
<i>payxa</i>	‘cool’	<i>paxta</i> (fs.)	<i>payxə</i> (pl.)
<i>tayla</i>	‘wet’	<i>talta</i> (fs.)	<i>tayla</i> (pl.)
+ <i>kayra</i>	‘cold’	+ <i>karta</i> (fs.)	+ <i>kayrə</i> (pl.)
+ <i>mayra</i>	‘bitter’	+ <i>marta</i> (fs.)	+ <i>mayrə</i> (pl.)

Most of these forms are derived historically from the pattern \*CaCiCa with identical second and third radicals, e.g. *dayka* < \*daqīqa. The first of the two identical consonants shifted to zero Ø, presumably by a dissimilation process, then the /i/ was syllabified with the preceding syllable since it could not constitute a syllable nucleus itself without an onset:

\*daqīqa > \*daØiqa > dákta

In the feminine form the medial vowel coalesced with the preceding /a/:

\*daqəqta > \*daØəqta > dákta

The adjective *payxa* ‘cool’, on the other hand, is derived from a middle /y/ root *p-y-x*. This may have arisen through the commutability of /y/ and Ø in weak roots (§ 4.10.3.) and by the application of the mapping of the variant root *p-Ø-y* onto the pattern CaCiCa, thus *paØixa* > *payxa*.

### 6.2.6 CCaCa, *fs.* CCaCta, *pl.* CCaCə

+ <i>xvara</i>	‘white’	+ <i>xvarta</i> (fs.)	+ <i>xvarə</i> (pl.)
----------------	---------	-----------------------	----------------------

### 6.2.7 CCuCa (*ms.*), CCuCta (*fs.*), CCuCə (*pl.*)

<i>flula</i>	‘round’	<i>flulta</i> (fs.)	<i>flulə</i> (pl.)
<i>ptuxa</i>	‘open’	<i>ptuxta</i> (fs.)	<i>ptuxə</i> (pl.)
<i>smuka</i>	‘red’	<i>smukta</i> (fs.)	<i>smukə</i> (pl.)
+ <i>płtuxa</i>	‘flat’	+ <i>płtuxta</i> (fs.)	+ <i>płtuxə</i> (pl.)
+ <i>trusa</i>	‘true’	+ <i>trusta</i> (fs.)	+ <i>trusə</i> (pl.)

### 6.2.8 CCiCa (ms.), CCəCta (fs.), CCiCə (pl.)

This is the pattern of the resultative participle of pattern I verbs and can be used productively to create attributive expressions from verbal roots that express events with an affectee that undergoes a change in configurational state (§ 4.25.1.1.). In the case of transitive verbal roots, the form has a passive sense.

<i>cpina</i>	'hungry'	<i>cpənta</i> (fs.)	<i>cpinə</i> (pl.)
<i>briza</i>	'dry'	<i>brəzta</i> (fs.)	<i>brizə</i> (pl.)
<i>xmiķa</i>	'putrid'	<i>xməkta</i> (fs.)	<i>xmiķə</i> (pl.)
<i>txina</i>	'ground'	<i>txənta</i> (fs.)	<i>txinə</i> (pl.)
<i>+xlima</i>	'thick'	<i>+xləmta</i> (fs.)	<i>+xlimə</i> (pl.)

In a few cases an adjective is used with this pattern but no pattern I verb exists. This applies, for example, to *nxila* 'sieved'. There is no pattern I verb *naxəl*, but only a pattern III form *manxəl* 'to sieve'. The adjective *criva* 'ploughed' is a vestige of the historical root \**k-r-b* 'to plough', which was used in Syriac, but in other inflections 'to plough' is now expressed by the phrasal verbs *ptana* 'avəd I and *cuytan* 'avəd I.

### 6.2.9 CiCa (ms.), CəCta (fs.), CiCə (pl.)

This is the pattern of resultative participles from pattern I middle /y/, middle /Ø/ and initial /Ø/ roots. As with *CCiCa*, it is used adjectivally when the verb involves an affectee that undergoes a change in configurational state:

<i>mita</i>	'dead'	<i>mətta</i> (fs.)	<i>mitə</i> (pl.)
<i>kida</i>	'burnt'	<i>kətta</i> (fs.)	<i>kidə</i> (pl.)
<i>kiša</i>	'cool'	<i>kəšta</i> (fs.)	<i>kišə</i> (pl.)
<i>siva</i>	'old'	<i>səvta</i> (fs.)	<i>sivə</i> (pl.)

There are also some adjectives with this pattern that are not resultative participles in origin, although in some cases there may be a verbal root associated with them that has been formed secondarily. These adjectives include:

<i>mila</i>	'blue'	<i>məlta</i> (fs.)	<i>milə</i> (pl.)
<i>kina</i>	'green'	<i>kənta</i> (fs.)	<i>kinə</i> (pl.)

### 6.2.10 Cuya (ms.), Cvita (fs.), Cuyə (pl.)

These are from middle /v/, final /y/ roots. The /v/ is contracted in the ms. and pl. forms:

<i>kuya</i>	'strong'	<i>kvita</i> (fs.)	<i>kuyə</i> (pl.)
<sup>+</sup> <i>suya</i>	'sated'	<sup>+</sup> <i>svita</i> (fs.)	<sup>+</sup> <i>suyə</i> (pl.)
<sup>+</sup> <i>tuya</i>	'concave'	<sup>+</sup> <i>tvita</i> (fs.)	<sup>+</sup> <i>tuyə</i> (pl.)

### 6.2.11 CəCya (ms.), CCita (fs.), CəCyə (pl.)

This is the pattern of resultative participles from pattern 1 final /y/ roots, which are used as adjectives when the verb has an affectee that undergoes a change of configurational state. In the ms. and pl. forms the original syllabification \*CCiya and \*CCiyə has been restructured.

<i>cərya</i>	'short'	<i>crita</i> (fs.)	<i>cəryə</i> (pl.)
<i>xədya</i>	'happy'	<i>xdita</i> (fs.)	<i>xədyə</i> (pl.)
<sup>+</sup> <i>mərya</i>	'ill'	<sup>+</sup> <i>mrita</i> (fs.)	<sup>+</sup> <i>məryə</i> (pl.)
<sup>+</sup> <i>pərya</i>	'abundant'	<sup>+</sup> <i>prita</i> (fs.)	<sup>+</sup> <i>pəryə</i> (pl.)
<sup>+</sup> <i>xəlyə</i>	'sweet'	<sup>+</sup> <i>xlita</i> (fs.)	<sup>+</sup> <i>xəlyə</i> (pl.)

### 6.2.12 CaCiCa (ms.), CaCəCta (fs.), CaCiCə (pl.)

<i>'atiķa</i>	'old'	<i>'atəkta</i> (fs.)	<i>'atiķə</i> (pl.)
<i>basima</i>	'well'	<i>basəmta</i> (fs.)	<i>basimə</i> (pl.)
<i>racixa</i>	'soft'	<i>racəxta</i> (fs.)	<i>racixa</i> (pl.)
<i>šamina</i>	'fertile'	<i>šamənta</i> (fs.)	<i>šaminə</i> (pl.)
<i>šapıra</i>	'beautiful'	<i>šapərta</i> (fs.)	<i>šapıra</i> (pl.)
<i>šaxina</i>	'hot'	<i>šaxənta</i> (fs.)	<i>šaxinə</i> (pl.)
<i>xamima</i>	'on heat'	<i>xaməmta</i> (fs.)	<i>xamimə</i> (pl.)
<sup>+</sup> <i>bajira</i>	'thin'	<sup>+</sup> <i>bajərta</i> (fs.)	<sup>+</sup> <i>bajirə</i> (pl.)
<sup>+</sup> <i>cašira</i>	'industrious'	<sup>+</sup> <i>cašərta</i> (fs.)	<sup>+</sup> <i>caširə</i> (pl.)
<sup>+</sup> <i>salila</i>	'sober'	<sup>+</sup> <i>salolta</i> (fs.)	<sup>+</sup> <i>salılıə</i> (pl.)
<sup>+</sup> <i>yarixa</i>	'long'	<sup>+</sup> <i>yarixa</i> (fs.)	<sup>+</sup> <i>yarixə</i> (pl.)

Most adjectives of this pattern have associated pattern 1 verbal roots. In such cases the resultative participle of the root (CCiCa) is not used adjectivally but only verbally in resultative perfect constructions, e.g. *rcixələ* 'he has become soft'. The adjective with the longer trisyllabic pattern CaCiCa expresses a time-stable stative property whereas the shorter resultative participle CCiCa expresses a dynamic process.

6.2.13 CaCuCa (*ms.*), CaCuCta (*fs.*), CaCuCə (*pl.*)

<i>caruba</i>	'angry'	<i>carubta</i> (fs.)	<i>carubə</i> (pl.)
<i>čaluja</i>	'greedy'	<i>čalujta</i> (fs.)	<i>čalujə</i> (pl.)
<i>javuja</i>	'agile'	<i>javujta</i> (fs.)	<i>javujə</i> (pl.)
<i>mayuta</i>	'mortal'	<i>mayutta</i> (fs.)	<i>mayutə</i> (pl.)
<i>naxupa</i>	'shy'	<i>naxupta</i> (fs.)	<i>naxupə</i> (pl.)
<i>payuxa</i>	'cool'	<i>payuxtta</i> (fs.)	<i>payuxə</i> (pl.)
+ <i>catura</i>	'difficult'	+ <i>caturta</i> (fs.)	+ <i>caturə</i> (pl.)
+ <i>čayura</i>	'sulky'	+ <i>čayurta</i> (fs.)	+ <i>čayurə</i> (pl.)
+ <i>navura</i>	'timid'	+ <i>navurta</i> (fs.)	+ <i>navurə</i> (pl.)
+ <i>saruxa</i>	'vicious'	+ <i>saruxta</i> (fs.)	+ <i>saruxə</i> (pl.)
+ <i>ṭayusa</i>	'prickly'	+ <i>ṭayusta</i> (fs.)	+ <i>ṭayusə</i> (pl.)
+ <i>xaķura</i>	'boastful'	+ <i>xaķurta</i> (fs.)	+ <i>xaķurə</i> (pl.)
+ <i>zaduya/</i>	'timid'	+ <i>zaduta</i> (fs.)	+ <i>zaduya/</i> (pl.)
+ <i>zaduvva</i>			+ <i>zaduvvə</i>

This pattern has developed historically from \**CaCoCa*, the medial long /o/ shifting to /u/ according to the usual process (§ 1.11.6. iii). Adjectives with the pattern *CaCuCa* typically express permanent inherent properties. The resultative participle of verbal roots of these adjectives in principle either express contingent properties, e.g. *criba* 'angry' (contingent) vs. *caruba* 'angry' (by nature), or a dynamic process, e.g. *nxipəla* 'he has become ashamed' vs. *naxupəla* 'he is shy (by nature)'. A similar semantic contrast is found with other patterns, e.g. *payxa* 'cool (contingently)' vs. *payuxa* 'cool (by nature)'.

6.2.14 CaCuyCa (*ms.*), CaCuCta (*fs.*), CaCuyCə (*pl.*)

<i>baruyza</i>	'dry'	<i>baruzta</i> (fs.)	<i>baruyzə</i> (pl.)
<i>jaxuyca</i>	'merry'	<i>jaxucta</i> (fs.)	<i>jaxuyca</i> (pl.)
<i>kaluyla</i>	'light'	<i>kalulta</i> (fs.)	<i>kaluylə</i> (pl.)
<i>laxuyma</i>	'comely'	<i>laxumta</i> (fs.)	<i>laxuymə</i> (pl.)
+ <i>saruypa</i>	'pungent'	+ <i>sarupta</i> (fs.)	+ <i>saruypə</i> (pl.)
+ <i>xamuysa</i>	'sour'	+ <i>xamusta</i> (fs.)	+ <i>xamuysə</i> (pl.)
+ <i>yakuyra</i>	'heavy'	+ <i>yakurta</i> (fs.)	+ <i>yakuyrə</i> (pl.)

This has developed from the pattern \**CaCuCa* with a long /u/.

As is the case with the pattern *CaCuCa*, adjectives with the pattern *CaCuyCa* typically express permanent inherent properties. The resultative participle of verbal roots of these adjectives in principle either express contingent prop-

erties, e.g. *briza* 'dry' (contingent) vs. *baruyza* 'dry' (inherent), or a dynamic process, e.g. <sup>+</sup>*xmisələ* 'it has become sour' vs. <sup>+</sup>*xamuysələ* 'it is sour'.

### 6.2.15 CaCaCa (*ms.*), CaCaCta (*fs.*), CaCaCə (*pl.*)

<i>lavaza</i>	'thin'	<i>lavazta</i> (fs.)	<i>lavazə</i> (pl.)
<i>zayara</i>	'arrogant'	<i>zayarta</i> (fs.)	<i>zayara</i> (pl.)

Note also the adjective *palya* 'half finished', which has the same vocalism as this pattern and seems to have been formed by contracting the reduplicative phrase *palya-palya* 'half-half'.

### 6.3 Adjectives with the Affix -*ana* (fs. -*anta*, pl. -*anə*)

Many adjectives are derived from nouns by means of this affix:

<i>carbana</i>	'irritable'	< <i>carba</i> 'anger'
<i>darbana</i>	'wounded'	< <i>darba</i> 'wound'
<i>dəknana</i>	'bearded'	< <i>dəkna</i> 'beard'
<i>dəmmana</i>	'bloody'	< <i>dəmma</i> 'blood'
<i>denana</i>	'in debt'	< <i>dena</i> 'debt'
<i>honana</i>	'intelligent'	< <i>hona</i> 'intelligence'
<i>fərvana</i>	'leprous'	< <i>fərva</i> 'leprosy'
<i>fulpana</i>	'winged'	< <i>fulpa</i> 'wing'
<i>kənana</i>	'horned'	< <i>kana</i> 'horn'
<i>ləbbana</i>	'brave'	< <i>ləbba</i> 'heart'
<i>lojana</i>	'glittering'	< <i>loja</i> 'brightness'
<i>miyyana</i>	'watery'	< <i>miyya</i> 'water'
<i>motana</i>	'mortal'	< <i>mota</i> 'death'
<i>našana</i>	'crowded'	< <i>našə</i> 'people'
<i>nurana</i>	'fiery'	< <i>nuyra</i> 'fire'
<i>pandana</i>	'cunning'	< <i>pand</i> 'trick'
<i>ranyana</i>	'colourful'	< <i>rany</i> 'colour'
<i>raxmana</i>	'merciful'	< <i>raxmə</i> 'mercy'
<i>sammana</i>	'poisonous'	< <i>samma</i> 'poison'
<i>šəxtana</i>	'dirty'	< <i>šəxta</i> 'dirt'
<i>šidana</i>	'mad'	< <i>šida</i> 'demon'
<i>šmayyana</i>	'heavenly'	< <i>šmayya</i> 'heaven'
<i>xelana</i>	'strong'	< <i>xela</i> 'power'

<i>xəm̥kana</i>	'putrefied'	< <i>xəm̥ka</i> 'putrefaction'
<i>xubbana</i>	'loving'	< <i>xubba</i> 'love'
<i>+baluvvana</i>	'greedy'	< <i>+baluta</i> 'throat'
<i>+barana</i>	'bright'	< <i>+bara</i> 'light'
<i>+muṭrana</i>	'rainy'	< <i>+muṭra</i> 'rain'
<i>+puzana</i>	'sullen'	< <i>+puza</i> 'snout'
<i>+ṭamana</i>	'tasty'	< <i>+ṭama</i> 'taste'
<i>+ṭatana</i>	'sweaty'	< <i>+ṭata</i> 'sweat'
<i>+təvvəllana</i>	'worm-eaten'	< <i>+təvvəlla</i> 'worm'
<i>+ṭimana</i>	'valuable'	< <i>+ṭima</i> 'value'
<i>+ṭinana</i>	'muddy'	< <i>+ṭina</i> 'mud'
<i>+ṭlulana</i>	'dewy'	< <i>+ṭlula</i> 'dew'
<i>+xalvana</i>	'in-milk'	< <i>+xalva</i> 'milk'

Active participles derived by attaching the suffix *-ana* to the present stem of verbs are often used adjectively, e.g.

<i>baxyana</i>	'weepy'	< <i>baxə</i> I 'to weep'
<i>jaxcana</i>	'affable'	< <i>jaxəc</i> I 'to laugh'
<i>tapyana</i>	'sticky'	< <i>tapə</i> I 'to stick'
<i>xamlana</i>	'patient'	< <i>xaməl</i> I 'to become patient'
<i>+axlana</i>	'gluttonous'	< <i>+axəl</i> I 'to eat'
<i>+bazyana</i>	'caustic'	< <i>+bazzə</i> I 'to bore'
<i>+catrana</i>	'knotty, difficult'	< <i>+catə</i> I 'to knot'
<i>+bašrana</i>	'skilful'	< <i>+bašər</i> II 'to be able'
<i>+paxlana</i>	'forgiving'	< <i>+paxəl</i> II 'to forgive'
<i>mabyənnana</i>	'visible, noticeable'	< <i>mabyən</i> III 'to appear'
<i>majrəppana</i>	'slippery'	< <i>majrəp</i> III 'to slip'
<i>manšiyyana</i>	'forgetful'	< <i>manšə</i> III 'to forget'
<i>+masxərrana</i>	'derisive'	< <i>+masxər</i> III 'to mock'
<i>+maxlana</i>	'hospitable'	< <i>+maxəl</i> III 'to feed'
<i>+majjəbbana</i>	'amazing'	< <i>+majjəb</i> QII 'to amaze'

The *-ana* ending is added to pattern II infinitives, probably to avoid ambiguity with active participles of pattern I:

<i>basumana</i>	'curing'	< <i>basəm</i> II 'to cure'
<i>makkudana</i>	'burning, stinging'	< <i>makkəd</i> III 'to burn'
<i>paķudana</i>	'bossy'	< <i>paķəd</i> II 'to order'
<i>tapuvvana</i>	'sticky'	< <i>tapə</i> II 'to stick (tr.)'

<i>xabulana</i>	'liable to feel cold'	< <i>xabəl</i> II 'to become cold'
<i>+paxulana</i>	'forgiving'	< <i>+paxəl</i> II 'to forgive'

The ending is occasionally added to resultative participles of unaccusative verbs, e.g.

<i>+kəryana</i>	'educated'	< <i>+kərya</i> < <i>+karə</i> I 'to read'
<i>+səvyanə</i>	'sated'	< <i>+səvya</i> < <i>+savvə</i> I 'to become sated'
<i>+siyyana</i>	'thirsty'	< <i>+siyya</i> < <i>+sayyə</i> I 'to become thirsty'

It is sporadically attached to an existing adjective to express approximation, e.g.

<i>kinana</i>	'greenish'	< <i>kina</i> 'green'
---------------	------------	-----------------------

The suffix *-naya* (§ 6.5.) is more frequently used with this function.

#### 6.4 Adjectives with the Affix *-aya* (fs. *-eta*, pl. *-ayə*)

In some cases the base form of these adjectives is used in the dialect as an independent word. These base forms are either nouns or adverbs, e.g.

<i>'alahaya</i>	'godly'	< <i>'alahə</i> 'God'
<i>dərranjaya</i>	'late'	< <i>dərranj</i> 'late (adverb)'
<i>košuynaya</i>	'military'	< <i>košun</i> 'army'
<i>mšixaya</i>	'Christian'	< <i>mšixa</i> 'Messiah'
<i>rišaya</i>	'first class, excellent'	< <i>riša</i> 'head'
<i>šəmšaya</i>	'sunny'	< <i>šəmšə</i> 'sun'
<i>šenaya</i>	'tame'	< <i>šena</i> 'tameness'
<i>yaminaya</i>	'right-handed'	< <i>yamina</i> 'right'
<i>+čaplaya</i>	'left-handed'	< <i>+čaplə</i> 'left'
<i>+rastaya</i>	'right-handed'	< <i>+rastə</i> 'right'
<i>+kətmaya</i>	'grey'	< <i>+kətma</i> 'ash'

In other cases the *-aya* ending can be identified as an attributive affix on etymological grounds, but the base form cannot stand alone as a separate word, e.g.

<i>kamaya</i>	'first'
<i>suraya</i>	'Assyrian Christian'
<i>šulxaya</i>	'naked'
<i>taxtaya</i>	'lower'
<i>xupyaya</i>	'barefoot'
<sup>+</sup> <i>ullaya</i>	'upper'
<sup>+</sup> <i>nuxraya</i>	'foreign, strange'
<sup>+</sup> <i>xaraya</i>	'last'

### 6.5 Adjectives with the Affix *-naya* (fs. *-neta*, pl. *-nayə*)

This ending is used in adjectives expressing approximate colours. In most cases it is added to the basic adjective denoting the colour in question,

<i>cumnaya</i>	'blackish'	< <i>cuma</i> 'black'
<i>milnaya</i>	'bluish'	< <i>mila</i> 'blue'
<i>smuknaya</i>	'reddish'	< <i>smuka</i> 'red'
<i>zardanaya</i>	'yellowish'	< <i>zarda</i> 'yellow'
<sup>+</sup> <i>kətmənaya</i>	'greyish'	< <sup>+</sup> <i>kətmaya</i> 'grey', <sup>+</sup> <i>kətma</i> 'ash'
<sup>+</sup> <i>xvarnaya</i>	'whitish'	< <sup>+</sup> <i>xvara</i> 'white'

Note, however, the form

*kinaya* 'greenish' < *kina* 'green'

Occasionally the base form is not used in the dialect, e.g.

*milannaya* 'bluish' < \**milana*

It is sporadically used by speakers to express approximation in other adjectives, e.g.

<sup>+</sup>*yarəxnaya* 'longish' < <sup>+</sup>*yarixa* 'long'

The affix *-naya* is also used in other types of adjectives:

<i>javarnaya</i>	'grey'
<i>joranaya</i>	'grey'
<sup>+</sup> <i>bajərnaya</i>	'thin, skinny'
<sup>+</sup> <i>xamurnaya</i>	'sweet and sour'

### 6.6      *xina* ‘Other’

The adjective *xina* ‘other’ exhibits a certain irregularity, in that the /n/ of the base is elided with the attachment of the -ta ending in the feminine singular form:

*xina* (ms.)

*xita* (fs.)

*xinə* (pl.)

### 6.7      Invariable Adjectives of Aramaic Etymology

A few adjectives of Aramaic stock are invariable in inflection. These are in origin nouns, which have come to be used as adjectives. They include the following:

#### Ending in -a

*rəx̥ka*    ‘distant’ (southern variety: *rək̥ka*)

*kurba*    ‘near’

*xərba*    ‘bad’

#### Ending in -u

*'amku*    ‘deep’

*xanku*    ‘deep’

*+mačču*    ‘smooth’

*+pərtu*    ‘spendthrift’

Examples:

*beta* (m.) *rək̥ka*    ‘a distant house’

*mata* (f.) *rək̥ka*    ‘a distant village’

*matvata* (pl.) *rək̥ka*    ‘distant villages’

*beta* (m.) *kurba*    ‘a nearby house’

*mata* (f.) *kurba*    ‘a nearby village’

*matvata* (pl.) *kurba*    ‘nearby villages’

*'urza xərba*    ‘a bad man’

*baxta xərba*    ‘a bad woman’

*našə xərba*    ‘bad people’

<i>kunya</i> (m.)	'amku	'a deep well'
<i>yama</i> (f.)	'amku	'a deep sea'
<i>miyya</i> (pl.)	'amku	'deep water'

The adjective *xərba* is sometimes inflected with -ə after plural nouns.

## 6.8 Compound Adjectives

Several attributive phrases are formed by combining a noun with a preceding preposition or head element. These include phrases such as the following:

(i) *marət* literally: 'owner of'

<i>marət hona</i>	'intelligent' ( <i>hona</i> 'mind')
<i>marət jnaha</i>	'guilty' ( <i>jnaha</i> 'crime')
<i>marət la jnaha</i>	'innocent'
<i>marət šəmma</i>	'famous' ( <i>šəmma</i> 'name')
<i>marət šənna</i>	'old' ( <i>šənna</i> 'years')
<i>marət +məsta</i>	'hairy' (+ <i>məsta</i> 'hair')
<i>marət +bar-našuya</i>	'populous' (+ <i>bar našuya</i> 'humanity')
<i>marət +hasəl</i>	'fertile' (+ <i>hasəl</i> 'produce')
<i>marət +pərməta</i>	'comprehensible' (+ <i>pərməta</i> 'understanding')
<i>marət +t̪ima</i>	'valuable' (+ <i>t̪ima</i> 'value')
<i>marət +t̪lanita</i>	'shady' (+ <i>t̪lanita</i> 'shade')

The form *marət* in these phrases is invariable and does not inflect for gender or number in agreement with the noun that the adjectival phrase modifies, despite the fact that the independent noun *mara* 'owner' has a plural (*mara-vatə*) and a feminine form (*marta* 'mistress'), e.g.

<i>xa naša marət hona</i>	'an intelligent man'
<i>xa baxta marət hona</i>	'an intelligent woman'
<i>+raba našə marət hona</i>	'many intelligent men'

The form *marət-* is sometimes contracted to *mār-*, e.g. *mār-hona*.

(ii) *b-**b-šəmma* ‘famous’ (‘with name’)*b-šənnə* ‘aged’ (‘with years’)(iii) *d-la* ‘without’

<i>d-la dəkna</i>	‘beardless’ ( <i>dəkna</i> ‘beard’)
<i>d-la ducta</i>	‘homeless’ ( <i>ducta</i> ‘place’)
<i>d-la hivi</i>	‘without hope’ ( <i>hivi</i> ‘hope’)
<i>d-la hona</i>	‘mindless, foolish’ ( <i>hona</i> ‘mind’)
<i>d-la fnaha</i>	‘innocent’ ( <i>fnaha</i> ‘crime’)
<i>d-la nxəpta</i>	‘shameless’ ( <i>nxəpta</i> ‘shame’)
<i>d-la zuyzə</i>	‘impecunious’ ( <i>zuyzə</i> ‘money’)
<i>d-la-’alaha</i>	‘godless’ ( <i>’alaha</i> ‘God’)
<i>d-la-mənyana</i>	‘countless’ ( <i>mənyana</i> ‘number’)
<i>d-la-xela</i>	‘frail, weak’ ( <i>xela</i> ‘strength’)
<i>d-la-+’ayva</i>	‘cloudless’ ( +’ <i>ayva</i> ‘cloud’)

(iv) *be-* ‘without’ (Kurd. bê)

<i>be-hona</i>	‘senseless, unreasonable’ ( <i>hona</i> ‘mind’)
<i>be-nəxpa</i>	‘shameless’ ( <i>nəxpa</i> ‘shame’)
<i>be-raxmə</i>	‘merciless’ ( <i>raxmə</i> ‘mercy’)
<i>be-xela</i>	‘powerless’ ( <i>xela</i> ‘power’)
<i>be-+čara</i>	‘helpless, without remedy’ ( +’ <i>čara</i> ‘remedy’)
<i>be-+namus</i>	‘dishonest’ ( +’ <i>namus</i> ‘honour’)
<i>be-+payda</i>	‘unprofitable, useless’ ( +’ <i>payda</i> ‘advantage’)
<i>be-+’tama</i>	‘tasteless’ ( +’ <i>tama</i> ‘taste’)

(v) *bi-* ‘without’ (Pers. bi) (less productive than *be-*)*bi-+’abur* ‘shameless’ ( +’*abur* ‘shame’)*bi-hivi* ‘hopeless’ (*hivi* ‘hope’)(vi) *çam-*, *çəm-* ‘lacking, little amount of’ (Azer. kəm, Pers. kam, Kurd. kəm)*çam-hona* ‘stupid’ (‘little of intelligence’) (*hona* ‘mind’)*çam-kuvvat* ‘weak’ (‘little of strength’) (*kuvvat* ‘strength’)*çam-ranj* ‘light coloured, weak (tea)’ (*ranj* ‘colour’)

Occasionally other types of compound adjective are found such as the following:

<sup>+</sup> <i>ruma-</i>	<sup>+</sup> <i>čala</i> (fs. <sup>+</sup> <i>rumta-</i> <sup>+</sup> <i>čalta</i> )	'hilly'
<sup>+</sup> <i>čalə-</i>	<sup>č</sup> <i>əččura</i> adj.invar.	'hilly'

## 6.9 Adapted Loans

A few adjectives that are loanwords have been fully adapted to Aramaic inflectional morphology, e.g.

<i>baxxila</i> (ms.)	<i>baxxəlta</i> (fs.)	<i>baxxilə</i> (pl.)	'jealous'	< Azeri paxıl
<i>cačala</i> (ms.)	<i>cačalta</i> (fs.)	<i>cačalə</i> (pl.)	'bald'	< Kurd. keçel
<i>javarnaya</i> (ms.)	<i>javarneta</i> (fs.)	<i>javarnayə</i> (pl.)	'grey'	< Kurd. gewr
<i>ʃøžžana</i> (ms.)	<i>ʃøžžanta</i> (fs.)	<i>ʃøžžanə</i> (pl.)	'dizzy'	< Kurd. gêj

## 6.10 Partially Adapted Loans

Some adjectives that are loaned from Kurdish are inflected with the Aramaic ms. ending *-a* and pl. ending *-ə*, but in the fs. have the ending *-ə*, which is in origin the Kurdish feminine singular oblique nominal ending.

<i>balķa</i> (ms.)	<i>balķə</i> (fs.)	<i>balķə</i> (pl.)	'multicoloured'	< Kurd. belek
<i>çarra</i> (ms.)	<i>çarrə</i> (fs.)	<i>çarrə</i> (pl.)	'deaf'	< Kurd. kerr
<i>çura</i> (ms.)	<i>çurə</i> (fs.)	<i>çurə</i> (pl.)	'blind'	< Kurd. kûr
<i>çutta</i> (ms.)	<i>çuttə</i> (fs.)	<i>çuttə</i> (pl.)	'dwarf'	< Kurd. qut
<i>čiķa</i> (ms.)	<i>čiķə</i> (fs.)	<i>čiķə</i> (pl.)	'squinting'	< Kurd. qîç
<i>čora</i> (ms.)	<i>čorə</i> (fs.)	<i>čorə</i> (pl.)	'with white mark' (animal)	< Kurd.
<i>lala</i> (ms.)	<i>lalə</i> (fs.)	<i>lalə</i> (pl.)	'dumb'	< Kurd. lal
<sup>+</sup> <i>latṭa</i> (ms.)	<sup>+</sup> <i>latṭə</i> (fs.)	<sup>+</sup> <i>latṭə</i> (pl.)	'shallow'	< Kurd. lat ('flat')
<i>lənjlula</i> (ms.)	<i>lənjlulə</i> (fs.)	<i>lənjlulə</i> (pl.)	'crippled'	< Kurd. ling ('leg')
<i>marda</i> (ms.)	<i>mardə</i> (fs.)	<i>mardə</i> (pl.)	'generous'	< Kurd. merd
<i>zarda</i> (ms.)	<i>zardə</i> (fs.)	<i>zardə</i> (pl.)	'yellow'	< Kurd. zerd
<i>zaxma</i> (ms.)	<i>zaxmə</i> (fs.)	<i>zaxmə</i> (pl.)	'huge, mighty'	< Kurd. zexm

The adjectives *çarra* and *marda* also have fs. forms with a *-ta* ending: *çarreta*, *mardita*.

This type of inflection has been extended to words of a different origin, e.g. *+kuṭra* 'hunchbacked', *+pašuvva* 'lukewarm', *+čuvva* 'smooth', *xampa* 'pagan', which are of Aramaic etymology, and *yacca* 'huge', a loan from Azeri:

<i>xampa</i> (ms.)	<i>xampə</i> (fs.)	<i>xampə</i> (pl.)	'pagan'
<i>+čuvva</i> (ms.)	<i>+čuvvə</i> (fs.)	<i>+čuvvə</i> (pl.)	'smooth'
<i>+kuṭra</i> (ms.)	<i>+kuṭrə</i> (fs.)	<i>+kuṭrə</i> (pl.)	'hunchback'
<i>+pašuvva</i> (ms.)	<i>+pašuvvə</i> (fs.)	<i>+pašuvvə</i> (pl.)	'lukewarm, tepid'
<i>yacca</i> (ms.)	<i>yaccə</i> (fs.)	<i>yaccə</i> (pl.)	'huge' < Azer. yekə

A few loaned adjectives retain the source form without inflection in the ms. and fs. but take the Aramaic plural inflection -ə, e.g.

<i>+casəb</i> (ms./fs.)	<i>+casibə</i> (pl.)	'poor' < Azeri kasıb
<i>jil</i> (ms./fs.)	<i>jilə</i> (pl.)	'young' < Kurd. çel
<i>sakkat</i> (ms./fs.)	<i>sakkattə</i> (pl.)	'crippled' < Kurd. seqqet, Pers. saqat
<i>sāx</i> (ms./fs.)	<i>saxə</i> (pl.)	'healthy, alive' < Kurd. sax
<i>nazuc</i> (ms./fs.)	<i>nazuyça</i> (pl.)	'fine, thin' < Pers. nazok
<i>šəlla</i> (ms./fs.)	<i>šəllə</i> (pl.)	'paralysed' < Pers. šal
<i>davlatmand</i> (ms./fs.)	<i>davlatmandə</i> (pl.)	'rich' < Pers. dowlatmand, Kurd. dewlemend

This pattern of inflection has been extended to the following adjective that originated in earlier Aramaic:

<i>+karras</i> (ms./fs.)	<i>+karrasə</i> (pl.)	'stubborn'
--------------------------	-----------------------	------------

## 6.11 Unadapted Loans

The majority of loaned adjectives are left unadapted without Aramaic morphological endings and remain invariable for number or gender. Some selected examples are:

<i>'arzan</i>	'cheap'	< Pers. arzān, Kurd. erzan
<i>ašcara</i>	'clear'	< Kurd. aşkere, Azer. aşkar
<i>dūz</i>	'right, straight'	< Azer. düz
<i>hasanay</i>	'easy'	< Kurd. hēsan, Azer. asan
<i>həşyar</i>	'careful'	< Pers. hošyār
<i>makul</i>	'acceptable'	< Pers. ma'qūl < Arab.

<i>pəltəç</i>	'stuttering'	< Azer. pəltək
<i>tambal</i>	'lazy'	< Azer. tənbəl, Pers. tambal
<i>taza</i>	'new, fresh'	< Azer. təzə
<i>zabbun</i>	'weak'	< Azer. zəbun
<i>+haram</i>	'unlawful'	< Azer. haram, Pers. harām < Arab.
<i>+hazər</i>	'ready'	< Azer. hazır < Arab.
<i>+narahat</i>	'uncomfortable'	< Pers. nā-rāhat
<i>+xayən</i>	'treacherous'	< Azer. xain, Pers. xā'en < Arab.

# Numerals

## 7.1 Cardinals

### 7.1.1 *Numerals 1–10*

These numerals are of invariable form and are not inflected for gender. They derive historically from the form used with masculine nouns in earlier Aramaic:

0	<sup>+</sup> <i>sipar</i>
1	<i>xa</i>
2	<i>tre</i>
3	<sup>+</sup> <i>tla</i>
4	<sup>+</sup> <i>ar̄pa</i>
5	<i>xamša</i>
6	<sup>’</sup> <i>ošta</i>
7	<sup>+</sup> <i>šavva</i>
8	<i>tmanyā</i>
9	<sup>+</sup> <i>əčča</i>
10	<sup>+</sup> <i>əsra</i>

The form <sup>+</sup>*tla* has lost an original *\*t* after the vowel (< \**tlātā*). The *\*l* acquired emphasis and the initial *\*t* shifted to emphatic *\*t̄* due to contact with the emphatic *!* (\**t!a*). The current form <sup>+</sup>*tla* resulted from the reanalysis of the emphasis as suprasegmental. The tense unaspirated /p/ in <sup>+</sup>*ar̄pa* has arisen by the coalescence of /b/ with the following laryngal (< \**arb'a*) (§ 1.9.1.1.). The /a/ in the initial syllable of <sup>’</sup>*ošta* was originally an epenthetic prosthetic vowel, but has been reanalysed as a syllable nucleus (§ 1.4.). The development of the form <sup>+</sup>*šavva* is < \**šāwa* < \**šaw'a* < \**šab'ā*, with the secondary gemination of the /v/ after the stressed short /a/ vowel. The afficates in <sup>+</sup>*əčča* developed from an original cluster *\*tš* and the word was emphaticised due to the presence of a historical *\*c*, thus <sup>+</sup>*əčča* < \**əčča* < \**ətš'a* < \**tš'a*.

When stressed the vowel of *xa* is sporadically followed by a glottal stop and an additional vowel of the same quality, e.g. *xá'a* (B 9:3) < *xa* ‘one’, *xá'a báxta* ‘one/a woman’ (A 39:10).

Plurals are formed of the numerals by adding the plural ending *-ə* with the glide /y/ separating this from the final vowel of the numeral. The plural ending

does not replace the final vowel of the numeral as in nouns: *xaya* ‘ones’, *treyə* ‘twos’, *+tlayə* ‘threes’, *+ar̪ayə* ‘fours’, etc.

When used independently as nominal arguments, numerals have feminine gender.

### 7.1.2 Numerals 11–19

These also are invariable and derive historically from the form that was originally used with masculine nouns:

- 11 *xaddəssar*
- 12 *taryəssar, təryəssar*
- 13 *+tal̪asar*
- 14 *'arbasar*
- 15 *+xamšasar, +xamsar*
- 16 *+əštasar*
- 17 *+šavvasar*
- 18 *+tmanəssar*
- 19 *'əččasar*

The geminated /d/ after the vowel in *xaddəssar* (< \**h<sup>3</sup>ða'sar*) probably developed secondarily in order to allow an /a/ vowel to follow the initial letter, presumably by analogy with the form *xa* ‘one’, in the citation form of which the vowel is short due to glottalization at the word boundary (§ 1.14.). The /s/ in the ten component is geminated secondarily when preceded by a high vowel, e.g. *taryássar* ‘12’ < \**taryə'sar*, *+tmanəssar* ‘18’ < \**tmanə'sar*, but remains ungeminated when preceded by /a/, e.g. *+xamšasar* ‘15’ < \**xamša'sar*, *+əštasar* ‘16’ < \**əšta'sar*. The form *+tal̪asar* has developed from \**tlat̪a'sar*. The lack of emphasis in *'arbasar* is likely to be due to the fact that in the historical form of the numeral a pharyngal was not in contact with the preceding labial (< \**arba'sar*), whereas in the emphatic form *+ar̪a* the pharyngal was in contact with the labial (< \**arb'a*). The same applies to the plain form *'əččasar* (< \**tša'sar*). The numeral *+šavvasar* is based on the numeral *+šavva* rather than on its historical form \**šba'sar* and so is emphaticized. The emphasis of *+xamšasar* and *+əštasar* appears to have developed by analogy with *+šavvasar*.

### 7.1.3 Tens

- 20 *'əsri*
- 30 *tlay*
- 40 *'ar̪i*

- 50 *xamši*  
 60 *'əšti*  
 70 *šavvi*  
 80 *+tmani*  
 90 *'əčči*

The presence of the high vowel /i/ or the glide /y/ at the end of numerals in this paradigm has blocked the development of emphasis in most cases, whereas many of the corresponding unit numerals ending in -a are emphatic.

Plurals are formed of these numerals by adding the plural ending -ə. A glide /yy/ separates this from the final -i, e.g. *'əsriyya* 'twenties', *tlayə* 'thirties', *'arpiyyə* 'forties', etc.

#### 7.1.4 *Hundreds*

- 100 *'əmma*  
 200 *tramma*  
 300 *+tłomma* ~ *+tlamma*  
 400 *'arbəmما* ~ *+arpmma*  
 500 *xamšəmma* ~ *xamšamma*  
 600 *'əštəmma* ~ *'əštamma*  
 700 *šavvəmma* ~ *+šavvamma*  
 800 *tmanyəmma* ~ *tmanyamma*  
 900 *'əččəmma* ~ *+əččamma*

There are variations in the first element of the forms 300–900. This may either be the historical feminine form of the numeral, which is not used as an independent cardinal, or it may be the masculine form, which corresponds to the independent form of the cardinal. There is a difference in emphasis between the feminine and masculine forms in many cases. The fact that the /əmma/ element is emphaticized after emphatic numerals whereas it is plain when independent ('əmma) indicates that it has fully bonded with the unit numeral in the domain of emphasis of a single word (§ 1.5.2.). It has singular inflection in all cases.

Plurals of these are formed by adding the plural ending -ə separated from the final -a by a glide /y/, e.g. *'əmmayə* 'hundreds'.

### 7.1.5 *Thousands*

- 1,000    *'alpa*  
 2,000    *tre 'alpa*  
 3,000    *+tla 'alpa*  
 4,000    *+ar̥pa 'alpa*  
 5,000    *xamša 'alpa*

Unlike hundreds, the unit and the word for ‘thousand’ have not been morpho-phonemically bonded together and are treated as separate words with their own domains of emphasis. The word *'alpa*, furthermore, is inflected for the plural in multiples like a noun.

### 7.1.6 *Combination of Numerals*

The numerals are combined in descending order. Tens and units are not linked by a coordinating conjunction, e.g. *'asri xa* ‘21’, *'ar̥pi tre* ‘42’, *xamši +tla* ‘53’. The hundreds (-*amma*) and ‘one thousand’ (*'alpa*) are combined with a following numeral by the enclitic conjunction *u*, the sequence /*a-u*/ contracting to /*o*/, e.g. *'ammo 'asri +tla* ‘123’, *'alpo 'aččəmmo šavvi xa* ‘1971’. When the thousand numeral is in the plural, no conjunction is audible, e.g. *tre 'alpa +talqasar* ‘2013’.

### 7.1.7 *Cardinal Numerals with Pronominal Suffixes*

Pronominal suffixes may be attached to the cardinals 1–10 to form partitive expressions. In such cases the numerals have the following forms:

<i>túrvəntan</i>	‘the two of us’	<i>túrvənte</i>	‘the two of them’
~ <i>túrvan</i> ,		~ <i>túrve</i>	
<i>+túlvuntan</i>	‘the three of us’	<i>+túlvunte</i>	‘the three of them’
~ <i>+túlluntan</i>		~ <i>+túllunte</i>	
<i>+árpuntan</i>	‘the four of us’	<i>+árpunte</i>	‘the four of them’
<i>xámšuntan</i>	‘the five of us’	<i>xámšunte</i>	‘the five of them’
<i>'áštuntan</i>	‘the six of us’	<i>'áštunte</i>	‘the six of them’
<i>+šávvuntan</i>	‘the seven of us’	<i>+šávvunte</i>	‘the seven of them’
<i>tmányuntan</i>	‘the eight of us’	<i>tmányunte</i>	‘the eight of them’
<i>+áččuntan</i>	‘the nine of us’	<i>+áččunte</i>	‘the nine of them’
<i>+ásruntan</i>	‘the ten of us’	<i>+ásrunte</i>	‘the ten of them’

The stress in all cases is placed on the first syllable, including when the 3pl. suffix is attached, which normally takes the stress. These forms appear to

have developed from a combination of an old construct form of the masculine numeral with final *-t* and the preposition *mən* with a pronominal suffix; cf. C. Telkepe *xamšaθnan*, C. Txuma *xamšətnan* ‘the five of us’ < \**xamšaθmənnan*. Some dialects lack the /t/ element, e.g. J. Urmi *xamšamnan*, J. Sulemaniyya *xamšannan* < \**xamšamənnan*. In C. Urmi the /t/ of the numeral and the /n/ of the preposition have been metathesized. The numeral ‘one’ and numerals above ‘ten’ are combined with pronominal suffixes in uncontracted phrases containing the preposition *mən*, e.g.

- xa mənnan* ‘one of us’  
*'asri mənnan* ‘twenty of us’

The affix *-unt-* is also used to join pronominal suffixes to the quantifier *cul-*:

- cílluntan* ‘all of us’   *cíllunte* ‘all of them’

## 7.2      Ordinals

The only ordinal adjective that is in use is ‘first’:

- kámaya* (ms.)  
*kámēta* (fs.)  
*kámayə* (pl.)

Note that this is stressed on the first syllable and not in the canonical position for stress on the penultimate syllable. This form is normally juxtaposed with the head noun with the normal syntax of an adjective:

- naša kámaya* ‘the first man’  
*baxta kámēta* ‘the first woman’  
*baxtata kámayə* ‘the first women’

In some circumstances the head noun is combined in an annexation construction with the fs. form *kámēta*, which has the status of abstract noun expressing the ‘status of being first’. In such constructions the head noun may be any gender, e.g.

- jahət kámēta* ‘the first time’, *jaha* f.  
*+p̪laš-kámēta|* ‘the First World War’ (A 41:1 = *+p̪lašət kāmēta*), *+p̪laša* m.

All other ordinals are expressed by combining a noun with a cardinal by means of the annexation enclitic *-at*. In such constructions an additional *d-* is optionally prefixed to the numerals *tre* and *+tla* (*d-tre*, *d-+tla* § 5.14.).

<i>našət tre ~ našət d-tre</i>	'the second man'
<i>baxtət tre ~ baxtət d-tre</i>	'the second woman'
<i>baxtatət tre ~ baxtatət d-tre</i>	'the second women'

<i>našət +tla ~ našət d-+tla</i>	'the third man'
<i>baxtət +tla ~ baxtət d-+tla</i>	'the third woman'
<i>baxtatət +tla ~ baxtatət d-+tla</i>	'the third women'

<i>našət +'ar̥pa</i>	'the fourth man'
<i>baxtət +'ar̥pa</i>	'the fourth woman'
<i>baxtatət +'ar̥pa</i>	'the fourth women'

<i>našət xamša</i>	'the fifth man'
<i>baxtət xamša</i>	'the fifth woman'
<i>baxtatət xamša</i>	'the fifth women'

When the *d-* element is inserted before *tre* and *+tla* the *-at* ending is occasionally omitted on the noun, e.g. *naša d-tre*, *naša d-+tla*.

### 7.3 Fractions

Special words for fractions exist only for 'half' and 'quarter':

<i>palja</i>	'a half'
<i>xa paljə</i>	'one and a half'
<i>čarac</i>	'a quarter'
<i>+tla čarajə</i>	'three quarters'

The ending *-ə* in *xa paljə* is the fossilized vestige of an archaic 3ms pronominal suffix *\*-eh*. Other fractions are expressed by phrases containing cardinals thus:

<i>xa mən-+tla</i>	'a third'
<i>xa mən-xamša</i>	'a fifth'

Pronominal suffixes may be attached to the cardinal in such phrases, e.g.

- xa mən-<sup>+</sup>ṭlayu* ‘a third of it’  
*xa mən-xamšu* ‘a fifth of it’

Cardinals are preferred to *paļja* and *čarac* in such phrases:

- xa mən-treyu* ‘a half of it’  
*xa mən-<sup>+</sup>ar̄pu* ‘a quarter of it’

#### 7.4 Days of the Week

<i>xošiba</i>	(pl. <i>xošibana</i> , <i>xošibavatə</i> )	‘Sunday’
<i>tró-šiba</i>	(pl. <i>tro-šibana</i> , <i>tro-šibavatə</i> )	‘Monday’
<i><sup>+</sup>ṭló-šiba</i>	(pl. <i><sup>+</sup>ṭlo-šibana</i> , <i><sup>+</sup>ṭlo-šibavatə</i> )	‘Tuesday’
<i><sup>+</sup>ar̄po-šiba</i>	(pl. <i><sup>+</sup>ar̄po-šibana</i> , <i><sup>+</sup>ar̄po-šibavatə</i> )	‘Wednesday’
<i>xamšó-šiba</i>	(pl. <i>xamšo-šibana</i> , <i>xamšo-šibavatə</i> )	‘Thursday’
<i>+ruyta</i>	(pl. <i>+ruytana</i> , <i>+ruytavatə</i> )	‘Friday’
<i>šabta</i>	(pl. <i>šabatə</i> )	‘Saturday’

The days Sunday—Thursday are derived historically from the phrases *\*xa b-šabba* ‘the first in the week’, *\*tre b-šabba* ‘the second in the week’, etc. The component *šiba* is plain even after emphatic numerals, so in such cases the names with this component should be analysed as two words, with their own domain of emphasis (§ 1.5.2.). In ‘Monday’—‘Thursday’ the stress is placed on the numeral, which also reflects the existence of a word division, so these are transcribed with a hyphen. ‘Sunday’ has stress on the penultimate and it has a uniform plain setting, so this can be interpreted as a unitary word and transcribed without a hyphen.

#### 7.5 Seasons

<i>sətva</i> (m.)	(pl. <i>sətva</i> , <i>sətvana</i> )	‘Winter’
<i>bí-nisanə</i> (m.)	(sing. and pl.)	‘Spring’
<i><sup>+</sup>ketə</i> (m.)	(pl. <i><sup>+</sup>ketana</i> , <i><sup>+</sup>ketavatə</i> )	‘Summer’
<i>čiriyə</i> (m.)	(pl. <i>čiriyavatə</i> )	‘Autumn’

The forms *bí-nisanə* and *čiriyyə* are plurals in origin (§ 5.6.). Sporadically the form *nisanə* is used as a shortened form of *bi-nisanə*.

## 7.6 Names of Months

<i>canun</i>	<i>+xáraya</i>	m.	'January'
<i>+əšvat</i>		m.	'February'
<i>+adar</i>		m.	'March'
<i>nisan</i>		m.	'April'
<i>+yār</i>		m.	'May'
<i>+xziran</i>		m.	'June'
<i>tamuz</i>		m.	'July'
<i>+ṭabbax</i>		m.	'August'
<i>ilul</i>		m.	'September'
<i>čiri kámaya</i>		m.	'October'
<i>čiri</i>	<i>+xáraya</i>	m.	'November'
<i>canun</i>	<i>ķámaya</i>	m.	'December'

# Particles

## 8.1 Preliminary Remarks

The term ‘particle’ is used in a broad sense to include all items that do not fall into the categories of noun, pronoun, adjective or verb. Some of the particles take nouns as their complement to express relations between elements in a clause, others take clauses as their complement to express relations between clauses. These two classes of particle are termed ‘prepositions’ and ‘clausal conjunctions’ respectively. The large residue of particles that do not fall into one of these two classes have various disparate functions, including adverbs, quantifiers, determiners, connectives and interrogative particles. Apart from the prepositions, most particles are uninflected.

## 8.2 Adverbs

There is no productive adverbial inflectional ending that can be used freely to create adverbs from nouns or adjectives in the spoken language. The ending *-aít* is occasionally used by educated speakers to form adverbials, e.g. *kanunaít* ‘by law’, *+šariraít* ‘assuredly’. The ending is sometimes pronounced with a glide /y/, e.g. *zuzanayít* ‘financially’ (B 10:26). This inflection, however, is a literary borrowing from Classical Syriac rather than a living feature of the spoken dialect. A phonetically reduced reflex of the Syriac ending may, nevertheless, be tentatively identified in the spoken dialect in the words referring to languages such as *surat* ‘Assyrian’, *farsat* ‘Persian’, *turcət* ‘Turkish’, *+arabət* ‘Arabic’. These words, however, are now treated syntactically as nouns rather than adverbs, e.g. *ci-tani fu-+farsat* ‘They say in Persian’, where the word is governed by a preposition. The ending is also found in the word *jənvət* ‘secretly’, which is used in combination with prepositions, e.g. *b-jənvət xášləl* ‘He went away secretly’, *mən-jənvət juššákłəl* ‘He looked secretly’.

Several adverbs and adverbial phrases of Aramaic origin are nouns in the absolute state without an inflectional vowel, e.g. *údyu* ‘today’ (< \**adyom*). Some adverbs have the ending *-áy*, e.g. *kamáy* ‘formerly’, *+baráy* ‘outside’, *javáy* ‘inside’. This ending may have evolved from the absolute state of the feminine singular: *kamáya* < \**qamayat* < \**qaðmayat* (cf. Syr. *qaðmāyat* ‘at first’). Note also the loanword *+xurráy* (< Kurd. *xurray*), in which the final syllable is stressed, possibly due to its identification with the NENA adverbial suffix *-áy*.

Some spatial adverbs have endings that are related to those of demonstrative pronouns, e.g. *+támma* ‘there (medium deixis)’, *+tammó* ‘over there (distant)’, *+táma* ‘there (out of sight)’; cf. *+’ávva* ‘that (medium deixis)’, *+’avvó* ‘that (distant)’, *+’av* ‘that (out of sight)’.

A feature that is exhibited by some adverbs of more than two syllables is the regular occurrence of stress in non-canonical position at the beginning of the word, e.g. *kédamta* ‘in the morning’, *láxxanə* ‘around here, nearby’. Adverbs consisting of two components combined in a stress group are stressed on the first component, e.g. *’á-šita* ‘this year’, *’ad-lelə* ‘tonight’, *yumá-xina* ‘the day after tomorrow’.

Lists of the adverbial particles that are used in the dialect are presented below.

### 8.2.1 *Spatial Adverbs*

<i>laxxa, ’axxa</i>	‘here’
<i>láxxanə</i>	‘around here, nearby’
<i>laxxanana</i>	‘around here’
<i>m-axxa</i>	‘from here’
<i>l-a-yba</i>	‘to here’ (lit. to this side < <i>l-a-jiba</i> )
<i>+tamma</i>	‘there (medium)’
<i>+támmənə</i>	‘around there’
<i>+tammanana</i>	‘around there’
<i>+tammó</i>	‘there (far)’
<i>+tammoha, +tammoxa</i>	‘there (far)’
<i>+tama</i>	‘there’ (absent)
<i>+tamanana</i>	‘around there’
<i>+’ullul, +lal</i>	‘above’
<i>+’al-+’ullul, +lal</i>	‘upwards’
<i>’əltəx, +’ultux</i>	‘below’
<i>xut</i>	‘underneath’
<i>+’al-’əltəx, +’al-’ultux</i>	‘downwards’
<i>vaddar, +’al-vaddar</i>	‘outside’ (Kurd. ba-der)
<i>javáy</i>	‘inside’
<i>+baráy</i>	‘behind’
<i>la-+bara</i>	‘backwards’
<i>’á-jiba, ’á-yba</i>	‘this side’
<i>’ó-jiba, ’ó-yba</i>	‘that side’
<i>pí-palja</i>	‘in the middle’
<i>kam</i>	‘in front’

<i>la-kama</i>	'forwards'
<i>kamáy</i>	'forwards'
<i>rišaxta</i>	'on its head'
<i>riša rišaxta, riš-rišaxta</i>	'upside down'
<i>pummaxta</i>	'face downwards, flatwise'
<i>+al-jarmət +xasu</i>	'on his back'
<i>xá-riša</i>	'directly'

### 8.2.2 *Temporal Adverbs*

<i>'adiyya, 'adi</i>	'now'
<i>'udyu</i>	'today'
<i>'ád-lelə</i>	'tonight'
<i>kamáy</i>	'at first'
<i>kuđma, kuđmat +vərra</i>	'yesterday'
<i>kuđma, kuđmat 'atə</i>	'tomorrow'
<i>m-kám-kuđma</i>	'the day before yesterday'
<i>yumá-xina</i>	'the day after tomorrow'; 'the day before yesterday'
<i>kédamta</i>	'in the morning, tomorrow morning'; Canda: 'in the early morning after dawn'
<i>kédamta jaldə</i>	'early in the morning'
<i>móriša</i>	'in the morning'; Canda: 'in the later morning after 8am'; 'tomorrow morning'
<i>móriša jaldə</i>	'early in the morning'
<i>+bérašə</i>	'in the evening, last night'
<i>kuđma +bérašə</i>	'last night'
<i>kuđma móriša</i>	'tomorrow morning'
<i>jaldə</i>	'early'
<i>dərranf</i>	'late'
<i>kamta</i>	'formerly, first'
<i>+xarta</i>	'afterwards'
<i>+bara</i>	'afterwards'
<i>'á-šita</i>	'this year'
<i>bázzuyna</i>	'last year'
<i>šət-+vərra</i>	'last year'
<i>həč-+dana</i>	'never'
<i>'aslan</i>	'never'
<i>b-dá-+dana</i>	'at this time'
<i>b-dé +dana</i>	'at that time'
<i>xa-b-xá</i>	'suddenly'

<i>xa-b-xá-ja</i>	'suddenly'
<i>xa-xa-já</i>	'sometimes'
<i>xacma-ja</i>	'sometimes'
<i>é-ja</i>	'at that time'
<i>hammaša</i>	'always'
<i>har</i>	'ever'
<i>+madəlbarə</i>	'from now onwards'
<i>mədrə</i>	'again'

The form *+madəlbarə* has been formed by bonding together the phrase *m-adi* +*al-*+*bara* into a single word with a single domain of emphasis.

### 8.2.3 *Interrogative Adverbs*

<i>'ica?</i>	'where?'
<i>m-ica?</i>	'whence?'
<i>celə?</i>	'where is he'
<i>'iman?</i>	'when'
<i>'əm-+dana?</i>	'at what time?'
<i>dax?</i> / <i>daxi?</i>	'how?'
<i>mujjur?</i> , <i>mújjurra?</i>	'how?'
<i>cma</i>	'how much?, how many?'
<i>ka-mudi?</i> /	
<i>ka-mú?</i> / <i>ksam?</i>	'why?'

The first syllable of the interrogative *'ica* is sometimes elided when it has an enclitic copula, e.g. *celə?* 'Where is he?', *cena?* 'Where are they?' The interrogative items *'iman* and *'əm* have oblique allomorphs with initial *d*, viz. *diman*, *dəm*, which are used in syntactically dependent position, e.g. *beta dəm naša?* 'the house of which man?', *hal diman?* 'until when' (§ 5.14.).

### 8.2.4 *Adverbs of Manner*

<i>'atxa</i>	'thus, like this'
<i>jaldə</i>	'quickly'
<i>nixa</i>	'slowly'
<i>nixunta</i>	'very slowly'
<i>+spay</i>	'well'
<i>jəns</i>	'well'
<i>xərba</i>	'badly'

<i>kəšya</i>	'hard'
<i>xelana</i>	'strongly'

The adverbial demonstrative *'atxa* has an oblique form *datxa* with initial *d*.

### 8.3 Quantifiers

<i>+raba, +roba</i>	'much, many'
<i>cullə</i>	'all'
<i>cul, cu</i>	'every, each'
<i>cma, xacma</i>	'a few, a small amount of'
<i>xačča</i>	'slightly, a little'
<i>xaččunta</i>	'very little'
<i>+uxča</i>	'so much'
<i>həč</i>	'no, none'

### 8.4 Prepositions

Prepositions are combined with nominals or pronominal suffixes. In some cases they may also be attached to adverbs. They are generally combined with their complement in the same stress group, especially when they are monosyllabic.

A few prepositions are inflected with the nominal annexation enclitic *-ət* when they have a nominal complement, though the majority do not use this enclitic. When, on the other hand, the complement is a demonstrative pronoun or a nominal phrase with an initial demonstrative, it is obligatory for the following demonstrative to be in its dependent form beginning with *d*- (§ 2.2.). The same applies to the interrogative pronouns *'əm-/əmn-?* 'which?' and *'iman*, which also begin with *d*- in this context. Some prepositions can take pronominal suffixes. These are attached to an allomorph of the preposition, which is generally slightly different in shape from the allomorph it has without suffixes. The pronominal suffixes that are attached to prepositions are the same as those that are attached to nouns (§ 2.3.). Prepositions that cannot take pronominal suffixes directly must be combined with the genitive particle *dīy-* inflected with suffixes.

### 8.4.1    +’aralləg̚- ‘between’

This is connected to a following noun or independent pronominal element by the annexation element -ət. The annexation element is attached either as an enclitic, which does not affect the stress position or morphological shape of the adverbial (+’aralləg̚-ət), or as an inflectional affix, which brings about a change of stress (+’aralləg̚jət) (§ 5.14.). This preposition general does not take pronominal suffixes:

+’aralləg̚-ət / +’aralləg̚jət	<i>babu ’u-yəmmu</i>	‘between his father and his mother’
+’aralləg̚-ət / +’aralləg̚jət	<i>dani</i>	‘between them’
+’aralləg̚-ət / +’aralləg̚jət	<i>do-naša ’u-de-baxta</i>	‘between that man and that woman’
+’aralləg̚-ət / +’aralləg̚jət	<i>diyyan</i>	‘between us’
+’aralləg̚-ət / +’aralləg̚jət	<i>diyyé</i>	‘between them’

The form is optionally combined with the preposition *b-*, e.g. *b-+’aralləg̚-ət babu ’u-yəmmu*.

It occasionally takes pronominal suffixes, in which case it has the shape +’aralğ-, e.g. *b-+’aralğəl* ‘in between them’ (A 39:13).

### 8.4.2    ’ax, max ‘like’

The prepositions *’ax* and *max* are used interchangeably.

’ax- <i>babi</i>	‘like my father’
’ax-+ <i>dav</i>	‘like him’
’ax- <i>do-naša</i>	‘like that man’
’ax- <i>dəm-naša?</i>	‘like which man?’
’ax- <i>diyyu</i>	‘like him’
’ax- <i>diyyo</i>	‘like her’
’ax- <i>diyyé</i>	‘like them’

### 8.4.3    +’al ‘upon; to’

This preposition is derived historically from \*’al ‘upon’, the emphasis being a reflection of the historical presence of the pharyngal. It has, however, merged with the historical derivative of the preposition \*l- ‘to’ (except for a few isolated cases § 8.4.4.) and so its semantic range includes ‘upon’ and ‘to’:

+’al- <i>cursi</i>	‘on the chair’
+’al-+ <i>dav</i>	‘on it (m.)’

- +*al-do-cursi* ‘on that chair’  
+*al-dəm-cursi?* ‘on which chair?’
- +*al-mata* ‘to the village’  
+*al-day* ‘to it (f.)’  
+*al-de-mata* ‘to that village’  
+*al-dəm-mata?* ‘to which village?’

The preposition is pronounced emphatic in slow, careful speech. In many cases, however, the emphasis is weakened when it is a proclitic without stress, especially if the word it is attached to is plain: [?al-ma:tʰa]. The /a/ vowel is, moreover, sometimes weakened to [i ~ ə], e.g. [?il-ma:tʰa]. Such weak forms are not represented in the transcription but rather are always transcribed as +*al-* for the sake of consistency. The merging of the prepositions ‘upon’ and ‘to’ is likely to have arisen due to the phonetic identity of the weak form of ‘upon’, viz. [?il], with the original reflex of \**l*, viz. [?il] (*l* with prosthetic vowel).

Some speakers in the Caucasus pronounce the preposition as [l] without any vowel. This is represented in the transcription, e.g. *l-ilàna*, *l-rišu* ‘on a tree, on its top’ (A 47:1).

When pronominal suffixes are attached to it, the /l/ is geminated. In such pronominal phrases the emphatic pronunciation is more stable, especially when the stem of the preposition is stressed:

- +*állu* ‘on/to him’  
+*állo* ‘on/to her’  
+*allé* ‘on/to them’

#### 8.4.4 la-, l- ‘to’

This is found sporadically and can be regarded as a vestige of the earlier preposition \**l*- ‘to’ rather than a weakened form of +*al*- . It is largely restricted to a few fixed adverbial phrases, which include:

- la-kama* ‘forwards’  
*l-a-jiba, l-o-jiba* ‘to/on this side, to/on that side’  
(often abbreviated to *l-a-yba, l-o-yba*)  
*l-a-pata, l-e-pata* ‘to/on this side, to/on that side’  
*lab* ‘to/at the house of’ (< \**l-bē*).

Note that the demonstrative pronoun in the adverbial phrases with *pata* and *jiba* are in the nominative form.

This preposition is occasionally found before nouns beginning with a consonantal cluster, e.g. *la-mdítə* ‘to the town’ (A 1:10), and also elsewhere, e.g. *la-béta* ‘to a house’ (A 42:11), *la-dáy<sup>l</sup>* ‘to her’ (A 42:33), *la-díyyi* ‘to me’ (A 42:36), *la-dó-rišət +àtra<sup>l</sup>* ‘to the other end of the land’ (B 2:16), *la-dán jibàna* ‘to those parts’ (B 2:16).

#### 8.4.5 <sup>+</sup>*ullul*, <sup>+</sup>*ulluylat* ‘above, over’

The adverbial form <sup>+</sup>*ullul* ‘above’ can take a complement either in the form of a pronominal suffix or a noun. It is connected to a noun by the annexation element *-at*. The annexation element is attached either as an enclitic, which does not affect the stress position or morphological shape of the adverbial (<sup>+</sup>*úllul-at*), or as an inflectional affix, which brings about a change in the morphological shape (<sup>+</sup>*ulliylat*) (§ 5.14.):

<sup>+</sup> <i>úllul-at</i> / <sup>+</sup> <i>ulluylat beta</i>	‘above the house’
<sup>+</sup> <i>úllul-at</i> / <sup>+</sup> <i>ulluylat +dav</i>	‘above it (m.)’
<sup>+</sup> <i>úllul-at</i> / <sup>+</sup> <i>ulluylat do-beta</i>	‘above that house’
<sup>+</sup> <i>úllul-at</i> / <sup>+</sup> <i>ulluylat dəm-cursi?</i>	‘above which house?’
<sup>+</sup> <i>ulluylu</i>	‘above him’
<sup>+</sup> <i>ulluylo</i>	‘above her’
<sup>+</sup> <i>ulluylé</i>	‘above them’

#### 8.4.6 <sup>+</sup>*altəx*, <sup>+</sup>*altixət* ‘under’

The adverbial form <sup>+</sup>*altəx* ‘underneath’ can take a complement either in the form of a pronominal suffix or a noun. It is connected to a noun by the annexation element *-at*. As is the case with <sup>+</sup>*ullul* ‘above’, the annexation element is attached either as an enclitic, which does not affect the stress position or morphological shape of the adverbial (<sup>+</sup>*altəx-at*), or as an inflectional affix, which brings about a change in the morphological shape (<sup>+</sup>*altixət*) (§ 5.14.):

<sup>+</sup> <i>altəx-at</i> / <sup>+</sup> <i>altixət beta</i>	‘under the house’
<sup>+</sup> <i>altəx-at</i> / <sup>+</sup> <i>altixət +dav</i>	‘under it (m.)’
<sup>+</sup> <i>altəx-at</i> / <sup>+</sup> <i>altixət do-beta</i>	‘under that house’
<sup>+</sup> <i>altəx-at</i> / <sup>+</sup> <i>altixət dəm-cursi?</i>	‘under which house?’
<sup>+</sup> <i>altixu</i>	‘under him’
<sup>+</sup> <i>altixo</i>	‘under her’
<sup>+</sup> <i>altixé</i>	‘under them’

#### 8.4.7 b- 'with, by, on, in'

When this preposition is attached to a noun that begins with a consonant, it is generally separated from it by a short /ə/ vowel. If the initial consonant of the noun is followed by a vowel, the consonant is sometimes geminated, although this gemination is often phonetically reduced in fast speech. In origin the /ə/ is an epenthetic, but this has now been phonologized and treated like a syllable nucleus (§ 1.15.2.). In all cases the preposition is transcribed *b-* without the epenthetic vowel or secondary gemination being represented:

<i>b-xmara</i> [bix'ma:ra:]	'by donkey'
<i>b-sila</i> [bis'si:la:]	'with sand'

There may be a hesitation between the preposition and the noun, in which case the vowel of the preposition is lengthened to /i/, e.g.

- (1) *lá jáxcət bí ... nášət +dòstux-inəl* 'Do not laugh at people who are your friends' (A 3:9)

When the following noun begins with //, the preposition coalesces with this and shifts to a tense /p̄/:

*p̄-ida* 'by hand'

Before demonstrative pronouns and 'əm(n)-':

<i>b-+dav</i>	'with it (m.)'
<i>b-do sila</i>	'with that sand'
<i>b-dəm sila?</i>	'with which sand?'

The nominative form of the demonstrative is used in the adverbial expressions *b-è-ductəl* 'in that place' (B 6:1) and *b-ánnə ducána* 'in these places' (B 2:10).

The preposition may be inflected with pronominal suffixes, in which case it has the base *biyy-*:

<i>biyyu</i>	'by him'
<i>biyyo</i>	'by her'
<i>biyyé</i>	'by them'

The long base may be used with the annexation suffix *-t* in the form *biyyat*, e.g.

- (2) *'á mújjurra xášla +kàt̪u bíyyət ... +ar̪ámma xamšámma cilomátrə 'ùrxa'*  
 'How is it that the cat went there on a journey of four hundred or five hundred kilometres?' (A 3:82)
- (3) *+báyyən maxyáppənna bráti bíyyət de-bàxtə.* 'I want to have my daughter washed by that woman.'

A long form of the preposition, *bíyya*, is used in the phrase *bíyya b-* 'together with', *tíli bíyya b-+xoravàti* 'I came together with my friends'.

The short form of the preposition is combined with the annexation particle *-at* in the idiomatic expression *bət-ləbbi* 'I think (literally: in my heart)'.

#### 8.4.8 *+bar* 'behind, after'

<i>+bar +xori</i>	'behind my friend'
<i>+bar +dav</i>	'behind him'
<i>+bar do-naša</i>	'behind that man'
<i>+bar dəm-naša?</i>	'behind which man?'
<i>+baru</i>	'behind him'
<i>+baro</i>	'behind her'
<i>+baré</i>	'behind them'

When used temporally, it is often preceded by the preposition *mən*:

*mən-+bar xa-šabta* 'after a week'

#### 8.4.9 *barķul-* 'opposite'

<i>barķuylət babi</i>	'opposite my father'
<i>barķuylət +dav</i>	'opposite him'
<i>barķuylət do-naša</i>	'opposite that man'
<i>barķuylət dəm-naša?</i>	'opposite which man?'
<i>barķuylu</i>	'opposite him'
<i>barķuylo</i>	'opposite her'
<i>barķulé</i>	'opposite them'

#### 8.4.10 *bazət* 'concerning, about'

<i>bazət babi</i>	'concerning my father'
<i>bazət +dav</i>	'concerning him'
<i>bazət do-naša</i>	'concerning that man'

<i>bazət dəm-naša?</i>	'concerning which man?'
<i>bazu</i>	'concerning him'
<i>bazo</i>	'concerning her'
<i>bazé</i>	'concerning them'

#### 8.4.11 bəl- 'between'

<i>bəl-babu 'u-yəmmu</i>	'between his father and his mother'
<i>bəl-dani</i>	'between them'
<i>bəl-do-naša 'u-de-baxta</i>	'between that man and that woman'
<i>bəl-dəm-našə?</i>	'between which people?'
<i>bilé</i>	'between them'
<i>bili bilux</i>	'between me and you'

#### 8.4.12 but 'concerning, about'

<i>but-babi</i>	'concerning my father'
<i>but-+dav</i>	'concerning him'
<i>but-do-naša</i>	'concerning that man'
<i>but-dəm-naša?</i>	'concerning which man?'
<i>but-diyyu</i>	'concerning him'
<i>but-diyyo</i>	'concerning her'
<i>but-diyyé</i>	'concerning them'

#### 8.4.13 cəs- 'near, with, at the home of'

<i>cəs-babi</i>	'at the home of my father'
<i>cəs-+dav</i>	'at his home'
<i>cəs-do-naša</i>	'at the home of that man'
<i>cəs-dəm-naša?</i>	'at the home of which man?'

The allomorph of the preposition that is used before pronominal suffixes has the shape *cəsl-*:

<i>cəslu</i>	'at his home'
<i>cəslə</i>	'at her home'
<i>cəslé</i>	'at their home'

#### 8.4.14 dar<sub>k</sub>ul- 'against'

<i>dar<sub>k</sub>uylət babi</i>	'against my father'
<i>dar<sub>k</sub>uylət +dav</i>	'against him'
<i>dar<sub>k</sub>uylət do-naša</i>	'against that man'
<i>dar<sub>k</sub>uylət dəm-naša?</i>	'against which man?'
<i>dar<sub>k</sub>uylu</i>	'against him'
<i>dar<sub>k</sub>uylo</i>	'against her'
<i>dar<sub>k</sub>uylé</i>	'against them'

#### 8.4.15 d-la 'without'

<i>d-la babi</i>	'without my father'
<i>d-la +dav</i>	'without him'
<i>d-la do-naša</i>	'without that man'
<i>d-la dəm-naša?</i>	'without which man?'
<i>d-la diyyu</i>	'without him'
<i>d-la diyyo</i>	'without her'
<i>d-la diyyé</i>	'without them'

#### 8.4.16 hal 'until, up to'

<i>hal-prakta</i>	'until the end'
<i>hal-day</i>	'until it (f.)'
<i>hal-da-+dana</i>	'until this time'
<i>hal-dəm-+dana?</i>	'until which time?'
<i>hal-diyyu</i>	'until it (m.)'
<i>hal-diyyo</i>	'until it (f.)'
<i>hal-diyyé</i>	'until then'

#### 8.4.17 ju-, ja-, javət 'in'

<i>ju-+lina</i>	'in a water pot'
<i>ju-+dav</i>	'in it (m.)'
<i>ju-do-+lina</i>	'in that pot'
<i>ju-dəm-+lina?</i>	'in which pot?'

The forms *ju* and *ja-* are contractions of *jav*. The uncontracted form *javət* is the allomorph of the preposition that is used before pronominal suffixes:

- javu* ‘in it (m.)’  
*javo* ‘in it (f.)’  
*javé* ‘in them (pl.)’

The form *javət*, consisting of the allomorph *jav-* and the annexation particle, may also be used before nouns, e.g. *jávət Nənvəl* ‘in Nineveh’ (A 3:78)

#### 8.4.18 *ka-* ‘to’

- ka-babi* ‘to my father’  
*ka-+dav* ‘to him’  
*ka-do-naša* ‘to that man’  
*ka-dəm-naša?* ‘to which man?’  
*ka-diyyu* ‘to him’  
*ka-diyyo* ‘to her’  
*ka-diyyé* ‘to them’

Pronominal suffixes may be combined with the preposition by means of the genitive particle, as shown above, or an allomorph of the preposition with the shape *kat-:*

- katu* ‘to him’  
*kato* ‘to her’  
*katé* ‘to them’

Before 1st and 2nd person singular suffixes the /t/ of the base *kat* is sometimes contracted:

- katux ~ kax* ‘to you (2ms)’  
*katax ~ kax* ‘to you (2fs)’  
*kati ~ kay* ‘to me’

#### 8.4.19 *kam-*, *ksamtət* ‘before, in front of’

- kam-cursi* ‘in front of the chair’  
*kam-+dav* ‘in front of it (m.)’  
*kam-do-cursi* ‘in front of that chair’  
*kam-dəm-cursi?* ‘in front of which chair?’  
*kamu* ‘in front of it (m.)’  
*kamo* ‘in front of it (f.)’  
*kamé* ‘in front of them’

The longer form *kamtət* is used temporally, e.g. *kámtət cíllə mārələ!* ‘he says first of all’ (A 3:61).

#### 8.4.20 *kamayt-*, *kamaytət* ‘before, in front of’

<i>kamaytət babi</i>	‘before my father’
<i>kamaytət +dav</i>	‘before him’
<i>kamaytət do-naša</i>	‘before that man’
<i>kamaytət dəm-naša?</i>	‘before which man?’
<i>kamaytu</i>	‘before him’
<i>kamayto</i>	‘before her’
<i>kamayté</i>	‘before them’

This is used in expressions relating to meeting, e.g. *+plátlə kamàytu!* ‘He went out to meet him.’

#### 8.4.21 *marzan-*, *marzanan-* ‘around’

<i>marzanət beta</i>	‘around the house’
<i>marzanət +dav</i>	‘around him’
<i>marzanət do-beta</i>	‘around that house’
<i>marzanət dəm-beta?</i>	‘around which house’
<i>marzanu</i>	‘around it (m.)’
<i>marzano</i>	‘around it (f.)’
<i>marzané</i>	‘around them’

#### 8.4.22 *mən* ‘from; with’

This preposition derives in form from *\*min* ‘from’ of earlier Aramaic, but the originally formally distinct preposition *\*am* ‘with’ has merged with it. A reflex of *\*am* in the form *+am* is occasionally heard in the speech of educated people under the influence of the literary language. In the vernacular dialect, however, *mən* expresses both ‘from’ and ‘with’:

<i>mən-babi</i>	‘from/with my father’
<i>mən-+dav</i>	‘from/with him’
<i>mən-do-naša</i>	‘from/with that man’
<i>mən-dəm-naša?</i>	‘from/with which man?’

In fast speech the preposition may be reduced to *m-*, e.g. *m-púmmət +Axikar!* ‘from the mouth of Axikar’ (A 3:21). This is likely to be cause of the merger with *\*am*.

The allomorph of the preposition that is used before pronominal suffixes has the shape *mənn-* with a geminated /n/:

- mənnu* ‘from him’  
*mənno* ‘from her’  
*mənné* ‘from them’

#### 8.4.23 +xadərvan- ‘around’

- |                               |                       |
|-------------------------------|-----------------------|
| + <i>xadərvanət beta</i>      | ‘around the house’    |
| + <i>xadərvanət +dav</i>      | ‘around him’          |
| + <i>xadərvanət do-beta</i>   | ‘around that house’   |
| + <i>xadərvanət dəm-beta?</i> | ‘around which house?’ |
| + <i>xadərvanu</i>            | ‘around it (m.)’      |
| + <i>xadərvano</i>            | ‘around it (f.)’      |
| + <i>xadərvané</i>            | ‘around them’         |

#### 8.4.24 xut ‘under’

- |                       |                      |
|-----------------------|----------------------|
| <i>xut-cursi</i>      | ‘under the chair’    |
| <i>xut-+dav</i>       | ‘under it (m.)’      |
| <i>xut-do-cursi</i>   | ‘under that chair’   |
| <i>xut-dəm-cursi?</i> | ‘under which chair?’ |
| <i>xutu</i>           | ‘under it (m.)’      |
| <i>xuto</i>           | ‘under it (f.)’      |
| <i>xuté</i>           | ‘under them’         |

### 8.5 Other Inflected Particles

Some particles are used predicatively with a pronominal argument expressed by a suffix. These include the following.

#### 8.5.1 bassa (*Kurd.* *bes*, *Pers.* *bas*)

The particle *bassa* may be used without suffixes, e.g.

- bàssa!* ‘That is enough!’  
*tré-dane býya**ə** bàssa.*! ‘Two eggs are enough’.

An affected pronominal argument may be optionally expressed by a pronominal suffix of the type that is added to nouns and prepositions, e.g.

*bàssi!*! ‘That is enough for me!.

*bàssux-ila!* ‘That is enough for you’.

*bássux mən-dàha!* ‘You have had enough of this’.

### 8.5.2 hayp- (*Pers. heyf < Arab.*)

This particle is used in exclamatory predications with the sense of ‘what a pity’! The item that is regretted is referred to by a pronominal suffix, e.g.

+*hàypu!*! ‘What a pity we have lost him (said when somebody dies)’.

+*hàypux-la!* *lá xúš +plàša!* ‘It is a pity for your sake, do not go to war’.

For its use with dependent clauses see § 9.15.3.

### 8.5.3 xas

The particle *xas* is used predicatively in oaths to express denial. It is combined with prepositional phrases containing *mən* or with L-suffixes, e.g.

*xás mónni ’ən-’ódən átxa məndi!*! ‘Far be it from me to do such a thing’.

*xásli lén túnya!*! ‘Far be it from me to have said such a thing (= I swear I did not say such a thing)’.

## 8.6 Miscellaneous Uninflected Particles

These may operate within a clause or may function as clausal conjunctions. Many of them are loanwords.

### 8.6.1 *Independent Particles*

<i>’ağallan</i>	‘at least’ ( <i>Pers. aqallan</i> )
<i>’äjar</i>	‘if’ ( <i>Pers. agar</i> )
<i>’albál, ’álbal</i>	‘immediately’ ( <i>Azer. əlbəhəl</i> )
<i>’anja</i>	‘if’ ( <i>Armenia</i> )
<i>’aslan</i> part.	‘fundamentally’; in negative and interrogative clauses ‘at all’ ( <i>Pers. aslan &lt; Arab.</i> )
<i>’axči</i>	‘only; but’
<i>’ay</i>	‘oh!’ (exclamation)

<i>'aybó</i>	'alas!' (exclamation)
<i>'azbar</i>	'by heart' (Azer. əzbər, Pers. az bar)
<i>balcá</i>	'perhaps' (Kurd. belkî, Pers. balke)
<i>băla</i>	'yes (answer to summons) (Pers. bale)'
<i>bas, ba</i>	'but, however; then' (Azer. bəs)
<i>bina</i>	'What do you want?' 'Please repeat'
<i>buš</i>	'more' (comparative particle) (Pers. bīš)
<i>çam, çəm</i>	'little, lacking' (Azer. kəm, Pers. kam, Kurd. kêm)
<i>čəm</i>	'very' (Turk. cf. Chagatai čum (Nöldeke 1868, 168), čung (Zenker 1866, 375))
<i>čuncət</i>	'because' (Azer. çünki)
<i>'ällaci</i>	'especially' (Arab. Pers. <i>'illā ke</i> 'but what' (Nöldeke 1868, 166))
<i>'ən</i>	'if'
<i>habas</i>	'in vain' (Azer. əbəs, Pers. abas < Arab.)
<i>hal</i>	'until, up to'
<i>halbát, halbatta</i>	'of course, surely' (Azer. əlbəttə, Pers. albatte)
<i>har</i>	'just, certainly, exactly' (Kurd. her, Pers. har)
<i>hatman</i>	'absolutely' (Pers. hatman < Arab.)
<i>hatta</i>	'even' (Pers. hatta < Arab.)
<i>həč</i>	'none, nothing, never' (Azer. heç, Pers. hīč)
<i>hi</i>	'yes'
<i>'ina</i>	'but', presentative particle
<i>'ita, 'itar</i>	'then, afterwards, therefore'
<i>jəd</i>	'except, besides' (Pers. joz, judā)
<i>koma</i>	'would that, if only' (cf. <i>kavvəm</i> QI 'to happen')
<i>la</i>	negative particle
<i>măjar</i>	interrogative marker (Pers. magar (§ 12.13))
<i>masalan</i>	'for example' (Pers. masalan < Arab.)
<i>mədrə</i>	'again'
<i>măjjət</i>	'indeed' (Kurd. < Arab. mujidd (Nöldeke 1868, 168))
<i>nájəstan, mən-nájəstan</i>	'suddenly' (Pers. nā-gāh + stān)
<i>săbab, sab</i>	'because' (Pers. sabab < Arab.)
<i>tacla</i>	'if only!' (Azer. tək 'only'+ <i>ila</i> (Nöldeke 1868, 186))
<i>tarsa</i>	'inside-out, back-to-front' (Azer. tərs)
<i>'u</i>	'and'
<i>'up</i>	'also'
<i>xu</i>	'surely' (usually with negative expression (§ 12.12))
<i>ya</i>	vocative particle (< Arab.)
<i>ya, yan</i>	'or' (Azer. ya, Pers. yā, Kurd. yan)

<i>yanət, yan</i>	'that, in order that' (Canda)
<i>yuxsa</i> (Canda <i>'usa</i> )	'otherwise' (Azer. <i>yoxsa</i> )
<i>zəl</i>	'directly' (Azer. <i>zol</i> 'line'? Arab. <i>zalla</i> 'to slip'?)
<i>zoda, buš-zoda</i>	'more' (adv.)
<sup>+</sup> <i>amma</i>	'but' (Azer. <i>amma</i> , Pers. <i>ammā</i> )
<sup>+</sup> <i>anjağ</i>	'rarely; only' (Azer. <i>ancaq</i> )
<sup>+</sup> <i>āx</i>	'ah!' (exclamation)
<sup>+</sup> <i>axər</i>	'in the end, after all' (Azer. <i>axır</i> , Pers. <i>ākir</i> < Arab.)
<sup>+</sup> <i>barabar</i>	'equally' (Pers. <i>barābar</i> )
<sup>+</sup> <i>baram</i>	'but' (Canda)
<sup>+</sup> <i>hala, +halam</i>	'yet, still' (Pers. <i>hälä</i> , <i>hälän</i> )
<sup>+</sup> <i>hana</i>	'here you are' (said when offering something)
<sup>+</sup> <i>of</i>	'oh!' (exclamation)
<sup>+</sup> <i>sevay</i>	'except, excluding' (Azer. <i>savayı</i> , Pers. <i>sevāye</i> < Arab.)
<sup>+</sup> <i>tammam</i>	'completely' (Azer. <i>tamam</i> , Pers. <i>tamām</i> < Arab.)
<sup>+</sup> <i>tuuva</i>	'may there be a blessing; it is a blessing'
<sup>+</sup> <i>vay</i>	'oh!' (exclamation)
<sup>+</sup> <i>yanə, yanə</i>	'that means' (Pers. <i>ya'nī</i> < Arab.)

### 8.6.2 Enclitic Particles

- =da 'also' (Azer. *da*, *də*)
- =ət annexation particle (in some constructions (§ 5.14))
- =zə 'also' (Kurd. *jî*)

<b>9</b>	<b>The Syntax of Nominals</b>	<b>1</b>
9.1	The Expression of Indefiniteness	1
9.2	Demonstrative Pronouns	12
9.2.1	<i>Syntactic Distribution</i>	12
9.2.2	<i>Referring to Referents in the Speech Situation</i>	13
9.2.3	<i>Recognitional Demonstratives</i>	16
9.2.4	<i>Anaphoric Demonstratives</i>	17
9.2.4.1	Anaphoric Near Deixis	17
9.2.4.2	Anaphoric Middle Deixis	20
9.2.4.3	Anaphoric Far Deixis	22
9.2.4.4	Anaphoric Use of 'anne	22
9.2.4.5	Default Demonstrative Pronouns	24
9.2.4.6	Strong Default Demonstrative Pronouns	30
9.2.4.7	Absence of Demonstrative Pronouns with Definite Nominals	31
9.3	The Reflexive Pronoun	32
9.3.1	<i>Subject</i>	32
9.3.2	<i>Object Complement</i>	33
9.3.3	<i>Complement of a Preposition</i>	33
9.3.4	<i>Genitive Complement</i>	34
9.3.5	<i>Non-Reflexive Use</i>	35
9.4	Pronoun of Isolation	35
9.5	Reciprocal Pronoun	36
9.6	Attributive Modifiers	38
9.6.1	<i>Adjectives</i>	38
9.6.2	<i>Apposition</i>	46
9.6.2.1	Non-Restrictive	46
9.6.2.2	Restrictive	48
9.6.2.3	Evaluative	49
9.6.3	<i>Adverbial and Prepositional Phrases</i>	49
9.7	Non-Attributive Modifiers	50
9.7.1	cul 'each, every'	51
9.7.2	cut 'each, every'	51
9.7.3	cullə 'all'	52
9.7.3.1	Before a Plural Head Noun	52
9.7.3.2	After a Plural Head Noun	52

	9.7.3.3	With a Singular Head Noun	52
	9.7.3.4	Independent	53
9.7.4	+raba ‘many, much’	53	
9.7.5	xačča ‘a little, a few; some’	55	
9.7.6	xacma, cma ‘some’	56	
9.7.7	xa-’axča, xa-xča ‘such a’	57	
9.7.8	+’uxča ‘so much’	58	
9.7.9	+pəllan ‘such-and-such’	59	
9.7.10	’atxa, xa-’atxa ‘such a’	60	
9.7.11	xina ( <i>f.</i> xita, <i>pl.</i> xinə) ‘other’	61	
	9.7.11.1	Modifier of a Noun	61
	9.7.11.2	xa-xta	62
	9.7.11.3	Adverbial <i>xina</i>	63
9.7.12	həč ‘not any’	63	
9.7.13	mut ‘what?’	64	
9.7.14	mujjur ‘what kind of?’	65	
14.9.15	la ‘not’	65	
9.8	Comparison of Adjectives and Adverbs (The Particles <i>buš</i> and <i>zoda</i> )	65	
9.9	Annexation	68	
9.10	Genitive Suffix and the Independent Genitive Particle	79	
	9.10.1	<i>Suffix and Independent Particle as Genitive Attribute</i>	79
	9.10.2	<i>Variant ipl. Forms of Suffix</i>	83
	9.10.3	<i>Anaphoric Function of Suffixes</i>	84
9.11	Juxtaposition of Specifiers	85	
9.12	Conjoining of Phrases	87	
	9.12.1	<i>Syndetic Conjoining</i>	87
	9.12.2	<i>Asyndetic Conjoining</i>	88
9.13	Repetition	90	
9.14	Numerals	94	
9.15	Gender	104	
	9.15.1	<i>Propositional Content</i>	104
	9.15.2	<i>Expressions of Time</i>	105
	9.15.3	<i>Impersonal Pronominal Reference</i>	106
	9.15.4	<i>Gender of Metalinguistic Words</i>	107
9.16	Adverbial Expressions	108	

<b>10 The Syntax of Verbs</b>	<b>112</b>
<b>10.1 Preliminary Remarks</b>	<b>112</b>
<b>10.2 The Function of Verbal Forms Derived from the Present Template</b>	<b>112</b>

# The Syntax of Nominals

## 9.1 The Expression of Indefiniteness

The cardinal numeral ‘one’ (*xa*) is often used as an indefinite article that is a grammatical signal of the indefinite status of the nominal, i.e. when the speaker assumes that the hearer is not able to identify the referent of the nominal. The particle *xa* is not used with all nominals that have indefinite status on the pragmatic level. Certain general tendencies can be discerned in its usage, though there are no categorical rules. The English indefinite article has a far wider distribution among nouns with indefinite status and it is often appropriate to use the indefinite article in an English translation where no *xa* particle appears in the dialect.

The particle *xa* may also be combined with the word *dana*, a Kurdish word literally meaning ‘grain’, to express indefiniteness, e.g. *xá-dana málca* ‘a king’ (A 3:1), *xa-dana <sup>t</sup>jilasta* ‘a cherry’.

The distribution of the indefinite marker *xa* in comparison with zero marking will first be examined and subsequently the motivation for the use of the marker *xa-dana* rather than *xa* will be considered.

In general, the marker *xa* tends to occur with an indefinite countable nominal with a referent that is individuated and salient in some way, whereas it tends to be omitted when these features are absent.

A major factor that determines the individuation or salience of an indefinite nominal is whether the speaker is using it to refer to a specific referent in the class of items denoted by the word or whether it is being used in a less specific sense to refer to any item in the class. Indefinite nominals with specific referents generally have *xa* whereas those with non-specific referents frequently lack the particle. Referentially specific usages of indefinite nominals occur more frequently, as one would expect, in narratives than in expositional discourse concerning general customs.

In narrative contexts the specific referents of such indefinite nominals introduced by *xa* often play an important role in the subsequent context, which is reflected by the fact that they are referred to in subsequent clauses. This, therefore, is a factor that further enhances the salience of the referent. Examples:

- (1) *'átvá látva| xá yála 'átvá| +másta +al-ríšu +rába látva| ci-+karívala cačalúna| +rába-zə naxùpəva| +rába-zə +zadìyəva| hóč mən-béta léva +pláta +al-*

*vàddar.* | ‘Once up on a time, there was a lad who did not have much hair on his head. They used to call him baldy. He was very shy and very timid. He never used to go outside of the house.’ (A 37:1)

An indefinite nominal referring to a period that functions as an adverbial is typically combined with the particle *xa* when the reference is to one specific time. This is often found at the beginning of a narrative section, where the adverbial sets the temporal frame of what follows, e.g.

- (2) *xà-yuma<sup>l</sup> + krílə + rába mən-dánnə nášə lípə.* | ‘One day he summoned many learned men.’ (A 3:3)
- (3) *xà-yuma<sup>l</sup> málca márəl + ka-+Axíkar.* | ‘One day the king says to Axiqar ...’ (A 3:14)
- (4) *xá-yuma bábu yámmu ... bæxzáyəna bruné jarvùsələ.* | ‘One day, his father and mother notice that their son is growing up.’ (A 37:2)

The particle is also found with spatial adverbials which typically set the spatial frame for the following section of text, e.g.

- (5) *xa-dúcta + rába šaršiyələ. mýyat + àyna bæxzáyələ xá + àyna. ital bəštáyələ xáčha mən-de-+ àyna. dápñat de-+ àyna bədmáxəl sáb + rába šuršiyəval + bætláyəl.* | ‘At a certain place he becomes very tired. He sees a spring water, a spring. So he drinks a little from that spring. He falls asleep at the side of that spring, because he was very tired, and he sleeps.’ (A 37:6)

When the generic word *məndi* ‘thing’ has a specific referent and is combined with *xa*, its contents are generally explicated in the following context, e.g.

- (6) *+ o-kaṭùla ... mərrəl málca t-ávət basıma, + báyyən xà-məndi tanánnux. mára mù-ilə? tāni!* | ‘The executioner ... said “King, be well, I want to tell you something”. He says “What is it? Speak!”’ (A 3:47)

The durability of the referent of a noun with *xa* in the following context may be of a lesser extent than in the examples cited above, but nevertheless there is generally some kind of relevance to what follows. In (7), for example, the relevance of the ‘hole’ extends to the content of the following subordinate clause but not beyond this.

- (7) *xa-<sup>+</sup>bázza bəšvàkəna| kat-napásu là-<sup>+</sup>kattə.* ‘They leave a hole so that his breathing would not be cut off.’ (A 3:36)

As remarked, the particle *xa* is frequently omitted if the indefinite nominal does not have a specific referent. Such nominals are commonly found in descriptions of habitual activities, e.g.

- (8) *čúxta c-avívalun* ‘They used to have a cellar.’ (B 2:4)  
 (9) *’ita ci-mapləxxíva ... +doràna| mán mázrak.* ‘So they used to use a rolling pin together with a dough-cushion.’ (B 2:9)  
 (10) *bèta +ṭarsíva biyyé.* ‘They used to build a house with them.’ (B 2:18)  
 (11) *késa ci-mattíva +xlima átxa.* ‘They used to place a piece of wood, thick like this.’ (B 2:19)  
 (12) *ci-yatvíva| marzánət tanùyra.* ‘They used to sit around an oven.’ (B 2:4)  
 (13) *’ita mán-dánnə míyət +’ánvə +səpyə| ci-šaklίva xàčča| ci-darívalun ju-+tiyan.* ‘So from this pure grape juice they used to take a little and pour it into a cauldron.’ (B 12:4)

In such cases attention is directed to the lexical description of the class of the noun rather than to the set of its individual referents, as is made explicit in cases such as (14):

- (14) *’o-késa +yaríxa +karívalə +karita.* ‘They used to call the long piece of wood “a beam”.’ (B 2:19)

Further examples of nominals referring to a class rather than a referent include cases such as the following:

- (15) *nàkva| mán-’úrza buš-xelàntəla.* ‘A woman is stronger than a man.’ (A 2:36)  
 (16) *’u-<sup>+</sup>byáyələ mán-de-yàmmu| kat-úla xumítu| báxtət +Axičkar| ávə mánno ýax +jóra.* ‘He wants to be with his mother, who has nurtured him, the wife of Axiqar, as a husband.’ (A 3:38)  
 (17) *+bəddáyət +kátu müjjur čarçùrəla?* ‘Do you know how a cat whines?’ (A 3:79)  
 (18) *cut-<sup>+</sup>dána ýáklu mattùyolə| xáčča jašùkələ.* *+bəzdáyələ +várələ javày.* ‘ína mādrəl sódu bitàyələl véla céca +támma piša. ‘Every so often he places his foot (outside of the gate) and looks (outside). He is afraid and comes back inside. But again he is (constantly) tempted, there is still a cake (i.e. on each occasion an unspecified member of the class of cakes) remaining there.’ (A 37:4)

The distinction between indefinite nouns with unspecified referents and those with specified referents is clearly seen in (19):

- (19) *+báyyəva bàxta javárva.* | *+ṭavvúyələ +ṭavvúyələ| xa-bàxta bəʃvárələ| šámmo +Màhəva.* | ‘He wanted to marry a woman (unspecified referent). He searches and searches and marries a woman (specific referent), whose name is *+Mahə*.’ (A 40:1)

Indefinite nominals without specific referents do, however, occasionally have *xa* when they are individuated in some way. The particle tends, for example, to be used before words denoting measures, portions or fractions of a whole, e.g.

- (20) *yán xa-sáma ’ən-+ràba ’áviva ci-zabnìva.* | ‘or if a proportion (of them) were surplus, they used to sell (them).’ (B 2:11)  
 (21) *ú ... míyyat +ánvə ci-+mardəxxìvalun| xa-pàlfət +sá’at.* | ‘They used to boil this grape juice for half an hour.’ (B 12:5)  
 (22) *’ána xá-məskal mən-’áštux pàrmən.* | ‘I shall cut a gram from your bottom.’ (A 7:3)

In (23) *xa* is used to stress the inclusion of every individual item of a set:

- (23) *cùl xa-móndi c-avívalun mán kənyàna=zə.* | ‘They used to have everything from the cattle.’ (B 2:10)

In (24) the particle is used with a noun of mass, which normally does not take the indefinite article, in order to distinguish a particular type of the entity denoted by the noun:

- (24) *daráxvala ’ùpra.* | *’átvalan xa-’ùpra, mən-Javilan mayyívalə.* | ‘We added soil. We had a (special type) of soil, which they brought from Javilan.’ (B 7:15)

The particle is used in distributive contexts, when individual items of a set are related to individual items of another set:

- (25) *ju-mavàtə,* | *cut-bèta* | *’átvälə xá tanùtyra.* | ‘In the villages each house hand an oven.’ (B 14:1)  
 (26) *cút béta c-óya tanútya* | *’átvälə xa-čàraz.* | ‘Each house, it may be said, had a wine-press.’ (B 12:2)

In (27) it is used distributively in the context of an iterative activity:

- (27) *'ána cút yùm| cút +beràšə| b-xá sìysə bət-+páltxən.* | 'Every day and every evening I shall go out with a (different) horse.' (A 39:42)

The particle is regularly used with nominals before a noun qualified by the adjective *xina* 'other', which draws particular attention to one individual item in contradistinction to other items within the class denoted by the noun, e.g.

- (28) *xájúra xína +tína +taròsva.* | 'Another type of mud used to be made.' (B 2:21)  
 (29) *'ína ő=t tanúyra xá-məndi xína.* | 'but the one (the bread) of the oven is something else.' (B 14:4)

The particle *xa* is placed before an indefinite noun when the speaker wishes to focus upon its unity, e.g.

- (30) *b-xá +čap̪álta 'ána ... arpí dánə dévə +másən +katlənnun.* | *b-xá mxétət dá +čap̪álta.* | 'With one staff I can (habitually) kill forty monsters, with one blow of this staff.' (A 37:8)

The particle is sometimes used with a nominal without a specific referent but has a modifier that specifies its lexical description, e.g.

- (31) *lá 'ávət mən-xa-bàxta| kát ... +jóro mítələ,| là forátlə.* | 'Do not be with a woman whose husband has died, do not marry her.' (A 3:10)

A particle *xa* is sometimes used when the noun does not have a specified referent but is the argument of a verb that has perfective aspect and denotes a particular event, e.g.

- (32) *ya-'alàha,| +xlàpu vili,| hálli xa-brùna.* | 'Oh God, I implore you, give me a son.' (A 3:4)

Contrast this with (33), in which *xa* does not occur. The verb here is negated and denotes a general, more diffuse ('never') situation:

- (33) *'át lè-avilux brúna.* | 'You will not have a son.' (A 3:5)

Note also (34)–(35), in which the protasis is perfective in that it denotes one possible event in the future:

- (34) *'án xa-náša bukàrra mənnáx| kət-'áha| mənila,| tənyat| bràtila.* ‘If somebody asks you who she is, you should say “She is my daughter.”’ (A 1:14)
- (35) *'íman-ət xá náša +fúra +avərvəl| járə kəmátvə +al-'áklux.* ‘When an old person entered, you had to get up onto your feet.’ (A 1:16)

An indefinite nominal that is predicative, the function of which is to assign the subject of the clause to a class rather than refer to a specific referent, generally lacks *xa* if it has no qualifier, e.g.

- (36) *'e-+dān-səvlux,| t-ávə brùna kátux.* ‘When you have become old, he will be a son to you.’ (A 3:6)
- (37) *+spày-ilə| kat-fú malciyta| t-ávə vəzzər kátu.* ‘He is suitable to be a minister for him in the royal court.’ (A 3:16)
- (38) *'át výyyət bába káti.| mádrə har-ó-baba vi-kàti.* ‘You have been a father to me. Be the same father to me again.’ (A 3:92)
- (39) *'àd-lelə| 'átən p̄t-ávət káy 'árxa.* ‘Tonight you will be a guest of mine.’ (A 4:7)
- (40) *'íman škəllə| júllu šulxələ| xzili nàkyləla.* ‘When he took off his clothes, I saw that it was a woman.’ (A 2:32)

The particle is often used, however, in a predicative nominal if its description is specified by a modifier, e.g.

- (41) *ví xa-náša lípa.| ví xa-náša macìxa.* ‘Be a learned man. Be a soft man.’ (A 3:11)
- (42) *výyyələ xa:jvànkəl| +màtya.* ‘He has become a mature young man.’ (A 3:16)

If the modifier precedes the noun the particle is less likely to be used, e.g.

- (43) *ví +spày náša.* ‘Be a good man’ (A 3:13)
- (44) *+rába čátun šòmma 'ótla.* ‘He has a very difficult name.’ (A 3:47)
- (45) *+rába basámta nùynəla.* ‘It is a very tasty fish.’ (A 34:9)
- (46) *'ána 'àtxa násənva.* ‘I was such a man.’ (A 2:25)

The particle is used with an unqualified predicate when it is individuated by being set up in contrastive opposition with some other item, e.g.

- (47) *'án xímə cùllə| cicé maxrupèna dévəl| kát dúlə 'axúnan tuyyílə xá +séda t̄-+axlàxlə| mára là 'axunváti,| là| 'á-ilə xá +bar-nàša.* ‘All the others are sharpening their teeth thinking that “our brother has brought a prey for us to eat.” He says “No my brothers, no. This is a human.”’ (A 37:12)

The particle is used in a predicate also to express a special case of the class denoted by the referent, e.g.

- (48) *'áha xá-yuma xa-<sup>+</sup>càtra t-ávə ká-díyyan.* ‘This man will be one day a (particular) problem for us.’ (A 37:19)

Occasionally an indefinite nominal with a specific referent lacks the *xa* particle. In many such cases in narratives the referent does not play an important role in the plot, but rather is incidental. In (49) and (50), for example, the ‘ladder’ and the ‘book’ respectively play no further role in the ensuing narrative:

- (49) *'á sáklə mən-səmmàlta.* ‘He went up by a ladder.’ (A 2:31)  
 (50) *bactávələ ju-ctàvələ kat-átnən fùr'un denánət ká ... málca.* ‘He writes in a book “You, Pharaoh, are in debt to the king.”’ (A 3:76)

In (51) the particle is omitted before the adverbial *yuma*, since, unlike the phrase *xa-yuma*, it does not set a durable temporal frame but denotes an ephemeral location:

- (51) *xàšla! yúma ju-xa-mdita, yúma ju-xa-cùča, ... +baxdàra.* ‘He went one day wandering in a town, one day in a street.’ (A 4:2)

The particle is omitted also from nominals that occur in a section of the text that has the status of a background comment rather than being part of the main narrative plot, e.g.

- (52) *'átlə šàmma! bas-šàmma +'úxča munšítun, 'o-<sup>+</sup>kaṭúla 'átlə šàmma.* ‘He has a name but I have forgotten the name, the executioner has a name.’ (A 3:33)

In (53) the particle is omitted in the case of a nominal that lacks individuation also due to the fact that it refers to a non-existent imaginary referent:

- (53) *+ávən čarčùrələ! tílə +tàla t-+axálli!* ‘He screams “A fox has come to eat me!”’ (A 37:5)

The particle *xa* is generally omitted from a nominal that serves to specify the descriptive content of the event rather to express a distinct argument involved in the event, even if it has a specific referent. This applies in particular to phrasal

type verbal constructions (§ 4.26.) in which a noun is combined with a light verb such as *'avəd* I ‘to do’ or *yavvəl* I ‘to give’, e.g.

- (54) *hàmla t-ávəd +'állux*.| ‘He will make an attack on you. (= He will attack you).’ (A 3:20)
- (55) *bəl-dìyyi<sup>l</sup> bəl-dìyyux* | *'aláha t-ávəd +dīvan*.| ‘God will hold a court (and judge) between me and you.’ (A 3:93)
- (56) *'ána +xàlt̥a vídən*.| ‘I have made an error (= I have erred).’ (A 3:48)
- (57) *'aláha +jùvvab yuvvál<sup>l</sup>a kátu*.| ‘God gave him a reply (= God replied to him).’ (A 3:5)
- (58) *'ána +byáyən mən-násux līpəl mən-jú +'átrət dìyyux* | *+árpa xamšá mənd-yánə káti* | *+jùvvab ód<sup>l</sup>* | *+jùvvab yavvili*.| ‘I want your learned men from your land, to respond to me, give me a response, regarding four or five things.’ (A 3:39)
- (59) *'ú-yuvvál<sup>l</sup>a +xàbra* | *ká-vàzzər*.| ‘He gave an order to the vizier. (= He ordered the vizier).’ (A 2:1)
- (60) *dástur yávvəl ká-vàzzər*.| ‘He gives a command to the vizier (= He commands the vizier).’ (A 2:13)

It also applies to other types of verbal phrases of this nature, e.g.

- (61) *+palačiyyəl +pála ptàxəva*.| ‘Fortune-tellers—they read (literally: opened) a fortune.’ (A 3:3)
- (62) *mammánnux b-momita*.| ‘I pledge you with an oath.’ (A 3:63)
- (63) *mátti +alámət +al-dà-beta*.| ‘Put a sign on this house. (= Mark this house).’ (A 2:8)

A noun with *xa* can take a genitive pronominal suffix, e.g.

- (64) *'ána báxtət dìyyux 'ax-xa-xàtila*.| ‘Your wife is like a sister of mine.’ (A 1:5)

In (65) the particle *xa* is separated from the noun by intervening material. The noun denotes a referent that enters the scene and is placed after the verb, as is often the case with presentative constructions (§ 12.5.2.2.):

- (65) *xá mánnu +várrə +ràma +ráma jvánka*.| ‘A very tall youth entered through it (the door).’ (A 42:2)

The phrase *xa-dana* expresses individuation with heavier morphological coding than the particle *xa* alone. It tends to be used to express a greater degree

of distinctness of the referent of the nominal. The phrase is generally a single stress group with the stress placed on the first element: *xá-dana*.

One context in which it is typically used is where the nominal marked by the phrase has a referent that has particular discourse prominence. In narratives it is marked on nominals that play an important role in the plot. Such nominals, of course, have specific referents, e.g.

- (66) *'átvə xá-dana málca.* | 'There was a king.' (A 3:1)  
 (67) *xəšlə| cəs| xá-dana +tàjər.* | 'He went to a merchant.' (A 1:2)

The phrase is also used with nominals without a specific referent that have particular prominence within a section of discourse. Examples (68) and (69), for example, from a narrative, occur at the beginning of sections of the text concerned principally with 'a cat' and the building of a 'house in the air' respectively:

- (68) *xá-dana +kátu dùkun.* | 'Catch a cat.' (A 3:78)  
 (69) *+bətlábələ móñ +Nuxadnásər| fur'un,| kát xa-dana-bèta| zarózla ju-+hàva.*  
 'Pharaoh asks Nebuchadnezzar to construct a house in the air.' (A 3:44)

In texts relating to habitual activities, speakers use the phrase *xa-dana* with items to which they wish to draw particular attention, e.g.

- (70) *'ón béta 'ávə +júral xá-dana stùyna-da xút ci-maxíva mən-+àrra| hál +tàmma| kát là talóxva.* | 'If the house was big, they used to place a pillar underneath (coming up) from the ground up to there, so that it would not collapse.' (B 2:19)  
 (71) *'ítə +berašvánə=da| kat-'ärxə 'atíval ju-dó bét tanùyra| mattívalun xá-dana miz| 'átxa mátti +al-pàtət tanùyra,| yan-là,| xá-dana +àdyal dár| nášə 'aklatè p-čambällívalun ju-do tanùyra,| cíllə šaxìna.* | 'Then in the evenings, when guests arrived, in that oven house they laid for them a table, they lay it thus on the top of the oven, or if not, they laid out a blanket and the people would dangle their legs in the oven, all (keeping) warm.' (B 14:2)

The phrase is used to give prominence to the unity of a referent, in contexts where it is set up in a contrastive opposition of some kind, e.g.

- (72) *bəxzáyələ mən-ràkkal 'ína xá-dana +šrá véla bəllàya| ju-xa-bèta.* | 'He sees from afar a single lantern burning in a house (contrasting with the absence of lanterns in the rest of the town).' (A 2:4)

- (73) *bərráxšələ +várəl +támə| jaššúkələ 'ína xá-dana báxtal mán təryəssər 'úrzə.*  
 'He goes and enters there. He sees a single woman with twelve men.'  
 (A 2:5)

In (74) the noun following *xa-dana* is preceded by a preposition *max* 'like':

- (74) *'áha| +m̥t̥lə mádrə +al-xá-dana max-bèta.* 'He came to something like a house.' (A 42:12)

A strategy to give additional prominence to referents introduced by the indefinite particle is to strengthen the glottalization after the vowel of *xa* (§1.14.) resulting in forms such as *xa'-dana* and *xa'a* as in (75), which relates a pivotal event in the narrative:

- (75) *+várələ| bəxzáyələ 'ína xá'-dana húri pàri| xá'a báxtal +raba šap̥órtə| tòvtəla.* 'He goes in and sees that a nymph, a very beautiful woman, is sitting there.' (A 39:10)

When the indefinite marker *xa* is combined with the following word in the same stress group, the stress is put either on the *xa* or on the word with which it is combined. The retraction of the stress to the indefinite marker is the norm in the phrase *xá-dana*, e.g. *xá-dana málca* 'a king' (A 3:1), and also in phrases with an expression of measurement, e.g. *xá-məskal* 'a measure' (A 7:3), expressions of time such as *xá-yuma* 'one day' (A 37:2), *xá-ja* 'once' (A 1:15), or words of low semantic content such as *məndi* 'thing' or *naša* 'person', e.g.

- (76) *'u-+rába nášə +k̥rìlə kát xá-məndi òdi.* 'He summoned many people to do something.' (A 3:3)  
 (77) *xá-naša lítən.* 'There is nobody (here).' (A 6:7)

The stress is put on the particle also when the speaker wishes to give prominence to the unity of the item by using the particle as a cardinal numeral, e.g.

- (78) *túrvəntan dámjax fú-xá-+otax 'ad-lélə.* 'Both of us will sleep in one room tonight.' (A 1:10)

In (79) the unity of the item is given particular prominence by giving the particle the nuclear stress of the intonation group:

- (79) *šítā xà-dana xabúša ci-ṭánya.* ‘It used to bear one single apple a year.’  
(A 39:1)

In such cases the cardinal numeral may be combined with the indefinite marker *xa* (80) or a demonstrative pronoun (81), e.g.

- (80) *xa-xá-jarja bərrəxšələ́ járjət d-trè, járjət +ṭlā́ járjət +ṭar̥pa.* ‘He (ploughs and) goes a single furrow, the second furrow, the third furrow, the fourth furrow.’ (A 5:6)
- (81) *škúl ḡa-xá +dínar ḡa-diyyux.* ‘Take this one dinar for yourself.’ (A 14:13)

The noun after the indefinite particle may be pronominalized by the phrase *xá-mənne* ‘one of them’. The 3pl. suffix in this phrase may refer to a group of referents that have been mentioned in the preceding context, in which case the phrase picks out one referent from a known salient group, e.g.

- (82) *þt-avíloxun tré bnùnə. šəmmané mattítuná xá-mənne +Àlmas xá-mənne +Bàhar.* ‘You will have two sons. Name one of them +Almas and one of them +Bahar.’ (A 42:3)

The 3pl. suffix may also be used with impersonal reference without being bound to any previously mentioned referents, in which case the phrase refers to a specific referent that is not bound to what precedes. It is generally used to refer to unnamed humans and is idiomatically translated ‘somebody’, e.g.

- (83) *jašùkələ́ xá-mənne har-kàlu bitáyalə.* ‘He sees that somebody is making a sound.’ (A 43:18)

When the phrase *xa-mənne* is used in negative clauses with the negative polarity item *həč* (§ 9.7.12.), the 3pl. suffix must be bound to the preceding context, e.g.

- (84) *məššəlmánə=zə ... həč-xa mənné látvalun carmàna.* ‘As for the Muslims ... none of them had vineyards.’ (B 2:6)

When there is no such binding to the previous context, an alternative negative polarity phrase must be used, such as *həč naša*:

- (85) *lá xzíli həč naša.* ‘I did not see anybody.’

## 9.2 Demonstrative Pronouns

### 9.2.1 *Syntactic Distribution*

The demonstrative pronouns have a nominative and an oblique form (§ 2.2.), e.g.

#### Nominative      Oblique

<i>'aha</i>	'this'	<i>daha</i>	'of this'
<i>+’avva</i>	'that'	<i>+davva</i>	'of that'
<i>+’av</i>	'that'	<i>+dav</i>	'of that'

They may function attributively by qualifying a nominal, in which case they are placed before the nominal, e.g.

#### Nominative      Oblique

<i>'aha naša</i>	'this man'	<i>daha naša</i>	'of this man'
<i>+’avva naša</i>	'that man'	<i>+davva naša</i>	'of that man'
<i>o-naša</i>	'that man'	<i>do-naša</i>	'of that man'

They may also be used independently, in which case they can substitute for nominals in most syntactic positions. The nominative forms are used in the positions of subject, extraposition, direct object and predicate. The oblique forms are used when the pronoun is a complement of a noun or of a preposition, e.g.

#### (i) Subject and extraposition

- (1) *’áha bitàyəla! ɬa-Nàtan, brūn-xàtu.* 'He comes to Natan, the son of his sister.' (A 3:7)
- (2) *+’ávva sìla bədráyəla.* 'He sprinkles sand.' (A 3:74)
- (3) *+’áv=da +rábə lìpəva.* 'He also was very learned.' (A 3:1)
- (4) *+’avun p̄t-ávə ɬa-sebúytux.* 'He will be for your old age.' (A 3:6)
- (5) *kát ’áha yàla ’avílə!* 'so that he would have a child' (A 3:3)

#### (ii) Predicate

- (6) *+júvvab +’ávvəva.* 'The (correct) answer was that.' (A 3:83)
- (7) *hákyat ’áhəla.* 'The story is this.' (A 41:20)
- (8) *Pdarāmàd<sup>P</sup>l ’áyyəla ’yáno.* '“Income” is that.' (A 3:41)

## (iii) Direct object

- (9) *+ávun +ktul-làbəllə.* ‘Kill him and take him away.’ (A 3:35)
- (10) *’áha móttuyul +tāma.* ‘He places him there.’ (A 3:16)
- (11) *kémən ’ana-+jarbənnə ’áha.* ‘I shall test him.’ (A 14:2)
- (12) *bas-jàrəc ’ána maxənna ’áha.* ‘So I must beat it.’ (A 3:81)
- (13) *’ánnəju-màšxa kultéñ.* ‘I have fried these in oil.’ (A 36:8)
- (14) *’á svíkuna bëta.* ‘They have left him at home.’ (A 37:13)
- (15) *’ána bərrášxən ’áyən cùtan ’odónna.* ‘I am going to plough it.’ (A 36:11)

## (iv) Complement of a noun

- (16) *bábət dáha* ‘the father of this man’ (A 2:14).
- (17) *mən-+táma +ruppílə jànu* *ju-císət +dàvva.* ‘From there he threw himself onto the stomach of that one.’ (A 7:6)
- (18) *bálcət +kanúnət dánnə ’àtxələ.* ‘Perhaps their custom is thus.’ (A 1:16)

## (v) Complement of a preposition

- (19) *+bar-dáha bərráxələ cəs-màlca.* ‘After this he goes to the king.’ (A 3:54)
- (20) *muttílə +tapàvut* *bəl-da-brùna* *bəl-+dàvva.* ‘He made a difference between this son and him.’ (A 3:19)
- (21) *+bár-t +xábra lá-vilə mən-dánnəl* ‘after no word was forthcoming from them’ (A 3:4)
- (22) *ka-dannə-mxàyələ.* ‘He beats them.’ (A 3:72)

**9.2.2 Referring to Referents in the Speech Situation**

When examining the function of the demonstrative pronouns a distinction should be made between three broad uses (i) to refer to entities that are perceptible in the extra-linguistic speech situation, (ii) to draw attention to a referent that is absent from the speech situation but is recoverable in the hearer’s knowledge of the world and (iii) to refer to referents within the discourse. As indicated in § 2.2., when used to refer to extra-linguistic entities the pronoun system consists of four series:

- |                 |   |
|-----------------|---|
| ‘near deixis’   | <i>’aha ctava</i> ‘this book (near to me)’                                      |
| ‘medium deixis’ | <i>+’ava ctava</i> ‘that book (remote from me and you in the speech situation)’ |
| ‘far deixis’    | <i>+’avvó ctava</i> ‘that book (remote from me and you in the far distance)’    |

'default'                    *'o-ctáva* 'that book (identifiable by you)'

The default demonstrative may be used with a nominal denoting a referent that is bound to a deictic element elsewhere in the noun phrase, e.g. *'o-ctava p̄-idux* 'that book in your hand', *'o-ctava p̄-idi* 'this book in my hand', where the 2nd and 1st person pronominal suffixes in the qualifying prepositional phrase supply the deixis that allows the hearer to identify the referent. It is also used without being bound grammatically to such deictic elements when the referent is in contact with the addressee or speaker in the speech situation and the identity of the referent is clear, e.g.

- (1) *hálli 'o-čàngjal.*! 'Give me that fork' (said when the addressee is holding the fork in his/her hand).

These various functions of the demonstratives correspond to those of the demonstrative adverbs *laxxa* (near deixis), *+tamma* (medium deixis), *+tammó* (far deixis), *+tama* (default).

Examples from the text corpus of demonstrative pronouns and demonstrative adverbs used to refer to items in the speech situation:

- (2) *‘áyya +karaváttat dìyyux=ila!* *‘á-da +karaváttat dìyyila.*! 'That is your bed and this is my bed.' (A 4:10)
- (3) *mən-dá +‘áyna c-àtax!* *mìyya ci-šákłax!* *‘a-mzída ci-màlyax!* *ka-xá šábtat diyyan.*! 'We come and take water from this spring. We fill this waterskin for us for one week.' (A 37:11)
- (4) *mànile bəxxá ju-+davvó béta?*! 'Who is living in that house over there?' (A 1:27)
- (5) *‘ína +avvó +túyra ‘áttən +tammòha.*! 'But there is that mountain over there.' (A 39:32)
- (6) *xúš kèsə mélan!* *mán dáyya mèša,* *véla mèša kùrba.*! 'Go and bring logs from that forest—the forest is over there nearby.' (A 37:14)
- (7) *cùl-məndit +báyyət!* *yavvànnux,* *‘o-jùlli,* *cùl-məndit +bàyyət!* *dàvi!* 'I shall give you everything you want—these clothes of mine (which I am wearing), everything you want, my gold ...' (A 1:8)
- (8) *ku-+vúrju-dó bùška.*! 'Come on, get into this barrel (which I am holding).' (A 6:9)
- (9) *xá-yuma +malla +Nasrádən výáyələ tíva +al-kèsə.*! *xá mən-nášə +vàrəva,* *mórrə +màlla!* *‘átən ‘o-késa pràmut,* *bət-nàplət.*! 'One day mullah Nasradin is sitting on a piece of wood. A person was entering and said "Mullah, you are cutting that wood (you are sitting on), you will fall." (A 32:1)

- (10) *'ína xá-dana dèv, mən-dánnə dèvə, ríšu muttúlə +al-bərco, ... màrələ ... ána tíyyən jān-+dàvun šaķlónna, ána tíyyən +'àvun +kaṭlánna.* ‘There is a monster, one of those monsters, whose head was on her knee ... He (the hero) says “I have come to take the head of that one (on your knee), I have come to kill that one.” (A 39:10–11)
- (11) *cèna 'an-núynə?* ‘Where are those fish (i.e. the fish that I gave you in your hand but are now not present).’ (A 36:14)
- (12) *xúš túy +tàmma!* ‘Go and sit over there!’ (A 1:31)

Deictic demonstratives may be used in presentative constructions such as (13) and (14) without a verb:

- (13) *áha ka-diyyux.* ‘This is for you.’ (A 39:15)
- (14) *ánnə zìtyzux.* ‘Here is your money.’ (A 7:2)

In such cases they may be combined with further presentative expressions, e.g.

- (15) *+hána á mána +zād.* ‘Here is a plate of food (literally: Here is this plate of food).’ (A 45:12)

If a speaker perceives the existence of an entity that is out of view by some other form of sensory perception, such as hearing, then a deictic demonstrative is used to draw the hearer’s attention to the sound. If there is a knock at the door, for example, one may say:

- (16) *máy-ilə +'àvva?* ‘Who is that (at the door)?’
- (17) *+'àvva Yòsəp-ilə.* ‘That is Yosip’.
- (18) *áyya báxtila.* ‘That is my wife.’

If the referent was present in the speech situation but is no longer so at the time of speech, a speaker can refer to this referent with a deictic pronoun, drawing attention, as it were, to the referent in the memory of the addressee. When, for example, a group of people are sitting at a table and one person stands up and leaves the room, another person can say:

- (19) *+'àvva +xòriva.* ‘That man (who you just saw) was my friend.’

If somebody is speaking on the phone and then puts the phone down, he may say:

- (20) *'áha +xòriva.* ‘That was my friend.’

In the latter case the near deixis is preferred, presumably because the referent is perceived as closer due to the closeness of the phone.

If the entity being referred to is in the environment but is not perceptible and is only known by intra-linguistic reference within the discourse, the default anaphoric demonstrative is used. If, for example, the interlocutors come to a wall and the speaker says that on the other side of the wall there is a house, but it is not perceptible at the moment, then the default demonstrative would be used to refer to it with an anaphoric function (§9.2.4), e.g.

- (21) *'o-béta bétət diyilə.* ‘That house is my house.’

In (22) the pronoun *'annə* is near deixis pointing to the fish in the speech situation, whereas the default pronoun *'an* is anaphoric, referring to the previous mention of the referent:

- (22) *ptàna vadónva| tre-nùyna +plátlun ju-úpra.* *'annəna 'an-núyna.* ‘I was ploughing and two fish came out of the soil. These are the fish.’ (A 5:7)

In (23) the speaker uses the far deixis pronoun *'anni* to express not spatial distance but rather emotional distance, implying that the conditions set by the judge are far beyond his ability to meet. In the previous clause the speaker uses the far deixis copula with a similar emotion-driven function of expressing despair and lack of control:

- (23) *'ína véna +báyyi šaklilə m-ídan| 'u-dayyána 'anni šártə muttéł.* ‘but they want to take it from us and the judge has made those conditions.’ (A 38:10)

Another deictic use of a demonstrative within a narrative is exemplified by (24), in which a near deixis pronoun draws attention to a newly introduced referent. This referent plays a major role in the following context:

- (24) *+várrəjavày| 'ína 'áha náša +rába 'átxa +pšima.* ‘He went inside (and saw) a certain (literally: this) man who was very sad.’ (A 10:2)

### 9.2.3 *Recognitional Demonstratives*

Occasionally demonstrative pronouns are found in the text corpus with newly introduced referents. The majority of examples of this in the text corpus have the near/middle deixis plural pronoun *'annə*:

- (1) *jibátu məlyáva mən-dánnə pənsíla +xodcárə davanáya.* ‘His pockets were full of golden automatic pencils.’ (A 41:6)
- (2) *‘ánnə +kaṭlánət ḁənyàna lè-’atīva +rába.* ‘The slaughterers of cattle did not come much.’ (B 10:4)
- (3) *‘é yámma ’ufa škálla ‘ánnə +xəṭṭə.* ‘The stepmother took grains of wheat.’ (A 51:3)
- (4) *xà-yuma +krílə +rába mən-dánnə nášə lípəl p̥rammāl-dārəP, p̥jādujārə.* ‘One day he summoned many of those learned men, such as geomancers, magicians.’ (A 3:3)
- (5) *Mácca +bəddayət mù-ilə?!* *‘ánnə məššəlmána c-ázi Màcca! Madīna.* ‘Do you know what Mecca is? Muslims go to Mecca and Medina.’
- (6) *ju-dánnə +šulánət prəzla +rába lénə víyyə.* ‘There were not many in jobs involving iron.’ (B 1:32)
- (7) *‘á dəžmánnu bitáyələ bəškálələ mən-dánnə cípət ’ərxə.* ‘His enemy comes and takes one of those millstones.’ (A 39:12)
- (8) *‘áyən ’íva ‘áxči xá dúctət kàt ka-xácma +sa’áttəl é +’atnàbəl yán p̥t-atyáva ‘é EbùsE! yán p̥t-atyáva pešáva +al-+bár xácma +sa’áttə t-azàva.* ‘This was a place where for a few hours a car or a bus would come, it would come and remain until after a few hours it would leave.’ (B 1:34)

Here these pronouns appear to be ‘recognitional demonstratives’, which signal that the referent is familiar to the interlocutors due to their knowledge of the world (Himmelmann 1996; Diessel 1999, chapter 5).

#### 9.2.4 *Anaphoric Demonstratives*

When used to refer to items within the discourse rather than to items in the extra-linguistic situation, demonstrative pronouns generally have an anaphoric function, i.e. they form a referential link with some item elsewhere, usually earlier, in the discourse. The near deixis, medium deixis and default demonstratives are used with this anaphoric function. The far deixis form is only very sporadically used anaphorically. When the demonstratives are used attributively before a nominal, the most natural translation of them in many cases is with the English definite article. When used independently, they are generally most idiomatically translated with English 3rd person pronouns.

##### 9.2.4.1 Anaphoric Near Deixis

The near deixis forms are used with referents to which the speaker wishes to give a particular prominence in the discourse. In narratives referents referred to in this way are typically central characters or items that are of central importance in a particular section of the discourse, e.g.

- (1) *'áha bitàyələ| ka-Nàtan| brūn-xàtu,| vádu brūn-jànu.| ... 'a-yála jarvìsəl.|* ‘He (Axiqar) goes to Natan, the son of his sister, and makes him his son. ... The boy grows up.’ (A 3:7–8. Axiqar and Natan are the central characters of the narrative)
- (2) *'áha máttuyul +tàma.| +Axìkar| bərróxšəl bëta.|* ‘He appoints him (Natan) there. Axiqar goes home.’ (A 3:16. Natan is a prominent character)
- (3) *'á märələ| là!|* ‘He says “No!”’ (A 37:15. In this and the next example the demonstrative refers to the main character of the narrative)
- (4) *'á švíkuna bëta.|* ‘They have left him in the house.’ (A 37:13)
- (5) *xa-ctàva ctávlə| mən-púmmat +Axìkar| ... 'a-ctàva| trè-samələ.|* ‘He wrote a letter on behalf of Axiqar ... The letter is in two parts.’ (A 3:19–21. The letter plays a pivotal role in the plot)
- (6) *+kátu bədvàkona.| ka-dáha +kátu +'ùxča mxáyələ.|* ‘They take the cat. He beats the cat hard.’ (A 3:79. The cat is a prominent referent in this particular section of the text)

It is occasionally used before the proper name of one of the central characters in a narrative. In some such cases it appears to have a subjective evaluative connotation, expressing emotional engagement, often negative, with the referent, e.g.

- (7) *škúlla 'a-Nàtan| p-idux,| cíllət +báyyət ýdət b-ríšu vùd.|* ‘Take this (confounded) Natan in your hands and do to him whatever you want.’ (A 3:88)

In the vast majority of cases, proper names are not combined with an anaphoric demonstrative. This includes titles such as *malca* ‘king’ or *+malla* ‘mullah’, which generally behave like proper names in this respect in narratives, e.g.

- (8) *málca +naràhat vâyələ.|* ‘The king becomes uncomfortable.’ (A 3:26)
- (9) *+malla míttvəva +jána| +yakúyra +'al-xmàrta.|* ‘The mullah had put a heavy load on the jenny.’ (A 32:3)

The near deixis forms are sometimes used with referents that have not been explicitly mentioned in the preceding discourse, but are only associated with the context. In (10), for example, the phrase *'á +jürət cačála* ‘this elder of the bald men’ refers to a protagonist who has not been mentioned earlier, though the referent is inferable from the mention of the gang of men previously. In (11) the ‘shoe’ is associated with the previously mentioned protagonist, who can be assumed to have had shoes. In (12) the pronoun *'aha* is used to refer to a game that has not been mentioned before, but which belongs to the set of games that has been invoked in the preceding discourse:

- (10) *'ína 'á +jùrət cačálə| ... 'íva| bùš| +'ùllul mòn| dan-xìna.| xàšlə| càs| xá-dana +tàjər.* | 'Now, the elder of the bald men ... he was higher (in rank) than the others. He went to a merchant.' (A 1:2)
- (11) *+úxča t-íva malyúzə malyúzə,| 'á +saválto šlèxla,| pólla +al-+pallacànə.* | 'She was in such a great hurry, that her shoe came off and fell on the stairs.' (A 51:8)
- (12) *'áha 'átvə 'úpju-márət šónnə nášə ci-+talivalà.* | 'There was this (game) that also old people played.' (B 9:12)

This applies also to constructions such as those in (13)–(15), in which the items with the near deixis demonstrative are presented in contrastive opposition to another item, or other items, in the same set, i.e. one is associated with another due to this set-relationship. In (13)–(14) these other items are explicitly expressed with the default demonstrative.

- (13) *ci-maxíva +àllu,| c-avíva +bərxàṭə| m-dà-rišə| +'al-dò-rišə,| m-dà-rišə| +'al-dò-rišə,* | 'They used to strike it (the horse) while they ran from this side to that side.' (A 1:1)
- (14) *xàšlə +al-dà duccána| +'al-dè duccána,| +'al-dè duccána.* | 'He went to this shop, to that shop, to that shop.' (A 1:15)
- (15) *'áha bəkyàmələ| tré dánə +bəsyàrəl xá-mənne b-dà tálpu,| xá-mənne b-+dàvva tálpu.* | 'He gets up and ties two of them, one of them on this eyelash of his, one of them on that eyelash of his.' (A 39:13)

In (16)–(18) the other item is inferable from the previous discourse, which refers to a different side and a different time respectively. Note that the near deixis form, not the default deixis form, is used to express the item of the set that is in contrast to what precedes:

- (16) *+jammúyol kòšun. | 'a-yba-xína-dafur'un bitáyələ.* | 'He musters an army. On the other side Pharaoh approaches.' (A 3:25)
- (17) *bərréšxəla b-jàmɪl| +'óra +al-dà jíbət +'átra.* | 'She goes in a boat to cross to the other side of the land.' (A 34:8)
- (18) *'á-sapar kátu mərrəl* | 'This time (unlike last time) he said to him ...' (A 3:89)

The near deixis pronoun is sometimes used to refer to the propositional content of the immediately preceding discourse when this is of importance in the discourse. In such cases it is often combined with the word *məndi* 'thing', e.g.

- (19) *Nàtan á-màndi vádulə* 'Natan does this.' (A 3:20)
- (20) *+byáyələ dénum šakəllə mónnux.* *+šámyutun áha mòndi?* 'He wants to collect your debt from you. Have you heard this?' (A 3:76)

In narratives speakers express immediacy by a variety of other strategies of near deixis. Often present progressive verbs are used to narrate past sequential events (§ 10.11.1.3.). The lexical verb *'atə* i 'to come', which has an inherent speaker deixis, is sometimes used by the narrator to present him/herself as being spatially close to the events where it would be more idiomatic to use 'to go' in English. In the case of (21), for example, the speaker himself was never in Leningrad. The verb, furthermore, is in the progressive form:

- (21) *savúni mən-nanunti bitáyəna fú Leningràd,* *paytáxtət +támə +Rùsyə.* 'My grandfather goes (literally: comes) with my grandmother to Leningrad, the capital of that place (literally: there) Russia.' (A 41:10)

#### 9.2.4.2 Anaphoric Middle Deixis

The middle deixis demonstratives are used relatively infrequently with an anaphoric function. The function of the examples that are attested in the text corpus can be classified broadly into the following groups.

##### (i) Contrastive or parallel events

In a number of cases the middle deixis form is used when one referent or the actions of one referent are set up in a contrastive opposition with another referent, e.g.

- (1) *Nátan +rába +naràhat vílə kát +Axíkar muttílə +tapàvut,* *muttílə +tapàvut bəl-da-brùna bəl-+dàvva.* 'Natan became very discontent that Axiqar made a distinction, made a distinction between this son and himself.' (A 3:18)

Sometimes the action of the referent denoted by the middle deixis form is presented as running in parallel with the action of another referent rather than being in contrastive polar opposition, e.g.

- (2) *šamašútya mxáyəla +támə +ávva sìla bədráyəla.* 'The sunray strikes there. He (in parallel) sprinkles sand.' (A 3:73–74)
- (3) *ka-báxtu +xábra yàvələ kat-’áyya málpani ... tré +zayət nàšrə, bajrálun, jarvássálun, malpálun.* 'He (Axiqar) sends word to his wife asking her to teach two young eagles, to nurture them, raise them and teach them.'

(A 3:57. Axiqar is dividing the labour of the task, requesting that his wife takes on some of the work in parallel with himself)

In (4), which is from expository discourse, the middle deixis form *+ávva* is used to express a referent that is set up in parallel with a preceding referent:

- (4) *kák b-yavviva| át b-šatàtvala.| ka-+dávva b-yavviva.* ‘They would give to you and you would drink it. (Then) they would give it to him.’ (B 5:8)

### (ii) Characters with intermediate importance

In some narratives the pronoun is used with characters who play a visible role in the plot but this is of intermediate importance, the near deixis form being reserved for the main protagonist(s). This applies to the wife of the merchant in text A 1, e.g.

- (5) *'áyya báxta| bərróxšəla +hàmmam.* ‘The woman goes to the bathroom.’  
(A 1:6)  
(6) *'u-'áyya báxta| +rába noniyəla.* ‘The woman pleads.’ (A 1:8)

In (7) the pronoun is used together with a middle deixis adverbial:

- (7) *'áyya báxta| +tamma xabùləla.* ‘The woman there becomes cold.’ (A 1:10)

In (8) the near deixis pronoun is used to refer to the main protagonist, mullah Nasradin, and the middle deixis pronoun for the character of next importance:

- (8) *'á bəškəlèlə| 'ánnə zúyzə +ṭašuyèlə| ju-sandùyka.| +ávva náša mən-jàrə| +bəslàyələ| +bərxáṭəl cəs-+màlla.* ‘This one (the mullah) takes the coins and hides them in a box. That man comes down from the roof and runs to the mullah.’ (A 14:6)

### (iii) Shift to background

In some cases a narrator uses the near deixis pronouns for protagonists in the main foreground events of the narrative, but shifts to the use of the middle deixis pronouns with these referents in background comments, e.g.

- (9) *'áha rába +tyántət mənta vádələ| +ávva yála +bəddàyələ 'ína 'áyya bráta kátu +byàyələ| 'á +rába bərróxša bitàyələ +šúlə.* ‘He expresses his gratitude a lot. The lad knows that the girl loves him. He comes and goes a lot, and so forth.’ (A 34:5)

- (10) *+báram léva +byáya +ávva náša parámvala áyya tavàrta.* ‘But that man did not want to slaughter that cow.’ (A 51:1)

#### (iv) Reference to propositional content

The middle deixis pronouns are used to refer to the propositional content of what precedes in comments tagged on to the end of a section of discourse, e.g.

- (11) *bás áyya! maxzúyala kàt! ’àtva +aturáya b-+dánat mšíxa! ju-+íran! ju-’Urmi.* ‘But that shows that there were Assyrians at the time of Christ in Iran, in Urmi.’ (B 1:3)
- (12) *’áyya=da +’Axíkar=ila.* ‘That (the preceding discourse) is (the story of) Axíqar.’ (A 3:94)
- (13) *kássat ’áyyala.* ‘The story is this (the following).’ (A 4:6)
- (14) *Pdarāmàd<sup>PL</sup> ’áyyala +yána.* ‘(The word) “income” is that (which has just been described).’ (A 3:41)
- (15) *+jùvvab yuvvállə kàtu.* *+jùvvab +’ávvəva.* ‘He gave him an answer (described in what precedes). The (right) answer was that (which has just been described).’ (A 3:83)
- (16) *b-xá +čap̄pálta ’ána ... ’arpí dánə dévə +másən +kaṭlənnun.* *b-xá mxétət dá +čap̄pálta’ áyya výyəla ctívə +tāma.* ‘With one staff I can kill forty monsters, with one blow of this staff.’ He had written that there.’ (A 37:8)

#### 9.2.4.3 Anaphoric Far Deixis

A few sporadic cases of far deixis pronouns being used anaphorically have been identified in the text corpus. These are used in clauses that present elaborative background material, which is one of the functions of anaphoric middle deixis pronouns:

- (1) *+’ávvó náša=da +rába ’átxa +yattùvva náša, +p̄armiyána.* ‘That man was a very knowledgeable man and astute.’ (A 44:7)

#### 9.2.4.4 Anaphoric Use of *’annə*

The plural demonstrative *’annə* is used with both near and medium deixis when pointing to items in a speech situation. When used anaphorically in discourse, therefore, it would be expected to have functions equivalent to both the near and far deixis singular forms described above.

In narratives in the text corpus it is used to refer to groups of referents that are central characters in the plot, which is a function of the near deixis anaphoric pronouns, e.g.

- (1) *'ánnə bəxzáyəna cúllə mzida šətyálə.* ‘They see that he has drunk the whole waterskin.’ (A 37:16. The pronoun here and in the next example is referring to the ‘monsters’, which are central characters in the narrative)
- (2) *'ánnə míyya +maxduréna +'ällu! 'u-bərràkəna.* ‘They pour the water over him and run away.’ (A 37:20)

In (3) the pronoun is used together with the near deixis adverb *laxxa* ‘here’ to refer to the protagonists:

- (3) *'ánnə laxxa cúllə jané +hùdrona.* ‘These here have all prepared themselves.’ (A 1:27)

The pronoun is used to refer to groups of referents participating in parallel events, which is a function of middle deixis anaphoric pronouns, e.g.

- (4) *mən-+támə +šarúyəna bədra-kálə 'ánnə yāl-sùrə! kat-hállun cípə, hállun míyya, hállun +tìna. +'Axíkar=da bəškálələ mən-+sarbázul ka-dánnə-mxà-yələ. mára ka-mù-itun cólyə? hállun +tìna! hállun míyya hállun cípə!* ‘From there the children begin to shout “Give stones, give water, give clay.” Axiqar also takes (things) from his soldiers and beats them. He says “Why have you stopped? Give clay, give water, give stones.”’ (A 3:72. These events are presented as taking place simultaneously in parallel)

In (5) the situation of the neighbour’s not seeing the woman is parallel to the situation of the woman. The neighbours have not been explicitly mentioned but their existence can be inferred. This, therefore, is an example of associative anaphora, which is more common with default demonstrative pronouns (§ 9.2.4.5.):

- (5) *'á bəxtə! pyásəla 'àtxa. láxma-da ləla yávo. 'ánnə švávə lèna bəxzáyo.* ‘The woman becomes (thin) like this. She is not even giving her food. The neighbours do not see her.’ (A 44:4)

The pronoun *'annə* is used to refer to preceding propositional content in a comment tagged onto the end of a section of discourse, which is also a function of middle deixis pronouns, e.g.

- (6) *+rába mən-dánnə məndyáñə malùpulə.* ‘Many of such things he teaches him.’ (A 3:10)

#### 9.2.4.5 Default Demonstrative Pronouns

When the default demonstratives are used anaphorically in narrative discourse they often refer to referents that do not play a major active role in the plot, e.g.

- (1) *bəškàlulə| o-náša +bəktàlulə| labúlulə ka-màlca| kat-+Axíkar ána +ktòlli.*  
'He takes the man and kills him. He takes him to the king (and says) "I have killed Axiqar." (A 3:36. This is an unnamed prisoner who plays only an ancillary role in the plot)
- (2) *+o-tájər ka-dá cačála +ràba ci-+bayyíva.* 'The merchant used to like this bald man very much.' (A 1:2. The bald man is the protagonist whereas the merchant is a minor character who is absent during most of the narrative)

In many cases the referents that do not play a major role are inanimate, e.g.

- (3) *bəškálolə scàntu| u-e-+čap̄pàltu, bərràxšələ.* 'He takes his knife and his club and goes (on his way).' (A 37:6)
- (4) *xá-yuma e-mzída bəškálolə bərróxšələ +al-+áyna.* 'One day he takes the waterskin and goes to the spring.' (A 37:15)
- (5) *míyát +áyna bəxzáyələ xá +áyna. ital bəstáyələ xáčča mən-de-+áyna.* 'He sees spring water, a spring. So he drinks a little from that spring.' (A 37:6)
- (6) *mán-dò cípa=zə prákələ.* 'He is saved from that rock also.' (A 37:22)

The status of the clause or phrase in which the demonstrative occurs is also a conditioning factor. On some occasions, the default demonstrative is used with referents that play a central role in the text, but the clause or phrase in which it occurs is a background comment that does not advance the narrative.

- (7) *Nàtan á-məndi vádulə, o-brùnu.* 'Natan does this thing—that son of his (added for clarification).' (A 3:20)
- (8) *mádrə mən-šmàyya pállun +tlá xabùyšə. xá ka-dó cačalùna xá ka-bàba yuvvállə, xá ka-yàmma yuvvállə.* 'Again three apples fell from heaven. He (the story-teller) gave one to that bald man, one to the father, he gave another one to the mother.' (A 37:22. The bald man is the central character of the narrative, but this passage is not part of the narrative plot but rather a formulaic closure to the story)

In (9) the same character is referred to by a default pronoun. Here it occurs in a section of discourse that is presented as background information, expressed

with *ptixələ* verb forms, rather than the mainline narrative, which is expressed by *bəptaxələ* verb forms:

- (9) +*mardúxəna miyya*! +*házər vadəna*,! 'e-+*dán t-ilə* +*təlyə*. +*ávun jánu* +*tùš-yolə*! *šópu švíkələ* ... *xá kësa*.! 'They boil water, they prepare it when he is asleep. He has hidden himself and has left a piece of wood in his place.' (A 37:20)

The narrator may change the mode of reference to a central character to reflect a change of role. In (10), for example, the central character of the story, the bald man, is referred to by the default demonstrative +*avun*, whereas elsewhere he is normally referred to by near deixis pronouns. This is likely to be due to the fact that in the passage in (10), unlike in most of the rest of the narrative, he is not in control of events, but rather it is his mother who is in control and is the dominant character:

- (10) *ju-dó* +*xàraya*! *yámma vítəla* +*tusító fáno*! +*bár* +*tàrra*,! +*tárra* +*bəxlásula*.! +*ávun* *čarčùrlə*! *tíla* +*tala t-axólli*! *díva pít-axólli*.! *mára là*! *lé šókan* +*ðræt*.! 'By the last (cake), the mother had hidden herself behind the door and she shuts the door. He screams "A fox has come to eat me! A wolf will eat me!" She says "No!, I will not allow you to enter." (A 37:5)

The referent of a noun that is marked as identifiable with a default demonstrative has generally been explicitly mentioned in the preceding discourse. In some cases, however, there is no explicit earlier mention of the referent but rather it is only associated in some way with what precedes. This associative anaphora may be of various types. In (11) the item with a demonstrative is in a set relationship with a previously mentioned noun, in that it is one item of the set of the 'three sons':

- (11) *áha málca* *átvalə* +*tlá bnùna*.! *šámmat do-bránu* *súra* *íva* +*Ášur*.! 'This king had three sons. The name of the young son was Ashur.' (A 39:1)

In (12) the 'executioner' has not been mentioned previously, but the issuing of the order for execution has been narrated earlier, with which an 'executioner' is clearly associated and can be inferred to be on the scene. The executioner is not a leading character in the plot. Likewise in (13) the 'neighbours', who are incidental characters, can be inferred to exist although not explicitly mentioned earlier. In (14) the existence of the smoke can be inferred from the mention of the fire in the preceding context. Likewise in (15) the existence of husks can be inferred from the mention of the grain:

- (12) *+o-kaṭùla-dal xìna| vâyələ bəštāya| ... mārələ kàtu| +Axíkar ka-+dàv mārələ, mārələ àna| fná lòtli. là +kṭúlli.* ‘(As) the executioner is drinking, ... he says to him, Axiqar says to him, he says “I am not guilty. Do not kill me.”’ (A 3:33)
- (13) *+xárta ‘én švàvə mórrəl céla ेçàččə?* ‘Then the neighbours said “Where is the girl?”’ (A 51:9)
- (14) *+aràlləg ‘átvale nýyrət +aràlləg ci-+karívalə. +úllul ‘átvə xá +bəzza| švíkəva càva. cáva švíkəva jú lámpa +úllul. yánət o-tánnə +palàtva.* ‘In the middle they had what they called a central fire. Above there was a hole, a window light was left (open). A window light was left in the ceiling above so that the smoke could escape.’ (B 17:54)
- (15) *þórda nàya| +bətrápuna| o-kálpu +palùtuna.* ‘They pound the raw grain and they take off its husk.’ (B 15:8)

We should include here the regular use of the demonstrative with definite nouns that have the non-attributive modifier *xina* ‘other’. In many cases the noun in question has not been explicitly mentioned. Rather it is associated with the previous context in a set relationship, in that it is presented as an item in a set that has been invoked or implied in what precedes, e.g.

- (16) *+tárra bəptàxulə| ... +tárra +bəčyàmula. báxta bərráxšəla m-do-+tárra xina.* ‘He opens the door ... He closes the door ... The woman goes out through the other door.’ (A 7:8)

This construction is often used with adverbial expressions that denote incremental temporal progression and are most idiomatically translated by English ‘next’, e.g.

- (17) *‘ó-yuma xína mòdra ‘ó-məndi vílə.* ‘The next day the same thing happened.’ (A 2:27. The previous ‘day’ has not been explicitly mentioned, but is implied in the previous narrative)
- (18) *‘é-šabta xítə| +málla +Nasrádən bərráxšəl mòdra.* ‘The next week mullah Nasradin goes again.’ (A 8:3. The previous ‘week’ has not been explicitly mentioned)

Default demonstratives are used anaphorically in other temporal adverbial constructions, e.g.

- (19) *+Nuxadnásər| ju-de-+dana| bəxyələ.* ‘At that (point in) time (= then), Nebuchadnezzar weeps.’ (A 3:45)

- (20) *'é-+dana hamzúmələ bázət márət jànu-zəl 'àt ... Nînve,| +Nuxadnásər.|* 'At that (point in) time (= then), he speaks about his master, of Nineveh, Nebuchadnezzar' (A 3:64)

Default demonstratives are used in direct speech to refer anaphorically to referents that are absent from the speech situation, e.g.

- (21) *brúnət xàtux,| Nàtan,| šámmu Nàtan-iva,| vúdla ka-jánux brùna,| máləpla,| xàmilə,| ka-jánux vúdla brùna,| +'àvun p̄t-ávə ka-sebíytux| 'e-+dān-sàvlux,| t-ávə brùna kátux,|* 'Make the son of your sister—Natan, his name was Natan—your own son. Teach him. Take care of him. Make him your own son. He will be for your old age when you have become old, he will be a son for you.' (A 3:6)
- (22) *+ávun +k̄tul-làbəlla,|* 'Kill him and take him away.' (A 3:35)
- (23) *'é-+dana hamzúmələ bázət márət jànu-zəl 'àt ... Nînve,| +Nuxadnásər.|* *márələ kat-+ávun | ən-tánə ka-šómša clı,| bət-càlyा,|* 'Then he speaks about his master, of Nineveh, Nebuchadnezzar. He says "If he says to the sun "stop", it will stop.'" (A 3:64)
- (24) *'ána múyyəvən xá 'axúnət tmánya ka-jànan| 'án macərbàxlə| +áv hár par-pəslən| hár +dardàklən| b-xá +čap̄páltu +masə máxə 'arpí dánə dèvə,|* 'I have brought an eighth brother for us. If we upset him, he would totally destroy us, he would totally shatter us. He can strike forty monsters with just his one staff.' (A 37:12)

In (25), which is used to tell a child to move away from the speaker, the default demonstrative is used with an associative anaphoric function, in that it is in a contrastive set-relationship with the area around the speaker, which is in the perception of the interlocutors:

- (25) *sí l-ò-yba!* 'Move to the (other) side. (= Move away from here)'

The anaphoric demonstrative is sometimes rendered idiomatically into English by 'the same', e.g.

- (26) *'ó-yuma xína mèdrə 'ó-məndi vílə,|* 'The next day the same thing happened.' (A 2:27)

In such cases, when the identity of the referent is being given particular prominence, the demonstrative is often preceded by the particle *har*, e.g.

- (27) *'át víyyət bába káti. mádrə har-ó-baba vi-káti.* ‘You have been a father to me. Be the same father to me again.’ (A 3:92)
- (28) *har-ó-+šula c-odívalə, yína búš hasanày, búš támmez.* ‘They (the oil stoves) used to perform the same task, but more easily and cleanly.’ (B 12:4)

Default demonstratives are frequently used with nouns the referents of which can be identified from a specification presented in a following modifier syntactically bonded to it rather than from the preceding context. In most case the noun is connected to the following modifier by the annexation element *-at* and is the head of a relative clause or an annexed nominal, e.g.

- (29) *cúllə-da 'an-+sarbázə t-íva mónnu! cúllə šátyəna +rìyəna.* ‘All the soldiers who were with him are all drunk and inebriated.’ (A 3:35)
- (30) *'e-dársət yúvvonva kátu kámta léla lípo bəxshávən +spáy.* ‘I don’t think he has learnt well the lesson that I gave him some time ago.’ (A 3:87)
- (31) *'o-nášət ká... +al-málcət jànu! pxayānāt<sup>P</sup> 'ávəd, +xəlṭa 'ávəd! +al-'aláha-zə vádələ! +xəlṭa.* ‘A man who does treachery to his own king, who commits a fault, he commits the fault also against God.’ (A 3:48)
- (32) *'o-ríšət do-náša labúlulə ká +Nuxadnásar kat-ána +Axíkar +ktəlli.* ‘He takes the head of the man to Nebuchadezzar (saying) “I have killed Axigar.”’ (A 3:37)
- (33) *+Axíkar +pláṭa bərrəxšələ! ka-dan-nášət mónnu! mára ...* ‘Axigar goes out. He says to the people with him ...’ (A 3:78)
- (34) *'ána hár 'ó nášət kámtevən.* ‘I am the man of former times.’ (A 36:17)

This construction is frequently found with the temporal expression *'e-+danət* ‘at the time that/when’, e.g.

- (35) *'e-+dánət zamərvə, 'ána +šammənva.* ‘When he sang, I used to listen.’ (A 3:81)
- (36) *'é-+dān t-ílə šámmu +bašmáyu +Axíkar! fūr'un! brázələ šòpu.* ‘When he hears his name Axigar, Pharaoh dries up on the spot.’ (A 3:67)

In (37) the head is followed by a numerical phrase expressing an ordinal:

- (37) *+al-dó yúmət d-trè-ca!* ‘the next day day (literally: the day of the two time)’ (A 51:6)

Occasionally such constructions are used where the initial noun is connected to a modifying restrictive adjective or prepositional phrase without an annexation element, e.g.

- (38) *cúllə 'an-júllax šapírə lùšlun.* ‘Put on all your beautiful clothes.’ (A 24:1)
- (39) *+jámmila 'e-kósun buš-xelánta| kat-xazánna kam-für'un.* ‘Muster a stronger army so that I can see it (stand) before Pharaoh.’ (A 3:24)
- (40) *'ána xa-mən-dan-šəcvànə| xa-mən-dan-šəcvànəvən| xut-'áklət málca.* ‘I am one of the ants, one of the ants under the foot of the king.’ (A 3:66)

When an attributive demonstrative is combined with its nominal complement in a single stress group (§ 1.19.4.), the stress is normally put on the nominal, e.g. *'a-ctáva* ‘this book’ (A 3:21), *'o-náša* ‘that man’ (A 3:36), *'e-mzída* ‘that waterskin’ (A 37:15). When the stress is put on the demonstrative, the nominal tends to be one of low semantic content, such as *məndi* ‘thing’, *+šula* ‘job, matter, thing’, e.g.

- (41) *+'Áxiqar| 'ána mut-xərbayúta kátux vídənva| kat-'átən 'á-+šula vádlux b-rìši?* ‘Axiqar, what evil had I done to you that you have done this thing against me?’ (A 3:27)
- (42) *Nátan brùnux 'á-məndi vádlə.* ‘Natan did this thing.’ (A 3:54)

The stress is also commonly put on the demonstrative in stress groups in adverbial expressions of time that bind the discourse temporally with what precedes, e.g.

- (43) *'é-+dana hamzúmələ bázət márət jànu=zə| 'òt ... Nènve,| +Nuxadnásər.* ‘At that (point in) time (= then), he speaks about his master, of Nineveh, Nebuchadnezzar.’ (A 3:64)
- (44) *'á-sapar kátu mòrrə.* ‘This time he said to him ...’ (A 3:89)

The stress is put on demonstratives elsewhere to give prominence to the anaphoric connection with what precedes, e.g.

- (45) *'átən 'ò-našət.* ‘You are that very man.’ (A 4:6)

The same intensifying function can be performed by the particle *har*, e.g.

- (46) *'át víyyət bába káti.| módrə har-'ó-baba vi-káti.* ‘You have been a father to me. Again be that very (= the same) father to me.’ (A 3:92)

#### 9.2.4.6 Strong Default Demonstrative Pronouns

Speakers in the Caucasus make marginal use of a second series of default demonstrative pronouns that are formed by adding the suffixed element *-xa* to the regular form. Only the singular forms are attested, viz. ms. *'oxa* (oblique *doxa*), fs. *'exa* (oblique *dexa*).

These pronouns are termed here ‘strong default demonstratives’ since they are used to give particular prominence to a referent that is bound anaphorically to the surrounding discourse. The purpose of this prominence may be to express some kind of contrast with items in the context or with alternative referents that the speaker assumes the hearer may be entertaining as possible candidates for the role, e.g.

- (1) *+xárta tíla é yòmma! 'u-é jáška yan-én +záyo t-i pùrtàcle 'exa šítá xína!*  
‘Then the mother returned and sees that her young have survived that year (in contrast to other years in which they were killed).’ (A 53:4)
- (2) *+karávat +júrta ka-cíllunte m-+iydalə damxíva, bába, yòmma, yála, ál déxa +karávat.* ‘They made for it a large bed, for them all to sleep together, father, mother, children. They all slept in that very same bed (and not any other bed, although this may have been expected).’ (B 17:32)

In (3) the pronoun expresses the fact that the daughter was unexpected in the role in question:

- (3) *'adíyya 'e-yómma 'íya! t-i xzila ka-dèxa! brítol* ‘Now, when the stepmother saw that daughter of hers’ (A 51:5)

In (4) the force of *'oxa* is to specify complete identity ('exactly that'). The pronoun is bound cataphorically with the content of the following relative clause (§ 14.1.1.1.):

- (4) *'ána lè-+amsən! 'ádi paškánnə 'óxa +xábrat kát! +šámyun módrə mán 'ava-háti! m-bábi sávi kát ju-dá məttálta hùkyuna!* ‘I cannot now expound exactly what I heard, as I said, from my forebears, my father and grandfather, which they related concerning this story.’ (A 47:21)

In (5) the strong demonstrative gives prominence to the uniqueness of the referent:

- (5) *xá 'óxa brúna sòjul 'átvale!* ‘They only had that single beloved son (literally: They had one that beloved son).’ (A 55:8)

#### 9.2.4.7 Absence of Demonstrative Pronouns with Definite Nominals

In principle a noun that has an attributive demonstrative is definite in status, i.e. the speaker assumes that the hearer is able to identify the referent. A noun that is definite in status, however, is not obligatorily combined with an anaphoric demonstrative. It can also be left without any demonstrative. We have discussed above the circumstances that motivate the speaker to use different demonstratives for anaphoric reference in discourse. Here we shall examine the motivation to omit a demonstrative on a definite noun that has an anaphoric connection with the preceding discourse. In general the heavier construction with the explicit anaphoric demonstrative is a more powerful anaphoric device that is used when the noun is disjoined to a greater extent from its anaphor. This disjunction is brought about principally by boundaries in the discourse structure. The heavy construction is used as a device to mark boundaries.<sup>1</sup>

This can be illustrated by the extract (1) from a narrative. The main characters in this extract are a woman (*baxta*) and a servant (*rīja*). Throughout the passage both these nouns are definite with identifiable referents. In some cases the nouns occur with a demonstrative and in other case without one. The occurrence of a demonstrative can be correlated with the onset of discourse boundaries, which are marked with roman numerals. Some of these correspond to clusters of clauses that are packaged as distinct events. This is clear in the boundaries (iii) and (iv). The section beginning at (iii) narrates how the servant leaves the scene. The event in (iv) is distinct from what precedes in that the woman is alone on the scene. The boundary in (ii) is adversative, in that it is a break in sequence with an event of pleading that defeats the expectations of what precedes.

- (1) (i) +háji +bəddáyələ kássat mù-ilə! ɻa-*rīja* márələ! ... *rīja* màjbur-ilə! màjbur-ilə šakálla báxta labəlla.! 'do +bəsyarələ labúlolə ɻat-+kaɻəlla.! (ii) 'u-áyya báxta! +rába nonùyələ! +xayəš vádən mónnux! là +ktúlli! ... 'ú *rīja* labbu! bəkyàdələ! lèlə +bəktálo.! ... báxta márəla kát! ... škúllux xá-dana 'òrba,! +ktúlla! dámmo máttilə +al-jülli! lábəlla ká mårux.! (iii) 'á *rīja*! 'á-məndi vádula! báxta bəsvákol šulxéta! +táməl ju-méšal +bár m-mdita! bəsvákol +táməl. *rīja* bərràxšələ! ... (iv) 'áyya báxta! +tamma xabúləla! +várəla xút jəllàlə! kálpa! ... kat-la xábla.! '(i) The pilgrim knows what the story is and says to the servant ... The servant is forced (to do so). He is forced to take the woman away. He ties her hands and takes her to kill

---

<sup>1</sup> The cross-linguistic evidence for fuller coding being used at the boundaries of discourse units is examined by Huang (2000, 309 ff.).

her. (ii) But the woman begs very much “Please. I plead with you don’t kill me.” ... The servant feels sorry for her. He does not kill her. ... The woman says ... “Take a sheep, kill it, put its blood on my clothes and take it to your master.” (iii) The servant does this. He leaves the woman naked there in the forest, outside of the town. He leaves her there. The servant goes off. (iv) The woman becomes cold there. She enters under shrubs and bark in order not to get cold.’ (A 1:7–10)

### 9.3 The Reflexive Pronoun

The reflexive pronoun *jan-*, which is inflected with pronominal suffixes, occurs in various syntactic positions in the clause.

#### 9.3.1 Subject

When used in subject position it stands independently or in apposition to a noun or personal pronoun (e.g. *'ana janí* ‘I myself’). It may express contrastive assertion or intensity (‘he himself’, etc.):

- (1) *'à-sapar!* *'ána jání +báyyən núyra +šérən.*! ‘This time I myself want to kindle the fire.’ (A 23:1)
- (2) *késəjánan +jámmax.*! ‘We ourselves (not you) shall gather wood.’ (A 37:18)
- (3) *'ánnə 'át jánux lèt mučxé.*! ‘You have not found these yourself.’ (A 38:12)
- (4) *lélə kát 'áxnan jánan vìyyəvax!* *jávo furvəssəvax.*! ‘This is not because we ourselves were born and grew up in it.’ (B 2:15)
- (5) *'ána bətxárəvən jánil sùrəvənval bábi-da sàvəval ci-yasķáxva mən-bábi +mýdalə cùt-yum!* *tálja jára +rappáxvalə m-+ál-jára.*! ‘I myself remember, I was young and my father was old, I used to go up together with my father and every day we had to throw off the snow from the roof.’ (B 2:19)

It is also used in subject position with enclitics expressing inclusiveness (‘also’), e.g.

- (6) *kát jánux-zə là sáķdət! másalan xuš kèsə mélan!* *mán dáyya mèša.*! ‘So that you also do not become bored, go, for example, and bring logs from that forest.’ (A 37:14)
- (7) *'áxnan jánan-zə mádrə o-+šúla c-odàxlə.*! ‘We also still do this task.’ (B 12:9)

The phrase *jan-ka-jan-*, with the first *jan-* in subject position, is used to express the isolation of the subject or a spontaneous event without an external cause:

- (8) *jánu ka-jánu bàxyøla.* 'He wept by himself.' (A 4:10)  
 (9) *túp jáno ka-jáno črøtla.* 'The gun went off by itself.'

### 9.3.2 Object Complement

The reflexive pronoun may be used to express a pronominal object that is co-referential with the subject of the verb:

- (1) *sépa muttíla 'atxa! jáno mäxyála +'ällu.* 'She put the sword like this and thrust herself upon it.' (A 2:35)  
 (2) *jáno +ruppála +al-sèpa.* 'She threw herself onto the sword.' (A 2:35)  
 (3) *yámma vítøla +tušito jáno.* 'His mother had hidden herself.' (A 37:5)  
 (4) *+árun jánu +tušyøla.* 'He has hidden himself.' (A 37:20)

Several verbs that denote actions in which the agent is typically also the affectee of the action express reflexivity without the addition of the reflexive pronoun. This applies, for example, to verbs such as *xayøp* i 'to wash' and *lavøš* i 'to dress', e.g. *xøpli* 'I washed (myself)', *lvøšli* 'I dressed (myself)' (§ 4.25.1.4.).

### 9.3.3 Complement of a Preposition

The reflexive pronoun occurs as the complement of a preposition when it is co-referential with the subject of the clause, e.g.

- (1) *'á mú vódlı b-rìš-jàni?* 'What have I done against myself?' (A 3:45)  
 (2) *vúdlø ka-jánux brùna.* 'Make him a son for yourself.' (A 3:6)  
 (3) *xáčča tá +al-jánux.* 'Come back to yourself slightly (i.e. recover a little).' (A 3:53)

In (4) the ipl. reflexive pronoun includes the referent of the 1s subject, but is not fully co-referential:

- (4) *'ána míyyøvøn xá 'axíunat tmánya ka-jànan.* 'I have brought an eighth brother for us.' (A 37:12)

In (5) a verb that normally denotes internal reflexivity (*lavøš* i 'to dress') has a reflexive complement expressed by a prepositional phrase. The specification of the reflexive affectee may be motivated by the fact that the object of clothing is specified:

- (5) *bəlvášələ xa-lvəšta| +’al-jànu| zàrda.* ‘He puts on a yellow garment.’ (A 3:62)

### 9.3.4 *Genitive Complement*

If there is co-referentiality between the subject of the clause and a genitive pronominal suffix in the same clause, the suffix is generally not attached directly to a noun but rather to the reflexive pronoun, to which the noun is annexed:

- (1) *’atən| xína xúš ju-násət jànu.* ‘You go to your own people.’ (A 37:22)
- (2) *’áha bitàyələ| ka-Nátan| brūn-xàtu,| vádu brūn-jànu.* ‘He goes to Natan, the son of his sister, and makes him his son.’ (A 3:7)
- (3) *+bár háda +dàrrə| cəs-’aláhət jànu.* ‘Then he appealed to his own god.’ (A 3:4)
- (4) *’é-+dana hamzúmələ bázət márət jànu-zə| ’àt ... Nènve,| +Nuxadnàsər.* ‘Then he speaks about his master, of Nineveh, Nebuchadnezzar.’ (A 3:64)
- (5) *málca=da yúvvəl dàstur| ɬat-cúllə panánnun| báxtət jáni-zə,| bax-málca-da| cúllə nókvə mən-pátt +’àrra šaklánnun.* ‘The king has given a command that I should eradicate everybody, even my own wife, also the wife of the king, that I should remove from the face of the earth all females.’ (A 2:17)
- (6) *’o-násət kátt ... +al-málcət jànu| Pxáyānàt<sup>P</sup> ’ávəd,| +xàltə ’ávəd| +al-’alàha-zə vádələ| +xàltə.* ‘A man who does treachery to his own king, who commits a fault, he commits the fault also against God.’ (A 3:48)

The 1pl. form *janan* is used when the subject is 1pl. (7), 1s (8) or when a 3rd person subject is a member of the community of the speaker (9) or an item associated with the community of the speaker (10):

- (7) *’ánnə cúllə +zaráxvalun ju-dé dártət jànan.* ‘We used to cultivate all of these in our own vegetable garden.’ (B 7:14)
- (8) *vàrda,| lišánət jánan šámmu| xá ’áxči ci-+yat̥jónna várda| smùka,| várda +xvàra,| várda zàrda.* ‘Flower—in our language I only know the one name “flower” (*varda*)—red, white flower, yellow flower.’ (B 17:45)
- (9) *ju-+xlulané| lá-+msilun| b-lišánət jànan.* ‘In their weddings they could not sing in our own language.’ (B 1:9)
- (10) *’ánnə cúllə c-atíva mòn| +zrútət jànan,| mən-màta.* ‘All these came from our own crops.’ (B 7:5)

The use of the reflexive pronoun is not obligatory when a genitive pronoun is coreferential with the subject. A simple genitive suffix is used in particular when

the noun to which it is attached is an inalienable possession of the subject, such as a part of the body (11):

- (11) *+Nuxadnàsər| ju-dè-<sup>+</sup>dana| bàxyələ| mxáyələ ju-rišu.* ‘Nebuchadnezzar at that moment weeps and beats his head.’ (A 3:45)

### 9.3.5 Non-Reflexive Use

A pronoun is expressed by a *jan-* phrase in a number of contexts where the pronominal suffix on *jan-* is not co-referential with the subject.

In (1) the object expressed by the phrase *jano* ‘herself’ is set up in a parallel opposition to her daughters, whom the protagonist also kills:

- (1) *ka-jáno=da +bəktàlələ.* ‘He kills also herself.’ (A 39:40)

In (2) the pronoun is used as an intensifier to signal that ‘man’ is not expected in this position:

- (2) *márələ múdilə ɔ-mándi buš-racixa ju-dúnyə?* *mára bábi* *'ídət jànu +bar-náša.* ‘He says “What is the softest thing in the world?” She says “Father, the hand of man himself.”’ (A 38:11)

In (3) the use of the form *janax* in place of the subject pronoun *at* seems to be a device to give the second of a pair of repeated clauses heavier morphology (§13.5.):

- (3) *'át mùdivat?* *jánax mùdivat?* ‘What are you? What are you?’ (A 5:3)

The stem *jan-* with a pronominal suffix is used in the idiomatic phrase *+al-jan-* ‘against so-and-so’ in expressions of aggression such as (4)–(5):

- (4) *cálbat +séda +rappuyélə +al-jáno.* ‘He releases the hunting dogs against her.’ (A 38:17)  
 (5) *+hájí +xárta kám +al-jáno.* ‘The pilgrim then rises against her (= assaults her).’ (A 1:43)

## 9.4 Pronoun of Isolation

The pronoun of isolation *noš-* ‘—self’ is normally combined with the preposition *b-* in the phrase *b-noš-*. Occasionally the *b-* is omitted. The following usages are attested in the text corpus.

## Predicate

- (1) *'át e-+dán b-nòšux-ivət| kát jánux-zə là sákdət| másalan xús kèsə mélan|món dáyya mèša.* ‘When you are alone, so that you also do not become bored, go, for example, and bring logs from that forest.’ (A 37:14)
- (2) *'ánnə məššəlmànəl 'ùrzə c-ávi b-nošé,| nəkva c-ávi b-nošè.* ‘Those Muslims—the men are by themselves and the women are by themselves.’ (A 5:1)
- (3) *'ána +rába b-nòšəvən.* ‘I am very alone.’ (A 36:3)
- (4) *'á bráta pyášala b-nòšo.* ‘The girl remains alone.’ (A 34:8)
- (5) *+’aturáyət +Íran pásłun b-nošè.* ‘The Assyrians of Iran remained by themselves.’ (B 1:16)

## Complement of subject

- (6) *báxta pásłla b-nòšo.* ‘The wife was left alone.’ (B 1:19)
- (7) *jári ju-dó xášca b-nòšux dámxət átən.* ‘You must sleep by yourself in this darkness.’ (A 36:17)
- (8) *túyna nòšu 'azálva.* ‘The hay would go by itself.’ (B 3:11)
- (9) *'ína míyyu +salíva +'ávun nòšu.* ‘But its juice flowed by itself.’ (B 7:16)
- (10) *'ána lén lápta b-nóši +'àxlan.* ‘I am not used to eating by myself.’ (A 35:13)

## Complement of object

- (11) *o +cárra bəškáluya b-nòšu.* ‘They took the butter off by itself.’ (B 17:20)
- (12) *'úmtət díyyan švíkálun b-nòšo.* ‘They left our nation by itself.’ (B 1:14)
- (13) *'ánnə cíl dána dána +jammátte b-nošè.* ‘Gather them all up grain by grain by themselves.’ (A 51:3)

## 9.5 Reciprocal Pronoun

Reciprocity is expressed by the reciprocal pronoun *+’iydalə*, sometimes pronounced *+’údalə*, (§ 2.7.). This is derived historically from the form *\*xdádē* (cf. Syriac *hdādē*), which developed from a combination of the two cardinal numbers *\*hdā + hdā* ‘one + one’ indicating the two sides of the reciprocal relationship. The compositionality of the modern dialectal reflex of this is now completely opaque.

The reciprocal pronoun *+uydalə* may occur in various syntactic positions, e.g.

- (1) *nšákłun +'uydalə.* 'They kissed one another.' (A 1:4)
- (2) *báxya bəx̄pákəna +'uydalə.* 'Weeping, they embrace one another.' (A 1:37)
- (3) *baxzáyəna +'uydalə.* 'They see each other.' (A 36:4)
- (4) *ka-+'uydalə +hayyùrəx.* 'We help each other.'
- (5) *ju-dánnə matvátəl +zrútał cílla 'áx +'uydaləva.* 'In these villages agriculture was all the same (literally: was like each other).' (B 2:3)

The reciprocal pronoun has an oblique form *+duydalə* with an initial *d-*. In contrast to demonstrative pronouns, this oblique form is not used after prepositions. It is used only when the pronoun is the dependent element in an annexation construction, e.g.

- (6) *xardúyəna b-kdálət +dùydalə.* 'They wrap themselves around the neck of each other.' (A 1:16)

The pronoun is used particularly frequently in combination with the prepositions *+al-* 'to, on' and *m-* (*mən*) 'with' (especially in the expression *m-+uydalə* 'together'):

- (7) *'ana jøddàluł +házər vidèvən, partúłə +'al-+'uydalə.* 'I have prepared its threads, twisting (them) together (literally: onto each other).' (A 3:74)
- (8) *'áxnan jú ... dáštat 'Úrmi Salámas +'al-+'uydalə 'átvalan 'ómmo tláy +tlá matvátə.* 'We, in the plain of Urmi and Salamas, had altogether a hundred and thirty-three villages.' (B 2:2)
- (9) *'án čímə b-+fína ci-mayyíval mattíva +'ál 'uydálə.* 'They used to bring back the sods with mud and place them on top of each other.' (B 2:18)
- (10) *kúrba +'al-+'uydalə t-ávi-xina, kúrba +'al-+'uydalə.* 'ésrí tláy +sántə prišə m-+uydalə] 'átxa cílla p̄t-odilun.] 'They are (put) near to each other, near to each other, twenty or thirty centimetres apart from each other, they make them all like this.' (B 14:6)
- (11) *+rábə məndýána hamzúməna m-+uydalə.* 'They speak together about many things.' (A 3:66)
- (12) *'ána bətxárəvən jàni! sùrəvənvał bábi-da sàvəvał ci-yaskáxva mən-bábi m-+uydalə cùt-yum! tâʃa! jára +rappáxvalə m-+ál-jára.* 'I myself remember, I was young and my father was old, I used to go up together with my father and every day we we had to throw off the snow from the roof.' (B 2:19)
- (13) *'an-kéṣə ci-mattívalun 'átxa šávyə! 'átxa m-+uydalə 'ázi 'átxa.* 'They used to lay those sticks equal (i.e. parallel) like this, so that they fit together like this.' (B 2:20)

- (14) *'ána jàni=zəl jú xá šíta +'ám jvánkə m-+uydálə 'á-+šula vìdux.* | 'I myself together with the lads did this task for a year.' (B 2:7)

Reciprocity is also expressed by constructions with *xa* + *xina* such as (15)–(18), in which the compositionality of the reciprocal phrase is more transparent:

- (15) *xá mən-do xína hamzùməva.* | 'They were speaking with one another.' (A 5:1)
- (16) *'ánnə nášə xìnəl xa-ka-do-xína mərrun.* | 'The people told (this) to one another.' (A 19:4)
- (17) *'ána-da b-+kačlánna jáni m-+bár diyyuxl* | *'áñ 'áxnan xá ka-do-xína lájorà-xən.* | 'I also will kill myself after you, if we do not marry each other.' (A 55:3)
- (18) *xáčča susavày-na!* *xá mən-do-xína šapíra.* | 'There were some horses, each more beautiful than the other.' (A 42:11)

Reciprocity may also be expressed by repetition of an argument of the verb, e.g.

- (19) *dvíkəna 'ída 'ída! ... +šaríyəna bərkáda bəšvàra.* | 'Holding each other's hands they begin to dance and jig.' (B 8:9)
- (20) *b-dokíva 'ída 'ída xà zója 'áxči.* | 'They would hold hands but only one pair.' (B 9:4)

## 9.6 Attributive Modifiers

This category includes various modifiers of head nouns that supply an attributive description.

### 9.6.1 *Adjectives*

The most common type of attributive modifier is an adjective. An adjective that can be inflected agrees in gender and number with the head noun. There is a considerable degree of flexibility with regard to the position of the adjective relative to the head noun. Adjectives may be divided into three groups: (i) restrictive, (ii) non-restrictive and (iii) evaluative.

A restrictive adjective supplies a description that limits the reference to one particular subset within the set of items denoted by the head noun. An adjective is non-restrictive, on the other hand, when it does not limit the reference to a subset of the class denoted by the noun. It may be non-restrictive

since the class denoted by the noun as a whole is presupposed generally to have the property denoted by the adjective. The adjective is non-restrictive also when it is assumed that the hearer can identify the referent of the noun without the adjective, either since the noun has a unique referent (e.g. 'the sun', 'Urmi') or because the referent is recoverable in the preceding context.

In principle, when an adjective is restrictive it may be placed before or after the head noun, whereas when it is non-restrictive it is only placed after the head noun. An adjective is placed far more frequently after the noun. The placement after the noun is the unmarked position, whereas the marked position is before it. This is due to the fact that the postposed adjective is unspecified as to whether it is restrictive or not. Also the placement of a restrictive adjective before the noun expresses a degree of intensity of the property, often in contrastive opposition to the property of some other items from the set denoted by the noun. Examples

<i>naša hamzəmmana</i>	'a talkative man' (restrictive)
<i>hamzəmmana naša</i>	'a particularly talkative man' (restrictive, intensive)
<i>+jilasə cumə</i>	'black cherries' (restrictive)
<i>cumə +jilasə</i>	'black cherries' (restrictive, contrastive with cherries of other colours, e.g. <i>smuka +jilasə</i> 'red cherries')
<i>xa lelə xəšcana</i>	'a dark night' (restrictive or non-restrictive)
<i>xa xəšcana lelə</i>	'a (particularly) dark night' (restrictive, intensive)
<i>šmayya milanta</i>	'a blue sky' (restrictive or non-restrictive)
<i>milanta šmayya</i>	'a (particularly) blue sky' (restrictive, intensive)
<i>'Urmi 'atəkta</i>	'the old (city of) Urmi' (non-restrictive, assuming that all of Urmi is old)
<i>*atəkta 'Urmi</i>	—

Evaluative adjectives express a subjective, emotion-driven evaluation of an item rather than an objective description of its properties. These typically include attributes such as 'good/nice/fine', 'bad', 'dear', 'clever', 'foolish'. When adjectives expressing such attributes are used evaluatively they are in principle placed before the head noun, e.g.

<i>+spay naša</i>	'a good man'
<i>xərba naša</i>	'a bad man'

Examples from the text corpus:

(i) Noun—Adjective

- (1) 'átv̥alan matvátə xáčča sùrəl' 'átv̥alan matvátə +júrəl' 'We had rather small villages. We had big villages.' (B 2:5)
- (2) '+rába móndi yávəl kátu, l̥v̥éšyáta šapírə, +mixulyáta šapírə.' 'He gives him many things, beautiful clothes, fine foods.' (A 3:8)
- (3) ví xa-náša lípa. ví xa-náša macixa. 'Be a learned man. Be a humble man.' (A 3:11)
- (4) ju-xa-mzída +júrta míyya ci-malíva mən-de-+áyna. 'In a big waterskin, they would pour water from that spring.' (A 37:7)
- (5) xá marájla +júra 'átlan. 'We have a big pan.' (A 37:19)

The adjective may be separated from its head by intervening grammatical material such as a verb. This is attested where the head noun is indefinite with a referent that is being introduced into the discourse, e.g.

- (6) xá síýsa tílə smùčka. 'A red horse came.' (A 45:11)
- (7) t̥-ázət! xá zíla p̥-kàttət +yaríxa. 'You should go and cut a long cane.' (A 42:24)
- (8) járə ... késa ci-mattíva +xlíma 'átxa! mən-dà júyda +al-dò júyda. 'The roof—they used to place a piece of wood, thick like this, from this wall to that wall.' (B 2:19)
- (9) bràtənva 'átxa súrča. 'I was a young girl like this.' (A 43:13)

The adjective may be separated from what precedes by an intonation group boundary, e.g.

- (10) bəlvášələ xa-lv̥éšta! +al-jánu! zàrda. 'He puts on a yellow garment.' (A 3:62)
- (11) 'átv̥a +aynáta, míyya ci-+pal̥t̥íva šaxína. 'There were springs, from which warm water would flow.' (B 4:7)
- (12) xa-dána bétal tundálla ju-+hával 'a house suspended in the air' (A 3:44)
- (13) +ál dán pardúvvə=da ci-mattíva +pavánət 'ilànəl bríza. 'On the laths they put dry branches of trees.' (B 2:20)
- (14) xúš ká-jánu! xa-béta +mátrəs! +júra 'átxa. 'Go and build yourself a house, big like this.' (A 34:6)
- (15) +bəkkárəna xa-+čáləl, tré mətrəl +tlá mətrəl 'ámčku. 'They dig a hole, two or three metres deep.' (A 3:36)

In (16) the adjective is introduced by the adversative particle *'ina*, indicating that the quality denoted by the adjective is contrary to what is expected for the class of referents denoted by the noun:

- (16) *+táma 'átva xa-dána bëta,| 'ína xrìva.* | 'There was a house, but (it was) a ruin.' (A 1:26)

In (17) the adjective is non-restrictive and has the function of expressing supplementary details about the state of the referent:

- (17) *júllo dømmána mayyátlun kàti.* | 'Bring her bloody clothes to me.' (A 1:9)

In (18) the referent of the definite head noun is assumed to be recoverable from the preceding discourse. The adjective here also, therefore, is non-restrictive:

- (18) *bæxzàyolə 'áyya báxta| +rába šapòrta| b-+pàgро.* | 'He sees the woman, (who is) very beautiful in her body.' (A 1:6)

## (ii) Adjective—Noun

- (19) *'áha málca káti 'íva xá +karùvva| kát +úxča šapíra kàla 'átvalə.* | 'This king was a rooster to me, who had such a beautiful voice.' (A 3:81, restrictive, intensive)
- (20) *+rába mhùmna nášələ.* | 'He is a very pious man.' (A 1:4, restrictive, intensive)
- (21) *+o-kaṭùla| šómmu +bøddàyunva,| munšili,| +rába čátun šòmma 'ótłə.* | 'The executioner—I used to know his name but have forgotten, he has a very difficult name.' (A 3:47, restrictive, intensive).
- (22) *xelána nášə børràxšəna,| léna +bašúrə ka-dá tanína majvàjji.* | 'Strong men go (there), but they cannot remove the dragon.' (A 40:11, restrictive, intensive)
- (23) *+rába +júrta dárta c-avílun bøtvátət màta.* | 'The houses of the village have a very large courtyard.' (B 14:13, restrictive, intensive)
- (24) *+yakùyra cípal +maxdørríva +al-jàrə.* | 'They would roll a (very) heavy stone on the roof.' (B 14:11, restrictive, intensive)
- (25) *'ánnə nášə kát 'átvalun tüp,| xelànta tüp,| t-azíva turàna,| maxtíva xxùyra.* | 'Those people who had a shotgun, a powerful shotgun, would go to the mountains and shoot pigs.' (B 4:6, restrictive, intensive)
- (26) *nášə kàt-+càsəb-ina,| ... bøtvaté ... 'árzan bøtvátəna.* | 'People who are poor,

their houses are cheap houses.' (B 14:12, restrictive, contrastive with people who are not poor and have more expensive houses)

- (27) *é mumlóxta júptal bədráyox ju-míyya mèlxal.* | *ánja +báyyax 'àxnan!* *ka-sàtval xamàxxa,* | *+tumòrta júpta.* | 'We put the salted cheese in salt water. If we want to keep it for the winter (we made) buried cheese.' (B 15:3, restrictive, contrast between the two types of cheese)
- (28) *+spáy švàvətun.* | 'You are good neighbours.' (A 36:4, evaluative)
- (29) *ví +spày náša.* | 'Be a good man.' (A 3:13, evaluative, more emotion-driven than *ví xa-náša lípa.* *ví xa-náša macíxa* in example (3) above)
- (30) *'áyən nýyna +bixálələl mára +rába basámta nùynəla.* | 'She eats the fish and says "It is a very tasty fish."' (A 34:9, evaluative)
- (31) *+tapànča | 'átváləl súrta +tapànča.* | 'He had a pistol, a small pistol.' (B 6:2, evaluative: 'only a small pistol', which did not justify him being assaulted)
- (32) *'áha +ràba! xárba +šúla vídələ 'áha.* | 'He has done a very bad thing.' (A 7:14, evaluative)
- (33) *xá +pahlúvvan nàšələ.* | 'He is a heroic man.' (A 40:15, evaluative)
- (34) *'á yála! +kəryána yála, honána yála, šapíra yála, móriša bəkyàməla.* | 'This lad, an educated lad, a smart lad, a handsome lad, gets up early.' (A 42:30, evaluative)
- (35) *'u-+háji káti mòrrəl kat-'à-baxtal xrèvta báxtəla.* | 'The pilgrim said to me that this woman is a bad woman.' (A 1:34, evaluative—the speaker is slandering the woman with a false accusation)
- (36) *'á yála honána yàlələ.* | 'This lad is a clever lad.' (A 35:5, evaluative)
- (37) *+ràba šapíra lákmal hóč 'áx do-láxmət matvàtə=da! Paslán<sup>P</sup> hòč-ductal* *'ánnə láxxa b-ánnə ducána lè-mačxət mən-do-láxmal +ràba šapíra.* | '(It was) very fine bread. Nothing like the bread of the villages—nowhere in these places (here) will you find such fine bread.' (B 2:10, evaluative)
- (38) *+xámra +társival +ràba rišáya +xámra ju-+línə.* | 'They used to make wine, very good quality wine in jars.' (B 2:5, evaluative)
- (39) *'ánnə məttəlyày! sávə nàšə hukyéna.* | 'The old folk told these stories.' (A 43:13, evaluative)

In (40) and (41) the intensity of the proposed adjective is increased by repeating it:

- (40) *xá mánnu +várrə +ràma +ráma jvánka.* | 'A very tall youth entered through it (the door).' (A 42:2)
- (41) *ju-šaxánta šaxánta +xálva bədráyox R̄pèp̄sinR.* | 'In very warm milk we put pepsin.' (B 15:2)

A preposed evaluative adjective may be negated, as in (42):

- (42) *Pbúr<sup>P</sup> la-+spáy nàša<sup>l</sup> jáldə b-rišu blùslə!* ‘Go, you bad man, quickly stamp on his head!’ (A 47:15)

Definite noun phrases containing restrictive or evaluative adjectives that are not predicative are in principle accompanied by an anaphoric pronoun, whereas this is not obligatory with unmodified definite nouns (§ 9.2.4.7.). This can be compared to the usual practice of determinining a definite head noun before a restrictive relative clause with an anaphoric pronoun (§ 14.1.1.). Examples:

- (43) *'iman-t +Axíkar xùbba muxzíl ka-do-'axína sùra, Nátan brínu kat-jurvás-suva ... +naràhat víla, buxxàlla.* ‘When Axiqar shows love to that young brother, Natan his son, whom he had brought up in ... became upset and jealous.’ (A 3:17)
- (44) *'o-késa +yaríxa +karívalə +karìta.* ‘They called the long piece of wood a “beam.”’ (B 2:19)
- (45) *màrat duccána, ó laxúyma jvánka, borróxšəl kátu màrələ!* ‘The owner of the shop, the handsome youth, goes and says to him ...’ (A 4:5)

A noun may be modified by more than one adjective. These may be both placed after the noun, both before the noun, or either side of the noun, e.g.

*beta sura šapíra* ‘a beautiful small house’

*xabuyša +jura smukə* ‘a big red apple’

*kesa xaruypa +yarixa* ‘a long sharp stick’

*+yakuyra 'u-+jura cipa* ‘a big heavy stone’

*+jura cipa +yakuyra* ‘a big heavy stone’

Examples of multiple adjective modifiers from the text corpus include:

- (46) *baxzáyələ xá +amárat +rába +júrta +rámta +šùlə.* ‘He sees a building that is very big and high, and so forth.’ (A 34:2)
- (47) *mən-+bàzar| zvànnə| tré-danə nýynə +rába +júrə| +xvàrə.* ‘She bought from the market two very large, white fish.’ (A 5:5)
- (48) *jaššúkələ 'inal màrat| 'at-dá duccána xá laxúyma jvánka šapíra.* ‘He looks (and sees) that the owner of the shop is a comely handsome youth.’ (A 4:3)

- (49) *juššáklə xa-<sup>+</sup>héyan<sup>a</sup> <sup>+</sup>rába <sup>+</sup>júra cúma tilə.*! ‘He looked (and saw) a very large black animal come.’ (A 39:5)

When two adjectives are placed before the noun, they are normally linked by the coordinating conjunction *‘u-*, whereas adjectives placed after the noun normally do not have this conjunction.

The adjectives ‘big’ (*+jura*) and ‘small’ (*sura*) tend to be kept adjacent to the noun in sequences of adjectives, otherwise the order is flexible, e.g.

<i>naša sura +bajira</i>	‘a small thin man’
<i>naša +jura +trisa</i>	‘a big fat man’
<i>+heyvana sura cpina</i>	‘small hungry animals’

In the case of the noun *yala* (pl. *yalə*) the modifying adjective *sura* is combined with it in the fixed expression *yala sura* ‘child’, *yāl-surə* ‘children’ (generally with the final *-ə* of the first element contracted). The adjective here is non-restrictive and characterizes the class as a whole rather than any distinct subset. The phrase can, in fact, be qualified by the adjectives *jarusa* ‘large’ and *sura* ‘small’, e.g.

<i>yala sura jarusa</i>	‘a large child’
<i>yāl-surə jarusə</i>	‘large children’
<i>yāl-surə surə</i>	‘small children’

If a nominal phrase consisting of a noun and an adjective is connected to a following noun in an annexation relationship, the annexation ending is attached to the end of the nominal phrase, whether this be the noun or the adjective (§9.9), e.g.

<i>xa-sama +jurət +mixulta</i>	‘a large portion of food’
<i>xa-<sup>+</sup>jura +kəttət dava</i>	‘a large piece of gold’

Compound adjectives such as *b-šənnə* ‘old’ (literally: ‘with years’), *b-šəmma* ‘famous’ (literally: ‘with a name’), *be-hona* ‘without sense, stupid’, *marət-jnaha* ‘guilty’ may also be used attributively and placed either side of the head noun, e.g.

- (50) *bábi náša b-šənnələ.*! ‘My father is an old man.’ (restrictive, unmarked)

- (51) *babi b-šənnə nášələ.*! ‘My father is an *old* man.’ (restrictive, marked)

- (52) *úha náša marət-jnáhələ.*! ‘This is a guilty man.’ (restrictive, unmarked)

- (53) *'áha marət-jnáha nášəla.* ‘This is a *guilty* man.’ (restrictive, marked)
- (54) *'áha 'ztva 'úp ju-márət šánnə nášə ci-+ṭalívalà.* ‘There was this (game) that also old people played (literally: they played among old people).’  
(B 9:12)

The ordinal numeral *kamaya* ‘first’ has the syntactic behaviour of restrictive adjectives. It is normally placed after the noun, but can be placed before the head noun when expressing contrast or intensity:

*'an-našə kamayə* ‘the first people’

- (55) *'án č́m kamáyə məššənnérə kát t̄lun| ju-dáštət 'Urmi* ‘The very first missionaries who came to the plain of Urmī’ (B 2:12)

The other ordinals are genitive constructions, with the numeral connected to the preceding head noun by an annexation construction (§ 7.2.), e.g.

*našət xamša* ‘the fifth man’

In such constructions the numeral is not permitted to be fronted before the head noun.

Occasionally a noun is connected to its attributive adjective in an annexation construction. This is attested where the adjective is gentilic, e.g.

- (56) *tré məššənnérət 'amricāyə* ‘two American missionaries’ (B 2:12)

Adjectives are nominalized by combining them with a demonstrative pronoun when they are definite. This can be analyzed as a substitution for a definite nominal head by a pronoun:

- (57) *paršàxvalun| 'én-šap̄ira.* ‘We separated the good ones (i.e. the good grapes).’ (B 3:15)
- (58) *'én +júra 'átxal| +čaləpvalun.* ‘He would split the big ones like this.’ (B 4:14)
- (59) *+šadúrələ +bar +tājər,| +bar +hájɪl 'ína 'an-'asliyyə.* ‘He sends for the merchant, the pilgrim, but the real ones.’ (A 1:41)
- (60) *ína 'á +júrət cačálə| ... 'íval bùš| +'ullul| mən| dan-xína.* ‘Now, the elder (literally: the big one) of the bald men, the elder of the bald men, that is he was the head of their gang, he was higher (in rank) than the others.’  
(A 1:2)

In (61) the nominalized adjective is itself qualified by an attribute:

- (61) *’á súra cačála bëtələ*.| ‘The bald young one is at home.’ (A 45:3)

An indefinite nominalized adjective takes as its head the indefinite particle *xa*, when it is singular, and *xačča* ‘some, any’, when plural, if it refers to one member or some members of a set of items that is salient in the speech situation, e.g.

- (62) *’átlloxun xa-súra?* ‘Do you have a small one?’  
 (63) *’átlloxun xáčča súra?* ‘Do you have any small ones?’

The head may be omitted before the adjective in non-referential phrases where there is no presupposition of a salient set:

- (64) *núyna súra dükun*,| +*jùrə dokítun*| +*ràba*.| ‘Catch small fish, catch large ones, lots of them.’ (A 9:3)  
 (65) *mádrə júyda bnáyava áxči cùpa* ‘Again they would build a wall but (one that is) low.’ (B 17:34)  
 (66) *’ína mən-jánux buš-’áhmač xòzyat?* ‘Have you seen a more stupid person than you?’ (A 16:1)

On some occasions a noun and its adjective are connected together prosodically in the same intonation group. This is found, for example, in the names of the festivals *’ida* +*jura* ‘big festival’ (= Easter) and *’ida sura* ‘small festival’ (= Christmas) in (67). Note that the stress of the stress group is placed on the final syllable of the noun:

- (67) *’idá-+jura ’idá-sura cáslan +ràba ci-dokáxvalə b-kòšya*.| ‘We held Easter and Christmas very strictly in our community.’ (B 9:12)

### 9.6.2 *Apposition*

#### 9.6.2.1 Non-Restrictive

A noun or pronoun may have a non-restrictive modifier in the form of a noun in apposition to it, e.g.

- (1) *Nátan brùni*! *’ána tuybèrrun*,| *jurvàssuvən*,| *mùlpun*,| *’áxči ka-dàha móndi*.| ‘I have brought up, raised and taught Natan, my son, only for this purpose.’ (A 3:15)

In many cases the item in apposition is put in a separate intonation group, e.g.

- (2) *+pállan yùma, +pállan +tàrəx málcət Məssər, für'un, hàmla t-ávəd +ällux.* 'On such-and-such a day, on such-and-such a date, the king of Egypt, Pharaoh, will attack you.' (A 3:20)
- (3) *brúnət xàtux, Nàtan, šámmu Nàtan-ıva, vídlə ka-jánux brùna.* 'Make the son of your sister, Natan—his name was Natan—your son.' (A 3:6)
- (4) *'a-ctáva Nátan yávulə ká ... +Noxadnásər, málca.* 'Natan gives this letter to Nebuchadnezzar, the king.' (A 3:22)
- (5) *škúllə +págṛət bábux, +Axíkar, +támorrə.* 'Take the body of your father, Axiqar, and bury it.' (A 3:37)
- (6) *'àtən! xa-báxta! mù-+amsat káti ýdat?* 'You, a woman, what could you do for me?' (A 5:3)

In (7) an appositional phrase is placed at the end of the clause:

- (7) *Nàtan ú-məndi vádulə, o-brùnu.* 'Natan did this thing, his son.' (A 3:20)

If a noun with a demonstrative pronoun stands in apposition to a noun that is the complement of a preposition, the preposition may be gapped but the demonstrative pronoun is in its oblique form, i.e. the form it would have if the preposition were present:

- (8) *bənpála ju-hònna, de-hàvuz.* 'It (the shoe) falls in thingy, that pool.' (A 43:3)
- (9) *+bəkyàrələ b-de-scántu +bəkyàrəl dé +čap̪pàltu.* 'He carves, he carves with his knife, his staff.' (A 37:8)

The same applies to a phrase standing in apposition to a pronominal suffix of a preposition, e.g.

- (10) *xùtol dé +kazànča! +šerívalə! ýnnə míyya +radxiva.* 'Under it, that pan, they lit a fire and the water boiled.' (B 3:14)

Constructions with oblique pronouns in apposition form the background of fixed expressions such as *babi dani* 'my father and his relatives/friends', *yəmmi dani* 'my mother with her relatives/friends'. In these expressions the oblique 3pl. pronoun *dani* denotes people associated with the first noun, typically family members. These are used both when the first noun is the complement of a preposition or of another noun (11–12) and also in other contexts (13–14):

- (11) *t-ázax láb bábi dàni.* ‘Let’s go to the home of my father and his family.’  
 (12) *xášlan bétat bábi dàni.* ‘We went to the house of my father and his family.’  
 (13) *tílun bábi dàni.* ‘My father and his family came.’  
 (14) *+báyyən xazónnun bábi dàni.* ‘I want to see my father and his family.’

The expression appears to have developed through the borrowing of the pattern of a construction in Kurdish, in which a 3pl. pronoun is placed in apposition to denote people associated with the first noun. The difference is that in Kurdish the pronoun in apposition follows rules of case agreement, in that it is oblique only when the first noun is dependent (15) but is in the direct case in other contexts (16):

Kurdish (Urmî region)<sup>2</sup>

- (15) *Eve mer-a bab-ê min wan-e*  
       this shovel-EZ father-EZ my they.OBL-is  
       ‘This is the shovel of my father and his associates.’  
 (16) *bab-ê min ew jî dé çine dewatê*  
       father-EZ my they.DIR also will go wedding  
       ‘My father and his associates will also go to the wedding.’

The NENA dialect has borrowed the pattern with oblique pronouns, as in constructions such as (15), and generalized it to all contexts. It has become a fixed, autonomous expression and the *dani* component has ceased to be interpreted as a 3pl. oblique pronoun. This is reflected by the fact that *dani* is often contracted to *day*, e.g. *babi day*, *yəmmi day*.

### 9.6.2.2 Restrictive

Occasionally a noun that is placed in apposition to another noun expresses a restrictive attribute, e.g.

- (1) *mən-+bár dàyən! bədvákəx míyya məlxə.* ‘After that we take salt water.’  
 (B 15:3)

An adjectival phrase that is nominalized by a demonstrative pronoun (§ 9.6.1.) can be used in apposition to a definite noun to express a restrictive attribute.

---

<sup>2</sup> The Kurdish examples were supplied by Ergin Öpengin.

This is used in particular when a contrastive opposition is set up between members of a salient limited set of items, e.g.

- (2) *brāt-málca* 'e-<sup>+</sup>*júrta labùlona*.! ‘They are taking the daughter of the king, the elder one.’ (A 45:9)
- (3) *cacála* 'aslí 'o-<sup>+</sup>*júra víyyələ málca* 'adíyya.! ‘The original bald man, the elder one, has become the king now.’ (A 1:29)

In (4) a middle deixis pronoun is used in this context:

- (4) *'á* +*šúla=da* *sátva c-odívalə*! *yála jílə* 'ánnə <sup>+</sup>*júrə*.! 'ánnə *sùrəl* *mòrril* *b-dó* +*kàvvəl* *b-*+*xadríva* *jaravày*.! ‘They do this in the winter, the older youngsters. The young ones, as I have said, went around the rooftops with that bowl.’ (B 5:9)

In (5) a noun that stands in restrictive apposition to a definite noun has a demonstrative pronoun:

- (5) *mən-dó-yba* *bitáyəna susavày*! +*allé* +*sayàdəl* *bi-tùp*,! *bi-calbanán* 'an-+*ta-zìyyə*.! ‘From the other side horses come, on which there are hunters with guns, with the greyhound dogs.’ (A 47:18)

### 9.6.2.3 Evaluative

A noun that expresses an attribute of another noun may be placed before the noun it qualifies when it has an emotion-driven evaluative function, e.g.

- (1) *xá šácla bráta vàyəla*.! ‘She becomes a girl a picture (of beauty).’ (A 43:22)
- (2) *šácla šácla laxúymə jvànķəl*! ‘handsome youths, a picture (of beauty)!’ (A 42:4)
- (3) +*ajibúyta* +*šùla víyyələ* +*táma*.! ‘An amazing thing (literally: a wonder a thing) has happened there.’ (A 43:24)

### 9.6.3 Adverbial and Prepositional Phrases

Nouns may be modified by a following adverbial or prepositional phrase, e.g.

- (1) *'éyàma* +*táma* *šámmo* *'ilə yámət* 'Urmi.! ‘The sea there, its name is the sea of Urmi.’ (B 2:17)
- (2) *dòšta* *b-dá* +*šúp̥ra* 'áxnan lèx xózya.! ‘We have not seen a plain with such beauty.’ (B 2:14)
- (3) +*úlma* +*aturáya* *ju-*'Urmi! *mən-kám* +*plàša* +*ràba* *šánnə* 'albáttá *mən-kám*

*+pláša, bí álpo tmanyámmo tláy! cúllə ’íva +ítət mădənxa.* ‘The Assyrian people in Urmi before the war, indeed many years before the war, in 1830, were all Church of the East.’ (B 1:27)

In (4) the prepositional phrase is separated from the head by an intervening copula:

- (4) *xa-mən-dan-šəcvàñəvən! xut-’ákłat màlca.* ‘I am one of those ants under the feet of the king.’ (A 3:66)

These phrases may be fronted before the head noun, e.g.

- (5) *mú yávvən b-dá mèymun?!* *maràni!* *xá ’áx +yúkro dàvə.* ‘“What should I give for this monkey?” They say “Gold in accordance with her weight.”’ (A 44:10–11)  
 (6) *’ax-bábijanáy* ‘people like my father’

In (7) both an adjectival and a prepositional phrase modifier are fronted before the head noun:

- (7) *t-íva xášle +al-+sèda,* *jáški +al-xá ’ilàna!* *távtəla xá šapórtə máx +šrá bəlláya bràta.* ‘When they had gone hunting, they saw sitting on a tree a beautiful girl shining like a lantern.’ (A 56:1)

If the fronted phrase carries the nuclear stress, it is given particular prominence, e.g.

- (8) *b-’íupra +kusaryátə ’átvalan.* ‘We had pots made of clay.’ (B 14:1)

In (9) there is an idiomatic ordering of the prepositional phrase to juxtapose two adjectives:

- (9) *xá dána +spáy yàla! hóna b-+júra súra lèlə!* *mòrrə.* ‘A fine young man, who had not a little brains, said ...’ (A 50:3)

## 9.7 Non-Attributive Modifiers

Nouns are also modified by a number of words that do not denote attributes. These include quantifiers and determiners. Many of these are invariable in

form. Here a variety of words of this nature are brought together. Many of them can also be used in other syntactic positions.

### 9.7.1 *cul* 'each, every'

The particle is used before a singular indefinite noun and has a distributive sense ('each one of the items of the set named by the noun'), e.g. *cúl bèta* 'every house' (B 2:11), *cúlyùma* 'every day' (B 2:19), *cúl-məndi* 'everything' (A 3:7). It may be followed by the cardinal indefinite participle *xa*, in which the items of the set are given greater individuation, e.g. *cùl xa-məndi* 'every single thing' (B 2:10). When combined with *yuma* 'day', the noun does not have the final *-a* inflectional ending, e.g. *cúl-yum* 'every day' (A 37:18). It is sporadically shortened to *cu-*, especially before common expressions, e.g. *cu-məndit* 'everything which' (A 34:7). The phrase *cu-məndit* is sometimes shortened further to *cu-mət* or *cu-m*, e.g. *cu-m-<sup>+b</sup>áyyət* 'whatever you wish' (A 37:10).

Occasionally it is used before an indefinite plural noun and has the sense of 'each sub-set of the item of the set named by the noun', e.g. *cul-nàšə* 'every (kind of) people' (A 3:42).

It may be combined with the annexation element *-ət*, resulting in the form *cullət*, and used at the head of a relative clause, e.g.

- (1) *cúllət <sup>+b</sup>áyyət ódat b-rišu vùd.* 'Do to him whatever you want.' (A 3:88)

The particle *cul* may be combined with the word *məndi* in such contexts, e.g.

- (2) *cúl-məndit óttə nàkval p-šaklátta m-páť <sup>+àrra.</sup>* 'Everything that has a female you must remove from the face of the earth.' (A 2:11)

### 9.7.2 *cút* 'each, every'

This particle, which has developed from the combination *\*kul + d*, has the same function as *cul*, e.g. *cút bèta* 'every house' (B 12:2), *cút <sup>+ber</sup>àšə* 'every evening' (A 4:12), *cút-xa* 'everybody' (A 1:43). It is used before numeral expressions, e.g.

- (1) *cút xa-<sup>+d</sup>àna* ... *cút trè-yarxə* *cút <sup>+tlá</sup>yárxa xà* 'every once (in a while), once every two or three months' (A 1:25).

When combined with *yuma* 'day', the noun does not have the final *-a* inflectional ending, e.g. *cút-yum* 'every day' (B 2:19).

It is used at the head of relative clauses, e.g.

- (2) *cút-ilə bitáya màra|'ávax +xlápux málca|'áxnan le-+yàttax.*| 'Everybody who comes says "With respect, king, we do not know."' (A 3:43)

### 9.7.3 **cullə 'all'**

This quantifier is used with plural or singular head nouns with the sense of 'all'. It is generally placed before the noun. The final -ə of the form can be identified as a fossilized form of an archaic 3ms pronominal suffix (§ 2.3.).

#### 9.7.3.1 Before a Plural Head Noun

Examples: *cúllə matvátət dáštət 'Ùrmi* 'all the villages of the plain of Urmî' (B 2:5), *cúllə matvátət diyyan* 'all our villages' (B 2:1), *cúllə bátə* 'all the houses' (B 2:11), *cúllə +tuyràna* 'all the mountains' (B 2:14), *cúllə +karavášu* 'all of his housekeepers' (A 3:38), *cúllə násət dúnýə* 'all the people of the world' (A 3:71), *cúllə 'ánnə +xabráne* 'all of these words' (A 3:45), *cúllə 'ánnə bəlyápənəl* 'He learns all of these' (A 3:58).

It may be separated from the following nominal by the inclusive enclitic -da, e.g. *cúllə-da 'an-+sarbàzə t-íva mónnu*l 'also all those soldiers who were with him' (A 3:35), or by other material, e.g. *cúllə +bəkrayèna našé*l 'They summoned all their relatives' (B 8:5).

When followed immediately by a demonstrative pronoun, the demonstrative is sometimes in the dependent form with an initial *d*, e.g. *cúllə dánna +parsúpə* 'all those people' (B 2:16).

#### 9.7.3.2 After a Plural Head Noun

It occasionally occurs after the noun, e.g. *cícu cúllə xrìvəl* 'all his teeth are ruined' (A 3:51).

#### 9.7.3.3 With a Singular Head Noun

When used with a singular head noun, the quantifier is generally placed before the noun. When the singular noun is definite, the quantifier has the sense of 'the whole of, all (of)', e.g. *cúllə dúnýə* 'the whole world' (A 3:1), *cúllə +págri* 'the whole of my body' (A 2:33), *cúllə kòšun* 'the whole of the army' (A 3:25), *cúllə 'o-+xiyávand* 'the whole of the street' (A 2:9), *cúllə +tùnta* 'all of the fruit' (A 3:12), *cúllə xàrjət tláy šànnəl* 'the whole of the expenses of thirty years' (A 3:44), *cúllə-yuma síma* 'the entire day' (A 5:8).

It may be used with the word *məndi* with a distributive sense, e.g. *'ána +púxlən cúllə məndi*l 'I have forgiven everything' (A 2:37). This is equivalent to *cul məndi*.

### 9.7.3.4 Independent

The particle may be used pronominally without any nominal being directly dependent on it, e.g. *cúllə* 'áx +'uydaləva<sup>l</sup> 'They were all like one another' (B 2:3), *cúllə* 'à-məndi<sup>l</sup> 'all of them (were) the same thing' (B 2:5), *cúllə* *bəxzayèna<sup>l</sup>* 'They see them all' (B 2:15), *cúllə* *yuvvélə* kàtu<sup>l</sup> 'He gave them all to him' (A 3:84), *cúllə* šátyøna<sup>l</sup> +'riyøna<sup>l</sup> 'They are all drunk and inebriated' (A 3:35), *cúllə* +*byáyəla* máxəl<sup>l</sup> 'He wants to beat them all'.

The independent form *culla* may have generic reference and have the sense of 'everything', e.g. *kámtət* *cúllə* mārələl<sup>l</sup> 'Before everything he says' (A 3:61).

### 9.7.4 +raba 'many, much'

This particle, which is pronounced *+roba* in some villages, modifies a singular noun of mass or a plural noun. It is generally placed before the head noun, e.g.

- (1) *lá-azət* +*bár* +*rába* *davəltə*.<sup>l</sup> 'Do not go after a lot wealth' (A 3:11)
- (2) *muyyílə* kàtu<sup>l</sup> +*rába* dàva.<sup>l</sup> 'He brought to him a lot of gold'. (A 3:84)
- (3) 'àxnan<sup>l</sup> *ju-*+*rába* +'atravátət dúnyə<sup>l</sup> +*xdirøvax*,<sup>l</sup> +*rába* dəšyàtə xózyøvax,<sup>l</sup> +*rába* *ducànə* xíšøvax.<sup>l</sup> 'We have travelled to many countries of the world, we have seen many plains, we have gone to many places.' (B 2:14)
- (4) 'átvəlun<sup>l</sup> +*rába* dàva.<sup>l</sup> 'They had many gold pieces.' (A 37:22)
- (5) +*bəkráyəla* +*rába* náše *lipə*.<sup>l</sup> 'He summons many learned people'. (A 3:42)
- (6) *malúpulə* +*rába* məndyàna.<sup>l</sup> 'He teaches him many things'. (A 3:7)

Occasionally it is placed after the head noun, e.g.

- (7) *sátvə* tálja<sup>l</sup> +*rába* *ci-*+*rayyíva*.<sup>l</sup> 'In winter a lot of snow fell.' (B 2:19)
- (8) *ju-*matvátə<sup>l</sup> 'átvə tanùrə<sup>l</sup> tanúrə<sup>l</sup> +*rába* átxa<sup>l</sup> àmku.<sup>l</sup> 'In the villages there were ovens, many ovens deep like this.' (B 2:9)

It is sometimes separated from the head noun by intervening material, e.g.

- (9) +*móstə* +'al-ríšu<sup>l</sup> +*rába* lətva.<sup>l</sup> 'There was not much hair on his head.' (A 37:1)
- (10) +*rába* *ci-*+*tarsíva* vádra.<sup>l</sup> 'They made many buckets.' (B 10:18)

It may be connected to its complement by the preposition *mən*, forming a partitive expression, e.g.

- (11) *xà-yuma<sup>1</sup> +krílə +rába mən-dánnə nášə lìpə.* ‘One day he summoned many of those learned men.’ (A 3:3)
- (12) *+rába mən-dánnə məndyána malùpula.* ‘He teaches him many of these things.’ (A 3:10)

The particle is often used as the intensifier of a gradable adjective, most commonly when predicative, e.g.

- (13) *+áv=da +rába lìpəva.* ‘He also was very learned.’ (A 3:1)
- (14) *'át +rába dívət sìva.* ‘You have become very old.’ (A 3:14)
- (15) *Nátan +rába +naráhat víla.* ‘Natan became very uncomfortable.’ (A 3:18)
- (16) *mən-+támə dáštət 'Úrmi<sup>1</sup> ci-mabyənnáva +rába šap̄ərta.* ‘From there the plain of Urmi looked very beautiful.’ (A 3:13)

The particle is used also with attributive adjectives, e.g.

- (17) *+rába cátun šəmma 'átlə.* ‘He has a very difficult name.’ (A 3:47)
- (18) *+xámra +társiva +rába rišáya +xámra ju-+linə.* ‘They used to make wine, very good quality wine in jars.’ (B 2:5)
- (19) *'ítə +al-dáni daríva +tínə, tínə lá +rába miyyàna.* ‘Then on these they would put mud, not very watery mud.’ (B 2:21)

In some contexts *+raba* with a gradable adjective is most idiomatically rendered into English as ‘too’, e.g.

- (20) *lá-'avət +rába šaxína.* *lá-'avət +rába +kàyra.* ‘Do not be too hot and do not be too cold.’ (A 3:9)

The particle may be used independently in predicative position in constructions such as:

- (21) *ka-mú=ina +raba?* ‘Why are they so many?’ (A 37:17)
- (22) *yán xa-sáma 'ən-+raba 'áviva ci-zabniva.* ‘Or they would sell a portion, if it was too much (surplus).’ (B 2:11)

It may also function as an adverbial modifier, e.g.

- (23) *málca +rába xdilə.* ‘The king rejoiced greatly.’ (A 3:34)
- (24) *'áxnan +rába bət-xádax<sup>1</sup> 'án yavvítun ká-díyyan pòrsat<sup>1</sup> +'ijàza yavvítunlan hár pésax ləxxa.* ‘We would be very happy if you give us the opportunity, (if) you give us the permission, to stay here always.’ (B 2:14)

- (25) *+rába +pšàməvax kát m-ída yùvvovax.* ‘We greatly regret that we lost it.’  
 (B 2:15)
- (26) *+rába murkžlla.* ‘He has delayed a lot.’ (A 37:18)

The particle is repeated to express further intensity, either before the modified element, after it, or each side of it, e.g.

- (27) *+rába +rába məndyánə märulə.* ‘He says to him many many things.’  
 (A 3:92)
- (28) *'ánnə məndyànəl +rāba, l +rāba| kátu tanuyèla.* ‘These many many things he tells him.’ (A 3:13)
- (29) *+rába honàntəval +rāba.* ‘She was very very clever.’ (A 3:32)

### 9.7.5    *xačča* ‘a little, a few; some’

This is placed before a singular noun of mass or a plural noun. It may function as a quantifier expressing a small quantity ('a little, a few') or as a determiner with a partitive sense, which does not express the size of the set of items that is referred to but only identifies the referent ('some').

- (1) *xáčča +xvárət bíta ci-+ṭarpíva ci-maxívə javé.* ‘They would beat a little white of an egg and put it in it.’ (B 12:4)
- (2) *yuvvällun xáčča +xólə kátu.* ‘They gave a few ropes to him.’ (A 37:17)
- (3) *xúš xáčča láxma mélan.* ‘Go and bring some bread.’ (A 19:1)
- (4) *'á yáləl xáčča švávə 'étlə.* ‘The boy has some neighbours.’ (A 36:2)
- (5) *'a-sápar xítə bəlvášələ ... xáčča júllə xínə.* ‘This other time he wears some other clothes.’ (A 3:62)

It is occasionally combined with the particle *xa*, e.g.

- (6) *'ázət xá xáčča mìyya mayyótlan.* ‘Go and bring us some water.’ (A 37:14)

The particle may stand independently and function as a nominal, e.g.

- (7) *ci-šaklíva xáčča| ci-darívalun ju-+týyan.* ‘They took some and put it in a cauldron.’ (B 12:4)
- (8) *xáčča mənné ci-+xoṭívalunju-dánnə míyyat +'ánvə.* ‘They used to bring and mix a little of it with the grape juice.’ (B 12:3)
- (9) *'ita bəštáyələ xáčča mən-de-+àyna.* ‘Then he drinks a little from the spring.’ (A 37:6)

On some occasions it is used as an adverbial quantifier, e.g.

- (10) *xáčča macriyyànnə*.! 'I shall shorten it slightly'. (A 3:14)
- (11) *xáčča tá +'al-jànu*x.! 'Return to yourself slightly (i.e. recover).' (A 3:53)
- (12) *+púzət póxa xáčča ptàxulə*.! 'He opens the mouth (of the bag of) wind a little.' (A 37:16)

It may also modify an adjective, e.g.

- (13) *'ina! ránjo xáčča smuknàya*.! 'But its colour is slightly reddish.' (B 12:6)

### 9.7.6 xacma, cma 'some'

This is placed before a singular noun of mass or a plural noun. It has the function of a determiner with a partitive sense, which does not express the size of the set of items that is referred to but only identifies the referent:

- (1) *bəsyákəna +'üllul*,! *hál cma-+dána 'atxa-+'üllul bəsyákəna*.! 'They go upwards, for some time they go upwards like this.' (A 3:71)
- (2) *'ázət xácma kèsə mayyátlən*.! 'Go and bring us some pieces of wood.' (A 37:14)
- (3) *+tlábloxun but-+zrùta katóxun xácma məndyána tánən*.! 'You have asked me to tell you some things about agriculture.' (B 2:1)
- (4) *'ótva xácma matvátət 'arəmnàya!* *ju-dáštət 'Urmi*.! 'There were some villages of Armenians in the plain of Urmi.' (B 2:6)
- (5) *+'ánvə ci-darívalun ju-xácma ... +tagjärə ci-+karáxlun*.! 'They used to put the grapes in kneading troughs, as we called them.' (B 12:2)
- (6) *'albáttə bətfákəna b-cmá 'apəskúpə kat-vàyanlə*.! 'Of course they meet bishops that we have.' (B 2:14)

The particle may be connected to the following noun by the preposition *mən*, e.g.

- (7) *xácma mən-nasyáttə masálan márələ* ... 'Some of the pieces of advice—for example he says ...' (A 3:9)
- (8) *ju-xácma mən-matvátə 'òttən!* *ýlpo 'əmmà-šənnə cípət bət-+kuravátə*.! 'In some of the villages, there are tombstones one thousand one hundred years old.' (B 1:6)

It is combined with the quantifier *cut* in constructions such as (9):

- (9) *cút-cma xa-<sup>+dàna</sup> ... ci-<sup>+pàlət</sup>*! ‘Every once in a while ... he goes out.’  
(A 1:25)

The particle *cma* can be used with an interrogative or exclamatory function, e.g.

- (10) *cmá xabiyyšə +báyyət?*! ‘How many apples do you want?’  
 (11) *cmá šànnə ́tlux?*! ‘How many years have you? (= How old are you?)’  
 (12) *+tíma dáha cimà-ilə?*! ‘How much is the value of this? (= What does this cost?)’  
 (13) *́ha cmá b-dákər?*! ‘How much would this cost? (= What does this cost?)’  
 (14) *cmá xmàrənva!*! ‘What an ass I was!’ (A 1:29)  
 (15) *údi cmá šònnə* *cáslux +xìlələ, šòtyələ!*! ‘How many years has he eaten and drunk in your presence!’ (A 3:22)  
 (16) *'an-cmá šónna ́na plíxən.*! ‘For so many years have *I* worked.’ (A 25:1)

#### 9.7.7    *xa-<sup>-</sup>axča, xa-xča* ‘such a’

This is used before nouns with the sense of ‘such a’, e.g.

- (1) *́na lé-<sup>+bayyən</sup> xà-<sup>-</sup>axča mánđi ju-<sup>+átrət</sup> díyyi ́və.*! ‘I do not want such a thing to be in my land.’ (A 1:38)  
 (2) *xá-<sup>-</sup>axča mánđi ́na lén mòrtə.*! ‘I have not said such a thing.’ (A 36:14)  
 (3) *xúš ́láha +baràxlux!* *kat-xá-<sup>-</sup>axča hònə* *karkápta kátux ́láhayùvvələ.*! ‘Go, God bless you, for God has given you such an intelligence and such a mind.’ (A 3:84)  
 (4) *bəxzáyəna xá-xča míyya +bərdàxa dáryəna* *á +hála mára dún +tətlı,*! *+yána* *'ax-t-én ́nna míyya mán +təta týyəna.*! ‘They see that they have poured so much boiling water, while this one says “I have just sweated,” as if this water has come from sweat.’ (A 37:21)  
 (5) *fúr'un málca! xá-xča mánđi +šudrənilə.*! ‘Pharaoh the king has sent us such a task (literally: thing).’ (A 3:55)

In some contexts it is used as a quantifier with the sense of ‘such-and-such an amount’, e.g.

- (6) *màrj dókax mónnax!* *+al-xá-<sup>-</sup>axča dàvə.*! ‘We shall make a bet with you on such-and-such an amount of gold coins.’ (A 34:10)

It may be preceded by a demonstrative pronoun, e.g.

- (7) *'áha xá-'axča +šúla +júra 'ávə výya ju-da-<sup>?</sup>átrət díyyi,| 'ána lā-+yatłən?*  
 'Has such a mighty matter as this taken place in this land of mine and I do not know about it?' (A 1:39)

In (8) it functions as a correlative that binds the reference of the nominal to the following subordinate content clause:

- (8) *'át xá-'axča| kvalta 'átválu| mən-+háji| kat-báxtux litən,| məttəla.* 'You had such a complaint against the pilgrim (namely) that your wife was missing, that she had died.' (A 1:30)

It may be used before adjectives in the sense of 'so', e.g.

- (9) *kám xá-xča +naràhat=ivət?* 'Why are you so uncomfortable?' (A 2:15)

It may be used adverbially with the sense of 'so much',

- (10) *mú váttəla ka-díyyux kat-xá-xča mxáyot?* 'What has it done to you that you beat it so much?' (A 3:80)  
 (11) *xázax ... ka-mù 'áxá-xča murkólla.* 'Let us see why he has delayed so much.'  
 (A 37:15)

In (12) it is combined with the interrogative particle *mut*:

- (12) *nášə cúlla mára 'a-yála mút xá-'axča muntyyəla.* 'Everybody says how much the lad has been successful.' (A 34:6)

### 9.7.8 <sup>+'</sup>uxča 'so much'

This particle, which appears to have developed from the combination of the demonstrative 'o with 'axča has a similar function to that of *xa-'axča*. Since it contains a demonstrative element, it is in principle, or at least was originally, anaphoric in function. Before nouns it has a sense of 'so much', e.g.

- (1) *tàlja| járə +rappáxvalə m-+ál-jára,| cíl yùma,| cíl yùma.* 'úxča tàlja ci-+rayyíva.' 'We had to throw off the snow from the roof, every day, every day, so much snow used to fall.' (B 2:19)

It is used before adjectives, e.g.

- (2) *'áha málca káti íva xá +karùvva| kát +'úxča šapíra kála 'stvala.|* 'This king was a rooster to me, who had such a beautiful voice.' (A 3:81)
- (3) *'ína +Axíkar +'úxča +narahàt vágølø| kat-háč xa-+xábra lòtlø.|* 'But Axiqar became so uncomfortable that he has nothing to say.' (A 3:30)
- (4) *'ína +'úxča sivøva| múttuva ju-xá ... +kørtàla.|* 'But he was so old that they had put him in a basket.' (A 2:14)

It may be used independently as an adverbial, e.g.

- (5) *+kátu bødvákona.| ka-dáha +kátu +'úxča mxáyølø,| +'úxča mxáyølø.* 'They take the cat. He beats the cat so much, he beats it so much.' (A 3:79)

The construction *xa-+uxča ... xa-+uxča* has a correlative function with the meaning of 'as much as ... so much ...', e.g.

- (6) *xa-+'úxčøt 'ilø,| xa-+'úxča-zø xut-+'arrølø.* 'As much as he is, so much is he also under the ground.' (i.e. you do not know half of him, he is cryptic, sneaky)

### 9.7.9    +pøllan

This word is an adaptation of the Persian (originally Arabic) form folán. Occasionally the initial fricative is retained: +føllan. It is used as a modifier of a noun with the sense of 'such-and-such', e.g.

- (1) *'à-šabta| málca| +pállan yùma,| +pállan +dàna,| +pállan +sà'at| +plàtølø| +al-dà 'úrxa.* 'This week the king, on such-and-such a day, at such-and-such a time, at such-and-such an hour, is going out on this journey.' (A 1:25)
- (2) *málca t-ávøt basíma| +pállan yùma,| +pállan +tarøx| málcat Møssær,| für'un| hàmla t-ávød +'állux.* 'King, be well, on such-and-such a day, such-and-such a date, the king of Egypt, Pharaoh, will make an attack on you.' (A 3:20)
- (3) *'on-lèt hammúnø,| ku-ta-mønni| 'ázax +pállan dícta.* 'If you do not believe, come with me, let's go to such-and-such a place.' (A 3:23)
- (4) *xàyølø| +pállan díctaølø.* 'He is alive. He is in such-and-such a place.' (A 3:50)

It is used with the Persian complement *cas/cas* in the sense of 'so-and-so',

- (5) *šámmøt díyyi 'ilø ... +pállan cás|* 'My name is so-and-so.' (A 37:8)

- (6) *'áxtun +bəddáyətun ána +fóllan cás-vən.* | ‘You know that I am so-and-so.’  
(A 39:42)

### 9.7.10   'atxa, xa-'atxa

This word may be used as an anaphoric determiner before a singular or plural noun in the sense of ‘such a’, ‘such’, e.g.

- (1) *'átxa baxtátə| jári péši +ktílə.* | ‘Such women must be killed.’ (A 1:7)  
 (2) *'átxa məndyána malùpula.* | ‘He teaches him such things.’ (A 3:13)  
 (3) *+rába hamzúmələ 'átxa məndyàna.* | ‘He speaks about many such things.’  
(A 3:46)

When the noun phrase is the complement of a noun or preposition, the anaphoric determiner *'atxa* is used in its oblique form *datxa*, e.g.

- (4) *'íta ju-dátxa +dána mən-šmáyya bənpáləna +tlà xabúšə.* | ‘Then at such a time as this, three apples fall from the sky.’ (A 38:19)

It may be used independently of a head noun as a subject or object argument in a clause, e.g.

- (5) *'átxa lè-ovyə* | ‘Such a thing should not be.’ (A 37:18)  
 (6) *mélə xázən ɬa-mù-ilə 'átxa vída.* | ‘Bring him so I can see why he has done such and thing.’ (A 3:26)

It is used predicatively, e.g.

- (7) *xubbàna-vi,| jaxcàna-vi| 'átxa-vi.* | ‘Be good, be loving, be merry, be like this.’  
(A 3:89)

The particle may function as a modifier of adjectives or adverbials, in which case it is placed either before or after the head, e.g.

- (8) *ju-matváta ɬtvə tanúrə| tanúrə +rába 'átxa 'ámku| javé láxma ci-yapìva.* | ‘In the villages there were ovens, many ovens, deep like this, in which they used to bake bread.’ (B 2:9)  
 (9) *ɬésa ci-mattíva +xlíma 'átxa| mən-dà jiýda +al-dò jiýda.* | ‘They used to place a piece of wood, thick like this, from this wall to that wall.’ (B 2:19)  
 (10) *'an-ɬésa ci-mattívalun 'átxa šàvyə.* | ‘They used to lay those sticks equal (i.e. parallel) like this.’ (B 2:20)

- (11) *dašdəššívalə́ ’átxa jáns +mam̄tivalə́*. ‘They used to stamp it very well like this and prepared it.’ (B 2:21)

It is frequently used independently as an adverb, e.g.

- (12) *’átxa +vára bərràxšəla.* ‘(Time) passes like this.’ (A 3:39)  
 (13) *har-’átxa čamčùmula.* ‘He throws (him) down just like that.’ (A 3:37)  
 (14) *márat díyyi lèla xšíxa | kat-’ána ’átxa hamzámmən bázú.* ‘My master does not need me to speak about him like this.’ (A 3:64)  
 (15) *+’ávva síla ’átxa ’átxa partùləla.* ‘He twists the sand like this.’ (A 3:74)  
 (16) *’an-jardéyə xrúzlun +’álju-dárta ’átxa.* ‘Lay out the round loaves in a line in the courtyard like this.’ (A 37:3)

The particle *’atxa* is sometimes preceded by the indefinite particle *xa*, forming the phrase *xa-’atxa*, which is sometimes contracted to *xa-txa*. It modifies a following noun or adjective and has the sense of ‘so much’. In the attested examples it is used with an exclamatory function (17–19) or a deictic function (20):

- (17) *’át mú-tahar b-xamyáttun ’ánnə +ambàrəl xá-’atxa dàvə?* ‘How will you protect these storerooms with so much gold?’ (A 43:1)  
 (18) *dáx xá-txa janáy +k̄taltēt, | ’át dámmat cùlla dəžmənnax šaklánna.* ‘Just as you have killed so many people, I shall avenge the blood of all of your enemies.’ (A 43:4)  
 (19) *xá-’atxa +naràhat-vət.* ‘You are so stressed.’ (A 39:32)  
 (20) *táxta +júrtəva flúltal xá-’atxa +rámta.* ‘It was a large round board, this high.’ (B 10:14)

### 9.7.11 *xina* (*fs. xita, pl. xinə*) ‘other’

#### 9.7.11.1 Modifier of a Noun

When functioning as a modifier of a noun, the word is always placed after the noun. A singular indefinite noun in such phrases generally has the indefinite cardinal particle *xa* ‘a, one’ and definite nouns singular and plural have demonstratives. The word means ‘other’, both in the sense of ‘different, alternative’ and also that of ‘additional’:

- (1) *’ána| yavvánna xa-dárs xíta.* ‘I shall give him another lesson.’ (A 3:87)  
 (2) *xá-məndi xína müttəla.* ‘He has placed (there) something else.’ (A 37:20)  
 (3) *’ádi xa-bába xína tíyyələ.* ‘Now another father has come.’ (A 3:93)  
 (4) *xá ’axúna xína ’ot-’ótvalə.* ‘Another brother, which he had.’ (A 3:17)

- (5) *xá-ja xítə-zə +Axíkar xazənvalə!* '(If only) I could see Axiqar one more time!' (A 3:46)
- (6) *'a-yba-xína-da fır'un bitáyələ!* 'One the other side Pharaoh comes.' (A 3:25)
- (7) *'ó-yuma xína mədrə 'ó-məndi vília!* 'The next day (literally: the other day), again the same thing happened.' (A 2:27)

A demonstrative pronoun, an indefinite particle or numeral may substitute for the nominal head, e.g.

- (8) *'o-xína +naràhat vágylə!* 'The other one becomes upset.' (A 3:17)
- (9) *+şadúrəna xa-xína* 'They send another one.' (A 37:16)
- (10) *hálli tré xínə!* 'Give me two others.'

In (11), from a text recorded in Georgia, the numeral *tre* is combined with *xa* in the head. Constructions such as this are not used in the Urmî region:

- (11) *yómmo 'iyal 'átvala tré bnátə xínə 'ayən-da!* 'Her stepmother, had two other daughters, herself and two others.' (A 51:2)

When the noun is indefinite plural, it is occasionally preceded by *xačča* 'some', but is generally left without a preceding particle, e.g.

- (12) *bəlvášələ ... xáčča júllə xínə!* 'He puts on some other clothes.' (A 3:66)
- (13) *xášlux cəs-nášə xínə!* 'You went to other people.' (A 3:5)
- (14) *nášə xínə látva?* 'Were there not other people?' (A 3:66)
- (15) *+rábə məndyánə xínə!* 'many other things' (A 3:44)

#### 9.7.11.2     *xa-xta*

The phrase *xa-xta*, which is in origin a combination of the indefinite particle *xa* with the fs. form *xita*, has a wider use than *xa-xina*. It may be used generically in the sense of 'another one', irrespective of the gender of the referent, e.g.

- (1) *'átlı 'áxči xá xabityša! hálli xá-xta!* 'I have only one apple. Give me another.'

It may also be used as an inclusive particle with the sense of 'also' or adverbially with the sense of 'again':

- (2) *+báyyən xa-ctávət Yósəp! 'u-xá-xta ctávət +xòru!* 'I want a book of Yosip's and also a book of his friend's.'
- (3) *xá-xta mxı!* 'Strike again!' (A 39:14)

### 9.7.11.3 Adverbial *xina*

The particle *xina* may be used adverbially with the sense of ‘more, again’, e.g.

- (1) *bitáyəna xína miyya*.| ‘The water comes again.’ (A 39:20)

It is most frequently used in negative expressions, e.g.

- (2) *'ána lèn +byáyo xína*.| ‘I do not want it anymore.’ (A 1:50)
- (3) *'ána xína lèn 'úrza*.| ‘I am no longer a man.’ (A 4:14)
- (4) *'ána xína-lè-pešən láxxa*.| ‘I shall not stay here any longer.’ (A 4:15)
- (5) *xína lè-'azən*.| ‘I shall not go again.’ (A 39:36)
- (6) *xína bássa*.|| ‘No more! (literally: more enough)’ (A 39:14)

The form *xina* may also function as a discourse connective (§ 13.1.6.).

### 9.7.12 *háč* ‘not any’

This is used as a negative polarity item in the sense of ‘not any’. The predicate of the clause in which it occurs is itself always negative, e.g.

- (1) *'ána háč-məndi le-+bàyyən*.| ‘I do not want anything.’ (A 3:86)
- (2) *háč-məndi lélə váda ka-bàbu*.| ‘He does not do anything to his father.’ (A 3:37)
- (3) *háč-náša le-hàmzəm*.| ‘Nobody will speak.’ (A 3:88)
- (4) *xa-mándi +báyyən tānat káti| kat-háč náša là-'ava +šámyu ju-dúnyə*.| ‘I want you to tell me something that nobody in the world has heard.’ (A 3:75)
- (5) *háč dúca lót dášta b-dá šúpра*.| ‘Nowhere is there a plain with such beauty.’ (B 2:14)
- (6) *háč məššəlmánə +šúlə-da léna viyyə*.| ‘There were no Muslims and so forth (there).’ (B 2:16)

It can take the indefinite cardinal particle *xa* as its complement, e.g.

- (7) *'ánnə háč-xa-mənne lèna +bəddáya*.| ‘None of them knows these.’ (A 3:35)
- (8) *háč-xa mənné látvalun carmànə*.| ‘None of them had vineyards.’ (B 2:6)

The predicate is not negated with a negator in (9), in which the particle *háč* is characterizing the negative property of the noun rather than the non-existence of its referent:

- (9) *bás áxnan ́ivax +šàvva! yána hàč-məndivax ka-dá!* ‘We are seven (in number), that is we are nothing (i.e. insignificant) for him.’ (A 37:9)

The particle is used independently with the adverbial sense of ‘never’ or ‘not at all’, e.g.

- (10) *háč mən-béta léva +pláṭa +al-vàddar!* ‘He never goes out of the house.’  
(A 37:1)  
(11) *háč +naráhat là-’avət!* ‘Do not be upset at all.’ (A 38:14)

Unlike the negative polarity item ‘any’ in English, *háč* cannot be used in positive questions, e.g.

- (12) A: *+bayyat məndi?* B: *là, lá +báyyən háč məndi!* ‘A: “Do you want anything?” B: “No, I do not want anything.”’

### 9.7.13 mut

This interrogative particle may be used as a modifier of a noun, e.g.

- (1) *’ána mut-xərbayúta kátux vıdənva! ̄kat-’átən ’á-+šula vódlux b-ríši?* ‘What evil had I done to you that you have done this against me?’ (A 3:27)  
(2) *’á mut-+xábrələ?* ‘What talk is this?’ (A 5:2)  
(3) *’a-mút +šùlələ?* ‘What matter is this? (i.e. What is this?)’ (A 2:21)  
(4) *’á mút +šùlux-ilə?* ‘What work of yours is this? (i.e. What are you up to?)’  
(A 37:18)  
(5) *mút +pásla +kátlàxlə?* ‘In what way shall we kill him?’ (A 37:19)  
(6) *’ína léx +rába +suxsìyyə +állu! mut-+manày ̄tłə!* ‘But we have not done much research on it, (as to) what meaning it has.’ (B 12:7)  
(7) *là + bukórrí ̄kat-’á báxta! b-mút móta móttəla, dàxi móttəla!* ‘I did not ask with what (type of) death she died, how she died.’ (A 1:29)

It may also be used as a clausal interrogative with the meaning of ‘why?’:

- (8) *mút kétət bìyyu?* ‘Why are you bugging him?’

The particle may be used exclamatorily, e.g.

- (9) *’a-mút +káłma dárýəl b-ríšu!* ‘What ash has he put on his head! (i.e. What a shameful thing he has done!)’ (A 2:23)  
(10) *mút bušlùnyələ!* ‘How hot it is! (What a hot day it is!)’

The particle is used also before adjectives with such an exclamatory function:

- (11) +čáydan mút xàmtəla! 'How hot the kettle has become!'
- (12) mút +sìyyəva, bən̥káya bən̥káya štíla. 'He was so thirsty that he drank in gulps.'

#### 9.7.14 mujjur

The adverbial interrogative particle *mujjur* 'how' is occasionally used as a modifier of a noun, e.g.

- (1) xázzax müjjuryáləla. 'Let us see what kind of boy he is.' (A 34:4)

#### 14.9.15 la

The negative particle *la* can be used as a modifier of an adjective, e.g. *carpíčə lə bšílə* 'unbaked bricks' (B 14:5), +àmra lá məsya! 'unwashed wool' (B 15:5), tína lá +rába miyyàna! 'mud that is not very watery' (B 2:21), *la* x̊ixa 'unworthy', *la* +masyattana 'inattentive', *la* +parmíyyana 'not understanding', *miyya la* +rdixə 'unboiled water', *xabuysə la bšilə* 'unripe apples', *marət la fnaha* 'innocent' (literally: 'owner of non-guilt').

### 9.8 Comparison of Adjectives and Adverbs (The Particles *buš* and *zoda*)

Comparative constructions are generally formed by placing the particle *buš* before an adjective or adverb. The item with which it is compared, if this is mentioned, is introduced by the preposition *mən*, e.g.

#### Predicative adjectives

- (1) 'áha xabuýsa buš-+júrələ mən-+dàvva xabuýsa. 'This apple is bigger than that apple.'
- (2) 'ína 'á +júrət cačálə! ... 'íva! bùš! +'ullul' mòn! dan-xìna. 'Now, the elder of the bald men ... was higher (in rank) than the others.' (A 1:2)
- (3) nòkva mən-'úrza buš-xelántəla. 'A female is stronger than a male.' (A 2:36)
- (4) nákva buš-xelántəla m-cùl-məndi. 'A female is stronger than anything.' (A 5:1)
- (5) mən-díyyi-da buš-šapírəna. 'They are more beautiful even than me.' (A 39:14)

In (6) the particle *buš* is placed before the noun rather than the adjective:

- (6) *búš batvaté šapírəva.* ‘Their houses were more beautiful.’ (B 1:41)

### Attributive adjectives

- (7) *+jámmila e-kóšun buš-xelànta kat-xazónna kam-für'un.* ‘Muster a stronger army so that I can see it (stand) before Pharaoh.’ (A 3:24)  
 (8) *xa-+kusárta buš-+fùrta +byáyəvən.* ‘I want a bigger pot.’ (A 8:3)

### Adverbs

- (9) *'ína xáčča bùš šapírta márola.* ‘But he tells it a little more beautifully.’ (A 3:77)  
 (10) *har-ò-+šula c-odívalə, 'ína búš hasanày, búš tamməz.* ‘They used to perform the same task, but more easily and cleanly.’ (B 12:4)

In (11) the compared item is expressed by a phrase introduced by the correlative quantifier *cma* ‘as much as’:

- (11) *jánu cmá šapírəva búš +ràba šapíra víla.* ‘As handsome as he was, he became more handsome (= He became more handsome than he was).’ (A 42:10)

The particle *buš* may be omitted before the adjective if the item with which the comparison is made is mentioned, e.g.

- (12) *'áha mən-dan xínə +rába šapàrtəla.* ‘She is more beautiful than the others.’ (A 39:16)  
 (13) *'ón mən-mèskal! ýya +ràba! mən-ðštux parmónna.* ‘If it is more than a gram, I shall cut it from your bottom.’ (A 7:11)  
 (14) *mánnan yálə súrə +rába +ràmtəva.* ‘It was much higher than us children.’ (B 10:8)

In (15) the attributive adjective and compared item are placed before the noun:

- (15) *'ána mán dá-da yácca béta +bàyyan.* ‘I want a house bigger than that one.’ (A 54:6)

The superlative may be expressed by a definite noun phrase, introduced by a demonstrative pronoun, containing an adjective accompanied by the particle *buš*, e.g.

- (16) *múdilə* 'o-mándi *búš* *xelàna ju-dínyə?* 'What is the strongest thing in the word?' (A 38:7)
- (17) *'é buš-šapárta lváštak hàlla.* 'Give me your most beautiful dress.' (A 1:13)
- (18) *yávolə* 'e-+kusárta *buš-šapárta* +fùrta| *ká* +málla +Nasràdən. 'He gives the biggest and most beautiful pot to mullah Nasradin.' (A 8:4)

The particle *buš* is sometimes omitted from such superlative expressions, especially when there is specification of the group in which the item is superlative, e.g.

- (19) *'ýy* é +fùrtəva *ju-bnátə.* 'She was the eldest among the girls.' (A 39:14)
- (20) *'ila* *xá mən-dan-*+umránə *'atíkət mšixayùta.* 'It is one of the oldest churches of Christianity.' (B 1:4)

In (21) and (22) the particle *buš* is combined with *+raba* 'much, many' to express the superlative degree of this quantifier:

- (21) *məndíyyu* *buš-+rába* *yuvvállə* *ka-brúna* +fùra. 'He gave most of his property to the eldest son.' (A 38:1)
- (22) *buš* *+rabəl̥* *'átvälun carmànə.* 'Most of them had orchards.' (B 1:23)

In (23) the quantifier *+raba* is placed after the noun:

- (23) *mən-kám* *+dána* *víyyan-ilə* *bùš matvátə* *+rába.* 'Before we had more villages.' (B 1:22)

In (24) the superlative of the non-attributive modifier *+roba* is expressed by making the compared item the universal quantifier:

- (24) *mən-dá* *bəškálona* *mən-cúllə* *+róba* *dítysə.* 'They take most of the honey from this.' (B 17:43)

The particle *buš* may be used independently with an adverbial functions, e.g.

- (25) *+úrra!* *cmá-t* *'óya macàxta* *buš-mìyya c-ázifávo.* 'The more soft the ground is, the more water sinks into it.' (A 3:11)

In such contexts, however, it is usually combined with *zoda*, e.g.

- (26) *b-+núyṭa buš-zóda +’ojaxyátə zùrzəva.* | ‘They had mostly made oil hearths.’  
(B 12:4)
- (27) *’ána xáčča bùš-zoda mónnux| xìyyən.* | ‘I have lived a little more than you.’  
(A 3:16)

The word *zoda* can be used without the *buš* particle to express a comparative adverbial, e.g.

- (28) *cut-bèta ’ótvala xá tanùyra,| tanùyra| kát ... zòda jávu| làxma ci-páyyi,| yán +’kusàrta ci-bášlijávo.* | ‘Every house had an oven, an oven, in which, mostly, they would bake bread, or they would cook in a cooking-pot.’ (B 14:1)
- (29) *+’rába zóda mən-+lázəm| mán +crəsyánə xóšu le-’atyáva.* | ‘He disliked Christians much more than was necessary.’ (A 3:16)

The particle *zoda* is used to express a comparative degree of quantity, e.g.

- (30) *búš xá móndi zòda b-yávvi káti.* | ‘They will give me something more (for them).’ (A 34:2)
- (31) *mən-mátra zòda c-áviva| +ràma.* | ‘It (the snow) was more than a metre high.’ (B 17:50)
- (32) *’əmmà-janə zódəla.* | ‘It (the queue) is more than one hundred people.’  
(A 19:2)
- (33) *’áxči ’à p̄t-+axlátla,| là zóda.* | ‘You may eat only this, no more.’ (A 35:7)
- (34) *zóda háč-naša lélə +bəddáyo ’àyya.* | ‘Nobody else knows it.’ (B 17:20)

It is combined with the word *sama* ‘portion’ to expresses the superlative degree of quantities, e.g.

- (35) *sáma zóda məndi| +’àvva vélə škílu.* | ‘He has taken most of the property.’  
(A 38:5)

## 9.9 Annexation

An annexation relationship between two nouns or nominal phrases is expressed by attaching the annexation element *-ət* to the end of the head noun or to the right periphery of the head nominal phrase. The basic features of the morphosyntactic behaviour of the annexation element have been described in

§ 5.14. This particle is used also to connect a head noun to an embedded relative clause (§ 14.1.1.). Here some additional features of the syntax and semantics of annexation constructions will be described.

In principle the dependent nominal phrase that follows the annexation element has the function of a restrictive modifier of the head nominal phrase. Broadly speaking the annexation expresses a relationship of some kind between the referents of the two phrases. The dependent phrase in an annexation construction has a different status from an adjective. In constructions consisting of a noun and an adjective the adjective in principle expresses a property inherent in the referent of the head noun, either permanently or contingently. In an annexation construction, the head is presented as related to or associated with the dependent phrase such that the dependent phrase specifies in some way the head.

Examples from the text corpus: *bétat málca* 'the house of kings' (A 3:18), *brúnat xàtux* 'the son of your sister' (A 3:6), *málcat Màssar* 'the king of Egypt' (A 3:19), *dáštət 'Ùrmi* 'the plain of Urmî' (B 2:1), *púmmət +Axìkar* 'the mouth of Axìqar' (A 3:19), *+págṛat bábxus* 'the body of your father' (A 3:37), *šámmət báxtu* 'the name of his wife' (A 3:31), *+maxdarránat +'àtri* 'the administrator of my land' (A 3:45) *'ídət xa-náša* 'the hand of a man' (A 3:31), *xárjət tláy šánnə* 'the expenses of thirty years' (A 3:44), *+ámvət +xála* 'grapes for eating' (B 2:3), *baxčánat yéməš* 'orchards of fruit' (B 2:6), *yámtat 'Ùrmi* 'lake of Urmî' (B 2:13), *+xvártat bíta* 'the white of an egg' (B 12:4), *kálat báxya* 'the sound of weeping' (A 2:31), *p-ùrxət šákítə* 'on the way to the stream' (A 6:2).

The annexation may be recursive, e.g. *vazzírət bábət málca* 'the vizier of the father of the king' (A 2:14), *ju-cúllə matvátət dáshtat 'Ùrmi* 'in all the villages of the plain of Urmî' (B 2:5), *én bíyyət dén +záyət dé səppárta* 'the eggs of the young of the bird' (A 53:2).

If the dependent noun is definite, the head phrase is definite, even when it has no anaphoric link with what precedes, if it is unique within the set of referents designated by the noun in its association with the dependent noun, e.g. *+págṛat bábxus* 'the body of your father' (A 3:37), i.e. he has only one body. In such cases the head noun is occasionally accompanied by a default demonstrative element signalling that its referent is identifiable in what follows, e.g.

- (1) *'o-rišət do-náša labúlulə ká +Nuxadnásar* 'He takes the head of the man to Nebuchadezzar' (A 3:37)

If the relationship is not unique and more than one possible item in the set could be intended, then the head noun is not definite, unless it has an

anaphoric relationship with the preceding context. This is typically the case, for example, when the head denotes a fraction, since fractions by definition are not unique members of a set, e.g. *pályət malcúyti* 'a half of my kingdom' (A 3:50). When the indefinite noun is not a fraction and it does not imply by virtue of its meaning other members of a set, the indefinite marker *xa* is in principle used, e.g. *xa 'axunət babi* 'a brother of my father's'. An alternative way to express this is by a partitive construction with the preposition *mən*, e.g. *xa mən 'axunvatət babi* 'one of the brothers of my father'. Other variations include an indefinite head and dependent noun (2) and an anaphorically definite noun with an indefinite dependent noun (3)

- (2) *'žtvalə xa-'ilánət xabùšə!* 'He had a tree of apples (= an apple tree).' (A 39:1)
- (3) *'áha brátət xá +sultānilə!* 'She is the daughter of a ruler.' (A 34:7)

A verbal noun is connected to one of the arguments of the event expressed by the verb. If the event involves an agent and an affectee, the dependent nominal may be either of these arguments, e.g. *bašáltət nipùxta* 'the cooking of molasses' (B 12:8), *b-xá mxéttət dá +čap̪pálta!* 'with one blow of this club' (A 37:8).

The annexation is used to introduce citations in expressions such as *+xábrət p-na-poxtə* 'the word *na-poxte*' (B 12:7), *šámmət nipùxta* 'the name *nipuxta*' (B 12:7).

It is used before the names of languages, e.g. *b-líšanət +fársət* 'in the Persian language' (B 12:8).

The annexation element *-at* in the head is sometimes contracted. The long vowel in a preceding open syllable remains long when it is closed by such an elision, e.g. *brunət* > *brún*. If the resulting form ends in a consonantal cluster, the final consonant is elided, e.g. *baxtət* > *baxt* > *bax* (§ 5.14.). Attested examples in the speech of informants from the Urmī region include:

- (i) kinship relationships, e.g.

<i>brún-xàtu</i>	'the son of his sister' (A 3:7) < <i>brunət</i>
<i>brát-málca</i>	'the daughter of the king' (A 34:3) < <i>bratət</i>
<i>+jór dá-baxta</i>	'the husband of this woman' (A 2:7) < <i>+jorət</i>
<i>bax-+tákər</i>	'the wife of the merchant' (A 1:12) < <i>baxtət</i>
<i>bax-+mamuna</i>	'wife of paternal uncle'
<i>bax-+xaluvva</i>	'wife of maternal uncle'

(ii) expressions with the head noun *marət*, e.g.

- |                     |                                  |
|---------------------|----------------------------------|
| <i>már duccàna</i>  | 'the owner of the shop' (A 10:4) |
| <i>már-xa 'akla</i> | 'one-legged man'                 |
| <i>már-xa luyla</i> | 'single-barrelled gun'           |
| <i>már-davolta</i>  | 'rich man'                       |

(iii) expressions with the head noun *betət* 'house of', e.g.

- |                     |                                  |
|---------------------|----------------------------------|
| <i>bēt-málca</i>    | 'the house of the king' (A 34:2) |
| <i>bēt-malcìyta</i> | 'house of the kingdom' (A 3:90)  |

(iv) illnesses with the head noun <sup>+</sup>*marrət* 'illness'

- |                               |                         |
|-------------------------------|-------------------------|
| <sup>+</sup> <i>mar-riša</i>  | 'head-ache'             |
| <sup>+</sup> <i>mar-kdala</i> | 'disease of the throat' |
| <sup>+</sup> <i>mar-cisa</i>  | 'stomach ache'          |

(v) fixed idiomatic phrases

- |                                |  |
|--------------------------------|--|
| <i>šəmšə-<sup>+</sup>sara</i>  | 'moonlight' (literally: 'the sun of the moon') |
| <i>kəštə-<sup>+</sup>maran</i> | 'rainbow' (literally: 'the bow of our Lord')   |

(vi) Other cases

- |                                     |                                  |
|-------------------------------------|----------------------------------|
| <sup>+</sup> <i>makrəttān-còsa</i>  | 'cutter of hair' (A 17:1)        |
| <i>pát</i> <sup>+</sup> <i>ärra</i> | 'the face of the earth' (A 2:11) |
| <i>kāl-jáxca</i>                    | 'the sound of laughter' (A 2:30) |
| <i>cóć nòkva</i>                    | 'female kind' (A 2:11)           |

The heavier variant with the uncontracted *-ət* element may be conditioned by prosodic end-weighting. In (4), for example, the annexation form *cōc* is repeated in the second of a pair of clauses in the fuller form *cocət*:

- (4) *cóć nòkva la-śòkət. | cōcət nòkva | cíllə dòkət. |* 'Do not leave female kind alive.  
Seize all female kind.' (A 2:11)

The contraction is also commonly found with the noun <sup>+</sup>*dánət* 'time of', e.g.

- (5) *údi <sup>+</sup>dán tètula. |* 'Now is the time of his returning.' (A 2:19)  
 (6) *<sup>+</sup>dán mótila. |* 'It is the time of my death.' (A 32:4)

In the Caucasus this contraction of the annexation element is more frequent. Some selected examples include:

- (7) *kámta mān-sótə mlíla.* ‘Fill the old lady’s plate first.’ (A 42:29) < *manət*
- (8) *mádrə lišán +hošárəla.* ‘Again it is in the language of the Muslims.’ (A 44:8) < *lišánət*
- (9) *þ-íd +bar-náša.* ‘in the hand of the man’ (A 47:2) < *þ-ídət*
- (10) *xút dōl xabúš pərdəsa.* ‘under that tree of paradise’ (A 49:7) < *xabúšət*
- (11) *míyyolə cal-náš.* ‘He has brought the bride of the people.’ (A 50:4) < *cáltət nášə*

Sporadically the loss of the *-ət* ending results in the shift of the stress in the head noun, e.g.

- (12) *bèta bitáyələl xína kóšun málca.* ‘The army of the king comes to the house.’ (A 48:14) < *košúnət*

When the head noun has a pronominal suffix, the annexation element has the status of an enclitic (§ 5.14.), e.g. *'isaktu-t dava* ‘his ring of gold’. In such contexts the annexation element is sometimes elided, e.g.

- (13) *bətyávələ +al-súysu kèsə.* ‘He sits on his horse of wood.’ (A 1:12)

In (14)–(17) the head is a phrase consisting two coordinated nouns. In (17) the first noun is shortened:

- (14) *yámma bábət bráta bitáyəna.* ‘The mother and father of the girl come.’ (A 35:8)
- (15) *'e-dúcta kat-šáxtə móxtət kənyàna ci-xamilun.* ‘the place where they keep the filth and the like of cattle’ (B 6:6)
- (16) *bába sávət díyyan katé jùškəna.* ‘Our father and grandfather looked after them.’ (B 16:3)
- (17) *'áy-da áklo mattúyola l-á-pāt l-é-patət kèsə.* ‘She puts her leg on this side and on that side of the wood.’ (A 1:14)

An active participle can be linked to an object argument by annexation, e.g.

- (18) *madmùyuxvən +al-xa-šəmšəl yavvántət +bàra.* ‘I compare you to a sun giving light.’ (A 3:62)

The noun *+bara* in (18) specifies the adjectival active participle *yavvantət*.

An annexation element that is attached to other types of adjective or non-attributive modifier may also relate to a complex nominal phrase consisting of noun and adjective, and so the dependent nominal phrase specifies the whole head nominal phrase and not the adjective alone, e.g.

- (19) *beta támməz-ət xati* 'The clean house of my sister'
- (20) *'an-júlla júrət dmàxa* 'the big clothing of bedding' (B 17:27)
- (21) *'ila xá mən-dan-+umránə 'atíkət mšixayùta*.| 'It is one of the oldest churches of Christianity.' (B 1:4)
- (22) *'áxnan fú ... béta malcáyət +Harúnə,| 'ánnə +xulafáyə,| haccimə výyan-ilə*.| 'In the royal household of Harunids, the caliphs, we had doctors.' (B 1:9)
- (23) *ju-dá 'urxa* *xá mənyána +júrət +aturáyə póšlə xiša mən-+ára*.| 'On this journey a large number of the Assyrians vanished in the middle (before reaching their destination).' (B 1:15)
- (24) *bétət kənyána +al-dójiba xinət bétəva*.| 'The cattle shed was on the other side of the house.' (B 14:13)

In nominal phrases in (25) the annexation element stands independently of the preceding adjective:

- (25) *'áha! cáslu výyulə xá ... xá +jánta +júrtal 'ót +mafrayátə| xá +jánta +júrtə 'ót mòlxə,| xá +jánta +júrtə-da 'ót mìxa*.| 'He has with him a big bag of razors, a big bag of salt and a big bag of nails.' (A 39:28)

If, however, an adjective modifies the entire annexation phrase rather than only the head noun, it is placed after the dependent nominal of the annexation phrase, as in (26):

- (26) *'ítə mən-dánnə míyyət +'ánvə +sàpyə| ci-šaklívə xàččələ ci-darívalun ju-+týan*.| 'So from this pure grape juice they used to take a little and pour it into a cauldron.' (B 12:4)

A noun is annexed to a numeral to express an ordinal (§ 7.2.), e.g. *'axiúnət tmànya* 'an eighth brother' (A 37:10).

The annexation element is used also to join prepositions and adverbial expressions to a following dependent phrase (see § 8.4. for details), e.g. *marzá-nət taniýra* 'around the stove' (B 2:4).

If the dependent nominal phrase begins with demonstrative pronoun, the demonstrative is in its oblique form with initial *d*, e.g. *b-ríšət dó mārux* 'by the

head of that master of yours.' (A 3:65), *márzət da-+’ayna* 'on the bank of this spring' (A 37:8), *dápnət dé dàšta* 'on the edge of that plain' (B 2:13), *b-xá mxéétat dá +čap̪pálta* 'with one blow of this club' (A 37:8), *bábət dáha* 'the father of this man' (A 2:14). In such cases the annexation particle on the head noun is sometimes dispensed with, e.g. *kóssat da-+hájí* 'the story of this pilgrim' (A 1:23). Fossilized demonstratives in the adverbials '*udyu* 'today' and '*ad-lelə* 'tonight' do not have oblique forms, e.g. '*Urmit udyu* 'Urmi of today'.

The head phrase may be separated from the dependent phrase in a number of circumstances. This reflects the clitic status of the annexation particle (§ 5.14.).

The head and the dependent phrase may be divided by a hesitation resulting in an intonation group boundary. In such cases the annexation element may occur in its normal position attached to the head, e.g.

- (27) *u-+Axíkar| cás bábət| málca=zə plíxəva.* 'and Axiqar had worked for the father of the king.' (A 3:1)
- (28) *b-+tráptət| nipùxtal ránjo mən-ránjət cùma| ci-+xavərvə.* 'By beating the molasses its colour from the colour of black would become white.' (B 12:5)

In some cases, however, the annexation element is separated from the head and occurs in the form '*ət*' after the hesitation, e.g.

- (29) *+xárta +várrə +sàbun| ... +fúra +sàbun| ’ət-+urusnàya.* 'Later soap came ... big soap, of the Russians.' (B 17:27)
- (30) *ju-matváta ’ətvalan| cùl bëta| ’ət-cùl mátal ’ətvalə xa-+káttət càrma.* 'In the villages we had ..., every house, of every village, had a plot of a vineyard.' (B 2:3)

In (31) and (32) the head noun has an annexation element and this is repeated after the hesitation:

- (31) *jaššúkəla ’ina| märət| ’ət-dá duccàna| xá laxíyma jvánka šap̪ira.* 'He looks (and sees) that the owner of the shop is a comely handsome youth.' (A 4:3)
- (32) *láxxa ’á ... dùcta ’əttən| ka-zgàttət| ’ət-zarduštàya.* 'There is a place here for the worship of the Zoroastrians.' (B 1:5)

When the annexation element is separated from the head, the position of the dependent phrase is flexible and can be separated from the head by intervening material, e.g.

- (33) *'ána cíllə xàrjət tláy šənnəl b-yavánna kàtuxl 'at-+'atri.* ‘I shall give you all the expenses of thirty years, of my land.’ (A 3:44)
- (34) *'é-+dana hamzúmələ bázət márət jànu=zəl 'at ... Nànvə.* ‘Then he speaks about his master, of Nineveh.’ (A 3:64)
- (35) *+táma xà ... jvùja víləl tánax 'ót smùkə, 'at +'urusnàya.* ‘There was a movement there, let’s say of the Reds, of the Russians.’ (B 1:14)

In some cases where there is no intervening hesitation in the form of an intonation group boundary, the annexation clitic occurs only on the dependent noun. This is attested with indefinite head nouns, e.g.

- (36) *xá dárs vádax 'at-'arəmnàya.* ‘We do a lesson of Armenian.’ (B 16:14)
- (37) *čiriyaváy +šulánə +ràbəva 'at-máta.* ‘In autumn jobs in the village were numerous.’ (B 10:7)
- (38) *+kazànča 'átlan 'at-'arak.* ‘We have an arak pan.’ (Canda)

If intervening material occurs after a head with the annexation element, the annexation element is generally repeated, e.g.

- (39) *'áxnan jú ... dáštət 'Úrmi Salámas +al-+uydálə 'átvalan 'ómmo tláy +tlà matvátə, matvátət 'áxči 'at-+aturàyava.* ‘We in the plain of Urmi and Salamas altogether had one hundred and thirty-three villages, villages of, only of the Assyrians.’ (B 2:2)

The annexation element is not repeated if the intervening material is an inclusive enclitic as in (40):

- (40) *xá jápnət=da lásxma!* ‘also a tray of bread’ (A 39:34)

The dependent phrase introduced by *'at* may be fronted. In such cases a pro-nominal copy of the dependent phrase is attached to the head in the form of a genitive suffix, e.g.

- (41) *'at-dó brúnū súra mattáttun jüllu.* ‘Lay out the clothes of the youngest son.’ (A 50:9)

The motivation for the fronting here is to set up the referent of the dependent phrase in a contrastive opposition to other salient referents in the context.

The fronted dependent phrase may be an interrogative, e.g.

- (42) *'at-dəm-nášələ nòbu?* ‘Which person’s turn is it?’

In (43) the *'at* particle is omitted before the oblique interrogative (the *d-* before the verb *dvàklun* is inserted for euphonic purposes § 5.14.):

- (43) *dám +xórət d-dvàklun| ci-maxíva ju-+xàsu.* ‘They would beat the back of any friend that they caught.’ (B 9:4)

Predications expressing blessings and curses may be fronted before the noun and connected to it by annexation. They have the function of non-restrictive relative clauses, which is expressed in the translations below. Their semantic function can be compared to evaluative adjectives, which are also typically fronted before the noun they qualify (§ 9.6.1.):

- (44) *+kátm̥a b-rišət +akúbra tilə| pásłə dmáxlə +tāma.* ‘The mouse, who should be cursed, came, stayed and went to sleep there.’ (A 52:5, cf. *+kátm̥a b-rišux* Dust be on your head [= curses on you])

In (45) the head of the annexation phrase is a nominalized form of the deontic phrase *'alaha manyəxlə* ‘May God grant him peace’:

- (45) *'aláha munyóxxət bəbi* ‘my father, to whom may God grant peace’ (A 36:13)

The head noun of an annexation construction may be replaced by a pronoun, e.g.

- (46) A: *xabuyšət bábux +spày-ilə?* B: *'ó=t Yósəp buš-spày-ilə.* ‘A: Is the apple of your father good? B: The one of Yosəp is better.’
- (47) *'ína 'ó=t tanúyra xá-məndi xína,| +rába +t̥amàna,| +rába basima.* ‘But the one (i.e. the bread) of the oven is something different, very tasty, very delicious.’ (B 14:4)
- (48) *fjordéta 'ó'tla mazrákət jàno| 'é=t fjordéta flültəla.* ‘A loaf has its own baking cushion. The one of a loaf is round.’ (B 17:24)
- (49) *'óttən naravátət kát mən-+turànət| xáčča péša +'Uràl,| 'án=ət Jílu,| +bəs-láyəva ju-yàmta.* ‘There are rivers from the mountains almost of the Ural range, those of Jílu, which descended into the lake.’ (B 1:21)
- (50) *e-+kazàncál 'án=t +mèta sapkáxva ju-dáyən.* ‘The saucepan—we emptied the contents of (literally: those of) the churn into it.’ (B 7:2)

The indefinite head noun of an annexation phrase that is marked by the indefinite particle *xa* (51) can be omitted (52);

- (51) *xa xabuyšət Yosəp* ‘an apple of Yosəp’s’  
 (52) *xa ’ət-Yosəp* ‘one of Yosəp’s’

It should be noted that in such cases the annexation particle is normally separated from the *xa* particle and not cliticized to it.

Alternatively the head noun may be gapped resulting in a nominal phrase consisting of the annexation element and the dependent noun. This is found mainly where the gapped head is indefinite without a specific referent, e.g.

- (53) *+xárta plátle ’ət-prəzla* ‘Then iron ones came out (i.e. tubs of iron).’  
 (B 17:28)  
 (54) *’ət-léša jàpna ci-+karívala.* ‘(One) of dough (i.e. a basin for dough) was called a kneading trough.’ (B 17:28)  
 (55) *’ətlan ’ət-taníyra.* ‘We have (those, i.e. flatbreads) of the oven.’ (B 14:4)  
 (56) *turšíyyat +bùybar, ’ət-calàmə, ’ət +badəmjàn* ‘pickles of chilli, of cabbage, of tomatoes’ (B 17:48)

The annexation dependent phrase may be given contrastive focus and occur without the head in constructions such as (57) and (58):

- (57) *zúyzət-+màmi +bayyánlun, lá ’ət-yàmmi.* ‘I want the money of my uncle not of my mother.’  
 (58) *zúyzət +dàvun +bayyánlun, lá ’ət-dàyən.* ‘I want his money, not hers.’

One dependent phrase may be coordinated with another one, as in (59):

- (59) *+bayyánlun zúyzət +mámi ’úp ’ət-sàvi.* ‘I want the money of my uncle and of my grandfather.’

When such a dependent phrase without a head noun is itself dependent on a preposition, the annexation particle is put in its oblique form *dət* (§ 5.14.):

- (60) *’úp ’ón ’íva máx dát xinə, məššəlmànə, ’ína ’íva +rába búš šapərta.* ‘Although it was like that of the others, the Muslims, it was much more beautiful.’ (B 1:40)

A phrase introduced by the annexation particle *’ət* can occur in predicative position, e.g.

- (61) *ju-màta| buxaríyyə ’at-kësa c-ávi.* ‘In the village the stoves are of wood.’  
 (B 14:3)
- (62) *cút mučxèlə| +záya ’at-+dàvun-ilə.* ‘Whoever finds them, the foal is his.’  
 (A 38:7)
- (63) *dáštət ’Úrmi xá +dána vítəla| cullana’it vítəla ’at-+’aturày.* ‘The plain of Urmi was once, was once entirely of (i.e. inhabited by) the Assyrians.’  
 (B 2:16)
- (64) *širánnax ’at-bràtəla.* ... *+xlúyla vágəla ’at-yála.* ‘The betrothal party is (the responsibility) of the girl. ... The wedding is (the responsibility) of the boy.’  
 (B 8:6–7)

In such cases the particle is occasionally reduced to *t-* if it can be easily syllabified with the next consonant, i.e. if the next consonant is a fricative or sonorant, e.g.

- (65) *+ávva kàlyā| ... t-suràyələ.* ‘This fried meat belongs to the Assyrians.’  
 (B 17:16)

A head nominal phrase with the annexation element can be followed by a prepositional phrase. In the attested examples they are restrictive modifiers, e.g.

- (66) *+Axíkar +pláṭa bərràxšələ| ká-dan-nášət mənnu| mára ...* ‘Axíkar goes out. He says to the people with him.’ (A 3:78)
- (67) *nášət xut-’ídət díyi müdi vágəna?* ‘What are the people under my hand?’  
 (A 3:61)
- (68) *málcət +’ùllul| ká-vazzìru márəl* ‘The king above (as opposed to the king below) says to his vizier ...’ (A 1:39)
- (69) *món dúnýət +’ùllul týyən.* ‘I have come from the world above.’ (A 39:21)

In (70) the head noun has a demonstrative pronoun:

- (70) *’é +mástət +’arállagjrišàla.* ‘He pulled the middle hair.’ (A 45:5)

In (71) the annexation element has the status of an enclitic rather than an affix on the head noun, as is reflected by the stress position:

- (71) *’ó vágər-ət +’ùllul +byayəva tanìva.* ‘The vizier above (as opposed to the vizier below) wanted to speak.’ (A 1:28)

The head noun may be pronominalized in such constructions, e.g.

- (72) *‘ē=t-+’aràlləj máyyax.* | ‘Let us bring back the middle one (fs.)’ (A 45:11)

In (73) a phrase with a pronominal head is placed before the noun it qualifies:

- (73) *’ō=t +’aràlləj| ’axùna| báššələ +karàvul bœcláyəl.* | ‘The middle brother goes and stands guard.’ (A 45:5)

Such prepositional phrases are best regarded as reduced relative clauses without a copula component, i.e. ‘the people who (are) with him’, ‘the people who (are) under my hand’.

## 9.10 Genitive Suffix and the Independent Genitive Particle

### 9.10.1 *Suffix and Independent Particle as Genitive Attribute*

When a noun is combined with a pronominal genitive suffix, it may take the suffix directly as an inflectional ending, e.g. *betux* ‘your house’, or it may be annexed to the genitive particle *diyy-* with the suffix attached to this particle, e.g. *betət diyyux* ‘your house’. In the latter type of construction the head noun has the annexation element, just as it does before a dependent noun, e.g. *betət babi* ‘the house of my father’, *betət do naša* ‘the house of that man’. The dependent component, whether it be a suffix or a genitive particle nominal phrase, expresses a genitive attribute of the head noun.

On some occasions the annexation element is contracted resulting in forms such as *rīš-diyyi* (< *rišət diyyi*) ‘my head’ (A 2:21), *bāb-diyyux* ‘your father’ (A 2:24).

The head noun in both constructions can be further determined by a demonstrative pronoun, e.g. *’aha baxtux* ‘this wife of yours’, *’ā +kaťúntət diyyux* ‘this cat of yours’ (A 3:8), *’ā-sepət díyyi* ‘this sword of mine’ (A 2:28).

The noun may also be preceded by the indefinite particle in constructions such as *xa ’axuni* ‘a brother of mine’. This is equivalent to partitive constructions such as *xa mən-’axunvati* ‘one of my brothers’.

The two constructions *babux* and *babət diyyux* have the same semantic content, but the latter is a heavier morphological coding of this than the former. Speakers exploit the morphological distinction to express pragmatic distinctions, which are often subjective and emotionally driven. It is relevant to note that within narratives the majority of cases of independent genitive particles

occur within direct speech and have first or second person suffixes, reflecting close emotional engagement. In general the construction with heavier coding is used when the speaker wishes to give the referent of the nominal phrase in question some kind of prominence in the discourse. In some cases items in contrastive opposition or items presented in a parallel relationship such as items belonging to the same set are given prominence by the heavy *babət diyyux* type of construction, e.g.

- (1) *ka-mùdil suysavátət diyyòxun* | *jávət Nònvəl hurhàmlun?* | *susyátət díyyan làxxa* | *murxàšlun.* | 'Why did your mares in Nineveh neigh? Our mares here aborted.' (A 3:78, contrastive)
- (2) *cócət nàkva* | *cúllə dòkət*, *kámta báxtət díyyi*, | +*xárta báxtət diyyux.* | 'Seize all female kind, first my wife, then your wife.' (A 2:11, presented as parallel members of the same set)
- (3) *ána 'ztli xa-bàba*. | +*rábə b-sànnalə*. | *vìyyava* | *vázzər ka-bāb-díyyux.* | 'I have a father. He is very elderly. He was vizier to your father.' (A 2:24, set relationship)
- (4) *'zn +msilur* | *'odílə nášət diyyux*, | *ána cúllə xàrjət* | *tláy šànnəl b-yavvánna kàtux* | *'ət-* +*'átri.* | 'If your people can do it, I shall give to you all the expenditure of my land for thirty years.' (A 3:44, i.e. two opposing sides of a bargain)

In some cases the heavy construction is used to express an opposition between first and second person referents in which one side of the opposition is implied rather than explicitly mentioned. This is often the case with nouns referring to a land or community, e.g.

- (5) *'àxči* | *ju-* +*'átrət díyyi* | *'áha mändi* | *'ávə* | *ána lè kablánnə.* | 'But I do not accept that this will exist in my land.' (A 2:12)
- (6) *ána +byáyən mən-nášux lípəl* | *mən-jú +'átrət diyyux* | +*árpa xamšá mən-dýána káti* | +*jùvvab* | *'ódi* | +*jùvvab yavríli.* | 'I want your learned men from your land to give me a response to four or five things.' (A 3:39)
- (7) *'inəl* | *'áha mändit* | *ána +báyən tanənnəl* | *bədvákələ mən-cúllə matvátət díyyan.* | 'But what I want to tell you holds for all of our villages.' (B 2:1)
- (8) +*aturáyət díyyan bəškaléva* | *mən-dáštat* | *'Úrmi labuléva la-dó-rišət +'átra.* | 'He takes our Assyrians, he takes them away from the plain of Urmi to the other end of the land.' (B 2:6)

The construction in (9) has a similar function:

- (9) *'a-mzída ci-màlyax<sup>1</sup> ka-xá šábtət dìyyan.*<sup>1</sup> 'We fill this waterskin for one week of ours.' (i.e. this is our particular custom) (A 37:11)

The construction with the genitive particle is often used with a noun whose referent is a particular centre of concern in the section of discourse in question, e.g.

- (10) *sábab brúni +Nátan +xáyən +plátlə +'älli ka-díyyi +bílun +kàtli, i'na 'aláha la-švàkla, kàt-'atónva láxxa<sup>1</sup> +júvvab dìyyux yavvònvala.*<sup>1</sup> 'Since Natan my son turned out to be treacherous to me and they wanted to kill me, but God did not permit this, so that I could come here and give you your answer.' (A 3:69, the answer to the riddles of Pharaoh was crucial)
- (11) *i'na 'á +kàtúntət dìyyux<sup>1</sup> m-áxxa kòmla, xásla 'ád-lelə kdálu +kçítula, titəla.*<sup>1</sup> 'But this cat of yours, he got up from here and went this night and has snapped his neck, then has come back.' (A 3:81, the cat is a prominent referent in this section of discourse)
- (12) *i'na màjbur-ín tanónnux<sup>1</sup> kát hemántət dìyyux màtla.*<sup>1</sup> 'I am obliged to tell you that your trust (= the woman you left in trust with me) died.' (A 1:17)

In many cases, there is a more subjective motivation and the speaker uses the heavier morphological form with referents with which he/she is personally emotionally engaged.

- (13) *málca ju-+mtétu ríš-díyyi maxíla.*<sup>1</sup> 'When the king arrives he will cut off my head.' (A 2:21)
- (14) *'én 'á là humzámłə<sup>1</sup> ríšət-díyyi prùmulə.*<sup>1</sup> 'If he does not talk, cut off my head.' (A 34:11)
- (15) *'á-sepət díyyi<sup>1</sup> 'ícat maxònval c-odánvala trè.*<sup>1</sup> 'Wherever I struck my sword I cut (the victim) in two.' (A 2:28)
- (16) *'áy bëtət díyyivət.<sup>1</sup> 'áy malciytət díyyivət.<sup>1</sup> 'áy xàyyət díyyivət.<sup>1</sup> 'You are my home! You are my kingdom! You are my life!' (A 3:54)*
- (17) *+bäkyárələ kát mára šámmət díyyi 'ílə ... +pòllan cás.*<sup>1</sup> 'He carves (in the ground) saying "My name is so-and-son." (A 37:8)
- (18) *tápi +šrà<sup>1</sup> xázzən 'a-+bər-cálba kàm kímələ +al-ján-díyyi.*<sup>1</sup> 'Light a lamp so that I can see why this son of a dog has mounted me.' (A 5:16)

Another function of the heavy forms is to mark discourse boundaries. In (19) and (20), for example, the construction is used in a clause that functions as a clarificatory generic tag to what precedes, which has a more specific perspective:

- (19) *'ātva šáxtat kənyàna, ... +paltáxvala dùcta xíta, daráxva miyya jávo.*  
*c-odáxva 'axl +tìna, +mamṭiyàxvala b-'ākləl tìna, 'u-ci-yapàxvala b-'ídan.*  
*'átxa +yarixə. šámmat dàni-dal ... +pátxùxa.* ‘We took out the filth of cattle  
 to another place and put water in it. We made something like mud, we  
 processed it with our legs into mud and kneaded it with our hands, long  
 like this. Their name is *+pátxuxə*.’ (B 7:11)
- (20) *'ātva bavátat +màšəl bavátat +xyàra, bavátat +bùslə, tìymal cút-xa bávu*  
*b-nòšuva. šámmat dáyən bávəl.* ‘There were basins of beans, basins of  
 cucumbers, basins of onions, garlic, every basin by itself. Its name is basin  
 (*bava*).’ (B 17:30)

In (21) the heavy morphology is used in a repetitive parallel construction to give end-weighting to the second member of pair of clauses.

- (21) *'úyən m-íca útxa jùllo?! m-íca júllat dàyən?!* ‘From where are her clothes?!  
 From where are her clothes?!’ (A 51:5)

The genitive particle can take a demonstrative pronoun as a head, e.g.

- (22) *'áha dàvələl 'an-díyyux bàrrənč-na.* ‘This is gold but those of yours are  
 rice.’ (A 31:3)

The pronominal genitive particle can occur in predicative position. In such cases it is preceded by the independent form of the annexation element *'at*, e.g.

- (23) *+xábrət +aturàyələ, 'at-díyyan-lə.* ‘It is an Assyrian word, it is ours.’ (B 2:17)  
 (24) *cúllə 'at-díyyan* *+aturáy 'u-'arəmnày-da.* ‘All (were) ours, the Assyrians  
 and Armenians.’ (B 2:6)

The light construction with pronominal suffixes attached directly to the noun is used in the majority of cases of third person pronominal suffixes in narratives, e.g.

- (25) *+rába məndyánə tanúyələ bázət màlcu.* ‘He tells many things about his  
 king.’ (A 3:65)  
 (26) *Nátan bəxzáyələ kat-bábu xàyələ, lábbu p̄kàyələ.* ‘Natan sees that his  
 father is alive and his heart bursts (with fear).’ (A 3:88)  
 (27) *+xábra yávələ ka-bàxtu.* ‘He gives word to his wife.’ (A 3:31)  
 (28) *+Axíkar lišánu bədvàkələ.* ‘Axiqar holds his tongue.’ (A 3:28)

The first and second person pronominal suffixes are used in direct speech with nouns with referents that do not play a prominent role in the discourse or with which the speaker is not emotionally engaged, e.g.

- (29) *'át +sàrəvət,| +bárət lèlə yávəvət| 'áni-da palàxux-na.|* 'You are the moon and you give the light of the night. They are your workers.' (A 3:61, 'your workers' is an incidental referent that does not play a central role in the discourse)
- (30) *brúnət xàtux,| Nàtan,| šámmu Nàtan-iva,| vúdlə ķa-jánux brùna.|* 'Make the son of your sister, Natan—his name was Natan—your own son.' (A 3:6, the sister does not play any role in the narrative plot)
- (31) *lá jáxcət bí ... násət +dòstux-ina.|* 'Do not laugh at people who are your friends.' (A 3:9, generic, hypothetical class, with which there is no emotional engagement)

The light construction with pronominal suffixes is regularly used with the reflexive particle *jən-* (§ 2.5.) and the expression of isolation *b-noš-* 'by—self' (§ 2.6.), e.g.

- (32) *'á mú vádli b-ríš-jàni?|* 'What have I done against myself?' (A 3:45)
- (33) *xáčča tá +al-jánux|* 'Come back to yourself slightly (i.e. recover a little).' (A 3:53)
- (34) *'ùrzə c-ávi b-nošé,| nək्यə c-ávi b-nošé.|* 'Men are by themselves and women are by themselves.' (A 5:1)
- (35) *'át e-+dán b-nóšux-ivət|* 'when you are by yourself' (A 37:14)

Items standing in apposition, the primary function of which is to give additional information about a preceding noun, tend to be expressed by the light construction, e.g.

- (36) *Nàtan brùnux á-məndi vádlə.|* 'Natan, your son, did this thing.' (A 3:54)

The light construction tends to be used for formulaic, parenthetical expressions, e.g.

- (37) *'ávax +xlápux málca.|* 'May we be your substitute, king.' (A 3:43)

### 9.10.2 Variant ipl. Forms of Suffix

In the varieties of the dialect spoken in the Caucasus there is a long form of the ipl. suffix *-eni*. This is used alongside the short form of the suffix *-an* and the construction with the independent ipl. genitive particle *diyyan*:

- (1) *'á daváltañ 'áxnan ka-màn! šokàxxa?* ‘To whom shall we leave this wealth of ours?’ (A 42:2)
- (2) *tí 'et-táza +alméni tíle láxxa lätvale háč móndi.* ‘When our people first came here, they had nothing.’ (B 17:34)
- (3) *láxmət diyyan +lavàšələ.* ‘Our bread is flat bread.’ (B 15:7)

The suffix *-eni* is found also in the C. Salamas and C. Gawilan dialects. It is used in similar contexts to those in which *diyyan* is used. It is, however, less frequently used in the Urmî dialect of the Caucasus than *diyyan*. In some cases it is used where the speaker is referring to a referent that is exclusive to the speaker’s family or to the speaker’s community and stands in opposition to equivalent referents belonging to the addressee’s community. This is the case with (2) and (3) above. It is not, however, always the case. In (4) the suffix *-eni* is inclusive of the addressee, as is also the *diyyan* particle in (5):

- (4) *me-+moràxxə, +tamràxxə +'ávva! ju-pajéni kat-náš là xázzi mújjurra bəxpárəx.* ‘Bring him and we’ll take him in there, we’ll bury him in our stable, so people do not see us digging.’ (A 48:10)
- (5) *'ázax +al-+'átrət diyyan.* ‘Let’s go to our country.’ (B 16:12)

The heavy genitive forms in cases such as (4) and (5) are used to give prominence to the opposition of the referents in question to equivalent referents belonging to a third party.

### 9.10.3 Anaphoric Function of Suffixes

There is a marginal use of pronominal suffixes with an anaphoric rather than a genitive function, whereas the heavy constructions with independent pronominal elements always have a genitive function. The anaphoric function is attested in cases such as the following:

- (1) *RíR +xárta +'ávun t-íva +bəxmàsa, bəkváya 'allkólat +xámru! 'á-spar púmmu +maçrıùyuva.* ‘Then, when it (the wine) was becoming sour, and the alcohol of the wine is becoming strong, then they sealed its mouth.’ (B 17:15)
- (2) *yán +al-dó-yumu xina p-azáva.* ‘or the next day it would leave.’ (B 1:34)
- (3) *+búlču kámoxət maccə-dal kámoxət +xàttə-da c-odíva +búlču.* *'ó jarùsa c-odívalə +búlču.* *bašlívələ ju-míyya +bərdàxa!* *RíR daríval mǎšxa, mǎšxa yá-da +xàlva.* *'ó dàyku! +'ávun ci-payyíval lāxma.* ‘They used to make both the flour of wheat and also the flour of maize into mash. The coarse flour they made into mash. They cooked it in boiling water and they put oil in it, oil or milk. The fine (flour) they would bake into bread.’ (B 17:9)

In these examples the pronominal suffix refers to the head of the nominal phrase and not to a dependent genitive attribute. In the case of phrases with a demonstrative determiner of a noun head (*+al-dó-yumu*) or phrases where a demonstrative pronoun functions as the head of an adjective (*ó dàyku*) the pronominal suffix is coreferential with this demonstrative.

### 9.11 Juxtaposition of Specifiers

Terms denoting quantitative measurements are juxtaposed with the following nominal rather than being annexed, e.g.

- (1) *'áxči hálli 'árpi yumána +dàna.* | 'But give me forty days of time' (i.e. give me forty days to prepare for this). (A 3:56)
- (2) *xá-yuma +málla +Nasrádən mìyyəva| xá| +bàtman| +bùsra.* | 'One day mul-lah Nasradin had brought a *batman* of meat.' (A 11:1)
- (3) *xa-þórça xùrrac dáryəna káto| xa-þórça-da làxma.* | 'They have laid for her a tiny amount (literally: crumb) of food and a crumb of bread.' (A 35:7)
- (4) *ká-d á-naša yúvvən 'alpá +dinára zùtyza.* | 'I have given this man one thousand dinars of money.' (A 7:10)
- (5) *ká-yámmo=da máyəla cmá +lavášə láxma bariyza.* | 'For her mother she brings a few dry rounds of bread.' (A 35:9)
- (6) *xa-cúnda lèša, ci-+tamráxa ju-kámxa.* | 'We buried a ball of dough in flour.' (B 7:9)
- (7) *'á müjjurra xášla +kátu| bát ... +arþámma xamšámma cilomátrə 'ùrxa, xášla +táma| xa-lèlə?* | 'How is it that the cat went there on a journey of four hundred or five hundred kilometres in one night?' (A 3:82)
- (8) *cut-+álma 'ótvala xá-táxta, ya-trè-taxta, ya-xá-tanap carmànə.* | 'Each family had a plot or two plots or a *tanap* (an areal measure) of orchards.' (B 12:1)
- (9) *'ánnə=da xá dúnja dàvəna.* | 'They are a load (literally: world) of gold coins.' (A 1:5)
- (10) *sàtval xá dárza pučèčə +maxuléx| xá xpáka=da jølla bədráyəx| ju-pàja.* | 'In winter we feed them a bundle of maize stalks and we put an armful of grass in the stable.' (B 17:46)
- (11) *'ùl +mixùlta=zə ci-lablíva| xá sáma jøllàla, làxma, ká-dán nášət c-atíva.* | 'They also took food, a portion of herbs and bread for those people who came.' (B 11:4)
- (12) *xá tré mešója +màšə| 'two or three bags of beans' (B 17:48)*
- (13) *xa-yáccə +kazánča míyya +bərdàxa| 'a huge pan of boiling water' (A 42:8)*

- (14) *xá mána +zád drilə*.| 'He served a plate of food.' (A 45:10)
- (15) *xá-dana +kusarta dàva*| 'a pot of gold' (A 49:7)
- (16) *sáma zóda mèndi +àvva vélə škílu*.| 'He has taken the greater portion of the property.' (A 38:5)
- (17) *xa tica laxma* 'a morsel of bread'
- (18) *+tla +tana +xəttə* 'three *tana* measures of wheat'
- (19) *tre +xuyncarə sabza* 'two *xuyncar* measures of vegetables'
- (20) *tre +mocə +rəzza* 'two *moca* measures of rice'

In (21) the measurement is separated from its complement by an intervening verb:

- (21) *'ánnə xa-dárya labúləna pašcásə káto*.| 'They bring a load of gifts for her.' (A 35:9)

In (22) the complement with nuclear stress is placed in front of the measurement in order to give it enhanced prominence:

- (22) *bədráyəva +xəmsa xá čámča*.| 'They put a spoon of yoghurt-starter (in it).' (B 17:19)

In (23) the pronominal object pronoun agrees with the singular measured item rather than the plural measurement, indicating that the measurement is treated as a numerical determiner rather than the head of the phrase:

- (23) *'áyya 'ən-óya +arþà-ciloyə, xamšá-ciloyə +búsra óya +xəltu, jára 'ádi +'əsrà ciloyə*.| 'If she is four kilos and has eaten five kilos of meat, she must now be ten kilos.' (A 11:3)

Similarly containers are juxtaposed to, rather than annexed to, a phrase that expresses their contents, e.g.

- (24) *muttíla xá +tása +júrta +dàvvə kátu*.| 'She put out for him a large bowl of yoghurt.' (A 5:8)
- (25) *'ána míyyəvən xá +tórba jdìla*.| 'I have brought a bag of ice.' (A 12:1)
- (26) *xá +lína +júra-da +xàmra*| 'also a large jar of wine' (A 39:24)

In (27) an item is juxtaposed with a noun denoting the material it is made out of:

- (27) *tàlma*,<sup>1</sup> *'átvälə kátta* *+xòla*.<sup>1</sup> 'A pitcher had a handle of rope.' (A 6:1)

The annexation element is likewise absent after nouns expressing 'kind', 'type' or '(sub)group', e.g.

- (28) *xá* *+pásla* *'ilàna* *'átvä* *šámmu* *tùyra* *ci*-<sup>1</sup>*karívalə*.<sup>1</sup> 'There was a type of tree called osier.' (B 10:11)
- (29) *xájúra* *xína* *+tína* *+tarësva*.<sup>1</sup> 'Another type of mud was made.' (B 2:21)
- (30) *ja-nárət* *díyan* *'átvä* *tré* *júrrə* *núynə*.<sup>1</sup> 'In our river there were two types of fish.' (B 4:13)
- (31) *xá-sama* *xína*-*da* *+álma* *'áttən* *kat-ci-táni* *mən-jíbat* *nipùxta*<sup>1</sup> *Pméye* *poxtè*<sup>1</sup>  
*sábab* *Pmè*<sup>1</sup> *b-líšanət* *+fársət* *har-mádrə* *+manáyət* *+xámra* *yávəla*.<sup>1</sup> 'There  
 is another group of people who instead of *nipuxta* say *meye poxte*, because  
*me* in Persian has the meaning of wine.' (B 12:8)

Complements of the adjective *málya* are juxtaposed. In (33) the complement is placed before the adjective:

- (32) *+máyələ* *xa-dúca* ... *váyəla* *mlítə* *nášə*.<sup>1</sup> 'He comes to a place ... it is full of people.' (A 39:17)
- (33) *kúnaya*<sup>1</sup> *lèva* *+rába* *míyya* *málya*.<sup>1</sup> 'The well was not very full of water.' (A 16:3)

## 9.12 Conjoining of Phrases

### 9.12.1 *Syndetic Conjoining*

Nominal phrases are sometimes joined by the conjoining particle *'u-*, which is attached to the front of the second item. In many cases in the text corpus two phrases that are linked by this particle are separated by an intonation group boundary, e.g.

- (1) *b-xəžbùyna*<sup>1</sup> *yávula* *làxma*<sup>1</sup> *'u-míyya*.<sup>1</sup> 'He gives bread and water in rations.' (A 3:94)
- (2) *'áha* *xína* *bəškálolə* *scàntu* *'u-e*-<sup>1</sup>*čapípàltu*,<sup>1</sup> *bərrəxšəla*.<sup>1</sup> 'He takes his knife and the staff of his and goes on his way.' (A 37:6)
- (3) *lá* *carmànə* *'átvälun*<sup>1</sup> *lá* *baxčánət* *yéməš*,<sup>1</sup> *cúllə* *'átvä* *díyyan*<sup>1</sup> *+aturày*<sup>1</sup> *'u-'arəm-này*-*da*.<sup>1</sup> 'They had no vineyards nor fruit orchards. They all belonged to us, the Assyrians and also the Armenians.' (B 2:6)

The conjoining particle may split a list of items. In (4), for example, the ‘mud’ and ‘water’, are separated from the preceding list of ‘bricks’ and ‘tiles’. This reflects a thematic subgrouping:

- (4) *hállun cipa| hállun lúgnə,| ýanna +kaštyyə,| carpityčə,| 'u-+tìna,| miyya.* ‘Give stones, give bricks, those tiles, bricks, and mud, water.’ (A 3:59)

The conjoining particle is regularly found in combinations of numerals, in which it coalesces to the final *-a* of the numeral preceding it, e.g. *'əmmo əsri +tlə '123' (< 'əmma-u)* (§ 7.1.6.).

A series of adjectives placed before the noun are normally linked by *'u-*, whereas adjectives after a noun are normally combined without the conjoining particle (§ 9.6.1.).

### 9.12.2 *Asyndetic Conjoining*

In many cases phrases are juxtaposed without being linked by the conjoining particle. Such combinations are often within the same intonation group, reflecting a tighter connection than combinations of phrases linked by *'u*, e.g.

- (1) *xá-yuma bábu yámmu xína ... baxzáyəna bruné jarvùsala.* ‘One day, his father and mother notice that their son is growing up.’ (A 37:2)
- (2) *mən-bábi yàmmi lípon ýa +mardùta.* ‘I have learnt this skill from my father and mother.’ (A 7:19)
- (3) *tóvlun +jóra báxta jané kaarjané taxmùna.* ‘The husband and wife sat by themselves thinking.’ (A 42:1)
- (4) *lótvälə 'axúna xàta.* ‘He did not have a brother and sister.’ (A 35:1)
- (5) *jíra kòšta 'átvälə.* ‘He had a bow and arrow (literally: arrow bow).’ (A 39:4)
- (6) *+úxča 'ida-ákli nšíkèla.* ‘She kissed my hands and feet so much.’ (A 1:35)
- (7) *béta xayyùtya 'átlux.* ‘You have a house and livelihood.’ (A 36:5)
- (8) *lótlə xá +xtíta +xèlta.* ‘He does not have sin or mistake.’ (A 1:44)
- (9) *cúlla 'úrza baxtáy +plàtlun.* ‘All the men and women came out.’ (A 5:10)
- (10) *xášta téta zàdlun.* ‘Going and coming increased.’ (B 14:3)
- (11) *+xáttə +sára b-+dána b-+kéta ci-+xazdivalun.* ‘They used to harvest wheat and barley at (harvest) time in summer.’ (B 2:8)
- (12) *b-susaváy b-cavádnə b-xmàrə c-azíva.* ‘They used to travel by horses, mules and donkeys.’ (B 2:12)
- (13) *‘áxnan jú ... dásstot 'Úrmi Salámas +al-+uydálə 'átvalan 'ómmo tláy +tlà matvátə.* ‘We, in the plain of Urmi and Salamas, we had altogether one hundred and thirty-three villages.’ (B 2:2)

- (14) *cúllə júllu čənyárru bəškalèlə.* ‘He gets up and takes all his clothes and belongings (literally: his rags).’ (A 4:16)

The members of the conjoined phrase may include independent pronouns:

- (15) *kúdmə pili 'ána jáni,* 'ána bàxta. ‘Yesterday I myself baked—I and my wife.’ (B 17:22)
- (16) *'ána 'átən-ivax,* *xá-naša lítən.* ‘I and you are (here) (= we are alone), there is nobody (here).’ (A 6:7)

In (17)–(19) a genitive pronominal suffix is attached only to the second noun but it serves both nouns of the phrase. Note also that the pronominal object on the verb in (19) is feminine singular in agreement with the final noun of the phrase (*patu*), reflecting the interpretation of the phrases as nominal compounds (§ 5.15.):

- (17) *'ída 'áklu +sirèlun.* ‘They tied his hands and legs.’ (A 36:16)
- (18) *'ída paté b-+xallìva* ‘They would wash their hands and face.’ (B 10:25)
- (19) *míyya màyəla!* *'ída pátu +xallàlla.* ‘She brings water for him to wash his hands and face.’ (A 36:6)

A plural attributive demonstrative pronoun is used with such asyndetic phrases, e.g.

- (20) *'átxa c-+oríva ̄én +jóra báxta.* ‘Thus the husband and wife spent (their life).’ (A 54:10)

In several cases, nevertheless, the phrases are separated by intonation group boundaries, e.g.

- (21) *+rába yálə jílə! bnátə jílə! c-azíva ju-dánnə +bustanànə +šúlə! bəzmàra,*  
*tanùvvə, bərkàda.* ‘Many young boys and young girls used to go to these orchards and so forth, singing, telling tales and dancing.’ (B 2:11)
- (22) *matxùrənə! 'ica xišəna,* *Còsə! yán ducánə xínə kát tpíkəna b-+Már +Avràm,* *+Már Yósəp,* *+Mar 'Illyya,* *+Már Yuxànnan.* ‘They mention where they have gone, Kose, or other places where they have met Mar Abraham, Mar Joseph, Mar Elijah and Mar John.’ (B 2:15)
- (23) *pardùvvə, +karyàtə! ci-mattìva!* ‘They used to lay laths and beams.’ (B 2:19)
- (24) *+mhádər +xa-+rámšə! štèta,* *cùl-məndi.* ‘Prepare dinner and drink, everything.’ (A 3:31)

- (25) *'u-čánnə jùlla,| 'a-dàva,| 'a-màndi,| cùllə kàtux-na.* ‘These clothes, this gold, this thing, that are all for you.’ (A 3:88)
- (26) *xácmə məndyánə kát ju-matvátə lètval ci-zonìva,| mayyìva kat-+lázəm c-avìva,| +pàrče,| jùlla| átxa məndyánə.* ‘They used to buy many things, sugar or things that did not exist in the villages and bring (them), for they were necessary, textiles and clothing, such things.’ (B 2:8)

Two nouns conjoined asyndetically may have a wider semantic range than that of the two individual referents, e.g. *baba sava* ‘father and grandfather’ (= ancestors).

### 9.13 Repetition

Asyndetic combinations of nouns sometimes consist of the repetition of the noun with the replacement of the first consonant by /m/. The effect of this is to make the class denoted by the noun more general. Such phrases can be productively formed from any noun except those that themselves begin with /m/, e.g.

<i>'arxə marxə</i>	‘guests’
<i>'atičə matičə</i>	‘old things’
<i>calbe malbə</i>	‘dogs’
<i>ctavə mtavə</i>	‘books’
<i>'ilanə milanə</i>	‘trees’
<i>jøllalə møllalə</i>	‘vegetables’
<i>kalamə malama</i>	‘pens’
<i>kalpə malpə</i>	‘husks’
<i>kesə mesə</i>	‘woods’
<i>nuynə muyna</i>	‘fish’
<i>perə merə</i>	‘fruits’
<i>pørxə mørxə</i>	‘dried herbs’
<i>sanduyčə manduyčə</i>	‘boxes’
<i>šøblə møbla</i>	‘corn heads’
<i>šøptiyə møptiyə</i>	‘watermelons’
<i>varda marda</i>	‘flowers’
<i>xabuyšə mabuyšə</i>	‘apples’
<i>yalə malə</i>	‘children’
<i>+ayva +mayva</i>	‘clouds’
<i>+bør-+zarrə +mør-+zarrə</i>	‘seeds’
<i>+xøttə +møttə</i>	‘wheat’

Such constructions are found in the non-Semitic languages in the area, e.g. Azeri (Ardabīl):

çörək mörək [tsø'reh mø'reh] 'bread and the like'  
uşaq muşaq [uʃaq muʃaq] 'children and the like'

Kurmanji Kurdish:

biçûk miçûk 'children and the like'  
şimtî mimtî 'a melon and the like'<sup>3</sup>

In (1) the middle syllable of the second component has been elided:

- (1) *cút +'ásra yumána xà| +palúṭola xá capárta márta yàvola.* | 'Every ten days she brings out some crockery and so forth and gives it to her.' (A 44:4)

In the NENA dialects of Iraq, *ma-* is used instead of the initial consonant *m-*, e.g. C. Barwar *qese ma-qese* 'pieces of wood and the like' (Khan 2008, 558). The use of *ma-* with this function is sporadically used in C. Urmi, e.g.

- (2) *málcat Čín mà-Čín* | 'the king of China or thereabouts' (A 43:13)

These are inseparable phrases and should be considered to be coordinative nominal compounds (cf. Haspelmath 2002, 91).

Examples from the text corpus:

- (3) *bəxzáyələ xá-dana ... nàša| mən-dánnə +hajíyyə +majíyyə bitàyələ.* | 'He sees a man coming, one of those pilgrims and the like.' (A 30:2)  
 (4) *'e-dúcta ḳat-ṣáxtə móxtət ḳənyàna ci-xamılun* | 'the place where they keep the filth and the like of cattle' (B 6:6)  
 (5) *'é-+danta telefónələ melefónə lətva.* | 'At that time there were no telephones and the like.' (A 2:2)

The second member of a repeated pair occasionally begins with /b/ or /ba/ rather than /m/. This is not productive, e.g.

*šákłə baklä* 'confused': *a-+šúla šákłə bùkłələ.* | 'This job is all mixed up.'

---

3 The data on Kurdish were supplied by Ergin Öpèngin.

*+zor-+bazor* ‘forcing’: *mút +zor-+bazòr=ila?* ‘What is this forcing (me to do something I do not want to do)?’

A similar function of broadening the semantic range of a noun is performed by the asyndetic combination of a plural noun with the plural form *+šúla* ‘things’, e.g.

- (6) *+bagvànə c-avíva| kát jinávə +šúla là-’atíva.* ‘They were guardians of the orchard (ensuring) that thieves and the like did not come.’ (B 2:7)
- (7) *+rába yálə jílə| bnátə jílə| c-azíva ju-dánnə +bustanàna +šúla.* ‘Many young boys and young girls went to the plantations and so forth.’ (B 2:11)
- (8) *ju-matvátə +šúla +bəxdárəna.* ‘They go around the village and the like.’ (B 2:15)
- (9) *xína míya ýe-+dān +múṭra tálja +šúla +rayyíva ju-béta lè +salíva.* ‘So that when rain, snow or the like fell, water would not run down into the house.’ (B 2:22)

Repetition of nouns, adjectives or adverbs may express diversity and large numbers, e.g.

- (10) *síla bədráyəla +mən-táma +bázza +bázza.* ‘He sprinkles sand into (lots of) holes.’ (A 3:74)
- (11) *júrrə júrrə lətvalan.* ‘We did not have many different types.’ (B 10:14)

In repetitive collocations of two plural nouns a distinctive prosody is often used with the pattern *CVCCì CVC*ə, with the nuclear stress falling on the final syllable of the first word, which has the vowel /i/ not /ə/, e.g.

- (12) *þərṭi þárṭə výyəla.* ‘It has become lots of crumbs.’ (sing. *þárṭa*)
- (13) *’o-nora +šmáṭla tici tíca.* ‘The mirror broken into lots of pieces.’ (sing. *tica*)
- (14) *króṭla xabúysha +kərṭi +kárṭə.* ‘He bit the apple into lots of pieces.’ (sing. *+kárṭa*)
- (15) *+’ávva xlépa +kərṭi +kárṭəla.* ‘That quilt is made of lots of patches.’ (sing. *+kárṭa*)
- (16) *’o-varáka +təṭṭi +təṭṭə vádli.* ‘I put lots of dots on the paper.’ (sing. *+təṭṭa*)
- (17) *šíšə́lta ’ótlə halķi hálķa.* ‘A chain has many links.’ (sing. *halķa*)
- (18) *tahari tahárə* ‘of various kinds’
- (19) *jurri júrrə* ‘of various kinds’
- (20) *+bər-+zarra jurri júrrə* ‘seeds of diverse kinds’ (sing. *jurra*)
- (21) *tókə ranjì ránjə* ‘multi-coloured rings’ (sing. *ranj*)

This prosodic pattern is used also for nouns that normally form plurals by the ending *-atə*, e.g.

*+kət̪ti káttə* 'lots of pieces' (sing. *+kəttə*, pl. *+kəttatə*)  
*jut̪ti júttə* 'lots of balls' (sing. *jutta*, pl. *juttatə*)

It should be noted that the distinctive prosodic pattern of these phrases does not occur in collocations in which the second member is repeated with initial *m*:

*tícə mícə* 'bits and bobs' vs. *tici tícə* 'lots of pieces'

Another function of repetition is to express gradual progression, e.g.

- (22) *níxa níxa níxa níxa| karbúnəla la-mdita.* 'Very slowly she comes near to the town.' (A 1:10)  
 (23) *+xárta +xárta +dàna| tila* 'In the very end the time came ...' (A 51:8)

If there are two items in the phrase, the aforementioned prosody is often used:

- (24) *xaččà xáčča|* 'little by little'

Repetition may express intensity, e.g.

- (25) *xášla xədyà xádyā.* 'He went along very happily.'  
 (26) *pášlə kuyà kúya.* 'He became very strong.'  
 (27) *é +dántət prákta prákta|* 'at the very end' (B 10:14)

If the repeated word ends in *-ə*, this is replaced by *-i* in the first word, e.g.

- (28) *ráklə jaldì jáldə.* 'He ran away very quickly.'

Repetition is sometimes used in distributive expressions such as the following:

- (29) *+xasà xásə mxílun| kat-dážmən +kàtli.* 'They stood back to back (each with his back against the back of another) so that they could kill the enemy.'  
 (30) *dástə dástə +xazdáxva bí ... mafjəsta.* 'Then we would harvest it, bunch by bunch, with a sickle.' (B 3:10)  
 (31) *+jammáxvala kúxa kúxa.* 'We gathered it up, heap by heap.' (B 3:10)

- (32) *+tárpa +tárpa b-+xmàṭa +moríla.* ‘They pass a needle through it (the tobacco), leaf by leaf.’ (B 3:27)
- (33) *dvíkəna ’ída ’ida* ... *+šarúyəna bərkáda bəšvàra.* ‘Holding each other’s hands they begin to dance and jig.’ (B 8:9)

The distinctive prosody described above is found in constructions in which infinitives of verbs are repeated to express progressive overlapping activities (§ 10.17.4.):

- (34) *+vərrəju-+ótax zmarà zmára.* ‘He entered the room singing.’
- (35) *+vərrəju-+ótax malyuzì-malyuzə.* ‘He entered the room in a hurry.’

Some nouns are formed from repeated elements, e.g. *+xalsa-+xalsu* ‘crush, crowd, hustle’.

#### 9.14 Numerals

A noun that is the complement of a numeral above ‘one’ is in the plural, e.g. *tré +parsúpə* ‘two gentlemen’ (B 2:12), *+tlá xabùyšəl* ‘three apples’ (A 37:22), *+tlá yumána* ‘three days’ (A 3:94). Also after compound numerals that end in *xa* the noun is plural, e.g. *’əsri xa šənna* ‘twenty-one years’.

The noun following the numeral may have a preposed adjective, e.g.

- xa +yakuyra cipa* ‘one heavy stone’  
*tre +yakuyrə cipə* ‘two heavy stones’

When a cardinal numeral determines an indefinite plural noun, the numeral is optionally followed by the plural form *dana* ‘items’. As with the use of the singular phrase *xa-dana*, which is a variant of *xa* (§ 9.1.), the use of *dana* draws particular attention to the phrase. In many cases this is due to an unexpectedly high number of items of a particular class, e.g.

- (1) *’ətväləl’ əští-danə baxtátə.* ‘He had sixty wives.’ (A 3:2)
- (2) *b-xá +čap̪álta ’ána ... ’arpí dánə dévə +másən +kətlənnun.* ‘With one club I can kill forty monsters.’ (A 37:8)
- (3) *’ətva +rába cačálə.* *+kúrbət +’əsrà-danə cačálə-’ətva.* ‘There were many bald men. There were nearly ten bald men.’ (A 1:1)
- (4) *+arpá-danə ’apəskúpə ’áyya +dána ’ətvalan.* ‘We had four bishops at that time.’ (B 2:15)

The particle is used also in cases where the referents of the enumerated items play a prominent role in the ensuing discourse, e.g.

- (5) *tmánya dánə nùynə müyyən.* | 'annəl bašlätłun. | 'I have brought eight fish. Cook them.' (A 36:7)

The plural form *dánə* can be used independently as in cases such as the following:

- (6) *básəlla cèca,* | *xrùzlun,* | +*yána* | *an-jardéya xrízlun* +*álju-dàrta átxa,* | +*xárta xa-tre-* +*tlá dánə=zə* +*al-váddar mən-dàrta* | *kát 'áhal bát* +*áxəl mənné* | *bət-pálət* +*al-váddar.* | 'Bake him cakes, lay them out together, that is lay out the round loaves together in the courtyard like this, then two or three outside of the courtyard so that he will eat them, then he will go along and go outside.' (A 37:3)
- (7) *xá-dana stílyna-da xút ci-maxíva mən-* +*árra* | *hál +támma* | *kát là talóxva.* | '*ítá cmá dánə mən-* +*dávun* | *átxa ci-mattíva.* | 'They would put a post underneath (coming up) from the ground to there, so that it did not collapse. So they would put some items of this (some of these) thus.' (B 2:19)

When a speaker enumerates a number of individual items from what is typically conceptualized as a collective entity, it is normal to use the itemizing particle *dánə* after the numeral, e.g.

- (8) *hálli tré-danə zète.* | 'Give me two olives.'
- (9) *hálli +tlá-danə cəšmišə.* | 'Give me three raisins.'

In such constructions the use of the particle *dánə* expresses an exact count of items from the collective set. It may be replaced by the particle *áxči* 'only', which has a similar function, e.g.

- (10) *hálli áxči +tlá cəšmišə.* | 'Give me only three raisins.'

If a low numeral is used with collectives without these particles, the phrase does not express an exact count but rather a small number, e.g.

- (11) *hálli tré cəšmišə.* | 'Give me a couple of (= a few) raisins.'

A number of nouns have two plural forms, one of which ends in the unmarked plural suffix -ə and the other in a longer suffix, which should be considered a

marked suffix. The unmarked plural suffix is generally used when referring to a typical plurality of a particular referent. Parts of the body that occur in pairs, for example, have a typical plurality of ‘two’ on the same body. In such cases, therefore, the suffix -ə tends to be used after the numeral ‘two’ with these nouns when referring to a pair on the same body, although there is no absolute rule concerning this, e.g.

<i>+ayna</i>	‘eye’	<i>tre +ayna</i> ‘two eyes (of one person)’
		<i>tre +aynatə</i> ‘two eyes (of different people)’
		<i>+tla +aynatə</i> ‘three eyes (of different people)’

<i>'ida</i>	‘hand’	<i>tre 'ida</i> ‘two hands (of one person)’
		<i>tre 'idata</i> ‘two hands (of different people)’
		<i>+tla 'idata</i> ‘three hands (of different people)’

<i>+kuča</i>	‘thumb’	<i>tre +kučə</i> ‘two thumbs (of one person)’
		<i>tre +kučačə</i> ‘two thumbs (of different people)’
		<i>+tla +kučačə</i> ‘three thumbs (of different people)’

Entities that are typically conceptualized as a collective mass have the unmarked plural ending -ə when referring to the collective. Some such nouns also have a marked plural, which is used to refer to selected individual items from the collective. The marked plural is used since this is not the typical plurality, e.g.

<i>+patuxta</i>	‘dried dung cake’	<i>+patuxə</i> ‘dried dung cakes’
		<i>tre +patuxyata</i> ‘two dried dung cakes’
		<i>+tla +patuxyata</i> ‘three dried dung cakes’

Several other nouns use both the unmarked plural suffix and a marked plural suffix. In general the conditions for their usage follow the principles just described. When they are not typically conceptualized as collectives, the unmarked plural tends to be restricted to specific numbered groups, which can be considered the more typical plural, whereas a general, uncounted, plurality has the marked plural, e.g.

<i>+rumxa</i>	‘spear’	<i>+raba +rumxatə</i>	‘many spears’
		<i>tre +rumxə ~ +rumxatə</i>	‘two spears’
<i>+mamuna</i>	‘uncle’	<i>+raba +mamunvata</i>	‘many uncles’
		<i>tre +mamuna ~ +mamunvata</i>	‘two uncles’

<i>savuna</i>	'grandfather'	<i>+raba savunvatə</i> <i>tre savunə</i>	'many grandfathers' 'two grandfathers'
<i>kənna</i>	'nest'	<i>+raba kənnatə</i> <i>tre kənna ~ kənnatə</i>	'many nests' 'two nests'
<i>+kora</i>	'grave'	<i>+raba +koravatə</i> <i>tre +kora ~ +koravatə</i>	'many graves' 'two graves'
<i>+šara</i>	'festival'	<i>+raba +šaravatə</i> <i>tre +šara ~ +šaravatə</i>	'many festivals' 'two festivals'

If the noun is definite, the numeral must take a pronominal suffix co-referential with the noun or the phrase must be modified by a demonstrative pronoun, e.g.

- 'an-+*tla* 'axunvata  
+*túlvunte* 'axunvata 'the three brothers'  
'the three brothers'

In (12) these two constructions are used in two parallel clauses:

- (12) 'ànnə́l màrə́lə́l bnátax bə́t-+kaṭlənnun,| 'án +áynə́t bə́bi lá yavváttun.| +túlvunte bnátax bə́t-+kaṭlənnun! 'ən-+áynə́t bə́bi lá yavváttun.| 'He says "I shall kill the daughters of yours if you do not give me the eyes of my father. I shall kill the three daughters of yours if you do not give me the eyes of my father." (A 39:38)

Ordinals above 'first' are expressed by combining a head noun with a numeral in annexation (§ 7.2.). The particle *d-* is optionally inserted before the numerals *tre* 'two' and *+tla*:

- |  |                        |
|--|------------------------|
| <i>našət tre</i> ~ <i>naša d-tre</i> ~ <i>našət d-tre</i>    | 'the second man'       |
| <i>našət +tla</i> ~ <i>naša d-+tla</i> ~ <i>našət d-+tla</i> | 'the third man'        |
| <i>našət +'arpa</i>  | 'the fourth man', etc. |

If the head noun has a pronominal suffix the *-ət* annexation element has the status of an enclitic, which may be detached from the head (§ 5.14.):

*bruni-t<sup>+</sup>ar̥pa* ~ *bruni ’at-<sup>+</sup>ar̥pa* ‘my fourth son’

A definite head noun may be pronominalized and replaced by an anaphoric pronoun. In such constructions the *d-* is optionally extended to other numerals. The attested constructions include the following:

- |                           |                       |
|---------------------------|-----------------------|
| 'ō=t d-tré, 'o d-tré,     | 'the second one (m.)' |
| 'ō=t d-+tlá, 'o d-+tlá    | 'the third one (m.)'  |
| 'ō=t +'arþa ~ 'o d-+'arþa | 'the fourth one (m.)' |
| 'ō=t xamša ~ 'o d-xamša   | 'the fifth one (m.)'  |

Occasionally the head is gapped without being replaced by a pronoun, as in (13):

- (13) *bəxzáyəna* 'at-d-+tlá=da +támələ. | 'They see that also the third one is there.'  
(A 6:13)

In ordinal expressions in the names of rulers a numeral is juxtaposed, e.g. +Šápur tré | 'Shapur the second' (B 1:9).

When the number of items is left imprecise, two or more numerals are placed together asyndetically, e.g.

- (14) *xá tré yálə súrə* +ráppax +al-márzət nàra. | 'We throw one or two children onto the river bank.' (A 39:18)  
 (15) +'árþa xamšá məndýánə mánni +tlíbələ. | 'He requested from me four or five things.' (A 3:55)  
 (16) 'tvalan bátat tré +tlá tabákə=zə b-cárpəč smùkta. | 'We had houses of two or three storeys (built) with red brick.' (B 2:18)  
 (17) +tmánessár 'eččasár šənnənənəl | 'They are eighteen or nineteen years.'  
 (A 37:5)  
 (18) 'á mújjurra xóšla +kàṭu| bát ... +arþámma xamšámma cilomátrə 'ürxa,  
*xášla* +táməl xa-lèlə? | 'How is it that the cat went there on a journey of four hundred or five hundred kilometres in one night?' (A 3:82)

Asyndetic juxtaposition is used to convey approximation also in numerical expressions such as the following:

- (19) *pyàšələ cəslé| xà-šabta| tré šabáy| +tlá šabáy.* | 'He stays with them for one week, two weeks, three weeks.' (A 37:13)  
 (20) +bár xà-+sa'at,| tré +sa'attə,| bitáyəna ḳat-xázi ýadi šlikələ| bšilələ. | 'After an hour or two, they come to see if he has been boiled and cooked by now.'  
 (A 37:21)

- (21) *mən-fu-+’árra +plátlun cmá-danə +’əsrá-danə nùynə.* ‘Out of the ground came some ten fish.’ (A 36:15)

The particle *xa* may be placed before a numerical phrase to present the collection of items as a unity, e.g.

- (22) *xa-’sri xámša šónna +vàrəna.* ‘Some twenty-five years go by.’ (A 41:3)  
 (23) *+hàla! o-náša léva xiša xá +’əsrá +pasulyà,* *+málla bitáyələ drúm +’al-*  
*+’árra.* ‘Before the man had gone a (distance of) ten steps, the mullah falls (literally: comes) bump on the ground.’ (A 32:2)  
 (24) *ci-pás̥va xá +’árpa xamšà daķíkəl jáns ci-bašəlva.* ‘It (the bread) stayed there for (a period of) four or five minutes, and baked well.’ (B 2:9)

In (25) the numeral *xa* is used in a similar way before the plural noun *zuyzə* presenting it as a collective:

- (25) *fári ka-+’árbab cmayútət xá zúyzə yavvivalun.* ‘They had to give the land-lord a certain sum of money.’ (B 13:2)

Repetition of identical numerals expresses distribution, e.g.

- (26) *xá xá jáha* ‘sometimes’  
 (27) *xá xá škilèlun.* ‘They took them one by one.’  
 (28) *xá-xa dárza ci-+rappàxva.* ‘Then we would throw one sheaf at a time.’  
     (B 3:11)  
 (29) *+tlá +tlá tilun.* ‘They came three by three.’  
 (30) *+tárət máccə xá xá dána pràxət.* ‘You strip maize heads one by one.’  
 (31) *zéta tré tré dána +bixálələ.* ‘He is eating olives two by two.’  
 (32) *xámša xámša bədrayélə +’al-+rušanànu.* ‘He puts them on his shoulders, five by five.’ (A 42:17)  
 (33) *+’ósla +’ósla dànəl ci-labláxvale +’ál mdita.* ‘We took them to the town, ten by ten.’ (B 17:5)

Multiples corresponding to ‘twofold’, ‘threefold’, etc. are normally expressed by combining the numerals with the words *taķə* ‘folds’, *jahə* ‘times’ or *+barabarə* ‘equal portions’, e.g.

- (34) *’ána yuvválli +’árpa jáha buš-zóda káto móñ dő-t yuvválli ka-+dàv.* ‘I gave her four times more than what I gave him.’  
 (35) *’ána yuvválli káto tré tákət dő-t yuvválli ka-+dàv.* ‘I gave her twice what I gave him.’

- (36) *'ána yuvválli káto +ar̥pa tákə zóda mən-dó=t jarəc yavvánnə kàtu.* ‘I gave her four times more than that which I must give him.’
- (37) *múdi-t yuvvállə káto 'íva tré tákə mən-d-yuvvállə kàti.* ‘What he gave her was twofold more than he gave me.’
- (38) *+áv tré jáhə buš-zóda +bəddáyəla mənno.* ‘He knows twice as much as she knows.’
- (39) *'ána +tlá jáhe buš-zóda mónnux xíšəvən +tāma.* ‘I have gone there three times as often as you have.’
- (40) *'áha tré tákə buš-+tíməla.* ~ *'áha tré +barabárə buš-+tíməla.* ‘This is twice as expensive.’
- (41) *'áha tré +barabárət dàvvəla.* ‘This is twice as much as that.’
- (42) *+krámli tré +barabárət díyyux.* ~ *+krámli tré +barabárət 'at +krámlux.* ‘I won twice as much as you.’

In (43) a multiple is expressed by means of the anaphoric adverbial *hada* ‘thus’:

- (43) *hál t-ázət bëta, <sup>R</sup>úže<sup>R</sup> o-bëtux! +ásra háda bëta t-áva yàcca.* ‘By the time you get home, your house will be already ten times bigger.’ (A 54:7)

Some expressions of mathematical operations include:

- (44) *tré +al-tré 'íla +ar̥pa.*  $2 + 2 = 4$
- (45) *'ásri mázyədla +al-'ásri bət-óya 'ar̥pi.*  $20 + 20 = 40$
- (46) *'óšta +jummítä m-tre +barabárət tmányəla.*  $6 + 2 = 8$
- (47) *tré +jammátla +al-+tlá bət-óya xàmša.*  $2 + 3 = 5$
- (48) *'óšta +mubsárta b-tré +barabárət +ar̥pəla.*  $6 - 2 = 4$
- (49) *tré +mábsərra mən-+ásri bət-óya +tmanàssar.*  $20 - 2 = 18$
- (50) *tré +mábsər mən-+árpa bət-óya trè.*  $4 - 2 = 2$
- (51) *tré +mabsərrätla mən-xámša bət-óya +tlá.*  $5 - 2 = 3$
- (52) *'óšta muzyáttä b-tré +barabárət taryàssar-ila.*  $6 \times 2 = 12$
- (53) *tré +jámmila +al-tré bət-óya +ar̥pa.*  $2 \times 2 = 4$
- (54) *xámša mázyədla b-tré bət-óya +ásra.*  $5 \times 2 = 10$
- (55) *xámša mxí b-tré bət-óya +ásra.*  $5 \times 2 = 10$
- (56) *tré jáhət xámša 'íla +ásra.*  $2 \times 5 = 10$
- (57) *'óšta +pullítä b-tré +barabárət +tlá-ila.*  $6 \div 2 = 3$
- (58) *+ásra +pallátla +al-tré bət-óya xàmša.*  $10 \div 2 = 5$

Percentages are expressed thus:

*'əmma ka-'əmma* ‘one hundred percent’

*'əčči ka-'əmma* ‘ninety percent’

A phrase containing a numeral followed by a plural noun with a pronominal suffix has a partitive sense, e.g.

*tre 'axunvatu* ‘two of his brothers’

The numeral *xa* followed by a singular noun with a pronominal suffix has a partitive sense, e.g.

*xa 'axuni* ‘a brother of mine’

Partitive constructions may also be expressed with the preposition *mən* before a plural noun thus:

*xa mən-'axunvati* ‘one of my brothers’

*tre mən-'axunvati* ‘two of my brothers’

Ordinal numerical constructions above ‘first’ may be formed with indefinite head nouns, e.g.

*xa xabuyšət d-tre* ‘a second apple’

*xa xabuyšət d-+tlə* ‘a third apple’

*xa xabuyšət +'arpə* ‘a fourth apple’

If an indefinite head noun in such constructions is dropped, the numeral is used by itself with the initial particle *d-*, not *'at*. The construction does not take the indefinite particle *xa* as its head:

*šáklən d-trè!* ‘I shall take a second one’

*škúl d-+'arpə!* ‘Take a fourth one!’

A definite nominal head of an ordinal may be gapped, in which case the numeral is preceded by the particle *'at*, not *d-*, e.g.

- (59) *'arpì +otáǵəna. tláy +'áčča kdíla b-yávvəl +'al-'idux. 'at-'árpí tání šuršìyyən.* ‘There are forty rooms. He will hand you thirty-nine keys. You should open them. At the fortieth (room) say “I am tired.”’ (A 42:8)

In such contexts if the ordinal phrase is the complement of a preposition, the *'at* particle has the oblique form *dət*, e.g.

- (60) *+al-dət-àrpíl márrə ́ána xína šuršìyyən.* ‘At the fortieth (door) he said “Well I am tired.”’ (A 42:9)

When the numeral is combined with a plural noun with a pronominal suffix to express a multiple of the noun rather than a part of it, the numeral must have a pronominal suffix or the phrase must be modified by a demonstrative pronoun, e.g.

<i>tre ́axunvatu</i>	‘two of his brothers’
<i>túrvante ́axunvatu</i>	‘his two brothers’
<i>’annə tre ́axunvatu</i>	‘these two brothers of his’

When the word *palya* is used after a unit, the final *-a* is replaced by *-ə*, which appears to be a fossilized vestige of a pronominal suffix (§ 2.3.), e.g.

<i>xa palyə</i>	‘one and a half’
<i>xa +sa’at palyə</i>	‘an hour and a half’
<i>tre +sa’attə palyə</i>	‘two and a half hours’

Numerical expressions relating to dimensions:

<i>+tlə mətrə ́amku</i>	‘three metres deep’
<i>+tlə mətrə +rama</i>	‘three metres high’
<i>+tlə mətrə pətya</i>	‘three metres wide’

- (61) *́áha ́úrxa +tlá mátrə ptítəla.* ‘This road is three metres wide.’

Various idioms relating to time and age are as follows:

- (62) *+sá’at cmà-ila?* ~ *mút +dànəla?* ‘What time is it?’  
 (63) *+sa’áttət trè-ila.* ‘It is two o’clock.’  
 (64) *tré pàlyəla.* ‘It is half past two.’  
 (65) *čárac ̄ka-+tlà-ila.* ‘It is a quarter to three.’  
 (66) *čárac mən-+bár +tlà-ila.* ‘It is a quarter past three.’  
 (67) *xá +vára xamšásar* ‘One fifteen’  
 (68) *xáčča mən-+bar taryàssar-ila.* ‘It is a little after twelve.’  
 (69) *mù vâyələ?* *xàmša?* ‘What (time) is it (now)? Five?’  
 (70) *šítət +vórra jähət kámēta xzíli +xalùvvı.* ‘Last year I saw my uncle for the first time.’  
 (71) *cút +’zsra yumánə xàl +palútola xá capárta márta yàvolə.* ‘Every ten days she brings out some crockery and so forth and gives it to her.’ (A 44:4)

- (72) *'ítá cút cmá xá +báyyi ázi táxni +'al-'òrxə.* | 'So, every once in a while they need to go to grind (the wheat) on the water-mill.' (B 10:8)
- (73) *cút trè-yarxa cút +tlá-yárxa xà ci-+pàlət.* | 'Once every two or three months he goes out.' (A 1:25)
- (74) *šítá xà-dana xabúša ci-čánva.* | 'It used to bear one single apple a year.' (A 39:1)
- (75) *'adýya pyáyəna cút šábta xà-ja.* | 'Now they bake once every week.' (B 17:25)
- (76) *šábta xá-ja c-átət làxxa.* | 'You come here once a week.'
- (77) *šítá xa-jahəl 'a-+kalàyčíl c-atíva mən-mdítə.* | 'Once a year this copper cleaner would come from the town.' (Note that the plural form *jahə* is used here, not the singular *jaha*, apparently to express an iterative activity)
- (78) *yúma tlá-+danə xuté tamməzzàxvalə.* | 'We cleaned under them three times a day.' (B 3:31)
- (79) *cmá šənnəvət? ~ šənnux cmà-inə? ~ mü-inə šənnux? ~ cmá šənnə 'òtlux?* | 'How old are you?'
- (80) *'ána 'əsrì šánnəvən. ~ 'ána 'òtli 'əsrì šánnə. ~ 'ána šánni 'əsrì šánnəna.* | 'I am twenty years old.'
- (81) *xa-bráta 'òtli šávvà šónna.* | 'I have a seven-year-old daughter.' (A 38:13)
- (82) *mxílun ju-cisət xáti tré šánnəl 'u-'axúni +arpà šónna.* | 'They kicked in the stomach my two-year-old sister and my four-year-old brother.' (B 6:5)
- (83) *'ánya +arpá šónna yála súrìl +purmíyyala xáyyə mü-inəl 'ána müjja +déran +baràyl mən-hammaniyta.* | 'If my four year old child has understood what life is, how can I revert from faith.' (B 16:8)
- (84) *brátu súrta kát +šávvá šónnovəl* 'his young daughter who was seven years old (literally: was her seven years)' (A 38:10)
- (85) *'ána ka-tré +sa'áttə 'ùrxa bərráxšəven.* | 'I have been walking now for two hours.'
- (86) *'ánnə 'arpí yumáne xəštəla.* | 'She went away forty days ago.' (A 35:16)

Some idiomatic phrases containing numerals include the following:

- (87) *xá-'ax páljət 'òrbuxl* 'a measure of as much as half of your sheep' (A 39:37)
- (88) *'á-sepət díyyil 'icət maxənval c-odánvala trè.* | 'Wherever I struck my sword I made him two (i.e. I cut the victim in two).' (A 2:28)
- (89) *+əsrá yumána m-kám +dána kay-tàni.* | 'Tell me ten days beforehand.' (A 2:18)
- (90) *cačála xa-b-xá-ja mìrrəl* 'The bald man suddenly said ...' (A 1:28)
- (91) *xa-b-xá bəxzáyəla márzət +áyna xá ... xa-nàša dúlə dmíxa.* | 'All of a sudden he sees that there is a man asleep by the side of the spring.' (A 37:7)

## 9.15 Gender

It what follows attention will be drawn to some uses of the feminine gender.

### 9.15.1 *Propositional Content*

In various constructions pronominal and inflectional elements referring to the propositional content of the preceding discourse are 3fs., e.g.

- (1) *bás 'ayya! maxzúyəla kàt! 'ètva +aturáyə b-+dánat mšíxa! ju-+Irān! ju-'Urmi.* ‘But that shows that there were Assyrians at the time of Christ in Iran, in Urmi.’ (B 1:3)
- (2) *bæctávələju-ctával kæt-’átən für'un! denánat ká... málca! díz-ila?* ‘He writes in a book: You, Pharaoh, are in debt to the king. “Is that true?”’ (A 3:76)
- (3) *’ína xáčča bùš šapárta mórola.* ‘But he says this (i.e. what has just been said) rather more beautifully.’ (A 3:77)
- (4) *lélá kát ’áxnan jánan viyyəvax! jávo juriyəssəvax.* ‘This (what I have just said) is not because we ourselves were born and grew up in it.’ (B 2:15)
- (5) *lá lélá múmcun.* ‘No it (i.e. what you have just said) is not possible.’ (A 10:6)
- (6) *’áx-t ’ána bætxárən kam-+’dynila.* ‘I remember as if it (what I am narrating) is before my eyes.’ (B 6:2)

In (7)–(11) the 3fs. pronoun anticipates the propositional content of the following asyndetic dependent clause:

- (7) *búš +spáyəla ’áxnan=zə ’á +šúla làxxa! ’odàxla.* ‘It is better that we also do that here.’ (B 11:11)
- (8) *’adíyya cèpux-lə! ’ádi nòkva pármətla! ’ùrza parmótlə.* ‘Now it is up to you (whether) you slaughter the woman or slaughter the man.’ (A 2:36)
- (9) *dáx c-óya ’ána mayyánnun bëta?* ‘How is it possible for me to bring them home?’ (A 6:3)
- (10) *díz-ila mšíxa mórrə xúshun +màcrəzzun.* ‘It is true that Christ said “Go and preach”’ (B 1:3)
- (11) *bædmáyəla +míra! m-xá xína bùš zóda zúyzə škílələ.* ‘It seems the foreman has taken more money from another.’ (B 13:4)

In (12)–(16) the 3fs pronominal element agrees with a following subordinate content clause introduced by *kat* (§14.5.):

- (12) *kabúlona kat-braté yavvila.* ‘They agree to give their daughter.’ (A 35:12)
- (13) *nášət díyyan! là muğjəbbálun! kát ’avívalun +musáfər +xànə.* ‘Our people did not want to have a travellers’ lodge.’ (B 1:35)

- (14) *ctávtəla ju-+oráyta| kát 'átən á 'úrxat-azətta.* 'It is written in the Torah that you will go on this journey.' (A 42:7)
- (15) *'u-+háji cílla kublálun kat-at-màttət.* 'The pilgrim and everybody have accepted that you have died.' (A 1:22)
- (16) *b-dá táhar výla kát| +šurílun mən-jíbət +tlá bətvátə| +šurílun cílla| bətvátət màtəl +hayyúrə +al-dá násbat.* 'In this way it happened that instead of three families all the families of the village began to help in this connection.' (B 11:4)

In (17) the oblique 3fs. demonstrative *dē=t* anticipates the content of the embedded clause:

- (17) *sábab násə bəzyàdəva| xína masála búš furvásłə| mán dē=t 'àxči| 'avílun +mixùltə| ka-+cavùtra,* ... 'Then, because the people were increasing and the event grew bigger than their just having food for lunch ...' (B 11:9)

In (18) the 3fs pronominal element agrees with a following embedded question:

- (18) *+kattívala íman +xliyyla p̄t-odíva* 'They decided when they would hold the wedding.' (Canda)

### 9.15.2 *Expressions of Time*

Clauses expressing the passage of time or location at a point in time can take a 3fs pronominal subject, e.g.

- (1) *+átxa +vára bərràxəla.* 'It passes in this way (i.e. time passes).' (A 3:39)
- (2) *xá tré +tlá šabátə +várəla.* 'One, two, three weeks pass.' (A 1:6)
- (3) *+várəla +beràšəl* '(Time) passes (to) evening (= in the evening +berašə m.).' (A 36:10)
- (4) *cmá-šənnə +várəla.* 'Several years pass.' (A 40:6)
- (5) *'žsri xámša šánnə, tláy šónna +várəla.* 'Twenty-five years, thirty years pass.' (A 41:2)
- (6) *xá-cma yumánə +várəla.* 'A few days passed.' (A 45:15)
- (7) *b-šənnə, b-yárxəl bəjràšəla.* 'Years, months, go by.' (A 41:1)
- (8) *+tlá yumánə léla vāya, Natan! bəzyárəla.* 'It is not three days (i.e. hardly had three days past), (when) Natan swells.' (A 3:95)
- (9) *+oráva +al-mòrisəl* 'When morning broke (literally: (when) it entered upon the morning)' (B 12:3)
- (10) *'ánnə cmá yárxa| +tavvùyən.* 'For the last few months I have been searching.' (A 4:6)

- (11) *sàtvəla.* 'It is winter.' (B 9:5)
- (12) *+hála jàldəla.* 'It is still early.' (A 1:11)
- (13) *b-lèlə víla.* 'It became night.' (A 42:32)
- (14) *xašcùnəla.* 'It is getting dark.' (A 42:13)
- (15) *+xárta xá-yuma víla mü jára víla* 'aláha rxámlo +àllu. 'Then one day it happened, it happened in some way, God had mercy on him.' (A 54:1)
- (16) *c-oyáva* é-+*dān t-íva* *+múṭra xelánta bitáya,* *bədlápəva,* *bətráyəva.* 'It used to happen that when heavy rain fell, it leaked and became wet.' (B 17:35)
- (17) *dárranj vítəla kat-yálpi.* 'It has become too late for them to learn.'
- (18) *xáčča pyásəla katòlla.* 'It remains a little that he would kill her (= he almost kills her).' (A 36:9)
- (19) *xáčča pášla naplənva.* 'I almost fell.'

In the English translation of several of these examples nouns denoting periods of time are made the grammatical subject, whereas in C. Urmi these are complements to the 3fs. impersonal subject.

### 9.15.3 Impersonal Pronominal Reference

Other expressions with a 3fs impersonal pronominal subject or object element include:

#### Subject

- (1) *fárk lélə váda.* 'It makes no difference.' (A 3:48)
- (2) *+al-bàlila ána.* 'I remember (literally: it is on my mind).' (B 10:21)
- (3) *clítəla müjjur béta áva.* 'It depends how the house is.' (B 14:13)
- (4) *ju-matvátá* 'átvalan bátə prišəl clítəva *+al-nàšə,* müjjurra másalan cmá 'á 'íva +cásəb yán dolátmand. 'In the villages we had various houses, it depended on the people, for example, how poor he was or how rich.' (B 2:18)
- (5) *'én basmàlux,* *dríli xa-* +čáy. 'Please, pour me some tea.'
- (6) *+úxča tálja ci-* +rayyíva. 'ádi! xína áx kámta lélə. 'So much snow used to fall. Now it is not like before.' (B 2:19)
- (7) *cèpax-la.* 'It is up to you.' (A 39:39)
- (8) *+háypo-la kat-* átxa vòdlux. 'It is a pity you did that.'
- (9) *'én müjjura* +xlásłla +àllux, *talux* tlúb mònni. 'If you are in any difficulties, come and make a request from me.' (A 54:2)
- (10) *xvátlə xurbàšla* +álli. 'It has become mixed up and confused for me (= I am confused).'

- (11) *c-óya* 'átən *tarcáttə* yá 'úrxa.<sup>1</sup> 'You may abandon this path (literally: It may be that you abandon this path).' (B 16:8)
- (12) *c-óya* *tanúyə* 'It may be said.' (B 12:2)
- (13) *lé-'oya* *tanúvvə*.<sup>1</sup> 'It cannot be said (it is beyond words).' (A 42:34)
- (14) *ka-díyyux* *lèla* +*lázəm*.<sup>1</sup> 'There is no need of you.' (A 45:13)

### Object

- (15) *mànsila!*<sup>1</sup> *cul-víyya* *vìyyələ*.<sup>1</sup> 'Forget it! What has been has been.' (A 3:54)
- (16) 'ádi *maxzíyyànnə* *ka-díyyux* 'ána!<sup>1</sup> 'Now I'll show you!' (A 48:11)
- (17) 'íman *xmártux* +*tlájáha* +*arṭàla*,<sup>1</sup> 'ó-yuma mètət.<sup>1</sup> 'When your jenny farts three times, on that day you will die.' (A 32:2)
- (18) *pəšyalə* 'He farted (silently).'

The inanimate interrogative pronoun *mu* takes 3fs. agreement on the verb or copula, e.g.

- (19) *mù-ila* *vítə*?<sup>1</sup> 'What has happened?' (A 28:2)
- (20) *mú* *vítəla*?<sup>1</sup> 'What has happened?' (A 40:8)
- (21) 'ána *mú tíla* *b-riši*?<sup>1</sup> 'What has come upon me?' (A 3:52)
- (22) 'á *mú-títəla* *b-rišo*?<sup>1</sup> 'What has happened to her?' (A 1:12)
- (23) 'átxa *tíla* *b-riši*.<sup>1</sup> 'It happened to me thus (= This is what happened to me).' (A 10:4)
- (24) *lén-*+*bədда* *mù* 'odónna.<sup>1</sup> 'I do not know what to do.' (A 48:8)

In (25) the generic phrase *xa-məndi* 'something' has feminine gender:

- (25) *bi-yàmmi*,<sup>1</sup> 'álaha d-là-'avəd,<sup>1</sup> *xá-məndi* *tpòkla*<sup>1</sup> 'If anything happens to my mother, God forbid, ...' (A 44:2)

#### 9.15.4 *Gender of Metalinguistic Words*

When words that are not nouns are cited metalinguistically they are assigned feminine gender, e.g.

- (1) 'á *mádrə* *pállə* +*al-d-e-həč*.<sup>1</sup> ... *háč* *munšíyyàlə*.<sup>1</sup> 'He again fell on that (word) *həč* ... He forgot (the word) *həč*' (A 9:7–8)
- (2) *xáčča* *xír* *búš* *xelàntələ*.<sup>1</sup> '(The word) *xur* is a little stronger.'

When nouns are cited metalinguistically, masculine nouns are sometimes treated as masculine, e.g.

- (3) *la'usa díyyan 'ila.* ‘(The word) *la'usa* is indeed ours.’

On some occasions, however, masculine nouns are treated as feminine, e.g.

- (4) *scánta 'ila nàkva.* *scina lèla.* *scína 'ùrza vâyøla.* ‘(The word) *scánta* is feminine. (The word) *scina* is not, *scina* is masculine.’

Feminine nouns are always treated as feminine, e.g.

- (5) *jánta ka-vàrdø-zø 'ila.* ‘The word *janta* (“garden”) is also for flowers (in addition to vegetables).’

### 9.16 Adverbial Expressions

Many nominals are used with the function of adverbials without an explicit marking of their relation by a preposition.

The majority of these are temporal expressions, e.g. *xà-yuma* ‘one day’ (A 3:14), *'ó-yuma xína* ‘the next day’ (A 2:27), *'ád-lelø* ‘tonight’ (A 3:81), *cúl-lelø šíma* ‘during the whole night’ (A 1:40), *'é-+dana* ‘at that time’ (B 2:12), *tré +sa'àttø* ‘for two hours’ (A 1:41), *kèta* ‘in the summer’ (B 2:22), *sátva* ‘in the winter’ (B 2:19), *+cavútra* ‘at lunchtime’ (A 35:15), *+xa-+ràmša* ‘at dinnertime’ (A 35:15), *+šuràya* ‘in the beginning’ (B 11:5). The noun *yuma* ‘day’ lacks the final *-a* inflectional ending in some adverbial forms, e.g. *cúl-yum* ‘every day’ (A 37:18), *cùt-yum* ‘every day’ (B 2:19), *'ýdyu* ‘today’ (< \**adyom*).

Nominals without prepositions may function as spatial adverbials, e.g.

- (1) *'átlux xa-nàša!* *mattátla šòpux?* ‘Do you have a person to put in your place?’  
(A 3:14)
- (2) *für'un!* *brázølø šòpu.* ‘Pharaoh dries up in his place (i.e. on the spot).’  
(A 3:67)
- (3) *'o-cačáløt bràta míyyolø vâyøla málca,* *šópøt málca.* ‘The bald man who has brought the girl becomes the king, in place of the (real) king.’  
(A 1:24)
- (4) *'e-+dánøt lèx béta,* *xiša +bar +sèda,* *'útøn míyyan pràkøna!* *'ázøt xá xáčøa míyya mayyátlan.* ‘When we are not at home and have gone hunting, when our water runs out, you go and fetch us some water.’ (A 37:14)
- (5) *+pøllan díuctølø.* ‘He is in such-and-such a place.’ (A 3:50)
- (6) *háč dúca lát dásøtø b-dá šùpøra.* ‘Nowhere is there a plain of such beauty.’  
(B 2:14)

- (7) *síla bədráyələ mən-+táma +bəzzə +bəzzə.* ‘He sprinkles sand there in holes.’ (A 3:74)
- (8) *‘áni céca +bixalèlə.* *+tárrət dárta=zə švák̥tula ptíxa.* *bəxzáyələ +tárrət dárta=zə ’àttən.* ‘He eats the cakes. She has left the door of the courtyard open. He sees that there are some at the courtyard door.’ (A 37:4)
- (9) *xa-b-xá bəxzáyələ márzət +’áyna xá ... xa-náša dúlə dmíxa.* ‘All of a sudden he sees that there is a man asleep by the side of the spring.’ (A 37:7)
- (10) *bás xxílə xmára lélə +bašúrə ’ázəl ’ùrxə.* ‘But he saw that the donkey could not go on the road.’ (A 15:1)
- (11) *’át túy +táməl ’ána-da cálən dàpnax.* ‘You sit there and I shall stand beside you.’ (A 39:19)
- (12) *ķa-díyyax b-+yásrən dápñət dá tòra.* ‘I shall tie you by the side of this ox.’ (A 35:2)
- (13) *bába sávət-diyyan bətyávəna susavayè.* ‘Our forefathers sit on their horses.’ (B 16:4)

Parallel expressions are used with prepositions in some cases, e.g. *b-+kéṭa* ‘in the summer’ (B 2:8); *b-dápnu* ‘by his side’ (A 39:9). In (14) the adverbial has a preposition in the first of the parallel clauses but lacks it in the second:

- (14) *ķa-trè +sa’áttə malcútux hálla kày.* *tré +sa’áttə* *malcútux hálla kày.* ‘Give me your kingdom for two hours. Give me your kingdom for two hours.’ (A 1:41)

A prepositional phrase, however, sometimes has a different meaning from the adverbial without the preposition. The phrases *b-yuma* and *b-lelə*, for example, have the sense of ‘during the day-time’ and ‘during the night-time’, rather than ‘on the occasion of a particular day/night’ (*xa yuma*, *xa lelə*), as seen in (15)–(17):

- (15) *’ítə b-yúma* *bnàtə ci-yatvíva.* *+baǵvánə c-avíva* *kát jinávə +šúlə lā-’ativa.* ‘During the day the girls would sit. They would be garden-custodians so that thieves and so forth would not come.’ (B 2:7)
- (16) *b-lélə-da jvànkə c-azvíva.* ‘During the night the boys would go (there).’ (B 2:7)
- (17) *b-lélə* *vázzər mən-málca +plàtəna.* ‘At night the vizier leaves together with the king.’ (A 2:3)

On some occasions nominals without prepositions occur with verbs of movement to express the place of destination, e.g.

- (18) *+Axíkar| bərráxšəl bəta.* ‘Axíkar goes home.’ (A 3:16)
- (19) *bitáyəla bəta.* ‘He comes home.’ (A 37:15)
- (20) *+m̥t̥ili bəta.* ‘I arrived home.’ (A 4:14)
- (21) *bás ’ázax lábəlli betòxun.* ‘Then let us go, take me to your home.’ (A 37:11)
- (22) *’ázax +póllan dūcta.* ‘Let’s go to such-and-such a place.’ (A 3:23)
- (23) *’àxnan| ... +rába ducànə xíšəvax.* ‘We have gone to many places.’ (B 2:14)
- (24) *+m̥t̥ilan xa-dūcta.* ‘We arrived at a place.’ (A 2:32)
- (25) *b-+dánət +kèta| +álma c-azálva carmànə.* ‘In the summer the people used to go to the orchards.’ (B 12:1)
- (26) *lablívalun ’ärxa-’ətva.* ‘They used to take them to watermills that there were (in the villages).’ (B 2:9)
- (27) *+jór dá-baxta xóšlə karibùyta.* ‘The husband of this woman has gone to foreign lands.’ (A 2:7)
- (28) *’u-bàbi! škállun lubàllun| márzət šakita.* ‘They took my father away to the bank of the stream.’ (B 6:6)
- (29) *c-azáxva +slùta.* ‘We used to go to prayer (i.e. to the place of prayer).’ (B 5:6)

Spatial adverbs may be used in this way to express the goal of movement as well as static location, e.g.

- (30) *bərráxšəl +tāma.* ‘He goes there.’ (A 39:36)

In the attested examples, nominal phrases that express the goal are generally not limited by demonstrative pronouns, attributive modifiers or annexed items. When the destination is specified in such a way, a preposition is generally used, e.g.

- (31) *bərráxšəl +al-dò bēta.* ‘He goes to that house.’ (A 39:30)
- (32) *+al-+dàrva +túyra lá-’azət.* ‘Do not go to that mountain.’ (A 39:32)
- (33) *’ína xá ’úrxə bərráxšələ +al-xá Papārtmán<sup>P</sup> +rába +júrta šap̥ərta.* ‘There is a road that goes to a very large and beautiful apartment.’ (A 39:10)
- (34) *+m̥t̥ilan +al-dé-ducta kát málca márəla kàtuł* ‘We reached the place in which the king says to him ...’ (A 3:29)
- (35) *bitáyəla fu-bétat bàbu.* ‘He comes to the house of his father.’ (A 3:38)

Some adjectives are used adverbially to express the manner of action, e.g.

- (36) *e-dársət yúvvonva kátu kàmta lélə lípo bəxšávən +spày.* ‘He has not learnt well the lesson that I gave him some time ago.’ (A 3:87)

- (37) *jáns ci-bašòlva.* ‘It cooked well.’ (B 2:9)
- (38) *+rábá kùya hamzúmələ mən-báxtu!* *kat-*<sup>áni</sup> *+šàmmi.* ‘He speaks very loudly with his wife so that they can hear.’ (A 6:10)
- (39) *+raba xérba bányulə.* ‘He has built it very badly.’
- (40) *+rábá xérba +máryøva.* ‘He was very badly ill.’ (A 24:1)
- (41) *’átxa níxa püčpòčlə.* ‘He whispered softly like this.’ (A 19:2)
- (42) *níxa níxa níxa níxa!* *karbúnəla la-mdita.* ‘Very slowly she comes near to the town.’ (A 1:10)
- (43) *pláxli kàšya.* ‘I worked hard.’
- (44) *čarčúrəla xelàna.* ‘She is screaming loudly.’

The feminine form of the adjective *šapárta* ‘beautiful’ is used adverbially, e.g.

- (45) *jøllálə purziyyèla šapárta.* ‘She chopped the herbs beautifully.’ (A 36:12)
- (46) *’ína xáčča bùš šapárta márola.* ‘But he says it a little more beautifully.’ (A 3:77)

Note also the following expressions with the noun *+xəłta* without a preposition:

- (47) *+xəłta móxyula.* ‘He has hit him by mistake.’ (A 21:1)
- (48) *’át +xəłłat.* ‘You are wrong.’ (A 22:4)

An interrogative adverb of manner without a preposition is found in (49):

- (49) *mút +pósła +katłàxlə?* ‘In what manner shall we kill him.’ (A 37:19)

In (50) a loaned adverbial *+pyáda* (< Pers. piyādē) ‘on foot’ is used:

- (50) *+málla max-diyyi!* *’átəl +pyàda?* ‘Can a mullah like me come on foot?’ (A 14:7)

The form *kurbət* ‘near to’, which has the allomorph *kurb-* before pronominal suffixes, is used adverbially in a number of contexts, e.g.

- (51) *+báyyə ’ázəl kùrbo.* ‘He wants to go near to her.’ (A 1:6)

The abstract noun *duzuyta* ‘truth’ is used as an subjective evaluative adverbial without a preposition, e.g.

- (52) *lóbbi kòdlə duzúta káto.* ‘In truth, I felt sorry for her.’ (A 1:35)

# The Syntax of Verbs

## 10.1 Preliminary Remarks

The verbal forms are categorized here according to their structure. The categories include the forms derived from the present template (*patəx*, *patəxva*), the forms derived from past template (*ptəxlə*, *ptəxvalə*), the compound forms containing a resultative participle and copula or verb 'to be' (e.g. *ptixələ*) and the compound forms containing the progressive stem and copula or verb 'to be' (e.g. *bəptaxələ*). For convenience of reference, these designations, which are the templates of pattern I forms of the strong verb *patəx* I 'to open', is used to refer also to equivalent structures in weak and irregular verbs and to pattern II, pattern III and quadriliteral verbs.

## 10.2 The Function of Verbal Forms Derived from the Present Template

When discussing the function of forms derived from the present template, a distinction must be made between verbs with an initial radical /Ø/ in their morphological root and verbs with an initial strong radical in their root. The reason for this is that the distribution of preverbal particles such as *ci-* and *bət-* (§ 4.4.1., § 4.4.2.) on initial /Ø/ verbs is different from its distribution on verbs with a strong initial radical. Initial /Ø/ verbs are in general consistent and conservative in their use of the particles whereas in verbs with initial strong consonants the particles are sometimes elided. The divergent distribution of the prefixed particles in the two groups of verbs has arisen from differences in phonetic structure rather than any semantic distinction. The crucial difference, it would seem, is that in initial /Ø/ verbs the particle normally becomes the onset of the first syllable of the word, e.g. *c-azəl* 'he goes', *t-azəl* 'he will go'. Since the particle constitutes the onset of the syllable, it is protected from elision. When the particles are attached to a verb with an initial strong consonant, on the other hand, they frequently lose their own syllable nucleus and cluster with the onset, e.g. *ci-patəx* > [cʰpʰa:tʰɪx] 'he opens', *bət-šakəl* > [pʃa:kɪl] 'he will take'. In this environment they have become more vulnerable to elision. The transcription of the *ci-* particle has been normalized and is represented as *ci-* before strong consonants even where it loses its vowel. It is not represented in the transcription, however, where it is completely elided. Initial /Ø/ verbs

will be designated as class A and other verbs as class B. In the description of the function of forms derived from the present template, therefore, these two groups of verbs will be treated separately. Since class A is the more conservative one with regard to the preverbal particles, the main classification of functions will be based on the distribution of the particles in verbal forms from this group.

### 10.2.1 *patəx*

#### 10.2.1.1 Irrealis *patəx*

In general terms, it can be said that the irrealis *patəx* form expresses an action that has not been realized in the perception of the speaker but is only potential or an action whose reality is not fully asserted by the speaker. It is used in a variety of contexts. Most of its occurrences are found in syntactically subordinate clauses, though it is also used in main clauses. It expresses either a perfective aspect, referring to one punctual event, or an imperfective aspect, referring to an unbounded situation.

##### 10.2.1.1.1 *Deontic Modality in Main Clauses*

When the form occurs in main clauses, it usually expresses deontic modality, i.e. it contains an element of will, and in most cases the verb has a volitive ('I wish to ...') or an exhortative sense ('Let me, let us,' etc.). Such verbs can be used in all persons:

#### Class A

- (1) 'àna 'ázən.| 'I would like to go.' (A 39:4)
- (2) +'àxla.| 'She should eat.' (A 1:14)
- (3) 'ázax +póllan dùcta.| 'Let us go to such-and-such a place.' (A 3:23)
- (4) xáčča +'órənju-dan-+otàgj| 'I shall just go into these rooms.' (A 42:10)
- (5) kúdma 'átət.| 'You should come tomorrow.' (A 3:70)
- (6) 'ázət xa-tóra zònət| màyyat.| 'Go and buy an ox and bring it back.' (A 35:4)
- (7) lá-'azət +bár +šúpра| ... lá-'azət +bár +rába dàvəltə.| 'Do not go after beauty  
... Do not go after great wealth.' (A 3:11)
- (8) lá +'àxlət| lágma +hàram.| +'axlátłə lágma dùz| +spày.| 'Do not eat forbidden food. Eat proper, good food.' (A 3:9)

#### Class B

- (9) 'aláha ràxəm +al-màlla.| 'May God have mercy on the mullah.' (A 4:11)
- (10) còc nàkva la-šòkət.| cócat nàkva cíulla dòkət.| 'Do not leave female kind alive.  
Seize all female kind.' (A 2:11)

- (11) *'ína 'á-məndi=da tanànnə.*! 'But I shall (intend to) talk about this too.' (B 2:6)
- (12) *küdmə xazónnux.*! 'Tomorrow I shall (intend to) see you.' (A 3:74)
- (13) *méti cmá=t 'átlux látlux.*! 'May as many as you have and do not have die (= may all your family die).' (A 4:14)
- (14) *'ánnə +bérašə bašlátłun, kúdma 'ánnə bašlátłun!* 'In the evening cook these and tomorrow cook these.' (A 36:7)

Such deontic uses of *patəx* are sometimes preceded by an imperative of the verb *kayəm* i 'to get up' or the imperative form *xuš* 'go!', e.g.

- (15) *kú 'ázax bëta.*! 'Get up, let's go home.' (A 37:11)
- (16) *ku-+yärmax.*! 'Get up, let's be off.' (A 2:8)
- (17) *kúmun +tálax +gáltə.*! 'Get up, let's play a game.' (A 1:24)
- (18) *'údyu císi xuš-pálxa, 'ána +áxlən.*! 'Today let my stomach work and let me eat.' (A 25:1)

Irrealis *patəx* is used in some main clause questions expressing deontic necessity (must, ought to, should) or deontic possibility, i.e. permission (may, might, can, could):

#### Class A

- (19) *mù 'ódən?*! 'What should I do?' (A 3:35)
- (20) *mù tánən?*! *mú +amsən 'ódən kat-át +paxlätli?*! 'What should I say? What should I do for you to forgive me?' (A 3:54)
- (21) *taxmùnələ! mu-'avəd, mu-lá-'avəd.*! 'He thinks what he should do and what he should not do.' (A 3:73)
- (22) *ká-mu cül-yum 'átax kësa máyyax?*! 'Why should we come every day and bring wood?' (A 37:18)
- (23) *'at kam-ázət?*! 'Why should *you* go?' (A 39:4)
- (24) *'atən! xa-báxtə! mù-+amsat káti 'ódat?*! 'You, a woman, what could you do for me?' (A 5:3)

#### Class B

- (25) *dáx +katlànna?*! 'How could I kill him?' (A 3:50)
- (26) *mújjuryávvax 'áxnan?!* *mújjuryávvax +támma 'áxnan +tìna, cipa, mìyya?*! 'How can we give? How can we give here clay, stones, water?' (A 3:72)
- (27) *xá nišánka káti yávvət káti mójjur mòttəla?*! 'Could you give me a sign as to how she has died?' (A 1:17)

### 10.2.1.1.2 *Conditional Constructions*

The unrealis *patəx* form is sometimes used in the protasis of conditional sentences that refers to a possible situation in the future, e.g.

#### Class A

- (1) 'ən-́ázət +rába pàta yavvótlə| 'u-p-tànəl xmàra=da díyyila.| 'If you go and indulge him further (literally: give him face), he will say "Also the donkey is mine."' (A 14:11)

#### Class B

- (2) 'ən-tána ka-šámša clì| bət-càlyā.| 'ən-tána +muṭra +ri| bət-+ràyya.| 'ən-tána dúnýa clí bət-càlyani.| 'If he says to the sun "stop", it will stop. If he says "rain", it will rain. If he says "Stop world", it will stop.' (A 3:64)

### 10.2.1.1.3 *Temporal Constructions*

The unrealis form is also used in a subordinate temporal clause referring to a situation in the future which is presupposed to take place, e.g.

- (1) 'íman xmártux +flá,jáhə +arṭàla| 'ó-yuma mètət.| 'When your jenny farts three times, on that day you will die.' (A 32:2)
- (2) har-́átya làxxa| c-ázən +támma mən-+támma.| 'As soon as she comes here, I go there, from there.' (A 39:27)

### 10.2.1.1.4 *Subordinate Complements*

The unrealis *patəx* occurs in subordinate clauses that are complements of various verbs and expressions when the action of the verb in the subordinate clause is as yet unrealized relative to the time of the main verb. The form is used not only with present tense main verbs, but also with main verbs that have past time reference, in which the form takes the past reference of the main verb as its deictic centre.

In a number of cases the clause expresses some kind of deontic modality (wish, intention, permission, obligation), e.g.

#### Class A

- (1) cmá=t ... +byáyələ ́átə hàmzəm| lélə +bašùrə.| 'However much he wants to come and talk, he cannot do so.' (A 3:30)
- (2) cíllət +báyyət ́ódət b-ríšu vùd.| 'Do whatever you want to do to him.' (A 3:88)

- (3) *màrrəl* 'ána lè-+*bayyən* háč *xa*-+*šrəl* óya *ju-màta*, *ju-mdita*.| 'He said "I do not want any lantern to be in the village, in the town." (A 2:1)
- (4) *táni* *ka-nášux* *ṭina* +*kašiyə*, *carpiyčə*, *mìtya*, *cúlla* *'odílun* +*hàzər*.| 'Tell your people to prepare mud, tiles, bricks, water, everything.' (A 3:70)
- (5) *ána* +*byáyən* *mən-nášux* *lipəl* *mən-jú* +*átrət* *díyyux* +*árpa* *xamšá* *mən-dýánə* *kátı* +*jùvvab* *ódi*.| 'I want your learned men from your land to give me a response to four or five things.' (A 3:39)
- (6) *'axči* *ju*-+*átrət* *díyyi* áha *mónđi* *àvəl* 'ána lè *kablánnə*.| 'But I do not accept that this thing be in my land.' (A 2:12)
- (7) *dástur* *yávəl* *ka-vàzzər* *kát* ... 'a-+*šúla* *avàdlə*.| 'He gives a command to the vizier to perform this task.' (A 2:13)
- (8) *záhmat* *bərášax* *kát* *nùynə* *dókax*.| 'We are taking trouble to catch fish.' (A 9:3)
- (9) +*xàyəš* *vádən* | 'á +*bùsra* *'odátlə* +*tuyàtə*.| 'I would like you to make this meat into kebabs.' (A 11:1)

### Class B

- (10) *márət* *díyyi* *lélə* *xšíxa* *kat-ána* *átxa* *hamzámmən* *bàzu*.| 'My master does not need me to speak about him like this.' (A 3:64)
- (11) +*tlábloxun* *but*-+*zrùta* *katóxun* *xácma* *məndyánə* *tánən*.| 'You have asked me to tell you a few things about agriculture.' (B 2:1)
- (12) *málca-da* *yúvvəl* *dástur* *kat-cúllə* *panánnun*.| 'The king has given a command that I should eradicate everybody.' (A 2:17)
- (13) *kòl* *škólla* *mónni* *kát* +*ṭamrònna*.| 'She made me promise that I would bury her.' (A 2:35)

Necessity, deontic or epistemic, may be expressed by impersonal particles such as *jarəc* (and its phonetic variants), +*lazəm*, *majbur*, e.g.

### Class A

- (14) 'ána *jarəc* 'ázən' *jávəl* *cúllə* *dùnyə* +*xàdrən* | 'I must go and travel around the whole world' (A 4:1)
- (15) *jarí* é-+*dana* 'ázi *kèsə* *máyyi*.| 'At that time they must go and bring wood.' (A 37:13)
- (16) 'átxa *jarí* 'òdət. | 'You must do it this way.' (A 35:9)

## Class B

- (17) *fári* +*kàtlət káti* máttat *láxxa ju*-+*kóra cəs*-+*fòri* +*ṭamrətli* | *íta* 'ázət. | 'You must kill me and put me here in the grave with my husband, bury me, then go.' (A 2:34)
- (18) *ka-dánnə yál-súra mù fári bášli?* 'What should they cook for those children?' (A 52:4)
- (19) *lèva* +*lázəm buxári tápi.* | 'They did not have to light a stove.' (B 14:2)
- (20) *májbur=ilə šakálla báxta labəlla.* | 'He is obliged to take the woman away.' (A 1:8)

The irrealis form is used in clauses expressing purpose. In some cases these are introduced by subordinating particles and expressions such as *kat*, though in many cases purpose clauses are placed after the clause on which they are dependent without a linking conjunction, e.g.

## Class A

- (21) +*u-rába nášə* +*krílə* | *kát xá-məndi* 'òdi| +*palačíyyə*| +*pála ptáxəva*| *kátu* *kát* 'áha *yála* 'avíla. | 'He summoned many people to do something, fortunetellers, who read fortunes, in order for him to have a child.' (A 3:3)
- (22) *xá* +*rápsa ju*-+*xásu màxət* | *ázəl nápəl xa-yáccə* +*kazánča míyya* +*bərdáxa.* | 'Give him a kick on his back, so that he goes and falls into a huge pan of boiling water.' (A 42:8)
- (23) *hár* 'é-+*dána* | +*šadúrəna* *xa-xína* *xáčča* | *ázəl míyya mayyilun.* | 'They then send another one to go and get some water for them.' (A 37:16)

## Class B

- (24) *kòšun muyyélə* | *kat-áta* +*pháləš mónnux.* | 'He has brought soldiers in order to come and fight with you.' (A 3:20)
- (25) *màyuna* | *kat-+kátlila.* | 'They bring him to kill him.' (A 3:31)
- (26) *xa-*+*bózza bəšvákəna* | *kat-napásu lā-*+*katta.* | 'They leave a hole so that his breathing would not be cut off.' (A 3:36)
- (27) *ku-tálux* | +*pəllan-dúcta xazənnux* | *kát... yavvónna* +*átra ka-díyyux.* | 'Come, I shall see you at a certain place, in order to give the land to you.' (A 3:21)
- (28) *ána kúdmə t-àtən* | *ka-díyyux bánən béta* +*üllul.* | 'I shall come tomorrow to build for you a house above.' (A 3:70)

The irrealis form is also used in a variety of other subordinate complement clauses in which the action or situation expressed in the subordinate clause is potential in relation to the main verb rather than one that actually exists. It is commonly attested, for example, in clauses that are the complement of the verbs *+masə* I and *+bašər* II ‘to be able’:

### Class A

- (29) *c-+ámsət* *’ázət pàlxət.* ‘You can go and work.’ (A 34:1)
- (30) *’átən!* *xa-bàxta!* *mù-+amsat* *káti ódat?* ‘You, a woman, what could you do for me?’ (A 5:3)
- (31) *’án +msilun!* *’odílə nášət díyyux,* *’ána cíllə xàrjət!* *tláy šànnə!* *b-yarvánna kàtux.* ‘If your men can do this, I shall give to you all the expenditure of my land for thirty years.’ (A 3:44)
- (32) *’a-dáx c-+ámsən* *’ana-à-+šula* *’odánnə?!* ‘Oh how can I do this thing?’! (A 2:12)

### Class B

- (33) *c-+ámsax +hayyərràxlux?* ‘Can we help you?’ (A 4:5)
- (34) *lèlə +másə hámzəm.* ‘He cannot speak.’ (A 3:30)
- (35) *lélə +bašúrə hámzəm.* ‘He is unable to talk.’ (A 3:28)

It is used also after expressions of fear or caution, e.g.

- (36) *+bəzdáyən là +ámsət.* ‘I am afraid you will not be able.’ (A 35:1)
- (37) *+bəzdáyən xànkə.* ‘I am afraid it may drown.’ (A 20:2)
- (38) *hášyar vímun lá naplitun.* ‘Be careful you do not fall.’
- (39) *lótlə júr’at t-àtə.* ‘He does not dare to come.’

It is used in a complement of the verb *sap̄ər* I ‘to wait’:

- (40) *bəspárəna káat-málca ’átə.* ‘They wait for the king to come.’ (A 1:26)
- (41) *bəspárəx póxa ’atini.* ‘We wait for the wind to come.’ (B 3:21)

It is used in subordinate clauses with conjunctions such as *hal* that express the notion of ‘before’ relating to a future event that has not yet occurred, e.g.

- (42) *bašlàttun!* *hal-’ána ’átən.* ‘You should cook them before I come back.’ (A 36:14)

- (43) *hál +dérən 'átən| cōc nà́kva la-šò́kət.* ‘Before I return and come back, do not leave female kind (alive).’ (A 2:11)

The form is used in expressions such as (44) and (45), which express that an event is close in the future but still has not taken place:

- (44) *jálət-ivən pàrkən.* ‘I have almost finished.’  
 (45) *xáčča pyášla káṭəlla.* ‘He almost kills her.’ (A 36:9)

The irrealis form occurs in various other contexts where the speaker is not fully committed to the truth of the clause, e.g.

- (46) *bálcət 'átə.* ‘Perhaps he will come’  
 (47) *bálcət| 'ána jàni| 'ázən lablánna pídi xa-màndi.* ‘Perhaps I myself should go and take something by my own hand.’ (A 1:16)  
 (48) *bálcət +hayyərrənnux.* ‘Perhaps I shall (be able to) help you.’ (A 2:16)  
 (49) *baxšáven ká-díyyax xòšax 'átya mánno.* ‘I think you will like it (literally: your happiness will come from it).’ (A 40:3)  
 (50) *c-óya 'átən tarcáttá yá 'ürxa.* ‘You may abandon this path (literally: It may be that you abandon this path).’ (B 16:8)  
 (51) *dáx c-óya 'ána mayyánnun bëta?* ‘How is it possible for me to bring them home?’ (A 6:3)  
 (52) *lá 'adíyya ká-díyyi-da +káṭəl?* ‘Will he now not kill also me?’ (A 2:23)

In (53) an irrealis *patəx* form is used in a complement of a verb of perception in which the speaker denies having witnessed a situation. The verb here takes its past time reference from the matrix verb:

- (53) *'ásłan 'ána ju-xáyyi lénva xázya nýyna mən-+árra +pál̥ti.* ‘I had never in my life seen fish come out of the ground.’ (A 36:13)

#### 10.2.1.1.5 Generic Relative Clauses

The irrealis *patəx* form is used in relative clauses that qualify heads that denote a generic class. In such cases the speaker is not committed to the existence of a referent in the class, i.e. the class may be empty of referents in reality, e.g.

##### Class A

- (1) *náša lòt| káṭ-á-màndi 'aváḍla.* ‘There is nobody who can do this.’ (A 3:45)  
 (2) *lòtən| xá mòndi| fáv +'átra| káṭ| xəžbùyna 'ódət +'állu.* ‘There is nothing in the land that you can count on.’ (A 1:21)

- (3) *'o-nášət kát ... +al-málcət jànu| Pxáyānàt<sup>P</sup> ávəd,| +xèltə 'ávəd| +al-'alàha-zə vádələ| +xèltə.|* ‘A man who does treachery against his own king, who commits a fault, he commits the fault also against God.’ (A 3:38)

### Class B

- (4) *'avíni b-rīš-dó nášət xəzmān jánū| bné=t 'umtət jánū| +rappùlun,| +naxráy davəklun.|* ‘May it be on the head of a man who rejects his relatives, people of his own community, and takes on foreigners.’ (A 48:24)
- (5) *cut-mačəxlə| xá-dana +dínar b-yavənnə.* ‘Whoever finds it, I shall give him a dinar.’ (A 26:1)

The motivation for using the *patəx* forms in (6) is similar, in that they occur in a subordinate content clause that is bound to the correlative phrase *xa-’axča məndi* ‘some such thing’ which is unspecified:

- (6) *xa-’axča| məndi víla láxxa| kat-xá +tákər| báxtu mayyíla máttə cəs-+háji.| +háji +xárta kám +al-jànol| +xárta yávvəl ká-ríjū| lábəl +káṭlla.* ‘Some such thing has happened (namely) that a merchant brings his wife and places her with a pilgrim, the pilgrim then assaults her, then gives her to his servant to take away and kill.’ (A 1:43)

#### 10.2.1.2 Realis *patəx*

##### 10.2.1.2.1 Actual Present

The compound *bəptaxəla* form is normally used to express the progressive aspect, i.e. an activity that is taking place in the present or, in the case of stative verbs, a state that holds at the present moment ('actual present') (§ 10.11.1.1.). In the case of some class B verbs that denote a psychological state, such as *+bayyə* 1 ‘to want’, *+yat̪ə* 1 ‘to know’ and *+masə* 1 ‘to be able’, the actual present is sometimes expressed by the *patəx* form, e.g.

- (1) *fúr'un +báyyə +pàləš mónnux.* ‘Pharaoh wants to fight with you.’ (A 3:21)
- (2) *+báyyən xá-məndi tanónnux.* ‘I want to say something to you.’ (A 3:47)
- (3) *mú +báyyət ána káx yávvən?* ‘What do you want me to give you?’ (A 3:87)
- (4) *cúl-našə +yat̪ilə.* ‘Everybody knows him.’ (A 1:4)
- (5) *’áxnan là-+msax mónnux xáyyax.* ‘We cannot live with you.’ (A 37:22)

In (6) a deictic copula introduces the verb, indicating that it relates to the current situation. The effect of the use of the far deictic copula is to express the emotional attitude of the speaker to an upsetting situation out of his control:

- (6) *'ína véna +báyyi šaklilə m-ídan.* | ‘But there they want to take it from our hands.’ (A 38:10)

The *patəx* form of these psychological verbs is used also to express the narrative present. With other verbs this is normally expressed by the *bəptaxələ* form (§ 10.11.1.3.):

- (7) *'áha hár +báyyə ràkəd,| pálju npálələ l-à-jiba| pálju l-ò-yba.* | ‘As soon as he wants to dance, one half of him falls on one side and the other on the other side.’ (A 39:14)

The *bəptaxələ* form is also used to express the actual present and narrative present of psychological verbs (§ 10.11.1.1., § 10.11.1.3.).

#### 10.2.1.2.2 Habitual

The present habitual is often expressed by the *ci-patəx* form with the habitual prefix *ci-*. Sometimes, however, the *patəx* form of class B verbs is also used to express the present habitual, e.g.

- (1) *+kusárta mattila.* | ‘They put a cooking pot (on the stove).’ (B 14:1)  
 (2) *+taptəppàlə-xina,| míyya lè-’ati ’áltəx,| ’àtxa vâyala.* | ‘It (the roller) knocks it down and the water does not come down. It is like this.’ (B 14:10–11)  
 (3) *b-xá +čap̪pálta ’ána ... ’arþí dánə dévə +másən +katlənnun.* | ‘With one (blow of) a club I can kill forty devils.’ (A 37:8)

Habitual *patəx* forms are sometimes used with past time reference within passages relating to habitual activities in the past that are expressed by past habitual forms, e.g.

- (4) *’ítə +berašvànə-da| kat-’ärxa ’atíva| ju-dó bét tanùyra| mattívalun xá-dana mìz| ’átxa mátti +al-pátət tanùyra,| yan-là,| xá-dana +àdyal dári| násə ’aklatè p-čambəllívalun ju-do tanùyra,| cílla šaxinə.* | ‘Then in the evenings, when guests arrived, in that oven house they laid for them a table, they lay it thus on the top of the oven, or if not, they lay out a blanket and the people used to dangle their legs in the oven, all (keeping) warm.’ (B 14:2)

#### 10.2.1.2.3 Narrative Sequential

In a few case the *patəx* form is used in narrative to express a realis event that is sequential to what precedes. This is attested in narratives recorded in Canda (Georgia), e.g.

- (1) *májjøt=da* 'á náša xèšla, **jášək** ó bétu súra víyyøva xá yácca máx bátøt málca víyyøva.<sup>11</sup> 'Indeed the man went off and sees that his small house had become huge.' (A 54:5)
- (2) +*xárta xá +sedáči børràššøva, børráššøva +bar +sèdu xína.* **jášəkni** 'ína' á +*tála bøsyákøla +al-’ilána.* 'Then a hunter was going after his prey. He sees that the fox is going up the tree.' (A 53:3)
- (3) *mórrø xá xázzøn mó vàdølø.* **jášək** 'ína 'ánnø +zàyøl síra sirè, +vásta +vøstè +hayvánø bøxyøna, **čarčürøna.** 'He said "Let me see what he is doing." He saw that the young are yelling and whining, the poor beasts are crying, and screaming.' (A 53:3)
- (4) *mádrø tila, mòdrøl +xølla, **jáška** én +záyo lát, +xilèlø.* 'She came back again, again it ate (the young), she sees that the young are not there, it ate them.' (A 53:2)
- (5) +*bakúrøla mæn-dà,* +*bakúrøla mæn-+dàvva lát +ákúbra.* **léna** xázyu hòč náša.<sup>12</sup> *úza xázza **jáška** +ákúbra* 'ína vélju- +xlíyløt brún-málca 'She asks this one and asks that one, but there is no sign of the mouse. Nobody has seen him. Then she goes and looks, she sees that the mouse is at the wedding of the son of the king.' (A 52:5–6)

As can be seen, this construction is predominantly attested with the verb *jášək* 11 'to look, to see' after a verb of movement. It is frequently the case that a verb of movement is followed by an irrealis *patøx* form expressing purpose, i.e. an action that is as yet unrealized from the temporal viewpoint of the verb of movement, e.g.

- (6) *xášla báxta +tárra patxàlø.* 'The woman went to open the door.' (A 18:2)
- (7) *børréšxøla b-’àmi* +*’óra +al-dàfíbøt +’átra.* 'She goes in a boat to cross to the other side of the land.' (A 34:8)

In examples such as (1)–(3) the syntax is the same but the temporal viewpoint is reset with the *patøx* form and it is used to express the event directly. It can be regarded as a form of result clause 'he went with the result that he saw'. It is significant to note that subordinate purpose clauses and result clauses share syntactic features, notably both may be introduced by the subordinating particle *kat* (§ 14.5.3.). In such cases, however, the verb of the result clause has a form that is typically used to express realis events (e.g. *ptaxla*, *bæptaxalø*, *ptixalø*). In the construction described here the irrealis verb form has been retained to express realis function. Example (5) shows that the use of realis *patøx* forms in narrative has been extended also to contexts where there is no preceding verb of movement.

Syntactic evidence for the fact that the *patəx* form should be interpreted as realis includes constructions such as (8). Here the *patəx* form follows a subordinate temporal clause and so the verb must be realis sequential:

- (8) *t-íva xášle +al-+sèda,| jáški +al-xá 'ilàna tóvtəla xá šapárta máx +šrám bəlláya bràta.* ‘When they had gone hunting, they saw sitting on a tree a beautiful girl shining like a lantern.’ (A 56:1)

### 10.2.2 patəxva

#### 10.2.2.1 Irrealis patəxva

##### 10.2.2.1.1 Conditional Constructions

The *patəxva* form is used in the protasis of conditional sentences that refer to a hypothetical condition in the past, which was not fulfilled (1), or to a hypothetical condition in the present or future, which the speaker assesses will not be fulfilled (2). Such hypothetical conditions refer to a single event (perfective) or a continuous situation (imperfective):

- (1) *'ən-+bakròtva,| bət-yavvónvalux zìlyza,| 'ína là +buķorrux.* ‘If you had asked, I would have given you money, but you did not ask.’  
 (2) *'ən-+masənva,| bət-'atənva.* ‘If I could, I would come.’

Examples from the text corpus:

- (3) *'ən-'ávənva jáni=da +al-xmàra,| káy=da b-lablìva.* ‘If I myself had been on the donkey, they would have taken me also.’ (A 26:2)  
 (4) *'ən-+yattíva mádrə 'àna,| lè tapíva.* ‘If it knew (that it was) me again, it would not light.’ (A 23:3)  
 (5) *'atətva,| ju-cúlla 'ánnə +xabrána ci-yavvótvala +jùvvab.* ‘If you would come, you would respond to all these requests.’ (A 3:45)  
 (6) *'án xá-xta maxìva,| +'áv bát-xayyìva.* ‘If he were to strike again, he would live.’ (A 39:13)

It is used in related deontic expressions without the conditional particle, which broadly have the sense of ‘if only ...!’

- (7) *xá-ja xítə=zə +Axíkar xazənvalə,| tapáķva bìyyi,| 'áxči pàti ketáva ju-pàtu,| báss=iva.* ‘If only I could see Axiqar once again, if only he could meet me again, if only my face could touch his face, that would be enough.’ (A 3:46)  
 (8) *'ávənva +xlápux +Axíkar.* ‘Would that I were your substitute, Axiqar.’ (A 3:60)

- (9) *'ídux +šamṭàva!'* 'May your hand break! (said to somebody who hits a child)'
- (10) *+axláva mən-rišux!* 'May (what you stole) bring bad fortune to you' (literally: May it eat from your head)
- (11) *+sansòpva,| ka-mú mána +šmòtlux?* 'May it smart! Why have you broken the pot?' (curse)

#### 10.2.2.1.2 Subordinate Complements

The *patəxva* form is used in the various subordinate complement clauses that the *patəx* form is used in. It has past tense reference and is dependent, in principle, on a past verb, which may express perfective or imperfective aspect, e.g.

#### Class A

- (1) *šaṭxìvalə| én míyyu mən-ʃávu 'azíva.* 'They spread it out in order for its water to reduce.' (B 3:16)
- (2) *+bílun +kàtli,| 'ína 'aláha la-švàkla,| kat-’atónva làxxal +juvvab díyyux yavvònvala.* 'They wanted to kill me, but God did not permit this, so that I could come here and give you your answer.' (A 3:69)
- (3) *'íta b-yùma! bnàtə ci-yatvíva.| +bağvàna c-avíva| kát fináva +šúla là-’atíva.* 'So during the day girls would sit (there). They used to be vineyard-keepers so that thieves and so forth would not come. Birds too used to come to eat the grapes.' (B 2:7)
- (4) *xéšlux cəs-nàšə xínə| kat-’áni lá-+msiva (= la-+'amsíva) kátux 'odíva.* 'You went to other people, who could not do this for you.' (A 3:5)
- (5) *'ína +'úxča sivəva müttuva ju-xá ... +kərtàla| ju-ctàna| kát là-+ajjəzva +págru.* 'But he was so aged that they had placed him in a basket, in cotton, so that his body was not harmed.' (A 2:14)
- (6) *káti +bətlabəva còmac 'azónva +állu.* 'She had been seeking me in order to go and help him.' (A 2:33)
- (7) *'íta látva +mašinə=zə| kát b-+mašinə nášə 'azíva 'atíva.* 'So there were no cars, so that people could come and go in cars.' (B 2:12)
- (8) *'ít nášə láxma lè máčxi +axlíva.* 'There were people who did not find bread to eat.' (B 3:36)

#### Class B verbs

- (9) *tàlfə| jári +rappáxvalə m-+ál-jàra,| cùl yùma.* 'We had to throw off the snow from the roof every day.' (B 2:19)

- (10) *'ánnə +'ánnə jári jařívalun b-+xasé móñ cárma hálju-čáraz.* ‘They had to carry these grapes on their backs from the vineyard up to the winepress.’ (B 12:2)
- (11) *ju-’érxa ci-taxnívalun| c-odívalun kámxa| kat-mayyíva ju-bátə| làxma yapíva.* ‘In the water-mill they used to grind it and make it into flour, in order to take home and bake bread.’ (B 2:9)
- (12) *xá-dana stíyna-da xút ci-maxíva móñ-+’árral hál +támma| kát là taláxva.* ‘They used to place a pillar underneath (coming up) from the ground up to there, so that it would not collapse.’ (B 2:19)
- (13) *xàšla cásłu| kat-šákálvala ziłyza.* ‘He went to him to take money.’ (A 1:2)
- (14) *’áha=zə léva +bašúrə hamzámva móñ +háji.* ‘So he did not manage to talk to the pilgrim.’ (A 1:16)
- (15) *’ána munšíli tanyánvalux.* ‘I forgot to tell you.’ (A 5:16)
- (16) *xáčxa péša ’ána +mažónva +’al-kárkáptət +tùyra.* ‘I had almost reached the top of the mountain’ (literally: little remained that I reach the top of the mountain)

In (17) the *patəxva* is dependent on a present form (*le-patəx*) deontic verbal expression *le-*-*oya* ‘it is not possible’:

- (17) *lé-’oya náša jávu xayyíva.* ‘People could not live in it.’ (A 1:26)

#### 10.2.2.1.3 Generic Relative Clauses

The form is used in a relative clause that has a head noun denoting a class rather than referring to a specific referent, e.g.

- (1) *xa-móndi-da látva ’ána +’axlónva.* ‘Moreover there was nothing that I could eat.’ (A 36:10)
- (2) *látva náša ’azíva pešíval xá télo.* ‘There were not many people who went and stayed for a night.’ (B 1:33)

#### 10.2.2.2 Realis *patəx*

##### 10.2.2.2.1 Past Habitual

In class B verbs the *patəxva* form without a prefix is very frequently used to express past habitual action, e.g.

- (1) *e-+dánət zamàrva,| ’ána +šammónva. +yatłónva málca ’étlə +’súla mónni. c-azónva cásłu.* ‘When he sang, I used to listen. I knew that the king had work for me. I used to go to him.’ (A 3:81)
- (2) *cúlla dínyə +yatłávalə.* ‘The whole world used to know him.’ (A 3:1)

- (3) +*Axīkar* | *xùbba maxzíva ̄ka-dá ̄axúna.* | ‘Axiqar used to show love to this brother.’ (A 3:17)
- (4) *sèpīl maxánvala +al-cipa* | +*čambərrənvalə.* | ‘I used to strike my sword on a stone and split it.’ (A 2:25)
- (5) *‘ù-sepət díyyīl ̄icət maxənvalə c-odánvalə trè.* | ‘Wherever I struck this sword of mine I used to make him two (i.e. I split my victim in two).’ (A 2:28)

#### 10.2.2.2.2 Past Habitual Temporal Clauses

The *patəxva* form of both class A and class B verbs occurs in temporal clauses with habitual aspect that set the time frame for what follows. These may be introduced by a temporal conjunction or may be asyndetic:

- (1) *‘íman=ət xá náša +fúra +avərvəl jári kemátvə +al-‘àklux.* | ‘When an old person entered, you had to get up onto your feet.’ (A 1:16)
- (2) *+oráva +al-mòriša* | *é-+dān ̄atíva ̄ánnə míyyət +árvə kát c-avíva xvìtəl ̄áx míyya +tinànəl ̄ka-mòriša c-avíva ̄ax=t-‘ámri +sápyə ̄ax-zýa.* | ‘As morning broke, when they came, the grape juices that were mixed, like muddy water, in the morning they were, as they say, clear as a bell.’ (B 12:3)
- (3) *‘íta +berašvànə-dəl ̄kat-‘árxa ̄atíva| ju-dó bét tanùyra| mattívalun xá-dana mīz.* | ‘Then in the evenings, when guests arrived, in that oven house they laid for them a table.’ (B 14:2)
- (4) *míyya é-+dān +múṭra tálja +šúla +rayyíva ju-béta lè +salíva.* | ‘When it rained or snowed and so forth water would not come down into the house.’ (B 2:22)

The lack of *ci-* even in class A verbs is significant and can be interpreted as having a discourse motivation in that a form of light coding is used to express discourse background. This contrasts with the use of the heavy coding of *ci-patəx* form to express discourse prominence (§ 10.2.3.1.).

#### 10.2.2.3 Continuous Situation in the Past

We have seen in § 10.2.1.2.1. that a small set of verbs denoting mental processes or states are used in the *patəx* form to express a situation that holds in the actual present but is not necessarily a habitual property of the subject. When such verbs are used in the *patəxva* form, they may denote, accordingly, a continuous situation at a particular period in the past rather than a habitual property of the subject, e.g.

- (1) *xá +dāna| bābət díyyux=zəl +bayyíva +katlívalə.* | ‘Once they wanted to kill your father.’ (A 3:34)

- (2) +*haramíyyə lùbluva* +*fóro*! +*báyyiva* +*katlivalə*.| ‘Brigands had taken her husband and they wanted to kill him.’ (A 2:33)
- (3) ‘*u-caçàla-da* *yámmu* +*yattàva* | *kat-xá-məndi tunilə* | *t-avàdla*.| ‘Now, the bald man—his mother knew that if he said something, he would do it.’ (A 1:14)
- (4) *cúllə* +*yattìva ka-* +*uydálə-xina*.| ‘Everybody knew one another.’ (A 5:10)

### 10.2.3 ci-patəx

#### 10.2.3.1 Habitual

This is the common form for the expression of the present habitual in both classes of verbs, e.g.

- (1) *har-àtxa násə c-odílun* ‘adíyya.| ‘The people make them the same way now.’ (B 14:12)
- (2) ‘*árrna məššálmána c-ázi Màcca*.| ‘The Muslims go to Mecca.’ (A 1:3)
- (3) *mən-dá* +*áyna c-àtaxl* *mìyya ci-šákłaxl* | ‘*a-mzída ci-màlyaxl* | *ka-xá šábtət diyyan*.| ‘We come and take water from this spring. We fill this waterskin for us for one week.’ (A 37:11)
- (4) ‘*áxnan jànan-zə mádra* ‘o-+*šúla c-odàxlə*.| +*yánə c-àzaxl* | *ci-zónax* +*ànvəl ci-* +*marçàxlunl* | *ci-bašlàxlun*.| ‘We still practice this tradition, that is we go and buy grapes, we crush them and cook them.’ (B 12:9)
- (5) +*àrra* | *cmá-t* ‘*óya macàxta* | *buš-mìyya c-ázi jávo*.| ‘*ína* +*arra-óya* | *kvítal* *míyya ju-dreté míyya c-àzi*.| ‘The more soft the ground is, the more water sinks into it. But if the ground is hard, when water is poured out, it flows away.’ (A 3:11)
- (6) +*šàda* | *kàmta* | *ci-yávva* +*ṭàrpəl* +*xárta* | *ci-yavvála* +*ṭùnto*.| ‘An almond tree first produces leaves and then produces its fruit.’ (A 3:12)
- (7) *bitáyəla mən-*+*táma ci-*+*karíla* *šamašùyta*.| ‘What they call a sun-ray comes from there.’ (A 3:73)
- (8) *xá-sama xína-da* +*álma* ‘*áttən* | *kat-ci-táni* | *mən-jíbat* | *nipùxta* | ‘*méye poxtè*.| ‘There is another group of people who instead of *nipuxta* say *meye poxtè*.’ (B 12:8)

The *ci-* prefix in class B verbs expressing the habitual is sometimes omitted by certain speakers (§ 10.2.1.2.2.). There is often a discourse pragmatic motivation for this. The particle tends to be omitted in sections of the text that have a lower level of prominence than sections with verbs that contain the particle. This is seen clearly in (9) in which the speaker describes the measures taken to protect roofs from leakage of water with *ci-patəx* verbs. He recapitulates the final stage of the process with a *patəx* verb. Recapitulated material was no doubt

considered to require less expression of prominence than the first description of the process:

- (9) *xá-xa-ja kat-jàrə́ míyya bitáyəna bədlápəna,| c-àti,| mòlxə ci-dári +al-járə,| mòlxə baruzta-xina,| ci-barbòzzi +allu.|’ita móndi max-dáyən ci-+max-dárri +al-járə,| ci-+taptəppálə.|| +taptəppálə-xina,| míyya lè-’ati ’òltəx.|’àtxa váyəla.| ‘Sometimes when the roof—water comes and leaks, they come and put salt on the roof. They scatter over it dry salt. Then they roll something like this (i.e. like a roller) on the roof and it knocks it down. It knocks it down and the water does not come down. It is like this.’ (B 14:10–11)*

In (10) the narrator gives a warning particular weight and prominence by using uncontracted forms of the *ci-* particle and even retains the laryngal before the form *’atə*:

- (10) *màrəna| xzil’ áha mítət díyyan| ci-kám,| ci-’atə.|| máttimunlə +rába ’òltəx.|‘They say “Look, this dead of ours rises and comes back. Put him very deep (in the grave).”’ (A 6:11)*

Some speakers of the northern variety of the dialect use a form with a *’i-* prefix in free variation with the *ci-patəx* form, e.g.

- (11) *’ó +bər-+zárra ’i-daráxlə +tāma.|‘We put the seed there.’ (B 3:23)*  
 (12) *’ó yùma| yálə súrə ’i-+xàdri| yaskíva jaravàta.|‘On that day the children go around and climb on the rooftops.’ (B 5:9)*

### 10.2.3.2 Actual Present

The *ci-patəx* form is used to express the actual present of some verbs denoting internal psychological processes or states, rather than a habitual situation, e.g.

#### Class A

- (1) *’a-dáx c-+ámsən ’ana-’à-+šula ’odánnə?!|‘How can I do this thing?!’ (A 2:12)*

#### Class B

- (2) *’ána ci-+bàyyən| +x̥títi tanənna,| modənna kátux.|‘I want to tell my sin, confess it to you.’ (A 3:48)*

- (3) *hállə p-ídət dìyyi!* ‘ána ci-<sup>+</sup>yáttən mu-p̄t-ódən b-rišu.
- ‘Give him into my hands, I know what I shall do to him.’ (A 3:26)

As shown in § 10.2.1.2.1., the *patəx* form of the class B verbs <sup>+</sup>*bayyə* I ‘to want’ and <sup>+</sup>*yattə* I ‘to want’, is also used to express the actual present. The function of the *ci-* pattern is to express a heightened degree of prominence of the psychological process in the subjective assessment of the speaker. In (2), for example, the construction is used to refer to the strong desire of the speaker to confess something that has been on his mind. In (3) the prominence is heightened by a contrastive opposition ‘I certainly know whereas you do not’. The class A verb *c-+aməs* ‘he is able’ regularly has the *ci-* particle.

#### 10.2.4 ci-patəxva

In class A verbs the *ci-patəxva* form is the normal means of expressing repeated, habitual activities in the past, e.g.

- (1) *e-+dánət zamərvə,* ‘ána +šammənva. <sup>+</sup>*yat̄tónva málca* ‘átlə <sup>+</sup>*šúla mánni,* *c-azərnva cásłu.* ‘When he sang, I used to listen. I knew that the king had work for me. I used to go to him.’ (A 3:81)
- (2) *’ítə b-+danət* <sup>+</sup>*kéṭal* <sup>+</sup>*álmə c-azálva carmàṇə* <sup>+</sup>*ánvə ci-+jammìvalun.* ‘So, in summer time, people would go to the vineyards and gather grapes.’ (B 12:1)
- (3) *+bár ’ánnə míyyət* <sup>+</sup>*ánvə ci-darívalun ju-+taǵàrəl* <sup>+</sup>*átvə xá ... mán ’ùpra,* *c-azíva mən-xácma* <sup>+</sup>*rumyátə tám̄məz,* <sup>+</sup>*ci-mačxívaləl* <sup>+</sup>*b-šámmət* <sup>+</sup>*xoràna.* *ci-mayyívaləl* *xáčča mənné ci-+xoṭívalun ju-dánnə míyyət* <sup>+</sup>*’ánvə.* ‘After they poured the grape juice into the bins, there was (a kind of) soil, they used to go to some clean hills and find it, (it is known) by the name of <sup>+</sup>*xorana*. They used to bring and mix a little of it with the grape juice.’ (B 12:3)
- (4) *’ítə mən-dánnə míyyət* <sup>+</sup>*ánvə +sàpyəl* <sup>+</sup>*ci-šákłíva xáčča* <sup>+</sup>*ci-darívalun ju-+tiyan.* *xáčča* <sup>+</sup>*xvárət bíta ci-+tarpíva ci-maxívəjavé.* ‘So from this pure grape juice they used to take a little and pour it into a cauldron. They used to beat a little egg-white and throw it in it.’ (B 12:4)
- (5) *’á ... míyyət* <sup>+</sup>*ánvə ci-+mardəxxívalun* <sup>+</sup>*xa-pàłjət* <sup>+</sup>*sá’at,* <sup>+</sup>*bálcət* <sup>+</sup>*árpi xamšā* <sup>+</sup>*dakíkə,* <sup>+</sup>*clítəla* <sup>+</sup>*al-+furýytət* <sup>+</sup>*tiyan.* ‘They used to boil the grape juice for half an hour, or perhaps forty-five minutes, depending on the size of the cauldron. Then the juice would come out as grape molasses.’ (B 12:5)
- (6) *’o-+tájər ka-dá cačála* <sup>+</sup>*ràba ci-+bayyíva.* ‘The merchant used to like this bald man very much.’ (A 1:2)

Some speakers regularly attach the particle *ci-* in front of past habitual forms of both classes. Other speakers, however, omit the *ci-* particle from class B verbs in certain cases. In sections of discourse in which habitual *ci-patəxva* forms and *patəxva* forms interchange, the *ci-patəxva* forms tend to be used to express the main events to which the speaker wishes to give particular prominence, whereas the *patəxva* forms are typically used for clauses that are elaborative or recapitulative of what precedes. This applies to the following examples:

- (7) *'inal xīna mən-carmānə, niþūxta ci-baþlīva. | +'ānvə mayyīvalun ju-čarāzəl +marþīvalun, | šīra! 'īta ju-+tiyānə darīva. | xuté mallīva nīyra! niþūxta baþlīva.* 'Also from the (produce of) the vineyards they would cook molasses. [main event] They used to bring the grapes in water-jugs, they used to press them and pour the must into cauldrons. They used to light a fire beneath them and cook molasses. [elaboration]' (B 2:4)
- (8) *tluvə ci-+tarsīva. | +'ānvə har-hàdəl tàza! čamballīvalun! jú ... čuxyàtə.* 'They used to make preserved grape-clusters. [main event] They used to hang up grapes, exactly as they were fresh (from the vineyards) in cellars. [elaboration]' (B 2:4)
- (9) *'ána jàni=zəl jú xá šítə +'ám jvánkə m-+uydálə 'á-+šula vīdux. | jinávə c-atīva doþaxvalun +súla.* 'I myself together with the lads did this task for a year. [main event] Thieves used to come and we used to catch them and so forth. [elaboration]' (B 2:7, note that the class A verb *c-atīva* has the *ci-* particle in the elaborative section)
- (10) *ju-matvátə 'átvə jarjárəl 'ánnə ci-lablīvalun ju-+budràtə. | b-jarjárəl b-kən-yànəl yán tòrəl yán xmàrəl 'ánnə jaršīva. | xáttə ci-+paltīvalun! mən-ju-búlət +xàttə.* 'In the villages there were threshing-machines. They used to take these to the threshing floors. [main event] With the threshing-machines—with cattle, or oxen or asses, these used to pull (the machines) [elaboration]—they used to extract the wheat from the ears of wheat. [main event]' (B2 8–9)
- (11) *+atúráyət díyan báþkaléval mən-dáštət 'Úrmi labuléva la-dó-rišət +'átra! +Köçan, | Måšad, | la-dán jibānə! ... +'ávun šakálvalun mayyīvalun +táma.* 'He took our Assyrians from the plain of Urmi and deported them to the far end of the country, Kochan, Mashhad, to those parts. [main event] ... He took them and brought them there. [recapitulation]' (B 2:16–17)

In (12) the heavy *ci-patəxva* form is used at the end of the chain of clauses describing the process of producing wine whereas the light *patəxva* forms are used before the end of the chain. The *ci-patəxva* forms in (13)–(15) mark closure in a similar way:

- (12) *šatxivalə| ̄én míyyu mən-jàvu ̄azìva.| +xárta +mar̄xivalə| darívalə ja-ka-dàlə| xá-cma yumána pàšva| +xárta púmmu ci-+mačrivalə.* ‘They spread it (the collection of grapes) out in order for its water to reduce. Then they squashed it and put it into pots. It remained thus for a few days then they sealed its (the pot’s) mouth.’ (B 3:16)
- (13) *bí +tásá šakliva,| ja-vádrə maliva,| mayyáva mattíva ja-pí-palgət màjləs.| ’ita’ ci-+maxdárriva bí +tásá.* ‘They took it with a cup, and filled buckets with it, then they brought it and placed in the middle of a gathering (of people) and handed it around in a cup.’ (B 3:17)
- (14) *’áttən háda banívalun.| ’áttən cíllə bí +tina ci-banívalun.* ‘There were some who built like that. There were some who built them all with mud.’ (B 3:37)
- (15) *cəšmíšə yavvívalun,| jòzə yavvívalun,| tlùvvə ci-yavvívalun.* ‘People gave them raisins, they gave them walnuts, they gave them preserved hanging grapes.’ (B 5:9)

Another strategy that is found is for the *ci-* to be attached only to the first of a chain of clauses, in this case the heavy form marks the onset of a discourse section rather than the closure:

- (16) *ci-+zarríva +xazdívala| ̄odívala jùttə| +morívala ju-+ambára ka-kənyàna.* ‘They sowed it (the clover), harvested it, made it into balls and brought it into the storerooms for the cattle.’ (B 10:10)

Some speakers of the northern variety of the dialect sporadically use the form *’i-patəxva* in place of *ci-patəxva*. In the majority of cases, however, such speakers use forms with the particle *ci-*:

- (17) *màsta ’i-dokíva| +càrra ’i-dokíva.* ‘They used to produce yoghurt, they used to produce butter.’ (B 2:10)
- (18) *nipúxta ’i-bašlva.* ‘They would cook molasses.’ (B 3:13)

In (19) the speaker uses both forms in parallel:

- (19) *b-léla ’i-damxàxva| b-yúma ... ci-yatvàxva.* ‘We slept at night and sat in the day.’ (B 3:20)

### 10.2.5 bət-patəx

#### 10.2.5.1 Predictive Future

One of the basic functions of the *bət-patəx* form is to express the future tense. In cases where the subject of the verb is 3rd person or where it is a non-agentive 1st or 2nd person, this is generally a predictive future, e.g.

- (1) *dīva p̄t-+axálli.* ‘A wolf will eat me.’ (A 37:5)
- (2) *’a-’ádi bət-ķám bət-+axállux.* ‘He will just now get up and eat you.’ (A 39:11)
- (3) *+pállan yúma,* *+pállan +tárax* *málcat Måssər,* *für'un,* *hámla t-ávəd +’állux.* ‘On such-and-such a day, on such-and-such a date, the king of Egypt, Pharaoh, will attack you.’ (A 3:20)
- (4) *+’árun p̄t-ávə ķa-sebúytux* *’e-+dān-sàvlux,* *t-ávə brùna ķátx.* *’e-+dān-màtlux,* *+’aynuxt p̄-+čámla.* ‘He will be for your old age when you have become old, he will be a son for you. When you die, he will close your eyes.’ (A 3:6)
- (5) *bəl-díyyi* *bəl-díyyux* *’aláha t-ávəd +dīvan.* ‘God will hold a court (and judge) between me and you.’ (A 3:93)
- (6) *’áha xá-yuma xa-+càtra t-ávə ķa-díyyan.* ‘He will be a problem for us one day.’ (A 37:19)
- (7) *+bəddáyələl móriša jàldəl málca* *p-+šádər +bàru.* ‘He knows that early in the morning the king will send for him.’ (A 1:39)

#### 10.2.5.2 Deontic Future

When the verb has an agentive 1st singular subject, the *bət-patəx* form generally has a modal sense expressing deontic intention, e.g.

- (8) *’ána p̄t-ázən ķa-xa-yàrxa.* ‘I shall go away for a month.’ (A 2:11)
- (9) *’ádi bət-+ķatłənnə.* ‘Now I shall kill him.’ (A 2:28)
- (10) *’ána ci-+yáttən mu-p̄t-ódən b-rìšu.* ‘I know what I shall do to him.’ (A 3:26)
- (11) *’ána kúdmə t-átən ķa-díyyux bánən béta +’ullul.* ‘I shall come tomorrow to build for you a house on high.’ (A 3:70)

A third person verb in indirect speech corresponding to a first person verb in direct speech may also express intention, e.g.

- (12) *’á màra! b-xá +čap̄pàltal* *’á ’arþí dánə dèvə bət-+kátəl.* ‘He says that he will kill forty monsters with one club.’ (A 37:9)

When the verb has an agentive 1st plural subject, the form often has a cohortative modal sense if the pronoun is used as an inclusive 1st plural (Let’s ...), e.g.

- (13) *xa-cípa* *+jùra bət-+ráppax* *+àllu.* ‘Let’s throw a big stone onto him.’  
 (A 37:22)

If it is used as an exclusive 1st person plural, it expresses deontic intention on the part of the speakers, e.g.

- (14) *cúlla märəna* *áxnan p-*<sup>+</sup>*hayyərràxlux.* ‘They all say “We shall help you.”’  
 (A 1:23)

Also when the verb has a second or third person subject, the *bət-patəx* form may have a deontic sense. When the subject is second person, it can be used to express a command or wish, e.g.

- (15) *t-ázət t-ázət*<sup>1</sup> *+ràba ðt-ázət.* ‘You should go, you should go, you should go a long way.’ (A 42:24)  
 (16) *cúl-məndit* *’áttə nàkval* *p-šaklóttə m-pát* *+’arrə.* ‘Whatever has female kind you must take away from the face of the earth.’ (A 2:11)  
 (17) *’ánnəna* *’an-núyna.* *b-lablàtlun,* *b-*<sup>+</sup>*xallàtlun.* ‘These are the fish. You should take them and wash them.’ (A 5:7)  
 (18) *’átən kə-díyyi bət-*<sup>+</sup>*kàtlət.* ‘You will kill me (= I want you to kill me).’ (A 2:32)  
 (19) *málca t-ávət basìma.* ‘King, you will be well (= may you be well).’ (A 3:15)

Such constructions have a similar function to deontic *patəx* forms, e.g.

- (20) *kúdma* *’átət.* ‘You should come tomorrow.’ (A 3:70)  
 (21) *málca* *’ávət basìma.* ‘King be well.’ (A 2:4)

The *bət-patəx* form is used in clauses that continue complements of the verb *+bayyə* 1 ‘to want’, e.g.

- (22) *’á-deva* *’íman bitáyəla* *kat-xázə* *’á-naša mìdilə*<sup>1</sup> *+báyyə* *+axòllə* *yán* *b-labállə* *+axunvátu m-*<sup>+</sup>*úydalə* *+t-axlilə.* ‘When this monster comes to see what man this is, he wants to eat him or to take him so his brothers would eat him together.’ (A 37:9)

It is also used to express purpose, e.g.

- (23) *cúlla nášət dúnýə=da* *+jmítəla* *kat-’áha* *béta bət-báni* *+’úllul ju-*<sup>+</sup>*hàva.* ‘Everybody is gathered in order to build this house above in the air.’ (A 3:71)

In interrogative constructions such (24), it expresses epistemic modality, i.e. the less than complete commitment of the speaker to the possibility that something will take place:

- (24) *mú p̄t-àvə*. ‘It does not matter (literally: What could it be?)’ (A 37:10)

#### 10.2.5.3 Conditional Constructions

After imperatives, the *bət-patəx* form expresses future events conditional on the event commanded by the imperative, e.g.

- (1) *'áxči hálli 'árpi yumána +dàna, 'ána b-zarzànnun.* ‘Only give me forty days and I'll deal with them.’ (A 3:56)
- (2) *hállulli +xòla, t-ázən kèsə máyyən.* ‘Give me ropes and I shall go and bring wood.’ (A 37:17)
- (3) *ku-tálux Nànvəl har-'átxa la-+p̄láša b-yavvánna kàtux.* ‘Come to Nineveh and I shall give it to you without any fighting.’ (A 3:19)

It is used in the apodosis of conditional constructions referring to possible future events (4)–(5), or possible habitual events (6)–(7), e.g.

- (4) *'ən-+msili, +'àv bət-yavválla káti.* ‘If I can (do this), he will give it to me.’ (A 3:55)
- (5) *'ən-'ávə xàya, páljət malcúyti b-yavvánna kàtux.* ‘If he is alive, I shall give you half of my kingdom.’ (A 3:50)
- (6) *'ən-tána ká-šámša clí, bət-càlyə. 'ən-tána +muṭra +ri, bət-+ràyya. 'ən-tána dúnuya clí bət-càlyani.* ‘If he says to the sun “stop”, it will stop. If he says “rain”, it will rain. If he says “Stop world,” it will stop.’ (A 3:64)
- (7) *'árxə tiyyu=x-ilə, b-yátu +tàma.* ‘(If) a guest has come to you, he sits there.’ (B 14:2)

#### 10.2.5.4 Discourse Dependency

In sequences of clauses relating to habitual events, the *bət-patəx* form can be used with a habitual sense. It is typically used in clauses that continue the description of a habitual situation that has been initiated with other types of constructions. It is, therefore, dependent on the preceding discourse. This is likely to be a development of its use in apodosis clauses of conditional constructions expressing habitual events:

- (1) *'íta +al-dàni pardùvvə ci-dári +'allé. pardùvvə késə nàzuc-inəl +'al-dànnə ci-yátvi. 'ánnə késə 'àtxa 'ína, 'ánnə +xliməl 'àtxa +'arallóggət dànnəl 'átxa*

*pardúvvə ci-dári kát ... +al-dáyya-da ... +tìna! ýnnə kèsəna,| +xlímə késə! ýtxa čüp| kùrba +al-uydàlə t-ávi-xina,| kùrba +al-uydálə.|| əsrí tláy +sántə priša m-+uydálə! ýtxa cílla p̄t-odilun.|| ’íta +al-dànnə,| pardúvvə bət-màxi, pardúvvə ’ína táxtə ýtxal léna +xlímə-xina,| táxtə +názuc.|| b-yátvi +al-dànnə ýtxa pardúvvə.|| ‘Then on these they put laths. Laths are thin strips of wood. They sit on the (beams). The beams, the thick beams, between these they put laths, and on that mud. These are wooden beams, thick wooden beams. Like this, thud, they are (put) near to each other, near to each other, twenty or thirty centimetres apart from each other, they make them all like this. Then on these they lay laths, laths, planks like this that are not thick, thin planks. The laths sit on those (beams).’ (B 14:6)*

As can be seen in (1) the *bət-patəx* form is in some cases temporally sequential to what precedes, e.g. ’íta +al-dànnə, pardúvvə bət-màxi! ‘Then on these they lay laths’. In other cases, however, the discourse dependence resides in the fact that the clause containing the *bət-patəx* form is elaborative of what precedes rather than being temporally sequential to it.

In (2) the *bət-patəx* form is used at the end of a chain of clauses. Habitual verbs earlier in the chain are in the lighter *patəx* form:

- (2) *xarája malàxla, mattáxla kam-yùma, ýha bət-bàrza.* ‘We fill the frames with it (tobacco), put it in the sun and it would dry.’ (B 3:27)

In (3)–(4) the sequential form is used after a subordinate temporal clause:

- (3) +bár mäxyálan +àmbar, *bət-péša čerìyya.* ‘After we have put it in the storeroom, it would stay there in autumn.’ (B 3:28)
- (4) ’íta e-+dán +kattila idé! ýmnət +báyya mən-dáni b-šákəl mayyılə, ýnnə b-zèdi, *bənyánət dánnə b-zàyəd.* ‘Then when he cuts their hands, he takes and brings back whomsoever he wants from among them, and they would increase, their number would increase.’ (B 9:3)

In (5) the form occurs in relative clauses that give further information about the head noun:

- (5) *bánoša c-avíva trè dásṭa,| ... kát xá dásṭa là-yba bət-cályá| xá dásṭa| xácmá mótrə ýtxa ... +arrána bət-cáli m-+uydàlə.* ‘(In the game) Banoša there were two teams ... one team of which stands to this side and one team—they stood several metres of ground from one another.’ (B 9:2)

### 10.2.6 bət-patəxva

#### 10.2.6.1 Future in the Past

The *bət-patəxva* form, with the past converter suffix *-va*, is used to express an event that is future in relation to a reference point in the past, e.g.

- (1) 'átən +dílux 'ána bət-náplənva m-+al-'ilàna.' 'You knew that I would fall from the tree.' (A 32:2)
- (2) 'ána lènva-+bədda p̄t-atíva.' 'I did not know he would come back.' (A 6:8)
- (3) muttélāju-+úpral +támāl' é-duca ƙat-+màlla ptànā t̄-avádva.' 'She put them in the ground, there, in the place where the mullah would plough.' (A 5:5)
- (4) xína ó bábət dó xátna mú p̄t-avádva?.' 'Well, what would the father of the groom do?' (A 55:7)

#### 10.2.6.2 Conditional Constructions

The *bət-patəxva* form is used in the apodosis of conditional sentences that refer to a hypothetical condition in the past, which was not fulfilled (1–2), or to a hypothetical condition in the present or future, which the speaker assesses to be impossible to fulfil (3)–(5). The verb form expresses an action that is temporally or logically sequential to the situation expressed in the protasis. Since it is delimited by a starting point that is sequential to what precedes, it is inherently perfective, e.g.

- (1) 'ən-+bakràtva,| bət-yavvánvalux zùyza,| 'ína là +buķárrux.' 'If you had asked, I would have given you money, but you did not ask.'
- (2) 'ən-+yat̄ánva šámmu mùdiva,| bət-tanànvalux,| 'ína là +yat̄ánva.' 'If I had known what his name was, I would have told you, but I did not know.'
- (3) 'ən-+masànva,| bət-'atànva,| 'ína lè-+masən.' 'If I could, I would come, but I cannot.'
- (4) 'ón xá-xta maxìva,| +'áv bá-t-xayyìva.' 'If he were to strike again, he would live.' (A 39:13)
- (5) 'ən-'avánva xáya| +bəddáyən mu-ŷt-ódənva b-rišòxun-xina.' 'If I were alive, I know what I would do to you.' (A 13:3)

It is used also in deontic constructions such as (6), which lack a protasis:

- (6) 'á 'aslán ka-mú 'ánnə bušlèlax 'átən?| 'ána jáni b-bašlònvalun.' 'Oh, why did you cook them at all? I would have cooked them myself.' (A 36:8)

The form may also express iterative aspect. In this context the form can still be interpreted as perfective in that the speaker uses the form that is appro-

priate to express each individual perfective occurrence of the iterated situation, e.g.

- (7) 'ən-<sup>+</sup>masənva,| bət-yavvánvalux zúyzə cùt-yum,| 'ína lè-<sup>+</sup>masənva.| 'If I had been able, I would have given you money every day, but I could not.'
- (8) 'ən-<sup>+</sup>masənva,| bət-yavvánvalux zúyzə cùt-yum,| 'ína lè-<sup>+</sup>màsən.| 'If I could, I would give you money every day, but I cannot.'

#### 10.2.6.3 Discourse Dependency

The *bət-patəxva* form is used outside of conditional constructions in clauses that are in some way dependent on the preceding discourse. In such cases the verb always expresses a habitual action:

- (1) məšmáššə mabrəzzivalun,| **b-zabnivalun.**| 'They would dry the apricots and sell them.' (B 1:23)
- (2) sənjiyyəva,| jəzəva,| cəšmišəva,| 'anna=zə **b-xamíva.**| 'There were jujube fruits, walnuts, raisins. They preserved these.' (B 1:25)
- (3) +bár pšórvəla +'avun,| ja-+kazánča **b-dariva.**| 'After it had dissolved, they poured it into a pan.' (B 3:14)
- (4) 'ó=t lətlə +xáttəl ci-zoníva,| +raba +xóttəl məsalanl | 'əštá-danə 'átxa jvàla **b-zoníva.**| 'Whoever did not have wheat would buy it, (they would buy) a lot of wheat, for example, they would buy six sacks like this.' (B 10:7)
- (5) 'íta +berašvànə=da| kat-'ärxa 'atíva| ju-dó bét tanúyra| mattívalun xá-dana mítz| 'átxa mátti +al-pátət tanúyra,| yan-lə,| xá-dana +'adyal dáril nášə 'aklatè p-čambəllívalun ju-do tanúyra,| cílla šaxína.| 'Now, in the evenings, when guests used to come, they used to set up a table in the oven house, they put it thus on the surface of the oven, or if not, they put a blanket, and people would hang their legs into the oven, all (keeping) warm.' (B 14:2)
- (6) 'ína kámta juydànəl b-čarpíčət 'úprəva,| čarpíčə là bšləl. | čarpíčə p̄t-odívalun,| kam-šámša **bət-barzíva.**| 'áni juyda **bət-baníva** mənné.| juyda 'átxa **bət-baníva.**| 'But in the old days the walls were of clay bricks, unbaked bricks. They would make bricks and they would dry in the sun. They would build walls from them. They would build a wall like that.' (B 14:5)
- (7) 'up-bétət tanúyra| +rába šaxína c-ávəl 'aklux=da ... ju-tanúyra| +rába basəmta c-oyáva.| 'íta **b-yatvíva** 'adíyyal 'árxə tìyyux-ilə,| b-yátu +támə.| **b-yattíva** hákíva zamrívəl t̄-+axlíva **b-šatíva,**| +rába sodànta c-oyáva.| 'So the oven house is very warm, with your feet in the oven, it was very pleasant. So, they would sit. If a guest has come to (visit) you, he sits there. They used to sit, tell stories and sing. They eat. They drink. It was very pleasant.' (B 14:2)

As is the case with discourse dependent *bət-patəx* forms (§10.2.5.4.), the *bət-patəxva* forms in these examples are either temporally sequential to previous actions or elaborative or recapitulatory of what precedes. In (7) the *bət-patəxva* form is continued by the *patəxva* form in the sequence *b-yattíva hakíva|zamrīva|* ‘They used to sit, tell stories and sing’. The clauses in this sequence express components a single overall event, the onset of which is expressed by the *bət-patəxva* form. The following two verbs, which are expressed in the *bət-patəxva* form (*t-+axlīva b-šatīva* ‘they used to eat, they used to drink’) are presented as discrete events.

In (8) the first two *bət-patəxva* forms express habitual situations that overlap temporally with the form *bət-xayyīva*. Note that the final verb of the series has the full form of the prefix *bət-* by a process of end-weighting.

- (8) *bušayuté ’átvulan ’árba,| cát mən-dánnə ’árba b-+xalvīva,| mən-+’ámṛət ’árba b-zabnīva,| +cárra júpta ’átxa məndyána bət-xayyīva.* ‘Most of them had sheep and lived by (literally: while) milking the sheep and selling the wool of the sheep, butter, cheese and such things.’ (B 1:23)

In (9) a series of parallel habitual situations are expressed by *bət-patəxva* forms, all of which are dependent on the initial habitual existential statement:

- (9) *’ádi ’átvulan +’ánvə +’ánvə p̄t-odíva cəšmišə,| p̄t-odíva sàvza,| t-odíva nipùxta,| t-odíva +xàmra| ’u-p̄t-odíva tlúvvə mədrə ka-sátva.* ‘Now, they had grapes. They used to make grapes into raisins, they made them into blanched grapes, they made them into syrup, they made them into wine and they made hanging preserved grapes, again for winter.’ (B 1:24)

In (10) the *bət-patəxva* form is dependent on a temporal subordinate clause:

- (10) *’óm-+dān xóšu tīvala,| t-atíva +pallívalo.* ‘Whenever he wished, he would come and divide it.’ (B 3:19)

The *bət-patəxva* form in (11) occurs in a relative clause. Here the dependency that conditioned the form appears to be on the matrix clause rather than the preceding discourse:

- (11) *’átva nàšət kátl b-+tarsíva tanùyrə.* ‘There were people who made ovens.’ (B 1:32)

The *bət-patəxva* form in principle must have a topical subject and this topic can be the antecedent in a relative clause construction.

The passage in (12) is an example of how a speaker shifts from a *bət-patəxva* form to a *ci-patəxva* form when there is a disjunction in the discourse structure. Section (i) of the passage presents a sequential chain of actions relating to the preparation of fallow ground, which contains a series of *bət-patəxva* forms. Section (ii) is an elaboration of what precedes, which provides more details regarding the construction of the basins. This contains a *ci-patəxva* form:

- (12) +àrra| crìva c-odáxvala| ... (i) +tlá-ja +taràxvala b-ptàna| damxàva xa-šíta.|  
 šít-trèl t-odàxvala| košànəl b-jaršàxva| jàvo.| +bár +tøryàlan,| muštiyyàlan.|  
 kàm maštéta,| +bár +zøryux| košànə b-jaršàxva| kat-míyya là bzbákki,  
 +ámsa lablálun| táxta ka-jàno| 'ýya ka-jàno. (ii) 'íta jàv| dánna táxta  
 +yøssùra ci-maxàxva| kat-míyya là nápli xá dúca. 'We would leave the  
 ground fallow. ... (i) We would plough it three times and it would rest for a  
 year. In the second year we would dig ditches in it. After we had ploughed  
 it, we watered it. Before watering it, after we had sown it, we would build  
 ditches, so that the water would not disperse and each basin in turn could  
 absorb it. (ii) Now, in these basins we would make a connection so that  
 the water would not fall in one place.' (B 3:8)

### 10.2.7 le patəx

The *le* in this construction has arisen by a contraction of the /a/ of the negator *la* with a particle /i/, which can be identified with the /i/ in the particle *ci-* (§ 4.4.1.). It is used to negate both the *ci-patəx* form and also the *bət-patəx* form.

#### 10.2.7.1 Negation of *ci-patəx*

As has been shown above (§ 10.2.1.2.2., § 10.2.3.1.), the *ci-patəx* form alternates with the *patəx* form in class B verbs. In the negative, both class A and class B have the form *le patəx*.

##### 10.2.7.1.1 Negation of Actual Present

The construction is used to express the negative of verbs denoting psychological processes or states holding in the actual present. The corresponding positive forms are typically in the *patəx* form without the particle *ci-* (§ 10.2.1.2.1.), e.g.

- (1) 'áxnan le-+yáttax.| mǎjar Nàtan +yáttə| 'We do not know, perhaps Natan  
 knows.' (A 3:43)  
 (2) 'ána hóč-məndi le-+bàyyən.| 'I do not want anything.' (A 3:86)

- (3) *'ána lè-<sup>+</sup>bayyən| hák̚ xa-<sup>+</sup>šrà| óya ju-màta.* ‘I do not want any lantern to be in the village.’ (A 2:1)
- (4) *har-lé <sup>+</sup>báyyə <sup>+</sup>pálət <sup>+</sup>al-vàddar.* ‘He does not want at all to go outside.’ (A 37:2)
- (5) *hár lè <sup>+</sup>báyyax <sup>+</sup>ka-díyyan pálxət.* ‘We no longer want you to work for us.’ (A 37:18)

#### 10.2.7.1.2 Negation of Present Habitual

This is the regular negation of present habitual verbs, e.g.

- (1) *b-ánnə ducánə lè-mačxət mən-do-láxma.* ‘In these places you do not find that bread.’ (B 2:10)
- (2) *<sup>+</sup>taptəppálə-xina, míyya lè-'ati <sup>+</sup>óltəx.* ‘It (the roller) knocks it (the roof) down and the water does not come down.’ (B 14:10)
- (3) *o-<sup>+</sup>tína e-<sup>+</sup>dān-brázələ, járə lè pák̚kə.* ‘When the mud dries, the roof does not crack.’ (B 14:8)

#### 10.2.7.2 Negation of *bət-patəx* forms

##### 10.2.7.2.1 Negation of Predictive Future

- (1) *<sup>+</sup>šúp̚ra lè-paš kátux.* ‘Beauty will not last for you.’ (A 3:10)
- (2) *cúllət <sup>+</sup>báyyat <sup>+</sup>ódat b-rišu vùd.* ‘Do whatever you like to him. Nobody will speak.’ (A 3:88)
- (3) *hár lè manšáxla.* ‘I shall never forget it.’ (B 3:22)

##### 10.2.7.2.2 Negation of Deontic Future

- (1) *lé šókan <sup>+</sup>òrat.* ‘I shall not let you enter.’ (A 37:5)
- (2) *'ána lè <sup>+</sup>kaṭlónnoxun.* ‘I shall not kill you.’ (A 37:10)
- (3) *'ána xina-lè-pešən láxxa.* ‘I shall not stay here any longer.’ (A 4:15)

#### 10.2.8 le patəxva

This is the negation of the *ci-patəxva* and *bət-patəxva* forms.

##### 10.2.8.1 Negation of *ci-patəxva* Forms

The past habitual form *ci-patəxva* alternates with the *patəxva* form in class B verbs. In the negative, both class A and class B regularly have the form *le patəxva*, e.g.

- (1) 'ánnə +kaṭlánət kənyàñəl lè-'atíva +rába. | 'The slaughterers of cattle used not to come much.' (B 10:4)
- (2) háč móndi lè-'odava. | 'She used not to do anything.' (A 35)
- (3) 'ítə sótva lè +palṭíva. | 'So, they used not to go out in the winter.' (B 3:31)
- (4) mən-+bár brəzvalə,| xína míyya ýe-+dān +mútra tálja +šúlə +rayyíva ju-béta lè +salíva. | 'After it had dried, when rain, snow and so forth fell, the water did not run down into the house.' (B 2:22)

#### 10.2.8.2 Negation of *bət-patəxva* Forms

This is found in the apodoses of conditional constructions, e.g.

- (1) +muṭrátə +rába 'avíva,| həč-lè maštáxvala 'áy. | 'If the rains were abundant, we would not irrigate it at all.' (B 3:10)
- (2) 'ína +xáṭṭət jànan 'avíva,| +'arránət jànan,| dák lè maxáxva. | 'But if it was our wheat, from our lands, we did not put a mark on it.' (B 3:19)
- (3) kúpšína xazzívalan,| lè 'arókva. | 'If the quail saw us, it would not flee.' (B 4:1)

#### 10.2.9 Long S-Suffixes on Present Template Verbs

When lengthened forms of S-suffixes are used, they generally have a pausal function. They tend to coincide with pausal prosody in that they occur at the end of an intonation group.

- (1) 'ən-táñə ka-šámša clí,| bət-cályva. | 'ən-táñə +muṭra +ri,| bət-+räyya. | 'ən-táñə dúnýə clí bət-cályani. | 'If he says to the sun "stop", it will stop. If he says "rain", it will rain. If he says "Stop world," it will stop.' (A 3:64)
- (2) bərrássən járə máčxan +jóra jorána. | 'I am going to find a husband to marry.' (A 52:1)
- (3) cmá=t vādəla,| lèla +myásal 'á pəkkal +palṭani. | 'However much she struggles, the frog is unable to get out.' (A 52:6)
- (4) 'én parmáli 'én jármo +jammáttel +rappátté ju-xa-+čáləl +ṭasyátte 'áni. | ka-díyyax +lázəm t-avini. | 'If she slaughters me, you should gather the bones and put them in a pit, hide them. You will need them (one day).' (A 51:1)
- (5) brátał yálał +báyyi +iydaləl 'úsa lè +báyyini | '(If) a girl and boy love each other, or not love (each other) ...' (A 56:5)
- (6) +xárta bədráyax +allé málxal kat-kavini. | 'Then we put on it salt, so it becomes hard.' (B 15:3)
- (7) býyo +tamúrona tanáxən. | 'They bury with it, we say.' (B 15:5)
- (8) léx +myásal damxáxən. | 'We cannot sleep.' (B 16:2)

- (9) *'ánya ́át-da b-úrxət t-jórax t-azàtən,| brúnux kám +áynax +kaṭlàxxə.|* ‘If you go in the way of your husband, we shall kill your son before your eyes.’ (B 16:7)
- (10) *hálla kàtu ka-do-jùdyə,| xuš-azàlni.* ‘Give it to him, to that filthy man, and let him go.’ (A 42:21)
- (11) *+rázitən bábi yámmy sápən 'atìni?* ‘Are you pleased for me to send for my father and mother to come?’ (A 43:15)
- (12) *+nesánnə mätni.* ‘I shall bite him and he will die.’ (A 47:5)

They often occur, moreover, at the end of a segment of discourse and so have a boundary marking function also on the level of discourse. This is seen clearly, for example, in repetitive sequences of two clauses in which the verb of the first clause is repeated in the second clause and the long form occurs only in the second clause:

- (13) *ú +bàyyət! lè-+bayyət! á tavárta zárdə prùmla,| ána bàsman. ... +búsra t-+àxlan,| basmàna.* ‘Whether you want to or not, slaughter this yellow cow so that I will be cured. ... Yes, I shall eat the flesh and shall be cured.’ (A 51:1)

The long forms also occur before hesitations, e.g.

- (14) *ká-báxtu +xábra yàvələ! kat-áyya málpani ... tré +zayət +nòšrə.* ‘He sends word to his wife asking her to teach two young eagles.’ (A 3:57)

In varieties of the dialect in which long forms are frequent, they are occasionally used in non-pausal position within an intonation group. This is found in particular in the varieties spoken in the Caucasus, e.g.

- (15) *jár xáda 'oyáni! kát bita máx çàppəøç! átxa mabyənnáni +al-pàta.* ‘It must be thus, so that the egg appears on the surface like a kopeck.’ (B 15:3)
- (16) *xáda maccúsot kúpšənta! páljо jár 'oyáni b-+kútma mcàsta! kát +háva là-+avərni.* ‘You cover the pot thus so that half of it is covered in the ash so that air does not enter.’ (B 15:6)
- (17) *bá mù 'vdáxən 'áxnan? mára.* ‘“Well what should we do?” they say.’ (A 42:2)

## 10.3 The Function of Verbal Forms Derived from the Past Template

### 10.3.1 ptəxlə

#### 10.3.1.1 Recent Past Events

In conversational discourse a common function of the *ptəxlə* form is to express with perfective aspect the occurrence of a punctual event in the recent past. The margin of the recent past may extend up to the present moment. The form may be used, therefore, when the endpoint of the event is witnessed in the present moment. It is appropriate to translate the form in such contexts by the English perfect of recent past. Examples of this are found in the text corpus, mainly in sections of direct speech, e.g.

- (1) +tárra mxàyəna! ... mára 'ay-+kátmə b-rišl +jóri tìlə! 'There is a knock at the door (literally: they beat the door) ... (She) says "Oh, ash be on my head, my husband has come!"' (A 6:8)
- (2) *m-ica tìlux?* 'Where have you come from?' (A 28:2)
- (3) *har-ádyya* 'ána +tórbə +šudráli kàtux.!' 'Just now I have sent you the bag.' (A 14:6)
- (4) 'ána-da 'adì-+šmili.!' 'I have just now heard.' (A 19:3)
- (5) *márri hà! mù +bayyítun?* mèrrun! tìlan! xázax tánax kátux! kat- ... 'I said "Ah, what do you want?" They said "We have come to see and tell you that ..." '(A 10:7)
- (6) 'át šuddànnux! 'You have gone mad!' (A 5:11)
- (7) *cacála +bøddáyəla* kat-málca xàšla.!' 'The bald man knows that the king has gone.' (A 1:39)
- (8) 'íca xášlux +málla +Nasràdən? 'Where have you gone, mullah Nasradin?' (A 20:1)
- (9) +bøttánən mèntux! kát 'á-məndi káy tunìlux.!' 'I am grateful to you that you have told me this thing.' (A 2:37)
- (10) *bitáyəla* ka-málca! mårəla málca! muyyàlux? 'He comes to the king and the king says "Have you brought her?"' (A 2:10)
- (11) +rábə murkølla.!' 'He has delayed a lot.' (A 37:18)
- (12) kòšun muyyélo! kat-áti +pàləš mónnux.!' 'He has brought soldiers in order to fight with you.' (A 3:20)
- (13) +tlábloxun but-+zrùta katóxun xácma məndyána tánən.!' 'You have asked me to tell you some things about agriculture.' (B 2:1)
- (14) o-+katùla sámμu +bøddàyurna, munšili.!' 'I used to know the name of the executioner, but I have (now) forgotten.' (A 3:47)
- (15) +küsártət diyyux! dølla! tré xína mònno.!' 'Your pot has given birth, (and there are) two others with it.' (A 8:2)

- (16) *'ána tuxmənni! áxtun ḳa-díyi +rába +huyyàrrətun.* ‘I have thought (up to the present and these are my conclusions), you have helped me a lot.’  
(A 36:4)

The results of such events that occur in the very recent past are likely to have some relevance in the present. It is important to note, however, that the *ptəxlə* form does not assert the existence of a resultant state in the present, rather it is only an implicature. If the speaker wishes to assert that such a resultant state holds at present, the compound form consisting of the resultative participle and copula is used (§ 10.10.).

The *ptəxlə* form of some psychological verbs are idiomatically translated by the English present. This applies, for example, to ‘to know’, e.g.

- (17) *+dilux! kámta mərri.* ‘You know, I told you before.’ (A 1:30)  
(18) *+dilux müjjur hukyàlə* ‘You know how he told it (his story).’ (A 1:31)

It applies also to *xazzə* 1 ‘to see’ and *xadə* 1 ‘to become happy’, e.g.

- (19) *xzílax mu-vádlax b-riši!* ‘You see what you have done to me!’ (A 23:3)  
(20) *'o-yála mára! 'at-diyyina! mára xzílux!* *xzílux ḳazí?!* ‘The lad says “They are mine!” (The mullah says) “Do you see, do you see judge?! (I told you he would say this).”’ (A 14:11)  
(21) *+rába xdíli kam-xazzənnux.* ‘I am very pleased to see you.’ (A 5:13)

Such constructions refer to the act of acquiring knowledge, perceiving or becoming happy at some point in the recent past with the implication that this psychological state exists in the present. Note that in (21) the complement of *xdíli* has the past perfective form *kam-patəxlə*, which is functionally equivalent to *ptəxlə* (§ 10.3.1.1.).

When the endpoint of the past event is adjacent to the present moment, the *ptəxlə* form is sometimes combined with the deictic copula, which refers to the grammatical subject of the verb, e.g.

- (22) *dúlə tilə!* ‘Look he has come back.’ (A 6:13)  
(23) *fúr'un dúlə tilə láxxa hàmla váda.* ‘Pharaoh has come here to attack.’  
(A 3:25)  
(24) *dúlə 'axúman muyyílə xá +séda ḥ-+axlàxla.* ‘Our brother has brought an item of prey for us to eat.’ (A 37:12)  
(25) *nùynə dúnə +plátlun!* ‘Fish have come out!’ (A 5:6)  
(26) *bəxzáyəna xá-xča míyya +bərdàxa dóryənəl* ú +hála mára dún +ḥətli, +yána

*'ax-t-án ɍánná míyya móñ +t̪àta t̪íyəna.*! ‘They see that they have poured so much boiling water, while this one says “I have just sweated”, as if this water has come from sweat.’ (A 37:21).

The particle *+hala* ‘still, yet’ can be combined with a *ptəxələ* form in negative questions such as (27) but not in the positive counterpart (28):

- (27) *+hála lá tilə?*! ‘Has he not come yet?’
- (28) *\*+hála lá tilə.*! ‘He has not yet come.’

This particle is normally used with the negated compound resultative construction with the resultative participle (*ptixələ* § 10.10.1.). In the resultative construction there is no restriction to interrogative clauses:

- (29) *+hála lélə t̪íyya?*! ‘Has he not come yet?’
- (30) *+hála lélə t̪íyya.*! ‘He has not come yet.’

The construction *+hala* + negative ‘not yet’ implies that the event in question will still take place. The negative *ptəxələ* form *la tilə* ‘He has not come’ negates the event, so this would be incompatible with *+hala*. The negative resultative construction negates the resultant state rather than the event. The interrogative *+hála lá tilə?* construction with the *ptəxələ* is referring to a perfective situation, i.e. a scheduled event which was expected to take place. The speaker is questioning whether this event has taken place yet or not. The question introduces doubt into the negation and so leaves open the possibility that he will still come, and indeed is used with the expectation that he will come (negative questions often have a positive epistemic bias § 12.11.2), and thus is compatible with *+hala*.

#### 10.3.1.2 Imminent Future

The function of *ptəxələ* to express the immediate past is exploited in some cases as a pragmatic strategy to express an event that is about to happen in constructions such as the following:

- (1) *'ána xòšli.*! *ta-+bàri.*! ‘I am going (said when leaving). Follow me.’ (A 42:30)
- (2) *'ána švákli xòšli*! *m-ju-dá malcùta.*! ‘I am leaving and going away from this kingdom.’ (A 48:25)
- (3) A: *+xa-+ramša +házər-ila.*! *ta-+sli!*! B: *tili.*! A: ‘Dinner is ready. Come downstairs.’ B: ‘I am coming.’
- (4) *+júri tilun.*! ‘My urine is coming (= I need to urinate)?’

- (5) *túy šèlyá| čapùla tílə.* ‘Sit quietly, a slap is coming (= otherwise you will get a slap).’
- (6) *mátlí mən-càpna!* ‘ícəla +mixùlta?!
- (7) *bàxtíl xína mótlíju-’ido.* ‘Well I have almost died at the hands of my wife.’ (A 54:7)
- (8) *+’ántu kòdli.* ‘Auntie, I am burning.’ (A 43:17)
- (9) *har-márri kádli bšòlli,* *+pàltunli.* ‘As soon as I say “I am burning, I am cooking”, take me out.’ (A 39:7)
- (10) *xáčča péša ’ána +mtíli +’al-kérkáptət +tìyra.* ‘I have almost reached the top of the mountain.’
- (11) *xáčča péša ’ána purákli ctàva.* ‘I have almost finished the book.’

### 10.3.1.3 Past Perfective in Narrative

In narratives the *ptaxlə* form is used as a preterite to refer to punctual events in the past with a perfective aspect. The main line events of the narrative plot are, however, generally expressed as if they are occurring in the present with the *baptaxlə* form. When the *ptaxlə* form is used to express events of the narrative, these often constitute background material and are not intended as the key events of the narrative. The *ptaxlə* form is frequently used, for example, in clauses at the beginning of the narrative in a section that expresses the preliminary events that set the scene for what follows. This is seen in (1), in which the scene-setting event of the king’s pronouncement is presented with a *ptaxlə* form (*yuvvállə*). The main event line then begins with a *baptaxlə* form (*+plàtələ*):

- (1) *’átvxa-dana-màlca! ’ú-yuvvállə +xàbra| ka-vàzzər. màrrəl ’ána lè-+bayyən| hác xa-+sràl ’óya ju-màta, ju-mdità. +báyyən +pàltən, +báyyən +pàltən| xázzən +’átri mù-ilə, xázzən +’átri mù-ilə. vázzər +plàtələ jàr bədráyələ.*  
‘There was once a king. He gave an order to the vizier. He said “I do not want any lantern to be in the village, in the town. I want to go out, I want to go out and see how my land is, see how my land is.” The vizier goes out and makes an announcement.’ (A 2:1–2)

Likewise in (2) the opening event of the main narrative is presented in the *ptaxlə* form:

- (2) *’ína ’á +jùrət cačáləl ... ’íva| bùšl +’ùllul mòn| dan-xìnə. xàšləl cès| xá-dana +tàjər.* ‘Now, the elder of the bald men ... was higher (in rank) than the others. He went to a merchant.’ (A 1:2)

In (3) a section of discourse is narrated with *ptaxla* forms that constitute a series of preliminary background events that keep the listener in suspense as to the activity of the protagonist. When the key actions of the protagonist are revealed the narrator shifts into the *bəptaxəla* form at the end of the cited passage:

- (3) *xá-yuma xína-zə kèsə xíšəva mayyíva! márrə hállulli +xòlə! t-ázən kèsə máyyən! yuvvállun xáčxa +xólə kàtu! márrun ka-mú-inə +ràba?!* *márrə! là-’aviloxun +šúla! xzílun +rába murkállə! xáslun +’al-’ùrxu! márrun! xázax ... ka-mù ’á xá-xča murkállə! xáslun xzílun +xóla +sírulə móan xa-kèsə bərráxshəla cíllə marzanánət mèšəl ’átxa! vélə hár +xóla +bəsyára! bərráxša!* ‘On another day he had gone to bring logs, he said “Give me ropes I will go and bring logs.” They gave some ropes to him. They said “Why (do you want) many?” He said “Don’t worry.” They noticed that he took a long time. They went along his path and said “Let us see why he has taken so long.” They went and saw that he has tied the rope to a branch and is going all around the forest. He keeps on tying the ropes like this as he goes.’ (A 37:17–18)

In (4) the *ptaxla* form that expresses the background of the following narrative is ingressive in that it has a start-point but no end-point:

- (4) *+bílə! kàt! +’ajjázva ka-+mällə! bərráxshəla bëta!* ‘He wanted (i.e. he started to want) to annoy the mullah. He goes home ...’ (A 14:2)

In (5) the narrator shifts from the *bəptaxəla* form to the *ptaxla* form to present the event of the man going to urinate, which is a background event and also an event that the narrator does not wish to give prominence to for reasons of social taboo.

- (5) *bəxzáyəla +hála jàldəla! +sá’at xàmšəla!* ‘*ica p̄t-ázəl’adýya?* ... *xóslə +támə kat-+jär!* ‘He sees that it is still early. It is five o’clock. Where will he go? ... He went there to urinate.’ (A 1:11)

The *ptaxla* form is also sometimes used to express a series of closely clustered events that constitute the denouement of a narrative plot, or of a major section of the narrative, after the key dramatic events have been presented. This is the case, for example, with the following denouement, which is narrated entirely with *ptaxla* forms:

- (6) *muyyílə kátu +rába dàva,| sìma,| jùllə,| cíllə yuvvélə kàtu.| 'u-tláy šènnət|  
Pdarāmàd<sup>P</sup>-ətl| +'átra| cíllə yuvvélə ka-+Axíkar,| muttílə +al-susavátəl|  
+šudárrə ká ... málca| Nènva.| +xábra yuvvállun kát bitáyələ +Axíkar.|  
+plátlun kamàytu.| málca +plátlə kamàytu.| xurdílə b-kdàlu.| nšəkłə.| +rába  
xdílə biyyu.| 'He brought to him large amounts of gold, silver, clothes and  
gave everything to him. He gave to Axiqar the income of the land for thirty  
years, he loaded it on horses and sent it to the king in Nineveh. They gave  
word that Axiqar was coming. They came out to meet him. The king came  
out to meet him. He hugged him round his neck. He kissed him. He was  
very pleased with him.' (A 3:84–85)*

#### 10.3.1.4 Past Perfective in other Types of Discourse

In other types of discourse, such as direct speech within narratives or expository descriptions, the *ptaxlə* form is the normal means of expressing past perfective events, e.g.

##### (i) Direct Speech in Narratives

- (1) *'ána kátux vádli náša,| 'átən ka-díyyi dušdášlux.| 'ána ka-díyyux muttíli ju-  
bēt-malcıtya,| 'átən ka-díyyi muttílux ju-+àrra.| 'I made you a man, but you  
trampled on me. I put you in the royal household, but you put me in the  
ground.' (A 3:90)*
- (2) *yámmat díyyux ka-díyyux tuybərra| 'ína 'át +bílux mánno 'avátvə 'ax-xa-  
+jòra.| 'Your mother brought you up, but you wanted to be with her like a  
husband.' (A 3:91)*
- (3) *'ána| ju-béti tívənval| e-+dántət ínva jvànka,| +tarri mxílun.| +tarri mxílun,  
+tuktáklun| 'u-+plátlə| 'áxči +šmíli mára ta-jáldəl| 'tli Pəhtiyáj<sup>P</sup> +állux.|  
+báyyən| +májtət +àlli.| hál=t xásli +bárəl mára tuláklə.| +dórri tili.| 'I was sit-  
ting in my house, when I was young, and somebody banged on my door.  
Somebody banged on my door, somebody knocked. I went out and only  
heard somebody saying "Come quickly, I need you (to do something for  
me). I want you to come to me." Before I got to him, he disappeared. I  
returned home.' (A 2:26–27)*
- (4) *xá +dána| bábət díyyux=za| +bayyíva +katlıvalə| 'ína 'ána lâ +kçállyi| málca|  
+pşəmlə| +pşəmlə| kat-ka-mùl +kçállyun| 'ína 'ána lènva +kçílu.| lubólli yuvválli  
ka-málca.| málca +rába xdílə.| 'Once they wanted to kill your father, but I  
did not kill him. The king was sad, he was sad (and wondered) why they  
killed him, but I had not killed him. I took him and gave him to the king.  
The king was very glad.' (A 3:34)*

## (ii) Expository Discourse

- (5) 'àna! xa-ctàva 'átlí! tré mæššənnérət 'amricàya! 'án čám ķamáya mæššən-nérə kát tilun! ju-dáštət 'Ùrmi.! ... 'ánnə tré +parsúpə tilun!,| 'é-+dān tilun!,| 'é-+dana 'urxátə=zə 'ásfalt lèva víyyə.! ... b-susaváy b-cavádnə b-xmàrə c-azívə.! 'ánnə b-susavaté 'é-+dān +m̄lūn +ál +láp ķarkáptət +tùyra! ... 'é-+dān m̄lūn táməl mən-+támə m-+al-susavaté +slilun!,| jušáklun +al-dáštət 'Ùrmi.! 'I have a book (of) two American missionaries, the very first missionaries who came to the plain of Urmi. ... When these two gentlemen came, at that time the roads had not (yet) been laid with asphalt ... They used to travel by horses, mules and donkeys. When they arrived with their horses at the very top of the mountain ... when they arrived there, they dismounted from their horses and looked at the plain of Urmi.' (B 2:12–13)

## 10.3.1.5 Conditional and Temporal Constructions

The *ptaxlə* form is used in the protasis of conditional constructions to express a possible event in the future that is temporally and/or logically anterior to the situation described in the apodosis, e.g.

- (1) 'ón-+msili,! +'áv bət-yavválla ķáti.! 'If I can (do this), he will give it to me.' (A 3:55)
- (2) 'ón ķál-jáxca +šmilux! xùš.! xína látli pəehtiyáj<sup>p</sup> +'állux.! 'ón ķál-bàxya +šmilux,! clí. 'If you hear the sound of laughter, go. I do not have need for you. If you hear the sound of weeping, wait.' (A 2:30)
- (3) 'ón +tála tilə +al-jáni bət-maxənnə.! 'If a fox comes against me, I shall strike him.' (A 37:6)

A similar usage is found in some temporal clauses referring to the future, e.g.

- (4) 'íman tilí +dàrrí! bət-yavvánnux +rāba.! 'When I come back, I shall give you a lot.' (A 1:3)
- (5) 'é-+dān +šudárroxun ka-díyyi 'áltəx,! har-márri ķádli bšəlli,! +pàltunli. 'When you send me down, as soon as I say "I have burnt, I have cooked", take me out.' (A 39:7)
- (6) cú-+dān márri +ràppi! 'át ķámta +ráppət lámxa.! 'Whenever I say "Throw," you must first throw the bread.' (A 39:25)

### 10.3.1.6 Modal Future

The *ptaxlə* form is sometimes used outside of conditional constructions to express a modal future, i.e. to express an event that the speaker believes might possibly take place, e.g.

- (1) *bálcət +huyyárri kàtux-xina.* ‘Well, perhaps I might help you.’ (A 10:3)

### 10.3.2 ptəxvalə

This form may be used to express an event in the past that is temporally anterior from the viewpoint of another event or situation in the past occurring in the surrounding context. It is generally idiomatically translated by the English past perfect.

In the text corpus it found mainly in subordinate clauses:

- (1) *+bár=t +mt̪ivalə,| bí majóstə +xazdīvalə.* ‘After it had ripened, they used to harvest it with a sickle.’ (B 3:6)
- (2) *+bár k̪ədvalə| c-avíva 'ax-cipa| cùma.* ‘When it had burnt, it was like a black stone.’ (B 3:14)
- (3) *'íman br̪əzvalun,| ci-+moráxvalun javay| ka-sətvə.* ‘When they had dried, we brought them inside for the winter.’ (B 7:11)
- (4) *mən-rákka 'icət jináva +vərvvalə| xazzənvalə.* ‘I would see from afar where a thief had entered.’ (B 3:20)
- (5) *čún 'ən-k̪əmvala,| bálcət| 'arkàva* ‘because, if it had got up, it would possibly run away’ (B 4:4)
- (6) *'óm-+dān xóšu tīvala,| t-ativíva +pallīvalə.* ‘Whenever he wished, he would come and divide it.’ (B 3:19)

## 10.4 Imperative

The imperative form typically commands an action to be performed immediately or close to the time of utterance, e.g.

- (1) *+sùrunlun!| cpüšunlun!* ‘Tie them up! Gather them up!’ (A 1:38)
- (2) *+rāba +spáy,| mèla.* (A 3:16) ‘Very good, bring him (perfective).’
- (3) *láblun +k̪t̪ulunlə.* ‘Take him and kill him.’ (A 3:31)
- (4) *xùš| škúlla +págṛət bābuxl +Axìkar| +t̪amərrə.* ‘Go and take the body of your father, Axiqar, and bury it.’ (A 3:37)
- (5) *'át clí láxxa xut-+t̪iyra.* ‘You stand here under the mountain.’ (A 2:30)
- (6) *ku-jàldə| vúd +t̪ámta* ‘Get up quickly and make breakfast.’ (A 1:14)

Commands for an action to be performed further in the future are characteristically expressed by the irrealis *patəx* form. This is seen in (7), in which the action that has to be performed immediately is commanded with an imperative, whereas the command for an action to be performed the following day is expressed by a *patəx* form:

- (7) *xób xúš dmúxju-<sup>E</sup>hotèl<sup>E</sup>-ux,| kúdmə ՚atət.*! ‘Good, go and sleep in your hotel and come tomorrow.’ (A 3:70)

The use of the imperative form is not restricted to the command of an immediate specific event, but may be used to command the performance of an iterative action, which involves different discrete specific actions performed on different occasions, or a habitual state. The imperative form, therefore, is not exclusively perfective in aspect, e.g.

- (8) *’arþíyumàna,| màra,| +xùl,| šti,| xùp. | xáčča tá +al-jànux| ku-tálux còslí| ýána +báyyən hamzámmən mànnux.*! “For forty days” he says “eat, drink, wash. Return to yourself a bit, then come to me. I want to talk to you.” (A 3:53)
- (9) *’ína ՚é-+dān +báyyət ódət xa-màndi| vúdlə ’ax-nàša.*! ‘But when you want to do something, do it like people (= do it properly).’ (A 1:50)

A few verbs use two imperative forms. One of these is the regular, unmarked, imperative and the other is a marked imperative, which is derived from a different root from that of the unmarked one. The marked imperative is used to add intensity to the command. Verbs with two imperatives include the following:

- (10) *jaššək* II ‘to look’  
 a. *jaššək +’álli!*! ‘Look at me!’ (unmarked)  
 b. *xúr +’álli!*! ‘Look at me!’ (marked)
- (11) *’azəl* I ‘to go’  
 a. *xùš!*! ‘Go!’ (unmarked)  
 b. *si!*! *sé!*! ‘Go!’ (marked)

The imperative is occasionally combined with a 2nd person L-suffix. This is found mainly with verbs of movement, e.g.

- (12) *ku-tálux Nànvə!*! ‘Come to Nineveh!’ (A 3:19)  
 (13) *ku-tálux còslí!*! ‘Come to me!’ (A 3:53)

- (14) *tàlux!* *tlúb mònni!* 'Come and make a request from me.' (A 54:2)
- (15) *'áti sílax lùš!* 'You go and get dressed.' (A 51:4)
- (16) *'áti sílúx bëta!* 'You go home.' (A 54:8)
- (17) *kìylux!* 'Get up!' (A 43:9)

These constructions are used in contexts where the addressee is being invited to do something for his/her benefit, so the L-suffix here can be identified as having a dative-benefactive function. An example in another verb is found in (18):

- (18) *škúllux xá-dana 'òrba,* +*kìulla* *dómmo máttilə* +*al-jùlli* *lábælla ká màrux.*  
"Take a sheep for yourself, kill it, put its blood on my clothes and take it to your master." (A 1:9)

The imperative may be preceded by the cardinal numeral *xa*. The basic effect of this is to add politeness to the command, turning it into an invitation to the speaker, e.g.

- (19) *xa* +*xùl!* 'Go on, eat!'
- (20) *nàša!* *xá zmùr!* 'Go on, sing man!'
- (21) *xá jàssák!* 'Have a look!'
- (22) *xá* +*tmilə!* 'Have a taste of it!'
- (23) *xa-tá làxxa!* 'Come here!' (A 42:15)

The particle can be used also with deontic *patəx* verbs with a similar function, e.g.

- (24) *xá 'ázax.*! 'Let's go.'
- (25) *xá* +*àxlax.*! 'Let's eat.'
- (26) *xa-*+*òrən!* 'Let me go in.' (A 42:13)
- (27) *'ána xá xázzən* *'áyya mù* +*jéyran.*! 'Let me see what gazelle that is.' (A 42:30)

Occasionally *xa dana* is used in this context, e.g.

- (28) *'ána xá-dana* *'ázən* +*bàzar!* *'átən.*! 'I shall just go to the market and come back.' (A 42:5)

In some circumstances it is used to add hortatory force to a command, apparently by the pragmatic strategy of insincere politeness, e.g.

- (29) *xa-jáššək mù kavvúmə fu-+átrət diyyan!* 'Just look what is happening in our land!' (A 1:39)

The imperative may be strengthened by combining it with the particle *di*, *d-*, which is likely to be related etymologically to *'adiyya*, *'adi* 'now'. This is found mainly in varieties spoken in the Caucasus:

- (30) *dí sìl!* 'Go away!' (A 52:2)  
 (31) *d-+sli!* 'Come down!' (A 47:14)

A prohibition may be expressed by combining the imperative with the negative particle *la*, e.g.

- (32) *là +ktúlli!* 'Do not kill me.' (A 3:33)  
 (33) *là-ta kúrba!* 'Do not come near!' (A 1:n)  
 (34) *lá-vud kàla!* 'Do not make a sound!' (A 1:28)  
 (35) *là +bákər!* 'Do not ask!' (A 2:16)

In (32)–(35) the prohibition is perfective in aspect. The construction is also used when an iterative, or enduring situation is prohibited, e.g.

- (36) *là-climun!* 'Do not stop! (now or at any subsequent time)' (A 3:57)  
 (37) *háč 'átxa lá vùd!* 'Never do that! (now or at any subsequent time)'

The particle *xa* may be used before the negator to make the prohibition more polite, e.g.

- (38) *xá lá hàmzəm!* 'Please do not speak.'

A negated imperative may be combined in a closely-knit construction with another imperative that is within the scope of negation but has no negative particle, e.g.

- (39) *xína lá xúš fu-+alulánə zàbənnun 'ánnə!* 'Do not go and sell them in the streets.' (A 34:5)

Prohibitions are also expressed by negating the deontic *patax* form. These are in principle used to relate to a perfective action in the future or an imperfective habitual action, e.g.

- (40) *lá +'àxlət! láxma +hàram.* ‘Do not eat forbidden food.’ (A 3:9)
- (41) *lá-'azət +bár +šúp̥ra.!* *+šúp̥ra lè-paš kátux.!* *lá-'azət +bár +rába davàlta.* ‘Do not go after beauty. Beauty will not last for you. Do not go after great wealth.’ (A 3:11)
- (42) *m-áxxa làjójət.* ‘Do not move from here (at any time).’ (A 36:16)

An imperative may be a complement of the expression *buš +spay* in constructions such as (43):

- (43) *'adíyya buš-+spáy ka-díyyi làbəl.* ‘You better take me now (literally: Now better take me).’ (A 43:11)

Sporadically the imperative is used by the narrator of a narrative to address one of the protagonists. This is used to present pivotal events. The clause component referring to the protagonist can have a demonstrative determiner or be an independent demonstrative pronoun, as in (44) and (45). This is a feature of a third person referent rather than an addressee in direct speech. In (46) the addressee of the imperative is followed by reference to her by a 3fs. object pronoun on the next verb. These features indicate that the imperatives do not occur within dialogue but rather within the narrative:

- (44) *tá kú 'á càlu janvíla.!* *'á cálū jnivàle.* ‘“Come get up” this bride. They kidnapped the bride.’ (A 55:6)
- (45) *'ájar yúma +tlá-ja ... rišo bəsràkula! +əsrà-ja jóxcəla! 'òmma-ja jóxcəla,!* *'á frúš +al-+bàzar.* ‘If she combs her head three times a day, she laughs ten times, she laughs a hundred times, he—take it to the market (= he could take it).’ (A 43:22)
- (46) *bəškàlona,!* *mattúvvona fu-xùrjun!* *'u-sé bəjràšona.* ‘They take her and put her in a pack-saddle, and off you go, they carry her off.’ (A 43:5)

## 10.5 Present Copula

The present copula exists in two forms, enclitic and independent. These must be distinguished when determining its function. The enclitic form is generally attached to the end of the predicate, e.g.

- (1) *brúnux +spày-ilə.* ‘Your son is good.’

In some circumstances it may be attached to the subject constituent, e.g.

- (2) +'áv-ilə +xòri.| 'He is my friend.'

The independent form is distinguished from the enclitic form by the presence of /' at the onset of its first syllable. This reflects the fact that it is treated as an independent word (§ 1.14., § 1.15.2.):

Enclitic	<i>ilə</i>
Independent	'ilə

The independent form bears its own stress, e.g.

- (3) *brúnux 'ilə +xòri.*| 'Your son is my friend.'

It is generally placed before the predicate, though it may also be placed after the predicate, e.g.

- (4) +'úllul 'ilə.| 'He is above.'

#### 10.5.1 *Enclitic Copula*

The enclitic copula attached to the predicate may be regarded as the functionally unmarked form of the copula. It is used irrespective of the time stability of the predicate. The predicate may express a permanent property of the subject, e.g.

- (1) *brúnux +spày-ilə.*| 'Your son is good.'

It may identify the referent of the subject with that of the nominal of the predicate, which is typically a permanent relationship, e.g.

- (2) +'avva náša *brùnan-ilə.*| 'That man is our son.'

The predicate may also express a contingent situation that is not necessarily a permanent property of the subject, e.g.

- (3) *brúnux cpìnələ.*| 'Your son is hungry'

Examples from the text corpus:

- (4) +'Axíkar xàyələ.| 'Axiqar is alive.' (A 3:49)

- (5) *déva-zə +sìyyəna.*| 'The monsters are thirsty.' (A 37:15)

- (6) *+yakùrtəla.* ‘It (the waterskin) is heavy.’ (A 37:15)
- (7) *+rába b-šənnəla.* ‘He is very aged.’ (A 2:24)
- (8) *bas-’áha móndi tázəla.* ‘But this thing is new.’ (A 3:76)
- (9) *karibàyəvax.* ‘We are foreigners.’ (A 2:6)
- (10) *’átən raxmànət.* *’át xubbànət.* ‘You are merciful. You are loving.’ (A 3:92)
- (11) *’òltəx!* *dášta cùllo kònəla.* ‘Below the whole plain is green.’ (B 2:14)
- (12) *’áxnan +šavvá ’axunvátəvax.* ‘We are seven brothers.’ (A 37:10)
- (13) *’ánnə +xuyravátuna.* ‘These are his friends.’ (A 2:7)
- (14) *’ítə ’áha=zə xá mən-+adáttət bne-* *’Urnila.* ‘So this too is one of the traditions of the Urmi people.’ (B 12:9)

In the foregoing examples the subject of the clause has a specific referent. The copula is also used when the subject refers to a generic class, e.g.

- (15) *nèkva! mən-’úrza buš-xelàntəla.* ‘A female is stronger than a male.’ (A 2:36)

The predicate may be combined with the particles *+hala* ‘still’ and *har* ‘already, still’, which demonstrate that the situation is not permanent, implying an endpoint or starting-point, e.g.

- (16) *brúnux +hálə cpìnəla.* ‘Your son is still hungry.’
- (17) *brúnux hár cpìnəla.* ‘Your son is already hungry.’
- (18) *’áha +hálə málcəla.* ‘He is still king.’
- (19) *’áha hár málcəla.* ‘He is already king.’

The present copula is used to express a situation that extends from the past into the present in constructions that are rendered by the English perfect of persistent situation, e.g.

- (20) *mən-ķedamta làxxəvət.* ‘You have been here since the morning.’ (A 4:6)

The construction is unmarked with regard to the communicative salience of the proposition of the clause as a whole. This is reflected by its usage irrespective of the factivity of the proposition. It is used both in factive and non-factive propositions. Clauses expressing assertive, factive propositions are high in communicative salience in that the speaker is committed to its factuality. Non-factive propositions do not involve such commitment and are low in communicative salience. This applies, for example, to interrogative clauses, in which the proposition is being questioned, e.g.

- (21) *brúnu +spày-ilə!* 'His son is good.'  
 (22) *brúnu +spày-ilə?* 'Is his son good?'

Examples of interrogative copula clauses from the text corpus:

- (23) *kám xá-xča +naràhat-ivət?* 'Why are you so upset?' (A 2:15)  
 (24) *mù-ila,jnáyo?* 'What is its crime?' (A 3:80)  
 (25) *dùz-ila?* 'Is that correct?' (A 3:76)  
 (26) *+hála xàyəvət?* 'Are you still alive?' (A 39:13)

On some occasions the clitic copula is attached to the subject constituent. This occurs in clauses that are identificatory or that predicate a permanent property of the subject, e.g.

- (27) *é-+dán +várəna jú dó,jappítə! ... án xínə cùllə! cicé maxrupèna dévə! kát dúlə 'axúnān tuyyílə xá +séda t-+axləxələ mára là 'axunváti, lə. á-ilə xá +bar-náša.* 'When they enter the cave, ... all the others (the other monsters) are sharpening their teeth thinking that "Our brother has brought a prey for us to eat." He says "No, my brothers, no. This is a human."' (A 37:12)  
 (28) *+simákur bəxšàvələ! ýahələ ý +janàvar! yán ý hònna! +bar-nášət kát bitá-yələ ýnnə býyo +bəšmatələ, +bixalələ.* 'The *+simaxur* bird thinks he is the monster, or the thing, the man who is coming to break and eat her eggs.' (A 39:22)

In (27) the ascription to the subject referent of the property of 'human' is presented in contrastive opposition to the expectations of those in the speech situation. The focus of the assertion, therefore, is on the property term and the copula is not a component of the assertion, but rather is a component of the presuppositional background of the clause. The contrastive assertion is the correct candidate for the slot in the presupposition 'He is X'. In (28) the copula is not part of the presuppositional background and both the copula and the predicate constituent are asserted, but this assertion is weak due to the fact that the clause is embedded under the main verb *bəxšàvələ* 'it thinks'. A verb such as 'think' weakens the claim to truth of its complement (Hooper 1975, 101). Constructions such as these consisting of *Subject—enclitic copula—Predicate* can, therefore, be regarded as weak forms of constructions with the independent copula with the form *Subject—Independent copula—Predicate*, which are typically used with identificatory predicates (§ 10.5.2.). In constructions with the enclitic copula such as (27) and (28) the copula is non-assertive or only weakly assertive, whereas in constructions with the independent copula the copula is fully assertive.

On some occasions the copula is used without a predicate constituent and it is existential in function, e.g.

- (29) *ka-rijavàtə| mujtáyyəd +rába rijavàyəna ju-bétu,| mára mèmun| scánta 'u-masèta.* ‘To the servants—there are many servants in the jurist’s house—he says “Bring a knife and scales.”’ (A 7:11)
- (30) *'adíyya +hàjilə,| márət xmàrələ,| márət motànələ| 'u-'áha sárhanj +jurələ.* ‘Now there is the pilgrim, there is the owner of the donkey, there is the master of the dead man, and there is this great colonel.’ (A 7:7)
- (31) *'ána 'àtən-ivax,| xá-naša lítən.* ‘I and you are (here) (= we are alone), there is nobody (here).’ (A 6:7)

Such existential usages of the copula typically occur when the subject is recoverable from the preceding discourse. The existential particle *'at*, by contrast, is typically used when the referent of the nominal is being newly introduced into the discourse.

In (32) an existential type of copula is used to shift attention to a topic that has been evoked already earlier in the discourse:

- (32) *yàmmola,| yàmmo| léla +bəddá mu-'òda.* ‘As for her mother, she does not know what to do.’ (A 42:19)

The present enclitic copula is sometimes used in clauses that are dependent on a matrix clause that contains a past tense verb. In such cases the copula takes the past time reference of the matrix verb, e.g.

- (33) *bəxšávəva +xuyravátuna.* ‘He thought they were his friends.’ (B 6:2)
- (34) *'o-náša xzílə ḳat-'á +màlla| hónu xáčča ... +basùrələ.* ‘The man saw that the mullah—his brain was rather lacking.’ (A 32:2)

### **10.5.2 *Independent Copula***

The independent copula is marked with regard to the nature of the predicate and also with regard to the communicative salience of the proposition expressed by the clause.

The predicate is generally identificatory, specificational or expresses a permanent property of the subject. In most cases it is placed between the subject and the predicate, e.g.

### Identificatory predicates

- (1) *'ána 'ívən +'Axīkar.* 'I am Axiqar.' (A 3:67)
- (2) *+ávun=da 'ílə ríjət +hàji.* 'He is the servant of the pilgrim.' (A 1:33)
- (3) *+ávva 'ívən 'ána.* 'That is me.' (the informant is pointing to a picture of himself on the wall)

### Specificational predicates

Such predicates give a specific value to the description in the nominal phrase before the copula (Higgins 1979, see § 12.5.6.8.).

- (4) *'ána šámmi 'ílə Véktur 'Ùršan.* 'My name is Viktor Uršan.' (B 11:1)
- (5) *šámmat díyyi 'ílə ... +pàllan cás.* 'My name is so-and-so.' (A 37:8)
- (6) *'é yàma +táma] šámmo 'ílə yámət 'Ùrmi.* 'The lake there, its name is the lake of Urmî.' (B 2:17)
- (7) *šámmat do-brúnu súra 'íva +Àšur.* 'The name of the young son was Ashur.' (A 39:1)
- (8) *čúncətvazzírət málca 'aslí] 'ílə 'Alla-Várdi +Xàn.* 'because the original vizier is Allah-Vardi-Khan' (A 1:24)
- (9) *xá-mənnə 'íla] kát 'ána jári xá-dana ... bëta] zárzən ka-für'un] ju-+hàva.* 'One of them (the tasks) is that I must build a house for Pharaoh in the sky.' (A 3:56)

### Predicates expressing a permanent property

- (10) *xá mən-cačála 'ílə +tàjər.* 'One of the bald men is a merchant.' (A 1:30)
- (11) *cúlla 'ánnə 'ína pòrxə.* 'All these are (= make up the spice collection known as) pòrxə.'
- (12) *+arabána 'íla 'et-'axúna +jùra.* 'The cart is the eldest brother's.' (A 36:3)
- (13) *'á màral b-xá +čap̄páltal] á 'arþí dánə dèvə bət-+kátləl.* bás 'áxnan 'ívax +šàvvəl +yána hàč-məndivax ka-dá. 'This man says that with one staff he would kill forty monsters. But we are (only) seven, so we are nothing (compared) to him.' (A 37:9)
- (14) *dayyána mírlə müdile 'o-mándi búš xelána ju-dùnyə? clíla mèrra] +jóri 'ílə +ràba xelána.* 'The judge has said "What is the strongest thing in the world?" She paused and said "My husband is very strong." (A 38:8)
- (15) *báxta 'íla PzayiféP.* 'A woman is weak.' (A 5:2)

Occasionally the independent copula is used with a contingent predicate:

- (16) *'ána 'ívən blyja. +máxbərri +bar-xamša dàyka.* | 'I am busy. Phone me in five minutes time.'

A construction with an independent copula is marked with regard to communicative salience. It is used in clauses expressing assertive, factive propositions, which are high in communicative salience in that the speaker is committed to their factuality, but it is not used to express non-factive propositions such as interrogative clauses, in which the proposition is being questioned. If the clause is interrogative, the enclitic copula on the predicate is used.

The communicative salience of the construction is exploited to give prominence to a statement. The motivation may be the fact that the clauses present pivotal information. The use of the construction to identify names (4–8) typically fall into this category. This applies also to cases such as (14), which supplies the key response to a riddle.

The prominence of a clause with an independent copula also signals that the clauses are disjoined from the adjacent clauses with regard to their discourse function. Clauses with the independent copula are often an introductory statement that constitutes the preliminary setting of a discourse section, an explanatory parenthetical insertion, or a concluding elaboration. The preliminary setting may present the grounds for the following statement, as in (16). Example (11) is a concluding recapitulative statement at the end of a discussion of a list of items. Examples such as (10) and (12) express some kind of elaborative background on what precedes. The marking of a boundary or discontinuity in the flow of the discourse is a common discourse usage of constructions with communicative salience.

In (17) the independent copula is used in a construction where the subject is extraposed with a resumptive subject pronoun. Extraposition itself is a strategy for marking boundaries in discourse (§ 12.14.):

- (17) *míyya 'ánnə 'ína o-mándi búš xelàna.* | 'Water—it is the strongest thing.'  
(A 38:11)

The clause may be given prominence to express contrastiveness. In (13) there is a contrastive opposition between the small number, which is a property of the group to which the speaker belongs, and the large number mentioned in the preceding context ('They are many' vs. 'We are seven'). This type of construction involves contrastive topics ('they' vs 'we'), which are correlated with contrastive predicates ('many' vs 'seven'). This contrastive topic function is clear in the following:

- (18) *'átlí tré +armonyàtə. | 'á 'íla +xvàrta. | 'á 'íla smùkta.* | 'I have two pomegranates. This one is white. This one is red.'

The independent copula is used to express other types of contrastive functions. In (19) the construction is used to make an assertion that contradicts a preceding assertion:

- (19) *kárjə 'ína cùma.* | 'Crows are black' (contradicting a statement by an interlocutor that they are another colour).

Such construction can be used not only in clauses ascribing permanent properties to the subject but also in a predicate expressing a contingent property

(20):

- (20) *'ána 'ívn cpína.* | 'I am hungry' (contrary to what you presuppose to be the case).

If the clause contradicts a preceding negative clause with the same predicate item, the copula is typically given the nuclear stress:

- (21) A: *brúnux lèla cpína.* | B: *là,* | *brúni 'íla cpína.* | 'A: Your son is not hungry. B: No, my son is hungry.'  
 (22) A: *bábux lèla +tama.* | B: *là,* | *bábi 'íla +táma.* | 'A: Your father is not there. B: No, my father is there.'

On some occasions the independent copula is placed after the predicate. In such cases the nuclear stress is typically placed on the copula. Examples found in the text corpus and noted during fieldwork include the following:

- (23) *'áyya rásmat díyyan 'íla.* | 'This is our custom.' (A 36:16, concluding comment)  
 (24) *+yakúyra 'íla.* | 'It is heavy.' (parenthetical comment)  
 (25) *xelánta-da 'íla.* | 'It is also strong.' (parenthetical comment)  
 (26) *'áyyen 'íla.* | 'It is indeed that.'  
 (27) *la'usa díyyan 'íla.* | '(The word) *la'usa* is indeed ours.'  
 (28) *ju-líšána +sapráya 'íla.* | '(It is not used in the spoken language), it is in the literary language.'  
 (29) *xa-+úxčət 'íla,* | *xa-+úxča=zə xut-+àrrələ.* | 'As much as he is, so much is he also under the ground.' (i.e. you do not know half of him, he is cryptic, sneaky)

This construction performs functions similar to those of the independent copula constructions described above. In some cases it occurs in a clause that supplies a concluding or parenthetic comment (23–25). In other cases it is used to make a strong assertion, to confirm against the background of a contrary presupposition (26–27) or an item in contrastive opposition (28). In (29) it is in a clause that is set up in a parallel opposition with the following clause and the independent copula gives it greater distinctness. A postposed independent copula is also found without the nuclear stress in examples such as (30), in which the predicated item has an inclusive focus expressed by an inclusive clitic:

- (30) *jánta* *ka-vàrdə=zə* *'ila.*! ‘The word *janta* (“garden”) is also for flowers (in addition to vegetables).’

When the subject of the independent copula is pronominal, in some cases it is expressed only by the inflection of the copula and is not realized by an independent pronoun, e.g.

- (31) *'ila* +*xorət* +*fjoro.*! ‘He is the friend of her husband.’ (A 5:13)  
 (32) *'ila* +*rába* *ràba**jáldə.*! ‘It (human thought) is very very fast.’ (A 36:11)  
 (33) *'ila* *xá mən-dan-*+*umránə* *atíkət* *mšixayùta.*! ‘It is one of the oldest churches of Christianity.’ (B 1:4)

## 10.6 The Deictic Copulas

The deictic copulas are used to draw attention to a referent or to a proposition.

### 10.6.1 Near Deictic Copula

The near deictic copula is generally used to draw attention to a situation that is near to the interlocutors. Normally the subject of the copula is near and the predication supplies information about this subject, e.g.

- (1) *dúla* *xèta.*! ‘She is alive.’ (A 1:37)  
 (2) *dúlə* *làxxa.*! ‘He is here.’ (A 6:12)

If no material in the predicate exists and only the subject referent is presented, then the copula is used to draw attention to the referent of the subject rather than to a proposition, e.g.

- (3) *jáš yámmi dùla!* 'Look, here is my mother.' (A 44:12)  
 (4) *dùla!* 'There she is!'

### 10.6.2 Far Deictic Copula

The far deictic copula may be used to draw attention to a situation that is far from the interlocutors but visible. As with constructions with *dulə*, normally the subject of the copula *velə* is far and the predication supplies information about this subject:

- (1) *véla méša kùrba!* 'The forest is over there nearby.' (A 37:14)  
 (2) *véna 'ánnə +tàmma!* 'There they are there.' (A 48:24)  
 (3) *véna +tàmma!* 'They are over there.' (A 1:11)  
 (4) *cúllə véna švávə xúš tāni!* 'All the neighbours are there, let them tell.' (A 44:12)

In (5) the far deictic copula is used to draw attention to a situation that is not visible to the interlocutors, e.g.

- (5) *xá-dana ... marjanítələ! ju-xá-dana kùnya véla!* 'There is a pearl, it is in a well.' (A 40:3)

In many such cases the speaker has an emotional connection with the situation. In (6) the revelation of the location of the eyes is a climactic event:

- (6) *+áynət bábux véna +pòllan díca!* 'The eyes of your father are in such-and-such a place.' (A 39:40)

If no material in the predicate exists and only the subject referent is presented, then the copula is used to draw attention to the referent of the subject, e.g.

- (7) *vèla!* 'There she is!'

In (8)–(9) the clause with the presentative copula is a complement of verb of perception and introduces a situation that comes to the attention of the subject of this verb:

- (8) *'ána xášli kédamta xzilil! 'ína cùlla o-+xiyàvand! ý nišánkət 'ána müttun! +'áv-da vēl-+tàmma!* 'I went in the morning and saw that the same sign that I had placed was in the entire street.' (A 2:10)  
 (9) *bəxzáyəle xá-dana xmàra!* *'ína véləju-+tìna!* 'He sees a donkey in the mud.' (A 7:4)

## 10.7 Past Copula

### 10.7.1 Enclitic Past Copula

The enclitic past copula is attached to the end of the predicate. Such constructions are unmarked with regard to the nature of the predicate and also with regard to the communicative salience of the proposition expressed by the clause. The predicate may express an enduring situation in the past or one that is contingent to a particular moment or space of time and exists only temporarily.

Enduring situation

- (1) *báxtu +rába honàntəva.* ‘His wife was very clever.’ (A 3:57)
- (2) *+’áv-da +rába lìpəva.* ‘He also was very learned.’ (A 3:1)
- (3) *xayyuté mən-+tàmməva.* ‘Their livelihood was from there.’ (B 2:3)
- (4) *dáštət ’Ùrmi xína ràba šaþórtəva.* ‘The plain of Urmi was very beautiful.’ (B 2:12)

Contingent situation

- (5) *’e-+dána +ràba críbənva márri ’ádi bət-+katlənnə.* ‘Then I was very angry and said “Now I shall kill him.”’ (A 2:28)
- (6) *xàmməva.* ‘It was hot.’ (A 37:21)
- (7) *júvvab +’àvvəva.* ‘The answer (to the riddle in question) was that.’ (A 3:83)
- (8) *+rába-zə naxùpəval +rába-zə +zadìyəva.* ‘He was very shy and was very timid (at that time).’ (A 37:1)

The subject in the foregoing examples has a specific referent. The past enclitic copula is also used when the subject refers to a class of referents, e.g.

- (9) *’áni xurráyat sàtvəva.* ‘They (i.e. the various items described previously) were winter foods.’ (B 2:4)

The unmarkedness of the construction with regard to the communicative salience of the proposition it expresses is shown by the fact that it is used both in assertive factive clauses and also in non-factive interrogative clauses, e.g.

- (10) *’axúnux ju-bètəva.* ‘Your brother was in the house.’
- (11) *’axúnux ju-bètəva?* ‘Was your brother in the house?’

### 10.7.2 *Independent Past Copula*

Constructions with the independent copula placed either before or after the predicate are used to express some kind of communicative salience. As is the case with the present independent copula, they are used most frequently with identificatory and specifical predicates or predicates expressing time stable properties that the speaker wishes to present with particular prominence in the discourse. The motivation for the prominence may be the importance of the proposition in the section of discourse in question, e.g.

- (12) *'átən ́ítva +maxdərránət +'àtri.* | 'You were the administrator of my land.'  
(A 3:45)
- (13) *xá-mənnə ́íva šémmu Míster Smith,| 'o-xína ́íva Dwìght.* | 'One of them—his name was Mr Smith, the other was Dwight.' (B 2:12)

In (14) the fact the father used to be the vizier is the crucial point of this section of discourse and this is expressed with an independent copula. The fact that he was now aged is an elaborative detail and is expressed by clauses containing an enclitic copula:

- (14) *'a-vázzer ́etválə xa-dána bába.|| bábət dáha ́íva vázzer ķa-bábət málca kámta.* | 'ína +'úxča sìvəva| müttuva ju-xá ... +'kárṭàla| ju-ctàna| kát lā-+aj-jazva +págru.|| +rába sìvəva| 'ína ́íva vazzírət bábət málca.|| 'This vizier had a father. His father was formerly vizier to the father of the king. But he was so aged that they had placed him in a basket, in cotton, so that his body was not harmed. He was very old, but he used to be the vizier of the father of the king.' (A 2:14)

Example (15) makes a statement about the king in the form of a parable, the purpose of which is draw particular attention. This prominence is expressed on the grammatical level by using the independent copula:

- (15) *'áha málca káti ́íva xá +karívvə| kát +'úxča šapíra ķala ́tvalə.* | 'This king was for me a rooster, which had such a beautiful voice.' (A 3:81)

The motivation to give prominence to a clause by means of an independent copula may be the fact that it is set up in a contrastive opposition with something else in the adjacent discourse. In (16), for example, the fact that Natan is in the royal household is presented in contrastive opposition to the privileges offered to his brother. In (17) the different origins of the referents are being presented in opposition. In (18) the status of being poor is set up in opposition to the status of being rich:

- (16) *ka-dáha yávvi zùyza| yávvi bëta,| sábab Nàtan| 'íva jú ... bétet málca.* ‘To this one (the brother of Natan) they should give money, they should give a house, because Natan was in the royal household.’ (A 3:18)
- (17) *tré-mønne 'íva mën-'Úrmi| xá-mønne 'íva mën-+Màraja.* ‘Two of them were from Urmi. One of them was from Maraga.’ (B 1:2)
- (18) *ju-matvátə 'átvalan bátə prišə| clítəva +'ál-nàšə,| müjjurra másalan cmá 'á 'íva +cásəb yán dolatmand.* ‘In the villages we had various houses, it depended on the people, for example, how he (i.e. a certain person) was poor or rich.’ (B 2:18)

Two statements with the same semantic content may have different types of copulas according to their position in the discourse. In (19), for example, the first clause is given prominence by the independent copula. This is followed by a recapitulation of the same content in a clause uttered more quickly to which the speaker does not give so much prominence. This is reflected on the grammatical level by the fact that the enclitic copula is used in this recapitulation.

- (19) *úna 'ína vazzírət bábət dìyyux.| vazzírət bábət dìyyux-ína.* ‘I was the vizier of your father. I was the vizier of your father.’ (A 2:25)

The communicative salience of the construction gives the clause a degree of independence from the adjacent discourse and this is sometimes exploited to express some kind of circumstantial background to a narrative. In such cases the circumstantial section typically sets the spatio-temporal frame for what follows, e.g.

- (20) *'ána| jù| duccàni 'ína| dax=ət-'údyu káti xzìlux ju-duccána,| ... 'ína 'ána xà-yuma| 'ína ju-duccàna,| 'ax-díyyux káti tílux xzìlux,| tíla xa-náša káti mòrrə|* ‘I was in my shop, as you saw me today in the shop ... now, I was one day in my shop, just like you, who came and saw me, a man came to me and said ...’ (A 4:12)
- (21) *'ána| ju-béti tìvənva| 'e-+dántət 'ína jvànka,| +tarri mxìlun,| +tarri mxìlun,| +tuktdàklum| 'u-+plàtlì.* ‘I was sitting in my house, when I was young, and there was a bang at the my door. There was a bang at my door, there was a knock and I went out.’ (A 2:26)

In (22)–(25) the independent copula is placed at the end of the clause. These clauses are elaborative tags placed at the close of a section of discourse. In (23) and (24) the copula is existential:

- (22) *'á +táltañ 'íva.* 'This was our game.' (B 9:12)
- (23) *'átxa cápna 'íva.* 'There was such hunger.' (B 3:36)
- (24) *'íta 'ánnə məndyánə 'íva.* 'So these things existed.' (B 5:5)
- (25) *šəmmané 'ína 'átxa 'íva.* 'These were their names.' (B 10:8)

## 10.8 Existential Particle

The existential particle *'at*, together with its variant forms (§ 4.23.), expresses either an enduring situation or a temporary, contingent situation:

Enduring situation

- (1) *xá-sama xína-da +álma 'áttən kət-ci-táni mən-jíbət nípùxtə* Pméye poxtè<sup>P</sup>  
'There is another group of people who instead of *nipuxta* say *meye poxte*.'
- (B 12:8)
- (2) *+rába čátun šəmma 'átlə.* 'He has a very difficult name.' (A 3:47)
- (3) *cúllə móndi 'átlı.* 'I have everything.' (A 3:86)
- (4) *cúl-məndit 'áttə nəkval p-šaklátta m-pát +árra.* 'Everything that has a female you should remove from the face of the earth.' (A 2:11)
- (5) *láttnə xa-náša 'ax-diyyux.* 'There is nobody like you.' (A 3:14)
- (6) *náša lət<sup>t</sup> kət-á-məndi 'avàdlə.* 'There is nobody who can do this.' (A 3:45)
- (7) *'átvə xa-dana-málca.* 'There was once a king.' (A 2:1)
- (8) *'átvələlə +əstí-dana baxtátə.* 'He had sixty wives.' (A 3:2)
- (9) *+úxča šapíra kàla 'átvələ.* 'He had such a beautiful voice.' (A 3:81)
- (10) *'ína yálə lətvələ.* 'But he did not have children.' (A 3:2)

Contingent situation

- (11) *xa-náša 'áttən ju-+dússak<sup>k</sup> bədmáyələ +álli.* 'There is a man in jail who resembles me.' (A 3:35)
- (12) *'áni céca +bixalélələ +tárrət dárta-zə švák<sup>k</sup>tula ptíxa.* bəxzáyələ +tárrət dárta-zə 'áttən. 'He eats the cakes. She has left the door of the courtyard open. He sees that there are some at the courtyard door.' (A 37:4)
- (13) *'átlı tré +xábra kátux tánən.* 'I have two words to tell you.' (A 2:25)
- (14) *'ína +Axíkar +xábra lətlə.* 'But Axiqar had nothing to say (literally: he had no word).' (A 3:19)
- (15) *késə lətlun<sup>t</sup> jári ýe-+dana 'ázi késə máyyi.* '(If) they do not have wood, they must then go and fetch wood.' (A 37:13)
- (16) *bəjrásəla kátu<sup>t</sup> sáb lələ +msáya jaróšla, látlə xəla.* 'It pulls him, because he cannot pull it, he does not have strength.' (A 37:15)

When dependent, either syntactically or pragmatically, on a past tense clause, the present existential particle can be used with past tense reference, e.g.

- (17) *'íman 'á málca vīlə| 'áxnan +xábra lòtlan?|* 'When did this man become king (while) we had no word of it?' (A 1:42)

There is no clear functional distinction between the short and long variants of the present existential particle (*'at*, *löt* vs. *'attən*/*'itən*, *lattən*/*litən*). They appear to be in free variation. In a series of two parallel clauses containing the particles, however, a short variant is often followed by a long variant, giving the final clause of the pair end-weighting, e.g.

- (18) *vázzər mən-málca +plàtəna.| b-ricávə bərrəxšəna| +bəxdàrəna| xázə mü-'at| mü'lattən.|* 'The vizier goes out together with the king. They go with cavalry, they travel around, so that he (the king) can see what is and what is not.' (A 2:3)

When the item whose existence is being predicated is definite, the particle expresses presence or absence on the scene of a known referent, e.g.

- (19) *tílan +várran xázax ķa-mú bnayèlə| 'ína lattən.|* 'We went in to see why he was counting them, but he was not there.' (A 10:8)  
 (20) *'a-náša löt +hála.|* 'This man is still not there.' (A 21:3)

## 10.9 Negative Copula

The present and past negative copula forms refer to states, both permanent (1–5) and contingent (6–10), in the present and past respectively:

- (1) *'áha ju-cùllə matvátəva,| léva 'áxči ju-mátət diyyan.|* 'This (custom) was in all the villages, it was not just in our village.' (B 2:5)
- (2) *'ádi| xína 'áx kámta lélə.|* 'Now it is not like before.' (B 2:19)
- (3) *márət díyyi lélə xšíxa| kat-'ána 'átxa hamzámmən bázu.|* 'My master does not need me to talk like this about him.' (A 3:64)
- (4) *léna +xlíma.* 'They are not thick.' (B 14:6)
- (5) *léva prəšta.* 'It was not different.' (B 2:3)
- (6) *lélə +dán P'suxì.* 'It is not time for a joking.' (A 2:29)
- (7) *mən-'álaha lélə +xšítə.* 'It is not hidden from God.' (A 2:17)

- (8) *'e-+dánət lèx béta| ... 'ázət xá xáčča mìyya mayyátlan.* | 'When we are not at home, ... you should go and bring us some water.' (A 37:14)
- (9) *lèla bšálta.* | 'It is not cooked.' (B 12:7)
- (10) *lélə +t̪òlyá.* | 'He is not asleep.' (A 37:19)

The negative copula may be preceded by a deictic copula, as in (11), where the clause expresses a contingent state:

- (11) *'á dúlə lèlə míta.* | 'See, he is not dead.' (A 37:21)

## 10.10 Verbal Forms Based on the Resultative Participle

### 10.10.1 ptixələ

#### 10.10.1.1 Resultative Perfect Function

In the majority of cases the *ptixələ* form expresses a resultative perfect. This expresses a state in existence in the present that has come about as the result of a previous action. It is the resultant state that is directly expressed by the construction, rather than the action, which is an implicature. The endpoint of the event is in the past and does not overlap with the present, e.g.

- (1) *'ádi yála furvàssəl.* | 'The boy has now grown up.' (A 37:5)
- (2) *brùni l̪úpru +kòčyulə +'áv-da ka-+dáv +nìsələ.* | 'My son has cut off its tail and it has bitten him.' (A 46:4)
- (3) *kóšun +jummévət +al-jàni.* *fúr'un m-á-yba xína bitáyələ +al-jàni.* | 'You have gathered the army against me. Pharaoh is approaching from the other side against me.' (A 3:27)
- (4) *fúr'un málca xá-xčá móndi +šùdranilə.* *+árpa xamšá məndyána mónni +tlíbələ.* | 'Pharaoh the king has sent us such-and-such a task. He has demanded of me four or five things.' (A 3:55)
- (5) *cullóxun lípotun darsòxun?* | 'Have you all learnt your lesson?' (A 1:25)
- (6) *'á bráta plàxtəla yan-lá?* | 'Has the girl worked or not?' (A 35:7)
- (7) *šuddànnət?* | 'Have you gone mad?' (A 3:82)
- (8) *'átlə šòmma bas-šòmma +úxča munšítun.* | 'He has a name but I have simply forgotten the name.' (A 3:33)
- (9) *nášə xínə látva kát ka-díyyux xa-šəcvána +šúdrələ cəs-xa-málcət Məssər.* | 'Were there no other people, that he has sent you, an ant, to a king of Egypt?' (A 3:66)
- (10) *'ána +Axíkar lén +ktílu ... 'ána +túmrún kam-+tárrət bëtu.* | 'I have not killed Axiqar ... I have buried him before the door of his house.' (A 3:49)

The resultative participle may be combined with an existential particle when the subject of the clause is indefinite, e.g.

- (11) *+xárta bəxzàyəna! xácma jáha bəxzáya bitàyəna! 'ína núyra lát +šíra! késə líttən ...!* ‘Then they see, sometimes they see when they come back that there is no fire lit (= no fire has been lit) and there are no logs of wood.’ (A 37:13)

The event to which the resultant state relates may have been of an extended period in the past or an iterative series of events, e.g.

- (12) *Nátan brúní! 'ána tuybàrrun, jurnàssuvən, mülpun, áxči ka-dàha mánđi.* ‘I have raised Natan, my son, I have brought him up, I have taught him only for this purpose.’ (A 3:15)
- (13) *'ádi cmá šənnəl cáslux +xíłəla, šətyəla!* ‘For how many years now has he eaten and drunk with you?’ (A 3:22)
- (14) *mən-kédamta at-tívət làxxa, cpína +sìyya.* ‘You have been sitting here from the morning, hungry and thirsty.’ (A 4:5)

The construction can have the sense of an experiential perfect, e.g.

- (15) *'áxnan! ju-+rába +atravátət dúnyə +xdırəvax, +rába dəšyátə xázýəvax, +rába duçàna xíšəvax.* ‘We have travelled to many countries of the world, we have seen many plains, we have gone to many places.’ (B 2:14)
- (16) *'ína mən-jánux buš-áhmač xázýət?* ‘Have you (ever) seen a more stupid person than you?’ (A 16:1)
- (17) *ju-+tuyrána lèx xíyya.* ‘We have not lived in mountains.’ (B 16:2)
- (18) *láxmət +lavášə +xíłəvət?* ‘Have you eaten *lavášə* bread?’
- (19) *'Úrmi xíšəvət?* ‘Have you been to Urmi?’

The *ptixəla* form is used in negated clauses containing the particle *+hala* ‘yet, still’ to express that the state of something not having happened still holds. Since the resultant state is negated rather than the event, the implication is that the event will still take place, e.g.

- (20) *'axúni +hála lélə tìyya.* ‘My brother has not yet come.’
- (21) *'útən +hála lèt jvíra?* ‘Have you not yet got married?’ (A 35:5)

In (22) the first speaker makes an allegation about a specific event with a *ptəxla* form, and the interlocutor denies this with a *ptixəla* form. The negated *ptixəla*

form denies a resultant state, which has been brought about by an event at any point in the past, rather than a specific event. This, therefore, is a strategy for expressing emphatic denial. Similarly in (23) the question has the *ptaxla* form, but the speaker uses the *ptixələ* form in the response to strengthen the denial:

- (22) *'át mèrrax.!* lá *'ána lèn mórrta.*! ‘‘You said it.’’ ‘No, I have not said it (on the occasion you allege or on any other occasion).’’ (A 36:16)
- (23) *'áxuni mù xzílux?*! *márrə háč móndi lén xàzya.*! ‘‘Brother, what did you see?’’  
He (the brother) said ‘I have not seen anything (at all).’’ (A 45:5)

In (24) subordinate clauses that are dependent on *ptixələ* verbs have the past unrealis *patəxxva* form:

- (24) *bas-'ánnə +'əχčámmo* *'áχči +'áχča* *'ána muttén!* *kàt!* Pəmtəhàn<sup>P</sup> *'odánva*  
*kátxu,*! *+jarbànvvalux.*! ‘But I have put these nine hundred and ninety-nine  
(in the bag) in order to give you a test, to test you.’ (A 14:5)

A *ptixələ* form may be in a subordinate clause that is dependent on a past tense main verb, in which case the form takes the past tense reference of the main verb as its deictic centre, e.g.

- (25) *+bəddáyənva kàt-xíšələ Màcca.*! ‘I knew that he had gone to Mecca.’ (A 1:41)
- (26) *léva +bəddá kàt á +rišələ.*! ‘They did not know that he was awake.’ (A 37:19)
- (27) *+šmílə kàt! +tájər tiyyələ.*! ‘He heard that the merchant had returned.’  
(A 1:15)

If the clause contains a time adverbial, a resultative perfect is translated idiomatically by an English simple past, e.g.

- (28) *'ána 'ìdyu!* *kèdamta!* *ptàna vádənva!* *tré nýynə +fúra!* *dvíkévən yuvvén*  
*kàtax.*! ‘This morning (when) I was ploughing, I caught two fish and gave  
them to you.’ (A 5:9)
- (29) *'ána hál kómlı mánkal tapyànvala!* *'áyya +kàtu!* *+xáltula cùllə +bùsra.*! ‘Be-  
fore I could light the grill, that cat ate all the meat.’ (A 11:2)
- (30) *ju-dá-+danta* *'át káy tíyyət zvínət.*! ‘At that moment you came and bought  
me.’ (A 28:3)

The distinction between *ptixələ* and *ptaxla* is clearly illustrated by (31) and (32). The *ptixələ* form in (31) *+tumrutun* expresses a state resulting from an event in the past that is clearly disconnected from the present and the *ptaxla* form

expresses an event in the recent past the end margin of which is near the present. In (32) the act of the speaker's striking the judge has just occurred but the act of striking by the other person took place at a more remote point in the past. Both *ptixəle* and *ptəxlə* verbs are idiomatically translated by English present perfects:

- (31) +*tùmrutun* *dúl mədrə tīla*. ‘You have buried him. Look he has come back again.’ (A 6:13)
- (32) +*málla bəkyàməl* *xá-dana müšta ka-+kazí mxàyələ*. *mára ́á-da mən-jíbət dàvun* *kat kày máxyələ* *’ána kàx mxílli*. ‘The mullah gets up and punches the judge. He says “There, instead of him, who has hit me, I have hit you.”’ (A 21:3)

#### 10.10.1.2 Circumstantial Background

In narratives or descriptions of habitual actions in the present tense, a *ptixəla* form may be used to express circumstantial background material, indicating a resultant state, with implied prior action, that holds at the time of the action denoted by the present tense verb. When used in this function the *ptixəla* form may be placed before or after the present verb, e.g.

- (1) +*šmítəna jdila*, *nùyna dvákəna*. ‘They have broken the ice and are catching fish.’ (A 9:2)
- (2) *xá mən-’axunvátə tíyyələ miyya lábəl*. *xa-b-xá bəxzáyələ márzət* +*áyna xá ... xa-násə dúlə dmíxa*. ‘One of the brothers has come to fetch water. Suddenly he sees that a man is asleep by the side of the spring.’ (A 37:7)
- (3) *dbíšəna ’an-cálba b-ríšu bədvákuna*, *bəxnákuna*, +*palùtuna*, *màyuna*. ‘The dogs have attached themselves to his head and seize him, they strangle him and bring him out.’ (A 47:19)
- (4) *’áha müyyələ nùynəl mírələ ’ánnə +bérašə bašlätłun*, *kúdmə ’ánnə bašlätłun*, *’ána tuyyè*. *kədámta bəkyàmələ* *’áha bašulələ*. ‘He has brought fish and has said “In the evening cook these and tomorrow cook these, I have brought them.” In the morning she gets up and cooks them.’ (A 36:7)
- (5) *cačáləl móriša jáldə kímələ*. *nú bubùška* +*maträyələ b-dó kèsul sùysə*. ‘The bald man is awake in the early morning. ‘nu bubuška’, he is galloping with his piece of wooden, the horse.’ (A 1:11)
- (6) *’áni céčə +bixalèlə*. +*tárrət dàrta-zə švákətula ptíxa*. *bəxzáyələ +tárrət dárta-zə ’àttən*. ‘He eats the cakes. She has left the door of the courtyard open. He sees that there are some at the courtyard door.’ (A 37:4)
- (7) *bərráxələ máya xá dána báxta*. *mulvíšona ’ax-báxta*. ‘He goes to bring a woman. They have dressed her like a woman.’ (A 1:37)

- (8) *'árxa tìyyux-ilə| b-yátu +tàma.|* '(If) a guest has come to you, he sits there.' (B 14:2)
- (9) *dévə ká-jané bærràxšəna| +sèda vágəna,| á švíkuna bëta.|* 'The monsters go and hunt for themselves, having left him at home.' (A 37:13)
- (10) *jári ýe-+danat sátva tìyyələ| táljələ| cùl díyca kàrtəla,| késə lòtlun| jári ýe-dana ázi késə máyyi.* 'When winter has come and there is snow, when everywhere is cold and they have no logs, they must then go and fetch logs.' (A 37:13)
- (11) *málca móriša jáldə bækýàmələ,| cùl-lelə šima lélə dmíxa.* 'The king gets up early in the morning, during the whole night he has not slept.' (A 1:40)

In clauses that set the circumstantial frame for a following stretch of discourse, an independent form of the copula is occasionally used, placed before the resultative participle. This is compatible with the function of the independent copula as a strategy for marking off preliminary or elaborative discourse segments (§ 10.5.2.). The following clause was used by an informant as an opening to a description of his various travels:

- (12) *'ána 'ivən xiša.* 'I have travelled.'

#### 10.10.1.3 Indirective Function

Although the primary function of the *ptixələ* form is to express a resultative perfect, it is occasionally used with a secondary function which I term 'indirective'. The resultative perfect expresses a resultant state that has arisen from a preceding event. The indirective use of *ptixələ* does not express a resultant state but rather expresses an event in the past, with either perfective or imperfective aspect. When used with this indirective function, therefore, the *ptixələ* form has a similar function to the perfective form *ptaxlə* or the imperfective form *ci-patəxva*. The indirective *ptixələ* form is used, however, specifically to denote that the speaker is distanced from the past event in question. This may be due to the fact that the speaker has learnt about the event indirectly by report, e.g.

- (1) a. *+xóru +m̥t̥lə kám xámša dàykə.* 'His friend arrived five minutes ago.'
- b. *márələ kat-+xóru +mátyələ kám xámša dàykə,| áxcí 'ána lén xózyu.* 'He says that his friend arrived five minutes ago, but I have not seen him (i.e. I have not witnessed the arrival of his friend).'

Constructions denoting events that the speaker has not directly witnessed, but acquires knowledge of only by indirect evidence such as a report or inference, are widely referred to in the literature as 'evidential' forms (Aikhenvald 2004).

In some cases, however, a speaker uses a *ptixələ* form to denote an event that he/she may have witnessed in the past but he/she is distanced from it temporally. The more generic term ‘indirective’, therefore, is used here. The term ‘indirective’ was introduced originally by Lars Johanson (1996; 2000; 2003) to refer to verbs with this function, which are widely attested in Iranian and Turkic languages. The indirective use of resultative perfects has been identified in other NENA dialects (Khan 2012). The indirective sub-system in C. Urmi can be represented thus:

### I Primary Function

<i>ptixələ</i>	<i>ptəxlə</i>	<i>ci-patəxva</i>
‘he has opened’	‘he opened’	‘he used to open’
(resultative)	(perfective)	(imperfective)

### II Secondary Function (Indirective)

<i>ptixələ</i>	<i>ptixələ</i>
‘he opened’	‘he used to open’
(perfective)	(imperfective)

The use of the indirective is not obligatory in conditions where it can be used and speakers may alternate between a primary form and an indirective form in the same context. In example (1b) above concerning a reported event speakers could also use the primary *ptəxlə* form (*márrə kat-+xóru +m̩ílə*).

Some examples of the perfective indirective *ptixələ* forms in the text corpus are as follows:

- (2) *márrə kat<sup>1</sup> xób ’ána +t̪lili.<sup>1</sup> t̪iyələ<sup>1</sup> o-+héyvan b-lélə<sup>1</sup> xabúša +xilulə<sup>1</sup> u-xišələ<sup>1</sup>.* ‘He said “Well I went to sleep. That animal came at night, it ate the apple and went away.”’ (A 39:3)

In (2) the speaker reports the event that he directly experienced by a *ptəxlə* form (+*t̪lili* ‘I went to sleep’). The other events, which he, therefore, did not directly witness, but which he must be inferring happened, are reported in the indirective *ptixələ* form.

- (3) *lá b-+xábrət diyyan<sup>1</sup> xášla +al-mèša,<sup>1</sup> +t̪ama,<sup>1</sup> u-díva +xilola<sup>1</sup> bàxya<sup>1</sup> bas-látlux xá nišánka,<sup>1</sup> xá nišánka káti yávvat kát müjjur məttala?<sup>1</sup> márrə là hác məndi látli-mənno.<sup>1</sup> àxčíl mətla<sup>1</sup> +u-þumrálí<sup>1</sup> diva +xilála<sup>1</sup>.* ‘“She went to the forest without my permission and there a wolf ate her.” He weeps and weeps “But have you not a sign you can give me as to how she died?”

He said “No, I have nothing of hers. She just died and I buried her. A wolf ate her.” (A 1:17)

In (3) the first speaker reports the death of the wife of his interlocutor. The act of her going to the forest is expressed in the *ptəxlə* form (*xəšla*), since he witnessed this. The act of the wolf eating her, however, is expressed by the indirective *ptixələ* form (+*xilolə*). This does not denote a resultant state but rather an event that the speaker did not witness directly, i.e. an indirective perfective. The interlocutor himself uses the *ptixələ* form when referring to the event of his wife’s death (*mattala*), which is also likely to be an indirective perfective (‘how did she die?’) reflecting the fact that he has only heard about the death by report and has no evidence for it. In the reply of the other speaker the events of her death, her burial and also her being eaten by a wolf are expressed by *ptəxlə* forms (*mətla*, +*ṭumralı*, +*xilalə*). The shift from indirective +*xilolə* to the unmarked perfective +*xilalə* may be due to the aforementioned fact that indirective forms are not obligatory or it may be interpreted as a reflection of the speaker’s attempt to convince his interlocutor of the truth of what he is asserting.

- (4) +*bułára bitáyələ* +*al-šámmət nipùxta*.| ‘áxnan xa-šəmmələ| *har*-+*šəmyuvax*| ‘ína léx +*rába* +*suxsiyyə* +*állu*| *mut-*+*manày* ‘ótla.| *b-xà-tahar*| *bitáyələ*| *b-*+*xábrət* *Pna-poxtèP*.| +*yánə bálcət xá* ... +*farsáya* ... ‘áviva xəzyə *mírəna* mǘ vàdətun?| *mírəna bašüləx*.| *xázyələ* *xá-məndi bálcət* *mírələ* ‘áha *Pna-poxtèP=la*| +*yánə lèla bşólta*.| ‘The question arises regarding the (origin of the) name *nipuxta* (‘molasses’). We have always heard it as being a single name, but we have not done much research on it as to what its meaning is. Among one group (i.e. in the opinion of some) it originates in the (Persian) word *na-poxte*. That is maybe a Persian—they (Persians) had seen (people preparing molasses) and they said “What are you doing?”, then they (the people preparing molasses) said “We are cooking”, he (the Persian) saw something and perhaps said “This is *na-poxte*”, that is “it is not cooked.”’ (B 12:7)

In (4) the speaker reports the opinion of some people with regard to the origin of the name *nipuxta* ‘molasses’. He states that he himself has not done any research on this, i.e. he has not seen direct evidence. Most of the anecdote explaining the possible origin of the name is presented with indirective *ptixələ* forms (*mirəna*, *mirələ*, *xəzyələ*), which refer to events for which the speaker has no direct evidence (‘they said’, ‘he said’, ‘he saw’) rather than resultant states (‘they have said’, ‘he has said’, ‘he has seen’).

In (5) the first speaker reports an event with the *ptəxlə* form (+*plótlun*). The interlocutors, who have not witnessed the reported event and are sceptical about its veracity, question the speaker about the event using a *ptixələ* form of the same verb (+*plítəna*), which can be interpreted as an indirective:

- (5) *màra|'àtxa víla|'ána xášli ptàna 'odáñvala|... mən-ju-+'árra +plótlun cmádanə +'əsrá-danə nùynə|... 'áni nášə mèrrun| mən-ju-+'árra nùynə +plítəna?| hi.| márrun m-ju-+'árra nùynə lè +pál̥ti|* 'He says "This is what happened. I went to plough. ... Out of the ground came some ten fish." ... The people said "Did fish come out of the ground?" "Yes." They said "Fish do not come out of the ground."' (A 36:15)

In accounts of past events speakers may use the *ptixələ* form to report events the completion of which is clearly disconnected from the present speech situation and for which there is no evidence visible to the addressee. Such constructions are idiomatically rendered by an English simple past and can be interpreted as indirective forms, e.g.

- (6) *màra|+màlla|'át+dílux báxta mòttəla?| hi|'ávən +xlápux|dàx la-+dili|'ána xzìli|'jáni +túmron|* 'He (the bald man) says "Mullah, do you know that the woman is dead?" "Yes, my lord (literally: may I be your substitute), of course I know! I saw it. I buried her myself"' (A 1:31)
- (7) *'át xšívət +'àvva kíməl +al-jànux|* 'You thought that *he* mounted you.' (A 5:18)

The indirective *ptixələ* form is used by speakers in expository discourse to narrate historical events in the remote past, typically before his/her lifetime, e.g.

- (8) *'əštá yàrxə| malèffə| kà|+urusnà|+táma xùmyəna|... bába sávət díyyan katéjuškəna|* 'Now, for six months the headmen looked after the Russians. ... Our forefathers looked after them.' (B 16:3)

Examples of indirective *ptixələ* forms expressing imperfective habitual activities in the remote past are as follows:

- (9) *'ína b-kám̥tət kám̥ta-da hár +al-jaaravày dmíxəna +keṭə|* 'But long ago they used to sleep on roofs during the summer.' (B 10:21).
- (10) *'àna|+báyyan tányan| šóm̥manət xácmə +tālyàtə| b-surútən kát +túləx ju-mavàtə|* 'I want to tell the names of some of the games that we used to play during our childhood in the villages.' (B 9:1)

- (11) *vítəla* +*dàna* | *mən-dà* *máta* +*al-dè* *b-*+*darvàza* *xíšəna*, | *hár zmára* *zmàra*. | *xíšəna* 'íta *tìyyəna* | *mádrə* +*bérašə* +*dírəna*. | 'There was a time when they would go from this village to that one in the <sup>+</sup>Darvaza game, singing all the time. They would go and then come back, again in the evening they would return.' (B 9:12)
- (12) *'áyya bùšlox* *bí* +*ànva* | +*mričə*. | 'We used to cook it with crushed grapes.' (B 10:2)
- (13) *xá mənyána* +*rába* *sùra* *víyyan-ila* *kát* | *zúbnələ* *kësa*, | *zúbnələ* *sàbzə*. | 'We had a very small number who used to sell wood or used to sell vegetables.' (B 1:33)

In (14) the *ptixələ* form in an indirect question under a past perfective matrix verb is unlikely to be a present resultative but rather should be interpreted as an indirective with past perfective meaning. The motivation to use such a form is that the speaker is unsure about the truth of the report of the woman's death, which he has not witnessed directly:

- (14) *là* + *bukárri* *kat-á* *bàxta* | *b-mùt móta* *mòttəla*, | *dàxi móttəla*. | 'I did not ask with what (type of) death she died, how she died.' (A 1:29)

#### 10.10.1.4 Elision of Final /ə/ of *ptixələ* Forms

The final /ə/ of the 3ms. enclitic copula is sometimes elided in the *ptixələ*. In varieties of the dialect spoken in the Urmi region the elision tends to occur predominantly in verbal forms occurring within the body of an intonation group rather than at its closing boundary, e.g.

- (1) *'át xšívət* +*àvva* *kíməl* +*al-jánux*. | 'You thought that *he* mounted you.' (A 5:8)
- (2) *rýja ràxmə* *vídəl* +*àllo*. | 'The servant took pity on her.' (A 1:43)
- (3) *málca-da* *yúvvəl* *dàstur*. | 'The king made a decree.' (A 2:17)
- (4) *'ávun* +*tlíbəl* *mánnux* *'áxči* +*'əsrə* *dákikə* *mánnux* *hámzəm*. | 'He has requested from you (permission) to speak with you only for ten minutes.' (A 2:24)
- (5) *baxzáyəla* *'áha jáns* *dmíxəl* +*ṭəlyələ*. | 'She sees that *he* is sound asleep (literally: *he* has lain down *he* is asleep).' (A 36:12)

In varieties of the dialect spoken in Armenia and Georgia, the /ə/ in the 3ms *ptaxələ* form is elided more frequently in all contexts.

### 10.10.1.5 Resultative Participle without a Copula

The copula of the *ptixələ* construction is omitted in clauses that express background information. In some cases this is found in clauses that are preliminary to a following foreground event. In (1) this is found in a section that sets the scene of the main narrative by presenting the circumstances of the main protagonist of the narrative. In (2) the clauses are preliminary to the final climactic event of the narrative. In such cases the construction has the function of a resultative perfect:

- (1) 'a-+màlla| ju-béta +xìla,| šàtya,| +hàmmam vída,| +xàsu príxa,| ... màra| 'The mullah having eaten in (his) house, having had a drink, having had a shower, having scrubbed his back ... says ...' (A 5:2)
- (2) nýnə *kulita*,| *muyyítá muttítá kamàytu*,| +*bixàla*.| 'She having fried the fish, having brought (them) and having put (them) in front of him, he eats (them).' (A 5:19)

In (3)–(4) bare *ptixa* forms are used in clauses that are circumstantial to and elaboratory of the action expressed in the preceding clause:

- (3) xéšlə +bəxdára +bəxdára +ràba| 'ína xa-sálət +xùrmə,| *mútta* +al-+rìyšú,| sála +jùra.| 'He went off walking around, walking around a lot, having put a basket of dates on his shoulder, a big basket. He wandered around.' (A 10:1)
- (4) tílan +várran xázax *ka-mú bnayèls*| 'ína lòttən.| lá dàvə 'áttən.| lá 'o-nàša 'áttən,| *škila mən-panjàra*,| *ríka*.| 'We went in to see why he was counting them, but he was not there. Neither were the gold coins there, nor was the man there. He had taken them through the window and ran off.' (A 10:8)

In (5) the final clause without the copula is an elaborative tag indicating the source of the fish:

- (5) 'ánnə +bérašə bašlàtlun,| *kúdma* 'ánnə bašlàtlun,| 'ána *muyyè*.| 'In the evening cook these (fish) and tomorrow cook these, I have brought them.' (A 36:7)

In (6) the *ptixa* form is used in a clause that is supplementary to a main clause on which the construction is dependent e.g.

- (6) *har-nipúxta-zə mən-míyyət* +'ánvə *pyášəla škálta*,| 'albátta lá +xdíra +al-xàmra.| 'Molasses too is produced from grape juice, but of course it has not turned into wine.' (B 12:8)

### 10.10.2 *dulə ptixa, velə ptixa*

A deictic copula (*dulə, velə* §3.3.) rather than an enclitic copula is sometimes used in the resultative construction in assertive clauses to draw particular attention to the resultant state.

A deictic copula is used in some cases where the speaker directly witnesses a situation, e.g.

- (1) *'át +rába dívat sìva.*! 'You have become very old.' (A 3:14)
- (2) *'á dúlə šuddànnna.*! 'He has gone mad.' (A 5:11)
- (3) *'áslan dút šuxláppla.*! 'You have completely changed.' (A 2:15)
- (4) *'a-mù vídæla?!* ... *'á dúlə cíllə nókvə xumyè.*! 'What has he done? ... He has preserved all the women.' (A 2:23)
- (5) *véləju-kánna dmíxa.*! 'There he is asleep in the den.' (A 42:25)

1st person deictic copulas are generally near deixis. These draw the attention of the addressee to a situation relating to the speaker:

- (6) *'ána dún +rába sòvta.*! 'I have become very old.' (A 39:24)
- (7) *'ána dún +mumròlla.*! 'I have become bitter.' (A 49:4)
- (8) *ká-jáni dún mučáxta +tliba, b-jorànnux.*! 'I have found a husband for myself (in you), I shall marry you.' (A 52:3)

The far deictic copula is generally used in the 3rd person. Sporadic examples are found in the text corpus, however, of 1st person forms. Since a first person referent cannot be far from the interlocutors, the copula is used to direct attention to a situation that is not in the immediate proximity of the interlocutors but is associated with the speaker in some way. In (9) the speaker draws attention to a resultant state that he is responsible for but is perceptible at a distance:

- (9) *náša +ktílən, vén curmáxxu ju-dánnə jùlla.*! 'I have killed somebody. Look I have wrapped him in those cloths.' (A 48:8)

In (10) the speaker draws attention to the existence of a situation that he has witnessed but is not immediately visible:

- (10) *dül-láxxa jánu +tùšyo. dül +últux jánu +tùšyo.*! 'It has hidden itself here. It has hidden itself under here.' (A 49:19)

In (11) the subject of the copula is no longer near to the interlocutors, but the observable resultant situation is in front of their eyes. It is clear from

constructions such as (10) and (11) that the deictic copula draws attention to a proposition rather than simply a referent:

- (11) *'ádi zarduštáya dúna +rúppə xišə m-áxxa.* ‘Now the Zoroastrians have abandoned it (the temple) and gone from here.’ (B 1:5)

In narrative contexts deictic copulas are used after verbs of seeing or contexts where vision is implied, expressing that a particular resultant state comes into the perception of the referent in question for the first time, e.g.

- (12) *xá mən-’axunvátə tíyyələ mìyya lábəl.* *xa-b-xá bəxzáyələ márzət +’áyna xá ... xa-nàša dúla dmíxa.* ‘One of the brothers has come to fetch water. Suddenly he sees that a man is asleep by the side of the spring.’ (A 37:7)
- (13) *xá-yuma bəxzàyələl* *’ina dúna kíma,* *+xilə,* *šàtya,* *’áyya pásṭəla cpànta.* ‘One day she sees that they have got up, eaten and drunk, but she has remained hungry.’ (A 35:13)
- (14) *ci-mattáxvala xut-+’árra* *ju-’ùpra,* *’ùpra daráxval +’állo.* *jaškátvə véna +plítə cùllə,* *+plítə výyəna bašlə.* ‘We used to put them under the ground in the soil, we put soil over it. You would see that they all came out and they have become musk melons (*bašlə*).’ (B 7:20)
- (15) *’ina màdra* *sódu bitàyalə* *véla céca +támma piša.* ‘But again he is tempted, there is still a cake remaining there.’ (A 37:4)
- (16) *’a-yála bəxzàyələ* *’á Suríyya xína máx kámta lèla ka-dáha,* *’á har-véla o-yála škáltu ju-xpàko.* ‘The young man notices that Suriyya is not (behaving) towards him as before and that she is constantly carrying the child in her bosom.’ (A 36:6)

In (17) and (18) the use of the near deixis copula expresses the emotional engagement of the protagonist with the upsetting situation:

- (17) *’axúna súra=zə bitáyəle bétal +pšíma* ... *’ádi dayyána dùlə* *yúvva šártə katé* *+yánə yúvvəl +càtrə katé* *kat-šarilun.* ‘The younger brother comes home sad ... Now the judge has given them conditions, that is he has given them problems to solve.’ (A 38:10)
- (18) *’ádi dayyána +hála bùš véla críba.* ‘Now the judge has become yet more angry.’ (A 38:14)

The *velə ptixa* form may be used to draw the attention of an addressee to an unexpected or surprising situation that is not directly witnessed by the addressee, e.g.

- (19) *kú 'axùni* +*arabáni véla xa-sùsa dálta.* ‘Get up my brother, my cart has given birth to a horse.’ (A 38:4)
- (20) *'é +simáxur=da ýdi-da xína véla +šurítá bəsyàva mən-xəššo* | *mən-+nara-hatìyo.* ‘The +*simaxur* bird has now begun to age from its sorrow and distress.’ (A 39:21)
- (21) *bitáyəla mára véna trè áklu píšə.* ‘She comes back and says “Two of its legs are remaining.”’ (A 39:28)

The construction is often found in adversative contexts such as (22)

- (22) +*pəllán-cas* +*jóro myàtələ* | *'ína véla xášta jáno šuprəntola.* ‘So-and-so’s husband is dying but she has gone and beautified herself.’ (A 24:2)

In (23) the *velə ptixa* construction is used in a section that expresses the grounds of the following decision of a judge. Its property of drawing attention is exploited to mark the onset of a unit of discourse.

- (23) +*árrva 'axúna* +*fùrələ* | *véla bušayútət məndi,* | +*yáma sáma zóda məndi* +*árrva véla škílu.* ‘That one is the elder brother and he has taken the majority of the property, that is most of the property.’ (A 38:5)

In (24)–(26) the near deixis copula is used with a verb that also has an enclitic copula:

- (24) *dún +támta muyyítən kàtux.* ‘Here I have brought the breakfast for you.’ (A 36:12)
- (25) *'aybó 'á dúlə lèlə míta.* ‘Alas, he is not yet dead.’ (A 37:21)
- (26) *'ánnə dúna kìdəna!* ‘These are burnt.’ (A 36:8)

In (27) the subject of the lexical verb in the clause is 1pl. but the copula is 3ms and refers to the patient of the action:

- (27) *vélju-pajèni=da +túmrux.* ‘We have buried him in our stable.’ (A 48:19)

### 10.10.3 *ptixəva*

#### 10.10.3.1 Resultant State in the Past

The *ptixəva* form consists of the resultative participle combined with the past copula. This construction, which may be designated as the past resultative, denotes a state that existed in the past as the result of an event that preceded the time reference of adjacent past verbs ('had done') or, in the case of a negated verb, the lack of a prior event, e.g.

- (1) *'ína sábab +aturáya mən-məššinérə lipəva| beté 'íva bùš šapíra mən-batvá-tət| ... məššəlmànə.* | 'But since the Assyrians had learnt from the missionaries, their houses were more beautiful than the houses of the Muslims.' (B 1:40)
- (2) *mən-kam-+dána bəbīl ka-bnē +Babá-čanya məššəlmánə xùmyəva.* | ... *'ína hár b-dè +dána| məššəlmànə| +xayyən +plátlun +àllu.* | 'My father had previously looked after the inhabitants of +Baba-čanja. ... But at that time the Muslims turned out to be treacherous against him.' (B 6:2–3)
- (3) *é +dána +hála 'ánnə +hammámət yurupnáyə lèva tíyya.* | 'At that time the European type of bathrooms had not yet come (to Urmī).' (B 1:40)
- (4) *+Àxiqar! 'ána mut-xərbayúta kátux vıdənva| kat-átan 'á-+šula vádlux b-riši?* | 'Axiqar, what evil had I done to you that you did this against me?' (A 3:27)
- (5) *málca| +pšəmlə| +pšəmlə| kat-ka-mù| +ktəllun| 'ína 'ána lènva +ktílu.* | 'The king was sad, he was sad (and wondered) why they killed him, but I had not killed him.' (A 3:34)

In narrative the reference point of a *ptixəva* form may be that of *bəptaxəla* forms, which express the foreground events, e.g.

- (6) *bəškaléla júllo šaluxəla| 'ína| +háji mírəva kat-júllo dəmmánə mayyátlun kàti| ka-rjü.* | 'He strips her clothes off, since the pilgrim had said to his servant "Bring her bloody clothes to me." (A 1:9)
- (7) *bəxzáyəl 'o-xmárət kúdmə zvìnūva| 'ína +táməla.* | 'He sees that the donkey that he had bought yesterday is there.' (A 28:6)

The reference point may be a continuous situation in the past, e.g.

- (8) *'u-+Àxiqar| cás bəbət| málca-zə plıxəva| cəs-bábu-da vıdəva vazzırıuya,| vazzər.* | *'ína yálə lətvalə.* | *+Àxiqar yálə lətvalə.* | *'ətvalə| əští-danə baxtətə.* | 'Axiqar had worked for the father of the king. He had served as vizier for his father. But he had no children. Axiqar had no children. He had sixty wives.' (A 3:2)
- (9) *'ətvalun +rába dàvəl t-íva +júmmə mán ... škilé mán ducána xinə.* | 'They had many gold coins, which they had gathered from ... taken from other places.' (A 37:22)

#### 10.10.3.2 Indirective Remote Past Perfective

The reference point of a *ptixəva* form may be a present resultant state expressed by a *ptixəla* form or the general present tense deixis of the context. In such cases

the *ptixəva* form does not express a state in the past, but rather a perfective event that occurred at a remote time in the past, separated by a temporal gap from present events. This, therefore, is an indirective use of the form:

- (1) 'e-dársət yúvvonva kátu kámta! lélə lípo bəxšávən +spày.! 'I don't think he has learnt well the lesson that I gave him some time ago.' (A 3:87)
- (2) 'ána báxti múttonva cás +hàjì.! 'ádi týyən šaklònna,! márələ mättəla.! 'I left my wife with the pilgrim. Now I have come back to take her and he says that she has died.' (A 1:18)
- (3) +'áx-bas-+šəmyənva! ka-díyyux +kṭàllun.! 'But I heard that they killed you.' (A 3:68)
- (4) 'ána kátux mìrənva! 'a-mú-ila +šrá bəllá támma?! 'Vizier, I told you (i.e. I told you to eliminate all lanterns), what is that lantern burning there?' (A 2:4)

The *ptixəva* form also in (5) is most easily interpreted as referring to a report of an event in the past rather than the expression of a resultant state:

- (5) har-'ádi +hàvar dáryan kat-'at týyətva +al-jàni.! 'I shall right now cry for help (saying) that you came upon me (to rape me).' (A 5:12)

#### 10.10.3.3 Background Events in Narrative

The *ptixəva* form is often used in narratives to express the preliminary background against which a past event took place. In such contexts the form is often most idiomatically translated by the English simple past. The past event that is the reference point for the *ptixəva* in the following examples is expressed by a perfective *ptəxlə* form, e.g.

- (1) xá-yuma +málla +Nasrádən mìyyəva! xà! +bàtman! +bùsra! ... +bùsra mìyyəva béta.! ka-bàxtu mórrə! 'One day mullah Nasradin brought a batma of meat ... he brought meat home. He said to his wife ...' (A 11:1)
- (2) xá-yuma +màlla! +mutʃónnəva +rába +rába kèsə! +al-+xásət xmàra! ... bás xzílə xmára lèlə +baśúrə 'ázəl 'ürxa.! kòmlə! clílə +al-'áklu.! 'One day the mullah loaded a lot of pieces of wood onto the back of a donkey ... But he saw that the donkey could not go on the road. He got up and stood on his feet.' (A 15:1)
- (3) xá jvánka tìyyəva! cíllə purziyyèlə! bráta +júrta lublàlə! 'A youth came, then cut them all to pieces and took away the elder daughter.' (A 45:11)
- (4) 'ána taníyra +šártənva 'ánnə xáčča kèsə +ruppíla ju-taníyra.! 'I lit the oven and she threw a few of these logs into the oven.' (A 35:7)

In some cases a series of *ptixəva* forms are used over an extensive preliminary introduction to the narrative before the narrator shifts to the main narrative verbal form. This is the case in (5), in which the main narrative form is *ptəxla*, but the narrator does not start using this until well into the story:

- (5) *'é tavárta zárdəl 'át-xá bráta +cásəb=va. | 'ítə 'átvala 'áyən yámma 'íyə. | hár +vártəva +bár dé tavárta zárdəl +vártəva +báro. | jáno +mumritova. | 'é yámma 'íyəl ķa-de +fóro mərtəva| á +báyyat| lè-+bayyat| á tavárta zárdə prùmla, | 'ána bázman. | ... cújúr t-ival primálə. | ... 'The yellow cow belonged to a poor girl. Now, she had a stepmother. She always went after that yellow cow, went after it. She (the stepmother) pretended to be ill. The stepmother said to her husband "Whether you want to or not, slaughter this yellow cow so that I will be cured." ... One way or another he slaughtered it. ...' (A 51:1–2)*

As the translations by the English simple past suggest, the *ptixəva* forms in examples (1)–(5) should be interpreted as having the function of a background past perfective rather than a past resultative. In this respect it would be related to the indirective 'remote past perfective' function described in § 10.10.3.2. Some features of its usage in narrative, however, suggest that the background—foreground distinction is the main motivating factor rather than temporal antecedence. This is shown by examples such as (6) in which the *ptixəva* form *mírəva* introduces a dialogue within the body of the narrative that can be interpreted as the preliminary background to the events that follow the mouse's going off to the wedding. The connective particle *+xarta* 'then' indicates that the verb is interpreted as expressing a perfective event that is sequential to what precedes rather than a resultative state:

- (6) *+xárta mírəva lā-+zdi báxta. | 'átən| tíy bèta. | vélə +xlíylət brūn-màlcələ. | 'ána p̄t-ázən| xáčča xáčča dákta mákta b-+jammìna| mayyìna. | ... hí-da xəšlə, | 'ákúbra xəšlə. | 'Then he said "Don't be afraid, wife. You sit at home. It is now the wedding of the king. I shall go and gather a few little pieces and so forth and bring them back. ..." So, he went off, the mouse went off.' (A 52:5)*

In constructions such as those described in this section, therefore, the *ptixəva* form is used indirectly to express a perfective event. This is not, however, temporally distant but rather distant in terms of discourse 'staging', in that it expresses background rather than foreground events.

### 10.10.3.4 Counterfactual Conditional Constructions

The *ptixəva* form is used in the apodosis of counterfactual conditions referring to a situation that the speaker knows is impossible since the condition in the past expressed in the protasis was not fulfilled, e.g.

- (1) *+kátu 'ən-’óyava +xəlta,| ’ádi vítəva yàccə.*| ‘If the cat had eaten, she would now be huge.’ (A 11:4)

## 10.11 Verbal Forms Based on the Progressive Stem

### 10.11.1 bəptaxəla

This compound form, which is inflected with the present enclitic copula, has the following functions.

#### 10.11.1.1 Progressive

The basic function of the form is to express the imperfective progressive aspect, referring to an action that is taking place at the present moment, e.g.

- (1) *’ána bitáyən bëta.*| ‘I am coming home.’ (A 3:31)  
 (2) *bəspárən +’ällux.*| ‘I am waiting for you.’ (A 3:53)  
 (3) *mú vädətun?* ‘What are you doing?’ (B 12:7)  
 (4) *bəxzáyat mu-vádələ bábi b-rišux?* ‘Do you see what my father is doing against you?’ (A 3:22)  
 (5) *für’un! hámla vädəl +’állan.*| ‘Pharaoh is undertaking an attack on you.’ (A 3:24)  
 (6) *dùylə mårət?* ‘Are you telling lies?’ (A 3:49)

In the case of verbs expressing a psychological state, the *bəptaxəla* form is used to express the ‘actual present’, i.e. the fact that the state is in existence at the present moment, but is not necessarily a permanent property of the subject. This construction is used with this function also with psychological verbs that can express the actual present in the *patəx* and *ci-patəx* forms (§ 10.2.1.2.1, § 10.2.3.2.), e.g. *+bayyə* I ‘to want’, *+yattə* I ‘to know’, *+masə* I ‘to be able’.

- (7) *’adíyya hammúnət?* ‘Now do you believe?’ (A 3:25)  
 (8) *’ən-lét hammúnə,| ku-ta-mènni.*| ‘If you do not believe, come with me.’ (A 3:23)  
 (9) *+rábə +pšàməvax| kát m-ída yùvvovax.*| ‘We greatly regret that we have lost it.’ (B 2:15)

- (10) *mu-<sup>+</sup>byàyat?* ‘What do you want?’ (A 3:70)
- (11) *háč móndi mónnux lén<sup>+</sup>byàya.* ‘I do not want anything from you.’ (A 3:87)
- (12) *márrə mára Nátan brùnux ’á-màndi vádlə.* *mára<sup>+</sup>bəddàyən.* ‘He said “Natan your son did this thing.” He says “I know.”’ (A 3:54)
- (13) *<sup>+</sup>bəddáyət mu-màrən?* ‘Do you know (i.e. understand) what I am saying?’ (A 3:38)
- (14) *’ána lén<sup>+</sup>bəddàya.* ‘I do not know.’ (A 3:43)
- (15) *léla<sup>+</sup>msá xá<sup>+</sup>zárrə-da jarvəssa.* ‘It is not able to raise a single offspring.’ (A 39:21)

#### 10.11.1.2 Performative

The *bəptaxələ* form is used as a perfective present to express a performative function, i.e. the action denoted by the verb is performed by the act of uttering it, e.g.

- (1) *mammúyux-vən b-ríšət dó màrux<sup>!</sup> tánili mánivət.* ‘I pledge you with an oath on the head of your master, tell me who you are.’ (A 3:65)
- (2) *’ána parpùlvən b-díyyux<sup>!</sup> ka-díyyan là<sup>+</sup>katłət.* ‘I beg you, do not kill us.’ (A 37:10)
- (3) *<sup>+</sup>rába<sup>+</sup>maxlèta<sup>+</sup>bətlábən.* ‘I greatly beg your pardon.’ (A 1:17)

#### 10.11.1.3 Narrative

The *bəptaxələ* form is often used in narrative with a perfective aspect to express an event that is sequential to what precedes. This strategy presents foreground events with heightened immediacy as if they were taking place before the eyes of the hearer. In the text corpus it is the commonest verbal form for narrating events in the main body of the narrative, with the preterite *ptaxələ* forms clustering in clauses that are not in the main line of the narrative, particularly in those expressing preliminary background events or in a section at the end of the main narrative that supplies an epilogue and final comment (§ 10.3.1.3.). Examples of the *bəptaxələ* forms in narrative expressing sequential events:

- (1) *bəškálələ ’o-náša, <sup>+</sup>bəktálulə.* *labúlulə ka-málca.* ‘He takes that man and kills him. He takes him to the king.’ (A 3:36)
- (2) *<sup>+</sup>bar-dáha bərráxšələ cəs-málca.* *+bətlábələ<sup>+</sup>paxálta mónnu.* ‘After that he goes to the king. He asks for forgiveness from him.’ (A 3:54)
- (3) *<sup>+</sup>xábra yávələ ka-fúr’un ... bəškálələ<sup>+</sup>Axiqar bíya bí ... rijavàtu<sup>!</sup> kòšun<sup>!</sup> bərráxšəna.* ‘He gives word to Pharaoh ... he takes Axiqar together with his servants and an army, and they go.’ (A 3:60)

- (4) 'áha bitàyələ| kaar-Nàtan| brūn-xàtu,| vádu brūn-jànu.| 'He comes to Natan, the son of his sister, and makes him his own son.' (A 3:7)
- (5) +bár +Axíkar myàtälə| fúr'un bæctáyələ xa-ctáva ká ... +Nuxadnàsər.| 'After Axiqar dies, Pharaoh writes a letter to Nebuchadnezzar.' (A 3:39)
- (6) Nàtan bitàyələ| hác-məndi lélə váda kaar-bàbu.| har-átxa čamčùmula.| 'Natan comes but does nothing to his father. He just throws him down like this.' (A 3:37)
- (7) é-+dān t-ílə šómmu +bašmáyu +Axíkar| fúr'un| brázələ šòpu.| 'When he hears his name "Axiqar," Pharaoh dries up on the spot.' (A 3:67)

On some occasions a series of *bəptaxələ* forms in a narrative expresses events or states that overlap with one another temporally or are different aspects of the same event, e.g.

- (8) +rába məndyána kátu tanìyələ| malúpələ kátu.| kaar-brùnu| +rába nasyáttə yàvələ.| 'He tells him many things. He teaches him. He gives his son many pieces of advice.' (A 3:8)
- (9) bitáyələ ju-béétat bàbu.| +bixàlələ| bæštàyələ| bæzmàrələ| bærkàdələ| bæšvàrələ.| 'He comes back to the house of his father. He eats, he drinks, he sings, he dances, he jumps.' (A 3:38)
- (10) +Nuxadnàsər| ju-dè-+dana| bàxyələ| mxáyələ ju-rišu.| 'Nebuchadnezzar at that moment weeps and beats his head.' (A 3:45)
- (11) +Axíkar lišánu bædvákələ| ... lélə +bašúra hámzəm.| 'Axiqar holds his tongue. ... He cannot speak.' (A 3:28)

#### 10.11.1.4 Habitual

The *bəptaxələ* form is sometimes used to refer to a habitual activity that is not necessarily taking place at the present moment. Habitual activities that are presented as permanent properties of the subject are normally expressed by the *ci-patəx* or *ci-patəxva* forms (also by the *patəx* and *patəxva* in class B verbs). The *bəptaxələ* form is sometimes used to denote a habitual or iterative activity that is not permanent, but rather is temporally delimited and is characteristic of the present and immediately adjacent periods of time, e.g.

- (1) lét +bixàla| lét bæštaya,| ýáslan dút šuxlòppa.| 'You are (now) not eating, you are not drinking, you have completely changed.' (A 2:15)

In (2) the *bəptaxələ* is used to express iterative events within a specific period with the present historic time reference of the main narrative event-line:

- (2) 'a-yála *jarvùsəl*.| +rába məndi yàvel kátu,| lvəšyàtə šapírə,| +mixulyàtə šapírə.| +rába məndyánə kátu tanùyələ.| 'The boy grows up. He gives him many things, beautiful clothes, fine foods. He tells him many things.' (A 3:8)

In (3) the *bəptaxələ* form refers to the current practice of making bread with oil or gas, which is an innovation, whereas in the preceding clauses the *ci-patəx* form is used to denote a permanent property of bread made in traditional wood-fired ovens:

- (3) +rába *basìma c-ávə*,| vá +tamàna c-ávə m-dó kát bí ... +niyṭa| b-+jazùyl váguna.| 'It (the bread from wood-fired ovens) is very delicious, and more tasty than the type they make (now) with oil or diesel fuel.' (B 14:4)

In (4) and (5) the *bəptaxələ* form is used to express a habitual progressive event that overlaps temporally with a habitual action that is expressed by a *ci-patəxva* form or other construction. Note that the present copula element of the *bəptaxələ* form in (5) has the past reference of the context:

- (4) 'áxnan jåri 'ázax| cí +dánət +'ávun nára bədvàkulə| xá tréyálə súrə +ráppax +'al-márzət nára.| 'Every time it is blocking the river, we must go and throw one or two children onto the river bank.' (A 39:18)
- (5) sábab baxtày| *ci-bašliva làxma* +cavútra *ci-lablíva ka-'urzán t-ína pəlxána* +'al-vàddar.| 'because women would bake bread and take lunch to the men who were working outside.' (A 5:6)

In (6) the speaker in a narrative uses the *bəptaxələ* form to describe a recurrent habitual situation. The motivation for the use of the form here seems to be to give a rather surprising situation added prominence rather than to delimit it temporally:

- (6) 'é-+dān sèl bitáyələ| 'ánnə níyna sùrə| sél mayèla| míya mayéna +al-màrza. íta 'ánnə bərréšxəna ju-'ùprə| ju-+tína *jarvùsəna*,| vágəna níyna.| 'When there is a flood, the flood brings the small fish, the water brings them to the bank. Then they go into the soil, they grow up in the mud and become fish.' (A 36:14)

In expository discourse some speakers make frequent use of the *bəptaxələ* form to express a permanent habitual activity. The main motivation to use the form in preference to the default *ci-patəx* habitual form is to give the activities that are in the foreground of the discourse prominence, e.g.

- (7) *múr á mújjur +tarúsox júpta?* *tavárta +bæxlávot.* *šaxánta šaxónnta,* *bædrá-yat jávo R-pépsin R.* ‘How do we make this cheese? You milk the cow, while warm you put in it pepsin.’ (B 15:2)
- (8) *'áttan tàxta.* *+al-dé táxta mattíyona cùnda!* *bí +dorána +darrúnuna.* *+xárta bædráyuna +ál +drané.* ‘There is a board. On the board they put a dough ball. They roll it with a rolling pin. Then they put it on their arms.’ (B 17:22)

In (9) the speaker uses the *bæptaxələ* form to express a permanent habitual situation that holds in the present, in contrast to a habitual situation that held in the past but no longer exists, which is expressed by other verbal forms:

- (9) *məšmáššə mabrəzzivalun,* *b-zabnivalun,* *sáb məšmášša hasanáy mabrù-zona.* ‘They would dry the apricots and sell them, because one can easily dry an apricot.’ (B 1:23)

In the category of habitual falls the use of the *bæptaxələ* form to express a persistent situation, which is rendered in English by the present perfect, e.g.

- (10) *+árpa šánnə áxnan bæxxáyəvax ju-*’Urmi.‘We have been living in Urmia for four years.’
- (11) *+ásra šánnə ju-da-+šúla ána pəlxànəvən.* ‘I have been working in this job for ten years.’

Here the *bæptaxələ* form expresses a habitual situation that is delimited by temporal boundaries. If there are no temporal boundaries, the *ptixələ* perfect form is normally used, e.g.

- (12) *hammáša xíyyəvax ju-*’Urmi.‘We have always lived in Urmia.’
- (13) *’ádi cmá šònnəl cáslux +xilələ, šòtyələ!* ‘How many years has he eaten and drunk with you?’ (A 3:22)

#### 10.11.1.5 Immediate Future

On some occasions the form is used to express an event that is about to take place in the immediate future, e.g.

- (1) *à-šabta! málca! +pállan yúma,* *+pállan +dána,* *+pállan +sà’at!* *+plàtələ!* *+al-dà* ’úrxa.‘This week the king, on such-and-such a day, at such-and-such a time, at such-and-such an hour, is going out on this journey.’ (A 1:25)

#### 10.11.1.6 Elision of Final /ə/ of *bəptaxələ*

The final /ə/ of the 3ms. enclitic copula is sometimes elided in the *bəptaxələ* form in narratives. In varieties of the dialect spoken in the Urmī region the elision tends to be restricted to verbal forms occurring before the end of the intonation group and followed by material before the intonation group boundary, e.g.

- (1) +Axíkar| *bərráxšəl bəta.*| 'Axiqar goes home.' (A 3:16)
- (2) xá-yuma +Axíkar *bəškáləl brūnu.* 'One day Axiqar takes his son.' (A 3:16)
- (3) fúr'un| *hàmla vádəl* +állan.| 'Pharaoh is making an attack on us.' (A 3:24)
- (4) *bərráxšələ* +várəl +támə.| 'He goes and enters there.' (A 2:5)

On a few occasions in a sequence of clauses it is elided at intonation group boundaries, but is retained in the final clause of the sequence. This reflects a prosodic unit corresponding to a discourse unit larger than individual intonation groups, e.g.

- (5) ́a-yála *javvùsəl.*| +rába móndi yávəl kátu,| *lvəsyàtə šapírə,*| +mixulyàtə šapírə.| +rába móndyánə kátu *tanùyələ.* 'The boy grows up. He gives him many things, beautiful clothes, fine foods. He tells him many things.' (A 3:8)

In varieties of the dialect spoken in Armenia and Georgia, the /ə/ in the 3ms *bəptaxələ* form is elided more frequently in all contexts.

#### 10.11.1.7 Progressive stem without a Copula

The copula is omitted from the construction on a number of occasions (*bəptaxə*). In most cases where this occurs the verbs in question are in clauses expressing events that constitute the circumstantial background to adjacent events and so are dependent on the main events on the level of discourse. The background clause generally occurs after the main verb, e.g.

- (1) ́u-́áyya báxtal| +rába nonùyəla| +xáyəš vádən mónnux| là +ktúlli| *bàxyə,*| +rábə| *bənpála* áklu bənšákè.| 'The woman pleads "I beg you, do not kill me", weeping, falling and kissing his feet.' (A 1:8)
- (2) ́ana jøddálul| +házər vidévən,| *partúlə* +al-+uydálə.| 'I have prepared its threads, twisting (them) together.' (A 3:74)
- (3) +Axíkar *bəškáləl brūnu,*| výyələ xa-jvánka,| +màtya,| *labúlu* cás +Noxadnà-sər.| 'One day Axiqar takes his son, when he has become a young man, mature, taking him to Nebuchadnezzar.' (A 3:16)

- (4) *bitáyəl'a-vázzər +rába +naràhat, lá +bixàla lá bəštàya.* 'The vizier comes (home), very upset, not eating, not drinking.' (A 2:13)
- (5) *ku-tálux| +pəllan-ducta xazənnux| kát ... yavvánna +átra ɬa-diyyux| là +plásə.* 'Come to such-and-such a place for me to give the land to you without fighting (without a battle).' (A 3:21)
- (6) *bətávəna +támə| +čày bəstá +šúlə.* 'They sit down, drinking tea and so forth.' (A 2:7)

The circumstantial clause may have a purposive sense, e.g.

- (7) *fúr'un dílə tílə láxxa hàmla váda.* 'Pharaoh has come here to make an attack.' (A 3:25)
- (8) *xíšətva ptána váda| jùl xàkla.* 'You had gone to plough in the field.' (A 4:9)
- (9) *bərráxshələ mágá xá dána báxta.* 'He goes to bring a woman.' (A 1:37)
- (10) *ká-mu xíšətju-dárta +tavvúyə +báro?* 'Why have you gone to look for it in the yard?' (A 27:1)

In some cases the circumstantial clause is placed before the main verb, e.g.

- (11) *báxyə bəxpákəna +uydàle.* 'Weeping, they embrace one another.' (A 1:37)

In the examples presented so far, the subject of the verb in the circumstantial clause is the same as that in the main clause. In some cases the verb in the circumstantial clause has a different subject from that of the main clause, e.g.

- (12) *'ína dámmu šaršùrə,| šaršùrə| xàšla.* 'But as his blood drips and drips, it (the animal) went away.' (A 39:5)
- (13) *málca márlələ +ka-+Axíkar| +Axíkar,| át +rába dívət sìva.* 'átlux xa-násələ mattótlə šòpux?| sábab láttən xa-násə 'ax-diyyux,| lábbu +bətlába +al-xá-násə 'ax-diyyu 'ávə. 'One day the king says to Axíqar "Axíqar, you have become very old. Have you somebody you can put in your place?—because there is nobody like you." His heart was seeking somebody who would be like him.' (A 3:14)

On some occasions the verb without a copula expresses an event that does not overlap temporally with the main verb but is rather closely linked to it in a sequential relationship. In such cases it occurs either after or before the main verb, e.g.

- (14) *dvíkələ +xa-kátu ju-+xiyàvand| mxàya.* ‘He has caught a cat in the street and is beating it.’ (A 3:79)
- (15) *+Axíkar +pláṭa bərràxšələ.* ‘Axiqar leaves and goes.’ (A 3:78)
- (16) *bərróxša áxči jašúkələ +bəddayolə.* ‘He goes (forward) and as soon as he looks he recognizes her.’ (A 1:12)

In (17) there is a sequence of two identical verbs expressing sequential phases of the same event:

- (17) *xarbúsuna m-+al-pallacàna.* *candúrə candúrələ* ‘They throw him down from the stairs. He rolls and rolls.’ (B 16:8)

In (18) the narrator uses a chain of *bəptaxa* forms without the copula to express a pivotal series of events. The effect is to bind the events tightly together to convey their dynamic sequence:

- (18) *áha mərral álaha víli +xlàpux| pàrəkli! +nàdrux óyan!* *átxa jambúlə, jambúlə, jambúlə, jambúlə,* *m-+sádrət +fùyra| níxa candúrələ npàla.* ‘She said “God, I implore you, save me! I beg you.” She tumbles, tumbles, tumbles from the mountain slope, slowly rolls and falls down.’ (A 43:4)

The construction without the copula is in some cases dependent on a main verb on the syntactic level. It is used, for example, to express the complement of the verb *+šarə* ‘to begin’, e.g.

- (19) *+šurílun bərràka.* ‘They began to run.’
- (20) *+šurílun +bixàlu.* ‘They began eating it.’ (A 13:3)
- (21) *+hájil +šurílun áklu bərjàda, +págru bərjàda* ‘The legs of the pilgrim began to tremble and his body (began) to tremble.’ (A 1:43)
- (22) *+šurílə +hájí átxa báxya +šùlə.* ‘The pilgrim began to weep like this, and so forth.’ (A 1:17)
- (23) *mən-+táma +šaríyəna bədra-kálə ánnəyāl-sùrə.* ‘From there the children begin to shout.’ (A 3:72)

The infinitive is used even when the main verb is an unrealis form, e.g.

- (24) *níxa níxa jašúkələ ína á čaríxu díla šaluxèl kát +šárya +bixàlu.* ‘He notices that she is gradually taking his sandals off in order to begin to eat him.’ (A 39:34)

In (25) the reduced clause with the *bəptaxə* form is made the complement of the preposition *ka-*, which, likewise, expresses irrealis purpose:

- (25) *kúdmə píli ... ka-xá šábta mlàyan| ka-cúlla ýjax +bixàla.*| ‘Yesterday I baked ... for it to be sufficient for us for one week, for all the family to eat.’ (B 17:25)

In some cases the construction has the function of an attributive modifier of a preceding noun, e.g.

- (26) *míyya +bərdàxa dárax +állu.*| ‘Let’s pour boiling water on him.’ (A 37:19)  
 (27) *bəxzáyəna xá-xča míyya +bərdàxa dárýəna.*| ‘They see that they have poured so much boiling water.’ (A 37:21)

An attributive phrase of this type may be fronted before the head noun,

- (28) *t-íva xóšle +al-+sèda,| jáški ’al-xá ’ilàná| tóvtəla xá šápórta máx +šrá bəl-láya bràta.*| ‘When they had gone hunting, they saw sitting on a tree a beautiful girl shining like a lantern.’ (A 56:1)

The verb *’amər* ‘to say’ exhibits a different distribution of the *bəptaxə* construction in narratives from other verbs. The progressive form without the copula of this verb (*mara*) is used to introduce sequential events far more frequently than is the case with other verbs. The *mara* forms introduce turns in dialogue than constitute components of the main line of the narrative. It is the normal construction in clauses that introduce a turn without the speaker or addressee argument being specified, e.g.

- (29) *yávulə +al-’ídət xa-nàša| mára lâblun| +’Axíkar| +ktùlunlə.*| ‘He (the king) gives him to a man and says “Take Axiqar and kill him.”’ (A 3:31)  
 (30) *bráclə +al-bərcàcūl mára yá ’àlaha!*| ‘He kneels on his knees and says “Oh God!”’ (A 3:46)

In (31) the form *mara* is combined with the augment suffix *-ni*:

- (31) *maráni| pùš láxxa.*| ‘He says “Stay here.”’ (A 43:4)

When the speaker and/or the addressee is specified by means of a full nominal, the fuller *bəptaxələ* construction is generally used. The specification of the participants and the heavier coding of the verb with the copula enclitic are devices used by the narrator to mark a boundary in the discourse, e.g.

- (32) +Axíkar málca márlələ | 'Axiqar says to the king ...' (A 3:15)
- (33) Nàtan ka-málca márlələ | 'Natan says to the king ...' (A 3:22)
- (34) málca márlələ kátu | 'The king says to him ...' (A 3:29)
- (35) ka-für'un márlələ | 'He says to Pharaoh ...' (A 3:21)
- (36) ka-málca márlələ | 'He says to the king ...' (A 3:25)

In (29) and (30) above, the short form *mara* is used where there is a continuity of subject. The short form *mara* is also frequently used where there is a change of speaker so long as the speaker is not specified in the clause by a full nominal, e.g.

- (37) +Axíkar ka-+dàv márlələ ... mára | 'Axiqar says to him (the executioner) ... he (the executioner) says ...' (A 3:34–35)

In (38) the narrator uses the *ptəxlə* form of the verb 'to say' rather than the heavy form *márlələ* as an alternative device to mark a boundary in the discourse. The clause with the *ptəxlə* form *morrə* 'he said' can be analysed as expressing a preliminary background event, which is the normal function of the *ptəxlə* form in narrative (§10.3.1.3.). This lays the ground for the main chain of turns of dialogue, which are introduced by the short *mara* forms:

- (38) 'o-+kátlələ ... mərrələ | málca t-ávət basıma, | +báyyən xà-məndi tanónnu. | mára mù-ilə? | tāni! | bitáyələ 'o-+kátlələ, | ... mára kátu kát | málca t-ávət basıma. | 'ána ci-+báyyən | +x̥títi tanònna, | modənnna kátx. | ... 'ína 'áha mändi 'ána +báyyən tanónna kátx. | mára mù-ilə? | hámzəm! | mára +Axíkar xàyələ. | 'ána lén +k̥t̥ílu. | 'The executioner said "King be well. I want to tell you something." He (the king) says "What is it? Speak!" The executioner comes, ... he (the executioner) says to him (the king) "King be well. I want to tell my sin, confess to you ... but I want to tell you this." He (the king) says "What is it? Speak!" He (the executioner) says "Axiqar is alive. I have not killed him." (A 3:47–49)

The form *mara* may be used impersonally in narrative to introduce some component in the narrative, e.g.

- (39) báxta +bəddáyələ mü-ilə k̥əssat. | mára +rába honàntəva, | +ràba. | 'The wife knows what is happening. It is said that she was very clever.' (A 3:32)

This impersonal construction is sometimes used to represent the voice of the narrator, at the beginning of a narrative (40) and also within the body of a narrative (41), e.g.

- (40) *mára* 'átva lòtva| 'átva xá-dana málca| 'It is said: There was, there was not, there was a king.' (A 3:1:1)
- (41) *bitáyəl* +*mṭáyələ* cəs-dívə.| *mára* +*hála dávə bəškalèl*,| +*palutəl*.| 'He comes and reaches the wolf. It is said: Then he takes the gold coins.' (A 49:10)

#### 10.11.1.8 Combined with Deictic Copulas

The deictic copulas occur in place of the enclitic copula in some cases, viz. *dulə bəptaxə* (relating to an event near to the speaker and hearer), *velə bəptaxə* (for an event at a distance from the speaker and hearer or outside of the speech situation).

##### (i) *dulə bəptaxə*

In (1)–(2) the speaker uses the construction to express an event that will take place in the immediate future:

- (1) 'ána dūn-myàta.| 'I am dying.' (A 13:2)
- (2) xáti spúr +àlli| dūn-bità.| 'My sister wait for me. I am coming back (immediately).' (A 1:12)

In (3) the use of the near deictic copula expresses the emotional engagement of the protagonist with an upsetting situation:

- (3) 'axúna súra=zə bitáyələ bëta| +pšíma| kát +záyu dúna b-xéla bəškàlu m-ídu.| 'The younger brother comes home sad that they are taking his foal from him by force.' (A 38:10)

In (4) a near deictic copula is used in a narrative to draw attention to a surprising event:

- (4) 'átxa kət-bətyàvələ,| cípa dílə bəjvàja.| 'When he is sitting like this, the stone moves.' (A 40:7)

##### (ii) *velə bəptaxə*

This is used to point to an event that is taking place in the speech situation at a distance from the interlocutors, e.g.

- (5) vélə bəkyàma.| 'Look there he is getting up.' (A 6:15)
- (6) véna bità.| 'Look there they are coming.' (A 47:17)

The *velə bəptaxə* form is used after verbs of perception (7) or in contexts where perception is implied (8):

- (7) *bəxzáyələ* 'á +*kərtála* *sákla* +*üllul*,| 'u-+*táma* *véna* *bədráya* *kàla*.| 'He sees the basket go up, and there they are shouting.' (A 3:59)
- (8) +*mṭáyələ* *xa-dùca*| +*bəzràčələ*,| *vélə* *xa-jiyda* +*mṭáyələ*,| 'ax-jiyda.| 'He reaches a place and scratches and look he reaches a wall, (something) like a wall.' (A 39:9)

In (9)–(15) the *velə bəptaxə* form is used in direct speech to denote an activity that is not visible to the addressees in the speech situation. It is used to give prominence to an assertion of a progressive action, expressing heightened emotional engagement on the part of the speaker:

- (9) *véna* +*bəktàlan*! 'They are murdering us!' (A 41:7)
- (10) *bitáyəna* *nášə* *ka-málca* *ka-für'un* *márəna* *kát* ... +*Axíkar* *vélə* *jáxca* *bìyyan*.| 'People come to the king, they say to Pharaoh "Axiqar is laughing at us!"' (A 3:79)
- (11) *mára clímun* *clímun*! *mujtáyyəd* *vélə* +*slùta* +*salùyə*.| 'He says (to the people outside) "Wait, wait, the jurist is saying a prayer."' (A 7:8)
- (12) 'ádi *láxma* *vélə* +*pallúyə* *ka-cul-nášə* *hár-atxa* +*xurrày*.| 'Now he is distributing bread to everybody completely free.' (A 19:3)
- (13) *mèrrun*! *tilan*! *xázax* *tánax* *kátux*! *kat-*+*xóran* *tíla* +*várrə* *javày*! *là* *yavvátlə* *zúyza* *kátu*,| *dàvə*.| *mèrril* 'o-*vélə* *bnayè*.| 'They said "We have come to check (literally: see) and tell you that (if) our friend has come and entered, do not give him the money, the gold coins." I said "He is counting them!"' (A 10:7)
- (14) +*Máhe* *ju-**ürxəla*! *vélə* *bitáya* *ka-*+*al-**jánat* *díyyux*.| 'Mahə is on the way, she is coming for you.' (A 40:22)
- (15) *márrun* *ka-yàmmi*! *kat-*+*fòrax*! *véna* 'úpra *škìlu*! *kárjə* *véna* +*bixàlu*,| *véna* +*bixàlu*.| 'They said to my mother "Your husband—they have removed the earth and crows are eating him, they are eating him."' (B 6:7)

The far deictic copula is generally used in the 3rd person. Sporadic examples are found in the text corpus, however, of 1st person forms. Since a first person referent cannot be far from the interlocutors, the copula is used to direct attention to a situation that is not in the immediate proximity of the interlocutors but is associated with the speaker in some way. In (16) the speaker draws attention to a habitual situation that she participates in but is currently absent from view:

- (16) *mút vītəla| 'ádi lāxxa| věx cíllan vādo.* | 'What was (there in the village), now here we all make it.' (B 10:5)

In (17) the *velə bəptaxə* form is used in narrative to express a progressive event that is surprising and unexpected in the context. It has an adversative function, which can be appropriately rendered by English 'but':

- (17) *ju-dà-+dana| bəxzàyələ| 'ína xá-dana motàna| +palùtuna,| labùluna,| +tamrila,| +'ávva-da vélə bəzmàra,| mārələ| sùrəl +jùrəl sùrəl +jùrə.* | 'ánnə bàxyəna| mxáyəna ju-rišəl +'ávva yála mitələl +'ávva-da vélə mára sùrə,| +jùrə. | 'At this time he sees a dead man who people were taking out to bury, but he is singing and saying "small, big, small, big." They are weeping and beating their heads, (since) the lad is dead, but he is saying "small, big, small, big."' (A 9:4)

In (18) the deictic copula is used to sharpen the contrast in an opposition:

- (18) *'é-n-t xačča zíyza 'òtle,| 'áni vénə bəzvàna.* | 'áxnan lòtlan zíyza| léx-+myasa zonàxən. | 'Those who have some money, they buy (washing machines). We have money, we cannot buy.' (Canda)

In (19) and (20) the *velə bəptaxə* form is used in narrative to draw attention to a situation that lays the grounds for the unfolding of the ensuing events:

- (19) *xá dúca bəxzáyələ 'ína xá-dana bëta| +'al-xá kunjìta.* | 'In one place he sees a house on a corner. He goes. He goes to the house.' (A 39:30)
- (20) *cmá-šənna +vòrtəla| xá-dana +còban| vélə 'òrbəl +marrúya +tàma.* | 'Several years have gone by and a shepherd is grazing sheep there.' (A 40:6)

On some occasions a deictic copula is used with a progressive verb that also has a enclitic copula, e.g.

- (21) *dúna cíllə sadíyta yàvəna.* | 'Look they are all bearing witness.' (A 1:20)
- (22) *+pállan náša vélə +póllan dúcta yávələ ... láxma +xurrày.* | 'Such-and-such a person in such-and-such a place is giving bread away free.' (A 19:4)
- (23) *+bəzràçələ,| vélə xa-jùyda +mṭáyələ.* | 'He scratches and look he reaches a wall.' (A 39:9)

### 10.11.1.9 Combined with Existential Particle

In some contexts the progressive stem is combined with an existential particle rather than a copula. This is attested with the progressive of the verb *payəš* I ‘to remain’, e.g.

- (1) *háč xá nás̥a ju-bétu* lát pyàša. | ‘There is nobody remaining in his house.’ (A 39:27)
- (2) *mən-dan-+kazánča* ’áttən pyáša. | ‘Some of those pans still exist.’ (B 17:56)
- (3) *bás mabyúnla kát ju-’Úrmi +hála +dánət mšíxa ’átvə +’aturáyə pyàša*. | ‘It seems that there were still Assyrians remaining in Urmi at the time of Christ.’ (B 1:2)

### 10.11.2 bəptaxəva

This form, which contains the past enclitic copula, has the following functions:

#### 10.11.2.1 Past Progressive

The form may denote imperfectively an ongoing situation in the past, which typically overlaps temporally with other events, e.g.

- (1) *e-+dánət +m̥íli bétə*, | *bábi baštáyəva +čay*. | ‘When I arrived home, my father was drinking tea.’
- (2) *ptána vadánva* *tre-nùynə +plátlunju-’úpra*. | ‘I was ploughing and two fish came out of the soil.’ (A 5:7)
- (3) *káti +bətlabəva còmac ’azónva +állu*. | ‘She was seeking me (during the period of the events narrated in the foregoing discourse) in order that I go and help him.’ (A 2:33)
- (4) *’ána lévən +bəddá ka-mùdi* | *’ána ő-yuma žgišənva* *lénva taxmúne +spáy +rāhat*. | ‘I do not know why I was confused that day and I was not thinking clearly (literally: well [and] calm).’ (A 1:38)
- (5) *kúdmə pili ’ána jáni*, | *’ána báxta*, | *báxta +darrùnəva* *bí +doràna*. | ‘Yesterday I myself baked—I and my wife—(while) my wife was rolling with the rolling pin.’ (B 17:22)

In narrative it is generally used in sections that present preliminary background material rather than the foreground events, e.g.

- (6) *xá-yuma* | *+málla +Nasràdən* | *tívəva ju-bétə* | *+slùta +salíyəva* | *ka-’alàha*. | *mára b-’álaha* | *hálli* | *’alpà +dinárə zúyza*. | ‘One day mullah Nasradin was sitting at home and saying a prayer to God, saying “Oh God, give me one thousand dinars.”’ (A14:1)

- (7) +*palačyya*! +*pála ptàxəva*! *kátu kát’ áha yàla ‘avíla.*! ‘Fortune-tellers were reading fortunes to him, in order for him to have a child.’ (A 3:3)

In (8) the form is used to express duration during a period in the past:

- (8) ‘ána *kúdməfáni pyàyənva*.! ‘Yesterday I was baking (all day).’ (B 17:22)

In (9) and (10) the form expresses an immediate future in the past:

- (9) *bərráxšənva* +*al-Màcca*! ‘u-*báxti muyyàli*.! *muttálí cás* +*hàji*.! ‘I was going to Mecca (= about to go to Mecca) and I brought my wife and placed her with the pilgrim.’ (A 1:44)
- (10) *xúvva* +*bənnàsiva*,! ‘ána *kátu* +*spayùta vídənva*.! ‘The snake was about to bite me, (although) I had done it a good deed.’ (A 47:16)

#### 10.11.2.2 Habitual

The form may be used to express habitual or iterative actions that are not permanent properties of the subject, but rather are limited temporarily to a specific period in the past, e.g.

- (1) *šámmu* +*bəddàyunva*,! *munšíli*.! ‘I used to know his name, but I have (now) forgotten.’ (A 3:47)
- (2) *háč mən-béta léva* +*pláṭa* +*al-vàddar*.! ‘He would (at that time) never go outside (but later he lost his fear).’ (A 37:1)

In (3) the *bəptaxəva* form is used to express a habitual activity that was a recent innovation in the past, whereas the *ci-patəxva* form is used to express a habitual situation that preceded this, in the remoter past:

- (3) *kámta tanúyran ju-*+*àrrəva*.! *baxtáyə ci-yatvíva ...* +*ál* +*àrra*,! +*ál jùlla*! ‘*ítə ci-maxivalə*.! ‘ína +*xárta* ó *tanúyra mattúyuva* +*al-páṭa*! *xáčxa* +*ùllul*! *yánət* +*al-áklux* *cálət pàyyət*.! ‘Formerly our oven was in the ground. The women used to sit on the ground, on a cloth, then they put it (the bread) in it. But later they put the oven on the surface, slightly above, so that you could stand on your feet and bake.’ (B 17:26)

In some cases there is no clear temporal delimitation of the habitual activity and the form appears to be used for the purpose of giving greater discourse prominence and immediacy to the event, e.g.

- (4) ́́ltəx ́́tva +tòpa| ́an-míyya bətpáxəva +al-de-+tòpa,| ́áyən partùləva.| 'Underneath there was a wheel. The water would pour on the wheel and it would turn.' (B 17:6)
- (5) ́́ltəx ́́tvala| ́átxa| súra| +bəzza,| mən-+táma ó +xámra bitáyəva jú| +ka-  
zànča.| bəškàluva| bədráyuva ju-bòška| ju-+línə.| 'Underneath it had a  
small hole, from where the wine came into a pan. They would take it and  
put it in a barrel, into an earthen jar.' (B 17:15)

## 10.12 The Verb ́avə I

In addition to the various copulas and the existential particles, the verb 'to be' may be expressed by the verb ́avə I, which is inflected in all verbal templates. Many of the inflections of this verb supply functions that are not expressed by the copulas or existential particles, though in some cases there is functional overlap. The functions of the various forms of ́avə correspond for the most part to those of the equivalent form in other verbs.

### 10.12.1 ́avə

The most usual function of the *patəx* form of ́avə is to express irrealis, which cannot be expressed by any of the copula forms or existential particles. It occurs in the same irrealis contexts as the *patəx* form of other verbs, which have been described in § 10.2.1.1.

#### 10.12.1.1 Deontic Modality in Main Clauses

- (1) ́ávən +xlápux.| 'May I be your substitute.' (A 3:52)
- (2) ́ávax +xlápux málca.| 'May we be your substitute, king.' (A 3:43)
- (3) málca ́ávət basıma.| 'King, may you be well.' (A 2:4)
- (4) lá-́ávət +rába šaxına.| lá-́ávət +rába +káyra.| 'Do not be very hot. Do not  
be very cold.' (A 3:9)
- (5) lá-́ávilux +šìla.| 'Do not have concern (= Do not worry).' (A 3:57)
- (6) lá ́ávət mən-xa-bàxta| kát ... +jóro mítəla.| 'Do not be with a woman whose  
husband has died.' (A 3:10)

#### 10.12.1.2 Protasis of Conditional Constructions

- (1) ́ən-́ávə xàya,| páljət malcúytı b-yavvónna kàtux.| 'If he is alive, I shall give  
you half of my kingdom.' (A 3:50)
- (2) ́ən-́ána ́ávən +sàra,| násət xut-́ídət díyyi mùdi vágəna?| 'If I were a moon,  
what would the people under my command be?' (A 3:61)

- (3) *'ína +'arra-óya kvita míyya ju-dreté míyya c-àzi.* 'But if the ground is hard, when water is poured out, it flows away.' (A 3:11)
- (4) *'án béta 'áva +júral xá-dana stüyna-da xút ci-maxíva mən-+'arra hál +tàmma kát là taloxva.* 'If the house was big, they used to place a pillar underneath (coming up) from the ground up to there, so that it would not collapse.' (B 2:19)

### 10.12.1.3 Subordinate Complements

- (1) *'ána lé-+bayyən xá-'axča móndi ju-+'átrət díyyi 'ávə.* 'I do not want such a thing to be in my land.' (A 1:38)
- (2) *'ána lè-+bayyən háč xa-+šrà óya ju-màta.* 'I do not want any lantern to be in the village.' (A 2:1)
- (3) *b-kablítunlì xa-rija 'ávən katòxun?* 'Will you accept me to be a servant for you?' (A 36:5)
- (4) *'áxči! ju-+'átra díyyi 'áha móndi 'ávəl 'ána lè kablónna.* 'But I do not accept that this thing should be in my land.' (A 2:12)
- (5) *cùllə! b-+tòxmak +katkøttàxla óya dàkta.* 'We break it all up with a mallet, so it will be fine.' (B 3:24)
- (6) *tuxmənnəl kat-a-báxta 'ica mattíla kát +xiyálu 'ávi +rəhat.* 'He thought where he could put this wife so that his thoughts could be at peace.' (A 1:4)
- (7) *'ána ka-díyyux mulàpli 'ávət +spày.* 'I taught you to be good.' (A 3:90)
- (8) *jurvàssuvən, mìlpun, 'áxči ka-dàha móndi, 'áxči kat-ávəju- 'ídət díyyux ka-malcùyta.* 'I have brought him up, I have taught him only for this thing, only so that he would be at your disposition (literally: in your hands) for the kingdom.' (A 3:15)
- (9) *'a-cúl dax-t-òya! 'ána xáčča bùš-zoda mónnux! xiyyən.* 'Whatever the case may be, I have lived a little longer than you.' (A 2:16)
- (10) *clítəla mùjjur béta 'ávə.* 'It depends on how the house is.' (B 14:13)
- (11) *lén bəxšáva xá móndi ju-dùnyəl 'ávə bùš racíxa mən-spadiyyátət díyyan.* 'I don't think there is anything in the world softer than our pillows.' (A 38:9)

In (12) the subordinate construction corresponds to the realis possessive construction *'ətlux* 'you have':

- (12) *'a-ctava lé-+msə t-'avílux! májar +párrət xa-zúyza +rəba.* 'You cannot have this book, unless you pay a lot of money.'

#### 10.12.1.4 Generic Relative Clauses

- (1) *lóbbu +baṭlába +’al-xá-naša ’ax-díyyu ’ávə.* ‘His heart was seeking somebody who would be like him.’ (A 3:14)
- (2) *+rába xáčča nášə výyan-ilə kát ’avílun díctət mašrèta.* ‘We had very few people who had a lodging place,’ (B 1:33)

#### 10.12.1.5 Habitual

It is sporadically used to express a realis habitual situation:

- (1) *báva ’avíla marzanàna.* ‘A basin has sides’ (B 17:30)

#### 10.12.2 ’aviva

This is used in the same irrealis contexts as the *patəxva* form of other verbs (§ 10.2.2.1.).

#### 10.12.2.1 Conditional Constructions

- (1) *’on-’avánva xáya! +bəddáyən mu-ŷt-ódənva b-rišòxun-xina.* ‘If I were alive, I know what I would do to you.’ (A 13:3)
- (2) *’avənva +xlápux +Axíkar.* ‘Would that I were your substitute, Axiqar.’ (A 3:60)

#### 10.12.2.2 Subordinate Complements

- (1) *’íta b-yùma! bnàtə! ci-yatvíva ju-+čolàtə! kat-jińávə la-’avíva! +’al-carmána +šùlə.* ‘So, during the day, the girls would sit in huts so that thieves and so forth would not be in the vineyards and so forth.’ (B 2:6)
- (2) *’ína ýát +bílux mónnō ’avátvə ’ax-xa-+jòra.* ‘But you wanted to be with her like a husband.’ (A 3:91)

#### 10.12.3 bət-’avə (ŷt-avə, t-avə)

##### 10.12.3.1 Predictive Future

- (1) *+’avun ŷt-ávə ka-sebúytux.* ‘He will be for your old age.’ (A 3:6)
- (2) *t-ávə brùna kátux.* ‘He will be a son for you.’ (A 3:6)
- (3) *’áha xá-yuma xa-+cètra t-ávə ka-díyyan.* ‘One day he will be a problem for us.’ (A 37:19)
- (4) *é čáččə xuš ’atyàni, ... ’ána +spáy t-avína.* ‘Let that girl come ... and I shall be well.’ (A 56:3)

### 10.12.3.2 Deontic Future

- (1) *málca t̄-ávət basıma.* ‘King, may you be well, ...’ (A 3:15)

### 10.12.3.3 Discourse Dependent

The form may be used to express present habitual actions in clauses that are in some way dependent on what precedes on the level of discourse (§ 10.2.5.4.), e.g.

- (1) *+ullíyulu-da k̄esa p̄t̄-áva.* ‘Above it is a (beam of) wood.’ (B 14:6)  
 (2) *’átxa č̄üp̄ k̄urba +al-’iydàlə t̄-ávi-xina.* ‘Thus, thud, they are near to one another.’ (B 14:6)

### 10.12.4 bət̄-’aviva (p̄t̄-aviva, t̄-aviva)

#### 10.12.4.1 Conditional Constructions

The *bət̄-patəxva* form of *’avə* is used in the apodosis of conditional sentences that refer to a hypothetical condition in the past, which was not fulfilled (1), or to a hypothetical condition in the present or future, which the speaker assesses to be impossible to fulfil (2), e.g.

- (1) *’ən-+bačr̄tva, p̄t̄-avánva +rába xədya, ’ína là +bučorrux.* ‘If you had asked, I would have been very happy, but you did not ask.’  
 (2) *’ən-+masənva, p̄t̄-avánva mənnux, ’ína lè-+masən.* ‘If I could, I would be with you, but I cannot.’

#### 10.12.4.2 Discourse Dependent

In the text corpus the most widely attested use of the *bət̄-patəxva* form of *’avə* is to express habitual situations that are in some way dependent on the preceding discourse:

- (1) *xá beta +júra c-avíva muryəzza +táma +xliyla p̄t̄-avíva.* ‘They would have organized a large house and there the wedding used to take place.’ (B 10:25)  
 (2) *hár c-avíva p̄lásəl jís lèva m-+úydala. hár t̄-avíva +čírə, ’ánnə nášə yácca.* ‘They were always fighting. They were not good together. They were always indignant with each other, those big people.’ (A 55:1)  
 (3) *xá +dánta ýjdíla xá-xča p̄t̄-avíva tálmə lè +mačíva +al-míyya.* ‘Once the ice was such that the jugs did not reach the water.’ (B 3:34)  
 (4) *móriša p̄t̄-azíva t̄-avíva +árpa xámša +’ásra, cmá dánə +šarit̄ə múttəna +táma.* ‘In the morning they would go and there would be four, five or ten, however many snares they had laid there.’ (B 4:9)

### 10.12.5 ci-<sup>2</sup>avə (c-avə)

This is used to express habitual situations. The subject of the clause typically refers to a class rather and a specific referent, e.g.

- (1) 'ánnə məššəlmàna| 'ùrzə c-ávi b-nošé,| nákvə c-ávi b-nošè.| 'Those Muslims—the men are by themselves and the women are by themselves.' (A 5:1)
- (2) 'up-bétət tanùyra| +rába šaxìna c-ávə.| 'Also, the oven house is very hot.' (B 14:2)
- (3) ju-màta| buxaríyyə 'ot-kësa c-ávi.| 'In the village stoves are of wood.' (B 14:3)
- (4) +rába basìma c-ávə, vá +tamàna c-ávə m-dó kát bí ... +nùyta| b-+jazùyl váguna.| 'It is very delicious and is more tasty than the one that they make (in stoves fuelled) with oil or diesel fuel.' (B 14:4)
- (5) max-þølla c-ávə ka-sàtva.| 'It is like grass for winter.' (B 14:7)

### 10.12.6 le-<sup>2</sup>avə

This form expresses the negative of the *bət-avə* and *ci-avə* forms, e.g.

- (1) lè-<sup>2</sup>avilux brúna.| 'You shall not have a son.' (A 3:5)
- (2) xìna| 'átxa kaláttə lè-<sup>2</sup>avi.| 'Such mistakes will not happen again.' (A 56:5)
- (3) 'átxa lè-<sup>2</sup>oya.| 'That is not (appropriate).' (A 37:18)

### 10.12.7 ci-<sup>2</sup>aviva (c-aviva)

This is used to express habitual situations in the past. The subject of the clause typically refers to a class rather and a specific referent, e.g.

- (1) čúxta c-avívalun 'They used to have a cellar.' (B 2:4)
- (2) 'íta b-yùma| bnàtə ci-yatvíva| +baývànə c-avíva| kát jinávə +šúlə là-<sup>2</sup>ativa.| 'So during the day girls would sit (there). They used to be vineyard-keepers so that thieves and so forth would not come.' (B 2:7)
- (3) kənyàna=zə c-avívalun.| 'They also had cattle.' (B 2:10)
- (4) cùl bëta káttət +àrra-da c-avívalə| carmànə=zə c-avívalə.| 'Every house had a piece of land and had vineyards.' (B 2:11)
- (5) 'íta xína +uluylé-da cíllə c-avíva kësə.| 'Now, on top of them everything was wood.' (B 2:19)
- (6) +rába sodànta c-oyàva.| 'It was very pleasant.' (B 14:2)
- (7) c-oyáva takríban 'áx +çàrra.| 'It was approximately like butter.' (B 12:6)

### 10.12.8 le-<sup>2</sup>aviva

In (1) this form is used to negate a habitual situation in the past:

- (1) *dávla maxyàñəl lè 'avívalan ju-máta.* ‘We did not have drummers in the village.’ (B 10:22)

In (2) the negative habitual is used to express lack of ability:

- (2) *'áha +myukàrta lè-'avivala brúna.* ‘This lady did not have/was not able to have a child.’ (B 11:2)

#### 10.12.9 *Imperative*

This may be used perfectly to command the entering into a state in a delimited time-frame or at a specific point in time, e.g.

- (1) *ví láxxa b-+sá'at tmànya!* ‘Be here at eight o’clock.’

It is also frequently used to command the entering into a permanent state without delimitation of time, e.g.

- (2) *ví macìxa. ví xubbàna. ví faxùca. ví +spày náša.* ‘Be humble. Be loving. Be jolly. Be a good man.’ (A 3:13)  
 (3) *ví xa-náša lípa. ... ví 'áx +àrra.* ‘Be a learned man ... be like the ground.’ (A 3:11)  
 (4) *ví 'áx tÙyta.* ‘Be like a mulberry.’ (A 3:12)  
 (5) *'átən raxmànət. 'át xubbànət. 'át víyyət bàba káti. módrə har-ó-baba vi-káti.* ‘You are merciful. You are loving. You have been a father to me. Be the same father to me again.’ (A 3:92)

It may be combined with the negative particle *la* to express a prohibition, e.g.

- (6) *lá-vi láxxa b-+sá'at tmànya!* ‘Do not be here at eight o’clock.’  
 (7) *ví 'áx tÙyta. lá-vi 'áx +šàda.* ‘Be like a mulberry. Do not be like an almond.’ (A 3:12)

Prohibitions of a state without time delimitation are more frequently expressed by the irrealis *patax* form, e.g.

- (8) *lá-'avət +rába šaxìna. lá-'avət +rába +kàyra.* ‘Do not be very hot. Do not be very cold.’ (A 3:9)  
 (9) *+narahát là-'oyat. 'axúanax lèlə míta.* ‘Do not be upset. Your brother has not died.’ (A 1:14)

The negative imperative is used in such contexts when the speaker wishes to give the prohibition particular prominence. In (7) this prominence arises due to the contrastive opposition with the preceding clause.

#### **10.12.10 *vilə***

The *ptaxla* form of *'avə* denotes the occurrence of a specific event in the past with perfective aspect.

It may refer to a situation as a complete event in the past, having a finite duration with a starting-point and end-point, which may be followed by another event that is sequential to, e.g.

- (1) *'ó-yuma xína mèdrə 'ó-məndivílə.* | 'The next day the same thing happened.' (A 2:27)
- (2) *'àtxa vílə kássat.* | 'The story happened thus (i.e. this is what happened).' (A 2:17)
- (3) *lá-vilə xa-+xábra mənnè.* | 'There was no word from them.' (A 3:3)

The perfective event may have a long duration, as in (4), which describes an extensive period in the past, which has now come to an end:

- (4) *búš +rába vílun fùl +pàrča zabánta.* | 'They were mainly in (the trade) of selling textiles.' (B 1:35)

Rather than denoting a complete event bounded by a start and an end, the form is sometimes used ingressively to denote the start of a situation without any definite endpoint. Another event mentioned in the ensuing discourse, therefore, may take place while this situation still holds rather than be sequential to its completion, e.g.

- (5) *Nátan brínu ... +naràhat vílə.* | 'Natan his son became upset.' (A 3:17)
- (6) *báxti +yákürta vílə.* | 'My wife became pregnant.' (A 7:17)
- (7) *bəxzáyələ 'ína 'áha 'idátu +káyra vílun fđila.* | 'He sees that his hands have become cold (as) ice.' (A 13:2)
- (8) *'ána ka-díyux mulápłi 'ávət +spày, vílux káti xərbə.* | 'I taught you to be good, but you turned out to be (literally: became) bad to me.' (A 3:90)
- (9) *'ýman 'á málca vílə! 'áxnan +xábra lətlən?* | 'When did this man become king (while) we had no word of it?' (A 1:42)

It may express a recent event and is rendered idiomatically by the English perfect of recent past, e.g.

- (10) *mù vília +kusárta?* ‘What has become of the pot?’ (A 8:4)

In (11) it is preceded by a deictic copula:

- (11) *'a-dúlə vília nàša!* ‘It has become a man!’ (A 28:2)

The form is used to express the event of ‘being born’ if the subject referent is still living, e.g.

- (12) *'ána vília b-šítət álpo +əççámmo xámši tmànya.* ‘I was born in the year 1958.’

The *vília* form is used in the protasis of conditional constructions to express a possible situation in the future, e.g.

- (13) *'ən-vílun! +əççámmo ʃççíi əççáa, lè- +bayyənnun.* ‘If they are nine hundred and ninety-nine, I do not want them.’ (A 14:3)

### 10.12.11 viyyələ

#### 10.12.11.1 Resultative Present Perfect

The combination of the resultative participle *viyya* with the present copula generally expresses a resultant state in the present that arises from an event or time-bounded situation in the past, e.g.

- (1) *xá-yuma +'Axíkar bəškáləl brùnu, viyyələ xa-jvànka! +màtya.* ‘One day Axíkar takes his son—he has become a mature young man.’ (A 3:16)
- (2) *'á mù-ilə víyya?* ‘What has happened?’ (A 2:15)
- (3) *xá-'axča móndi lèlə víyya.* ‘Such a thing has not happened.’ (A 14:10)
- (4) *mànšila! cul-víyya viyyələ.* ‘Forget it! Everything that has happened has happened.’ (A 3:54)
- (5) *'ánnə +lavášə-da ɺat-'átxa c-ávi 'adíyya-xina! léna výyə-xina b-tanùyra.* ‘These flat breads which are found now have not been in the oven.’ (B 14:4)

The resultative participle may be introduced with a deictic copula, which gives greater prominence to the assertion, e.g.

- (6) *'ína 'adíyya velə-víyya +xàyən +'állux.* ‘But now he has become treacherous to you.’ (A 3:22)

The endpoint of the past situation may coincide with the present, as seen in examples such as (7):

- (7) *b-šánnə víyyətju-bèti.* 'For years you have been in my house.' (A 3:29)

In subordinate clauses that are dependent on main clauses containing a past tense verb, the resultative form *víyyələ* can take the past time reference from the main clause, e.g.

- (8) *cačála kát víyəl' adíyya málca humzàmlə.* 'The bald man who had become king spoke.' (A 1:43)

#### 10.12.11.2 Indirective Function

The *víyyələ* form is sometimes used not to express a resultant state but rather a situation in the past from which the speaker is distanced. When used with this 'indirective' function (§ 10.2.5.4.), the *víyyələ* form presents the situation in the past either perfectly or imperfectively. The indirective subsystem of the verb 'to be' in C. Urmi can be represented thus:

##### I Primary Function

<i>víyyələ</i>	<i>vilə</i>	<i>'ivə</i>
'he has become'	'he was/became'	'he was'
(resultative)	(perfective)	(imperfective)

##### II Secondary Function (Indirective)

<i>víyyələ</i>	<i>víyyəle</i>
'he was/became'	'he was'
(perfective)	(imperfective)

Examples (1–9) present some occurrences of *víyyələ* in its indirective function that are found in the text corpus. In all cases the motivation for the speaker to use the form is the fact that he/she feels distanced from the situation in the past that the verb is denoting due to an intervening period of time between when the situation in question existed and the present. In some cases the situation has not been directly witnessed by the speaker, while in other cases it has been witnessed but only in the remote past:

- (1) *ju-dé +'átra=zə,| +yánə +Spúrgān ju-'Ùrmil xa-bràtəval šámmo Helinəva.| +róba šapòrta vítəla.* 'In that land, meaning Spurğan in Urmi, there was a girl whose name was Helen. She was very beautiful.' (A 41:3)
- (2) *dáštət 'Ùrmil xá +dána vítəla cullana'ít vítəla 'at-+aturày.| hác məššəlmána +súla-da léna víyyə.* 'The plain of Urmi was once, was completely (the plain) of the Assyrians. No Muslims and so forth were there.' (B 2:16)

- (3) *+ròba 'átxa káša víyyan-lə.* 'We had many priests like that.' (B 16:11)
- (4) *ctávə 'atíkə=zə kat-víyyan-lə bərráxšəna cíllə bəxzayèna.* 'They go and see all the old books that we had.' (B 2:15)
- (5) *vítəla +dàna mən-dà máta +al-dè b-+darvàza xíšəna* 'There was a time when they would go from this village to that in the *+Darvaza* game.' (Alice 12)
- (6) *'átən raxmànət. át xubbànət. át víyyət bàba káti. módrə har-ó-baba vi-káti.* 'You are merciful. You are loving. You were a father to me Be the same father to me again.' (A 3:92)
- (7) *kosúnət +urusnáy vítəla ju-+íran* 'The army of the Russians was in Iran.' (B 16:3)
- (8) *+Olixa vítəla yámmət +Már +Kuryákus.* 'Julietta was the mother of St. Quryaqu's.' (B 16:7)
- (9) *+álmat díyyan násət díyyan búš-+raba víyyəna yán víyyəna darziyya, +xayyáṭə, ... yán víyyəna +rabiyə.* 'Our community, our people were mainly either tailors, tailors, doing tailoring, or were teachers.' (B 1:33)

In (1) the speaker is talking about his grandmother and uses the indirective form *vítəla* to express an imperfective situation that he himself did not witness. Example (2) refers to a situation in the remote past, knowledge of which the speaker has acquired indirectly through reports in books. Since this situation is clearly bounded by time, the *víyyəla* form may be interpreted here as an indirective perfective. In (3) and (4), on the other hand, the *víyyəla* form, with an ipl. S-suffix expressing a dative of possession, denotes an ongoing situation that held in the past. These situations are in the remote past. The clause *vítəla +dàna* in (5) refers to a period in the remote past, when there was traditional village life. In (6) the request 'Be the same father to me again' indicates that the clause *'át víyyət bàba káti'* refers to a situation that ceased to exist at some point in the past. Indeed it is clear from the narrative plot that there was an extended period of time between this situation and the present. It is not appropriate, therefore, to translate *víyyət* as 'you have been' but rather it should be interpreted as an indirective 'you were', in this case with perfective aspect.

The indirective *víyyəla* form is used to refer to the birth of somebody who is no longer alive, whereas the *vítəla* form is used when the person is alive, e.g.

- (10) *savúni víyyəla b-šítət álpo tmanyámmo +tmàni.* 'My grandfather was born in 1880.'

In narrative the indirective form is used to express situations that constitute the background of foreground events. This is illustrated in the following passage:

- (11) *+bəkyàrələ| ... kát mára šámmət díyyi 'ílə +pəllan ... +pəllan cás.| ... 'íta 'ax-šér-ila 'áyan.| ... 'áy=zə vítəla dàpnu.* ‘He carves (on the ground) saying “My name is so-and-so ... such-and-such a person.” ... It is a like a poem. ... It (the inscription) was beside him.’ (A 37:7–8)

In the passage in (11) the final clause *'áy=zə vítəla dàpnu* is more appropriately translated ‘It was beside him’ (indirective) than ‘It has become beside him’ (resultative), i.e. it is not a resultative but rather an imperfective indirective. It marks a clear disjunction between background and foreground. Here it does not mark temporal disjunction but rather disjunction in discourse structure.

Sometimes the indirective form is used to give a proposition particular prominence. In such cases again the distinction between the indirective form and other verbal forms in the context does not mark temporal disjunction but rather disjunction in discourse structure and consequential prominence.<sup>1</sup> This is the case in (12), which is the climactic event of the narrative. In (13), from expository discourse, the speaker uses the negative indirective form to give prominence to the statement to mark a clear contrast with what precedes:

- (12) *+šavvá yumànəl +šavvá lelavàyl víyyələ +xlúyla +šàra.* ‘Then there was a wedding party for seven days and seven nights.’ (A 51:11)
- (13) *búš-+raba +pàrča ci-zabnívá,| +'aturáyat diyyan,| yán +xyùṭa c-odíva,| ju-dánnə +šulánət prəzla| +rába lèna víyyə.* ‘They would mainly sell textiles, our Assyrians, or would make sewn work. There were not many in jobs involving iron.’ (B 1:32)

Speakers perceive (14b) to be expressing a stronger protest of the injustice of not being fed than (14a). This arises from the fact that the indirective form gives greater prominence to the first clause.

- (14) a. *'ána cpìnənva| 'u-xúrrac là yuvvállə káti.* ‘I was hungry, but he did not give me food.’
- b. *'ána víyyen cpìna| 'u-xúrrac là yuvvállə káti.* ‘I was hungry, but he did not give me food.’

---

<sup>1</sup> This can be compared to the use of the Turkish evidential suffix *-mIş* to express the mirative (Slobin and Aksu-Koç 1982; Payne 1997, 255), i.e. unexpected or surprising information.

### 10.12.12 viyyəva

#### 10.12.12.1 Resultative Past Perfect

The combination of the resultative participle *viyyəva* with the past copula may be used to express a resultative state holding in the past, which arose as a result of a prior event, or, when negated, a resultative state that had not yet come into existence, e.g.

- (1) 'ó bétu súra víyyəva xá yácca máx bótat málca víyyəva.' 'His small house had become huge, it had become like the house of kings.' (A 54:5)
- (2) 'é-+dana 'urxátə-zə 'ásfalt lèva víyyəva.' 'urxátə P'susèPval 'ásfalt lèva víyyəva.' 'At that time the roads had not been (laid with) asphalt. The roads were (surfaced with) sand. They had not been (laid with) asphalt.' (B 2:12)

The construction may be used to present the background of subsequent events in a narrative, e.g.

- (3) '+xárta á báxtu bi-dò béra-da +rázi léva víta. ... á náša sáva xàšla.' xàšla, módrə '+kríla ka-dé nìyna.' 'Then his wife became discontent with that house. ... The old man went. He went and called the fish.' (A 54:6)

#### 10.12.12.2 Indirective Function

The *viyyəva* form is sometimes used in an indirective function to express a past situation from which the speaker is distanced rather than a resultative state. This is the case in (1)

- (1) 'ána 'átlı xa-bàba.' +rába b-śànnəla.' viyyəva' vázzer ka-bāb-dìyyux.' 'I have a father. He is very old. He was vizier to your father.' (A 2:24).

Here the speaker is referring to a period in the remote past, separated from the present by many years.

The form is used to express the event of 'being born' when the subject referent is no longer alive, and so both the birth and the subject referent are distanced from the speaker, e.g.

- (2) 'savúni viyyəva b-śítət álpa tmanyámma +tmàni.' 'My grandfather was born in the year 1880.'

Speakers sometimes use the form in the 1st person when referring to a situation in the remote past from which they are now separated by intervening events, e.g.

- (3) *viyyəxva mən-<sup>+</sup>urusnáya<sub>a</sub>*, *’ína xlitəxva*.| ‘We were with the Russians, but we were mistaken.’ (B 1:19)

In narratives the *viyyəva* form is used in clauses that have the function of supplying background information to the main chain of events, e.g.

- (4) *’áyən brít<sup>+</sup>casibə vítəva*.| ‘She was the daughter of paupers.’ (A 56:1)

#### **10.12.13 ’avə viyya**

This is used to express an irrealis resultative perfect. In (1), for example, it is used in a context where the king questions the reality of a situation:

- (1) *’áha xá-’axča<sup>+</sup>šúla<sup>+</sup>júra<sup>+</sup>’avə viyya ju-da-<sup>+</sup>átrət dìyyi*, *’ána lā-<sup>+</sup>yattən?*  
‘Has such a mighty matter as this taken place in this land of mine and I do not know about it?’ (A 1:39)

#### **10.12.14 vayələ**

The *bəptaxələ* form of *’avə* is generally *vayələ*, in which the initial /b/ has been assimilated. Sporadically the form *bivayələ* is used, preserving the original initial /b/ element.

##### **10.12.14.1 Actual Present**

The *vayələ* form may be used to express a situation that holds in the actual present. The construction is imperfective and expresses a situation with a degree of duration. The temporal reference of the actual present may be the historic present of narratives. In (1) the *vayələ* form conveys the durative dimension of the period of the priests:

- (1) *+várəna<sup>+</sup>róba<sup>+</sup>dàna* *váyəna<sup>+</sup>ròba<sup>+</sup>kášə<sup>+</sup>suráya*.| *Yáprəm vayələ*, *’Isə vayələ*, *Mixáyəl vayələ*, *káša<sup>+</sup>Sàndu vayələ*.| ‘Much time passes, there are many Assyrian priests. There is Ephrem, there is Iso, there is Mixayəl, there is father Sandu.’ (B 16:11)

In (2) the durative situation overlaps with the events in the surrounding context:

- (2) *bərráxşəna ’albátta batfákəna b-cmá ’apəskúpə kat-vàyan-lə*, *+’árpa xamšá ’apəskúpə*.| ‘They go and, of course, meet some of the bishops that we had (during that time), four or five bishops.’ (B 2:14)

In (3) the enclitic copula in the first clause expresses a permanent situation whereas the *váyəla* form in the second clause expresses a non-permanent situation in the actual present:

- (3) *'ùrxəla' azána 'atyàna váyəna.* 'It is a road. There are wayfarers (literally: goers and comers).' (A 43:4)

The construction is often used to express the circumstantial background of following events in a narrative or section of narrative, e.g.

- (4) *xá-yuma +malla +Nasràdən! +rába váyəla cpìna.* 'One day mullah Nasradin is very hungry.' (A 23:1)
- (5) *xá-yuma +malla +Nasrásdən váyəla tíva +al-kèsə.* 'One day mullah Nasradin is sitting on a branch of wood.' (A 32:1)
- (6) *sépu=zə váyəla b-dápnu sépu bəškàlələ! útxa bədvakóla kám.* 'His sword is by his side. He takes his sword and holds it like this in front.' (A 39:9)
- (7) *'adíyya 'ánnə nàkva! cílla +házər váyəna! mən-yál-súra nákva hál +jùrə! +plátəna kam-málca.* 'Now the women are all ready, from young girls to older women. They go out before the king.' (A 2:22)
- (8) *váyəla xína +rába rákə m-cás 'axúnə m-cás bábu xína.* xá dúca bəxzáyəla 'ína xá-dana bëta! +al-xá künjítə. 'He is very far from his brother's home, from his father's home. In one place he sees a house on a corner.' (A 39:30)
- (9) *+tlá yumána léla váya, Nàtan! bəzyàrəla, bəzyàrəla, bəzyàrəla, bùm! bəpkàyəla, myátəla Nàtan.* 'While three days are not (= Hardly had three days past), Natan swells, he swells, he swells boom! He explodes. Natan dies.' (A 3:95)

It is also used to express a circumstantial situation within a narrative, as in the inserted comments in (10) and (11):

- (10) *xá-yumal yámmu māral sàtva váyələ! mára brùni! hác-məndi lòtlən ka+xàla.* 'One day his mother says—it is winter—she says "My son, we have nothing to eat." (A 35:2)
- (11) *màrələ! ... +rába šapòrtət. +rába laxùmtət. +janàvar váyəla xína, 'ína +áv +bəxkàrolə! kát xázə mü t-òda.* 'He says ... "You are very beautiful. You are very comely." She is a monster, but he praises her in order to see what she would do.' (A 39:34)

It is used likewise to express circumstantial background situations or background comments within expository discourse, e.g.

- (12) *'é báxta kát pyàyəla láxma! bədráyula +al-de-màzra[k]! +bəššáyula ju-ta-nùyra! tanúyra=da šaxína vágəla.* ‘The woman who was baking bread would put it on the baking cushion and stick it onto the oven. The oven is hot.’ (B 10:14)
- (13) *bás 'áyya=zə xá +sabəttúta vágəla kàt! ju-'Úrmi 'ztva nášə b-+dánət mšixa-yúta.* ‘This also is a proof that there were people in Urmī at the time of (the rise of) Christianity.’ (B 1:5)

It is used to express a permanent, or at least long-term, background situation, e.g.

- (14) *xá yála! bábu myàtəla! xá yómma sòta vágüla.* ‘A boy—his father dies. He has an old mother.’ (A 34:1)

The simple copula can also express contingent situations such as these. The *vágəla* form draws heightened attention to the situation. In (4)–(13) above the purpose of this is to mark a boundary in the discourse. The *vágəla* form is used in other contexts to express a greater degree of prominence than the copula. It is used, for example, to mark parallel oppositions in constructions such as the following:

- (15) *scónta 'íla nèkva! scina lèla, scína 'ürza vágəla.* ‘(The word) *scónta* is feminine. (The word) *scina* is not, *scina* is masculine.’
- (16) *'ən-'ána 'ávən +sàra, nášət xut-ídət díyyi mùdi vágəna?* ‘If I am the moon, what are the people under my hand?’ (i.e. Given that I am the moon, what would my subjects be in such a situation?) (A 3:61)

It is used in expressions of perception when a referent comes into the vision of somebody, e.g.

- (17) *+mṭáyəla xa-dùca! 'inal xá 'áx màta! vágəla! mlíta nášə.* ‘He reaches a place (and sees) something that is like a village, full of people.’ (A 39:17)

Elsewhere it is used more generally to direct heightened attention to key situations in a discourse, e.g.

- (18) *cúllə 'ánnə bəlyàpəna! cíl-məndi ... vágəla díz.* ‘They learn all these things. Everything is correct.’ (A 3:58)

### 10.12.14.2 Ingressive

In some cases the *vayələ* form is used with an ingressive function to express the onset of a situation in the present, e.g.

- (1) *cačála vayələ málca.* ‘The bald man becomes the king.’ (A 1:24)
- (2) *málca +naràhat vayələ.* ‘The king becomes upset.’ (A 3:26)
- (3) *’o-cačálət bràta móyyola vayələ málca.* ‘The bald man who has brought the girl becomes the king.’ (A 1:4)
- (4) *xášca vayələ.* ‘It becomes dark.’ (A 5:15)
- (5) *+duràša vayələ bilé.* ‘An argument starts between them.’ (A 38:4)

In (6) the form is used without a predicative complement to express coming into existence:

- (6) *jáššək mù-ilə váya.* ‘Watch what is happening.’ (A 1:28)

### 10.12.15 *vayəva*

This form is sometimes used to expresses a habitual situation in the past, e.g.

- (1) *xá sáma hár +al-+kunṭopa ci-pešíva brìza.* *lén-**+bəddəl kám* *átxəva,* *búš* *šapìra vayəva.* ‘Some of them would become dry while still in a bunch (on the vine). I do not know why it was so, they were nicer (like that).’ (B 10:1)
- (2) *+róbə ’ón ’atíl jarùsa vayəva kámxa.* ‘If a lot came, the flour was coarse.’ (B 17:7)
- (3) *’átxa ’átvalan bìl bí pátvət dá mìz,* *+tlá àkłə, cíllə* *+xadərvánət juydànəl kát* *là sandáxva b-júyda +káyra vayəva.* ‘We had ones like this with the width of this table, three feet, all around the walls, so that we did not lean on a wall that was cold.’ (B 10:19)

In some case it has a habitual ingressive sense, e.g.

- (4) *yemíšə bədráyəxva ju-šácar* *xáčča ... vayəva áx dùyša!* *’ú miyyé búš kúya* *vayəva* *bəškáleñxva.* ‘We put fruits into the sugar and they became like honey. When their liquid became harder, we would take them off.’ (B 10:2)
- (5) *’é másta vayəva +càrra.* ‘The yoghurt would become butter.’ (B 17:20)
- (6) *+rába mənné bitáyəva l<sup>E</sup>Amèrica<sup>E</sup> +bəkráyəva.* *+bədyàrəva,* *haccimə* *vayəva.* ‘Many of our people who had some education used to go to America to study. They would return and become doctors.’ (B 1:31)

### 10.13 Compound Verbal Forms Containing the Verb *'avə* I

The copula in compound constructions based on the resultative participle (*ptixələ*) and the progressive stem (*bəptaxələ*) may be replaced by a form of the verb *'avə* in the types of context that condition the occurrence of *'avə* elsewhere.

#### 10.13.1 *'avə ptixa*

This is used to express a resultative perfect in irrealis contexts where *'avə* rather than the copula would be required:

- (1) *'aláha ráxma 'ávəd +'állo kat-lá-'avi dívə +xiло.* 'God have mercy on her that wolves have not eaten her.' (A 1:35)
- (2) *'ána lén̥ hammúnəl núra 'ávə píla bi-'ilàna.* 'I do not believe that fire broke out in the tree.' (A 47:13)
- (3) *xa-mándi +báyyən tánət káti! kat-háč náša là-'avə +šámyu ju-dúnyəl 'áxči ... tázə 'ávə.* 'I want you to tell me something that nobody in the world has heard but is new' (A 3:75, relative clause with a generic, non-referential head)
- (4) *là-'avə +šámya 'áha.* '(I hope that) he has not heard.' (A 5:17)
- (5) *bálcət 'áva +šámya.* 'Perhaps he has heard.' (A 5:18)
- (6) *'áyya 'ən-'óya +arþá-ciloyə, xamšá-ciloyə +búsra 'óya +xəltu, jári 'ádi +əsrə ciloyə.* 'If she is four kilos and has eaten five kilos of meat, she must now be ten kilos.' (A 11:3)

#### 10.13.2 *'aviva ptixa*

This is used to express a resultant state in the past with irrealis modality. In (1) it occurs after the particle *bálcət* 'perhaps', indicating that the speaker is not committing himself fully to the truth of the following proposition:

- (1) *bálcət ... 'áviva xəzyəl* 'Maybe ... they had seen.' (B 12:7)

In (2) it occurs after the deontic particle *jári*:

- (2) *'íta ó nášət +accárət +dána yúvvuval ju-+fəllan yúmal ya-+fəllan šábtal jári mən-kám-+dana 'avíva zíyzu +purriyyé.* 'Now the man or the farmer to whom he had given (a deadline) on such-and-such a day or such-and-such a week had to have paid his money beforehand.' (B 13:2)

It is used in counterfactual conditional constructions, in which the speaker knows that the condition in the past that is expressed in the protasis was not fulfilled, e.g.

- (3) *+kátu 'ən-óyava +xəlta,| 'ádi vítəva yàccə.* 'If the cat had eaten, she would now be huge.' (A 11:4)

It is also used in counterfactual deontic constructions, such as (4), in which the speaker expresses what 'should have' happened:

- (4) *'oyátva ju-màšxa kulité.* 'You should have fried them in oil.' (A 36:8)

### 10.13.3 c-aviva ptixa

This expresses a habitual state in the past. The construction is generally used to present the setting for an event or situation presented in what follows:

- (1) *xá beta +júra c-avíva muryàzza| +táma +xlùyla p̄t-avíva.* 'They used to organize a large house and there the wedding would take place.' (B 10:25)
- (2) *c-avíva dáryə +táma +kùxal c-aváxva tívə màccə práxa.* 'They used to lay out there a pile and we used to sit hulling the maize.' (B 17:4)
- (3) *tálma| ... c-aváxva mutté ja-bèta| 'átxa xrizè. móriša kemáxva jáškax mujdàllə.* 'We placed the jugs in the house, we lined them up like this. In the morning we got up and saw that they were frozen.' (B 3:33)

In (4)–(6) the verb is used in a clause that provides elaborative background for what precedes:

- (4) *ó túyna lè šavákval| á +tína pákkiṇi. c-avíva 'átxa dvìku.* 'The straw did not allow the mud to crack. It used to hold it together.' (B 3:39)
- (5) *ci-daráxva jávo| màstal| 'u-pùmmo| ci-+yásráxvalə bí císət| kənyàna, c-aváxva zúrzo šap̄ərta.* 'We put in it (the churn +meta f.) yoghurt and tied its mouth with the stomach of cattle. We had made it attractive.' (B 7:1)
- (6) *xáyúma +ršòmlun| kát ka-dà yúma| ci-+hadríval| ci-'azíva +al-mátat Zumàllan. c-avíva zvínə m-kám +dána +ràba| kámxa, màšxa.* 'They designated a day for which they would prepare and on which they would go to the village of Zumallan. They would have bought beforehand a lot of flour, oil.' (B 11:4)

### 10.13.4 bət-'avə ptixa

This expresses a resultant state that will hold in the future, e.g.

- (1) *'e-+dánət bət-+maṭən bəta,| bábi ḥ-ávə +pliṭa.|* ‘When I arrive home, my father will have left.’

### 10.13.5 *vilə ptixa*

This form is used to express a resultant state in the past that is enduring but has temporal boundaries. It is typically used in a narrative to express a situation that forms the background to subsequent events, e.g.

- (1) *'ína +ávva har-vilə-tíva +tāma.|* ‘But he was just sitting there.’ (A 4:5)

In (2) it is used in a protasis of a conditional construction to express the same profile of a situation but in the future:

- (2) *lá vília +al-dúcu cèlyā| cullóxun rišóxun maxánnə bi-+bàlta.|* ‘If it is not standing in its place (i.e. the same weight as before), I shall behead you all with an axe, I shall kill you.’ (A 48:28)

### 10.13.6 *viyyələ ptixa*

The *viyyələ* form here has an indirective function (§ 10.2.5.4.) and refers to a situation in the past that is distanced from the temporal reference point of the speaker by a temporal gap. The construction consisting of the *viyyələ* form with the resultative participle *viyyələ ptixa* is used in narratives to denote a resultant state in the past that is distanced from the temporal reference point of the main narrative line by a temporal gap, e.g.

- (1) *b-cúl 'ùrxa| xá-dana jáldə jáldə bəjnàvulə,| +várələ javày.| +xárta 'o-xína| bəjnàvulə,| ju-dó +xàraya| yámma vítəla +tušítə jàno| +bár +tàrra,| +tárra +bəxlàsula.|* ‘By any means (he can) he quickly snatches one (flat-bread), and comes back inside. Then he snatches the other one. By the last one, the mother had hidden herself behind the door and she shuts the door.’ (A 37:5)
- (2) *+bəkýárələ kát mára šámmət díyyi 'íla +pállan ... +pállan cás| ... ýyya viyyələ ctívə +tāma.|* ‘He carves (on the ground) saying “My name is so-and-so ... such-and-such a person.” ... He had written that there. It is a like a poem. He had become tired and fallen asleep, while that was beside him.’ (A 37:8)
- (3) *yāl-súrə xína +jùrə víyyəna,| ju-+Rúsya víyyəna +kòryə,| b-jámi bitáyəna l-á-ybət +'Irən.|* ‘The children had grown up, they had studied in Russia. They go in a ship to Iran.’ (A 41:14)

The function of the *víyyələ ptixa* form is, therefore, similar to that of the *ptixəva* form. It appears, however, to mark a greater disjunction between the background and the foreground than *ptixəva*. This is seen in a pair of clauses such as (4):

- (4) a. 'ána xíšərva 'íman=t ju-ríšət +'ùydalə mxílun. | 'I had gone when they beat each other up.'
- b. 'ána víyyən xíša 'íman=t ju-ríšət +'ùydalə mxílun. | 'I had gone when they beat each other up.'

A speaker would use (4b) to give particular prominence to the fact that he was not involved in the fight ('I had long since gone'). This can be regarded as a mirative function, expressing surprising or unexpected information.<sup>2</sup>

On some occasions the *víyyələ ptixa* form is used equivalently to the indirective *ptixəla* form to express a situation in the remote past. In such cases speakers exploit the heavier morphology of the *víyyələ ptixa* form in comparison with the *ptixəla* form to express discourse prominence. This is seen in (5), where the form *víyyəvax xiyyə* occurs in the clause that expresses the main point of the speaker. The clause following it is an elaborative addition, in which the *ptixəla* form is used:

- (5) 'ína ju-dé pi-pálja, | +šavvámma tmanyámma +əççammà šánnə, | *víyyəvax*  
+rába +rāhatju-+íran xíyyə. | *xíyyəvax* +am-zarduštāyəl 'ína 'ax-mšixāyə. |  
'But in that interval, for seven hundred, eight hundred, nine hundred  
years, we lived very peacefully in Iran. We lived with the Zoroastrians, but  
as Christians.' (B 1:10)

### 10.13.7 *vayələ ptixa*

This form may be used with the sense of an ingressive resultative state, e.g.

- (1) *ju-saxánta šaxánta* +xálva bədráyəx R<sup>h</sup>pəpsin<sup>R</sup>. | *vayələ rita*. | 'In very warm  
milk we put pepsin. It (the cheese) sets (literally: becomes set).' (B 15:2)

The form is used to express a resultative situation that forms the circumstantial background of events in a narrative, e.g.

<sup>2</sup> The mirative is one of the functions of the Turkish evidential suffix *mIş* (Slobin and Aksu-Koç 1982; Payne 1997, 255).

- (2) *'áy bitayəla. áha-da b-sùysa vayəla tíyya xína! súysu vayəla máxyu ju-pàya.* cut-+dána bitayəla cásalu märəla 'àxuni, sùysux! +tlà-'ákla 'átvələ
- é-+dān tilux?* xá-'áklu vayəla +xàlto.
- ‘She comes. He has come on a horse and has put his horse in the stable. She comes to him, each time, and says “Brother, did your horse have three legs when you came?” She has eaten one of its legs.’ (A 39: 28)
- (3) *'áha +bérašə cúra xambáša bitayəla! hó hó hó hó!* *'áha vayəla xiša!* 'òrbə +marriuvva.
- ‘The blind giant comes back in the evening, “Ho, ho, ho, ho.” He has gone to graze sheep.’ (A 39:31)
- (4) *+hála tré +saháttə lélá vaya +vàrta,* mən-vazzíru lél hamzùma-da malca,
- +bəkráyəl +jamáhat +al-+máydan.* ‘Two hours have not passed, the king does not speak with his vizier, he summons a crowd to the square.’ (A 48:13)

In (5) the form describes the circumstantial situation at the time of the event of the first clause:

- (5) *hál bəkyámən-da kat-+àxlana!* cílla vayəna +xilə.
- ‘By the time I get up to eat, everybody has eaten.’ (A 35:13)

The *ptixəla* form also has this function (§ 10.10.1.2.). The *vayəla ptixa* for directs a heightened degree of attention to the resultative situation than the simple *ptixəla* form. This is illustrated (6). Here the *vayəla ptixa* form is used to describe the situation of a woman who is one of the protagonists in the narrative. The *ptixəla* form is used to express the situation of a cat, who is a minor player in the narrative. Note that the cat is not introduced by the indefinite marker *xa*, which is also a sign of the minor role of this referent in the discourse (§ 9.1.).

- (6) *báxtu vayəla tóvta +al-hàvuz,* mánə +xállulə. +kátu +vórtəla tóvtəla +táma jaššúkə.
- ‘His wife is sitting on the pool washing dishes. A cat has come in and is sitting there looking.’ (A 12:1)

In (7) the construction has the long form of the auxiliary *bivayəla* and is used to give the circumstantial background of a habitual activity:

- (7) *ju-cílla +kéta é-ducta bivayəla +tuptápta b-kvìta.* 'íta ju-čiriyaváyə ci-parmiivala' útxa útxa carpíčə carpíčə.
- ‘Throughout the summer this place has been trodden down making it hard. Then in autumn they used to cut it into blocks.’ (B 10:6)

In (8) the *vayələ ptixa* form providing the circumstantial background occurs in a relative clause:

- (8) *'ína +bar-náša kát vágol +tála xáyyu purkè,| xáyyøt +bar-náša,| +bar-náša ka-dó +tála zabùnølə.* ‘The man, whose life the fox had saved, the life of the man, the man betrays the fox.’ (A 47:20)

#### 10.13.8 *'avə bəptaxa*

This construction is used to express a progressive action in irrealis contexts in which irrealis *'avə* is appropriate rather than a copula. In (1) it is used in a relative clause with a generic, non-referential head:

- (1) *madmuyévən +'al-càxvə| 'ávi ju-šmáyya +balbùsə.* ‘I compare them to stars that shine in the sky’ (A 3:62)

#### 10.13.9 *c-avə bəptaxa*

This form is used to express an event with duration that is habitually in progress, e.g.

- (1) *hár babé yəmmé c-avíva +płàša.* ‘Their father and mother were always fighting.’ (A 55:1)  
 (2) *'ána=da c-ávən bərràkə| m-kám 'ido.* ‘I am (habitually) running from her clutches (literally: her hand).’ (A 39:27)

In (3) the form is used to express habitual duration in an interval of time alongside non-compound habitual forms, which do not express such duration:

- (3) *'u-xá bəxtal| yán xàl 'úrza yatóvvva kət-+mayyìvala.| mattíva xúto jùlla| 'u-c-ávə +myàyo| e-+mèta.| bálcət xá páljøt +sá'at jaršàval hál-t 'o-+cárra 'atìva.* ‘A woman or a man would sit in order to churn it. He would put a cloth under it and kept churning the churn. Perhaps it took half an hour until the butter was produced.’ (B 7:1)

In some cases it is used to express a habitual action that is in progress at the time of the occurrence of another a habitual event, e.g.

- (4) *cul-yúma e-+dánøt ci-+maṭən bëta,| bábi c-ávə bəštáya +čày.* ‘Every day when I arrive home, my father is drinking tea.’  
 (5) *ci-maxíva +'allu,| c-avíva +bərxàta| m-dà-riša| +'al-dò-riša,| m-dà-riša| +al-dò-riša,* ‘They used to strike it (while) they ran from this side to that side, from this side to that side.’ (A 1:1)

In (6) the form is used to express an iterative activity:

- (6) *mən-ɬaltíxo c-ávax cúl+dána +tlá +tárpaʃabùvvə.* | ‘Each time we pick three leaves from the bottom of it.’ (B 3:26)

#### **10.13.10 'aviva bəptaxa**

This is attested in deontic expressions without the conditional particle, which broadly have the sense of ‘if only ...’!

- (1) *bá lá-avətva màra!* | ‘Well, if only you had not said (this)!’ (A 44:5)

#### **10.13.11 c-aviva bəptaxa**

This form is used in some cases to express a habitual activity in the past that had a specified duration, e.g.

- (1) *+əsrà yumána, +xamsàryumána c-ávi iðavày barúxa.* | ‘They used to convey festival blessings for ten days, for fifteen days.’ (B 5:7)

In some cases this expresses a habitual progressive activity in the past that is circumstantial to a habitual event expressed in the *ci-patəxva* form:

- (2) *məttəlyay ci-hakìva! an-sàvə kátan! áxnan c-aváxva màccə práxa.* | ‘The old men used to tell us stories while we were hulling the maize.’ (B 17:4)

In some cases it expresses a habitual activity that is not the circumstantial background, but rather the foreground. The heavier coding and compositionality of the construction is exploited to give greater prominence to the activity. In (3), for example, the squashing of the grapes is the central concern of the speaker and is an activity with which he is emotionally engaged, since he was one of the participants:

- (3) *yāl-súrə ci-mas̄kívalan +tlá +arpá janay! c-aváxva +mràča.* | ‘They used to take us children up, three or four people, and we would squash (the grapes).’ (B 17:15)

#### **10.13.12 bət-'avə bəptaxa**

This is used to refer to an enduring situation in the future, which is typically in progress during the occurrence of another event, e.g.

- (1) *'e-+dánət bət-+maṭən bəta| bábi ḥ-ávə bəštáya +čáy.|* 'When I arrive home, my father will be drink drinking tea.'

In (2) it denotes an enduring iterative situation, in which an event recurs on multiple occasions. The basic *bəptaxələ* form may have an iterative function within a delimited period of time. Here the auxiliary *bət-’avə* limits the time period to the future:

- (2) *lá ’ávət mən-xa-bàxta| kát ... +jóro mítəla| là jorátlə| sábab| ... cù-+danta ḥ-áya mára +jóri +jóri|* 'Do not be with a woman whose husband has died. Do not marry her, because she will always be saying "my husband, my husband." (A 3:10)

#### 10.13.13 *vilə bəptaxə*

This form is used to denote a progressive action in the past that has temporal boundaries and so is perfective in aspect. In narratives this construction is typically used when the progressive action is followed by clauses expressing events that are sequential to it. In (1)–(3) the form is used in sections describing progressive activities that form the preliminary background to the succeeding narrative:

- (1) *b-ŷàrxə| b-šánnə vilə +bəxdára kət-máčəx xa-nàša| xa-nòkva| kát| xóšša là-’avila|* 'He was wandering for months, for years, in order to find a man, a woman, who did not have sorrow.' (A 4:2)
- (2) *’ánnə nàše| mən-kédamta hal-+berášə vílun +vára +pláṭa móndi bəzvàna|* 'The people, from morning until night, were going in and out, and making purchases.' (A 4:5)
- (3) *’ánnə ’úrzə vílun màra|* 'Those men were saying ...' (A 5:1)

On some occasions the *vilə* component is used in its ingressive sense, and so the construction expresses 'beginning doing something', e.g.

- (4) *vílun +bədràša|* 'They began to argue.' (B 1:29)
- (5) *lišána vília hamzúma|* 'It (the fish) began to speak a language.' (A 54:2)
- (6) *’á báxtu cràbla| vília +sára| vília bəndà|* 'His wife became angry, she began to curse, she began to jump.' (A 54:3)
- (7) *’ýən-da +hàyyan| təvla| vília bəxya|* 'She, poor thing, sat down and began to cry.' (A 51:3)
- (8) *+málla +Nasràdən| har-vílə mən-+tárrət béta +pláṭa| vília màra| hàč,| hàč, hàč,| kat-là manšívala|* 'Immediately Mullah Nasradin began to go out

of the door of the house, he began to say “*hač, hač, hač, hač*”, so he would not forget it.’ (A 9:1)

### 10.13.14 *viyyələ bəptaxə*

This may be used to express a resultant state that has internal duration, e.g.

- (1) ‘ána kát mən-+bár cmà šónna| kát vítəvan +čallúšə kát ’avíli +zàya| lén +msítə ’avíli +zàya.| ‘I, who after so many years have been trying to have young, have not been able to have young.’ (A 39:23)

In (2) the construction is used to supply an elaborative background to the situation expressed in the preceding clause:

- (2) *bitáyələ* +bérašə +málla šuršiyya,| jiyya| cùllə-yuma šíma víyəl +bətráya ptána +bár kənyàna.| ‘The mullah comes back in the evening, exhausted and tired. The entire day he has been driving the plough behind animals.’ (A 5:8)

In (3) and (4) the form is used with indirective function, i.e. rather than expressing a resultant state it is equivalent to an imperfective progressive construction with a copula. The basic meaning of indirective forms is to signal that the event occurred at a distance which is marked due to the fact that it is remote or not directly witnessed. In (3) and (4) the primary motivation of using the indirective form appears to be to exploit its markedness to give the clause particular prominence in the discourse, since it expresses a situation to which the speaker wishes to draw particular attention. The use of an indirective form with such a prominence marking discourse strategy has been seen in some other examples discussed above. It is noteworthy that in (3) the statement is repeated with an unmarked *bəptaxəva* form, demonstrating the equivalence on an aspectual level:

- (3) čún Fàrtist<sup>E</sup>-va ķa-məlláttət jànu víyələ taxmúna| ķa-məlláttət +’aturáya taxmùnəla| ‘because he was an artist, he was thinking about his own people, he was thinking about the Assyrian people.’ (A 41:19)
- (4) məndìyyan| cùllə lubóllun.| xá-yarxa víyəna məndi bəfráša mən mátət +Hàssar.| ‘They took all of our property. For one month they removed things from the village of +Hassar.’ (B 6:3)

In (5) the indirective *viyyələ bəptaxə* form is used to express a habitual situation in the remote past (*víyəna ... zabuna*). In the same passage a habitual situation

in the remote past is expressed by the indirective *ptixələ* form (*vidəna*). The motivation for using distinct forms appears to be to express differing degrees of prominence. The *ptixələ* form *vidəna* occurs in a clause giving elaborative background to the term <sup>+</sup>*xayyaṭə* ‘tailors’, whereas as the *vīyyələ bəptaxə* form is in the foreground:

- (5) +*àlmət díyyan*! *nàšət díyyan*! *búš-+raba vīyyəna*! *yán vīyyəna darzìyyə*,!  
 +*xayyaṭə*,! +*xyùṭa vídəna*,! *yán vīyyəna +rabìyyə*,! *yán vīyyəna +pàrča zábúna*.! ‘Our community, our people were mainly either tailors, tailors, doing tailoring, or were teachers, or sold textiles.’ (B 1:33)

### 10.13.15 *vayələ bəptaxə*

The construction is used in narratives to express a progressive action that constitutes the preliminary circumstances of a following main-line narrative that is expressed by the *bəptaxələ* form. The *vayələ* auxiliary heightens the prominence given to the progressive action to mark a boundary in discourse, e.g.

- (1) +*o-kaṭùla-dal* *xína*! *vayələ bəštāya*! ... *márlə ḳàtu*! +*Axíkar ka-+dàv márlə*,! *márlə àna*! *jná látli*.! *là +kṭúlli*.! ‘(As) the executioner is drinking, ... he says to him, Axiqar says to him, he says “I am not guilty. Do not kill me.”’ (A 3:33)
- (2) *vayələ 'árbu +šílu +marruvvè +táma*! *vayələ tīva*.! *mən-+bár xáxča nàjəstan*! *jašúkələ xá báxta cósó bulmàlla*,! *é šádda bolòlolə xína*! *cósó bulmálla +savánta dúla tīla*.! ‘He is grazing his sheep there and is sitting. After a while, suddenly he notices that a woman with tangled hair, the demon monster, her hair tangled, ugly, has come.’ (A 39:33)
- (3) *xá 'urxàči*,! +*bar-nàša*,! *vayələ 'úrxxa bərráxša*.! *ú mən-dápna*t *mèša +vártu*! *pacúrəl ḳat-nùra bəlláyələ*! *'u-méša bəkyàdəl*.! ‘(As) a wayfarer, a man, is going along the road, having entered a forest, he observes that a fire is flaming and the forest is burning.’ (A 47:1)
- (4) *bí dé sépa vayələ bí xívvə +ṭavùlə*,! *mújjar vayələ*! *mən-ṭúpru mxàyələ*,!  
*ṭúpru +bəkṭāyələ*.! ‘While he is playing with the sword with the snake, it happens that he makes a blow on his tail and cuts off his tail.’ (A 46:3)

The construction is also used to express a progressive action that is circumstantial to a perfective event expressed in a preceding clause by a *bəptaxələ* form, e.g.

- (5) xá šábta 'áha +*katkúṭulə ju-nàra*| xá šábta **váyələ dàmma bərráxša ju-nára**.| 'He cuts it up for a week and for a week (during this process) blood is flowing in the river.' (A 39:20)

### 10.13.16 vayəva bəptaxa

This form is used to express progressive actions in the past that constitute the background of following events narrated in the past tense *ptəxlə* form, e.g.

- (1) +*málla váyəva +slùta +salùya*,| *xziləl +tórba tìla*.| '(As) the mullah was praying, he saw a bag come.' (A 14:3)

### 10.13.17 Discourse Motivation for Compound Forms

As has been remarked already in some of the preceding sections, in some cases various verbal forms are used with similar tense-aspect functions and the main motivation for their use is to express different degrees of discourse prominence. This can be seen, for example, in (1), in which the *ci-patəxva*, *bəptaxəva* and *c-aviva bəptaxa* forms are used with the same tense-aspect function. The *ci-patəxva* form can be regarded as the default habitual form. The compound verbal constructions express greater prominence, the *c-aviva bəptaxa* form, with the heaviest coding and compositionality expressing the highest degree of prominence. The speaker is particularly emotionally engaged with the event of squashing grapes in his childhood:

- (1) *yāl-súrə ci-maskívalan +tlá +arpá janàyl c-aváxva +mràča*.| <sup>RjR</sup> *žltax*  
*žtvalal žtxal súral +bèzza*,| *mən-+támə* ō *+xámra bitàyəva júl +kazànča*.|  
*bəškálaluval bədráyuva ju-bòškal ju-+lìna*.| 'They used to take us children up, three or four people, and we would squash (the grapes). Underneath it had a small hole, from where the wine came into a pan. They would take it and put it in a barrel, into a earthen jar.' (B 17:15)

In (2) *bəptaxəva* forms are used to describe the habitual activity of making butter and buttermilk, but the speaker shifts to the default *ci-patəxva* form to give background information on the use of the buttermilk.

- (2) *é másta váyəva +càrra*.| *o +cárра bəškálaluva b-nòšu*,| *íta +ávun pyášəva +dàvvə*.| *b-+dávvə ci-bašláxva bušàla*.| 'The yoghurt becomes butter. They take off the butter by itself, then what remained was buttermilk. With buttermilk we used to cook stew.' (B 17:20)

The passage in (3) describes the custom of building houses. The verbs denoting the foreground building activity are in the *bəptaxəva* form whereas the background section describing how the bricks were made has verbs in the *ci-patəxva* form:

- (3) xácmə betanàna! ... betanánət 'ùprəva.! bí 'àləz +túrsəva.! càrpəč.! jané +tarúsəva bí 'ùpra,! bí tìyna.! ... tìyna,! jólla bariyza! ci-+xołívalə bí do-+tìna! c-odíva cărpıča.! ci-mabrəzzívale +al-yùma.! b-dáni bnáyəva bèta.! 'Some of the houses ... were houses of mud. They were made of mud brick, brick. They used to build themselves with mud, with straw. ... Straw, dry grass, they mixed it with the mud and made bricks. They dried them in the sun. With these they used to build a house.' (B 17:32)

For the discourse motivation for using the heavy *viyyələ ptixa* form instead of the lighter *ptixələ* form, or for using the heavy *viyyələ bəptaxə* form instead of the lighter *ptixələ* form see § 10.13.6., § 10.13.14.

#### 10.14 *kam-patəxlə*

This form is used more frequently in the varieties of the dialect spoken in the northern region of the Urmī plain. It is sporadically found also in other varieties.

The construction is functionally equivalent to the *ptəxlə* form but is restricted to verbs that have a pronominal object in the form of an L-suffix. The L-suffix may express a pronominal direct object or indirect object. As with *ptəxlə*, the basic function of the construction is to express perfectly an event in the past, e.g.

- (1) *kam-yavvəlli pašcàšə*.! 'He gave me gifts.' (A 3:34)  
 (2) *lá kam-yavvánnux +dàna*.! 'I did not give you time.' (A 3:52)

In (3) the form is used to express an event in the recent past with a margin in the present (cf. § 10.3.1.1. for this function of *ptəxlə* verbs). The translation with an English present verb is, therefore, appropriate:

- (3) +rába xdíli *kam-xazzənnux*.! 'I am very pleased to see you.' (A 5:13)

In (4) it used in a conditional construction to refer to a possible event in the future. In the preceding parallel condition the *ptəxlə* form is used, demonstrating the functional equivalence of the two forms:

- (4) *'ən-ána kákx +uldili, 'ánnə 'alpá +dinàrə| kàtina. | 'ən-lá kam-+aldànnux, | 'ət-dìyyux-na.* | 'If I trick you, these thousand dinars are mine. If I do not trick you, they are yours.' (A 22:2)

In (5) it is used with the verb *'avə* where the L-suffix expresses possession. It is perfective, expressing a situation with a temporal boundary followed by a subsequent event:

- (5) *+rába xamxámta kam-àvila, mətlə.* | 'She had a great fever (and then) she died.' (A 1:32)

### 10.15 Active Participles

The active participle of some verbs can be used in the predicate of clauses to express an unscheduled event in the future, i.e. at some unspecified point in the future. This is possible with the active participles *'atyana* 'coming', *'azana* 'going', *+derana* 'returning', *pešana* 'staying' and *parkana* 'finishing', e.g.

- (1) *tíyyəna 'ína 'azànəna.* | 'They have come, but they will go (at some unspecified point in the future).'

Such constructions are often used in a modal sense of deontic necessity or intention, i.e. 'they must go', 'they intend to go'.

If the specific time of the future event is scheduled, the *bət-patax* form is used, e.g.

- (2) *tíyyəna 'ína t-ázi b-+sa'at +tlə.* | 'The have come but they will leave at three o'clock.'

Further examples:

- (3) *'atyàntəla!* 'She will come (at some unknown point in the future).'
- (4) *+derànəvən!* 'I must return (at some unknown point in the future).'
- (5) *'a-+šúla parkànələ.* | 'This job is coming to an end.' (i.e. it is finite, but its specific end-point is not known)

In (6), from the text corpus, the participle *pešana* is connected to an adverbial complement by nominal annexation:

- (6) *'ána lén pešánat làxxa.*<sup>1</sup> 'I do not intend to stay here.' (A 39:21)

The *bət-patax* form without any specification by a time adverbial expresses greater immediacy than the unscheduled future constructions, e.g.

- (7) *b-<sup>+</sup>dèrən*<sup>1</sup> 'I shall return (now).'

The active participle *pešana* 'staying' can be used in a negative unscheduled future construction, e.g.

- (8) *tíyələ 'ína pešána lèlə.*<sup>1</sup> 'He has come, but he will not stay.'

The active participles of other verbs are used as adjectives to attribute a characteristic property to a referent, e.g. *naša +axlana* 'a man who is a (big) eater', *naša šatyana* 'an man who is a (frequent) drinker, a drunkard', or as nouns to refer to practitioners of professions or instruments, e.g. *+jarrana* 'barber', *+sapyana* 'strainer'.

Active participles from transitive verbs may have object arguments. These typically have generic reference and are expressed with nominal syntax, whereby the participle is treated like a nominal and is attached to its object in an annexation relationship:

<i>naša kablanat 'arxa</i>	'man receiving guests, hospitable man'
<i>naša xamyanat cīn</i>	'man bearing a grudge, vindictive'
<i>naša xazyanat pata</i>	'man seeing a face, biased man'
<i>naša +šamtanat kola</i>	'man breaking a promise, perfidious'
<i>naša +šamtanat momita</i>	'man breaking oath, perjuring man'
<i>xa məndi maķdanat ləbba</i>	'something burning the heart, moving'
<i>maxyanat jiba</i>	'striker of pocket, pickpocket'
<i>'odanat keybat</i>	'maker of slander, slanderer'
<i>yavanat burcatə</i>	'one who grants blessings'
<i>zabnanat ctavə</i>	'bookseller'
<i>+jarranat dəkna</i>	'shaver of a beard, barber'
<i>+maķraṭṭanat +tuḍḍuryatə</i>	'clipper of nails, nail-clippers'
<i>+rappanat fulla</i>	'shooter of a bullet, marksman'
<i>+taryanat +arabana</i>	'driver of a coach, coachman'
<i>+xeṭṭanat čacmə</i>	'sewer of boots, bootmaker'

The generic reference of the dependent nouns is a characteristic feature of compound nominals (§ 5.15.). The dependent noun that expresses the object in such annexation constructions may also have a specific referent, in which case the phrase cannot be interpreted as a compound, e.g.

*zabnanət dan-ctava* ‘the seller of those books’

Occasionally the object is expressed with verbal syntax and placed before the participle. Such constructions are always compounds and the object is obligatorily generic:

<i>davla maxyana</i>	‘drum-beater, drummer’
<i>meymun zonana</i>	‘seller of monkeys’
<i>prəzla +taptappana</i>	‘beater of metal’
<i>+čay šatyana</i>	‘tea-drinker’
<i>+faytun +taryana</i>	‘carriage driver’
<i>+jār daryana</i>	‘decree presenter, herald’
<i>+sola +xetana</i>	‘shoe-sewer, cobbler’

Participles of verbs of movement can express the source or goal of the movement by a dependent nominal in an annexation construction, which may be generic (9) or specific (10):

- (9) *bábi ʼazánət +’ùmrələ.* ‘My father is a church-goer.’  
 (10) *nanúnti ʼatyántət Rùsiyyəla.* ‘My grandmother comes from Russian.’

The complement of the participle may be a prepositional phrase. This is placed after the participle. Some of the available examples have the annexation ending on the participle others lack it:

<i>jaškana +’al-ctava</i>	‘sorcerer’
<i>naša la-calyanət +’al-kola</i>	‘man not standing on promise, an inconstant man’

## 10.16 Expression of the Passive

### 10.16.1 Payəš with a Resultative Participle of Transitive verbs to Express the Passive

The passive of a transitive verb is formed productively by combining the verb *payəš* i with the resultative participle of a transitive verb. The tense and aspect of the construction are determined by the form of *payəš*, e.g.

- (1) *píšələ +'uldìyya.* 'He has been deceived.' (A 3:30)
- (2) *'átxa baxtàsəl jári péši +k̥tilə.* 'Such women must be killed.' (A 1:7)
- (3) *'ánnə +'ánvəl ci-pešíva +jummiyyəl b-+k̥arçàlə.* 'The grapes were gathered in baskets.' (B 12:2)
- (4) *har-nipúxtxa=zə mən-míyyət +'ánvə pyášəla šk̥álta.* 'Molasses too is produced from grape juice.' (B 12:8)
- (5) *hál 'údyu yúma=zəl c-óya tanùya| ý +šúla ju-mátət Zumàllan| ju-+maštákxət 'Úrmi| pyášəla vida.* 'It may be said that to this very day this is being done in the village of Zumallan on the plain of Urmi.' (B 11:10)

Such constructions are passives of agentive transitive verbs, i.e. verbs expressing an event that has an initiator, typically a human, and a patient that is affected by the event (§ 4.25.1.2.). The affected patient is made the grammatical subject of *payəš*. The involvement of an agent or cause in the event is implied, though this is generally left unspecified. The agent or cause of the event is occasionally identified in an adjunct prepositional phrase as in (6) and (7):

- (6) *ka-mú pásli +'uldìyya! b-Nátan brùnux?* 'Why was I deceived by Natan your son?' (A 3:52)
- (7) *tálja pásłə mupšárra b-šəmša.* 'The snow was melted by the snow.'

A passive may be formed of transitive phrasal verbs, which consist of a light verb and noun complement (§ 4.26.). The noun complement is kept juxtaposed to the verb:

- (8) a. *bábi ránj mxílə jíyda.* 'My father painted the wall.'
- b. *jíyda pásłə ránj máxya.* 'The wall was painted.'
- (9) a. *bábi +básma bət-maxílə ctáva.* 'My father will print the book.'
- b. *'o-ctáva pásłə +básma máxya.* 'The book was printed.'

A dative complement of a ditransitive verb may be made the subject of a passive construction, e.g.

- (10) a. *bət-yávví zúyza k̥áti.* 'They will give me money.'
- b. *pásli yúvva zúyza.* 'I was given money.'
- (11) a. *+yávvá násá yuvválla zúyza k̥áti.* 'That man gave me money.'
- b. *pásli yúvva zúyza b-+dávvá násá.* 'I was given money by that man.'
- (12) a. *bət-+párri zúyza k̥áti.* 'They will pay me money.'
- b. *pásli +pórya zúyza.* 'I was paid money.'

In (13) the compound *vayəla ptixa* form of a transitive verb is used to express the passive (note that the long form of the auxiliary *bivayəla* is used):

- (13) *ju-cúllə +kéta é-ducta biváyəla +tuptápta b-ķvita.* ‘Throughout the summer this place has been trodden down making it hard.’ (B 10:6)

For more details concerning the semantics of resultative participles see § 4.25. For passive constructions with the infinitive see § 10.17.2.

### **10.16.2 Expressing the Passive by Labile Verbs**

Occasionally agentive transitive verbs are used intransitively to express an event that is not spontaneous and must have an agent. The agent, however, is de-emphasized and is typically non-specific. The verb, moreover, typically denotes a generic or habitual situation, which increases the non-specificity of the agent. Such constructions cannot take adjunct phrases that express the agent:

- (1) *+bar-náša ... járəc +násni.* ‘A human being must be bitten.’ (A 47:6, *+nayəs* I ‘to bite’)
- (2) *'ánnə +šulán járəc +járbi.* ‘These things have to be tested.’ (A 48:7, *+jarəb* II ‘to test’)
- (3) *jári maxnəkni vázzər.* ‘The vizier must be hanged (literally: caused to be throttled).’ (A 48:13, *maknək* III ‘to cause to be throttled’)
- (4) *é-+dān 'atíva násə,* *+búsra parómva ju-màta.* ‘When people came, meat would be slaughtered.’ (B 7:5)
- (5) *tanúyrət díyyan müjjur +šárva?* ‘How was our oven kindled?’ (B 7:10)

The intransitive alternant of the majority of labile verbs expresses a spontaneous action where there is no implication of the involvement of an agent (§ 4.25.1.1.).

### **10.16.3 Payəš with a Resultative Participle of Intransitive Verbs**

In some sporadic cases a form of the verb *payəš* I is used with the resultative participle of an intransitive verb. In (1), for example, it is used with the participle *xiša*. The motivation for this is to make explicit the non-volitional nature of the action:

- (1) *ju-dá 'ùrxal xá mənyána +júrət +'aturáya pəšlə| xiša mən-+'ára.* ‘On this journey a large number of the Assyrians vanished in the middle (before reaching their destination).’ (B 1:15)

## 10.17 Constructions with Infinitives and Verbal Nouns

### 10.17.1 Preliminary Remarks

The infinitive is a different morpheme from the progressive stem. This is shown by distinctions in form between the two in pattern I verbs. Most pattern I progressive bases have an initial *b-* element, which is lacking in the infinitive. As discussed in § 1.15.2., in the current synchronic state of the dialect this *b-* element is part of the progressive stem and not a prefixed preposition. In some pattern I verbs, the internal pattern of the progressive stem is different from that of the infinitive.

	Progressive	Infinitive	Verbal noun
Pattern I	'open' <i>bəptaxa</i>	<i>ptaxa</i>	<i>ptaxta</i>
	'eat' <i>+bixala</i>	<i>+xala</i>	<i>+xalta</i>
	'go' <i>bərraxša</i>	<i>xasa</i>	<i>xašta</i>

In roots with weak radicals, there is a greater tendency for the weak radicals to be contracted in the progressive stem than in the infinitive:

'see'	<i>bəxzaya</i> ~ <i>bəxzə</i>	<i>xzaya</i>	<i>xzeta</i>
'shake'	<i>+bəššaša</i> ~ <i>+bəšyaša</i>	<i>+šyaša</i>	<i>+šyašta</i>

### 10.17.2 Infinitive with Passive Diathesis

One construction in which the infinitive is used is where it is the complement of a form of the verb 'to be' to express that the referent of the grammatical subject of the verb 'to be' has the potential property of undergoing the action of the verb, e.g.

- (1) *'a-móndi c-ávə +xàla.'* 'This thing may be eaten.'
- (2) *'ánnə míyya c-ávi štàya.'* 'This water may be drunk.'
- (3) *'ánnə +'anvə c-avi mabrùzə.'* 'These grapes may be dried.'
- (4) *'ánnə +xəttə c-ávi txàna.'* 'This wheat may be ground.'
- (5) *'a-+tárra c-ávə ptàxa.'* 'This door may be opened.'
- (6) *'ánnə +xábrə c-ávi zmàra.'* 'These words may be sung.'
- (7) *'ánnə yumána lé-'avi mansùya káti.'* 'These days are unforgettable for me.'
- (8) *'a-náša lé-'avə šaxlùpə.'* 'This man is irreplaceable.'
- (9) *+'ávva náša c-ávə maјjùba.'* 'That man is lovable.'

In such cases the infinitive has passive diathesis and the verb 'to be' is typically in a habitual form. The referent of the grammatical subject is the internal

patient argument of the infinitive. One should contrast this with parallel constructions with the progressive stem (*bəptaxa*), which have active diathesis, in that the referent of the grammatical subject of the verb ‘to be’ is the external agent argument, e.g.

- (10) *c-áva +bixàla.* ‘He is (habitually) eating’ (tr.)
- (11) *cul-yúma 'e-+dánat ána ci-+máṭən béta bábi c-ávə bəštáya +čày.* ‘Every day, when I arrive home, my father is drinking tea.’

This potential construction with the infinitive is only possible with infinitives of transitive verbs. It is not available for intransitive verbs, e.g.

- \**c-avə myata* ‘He may die’
- \**c-avə npala* ‘He may fall’

The examples of the potential construction given so far have the imperfective present habitual form of *avə* (*c-avə*). The construction can be used with other forms of the verb, of both imperfective and perfective aspect, e.g.

- (12) *'ánnə míyya c-avíva štáya kùdməl* *'ína 'adíyya lè-'avi štáya.* ‘This water was drinkable yesterday, but is now not drinkable.’
- (13) *'a-+mixúlta víla +xála 'áxči ka-tré yumàna.* ‘This food was edible only for two days.’
- (14) *'a-+mixúlta t-óya +xála 'áxči ka-tré yumàna.* ‘This food will be edible only for two days.’

The subject of the verb may be impersonal, as in (15) and (16), in which the impersonal subject is expressed by the 3fs:

- (15) *cút béta c-óya tanúyə 'átvälə xa-càraz.* ‘Each family, it may be said, used to have a wine-press.’ (B 12:2)
- (16) *lé-'oya tanùvvə.* ‘It cannot be said (it is beyond words).’ (A 42:34)

On some occasions the final -ə of pattern II, pattern III and quadrilateral infinitives is replaced by -a, which is a marginal variant ending of such infinitives, e.g.

- (17) *lé-'avə +paxìlə* ~ *lé-'avə +paxìlə.* ‘It is unforgiveable.’
- (18) *lé-'avə šaxlùpə* ~ *lé-'avə šaxlùpə.* ‘It is irreplaceable.’

Some other verbs can take the place of *'avə* in this type of construction. These include *+bayyə* I 'to want, to need' and *+šarə* II 'to begin', e.g.

- (19) *'a-+cátra +báyyə šràya.* | 'This problem needs to be solved.'
- (20) *'ánnə dádvə +báyyi +ktàla.* | 'These flies must be killed.'
- (21) *'e-+mixúlta +báyya +xàla.* | 'This food needs to be eaten.'
- (22) *'áha móndi +báyyə mattúvvə +al-mìz.* | 'This thing needs to be put on the table.'
- (23) *'áha náša +báyyə +palútə mən-bèta.* | 'This man must be ejected from the house.'
- (24) *+cátra +šuríla šràya.* | 'The problem began to be solved.'
- (25) *batvatè ... +šurílun +matrúsə bí lòbna.* | 'Their houses ... began to be built with bricks.' (B 1:40)

The construction is also used with deontic expressions such as *+lazəm* and *jarəc*, e.g.

- (26) *'a-+tárra +lázəm dvàra.* | 'This door must be closed.'
- (27) *'a-xákla +lazəm dvàra.* | 'This field must be threshed.'
- (28) *'áha móndi jarəc mattúvvə +al-mìz.* | 'This thing must be put on the table.'

This type of construction may be formed from ditransitive verbs. In such cases either the direct object or the dative object can be made subject, e.g.

- (29) *'an-zúyzə +báyyə yáva ka-dán +sarbàza.* | 'The money needs to be given to the soldiers.'
- (30) *'an-sárbažə +báyyi yáva zùyzə.* | 'The soldiers must be given money.'

A further construction in which the infinitive has passive diathesis is one in which it is the complement of the verb *'atə* I 'to come'. In this construction the infinitive has the prefixed preposition *l-*. This is not the locative preposition *+al-* 'to, for, on', but rather appears to be a vestige of the original *\*l-* preposition, which has survived elsewhere in verbal L-suffixes:

- (31) *'áha +šúla bət-'átə l-vàda.* | 'This job can be done.'
- (32) *'áha +cátra bət-'átə l-šràya.* | 'This problem can be solved.'
- (33) *'áha +šúla lé-'atə l-mansùya.* | 'This matter cannot be forgotten (is unforgettable).'
- (34) *'áha +cátra tílə l-šràya.* | 'This problem came to be solved.'
- (35) *'ánnə +cátra tílun l-šràya.* | 'These problems came to be solved.'

### 10.17.3 Infinitive with Active Diathesis

The infinitive is used with active diathesis in a number of negative constructions in which the event expressed by the infinitive is not fulfilled. It is used, for example, in an adverbial function in contexts where it expresses the temporal circumstances of the event of an adjacent main clause, the subject of the infinitive being understood to be that of the main finite verb, e.g.

- (1) *lá +xàla,| xóšlə +al-+šùla.* ‘Not eating (= without eating), he went to work.’
- (2) *lá xzàya,| zvánli ‘a-bèta.* ‘Not seeing (= without seeing it), I bought this house.’
- (3) *lá tàyä,| zubánnə ‘a-beta kàti.* ‘Not coming (= without coming), he sold this house to me.’
- (4) *lá xáša +tàma,| ýána +bøddayən müdi ķuvvàmlə.* ‘Not going there (= without going there), I know what happened.’
- (5) *lá plàxa,| vílə márət zìyza.* ‘Not working (= without working), he became rich.’
- (6) *lá váda hàč móndi,| vílə márət zìyza.* ‘Not doing anything (= without doing anything), he became rich.’
- (7) *yúma lá zràka,| c-ázax jabàxən.* ‘When the sun has not risen, we go and pick (the tobacco).’ (B 3:26)
- (8) *hár la bakúra bæxnàkivat,| háč móndi lá bakúra?* ... *har-átxa bæxnàkivat lá háč móndi tanùya.* ‘Are you hanging without asking (questions), without asking anything? ... You are hanging me like this, without saying anything.’ (A 48:18)
- (9) *lá +bakùrə,| lá hamzùmə,| lá tanúyə xà-mändi,| ķa-díyyux +muktəlli.* ‘Without asking, speaking or saying anything, I had you killed.’ (A 3:45)
- (10) *+vərrə lá fxàca.* ‘He entered without laughing.’
- (11) *+vərrə lá bxàya.* ‘He entered without weeping.’
- (12) *tóvlə lá plàxa.* ‘He sat without working.’
- (13) *ku-tálux Nònvəl har-átxa la-+pláša b-yavvónna kàtux.* ‘Come to Nineveh and I shall give it to you without fighting (without a battle).’ (A 3:19)

The infinitive clause may contain a subject nominal, e.g.

- (14) *+tárra lá ptàxa,| ķàla +šmílə.* ‘The door not opening (= without the door opening), he heard a voice.’

This construction is often used in combination with the particle *+hala* ‘yet’, e.g.

- (15) *+hala lá +mṭáya +al-bèta,| +šmíla kálat +xòru.* ‘Not yet arriving at the house (= before he arrives at the house), he heard the voice of his friend.’
- (16) *+hála +’àvva| +’al-’árra la-kyàta,| vél-bərràká.* ‘While he is not yet touching the ground (= before he touches the ground), he (the other man) flees.’  
(A 6:15)
- (17) *+hála háč-məndi lá và,| bəšvárələ b-rišo| kát našèkla.* ‘Nothing yet happening (= before anything happened), he jumps on her to kiss her.’ (A 34:7, *và < vaya*)
- (18) *+hála la-hamzùməl +tárra mxàyuna.* ‘He not yet speaking (= before he can speak), there is a knock at the door (literally: they hit the door).’  
(A 6:8)

In these constructions the infinitive may take a pronominal object suffix, e.g.

- (19) *lá xzàyu,| fýorrí mənnu.* ‘Not seeing him (= without seeing him), I married him.’
- (20) *lá xzàyu,| +rdíla.* ‘Without seeing him, she liked him.’

A variant of this has *d-la* ‘without’ before the infinitive, typically placed after the main clause, e.g.

- (21) *+rdíla d-lá xzàyu.* ‘She like him without seeing him’

The infinitive may be used with passive diathesis, as in (22), in which the undergoer subject of the infinitive is the subject of the finite verb in the main clause:

- (22) *ju-bétan +mixulta +hála lá +xála baxràvala.* ‘In our house food not yet being eaten, it goes bad.’ (= food goes bad before it is eaten)

A verbal noun may also be used in such adverbial circumstantial constructions, e.g.

- (23) *la +xàlta,| dmàxla.* ‘Not eating (= without eating), he went to sleep’.

There is a greater tendency to use a verbal noun when the main verb is perfective and refers to a specific event with a definite subject, e.g.

- (24) *hammáša lá xzáya ci-zàvən məndiyána.* ‘Always not seeing (= without seeing) he buys things’ (habitual imperfective)

- (25) *la xzèta| zvánnə 'o-bèta.* 'Not seeing (= without seeing it), he bought that house.' (specific perfective)

#### 10.17.4 Infinitive Repeated in Circumstantial Phrases

An infinitive may be used in positive circumstantial phrases denoting progressive aspect if they are repeated. In such cases the infinitives may be placed before or after the main verb. Often, but not regularly, the pair of infinitives has a prosody that is commonly used with asyndetic repetitive constructions whereby the nuclear stress is placed on the final syllable of the first item and if the first item ends in *-ə* this is changed to *-i* (§ 9.13.), e.g.

- (1) *+várrəju-+ótax zmarà zmára.* 'He entered the room singing.'
- (2) *+várrəju-+ótax +xalà +xála.* 'He entered the room eating.'
- (3) *víla hamzúmələ xašà xáša.* 'He spoke as he went along.'
- (4) *víla +tar̥túma tayà táya.* 'He grumbled as he came.'
- (5) *vádli 'a-+šúla +dayà +dáya.* 'I did that consciously' (literally: 'knowing knowing')
- (6) *+várrəju-+ótax +savuri +savúro.* 'He entered the room cursing'
- (7) *+rxaṭà +rxáṭa xášla.* 'He went along running'
- (8) *xúvvə +jrà +jrá xášla.* 'The snake went sliding by'
- (9) *ka-mú myatà myáta bərráxšavət?* 'Why are you walking so slowly?' (Literally: dying dying)

When the verbs *faxəc* I 'to laugh' and *baxə* I 'to weep' are used in such constructions, the abstract nouns *faxca* and *baxya*, which are used as their progressive stems, are generally used instead of the infinitive forms, but the regular infinitive forms *fxaca* and *bxaya* are also used, e.g.

- (10) *+várrəju-+ótax fəxcà fxáca.* ~ *+várrəju-+ótax fxacà fxáca.* 'He entered the room laughing'
- (11) *+várrəju-+ótax bəxyà bxaya.* ~ *+várrəju-+ótax bxayà bxáya.* 'He entered the room weeping'

Abstract nouns corresponding to the progressive stems of the verbs *paləx* I 'to work' and *'azəl* I 'to go', viz. *pəlxana* and *rəxša*, are, by contrast, not used in these constructions. Only the infinitive forms *plaxa* and *xaša* are used:

- (12) *plaxà pláxa xášla.* 'He went along working (as he went)'
- (13) *xašà xáša mənni hamzúmələ.* 'He is speaking to me as he walks along'

In (14) the second pair of infinitives have suffixes that are coreferential with the subject:

- (14) *'ána bərráššən rkáda rkáda, švári švári'* 'I am going, dancing and leaping'  
(A 52:1)

The progressive stem is only marginally used in such constructions, e.g.

- (15) *+bixalà +bixála xášla.* 'He went along eating.'  
(16) *+bərxatà, +bərxáta xášla.* 'He went along running.'

Similar adverbial constructions are found with other repeated elements. This applies in particular to expressions that are related to quadrilateral verbs such as (17) and (18):

- (17) *bajù-baju xášla.* 'He crawled along.' (cf. *bajbaj* Q1 'to crawl')  
(18) *lənyò-lənyo xášla.* 'He limped along' (cf. *lanjən* Q1 'to limp')

In corresponding constructions with a negated circumstantial phrase, a single infinitive is used, including in constructions with the verbs *faxəc* and *baxə*, e.g.

- (19) *tóvlə là +xálə.* 'He sat without eating.'  
(20) *tunílə masála là fxáca.* 'He told a story without laughing.'  
(21) *+várrə là bxáya.* 'He came in without weeping.'

Negated infinitives can be fronted, as already seen, but this is not possible with single positive infinitives:

- (22) *lá xáša +támə, 'ána +bəddayən múdi kuvvəmlə.* 'Without going there, I know what happened.'  
(23) *\*xáša +támə, 'ána +bəddayən múdi kuvvəmlə.* 'By going there, I know what happened.'

### 10.17.5 Infinitive as Inner Object

Pattern 1 verbs may take an infinitive from the same root in object position in constructions such as the following:

- (1) *xá +xálə +xálə.* 'He ate a (great) eating (= he stuffed himself).'  
(2) *xá mxáya mxílə.* 'He hit a (great) hitting (= he beat hard).'  
(3) *xá zmára zmárrə.* 'He sang a (great) singing (= he sang so well).'

- (4) *xá rkàda rkádlə.* ‘He danced a (great) dancing (= he danced so well).’
- (5) *xá štàyá štíla.* ‘He drank a (great) drinking (= he had a good drink).’
- (6) *xá dmàxa dmáxlə.* ‘He slept a (great) sleeping (= he had a good sleep).’

Here the infinitive is the inner object of the verb rather than an affected argument. The function of the construction is to express intensity.

In (7) a progressive stem is used in place of the infinitive:

- (7) *xa-bóxya bàxyələ.* ‘He wept bitterly.’ (A 50:9)

In equivalent constructions with verbs from patterns II and III and with quadrilateral verbs the inner object is generally expressed by a verbal noun, e.g.

- (8) *xá bašálta bušálłə.* ‘He cooked a (great) cooking (= he cooked a lot).’
- (9) *xa +maddárta +muddárrə.* ‘He vomited a (great) vomiting (= he vomited a lot).’
- (10) *xa-+makréta +muķriyyélun.* ‘They gave them a (good) education.’ (A 42:4)
- (11) *xa čakčákta čakčékkvá.* ‘They were chattering a (great) chattering (= they were having a good old natter).’

In (12) an infinitive expressing an inner object is used in an interrogative construction. The motivation for this is to reinforce the verb to a desiderative bias in the question, i.e. the speaker wants the answer to be positive (§ 12.11.1.):

- (12) *kabúlə p-kábli árxə?* ‘Do they accept guests?’ (A 43:14)

A verbal noun object from the same root as the verb may be used also in contexts that do not express intensity, e.g.

- (13) *bæzmárəva xa zmàrtə.* ‘He was singing a song.’
- (14) *šmáyya karkúməva karkàmtə.* ‘The sky was thundering thunder.’

#### **10.17.6 Infinitive as an Argument of a Verb**

An infinitive sporadically occurs as an argument of a verb where it is not an inner object, e.g.

- (1) *tílə xmàra, +buťállə zmàrə.* ‘An ass has come and spoilt the singing.’ (said when an unwelcome guest arrives)
- (2) *slàba vâyələ.* ‘There is pillaging.’ (A 41:7)

- (3) *b-dá mərtùxa| xá txàra c-avíva.* ‘With this (festival of) cake dough a memorial took place.’ (B 11:5)
- (4) *lá ’ána kátux purðkli mán ... | kyàda?* ‘Did I not rescue you from the conflagration?’ (A 47:2)

It may also be the complement of a noun in an annexation construction, e.g.

- (5) *’átvalan kənyánət +xlàva.* ‘We had dairy cattle (literally: cattle of milking).’ (B 3:31)
- (6) *’an-júllə júrət dmàxa| t-ína malàpa.* ‘the big clothing of sleeping (bedding), that is sheets’ (B 17:27)
- (7) *’ánvət +xàla.* ‘grapes for eating’ (B 2:3)
- (8) *’át mändit pyáša lèt.* ‘You are not something worthy of living.’ (A 47:9)

#### **10.17.7 *The Syntax of Verbal Nouns and the Relative Distribution of Verbal nouns and Infinitives***

A verbal noun may take a pronominal suffix, which may refer to the subject of the main verb, e.g.

- (1) *’ú mən-dápñət mèša +vártu| pacúrəl kat-nùra +bəlláyələ.* ‘Having gone alongside a forest, he sees that a fire is flaming.’ (A 47:1)

The subject of the verbal noun may also be left unrepresented by a pronoun, e.g.

- (2) *mən-xúvva +taválta| jašúkələ +al-júyda xá dàna| sèpa.* ‘Whilst he was playing with the snake, he sees a sword on the wall.’ (A 46:3)
- (3) *mádənxa pràtta,| kedàmta,| +hala hác-xa +hayvàna,| hác-xa| mändi lèl jvìja,| +bar-náša bitàyəl pátu ’ídu +xallutéljáv +’äyna.* ‘As the dawn breaks, early in the morning, when no animal, nothing has moved, the human comes and washes his face and hands in the spring.’ (A 47:9)

If the verb in the non-finite verbal form in the subordinate clause has a following nominal object complement or prepositional phrase complement, a verbal noun rather than an infinitive is used, e.g.

- (4) *lá xzétət báxtu| xàšlə.* ‘Not seeing his wife (= without seeing his wife), he went.’
- (5) *lá +xaltət +tám̥ta,| xášlə +al-+šùla.* ‘Not eating breakfast (= without eating breakfast), he went to work.’

- (6) *lá ptáxtat<sup>+</sup>tàrra,| kálo<sup>+</sup>šmíla.* ‘Not opening the door (= without opening the door), he heard her voice.’
- (7) *lá téta<sup>+</sup>al-bèta,| zvànnə.* ‘Not coming to the house (= without coming to the house), he bought it.’
- (8) *lá parpálta bìyyu,| xàšla.* ‘Not pleading with him (= without pleading with him), she went.’

If, however, the complement comes before the non-finite verbal form, an infinitive may be used, as shown by:

- (9) *+hála<sup>+</sup>árra<sup>+</sup>al-árra la-kyàta,| vél-bàrràka.* ‘While he is not yet touching the ground (= before he touches the ground), he (the other man) flees.’ (A 6:15)

A negative infinitive is also attested with a postposed generic object *xa-məndi* in:

- (10) *lá<sup>+</sup>baķùra,| lá hamzùmo,| lá tanúyə xà-məndi,| ka-díyyux<sup>+</sup>mukṭəlli.* ‘Without asking, speaking or saying anything, I had you killed.’ (A 3:45)

The infinitive may be combined with the preposition *ka-* in constructions expressing potential events such as the following:

- (11) *kurkózla ka-xàša.* ‘He prepared to go.’
- (12) *’ána dún karbúna ka-myàta.* ‘I am getting close to dying.’ (A 32:3)
- (13) *’áyən-da bnítəla<sup>+</sup>pátvo xá mòtra<sup>+</sup>ka-dmàxa.* ‘It (a platform) is built a metre in width for sleeping.’ (B 17:33)
- (14) *e-pákka ka-jvàrəva.* ‘The frog was (read) to marry.’ (A 52:1)
- (15) *’è<sup>+</sup>dána<sup>+</sup>áxnan ci<sup>+</sup>maṭáxva šánnan ka-jvàra.* ‘when we used to reach the age of marrying (literally: we reached our years for marrying).’ (B 5:1)

When the verb is transitive and the argument that would serve as subject of the verb is mentioned in the construction, the infinitive is read as being of active diathesis with the same subject, e.g.

- (16) *’an-t-íva-Ruže<sup>R</sup> mən-+bár díyyan ka-maštùyə.* ‘those whose turn it was after us to irrigate’ (B 17:31)
- (17) *’ána nùyna ’ótli ka-zabùna.* ‘I have fish to sell.’ (A 34:3)
- (18) *brùni<sup>l</sup> hác-məndi látlan ka-+xàla.* ‘My son, we have nothing to eat.’ (A 35:2)

If the subject argument is not mentioned in the construction, the infinitive should be interpreted as being active with an unspecified subject, e.g.

- (19) *ju-dáha mdíta lát hæč-móndi ka-xzaya.* | 'In this town there is nothing to see (= there is nothing for anybody to see).'

In (20) there is no preposition linking the verbal argument with the infinitive:

- (20) *+dán-t sátva móndi +xála lèl váya.* | 'In the time of winter there is nothing to eat.' (B 15:1)

A verbal noun may be used instead of an infinitive, e.g.

- (21) *láttən hæč-móndi láxxa ka-štèta.* | 'There is nothing here to drink.'

- (22) *kurkázlə ka-xášta.* | 'He prepared to go.'

The use of a verbal noun is the norm in such constructions if it takes an object or prepositional phrase as a complement:

- (23) *mádrəjúyda bnáyəva áxči cùpa! ka-dmàxtat +állu,| ka-+xàltat +állu.* | 'They build another wall, but a low one for sleeping on, for eating on.' (B 17:34)

When a preposition is used before a non-finite verb in other contexts, it is the norm to use a verbal noun rather than an infinitive. The function of the construction varies according to the preposition, e.g.

Temporal Adverbial (*ju-/ja-, +bar, m-+bar, mən-ķam, b-*)

- (24) *har-ju-+várto +táma,| ó cačála xína kač-íva +tàjər vídu| ... bəkyáməl màra!*  
 'As soon as she enters there, the other bald man whom he had made into the merchant ... gets up and says ...' (A 1:37)
- (25) *'ína +arrá-óya ķíta! míyya ju-dreté míyya c-ázi.* | 'But (if) the ground is hard, when water is poured out, the water flows away.' (A 3:11)
- (26) *har-ju-béta ju-+vartè,| bráta máyala xáčča tiyma.* | 'As soon as they enter the house, the girl brings some garlic.' (A 35:17)
- (27) *+bár +mráčtət 'ánnə 'ánvə,| 'ánnə míyyət ... +'ánvə ci-darívalun ju-xácma ... +tajářat ci-+karáxlun.* | 'After crushing the grapes, they used to pour the juice of the grapes into what we used to call "bins."' (B 12:2)
- (28) *mən-ķám xzètu,| +štíli +čay.* | 'Before seeing him, I drank tea.'

Purpose (*ka-*)

- (29) *xá-mənne c-atíva*,<sup>1</sup> *ju-xa-mzída* *+júrta* *míyya ci-malíva mən-de-+’yna*  
*labólva ... ka-šteté*.<sup>2</sup> ‘One of them would come and fill up a big waterskin  
 with water from that spring, and would take it for them to drink.’ (A 37:7)
- (30) *’é-+dana b-yúma tanúyra c-odívalə ka-làxma pyéta*.<sup>3</sup> ‘At that time, during  
 the day they used the oven for baking bread.’ (B 14:2)
- (31) *’á ’axúna +júra kát ’átlə xačlánə +rāba* *bitáyəla* *+bačlábəla mən-’axínu*  
*+hayyárta* *kat-’ázəl* *+hayyər kátu* *ka-+xzáttə* *ka-’ráštət məndi*.<sup>4</sup> ‘The eldest  
 brother who has many fields comes and asks his brother for help, to go to  
 help him for harvesting, for transporting things.’ (A 38:2)
- (32) *+júrə +kərtálə ka-+’anvə frášta*.<sup>5</sup> ‘large panniers for transporting grapes’  
 (B 10:11)

Means (*b-*):

- (33) *b-jaššaktət +’al- dà +šúla* *’úp matvátə xìnə=zə* *+šurílun* ‘By looking at this,  
 also other villages began (to do so).’ (B 11:14)

Constructions with verbal nouns expressing purpose without a preceding preposition are occasionally found, e.g.

- (34) *t-azíva riša basámta*.<sup>6</sup> ‘They would go to offer their condolences.’ (B 5:6)

Negation (*b-la*)

- (35) *b-lá xášta +táma*,<sup>7</sup> *’ána +bəddáyən múdi* *kuvvəmlə*.<sup>8</sup> ‘Without going there, I  
 know what happened.’
- (36) *b-lá téta ləxxa*,<sup>9</sup> *’ána +bəddáyən múdi* *kuvvəmlə*.<sup>10</sup> ‘Without coming here, I  
 know what happened.’
- (37) *b-lá vátta háč məndi*,<sup>11</sup> *víla márət zùyzə*.<sup>12</sup> ‘Without doing anything, he  
 became rich.’

A temporal adverbial phrase containing a verbal noun may also be introduced by a noun with temporal adverbial function, e.g.

- (38) *brúnu +jura xəšlə* *+dánət +mṭétət xabùša*.<sup>13</sup> ‘His elder son went at the time  
 of the ripening of the apple.’ (A 39:2)

A pronominal argument of the event is expressed by a pronominal suffix. When the verb is transitive, a pronominal suffix on the verbal noun may express the subject of the action, as in (39), or its object, as in (40):

(39) *ju-xzéti kàtè| +dárri bëta.* ‘On my seeing them, I returned home.’

(40) *ju-xzetè| +dárri bëta.* ‘On seeing them, I returned home.’

The subject of the action may be left unindexed by a pronominal suffix, e.g.

- (41) *hár mən-+tárra ju-+vàrta,| átxa labùlə| bábo ríxu bəškàləl,| bəkyáməl bətyàvələ.* ‘As soon as she enters the door, she takes it, his father smells it and he sits up.’ (A 42:29)
- (42) *+áv +tárra ju-ptàxta| xá +rápsa ju-+xásu màxət.* ‘When he opens the door, give him a kick on his back.’ (A 42:8)

In (43)–(45), which lack a suffix on the verbal noun, the subject is impersonal, e.g.

- (43) *+tárra mxàyuna.| +tárra ju-mxèta,| mára +kótm̥a b-riši!| +jóri +vàrrə.* ‘They (impersonal) bang the door. When they (impersonal) bang the door, she says “Ash be on my head! My husband has entered.”’ (A 6:8)
- (44) *+tárra mxilun,| +tuktàkłun| ... +ták ju-vàtta| +tárra ptóxli +bar-dàha.* ‘They (impersonal) banged on my door, they (impersonal) knocked ... When they (impersonal) knocked, I opened the door after him (the presumed knocker).’ (A 2:26–29)
- (45) *har-šátla ja-mattéta bətpàyələ.* ‘As soon as they (impersonal) plant the seedling, it takes root.’ (B 3:2)

In (46) an object is fronted before a subject constituent. The pronominal suffix on the verbal noun is of ambiguous reference:

- (46) *hár +tárra +áv ju-ptàxtu| xá-dana b-+rápsa mxílə ju-+xásu.* ‘As soon as he opened the door, he gave him a kick on his back.’ (A 42:9)

A verbal noun is connected to a following nominal argument by nominal annexation. If the event involves an agent and an affectee, the dependent nominal may be either of these arguments, e.g. *+mráčtat úmna ànvə* ‘the crushing of those grapes’. (B 12:2), *bašáltat nipùxta* ‘the cooking of molasses’ (B 12:8), *b-+tráptat| nipùxta|* ‘through the beating of the molasses’ (B 12:5), *b-xá mxétat dá +čap̥pàltə|* ‘with one blow of this club’ (A 37:8).

A subject, direct object nominal or a prepositional phrase that is the complement of the verb may be placed before the verbal noun with verbal syntax, e.g. *m-+bára +barrànta ... hal-yúma, fnéta* ‘from light appearing ... until the day setting’ (A 47:6), *+dān +bára +barrànta* ‘at the time of light appearing’ (A 48:4), *ju-beta +tarasta* ‘in building a house,’ *ka-’árač +paláčta* ‘for producing arak’ (B 17:17), *ká dárta cnášta* ‘for sweeping the yard’ (B 17:38), *hal mən-+xalva +kteta* ‘until cutting off from milk (= until weaning).’ In (47) the object is placed after the verbal noun with verbal syntax and not by annexation:

- (47) *ja-’átxa +marámta á, jdàla| ’átxa hálka| napálva b-kdalo.* ‘When it raises the string, the ring would fall on its neck.’ (B 4:7)

The object of the second verbal noun in (48) is fronted before the preposition:

- (48) *ja-+púzo ’átxa mxéta rišo ja-+marámta, áha b-+xalàsva a-hálka.* ‘When it put its beak in and raised its head, this would tighten the ring.’ (B 4:9)

If the verb has both an object and a preposition phrase complement, one of these is placed after the verbal noun in an annexation relationship, e.g. *ká mändi mattétat +’allo* ‘for putting something on it’ (B 17:52).

If the verbal noun has a nominal determiner in the form, for example, of a demonstrative pronoun, the construction must have nominal syntax and the object is placed after the verbal noun in a nominal annexation, e.g. *ju-de-+tarastat beta* ‘in this building of a house.’

If the argument of the verb has a nominal determiner, then either the annexation or verbal construction is possible, e.g. *ju-+tarastat do beta* ‘in building that house,’ *ju-dá +xlíyla vátta* ‘when holding this wedding’ (A 55:5). As can be seen in the last example, in the verbal construction the determiner is in the oblique form after the preposition.

When a nominal object or prepositional phrase complement is fronted before the verbal noun, the verbal noun may take a pronominal suffix. The pronominal suffix may refer to the subject or the object of the verb, see (46). Further examples:

- (49) *+šrá ju-tapétu bæxzáyələ ’ína ’àrxa dmíxələ.* ‘When he lights the lamp, he sees that the guest is asleep.’ (A 5:17)
- (50) *+tárra ju-ptàxtu bæxzáyələ mujtàyyad mən-xa-bàxtalə.* ‘When he opens the door, he sees that the jurist is with a woman.’ (A 7:8)
- (51) *mən-vètu hál mən-+xálva +ktetu.* ‘from his birth until his weaning’ (literally: ‘cutting him from milk’)

The pronominal suffix may refer to the subject of intransitive verbs in constructions such as (52):

- (52) *+málla ju-kyàmtu| dúcto šaxlùpola.* ‘When the mullah rises, she changes her place.’ (A 5:15)

In the temporal constructions (49), (50) and (52) with the preposition *ju-* it can be seen that the definite nominal arguments are fronted before the preposition. In a construction such as *ju-beta +tarasta*, with the object kept adjacent to the verbal noun, the object is typically indefinite and generic ('in building a house'). This applies also to other prepositions combined with the verbal noun, e.g.

- (53) *+ktíla yála mən +xàlva +myásta.* ‘She weaned the child from sucking milk (generic).’

A verbal noun may be the subject of a clause, e.g.

- (54) *kát ... dyánti óya dùz.* ‘so that my judgement be just.’ (A 38:6)

A verbal noun is used as the complement of a verb or expression. This may be a direct complement (55–56) or one that is connected to its complement by a preposition (57–60), e.g.

- (55) *malúpon sxèta.* ‘I have taught her to swim.’ (A 20:2)

- (56) *’áxnan lìpəx| dùz dùcta xéta.* ‘We are used to living in a flat place.’ (B 16:2)

- (57) *blíjəvən b-ctàvta.* ‘I am busy with writing.’

- (58) *blíjəvən b-+bázar vátta.* ‘I am busy with shopping.’

- (59) *dún ƙarbúnə +al-prákta +šùla.* ‘I am approaching completion of the job.’

- (60) *ctáva ƙarbúnələ +al-prákta.* ‘The book is approaching completion.’

The infinitive that is the complement of a preposition in (61), which is found in the text corpus, is anomalous:

- (61) *’ána blájtən b-bašùlə.* ‘I am busy with cooking.’ (A 19:1)

## 10.18 Direct Object

### 10.18.1 Objects Expressed by Pronominal Suffixes

The expression of pronominal direct objects as suffixes on the various verbal forms has been described in § 4.16.–4.19. Here we shall restrict ourselves to some remarks concerning the marking of pronominal objects on past template verbs.

Examples from the text corpus of pronominal objects expressed with S-suffixes on past template verbs in an ergative type of construction include:

- (1) *+kt̥ilàli* 'I have killed her.' (A 1:9)
- (2) *là +kt̥iláli*.| *švi᷑kàli*.| 'I did not kill her. I spared her.' (A 1:35)
- (3) *mòtlal* 'u-+tumràli'.| *díva +xilála*.| 'She died and I buried her. A wolf ate her.' (A 1:17)
- (4) *muttálí cás +hàjìl* 'I placed her with the pilgrim.' (A 1:44)
- (5) *supyálə b-yòmmu*.| 'He delivered her into the care of his mother.' (A 1:15)
- (6) *'ána-da xumyèli*.| 'So I kept them.' (A 10:5)
- (7) *muyyàlux?* 'Have you brought her?' (A 2:10)
- (8) *'ána muyyèli*.| 'I have brought them.' (A 36:14)
- (9) *vidèlan*.| 'We have done them.' (A 3:55)

The 3ms S-suffix is zero:

- (10) *'ánnə dvòkluṇ*.| 'They seized him.' (A 36:6)
- (11) *'u-+pulàɬluṇ* *váddar lubàlluṇ*.| 'and they took him out, took him outside.' (B 6:2)
- (12) *màlcàl* *+pšòmləl* *+pšòmləl* *kat-ka-mùl* *+kt̥àlluṇ* *'ína 'ána lènva +kt̥ílu*.| *lubólli yuvvàlli ka-màlcà*.| 'The king was sad, he was sad (and wondered) why they killed him, but I had not killed him. I took him and gave him to the king.' (A 3:34)
- (13) *xurdílə b-kdàlu*.| *nšòkla*.| 'He wound himself around his neck and kissed him.' (A 3:85)

1st and 2nd person pronominal objects may also be expressed by S-suffixes on past template verbs, but these are less frequently used than 3rd person objects. They are rarely encountered in the text corpus, in which 1st and 2nd person objects of past template verbs are normally expressed by independent prepositional phrases. Some attested examples include:

- (14) *kàm +murrəššənnux?* ‘Why have you woken me?’ (A 42:34)
- (15) *mèymun vidánná, zubnànná.* ‘She made me (fs.) into a monkey, she sold me (fs.).’ (A 44:9)
- (16) *báxti har-kámtat cíllə +uldiyyànná.* *zubnànná báxti.* ‘My wife before everybody else tricked me. My wife betrayed me.’ (A 48:23)
- (17) *lubláxlun ju-de-mátat bi-savùni.* ‘They took us to the village of the family of my grandfather.’ (B 6:7)

Many speakers have difficulty processing past verbs with objects expressed by 1st or 2nd person S-suffixes. Particular processing difficulties are manifested by speakers when the pronominal subject of such verbs, expressed by an L-suffix, is also 1st or 2nd person, e.g.

- (18) *xəzyànnux.* ‘You saw me.’

When a past template verb has a 1st or 2nd person pronominal object, speakers find it easier to process when it has a 3rd person subject, e.g.

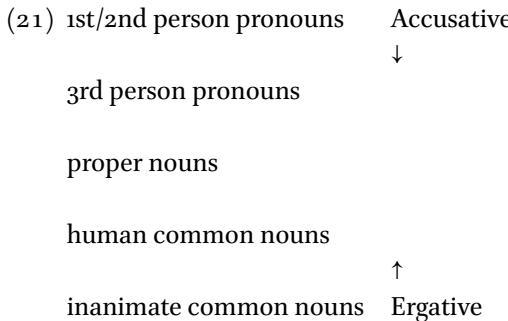

- (19) *xəzyànnə.* ‘He saw me.’

Some speakers who accept (19) do not accept (18). All speakers, however, unproblematically accept verbs with 3rd person objects irrespective of the person of the subject.

This scale of preferences can be represented thus (the symbol > being read as ‘more favoured than’):

- (20) 3rd S + 3rd L > 1st/2nd S + 3rd L > 1st/2nd S + 1st/2nd L

This situation can be explained by the relative morphological markedness of S-suffixes and L-suffixes. S-suffixes are morphologically unmarked whereas L-suffixes are morphologically marked since they are structurally more complex (Doron and Khan 2012). In constructions with 1st or 2nd person objects expressed with unmarked S-suffixes there is a mismatch between the syntactic status of the suffixes as object and the unmarkedness of their morphological coding. The role of object is a marked function for 1st and 2nd person pronouns, more so than for 3rd person pronouns, i.e. 1st and 2nd person pronouns are less likely to be objects than 3rd person pronouns. This is a reflection of Silverstein’s (1976) hierarchy for the split between accusative and ergative syntax on the basis of the property of arguments, which may be represented as follows:

This predicts that 1st and 2nd person pronominal objects are more likely to be accusative, i.e. more likely to have the morphologically marked accusative case than 3rd person pronominal objects in languages that exhibit both accusative and ergative alignment strategies. In C. Urmî ergative syntax is the expression of the object by S-suffixes and accusative syntax is its expression by independent prepositional phrases.

As for the preference hierarchy found in C. Urmî (20), this correlates with the predictions of Silverstein's hierarchy with regard to subject arguments. 3rd person pronoun subjects favour ergative marking more than 1st and 2nd person pronouns. A 1st and 2nd person subject expressed by an ergative L-suffix is, therefore, more semantically marked than a 3rd person ergative L-suffix. A verbal construction that has an object expressed by a 1st or 2nd person S-suffix and a subject expressed by a 1st or 2nd person L-suffix is, therefore, doubly marked semantically.

As indicated in § 4.3.5., this situation reflects the fact that the S-suffixes are the objects of an ergative construction and not the subjects of passive constructions, since there are no constraints on the subject of present template verbs expressed by S-suffixes. Further evidence can be adduced for analysing the referent of the L-suffix as the subject of an ergative construction and the S-suffixes as object rather than considering the S-suffixes as subject of a passive construction with the L-suffixes adjunct agentive phrases. This includes the fact that the subject expressed by the L-suffix binds a reflexive object, e.g.

- (22) *+kt̪iláłəjànu.* 'He killed himself' (the reflexive base *jan-* is fs.)

If the S-suffix was the subject of a passive construction and the L-suffix was an agentive adjunct, the reflexive pronoun could not be used in the way illustrated by this example, since a reflexive pronoun cannot be subject.

The ergativity is morphological ergativity and not syntactic ergativity,<sup>3</sup> i.e. the argument expressed by the unmarked S-suffix is not the syntactic pivot, rather the pivot is the argument expressed by the L-suffix. From a syntactic point of view, the argument expressed by the L-suffix of a past template verb behaves like the subject argument expressed by an S-suffix in a present template verb.

- (23) a. *'e-báxta bráto maxyàla| 'u-xàšla.|*  
          'The woman beat her daughter and went away.'  
 b. *'e-báxta bráto bət-maxyàla| 'u-bət-'àzla.|*  
          'The woman will beat her daughter and go away.'

In both (23a) and (23b) the default subject of conjoined clause is interpreted as being 'the woman' and this shows that in each case it is the syntactic pivot. If the speaker wishes to express the fact that the daughter went away, a strategy is needed that would indicate discontinuity and disjunction of an expected sequence, such as the use of an independent subject pronoun (§ 12.5.3.):

- (24) a. *'e-báxta bráto maxyàla| 'u-'áy xàšla.|*  
          'The woman beat her daughter and she (the daughter) went away.'  
 b. *'e-báxta bráto bət-maxyàla| 'u-'áy bət-'àzla.|*  
          'The woman will beat her daughter and she (the daughter) will go away.'<sup>4</sup>

#### 10.18.2 *Objects Expressed by Independent Nominal or Pronominal Phrases*

When the direct object is an independent nominal or pronominal phrase, various types of syntactic construction are used.

##### 10.18.2.1 No Grammatical Marking

The object has no grammatical marking either on the nominal or on the verb in the form of a pronominal suffix agreeing with the object on the verbal base.

This is the usual construction when the object nominal is indefinite, both when it has a specific referent and also when the referent is a generic class, e.g.

---

3 For the distinction between morphological and syntactic ergativity see Dixon (1994).

4 For further discussion of the typology of ergative in C. Urmi and other NENA dialects see Khan (2016).

- (1) *mátti +alámat +al-dà-beta.* | 'Put a sign on this house. (= Mark this house).' (A 2:8)
- (2) *xa-+bózza bəšvákəna| kat-napásu lə-+kattá.* | 'They leave a hole so that his breathing would not be cut off.' (A 3:36)
- (3) *xa-dána +kátu dùkun.* | 'Catch a cat.' (A 3:78)
- (4) *dvíkələ xa-+kátu ju-+xiyávand.* | 'He has caught a cat in the street.' (A 3:79)
- (5) *ána +xəltá víðən.* | 'I have made an error (= I have erred).' (A 3:48)
- (6) *béta +tarsíva biyyé.* | 'They used to build a house with them.' (B 2:18)
- (7) *késa ci-mattíva +xlíma ýátxa.* | 'They used to place a piece of wood, thick like this.' (B 2:19)
- (8) *+šáda| kámta c-yáva +tárpa.* | 'An almond tree first gives leaves.' (A 3:12).
- (9) *+mardáxxax miyya jávu.* | 'Let's boil water in it.' (A 37:19)

When the reciprocal pronoun *+uydalə* has the syntactic position of direct object, there is no pronominal object copy on the verb, e.g.

- (10) *bóxya bəxþákəna +uydále.* | 'Weeping, they embrace one another.' (A 1:37)
- (11) *nšákłun +uydalə.* | 'They kissed one another.' (A 1:4)

There is no pronominal object copy when the verb takes a demonstrative pronoun as object that is non-referential in constructions such as (12):

- (12) *+bəxdàrəva,| bəxzáyəva +àvva,| bəxzáyəva +àvva,| bəxzáyəva àha.* | 'He wandered around and saw that one (i.e. some unspecified person), saw that one, saw this one.' (A 10:1)

When a clause introduces a class or non-specific referent by means of an indefinite noun and this has the status of object of the verb in the following clause, a pronominal object pronoun is often omitted on the verb in the second clause, e.g.

- (13) *ýázət xa-tóra zònət| màyyət.* | 'Go and buy an ox and bring it back.' (A 35:4)
- (14) *máyyət +rába jòzə,| +šámčax.* | 'You should bring walnuts and we shall break them.' (A 39:42)
- (15) *ye-+dánət c-azálva ptána c-avàdva,| níyna ju-+árra ci-+palčíva,| ci-mayyíva bëta.* | 'When he used to go and plough, fish used to come out of the ground and he would bring them home.' (A 36:13)
- (16) *ýna ána lénva +šámya xá-’axčá mèndi,| lén-xàzya.* | 'But I had not heard of such a thing, I have not seen it.' (A 36:13)

- (17) *'ána ƙa-riŋa b-yávvən bráta?* *'ána lè yávvən kátu.* 'Would I give a daughter to a servant? I will not give her to him.' (A 42:18)
- (18) *táni ƙa-yámmax šákla xá-dana +píra +palliyya.* 'Say to your mother that she should take a lamb and share it out.' (A 43:12)
- (19) *brát +aràllagj báššax dážmən maxàxlə* *šákłax màyyax.* 'We are going to attack the enemy, take a middle daughter and bring her back.' (A 45:11)

In (20) the omission of the pronominal object suffix extends over a sequence of two subsequent clauses, which form a tightly knit unit (§ 13.4.):

- (20) *c-àtəl cút-yum móriša +táma ƙésa +jàmməl lábəl zàbən.* 'He comes every day in the morning to gather wood, to take away to sell.' (A 43:18)

For further discussion of this phenomenon see § 13.4.

The pronominal copy is occasionally omitted when the object is definite. In the majority of the attested cases the object is placed after the verb. The occurrences may be classified as follows:

(i) Definite objects of irrealis verbs or verbs expressing a situation concerning which there is doubt, e.g.

- (21) *'ánnə +'ómza vódlun! kàt! hác-naša hák lòtlə* *'áta šákəl 'ánnə dàvə.* 'They signed (an agreement) that nobody has a right to come to take these gold coins.' (A 10:5)
- (22) *ju-de-+dánta +tárра mxílun!* *xášli +tárра pátxən xzili* *'an-tre-+xuravay-xínə tília.* 'At that moment there was a knock at the door. I went to open the door and I saw that the other two friends had come.' (A 10:7)
- (23) *lén +bəddá mú-tahar á +duxrána álahə p-ƙàbəl.* 'I do not know how God will accept this offering.' (A 43:10)
- (24) *'ána 'ánnə yálə mù-tar b-xámən?* 'How can I look after these children?' (A 45:1)

(ii) Definite object nominals of imperatives and deontic expressions, e.g.

- (25) *šálax tumbànux!* 'Take off your trousers!' (A 7:3)
- (26) *'át mxí zàrbux!* 'You strike your blow!' (A 39:13)
- (27) *xélux máxzil!* 'Show your strength.' (A 39:12) [Contrast what follows: *'ána hammáša yávvən pórṣat ká dážmànni,* *dážmànni kámta xélu maxzílə,* *+xàrta 'ána xéli maxzánna.* 'I always give the opportunity to my enemy for my enemy first to show his strength, then I show my strength.]

- (28) *+xóloxun +šàdərrun!* ‘Send your rope.’ (A 39:15)  
 (29) *’álaha tálax talmidux!* ‘May God destroy your disciples.’ (A 42:21)

The same applies to the reflexive pronoun *jan-* which normally takes a pronominal copy on the verb when it is an object (§ 9.3.2.) but there is no pronominal copy if the verb is an imperative, e.g.

- (30) *+ráppijánux* ‘Throw yourself’ (A 7:16)

Although in some of the cases cited above the object is placed before the imperative, there is a greater tendency for the pronominal copy to be omitted if the object is postposed. Compare, for example, (31) and (32):

- (31) *+súrun ’ídat dá +bər-càlba.* ‘Tie the hands of this son of a dog!’ (A 7:16)  
 (32) *’idə-aklé +súrunlun.* ‘Tie their hands and feet!’ (A 1:49)

When questioned, moreover, my informants accepted the omission of the pronominal copy in (33) but not in (34), in which they stated it is obligatory:

- (33) *+pášət ’ídux! ~ +pášətlə ’ídux!* ‘Stretch out your hand!’  
 (34) *’ídux +pášətlə!* ‘Stretch out your hand!’

### (iii) Clauses that express discourse background

A pronominal copy is occasionally omitted when the clause has low discourse prominence due to the fact that it supplies elaborative background rather than expressing the main concern of the speaker. This applies, for example, to the comment in bold in (35):

- (35) *’údyu ’ána xmíra škóltun mən-švèta. ci-xamívalə mən-’ída +’al-’ida. lé šokíva parðkvə. +’áv lè manšíva lá jári baxtátə manšíva.* ‘Today I have taken leaven from a neighbour. They preserved it from hand to hand. They did not let it finish. They would not forget it, the women were not supposed to forget.’ (B 10:12)

#### 10.18.2.2 Pronominal Copy

In such cases the verb has a pronominal suffix that is co-referential with the object. This construction is the most common one when the object is a definite nominal, e.g.

- (1) *'an-jardéyə xrúzlun +álju-dàrta 'átxa.* | 'Lay out the round loaves together in the courtyard like this.' (A 37:3)
- (2) *'axunvátux màxzilun ká-díyyi.* | 'Show your brothers to me.' (A 37:11)
- (3) *šámmat báxtu munšítun.* | 'I have forgotten the name of his wife.' (A 3:31)
- (4) *'á ... míyyat +'ánvə ci-+mardəxxivalun| xa-páljət +sá'at.* | 'They used to boil this grape juice for half an hour.' (B 12:5)
- (5) *škúllə 'a-Nátan| p-ídux.* | 'Take this Natan in your hands.' (A 3:88)
- (6) *rífavátə cíllə məxyélux.* | 'He beat all the servants.' (A 3:91)
- (7) *+šàda| ... +xárta ci-yavála +tùnto.* | 'An almond tree ... afterwards gives its fruit.' (A 3:12)
- (8) *cullóxun lípotun darsòxun?* | 'Have you all learnt your lesson?' (A 1:25)

The construction is used when the object is a nominative form of an independent pronoun, e.g.

- (9) *kémən 'ana-+jarbànnə 'áha.* | 'I shall test him.' (A 14:2)
- (10) *'ána bərrášxən 'áyən cítan 'odánna.* | 'I am going to plough it.' (A 36:11)
- (11) *zóda hác-naša lélə +bəddáyo 'áyya.* | 'Nobody else knows it.' (B 17:20)

A pronominal copy is added to the verb also when the reflexive pronoun is direct object, e.g.

- (12) *jáno +ruppála +al-sèpa.* | 'She threw herself onto the sword.' (A 2:35)
- (13) *yámma vítəla +tušito jáno.* | 'His mother had hidden herself.' (A 37:5)
- (14) *jáno bəknàzola.* | 'She huddles up.' (A 1:10)

The agreement is singular even when the suffix on *jan-* is plural, e.g.

- (15) *'ánnə láxxa cíllə jané +hùdrona.* | 'These here have all prepared themselves.' (A 1:27)

In some other NENA dialects there is no grammatical marking when the definite object is an information focus and bears the nucleus stress.<sup>5</sup> In C. Urmi the grammatical marking is retained in such contexts. In (16)–(17), for example, the focus is contrastive and in (18)–(20) it is inclusive:

---

<sup>5</sup> E.g. Barwar, see Khan (2008, 777–779).

- (16) *'ána mímənva kátu baxtátə +katjällun| 'á díúl 'ürzə +ktile!|* 'I had told him that he should kill *the women*, but he has killed *the men*.' (A 2:23)
- (17) *'axùnux bət-xazzánna, lá xàtux.|* 'I shall see *your brother*, not *your sister*.'
- (18) *+àvva-da mattíyula +tàma.|* 'She puts also him there.' (A 6:8)
- (19) *ci-mattíval +àvun-da ka-sótva.|* 'They put also this aside for winter.'  
(B 17:16)
- (20) *škilálun ày-da mónnu.|* 'They took also that from him.' (B 6:2)

Occasionally a pronominal copy on a verb agrees with an indefinite direct object, e.g.

- (21) *xá mən-cačálə vádulə vazzər.| xá vádulə +tajər.|* 'He makes one of the bald men vizier. He makes one the merchant.' (A 1:24)
- (22) *xá cačála xína-da máyuna kamàytu.|* 'They bring another bald man before him.' (A 1:36)
- (23) *tré nýynə +jùrəl dvikévən yuvvén katax.|* 'I have caught two large fish and given them to you.' (A 5:9)
- (24) *xa-+áyno +palùčola.| yávola.|* 'She takes out one of her eyes and gives it to her.' (A 43:17)
- (25) *xá mən-dánnəl mattívvolə ju-mìyya.|* 'He puts one of them in the water.' (A 39:40)
- (26) *xá cmá-šənnə m-kám-adi xa-báxta +puščálun mən-+tàma,| šómmo +Máhəva.|* 'Several years ago they sent from there a woman whose name was Mahə.' (A 40:8)
- (27) *xá mənné +kutkàttón.|* 'I have cut one of them to pieces.' (A 44:6)
- (28) *xá mən-dán jválə +rámə b-lablivala.|* 'They would take one of those high sacks.' (B 10:8)
- (29) *b-xá +čap̪álta ána ... arpí dánə dévə +másən +katljonnun.| b-xá mxétət dá +čap̪álta.|* 'With one staff I can kill forty monsters, with one blow of this staff.' (A 37:8)
- (30) *+bəddáyat bət-kuraváy mù-inə?| násə +tamrílun javè.|* 'You know what a cemetery is? They bury people in it.' (A 1:10)
- (31) *+šulána zaràzlun.|* 'He fixes things.' (A 1:20)

In all these examples the object nominal is placed before the verb.

#### 10.18.2.3 Preposition *ka-* without a Pronominal Copy

On some occasions a definite direct object phrase is introduced by the preposition *ka-*, which is normally used elsewhere as a preposition expressing a dative relationship. This is used predominantly when the object is definite and its ref-

erent is human, or at least animate. When a direct object is marked with *ka-*, there is no pronominal copy on the verb, even though the nominal is definite in status, e.g.

- (1) *'o-+tájor ka-dá cačála +ràba ci-+bayyíva.* | 'The merchant used to like this bald man very much.' (A 1:2)
- (2) *+bìlə| kàt| +'ajjázva ka-+màlla.* | 'He wanted to annoy the mullah.' (A 14:2)
- (3) *ka-dáha +kátu +'ùxča mxáyələ.* | 'He beats this cat so hard.' (A 3:79)
- (4) *'ánnə nášə már-mítəl bitáyəna ka-dáha+ bənpásəna.* | 'The people who are the family of the dead person come and shake him.' (A 9:5)
- (5) *kámłə ka-da-báxta kat-máxə.* | 'He got up to beat this woman.' (A 5:10)
- (6) *cúllə +yat̪íva ka-+uydálə-xina.* | 'They all knew each other, you see.' (A 5:10)
- (7) *+byáyən ka-xmári +hayyərrən| kàt| buš-+rāhat ázəl.* | 'I want to help my donkey to go more comfortably.' (A 15:2)
- (8) *xà-yuma| ka-suríyya bəxzàyələ.* | 'One day he sees Suriyya.' (A 36:3)
- (9) *+hám ka-axúnə maplíuxəval+ hám ka-bàxtət 'axúnū.* | 'He employed both his brother and the wife of his brother.' (A 38:2)

Occasionally *ka* is used with an indefinite object nominal. In (10) the indefinite object nominal has a specific referent that plays a prominent role in the remainder of the narrative:

- (10) *ka-xá-dana +nàjjar| muyyíli làxxa| ju-bèti.* | 'I brought a carpenter here into my house.' (A 16:2)

The preposition *ka-* more frequently introduces pronominal objects than full nominal objects. The pronominal objects are expressed either as suffixes on the allomorph of the preposition *kat-* (e.g. *katu* 'him') or as complements of *ka-* in the form of the genitive particle *díyy-* or oblique pronouns (e.g. *ka-díyyi* 'me', *ka-+dav* 'him'). A distinction can be made between pronominal objects of verbs that are expressed by affixes and pronominal objects expressed by independent phrases introduced by *ka-*. The latter can be termed 'heavy coding' of the pronominal object:

Verbal forms	Light coding	Heavy coding
Present template	L-suffixes	<i>ka</i> -phrase
Past template	S-suffixes	<i>ka</i> -phrase
Resultative Participle and Progressive	Genitive suffixes	<i>ka</i> -phrase

Verbal forms	Light coding	Heavy coding
<i>xazə</i>	<i>xazila</i>	'he sees her'
<i>xzilə</i>	<i>xəzyalə</i>	'he saw her'
<i>xəzyalə</i>	<i>xázyolə</i>	'he has seen her'
<i>bəxzayələ</i>	<i>bəxzáyolə</i>	'he sees her'
		<i>xazə kato</i>
		<i>xzilə kato</i>
		<i>xázyolə kato</i>
		<i>bəxzáyolə kato</i>

The variant forms of *ka*-phrase can themselves be regarded as different degrees of heaviness of coding, compound forms such *ka-diyyux* being heavier than inflected forms such as *katux*. Some of the inflected forms themselves may be shortened further by the elision of the intervocalic /t/, e.g. *kax* < *katux*:

	Shortened	Inflected	Compound
3ms		<i>katu</i>	<i>ka-<sup>+</sup>dav, ka-<sup>+</sup>davun,</i> <i>ka-<sup>+</sup>davva, ka-daha</i>
3fs		<i>kato</i>	<i>ka-day, ka-dayən</i> <i>ka-dayya, ka-daha</i>
3pl		<i>katé</i>	<i>ka-dani, ka-dannə</i>
2ms	<i>kax</i>	<i>katux</i>	<i>ka-diyyux</i>
2fs	<i>kax</i>	<i>katax</i>	<i>ka-diyyax</i>
2pl		<i>katoxun</i>	<i>ka-diyyoxun</i>
1s	<i>kay</i>	<i>kati</i>	<i>ka-diyyi</i>
1pl		<i>katan, kateni</i>	<i>ka-diyyan</i>

#### 10.18.2.3.1 With Past Template Verbs

Pronominal objects expressed by *ka*-phrases most frequently express 1st or 2nd person objects of verbs derived from a past template. The main motivation for this is likely to be the lack of tolerance of the expression of 1st and 2nd person objects by S-suffix inflections of the past template (§ 10.18.1.), which is a syntactic constraint, e.g.

- (1) *ka-díyyux +ktəllun.* 'They killed you.' (A 3:68)
- (2) *ka-díyyux +mukṭəlli.* 'I had you killed.' (A 3:45)
- (3) *yámmat díyyux ka-díyyux tuybərra.* 'Your mother brought you up.' (A 3:91)
- (4) *náša xínə lətva kát ka-díyyux xa-šəcvana +šúdrələ cəs-xa-málcat +Məssər.* 'Were there no other people, that he sent you, an ant, to a king of Egypt?' (A 3:66)
- (5) *ína əláha bsámlə ka-díyyi +xumila.* 'But it pleased God to protect me.' (A 3:69)
- (6) *ína ka-díyyux muləpli avát +spày, vílux káti xərba.* 'ína kátx várli náša, ítən ka-díyyi dušdəšlux.' *ína ka-díyyux muttılı ju-bət-malcıuya,* 'ítən ka-

*díyyi muttílux ju-+àrra.* ‘I taught you to be good, but you were bad to me. I made you a man, but you trampled on me. I put you in the royal household, but you put me in the ground.’ (A 3:90)

- (7) *'ána! jùl duccàni 'ívna! dax-ot-údyu káti xxilux ju-duccána, u-xàdyá +psìxa.* ‘I was in my shop just as today you saw me in the shop, happy and merry.’ (A 1:12)

Pronominal objects of the 3rd person are generally expressed by S-suffix affixes of the past template. Some isolated cases of pronominal *ka*-phrases occur in the text corpus:

- (8) *ka-dáy-da +bèktàlələ.* ‘He kills also her.’ (A 30:3)  
 (9) *xášlə rkádlə cás-dé bràta, cás-dé +cásəb xášlə. cás-dáyən xášlə rkàdla.* <sup>RiR</sup> ‘*ka-dáyən +rdila.* ‘He went and danced with that girl, he went to that poor girl. He went and danced with her, and he liked her.’ (A 51:6)

In these examples the referent of the pronoun is in some kind focus. In (8) it is in an inclusive focus and in (9) it is set up in contrastive opposition with other referents (i.e. other women at the ball).

#### 10.18.2.3.2 *Verb Forms Derived from Other Bases*

Pronominal objects of verbs derived from other types of base are occasionally expressed with *ka*-phrases, e.g.

- (1) *ka-díyyi +bílun +kàtlí* ‘They wanted to kill me.’ (A 3:69)  
 (2) *ka-danno-mxàyələ.* ‘He beats them.’ (A 3:72)  
 (3) *'ána parpùləvən b-díyyux! ka-díyyan là +kátlət.* ‘I beg you, do not kill us.’ (A 37:10)  
 (4) *'átən lèjórat ka-+dàvun.* ‘You will not marry him.’ (A 55:3)

There is no syntactic constraint on the expression of pronominal objects by lighter affixes with these verbal forms. The motivation to use them, therefore, must be pragmatic. In the examples adduced above the narrator uses the heavier morphological coding of the construction to signal the heightened salience of the proposition expressed by the clause.

In (5) the construction is used to bring together in parallel three coordinated object phrases:

- (5) *'án 'ádi +yàttíl kàt-'átən cásli bəxxàyət! u-kàtax! kàtlí ka-+jórax bət-kàtlí.* ‘If they now know that you are living with me, they will kill you, me and your husband.’ (A 1:22)

The heavy coding of the pronominal object is sometimes used to signal the closure of a sequence of clauses that are presented as a single overall event:

- (6) *xá m-dēn-t-íva mxáyu +maṭṭusu| ó xína yár manpàlva ka-+dávən.* ‘One of those who were hitting it would stick it in, the other had to make it fall.’  
(B 17:1)

A *ka*-phrase is regularly used if the pronominal object has some kind of narrow focus, e.g.

- (7) *kùl +yàrmax| 'ázax| m-kám=at ka-díyyan-da cápsi jú +dússak.* ‘Come on, let’s go, before they bundle also us into prison.’ (A 1:39)  
 (8) *ka-dáy-da +bəktálələ.* ‘He kills also her.’ (A 30:3)  
 (9) *lá 'adíyya ka-díyyi-da +kàtəl?* ‘Will he now kill also me?’ (A 2:23)  
 (10) *'ína 'íman bəfrásol| 'ày bəfrásla kàtu| sáb lélə +msáya jarásla.* ‘But when he pulls it (the waterskin), it pulls him, because he cannot pull it.’ (A 37:15)

In (7)–(9) the pronominal object has narrow inclusive focus expressed by the particle *da*. In (10) the pronominal subject and object have contrastive narrow focus, since their roles are the opposite of what is expected.

In pragmatically unmarked clauses pronominal affixes are used, e.g.

- (11) *+báyyən xazànnux.* ‘I want to see you.’ (A 3:19)  
 (12) *kùdmə xazónnux.* ‘Tomorrow I shall see you.’ (A 3:74)  
 (13) *xúš 'aláha +baràxlux.* ‘May God bless you.’ (A 3:84)

#### 10.18.2.4 Preposition *ka-* with a Pronominal Copy

In some sporadic cases found in texts recorded in Armenia a definite object nominal marked with *ka-* is indexed also by a pronominal copy on the verb, e.g.

- (1) *+Báhar ka-+xóla +bəktàyula.* ‘+Bahar cuts the rope.’ (A 42:35)

#### 10.18.2.5 Preposition *+al-* without a Pronominal Copy

In some isolated cases a definite object is introduced by the preposition *+al*, which, like *ka-*, has among its other functions the marking of the dative, e.g.

- (1) *bəškáləl +al-dè bráta.* ‘He takes that girl’ (A 39:20)

This is likely to be the result of influence from the literary language, in which this preposition frequently takes the place of *ka-*.

### 10.19 Indirect Object

The indirect object expresses the recipient or beneficiary of the verbal action. Pronominal indirect objects have been described in § 4.20. They are expressed by L-suffixes, S-suffixes (on past template verbs), genitive suffixes (on resultative participles and progressive stems) or suffixes or phrases containing the preposition *ka-*. The pronominal *ka*-phrases are of varying morphological weight, as described above (§ 10.18.2.3.), e.g. *kax*, *katux*, *ka-díyyux*.

Indirect objects that are full nominals are in most cases introduced by the preposition *ka-*. There is no agreement with such nominals on the verb in the form of a pronominal copy, even when the nominal is definite in status, e.g.

- (1) *ka-màlca bæctávələ*. ‘He writes to the king.’ (A 3:20)
- (2) *+xábra yávələ ka-bàxtu*. ‘He sends word to his wife.’ (A 3:30)
- (3) *'ən-tánə ka-šámša clì bøt-càlyā*. ‘If he says to the sun “Stop!”, it will stop.’ (A 3:64)
- (4) *ka-dan-násət mònnu mára* ‘He says to the people with him ...’ (A 3:78)
- (5) *+Axíkar xùbba maxzíva ka-dá 'axúna*. ‘Axíqar showed love to this brother.’ (A 3:17)

In (6) and (7) pronominal *ka*-phrases of different weight are used. In both cases a clause is repeated, with the heavier *ka*-phrase in the second clause. Also the phrases are placed on different sides of the verb in the two clauses:

- (6) *+o-kaṭùla-dal xìna vâyələ bæštàya ... mårələ kàtu +Axíkar ka+dàv mårələ*, *mårələ 'àna jná lätli*. ‘(As) the executioner is drinking, ... he says to him, Axíqar says to him, he says “I am not guilty. Do not kill me.”’ (A 3:33)
- (7) *'a-+kátu +héyvan kákx mû vòttəla? mû vátta la ka-díyyux kat-xà-xča mxáyot?* ‘What has this cat, this animal, done to you? What has it done to you that you beat it so much?’ (A 3:80)

A heavy pronominal dative phrase is often used at the beginning of speech turns or discourse sections. This is the case in (8), in which the lighter suffix form is used subsequently when the verb is repeated:

- (8) *ú mû tánən ka-díyyux? ... 'ína màjbur=ín tanánnux*. ‘Oh, what should I say to you? ... But I must tell you.’ (A 1:17)

In (9) the pronominal dative phrase is made heavier still by juxtaposing an independent pronoun that is coreferential with the suffix. This occurs at the beginning of a narrative:

- (9) *‘á masàla! tanánna ka-dìyyux ‘átən.* | 'I shall tell you this story.' (A 1:1)

Examples from the text corpus of S-suffixes expressing a dative relationship:

- (10) *yuvvállun xa-dána +pàprus.* | 'They gave him a cigarette.' (B 6:4)  
 (11) *+tlájanáyat tílun càslíl yúvvənnun +tlammà-dane dávə.* | 'Three people who came to me gave me three hundred gold coins.' (A 10:4)  
 (12) *‘ána xášli míya màyyan! šamáša +‘áyna məxyánnəl ‘u-kàša +‘áyna məxyánnəl ‘u-‘abùna +‘áyna məxyánnə.* | 'I went to fetch water and the deacon winked at me, a priest winked at me and a bishop winked at me.' (A 6:3)  
 (13) *mádrə +zàya viyyàle.* | 'She again had young (literally: young became to her).' (A 53:2)

In (11) and (12) the S-suffix is 1st person and the L-suffix expressing the subject is 3rd person. See the remarks above about the scale of preference of S-suffixes (§ 10.18.1.). Forms such as *yuvvənnux zuzyə* 'You gave money to me' are disfavoured by speakers.

Examples from the text corpus of genitive suffixes expressing a dative relationship:

- (14) *fúr'un málca! xá-xča móndi +šudràñ-ilə.* | 'Pharaoh the king has sent to us such-and-such a task (literally: thing).' (A 3:55)  
 (15) *ctáva ‘atíkə-zə kat-víyyan-lə! bərráxšəna cíllə bəxzayèna.* | 'They go and see all the old books that we have.' (B 2:15)  
 (16) *‘ón ‘átxa tunítux-la, sí xá móndi b-yavvàlux.* | 'If it (the fish) has said this to you, go and it will give you something.' (A 54:3)  
 (17) *bərráxšəna ‘albáttə bətfákəna b-cmá ‘apəskúpə kat-vàyan-lə, +árpa xamšá ‘apəskúpə.* | 'They go and, of course, meet some of the bishops that we have (during that time), four or five bishops.' (B 2:14)  
 (18) *xá yàla! bábu myàtələ. xá yómma sòta vâyula.* | 'A boy—his father dies. He has an old mother.' (A 34:1)  
 (19) *šamáša +‘áyna bəkyásolə.* | 'The deacon winks at her.' (A 6:5)  
 (20) *bərráxšələ bədvákələ xá cərvəš.* | 'He goes and catches a rabbit for her.' (A 38:15)  
 (21) *mú muyyitivat?* | 'What have you brought me?' (A 38:18)

# The Syntax and Semantics of Prepositions

The morphology and basic uses of the prepositions have been described in § 8.4. In this chapter we shall take a closer look at the syntax and semantic range of the main prepositions, particularly those that have multiple functions.

## 11.1 *b-*

The preposition *b-* has a variety of uses. When it takes pronominal suffixes, these are attached to a longer base with the form *biyy-*.

### 11.1.1 *Spatial Location*

It may express location in a perceptible unenclosed space in contexts such as the following:

- (1) *tóvli* +*al-súysə* +*hàzər*, *sèpi-da* *p̄-ídi*.| ‘I sat on the horse ready, with my sword in my hand.’ (A 2:28)
- (2) *hállə* *p̄-ídət* *diyyi*.| ‘Give him into my hands.’ (A 3:26)
- (3) *’ánnə* +*’ánvə* *jári* *jaršívalun* *b-*+*xasé* *mán* *cárma* *hálju*-*čàraz*.| ‘They had to carry these grapes on their backs from the vineyard up to the winepress.’ (B 12:2)
- (4) *’ánnə* +*’ánvə* *ci-pešvíva* +*jummiyyəl* *b-*+*kərtàlə*.| ‘These grapes used to be gathered in pannier-baskets.’ (B 12:2)
- (5) *b-xà-tahar* *bitàyəla* *b-*+*xábrət* *Pna-poxtèP*.| ‘Among one group (of people) it originates in the (Persian) word *na-poxte*.’ (B 12:7)
- (6) *b-lišanət* *fársat* *har-mádra* +*manáyat* +*xámra* *yávəla*.| ‘In the Persian language it has (literally: gives) the meaning of “wine.”’ (B 12:8)
- (7) *b-lišan-díyyan* +*sùrvvaǵ* *ci-táni*.| ‘In our language we say +*suvvaǵ* (‘mortar’).’ (B 14:7)
- (8) *b-súysa* *ci-*+*xadárvə*, *b-xáčča* *júllə* *’atičə* *kat-là* *yattívalə*.| ‘He would travel around on a horse, in some old clothes, so that people would not recognize him.’ (A 35:3)

The preposition *ju-* (§ 11.2.) is far more commonly used to express location within an enclosed physical space.

### 11.1.2 *Temporal Location*

- (1) *b-lèlə| vázzər mən-málca +plàtəna.* ‘At night the vizier and king leave.’ (A 2:3)
- (2) *b-yúma tanúyra c-odívalə ķa-làxma pyèta.* ‘During the day they use the oven for baking bread.’ (B 14:2)
- (3) *b-+kèṭa ՚á +šúla c-odívala.* ‘They did this job in summer.’ (B 12:6)
- (4) *+’ojáxta b-šánnə ķamaya, ՚áx bətxàrən, ķesə ci-mattíva +’állo.* ‘The hearth—in the early years, according to what I remember, they used to put wood on it.’ (B 12:4)
- (5) *b-šánnə víyət ju-bèti.* ‘For years you have been in my house.’ (A 3:29)
- (6) *՚á +xábra b-mátxət šənnələ +xdırələ ՚skíllələ šámmət nipùxta.* ‘This word, in the course of the years, changed and assumed the form *nipuxta*.’ (B 12:7)

We may include here the expression *xa-b-xa* ‘suddenly’:

- (7) *xa-b-xá bəxzáyələ márzət +’áyna xá ... xa-nàša dílə dmíxa.* ‘All of a sudden he sees that there is a man asleep by the side of the spring.’ (A 37:7)

### 11.1.3 *Instrument*

It is often used in relation to the instrument or means by which an action is performed, e.g.

- (1) *xéslux cás nášət kát p-ida plíxəna.* ‘You went to people who were made by hand.’ (A 3:5)
- (2) *b-+tràptət̄l̄ nipùxta| ránjo mən-ránjət cùma| ci-+xavàrvəl̄ c-avíva +xvàra.* ‘Through the beating of the molasses its colour used to change from the colour black and it used to become white.’ (B 12:5)
- (3) *vá +ṭamàna c-ávə m-dó kát bí ... +nùyṭəl̄ b-+fazìyl váguna.* ‘It (bread of the oven) is more tasty than that which they make with oil or with diesel fuel.’ (B 14:4)
- (4) *b-ķənyàna| yán tòrəl̄ yán xmàrəl̄ ’ánnə jaršìva.* ‘They used to pull these with cattle, or oxen or asses.’ (B 2:8)
- (5) *b-susaváy b-cavádnə b-xmàrəl̄ c-azíva.* ‘They used to travel by horses, mules and donkeys.’ (B 2:12)
- (6) *b-cúl ’ùrxal xá-danajáldəjáldə bəjnàvula, +várələjavày.* ‘By any means (he can) he quickly snatches one, and comes back inside.’ (A 37:5)
- (7) *kát ՚áni +bári b-dé +čap̄pálta xá ... ՚áni +tála tílə +al-jáni bət-maxənnəl yán b-scànta.* ‘so that those coming after me ... if a fox comes after me I shall hit it with this staff or with the knife.’ (A 37:6)

- (8) *ci-xayyíva b-’òrbə.* ‘They lived by sheep.’ (B 1:23)
- (9) *ci-šaklíva zùyza, c-azíva, xayyíva biyyé.* ‘They used to take money, go off and live by it.’ (A 1:2)

#### 11.1.4 *Agent*

In passive constructions (§ 10.16.1.) the preposition *b-* may be used to express the agent, e.g.

- (1) *ka-mú pásli +’uldìyya b-Nátan brùnux?* ‘Why was I deceived by Natan your son?’ (A 3:52)

It is used before a noun denoting the agent in causative constructions of transitive verbs, in which the agent is expressed in an adjunct phrase (§ 4.25.3.1, § 4.25.4.7.), e.g.

- (2) *+maktúlul b-dan-cálba, b-dán +’avčíyya.* ‘He causes it to be killed by the dogs, by the hunters.’ (A 47:20)
- (3) *bøt-mamxílun cálba b-do-nàša.* ‘He will cause the dogs to be hit by that man.’

#### 11.1.5 *With*

On a number of occasions it is appropriate to translate the preposition by English ‘with’. The relation may be comitative, e.g.

- (1) *b-ricávə børràxšəna.* ‘They go with horsemen.’ (A 2:3)
- (2) *’át e-+dán b-nòšux-ivøt* ‘when you are alone (literally: with yourself)’ (A 37:14)

The preposition is also used to express various other types of association or linkage, e.g.

- (3) *lætlux +šúla býyu.* ‘You have no concern with him.’ (A 3:26)

#### 11.1.6 *Attributive*

The preposition sometimes has the function of linking a referent to a nominal that is presented as an attribute, in that it constitutes a component or property of it. e.g.

- (1) *+rába b-šànnøla.* ‘He is very old (literally: with years).’ (A 3:24)
- (2) *’z̄ta xá ... móñ ’ùpra ... b-šómmat +xoràna.* ‘There was (a kind of) soil ... with the name of +xorana.’ (B 12:3)

- (3) *dàšta| b-dá +šúp̥ra 'áxnan lèx xázyə.|* ‘We have not seen a plain of such beauty.’ (B 2:14)
- (4) *b-+núyṭa buš-zóda +'ojaxyátə zùrzəva.|* ‘They had mostly made oil hearths.’ (B 12:4)

Occasionally the preposition is used before an adjective that has the function of a predicative complement (§ 12.7.1.) expressing an attribute resulting from an action, e.g.

- (5) *ju-cúlla +kéṭa é-ducta biváyəla +tuptápta b-ķvīta.|* ‘Throughout the summer this place has been trodden down making it hard.’ (B 10:6)

### 11.1.7 *Material*

It is occasionally used to denote the material out of which something is made, e.g.

- (1) *b-'ùpra +kusaryátə 'átvalan.|* ‘We had pots made of clay.’ (B 14:1)
- (2) *'ína kám̥ta juydànə| b-čarpíčət 'ùprəva.|* ‘But formerly the walls were made of clay bricks.’ (B 14:5)
- (3) *+xòla| +zakṛàtlí| ... b-síla.|* ‘Weave me a rope out of sand.’ (A 3:73)
- (4) *b-kèsə +tuŕsəva| b-táxtə +jùra.|* ‘They were made with wood, with big planks.’ (B 10:8)

### 11.1.8 *Price*

It denotes the price at which an item is fixed either in an amount of money or a bartered object, e.g.

- (1) *'átən láxxa yávət tré-danə láxma b-xá-'axča +tìma!|* ‘You here are selling two loaves of bread for such a price!’ (A 19:4)
- (2) *bi-mù zabúnət?|* ‘For what are you selling it?’ (A 42:28)
- (3) *zabúnən várda| bi-mù zabúnət?| mára 'ána zabúnən bí +'àyna.|* ‘I am selling flowers. What are you selling them for? He says I am selling for eyes.’ (A 43:20)
- (4) *'ánnə míyya yavéna b-+'àyna.|* ‘They give the water in exchange for eyes.’ (A 43:17)
- (5) *mú yávvən b-dá meymunòxun?|* ‘What should I give for this monkey of yours?’ (A 44:10)

### 11.1.9 *Manner*

It may express the manner in which an action is performed. In such cases it is generally combined with an abstract nominal, e.g.

- (1) *b-xəžbùyna!* *yávulə làxma.* ‘He gives him bread by reckoning (i.e. in rations).’ (A 3:94)
- (2) *'u-sèpi mxíli b-cúllə xéli +tàma.* ‘I struck my sword there with all my might.’ (A 2:36)
- (3) *ķabuléna b-dó xubbè.* ‘They receive them with that love of theirs.’ (B 2:15)
- (4) *níxa b-níxa +marrùšula.* ‘He gently wakes him.’ (A 37:10)
- (5) *b-nobána +báyyi 'áha=zə 'áx t-an-pàləx.* ‘They want him to work as it were in turns.’ (A 37:14)
- (6) *hár xà-ja šetyálə! b-xá bìna.* ‘He has drunk it all at once, with just one breath.’ (A 37:16)
- (7) *cúllə e-máta háda b-+xadràxvala, járə b-jàrə.* ‘We would go around all of the village, roof by roof.’ (B 9:5)

### 11.1.10 *Oath*

The preposition is used in oaths or adjurations before the item by which the speaker is swearing, e.g.

- (1) *b-aláha ýá +málla hónu yùvvulə m-ída.* ‘By God, this mullah has lost his mind.’ (A 5:9)
- (2) *mammúyux-vən b-ríšət dó màrux! táníli mànívət.* ‘I adjure you by the head of your master, tell me who you are.’ (A 3:65)

### 11.1.11 *Preposition Elided*

In some cases the preposition *b-* is elided in contexts where it may be used to express a relationship between components of a clause. A distinction should be made between adverbial expressions in which the *b-* is optionally omitted, e.g. *+keṭa ~ b-+keṭa* ‘in summer’ (§ 9.16.) and expressions where the *b-* can be assumed to have been elided. We may include in the latter cases where a demonstrative pronoun after the elided preposition is in its oblique form, which demonstrates the original presence of the preposition, e.g.

- (1) *hár dé-+dana c-avívalun +kəttáṭat +'arràta.* ‘At the same time they used to have fields.’ (B 2:8 < *b-de-+dana*)

For the omission of prepositions before oblique demonstratives in appositional constructions see § 9.6.2.1. examples (8)–(10).

### 11.1.12 Complements of Verbs and Expressions

The preposition *b-* is used as the complement of some verbs, e.g.

<i>baləf</i> I <i>b-</i>	'to become busy with'
<i>baxxəl</i> QI <i>b-</i>	'to envy'
<i>hammən</i> QI <i>b-</i>	'to believe in'
<i>jaxəc</i> I <i>b-</i>	'to laugh at'
<i>jašək</i> II <i>b-</i>	'to look at'
<i>kayət</i> I <i>b-</i>	'to knock'
<i>mhumna</i> <i>b-</i>	'faithful to'
<i>modə</i> QI <i>b-</i>	'to confess'
<i>najəv</i> I <i>b-</i>	'to scold'
<i>naxəp</i> I <i>b-</i>	'to become ashamed of'
<i>nonə</i> QI <i>b-</i>	'to plead with'
<i>pacər</i> II <i>b-</i>	'to look closely at'
<i>parpə</i> QI <i>b-</i>	'to implore'
<i>šapər</i> I <i>b-</i>	'to flatter'
<i>šapləp</i> QI <i>b-</i>	'to implore'
<i>šarəz</i> I <i>b-</i>	'to become jealous of'
<i>tafək</i> I <i>b-</i>	'to meet'
<i>tapa</i> I <i>b-</i>	'to stick to'
<i>tarsə</i> QI <i>b-</i>	'to nourish with'
<i>xadə</i> I <i>b-</i>	'to become pleased with'
<i>xakər</i> I <i>b-</i>	'to praise'
<i>xanə</i> I <i>b-</i>	'to become happy with'
<i>xatər</i> I <i>b-</i>	'to become proud of'
<i>xayər</i> I <i>b-</i>	'to look at'
<i>yaləp</i> I <i>b-</i>	'to become used to'
+ <i>ajjəb</i> QI <i>b-</i>	'to be surprised at'
+ <i>dabər</i> II <i>b-</i>	'to lead'
+ <i>dakər</i> I <i>b-</i>	'to touch'
+ <i>karə</i> I <i>b-</i>	'to call on'
+ <i>macrəz</i> III <i>b-</i>	'to preach'
+ <i>masxər</i> III <i>b-</i>	'to scoff at'
+ <i>razi</i> <i>b-</i>	'pleased with'
+ <i>sabər</i> I <i>b-</i>	'to have companionship with'
+ <i>xabər</i> I <i>b-</i>	'to become informed about'
+ <i>xaṭə</i> I <i>b-</i>	'to sin against'

The preposition is used in the complement of some verbs to express an added nuance of disadvantage to the referent in the complement, e.g.

- (1) 'ən-šúk mən-da-+xəlti| xá-məndi xína xázət bìyyi| +ktülli.| 'If apart from this fault of mine, you find something else against me, kill me.' (A 3:48)
- (2) bət-maxzánna bìyyux.| 'I shall show you the consequences of your actions.'
- (3) xá +rába +muxáltəla bìyyi| kát lèt +bəddá xína.| 'She has made me so fed up (literally: she has fed me a lot), that you cannot understand.' (A 40:8)

A similar function is performed by the phrase *b-rišux* in constructions such as (4):

- (4) bəxzáyət mu-vádələ bábi b-rišux?| 'Do you see what your father is doing against you?' (A 3:22)

## 11.2 *ju*

### 11.2.1 *Spatial Location*

The preposition *ju*, has the allomorph *jav-* before pronominal suffixes and the rarer allomorphs *ja-*, *javət* or *jav* before nouns. It is the normal means of expressing location within an enclosed or bounded space, e.g.

- (1) *ju-bétux jurvàssələ*.| 'He has grown up in your house.' (A 3:22)
- (2) 'ána lè-+bayyən| háč xa-+šrà| óya ju-màta.| 'I do not want any lantern to be in the village.' (A 2:1)
- (3) *xa-náša 'áttən ju-+dùssak*.| 'There is a man in prison.' (A 3:35)
- (4) 'átən ka-díyyi muttílx *ju*-+àrra.| 'You put me in the ground.' (A 3:90)
- (5) +jóra škéllea *ju*-+sádro.| 'She took her husband in her breast.' (A 2:35)
- (6) *malúpulə +rába məndyànəl kat-jú malciýta* ... 'ávə,| lá *ju*-+alulàna.| 'He teaches him many things, so that he would be in the royal household, not in the streets.' (A 3:7)
- (7) *cúllə matvátət díyyan* | *kat-átvalan ju-dóštət 'Urmi*,| *ju dáštət Salàmas*| 'all our villages, which we had in the plain of Urmi and the plain of Salamas' (B 2:1)
- (8) *ju-árxə ci-taxnívalun*.| 'They used to grind them in water-mills.' (B 2:9)
- (9) é-+dán +várəna *jú dó jəppítə* ... *ju*-+túra.| 'When they entered the cave ... in the mountain, ...' (A 37:12)
- (10) *xa-mándi +báyyən tānat káti* | *kat-háč náša lā-'avə +šámyu ju-dúnyə*.| 'I want you to tell me something that nobody in the world has heard.' (A 3:75)

- (11) *bəctávələ ju-ctàva.* ‘He writes in a book.’ (A 3:75)  
 (12) *xá-yuma +malla +Nasràdən* *ju-+tùyra* *balbùyəva.* ‘One day mullah Nas-radin was searching in the mountains.’ (A 29:1)

The enclosure may be liquid or an intangible ambience, e.g.

- (13) *+bətlábələ mán +Nuxadnàsər* *für'un,* *kát xa-dana-bèta* *zarázlə ju-+hàva.* ‘Pharaoh asks Nebuchadnezzar to build him a house in the air.’ (A 3:44)  
 (14) *ci-+xoṭívalun* *ju-dánnə míyyət +ànva.* ‘They would mix them in this grape-juice.’ (B 12:3)  
 (15) *+’ánvə har-hàda* *tàzał* *čambəllivalun* ... *ju-xəšca.* ‘They hung the grapes like this, fresh, in the dark.’ (B 2:4)  
 (16) *madmuyévən +’al-càxvəl* *’ávi ju-šmáyya +balbùsa.* ‘I compare them to the stars that shine in the sky.’ (A 3:62)  
 (17) *ju-nášə šámmi t-àzəl.* ‘My (good) name among the people will be lost.’ (A 1:34)

The preposition *ju* generally expresses a more permanent location than is the case with *b*. This is seen, for example, when one compares constructions such as (18) with those with *ju* such as (19) and (20):

- (18) *tóvli +’al-súysə +házər,* *sèpi-da* *ŷ-ídi.* ‘I sat on the horse ready, with my sword in my hand.’ (A 2:28)  
 (19) *Nátan jurvásłə ju-’ídət +Axiqar.* ‘Natan grew up in the hands of Axiqar.’ (A 3:43)  
 (20) *Nátan brùnił* *’ána tuybèrrun,* *jurvàssuvən,* *mùlpun,* *’áxcí* *ka-dàha mändi,* *’áxcí* *ka-’ávə* *ju-’ídət* *dìyyux* *ka-malcùyta.* ‘Axiqar says to the king “Oh king, be well, I have raised Natan, my son, I have brought him up, I have taught him only for this purpose, only so that he would be in your hands, for your royal court.”’ (A 3:15)

The phrase *ju-’ídət* ‘in the hands of’ in (19–20) expresses a more permanent situation than *ŷ-ídi* in (18) and implies a greater degree of control by the person in whose hands the referent is located.

The use of *ju* rather than *b* may also be determined by the verb. Consider (21) and (22):

- (21) *’u-yálə súrə=da mattúyəna ju-xa-+kərtàla.* ‘And they put children in a pannier-basket.’ (A 3:58)  
 (22) *’ánnə +’ánvəl ci-pešvíva +jummìyyəl b-+kərtàla.* ‘These grapes used to be gathered in pannier-baskets.’ (B 12:2)

In (21) locative enclosure is a core complement of the verb 'to put' whereas in (22) it is more peripheral to the act of gathering. One may say that the verb 'to put' has greater control over the location than the verb 'to gather'.

The difference between *ju* and *b* may also be related to attitude. In (23) and (24), for example, the verbs of 'striking', 'kissing' and 'touching' take complements with *ju* and express a positive empathy and engagement with the complement. In (25) and (26), however, in which the complement has *b*, there is no empathetic engagement but rather negative hostility or confrontation.

- (23) *nšákłə ju-kòssu.*<sup>1</sup> 'He kissed his forehead.' (A 2:37)
- (24) *'áxči pàti ketáva ju-pàtu.*<sup>1</sup> 'If only my face could touch his face.' (A 3:46)
- (25) *baxzáyət mu-vádələ bábi b-rišux?*<sup>1</sup> 'Do you see what your father is doing against you?' (A 3:22)
- (26) *bakyátəl b-bàxtu.*<sup>1</sup> 'He touches his wife (in a confrontational way).' (A 5:3)

The construction in (27) also expresses positive engagement:

- (27) *ju-cúllə 'ánnə +xabráne ci-yavvátvələ +jìvvab.*<sup>1</sup> 'You could respond to all these requests.' (A 3:45)

In general, therefore, *ju* denotes greater fixture in, control over, or emotional engagement with, the referent of its complement than is the case with *b*.

In some cases *ju* is used in some kind of association with movement. In (28), for example, there is movement within the item that is the complement of the preposition:

- (28) *ju-+rába +atravátət dínyə +xdírəvax.*<sup>1</sup> 'We have travelled in many countries of the world.' (B 2:14)

In (29)–(32) there is ingressive movement into or towards the item:

- (29) *'áxnan tílan ju-dá +àtra.*<sup>1</sup> 'We have come to this land.' (A 2:6)
- (30) *xúš ju-nášət fànux.*<sup>1</sup> 'Go to your own people.' (A 37:22)
- (31) *mən-+bár bràzvalə, xína míyya 'é-+dán +míutra táļa +šúlə +rayyíva ju-béta lè +salíva.*<sup>1</sup> 'After it dried, when it rained or snowed and so forth, water would not come down into the house.' (B 2:22)
- (32) *ju-+tìyànə daríva.*<sup>1</sup> 'They used to pour (the must of the grapes) into cauldrons.' (B 2:4)

In (33)–(36) there is movement away from the item, which is expressed by combining *ju* with the preposition *mən*:

- (33) *+púləṭla m-ju-jibū xá xabùyša.* ‘He took an apple out of his pocket.’ (A 42:3)
- (34) *xáṭṭə ci-+palt̄ivalunl mən-ju-búlət +xáṭṭə.* ‘They extracted wheat grains from the head of the wheat.’ (B 2:8)
- (35) *bərráxšəla mən-’àltaxl mən-ju-pàjəl máyəla xa-śārxa.* ‘She goes and brings a calf from below, from the stable.’ (A 5:17)
- (36) *bí cálə bí xèla c-áziva m-áxxa mən-ju-da-+’alúla.* ‘They used to go with effort with carts, with buffaloes from here, from this street.’ (B 17:51)

In (37) and (38) the combination of *mən* + *ju* expresses movement through or across:

- (37) *práxələ m-ju-+hàva.* ‘It flies through the air.’ (A 42:11)
- (38) *+puláṭla xa-ķamči, yála mxíla m-ju-+xàsu.* ‘She took out a whip and struck the lad across his back.’ (A 42:31)

In (39) the preposition *+al* ‘upon’ is combined with *ju* to express the relation of ‘onto the enclosure of’:

- (39) *’an-jardéyə xrúzlun +’ál-ju-dàrta ’átxa.* ‘Lay out the round loaves together in the courtyard like this.’ (A 37:3)

The attested instances of the long allomorphs *javət* and *jāv* express spatial location, e.g.

- (40) *ka-mùdi suysavátət diyyòxunl jávət Nànvəl hurhòmlun?* ‘Why did your horses in Nineveh neigh?’ (A 3:78)
- (41) *+paláṭṭət məndi mən-jāv-+’àtrət díyyi!* ‘the produce from my land’ (A 3:41)

### 11.2.2 *Temporal Location*

This preposition is combined with a verbal noun to express deixis to a particular perfective event. The event of the following main clause is presented as occurring within the temporal frame of the initial perfective event, e.g.

- (1) *málca ju-+mṭétu rīš-díyyi maxíla.* ‘When the king arrives, he will strike off my head.’ (A 2:21)
- (2) *+tákju-vàttal +tárra ptáxli +bar-dàha.* ‘When there was a knock, I opened the door after him (i.e. the person who knocked).’ (A 2:29)

- (3) *'ína +'arra-óya ķvítā! míyya ju-dreté míyya c-àzi.* ‘But if the ground is hard, when water is poured out, it flows away.’ (A 3:11)

This should be contrasted with the progressive stem (*baptaxa*), expressing an ongoing activity, which was formed historically by combining *b* with the infinitive.

The preposition *ju* is also used with various temporal expressions to express a particular point in time (4) or a bounded period of time (5–6):

- (4) *+Nuxadnásər! ju-dè-+dana! bàxyələ.* ‘Nebechadnezzar at that time wept.’ (A 3:45)
- (5) *'íta 'áha-zə xá mən-+adáttat bne-'Ùrmila! kat-ju-mátxət šánnə vìdona.* ‘So this too is one of the traditions of the Urmi people that they have practiced for a period of (many) years.’ (B 12:9)
- (6) *'ána jàni=zə! jú xá šítə +'ám jvánkə m-+uydálə 'á-+šula vìdux.* ‘I myself together with the lads did this task one year.’ (B 2:7)

### 11.3      *+al*

This preposition has a wide variety of functions. One reason for this is that it is derived from two different prepositions in earlier Aramaic, namely *\*l-* ‘to, for’ and *\*'al* ‘upon’. Generally the usage of *+al-* in the dialect makes it clear from which of these two earlier prepositions it is derived in any one particular case. In some cases, however, the derivation is not completely certain. For this reason all the usages of *+al-* are here treated together.

#### 11.3.1    *Destination*

The preposition *+al-* is frequently used in the complement of a verb of movement to express the destination, e.g.

- (1) *bərráxšələ +'al-+'ayna.* ‘He goes to a spring.’ (A 37:15)
- (2) *'ána bərràxšəvən! +'al-Màcca.* ‘I am going to Mecca.’ (A 1:3)
- (3) *sáklə +'úllul +'al-+'tiyra.* ‘He went up to the mountain.’ (A 2:31)
- (4) *+m̄t̄lān +'al-dé-ducta kát málca márələ kátu!* ‘We reached the place where the king says to him ...’ (A 3:29)
- (5) *+bàyyən! +máṭat +'álli.* ‘I want you to come to me.’ (A 2:26)
- (6) *xáčča tá +'al-jànux!* ‘Come back to yourself a little (= recover a little).’ (A 3:53)
- (7) *ci-+paltíva +'al-váddar mən-màta.* ‘They went outside the village.’ (B 2:18)

- (8) *sábza daríva lablívala +al-mdita.* ‘They used to lay out the vegetables and take them to the town.’ (B 2:3)

It is used, likewise, to express the endpoint of processes and situations, e.g.

- (9) *har-nipúxta-zə mən-míyyət +ànvə pyášəla škálta, ’albátta lá +xdíra +al-xámra.* ‘Molasses too is produced from grape juice, but of course it has not turned into wine.’ (B 12:8)
- (10) *ķesa ci-mattíva +x líma ’átxa! mən-dà júyda +al-dò júyda.* ‘They used to place a piece of wood, thick like this, from this wall to that wall.’ (B 2:19)

In (11) the complement of the preposition is a temporal endpoint:

- (11) *ánnə šártə ’ázil máyyi javvəbbilun +’al-dó-yuma xína.* ‘They should go and bring the answer to these conditions by the next day’ (A 38:6)

When the destination of a verb of movement is a person, the preposition *cəs* is often used instead of *+al*, e.g.

- (12) *xášlux cəs-nášə xína.* ‘You went to other people.’ (A 3:5)
- (13) *+’Axíkar máyuna cəs-málca.* ‘They bring Axiqar to the king.’ (A 3:27)
- (14) *c-azənva cáslu.* ‘I used to go to him.’ (A 3:81)
- (15) *mélə cəsli.* ‘Bring him to me.’ (A 3:26)

### 11.3.2 *Dative*

The preposition *+al-* is used to express the recipient or beneficiary of an action, e.g.

- (1) *bədráyula ’a-bétət malcùytu +’al-+’Axíkar.* ‘He hands over his royal house to Axiqar.’ (A 3:53)
- (2) *yávulə +’al-’ídət xa-náša.* ‘He (the king) gives him to a man.’ (A 3:31)
- (3) *Nátan brúni hállə +’al-’idi.* ‘Hand over Natan my son to me (literally: to my hand).’ (A 3:87)
- (4) *+ràba! zlýzə xúrjəva +’allu.* ‘He had spent a lot of money on him.’ (A 3:89)

### 11.3.3 *Upon, on, onto*

In many cases *+al-* has the sense of ‘upon’ or ‘on’, denoting a spatial location above or, at least, on the surface of the referent that it governs. The preposition in such cases is clearly derived from *\*’al:*

- (1) *+mósta +al-rišu +rába lètva.* ‘There was not much hair on his head.’  
(A 37:1)
- (2) *ci-mayyívalun +al-+xasè.* ‘They brought them on their back.’ (B 12:2)
- (3) *tóvli +al-sùysi.* ‘I sat on my horse.’ (A 2:27)
- (4) *bølvášølø xa-lvøšta +al-jànul zàrdø.* ‘He puts on (literally: he put on himself) a yellow piece of clothing.’ (A 3:62)
- (5) *ú +týan ci-mattívala +al-+ojaxta.* ‘They put the cauldron on the hearth.’  
(B 12:4)
- (6) *mátti +al-ámøt +al-dà-beta.* ‘Put a sign on this house.’ (A 2:8)
- (7) *'íta +al-dáni daríva +tìna.* ‘Then on these they put mud.’ (B 2:21)
- (8) *sépi maxánvala +al-cípal +čambørrønvala.* ‘I used to strike my sword on a stone and split it.’ (A 2:25)

After verbs of involving movement towards the top of a referent it is often idiomatically rendered by English ‘onto’, e.g.

- (9) *pállø +al-'àrra.* ‘He fell on the ground.’ (A 7:14)
- (10) *maskívalø +al-jàrø.* ‘They take it up onto the roof.’ (B 2:22)
- (11) *jáno +ruppála +al-sèpa.* ‘She throws herself onto the sword.’ (A 2:35)
- (12) *brácølø +al-børcàcu.* ‘He kneels down onto his knees.’ (A 3:46)
- (13) *'ánnø míyya +maxduréna +àllu.* ‘They pour out the water onto him.’  
(A 37:20)

When the movement is away from the top, the preposition is combined with *møn/m-* ‘from’, e.g.

- (14) *m-+ál-susavaté +slílun.* ‘They dismounted from upon their horses.’ (B 2:13)
- (15) *'átøn +dílux 'ána bøt-náplønva m-+al-'ilàna.* ‘You knew that I would fall from the tree.’ (A 32:2)
- (16) *bøt-+šóri m-+al-čáppar.* ‘They will jump over the fence.’

The expression *+al-+uydalø*, which literally means ‘on one another’, is used in the sense of ‘together’, e.g.

- (17) *'áxnan jú ... dáštøt 'Úrmi Salámas +al-+uydálø 'átvalan 'ómmo tláy +tlà matvátø.* ‘We, in the plain of Urmi and Salamas, we had altogether a hundred and thirty-three villages.’ (B 2:2)
- (18) *'ána føddálul +házør vidèvøn, partúlø +al-+uydálø.* ‘I have prepared its threads, twisting (them) together.’ (A 3:74)

### 11.3.4 ‘Against’

- (1) *kóšun +jummévat +al-jáni.* ‘You have gathered the army against me.’ (A 3:27)
- (2) *für'un! hàmla t-ávəd +állux.* ‘Pharaoh will make an attack against you.’ (A 3:20)
- (3) *'ína 'adýya velə-víyya +xàyyən +állux.* ‘But now he has become treacherous against you.’ (A 3:22)
- (4) *'o-násət kát ... +al-málcat jànu! P xáyānàtP ávəd, +xèlṭa ávəd! +al-'alàha-zə vádələ! +xèlṭa.* ‘A man who does treachery against his own king, who commits a fault, he commits the fault also against God.’ (A 3:48)

In (5) after a verb of movement the preposition is preceded by *ka-* ‘to’:

- (5) *+Máhe ju-ùrxəla! néla bitáya ka+al-jánat dìyyux.* ‘Mahə is on the way, she is coming for you (literally to against you).’ (A 40:22)

### 11.3.5 ‘Concerning’

- (1) *+buķára bitáyələ +al-šámmət nipùxta.* ‘A question arises concerning the name *nipuxta*.’ (B 12:7)
- (2) *'ína léx +rába +suxsìyyə +állu.* ‘But we have not researched much concerning it.’ (B 12:7)

It is used in the context of betting in constructions such as (3):

- (3) *màrj dókax mónnax! +al-xá-'axča dàvə.* ‘We shall make a bet with you on such-and-such an amount of gold coins.’ (A 34:10)

### 11.3.6 *Temporal Location*

In some cases the preposition is used to denote location in time. This is found mostly in the varieties of the dialect spoken in the Caucasus:

- (1) *+al-dó-yuma xína mòdrə +plàṭla.* ‘On the next day she went out.’ (A 52:2)
- (2) *mòdrə +al-dé šítə xítə módrə 'átxa bìyyə muttíla.* ‘Again the next year she again laid eggs.’ (A 53:2)

### 11.3.7 *Complement of Verbs and Expressions*

The preposition *+al-* occurs as a complement to various verbs and expressions, e.g.

- (1) *bədmáyələ +'àlli.* 'He resembles me.' (A 3:35)
- (2) *lábbu +bətlába +'al-xá-naša 'ax-díyyu 'ávə.* 'His heart is seeking a man who is like him.' (A 3:14)
- (3) *bəspárən +'àllux.* 'I am waiting for you.' (A 3:53)
- (4) *jušáklun +'al-dáštət 'Ùrmi.* 'They looked at the plain of Urmi.' (B 2:13)
- (5) *ci-maxíva +'állu.* 'They used to strike it (the horse).' (A 1:1)
- (6) *káti +bətlabəva còmac 'azánva +'állu.* 'She had been seeking me in order to go and help him.' (A 2:33)
- (7) *clítəla +'al-+jurýytət +'týyan.* 'It depends on the size of the cauldron.' (B 12:5)
- (8) *'álli pəhtiyáj p +'állux.* 'I have need of you.' (A 2:26)
- (9) *+áynu bəkyátəla +'ál de-ctəvta.* 'His eye touches that writing.' (A 37:9)
- (10) *+áynu kliékéla +'álli.* 'He stared at me.'
- (11) *+másyət +'álli!* 'Listen to me.'
- (12) *báxta +tábba +'al-joro.* 'A wife obeys her husband.'
- (13) *clílə +'al-+xábru.* 'He was stubborn.'
- (14) *cálbi cušcásli +'al-jinávə.* 'I set my dog on the thief.'
- (15) *+'al-cépi mxilə.* 'He spoiled my pleasure, he offended me.'
- (16) *'ána kbólli 'et-šálmən +'al-kanunè.* 'I agreed to adhere to their rules.'
- (17) *njávla +'al-dó náša.* 'He rebuked that man.'
- (18) *bət-sánkən +'állux.* 'I will need you.'
- (19) *šavútəvən +'állu.* 'I am lusting for her.'

## 11.4 *ka*

### 11.4.1 *Dative*

A frequent usage of this preposition is to express the recipient, beneficiary or addressee, which can be termed a dative function, e.g.

- (1) *lubállyi yuvvállyi ka-málca.* 'I took him and gave him to the king' (A 3:34)
- (2) *+xábra yávələ ka-báxtu.* 'He gives word to his wife.' (A 3:30)
- (3) *+Axíkar málrlə ka-málca!* 'Axiqar says to the king ...' (A 3:15)
- (4) *ka-dan-nášət mənnu mára* 'He says to the people with him ...' (A 3:78)
- (5) *'ən-táno ka-šámsha clí, bət-cályā.* 'If he says to the sun "Stop!", it will stop.' (A 3:64)
- (6) *ka-málca bəctávələ.* 'He writes to the king.' (A 3:20)
- (7) *vúdlə ka-jánux brùna.* 'Make him a son for yourself.' (A 3:6)
- (8) *+ávun p̄t-ávə ka-sebúytux.* 'He will be for your old age.' (A 3:6)
- (9) *vìyyəvəlá vázzər ka-báb-díyyux.* 'He was vizier for his father.' (A 2:24)

- (10) *háč-məndi lélə váda ₯a-bàbu.* ‘He does not do anything for his father.’  
(A 3:37)

The preposition is used to express benefit to the speaker for the purpose of courtesy in expressions such as:

- (11) *'ād-lələ* | *átən p̄t-ávət káy 'árxa.* ‘Tonight you will be a guest of mine (literally: for me, for my benefit).’ (A 4:7)

#### 11.4.2 *Temporal Objective*

The preposition may be used to express a temporal objective or endpoint in constructions such as the following:

- (1) *'ána p̄t-ázən ₯a-xa-yàrxa.* ‘I shall go for a month.’ (A 2:11)  
 (2) *₯a-trè +sa'áttə malcútux hälla kày.* ‘Give me your kingdom for two hours.’  
(A 1:41)  
 (3) *yávola +dána ₯a-+Axíkar ₯a-'arpí yumànə.* ‘He gives the time to Axiqar, for forty days.’ (A 3:53)  
 (4) *b-+kèta á +šúla c-odívalə* | *kát ₯a-cúllə mótxat sátvə 'ánnə 'avílun nipùxta.*  
‘They used to do this thing in summer so that they would have molasses for the entire period of winter.’ (B 12:6)  
 (5) *daríva cəsmišə ₯a-sàtvə.* ‘They used to lay out raisins for the winter.’  
(B 2:4)  
 (6) *'ánnə míyyət +'ánvə kát c-avíva xvìtə* | *'áx míyya +tinànə* | *₯a-móriša c-avíva  
'ax-ət-'ámri +sápyə 'ax-zìja.* ‘The grape juices, which were mixed like muddy water, by the morning were, as they say, clear as a bell.’ (B 12:3)  
 (7) *₯a-kúdmə p̄t-atítun cèsli.* ‘You should come to me by tomorrow.’ (A 38:7)

#### 11.4.3 *Purpose or Cause*

- (1) *'án +adàttə*, | *c-óya tanùyə*, | *ju-matvátət 'Urmi* | *c-odívalun ₯a-bašáltət ni-pùxta.* ‘They used to practice these traditions, one may say, in the villages of Urmi for cooking molasses.’ (B 12:9)  
 (2) *'é-+dana b-yúma taníyra c-odívalə ₯a-làxma pyèta.* ‘At that time, during the day they used the oven for baking bread.’ (B 14:2)  
 (3) *ju-xa-mzída +júrtə* | *míyya ci-malíva mən-de-+'áyna labálva ₯á ... ₯a-štetè.*  
‘He would fill up a big waterskin with water from that spring, and would take it for them to drink.’ (A 37:7)  
 (4) *bərráxšəla +rába +p̄síma* | *₯a-dà móndi.* ‘He goes off sad because of this situation.’ (A 1:21)

- (5) *ḳà-del* +*ḳusártu yuvvàlə*.! ‘On account of that he gave his pot.’ (A 8:3)
- (6) *ḳa-mú pósli* +*'uldìyya*! *b-Nátan brùnux?*! ‘Why (literally: for what) was I treated treacherously by Natan your son?’ (A 3:52)
- (7) *ḳa-mùdī* *suysavátat diyyòxun*! *jávət Nènva*! *hurhàmlun?*! ‘Why did your horses in Nineveh neigh?’ (A 3:78)

#### 11.4.4 Direct Object Marker

When the preposition marks the direct object (§ 10.18.2.3.), the complement is most frequently a pronoun, especially 1st and 2nd person, rather than a full nominal, e.g.

- (1) *ḳa-díyyux* +*ḳṭàllun*.! ‘They killed you.’ (A 3:68)
- (2) *'ína 'aláha bsóm̥lə* *ḳa-díyyi* +*xumílə*.! ‘But it pleased God to protect me.’ (A 3:69)
- (3) *ḳa-dam̥moxàyələ*.! ‘He beats them.’ (A 3:72)
- (4) *'ína 'íman bəjràšolə* 'ay *bəjràšolə* *ḳàtu*! *sáb lèlə* +*msáya, jaróšla*.! ‘But when he pulls it (the waterskin), it pulls him, because he cannot pull it.’ (A 37:15)
- (5) *ḳa-dáha* +*ḳáṭu* +*'ùxča mxáyələ*.! ‘He beats this cat so hard.’ (A 3:79)

#### 11.4.5 Complements of Verbs

The use of the preposition before a verb complement is specific to some verbs. This applies in particular to +*ḳarə* i *ḳa-* ‘to call’, e.g.

- (1) *ḳa-dáni* +*karíva pardùvvə*.! ‘They called those laths.’ (B 2:19)
- (2) *ḳa-cúllə dánnə* +*parsúpə* *ḳátju-dé* *dáštət* 'Urmi ci-xáyil' *ḳát məššəlmànənəna* ci-+*ḳaráx* +*hošàrə*.! ‘We call all those people that live in the plain of Urmia who are Muslims *hošàrə*.’ (B 2:16)
- (3) *ḳa-Nátan* +*bəkràyəna*.! ‘They call Natan.’ (A 3:43)

#### 11.5 *mən, m-*

This preposition represents the merging together of two prepositions that were distinct in earlier Aramaic, viz. \**men* ‘from’ and \**'am* ‘with’ (§ 8.4.22.). The form +*'am* ‘with’ is sporadically used by speakers, but this should be regarded as a loan from the literary language, e.g.

- (1) *'ána jàni=zəl* *jú* *xá šítə* +*'ám jvánkə* *m-*+*uydálə* *á-*+*šula* *vìdux*.! ‘I myself together with the lads did this task one year.’ (B 2:7)

The relations the preposition *mən/m-* expresses may be classified as follows.

### 11.5.1 Separation or Removal

- (1) *ci-+paltíva +’al-váddar mən-màta.* ‘They went outside of the village.’ (B 2:18)
- (2) *cúllə nákvə mən-pátt +’arrə šaklónnun.* ‘I should remove from the face of the earth all females’ (A 2:17)
- (3) *mən-’álaha lèla +tšítla, mánnux mùt +tšítæla?* ‘It is not hidden from God, why is it hidden from you?’ (A 2:17)
- (4) *b-+traptæt! nipùxtal ránjo mən-ránjæt cùma! ci-+xavàrvæl c-avíva +xvàra.* ‘Through the beating of the molasses its colour used to change from the colour black and it used to become white.’ (B 12:5)
- (5) *’əsrí tláy +sántə prišə m-+uydála!* ‘twenty or thirty centimetres separated from each other’ (B 14:6)

In (6) and (7) it is combined with the preposition *+al-:*

- (6) *m-+ál-susavaté +slilun.* ‘They dismounted from upon their horses.’ (B 2:13)
- (7) *bæcnášəva m-+áljára.* ‘They swept it from off the roof.’ (B 17:37)

### 11.5.2 Source or Origin

- (1) *mən-+táma +šarúyəna bədra-kálə ’ánnə yál-súra.* ‘From there the children begin to shout.’ (A 3:72)
- (2) *bæxzáyələ mən-rèkkəl’ ína xá-dana +šrá véla bəlláya.* ‘He sees from afar a lantern burning in a house.’ (A 2:4)
- (3) *+bár=æt +xábra lá-víla mən-dànnəl* ‘after there was no word from them ...’ (A 3:4)
- (4) *xa-ctávæ ctávləl mən-púmmæt +Axìkar.* ‘He wrote a letter on behalf of (literally: from the mouth of) Axiqar.’ (A 3:19)
- (5) *’adíyya ’ánnə nákvəl cúllə +házər vágəna! mən-yál-súra nákvə hál +jùra.* ‘Now the women are all ready, from young girls to older women.’ (A 2:22)
- (6) *késa ci-mattíva +xlima ’átxa! mən-dà júyda +’al-dò júyda.* ‘They used to place a piece of wood, thick like this, from this wall to that wall.’ (B 2:19)
- (7) *háč məndi látlí-mənno.* ‘I have nothing of hers.’ (A 1:17)
- (8) *+šadurèləl mən-+bəzzæt buxàri.* ‘He sends them through the hole of the fireplace.’ (A 14:2)

### 11.5.3 Cause

- (1) *mən-cápnu lél +myása kām| mən-+tāma.* ‘On account of his hunger he is unable to rise from there.’ (A 49:12)
- (2) *mátli mən-cápna!* ‘I am dying of hunger!’
- (3) *lèla dmíxa| mən-+narahatìytu.* ‘He has not slept due to his being upset.’ (A 1:40)

### 11.5.4 Partitive

On numerous occasions the preposition expresses a partitive relationship, i.e. a part of a larger group or class, e.g.

- (1) *+rába mən-dánnə məndyánə malùpulə.* ‘He teaches him many of these things.’ (A 3:10)
- (2) *mónđi kát ’áta mən-+’átri| mən-+xəttə| mén ... dàva| mən-síma.* ‘What accrues from my land of wheat, of gold, of silver.’ (A 3:40)
- (3) *xa-mən-dan-šäcvànəvən| xut-’áklət málca.* ‘I am one of those ants under the feet of the king.’ (A 3:66)
- (4) *’ítá ’áha-zə xá mən-+adáttət bne-’Ùrmila.* ‘So this is one of the customs of the people of Urmia.’ (B 12:9)
- (5) *mən-dánnə tlívva ci-mayyíva.* ‘They used to bring some of those preserved grape-clusters.’ (B 2:4)
- (6) *lè-mačxət mən-do-láxma.* ‘You will not find any such bread.’ (B 2:10)
- (7) *júrrə júrrə mən-dánnə yemíšə+zarríva.* ‘They cultivated different kinds of such fruit.’ (B 2:10)
- (8) *’ítá cmá dánə mən-+dávun ’átxa ci-mattíva.* ‘So they used to place a few items of this.’ (B 2:19)
- (9) *háč-xa mənné látvalun carmàna.* ‘None of them had vineyards.’ (B 2:6)
- (10) *xáčča mən-+dávvə štílə.* ‘He drank a little of the yoghurt.’ (A 5:9)
- (11) *sátva mən-dáni c-+axlíva.* ‘In winter they would eat some of these.’ (A 35:2)
- (12) *zonáva móń +xàltə.* ‘She would buy some food.’ (B 17:5)

### 11.5.5 Comparison

- (1) *nàkva| mən-’úrza buš-xelàntəla.* ‘A female is stronger than a male.’ (A 2:36)
- (2) *’ána xáčča bùš-zoda mánnux| xìyyən.* ‘I have lived a little more than you.’ (A 2:16)
- (3) *+tamàna c-ávə m-dó kát bí ... +nùyṭa| b-+fazùyl váguna.* ‘It is more tasty than the one they make with oil or diesel fuel.’ (B 14:4)

- (4) *+rába zóda mən- +lázəm| mán +crəsyána xóšu le-’atyàva.* ‘He disliked Christians much more than was necessary.’ (JP 1:16)

For further details concerning the formation of comparative constructions see § 9.8.

### 11.5.6 *Material*

The preposition may express the material from which something is made, e.g.

- (1) *kát mən-síla| jøddàla zárəz.* ‘that he should make threads out of sand.’  
(A 3:56)
- (2) *’áxnan ’ótlan spadiyyàtə| mán párrət tèrəna.* ‘We have pillows made of birds’ feathers.’ (A 38:9)

### 11.5.7 *Spatial Location*

On some occasions it is used to refer to a spatial location. This is particularly common in adverbial expressions containing locations that typically stand in contrastive opposition, especially sides, e.g.

- (1) *fúr’un m-á-yba xína bitáyəla +al-jàni?* ‘Is Pharaoh coming against me on this side?’ (A 3:27)
- (2) *xá-sama xína-da +’álma ’áttən kət-ci-táni mən-jíbət nipùxtal* Pméye poxtè. P| ‘There is another group of people who say *meye poxte* instead of (literally: on the side of) *nipuxta*.’ (B 12:8)
- (3) *+’ál dáni ci-mattíva pardùvvə,| mən-dà-riša.* ‘On those they put laths, on this side.’ (B 2:20)
- (4) *’ána clíli +támə.| á sáklə mən-səmmálta.* ‘I waited there (on one side). He went up on a ladder (on the other side).’ (A 2:31)
- (5) *čarùxə| ’ax-dáhəna,| ’ax-dáha,| ’ína m-áxxa m-áxxa m-áxxa m-áxxa ’áttən jøddàla.* ‘Woven boots were like this, like this, but here, here, here and here there were threads.’ (A 4:2)
- (6) *’ína +málla m-cəs-dánnə bərràxšələ.* ‘The mullah passes by them.’ (A 9:2)
- (7) *síla bədráyəla mən-+támə +bázzə +bàzzə.* ‘He sprinkles sand there in holes.’ (A 3:73)

In (8)–(10) the preposition is used to express location of an action on part of a body:

- (8) *'átxa mən-<sup>+</sup>kássat brátu nšòkla.* 'He kissed her like this on her forehead.' (A 43:2)
- (9) *ka-bàbìl mxílun m-àxxu.* 'They struck my father here on him.' (B 6:5)
- (10) *mən-túpru mxàyələ, típ̥ru <sup>+</sup>bəktàyələ.* 'He strikes his tail.' (A 46:3)

### 11.5.8 'With'

When it is appropriate to translate the preposition with English 'with', the relation is generally comitative, e.g.

- (1) *lá 'ávət mən-xa-bàxta! kát ... <sup>+</sup>jóro mítələ.* 'Do not be with a woman whose husband has died.' (A 3:10)
- (2) *ku-ta-mènni!* 'Get up and come with me!' (A 3:23)
- (3) *'ána <sup>+</sup>báyyən hamzámmən mènnux.* 'I want to speak with you.' (A 3:53)
- (4) *cúllə-da 'an-<sup>+</sup>sarbàzə t-íva mónnu! cíllə šátyəna <sup>+</sup>rùyəna.* 'All the soldiers who were with him were drunk and inebriated.' (A 3:35)
- (5) *kòšun muyyéla! kat-'<sup>áti</sup> <sup>+</sup>pàləš mónnux.* 'He has brought the army in order to fight with me.' (A 3:20)

The preposition is used with this sense in the expression *m-<sup>+</sup>uydala* 'together', e.g.

- (6) *+rába məndyánə hamzúməna m-<sup>+</sup>uydàla.* 'They speak about many things togther.' (A 3:66)
- (7) *túrvante m-<sup>+</sup>údalə bərráxšəna bëta.* 'Both of them go home together.' (A 37:11)

### 11.5.9 'With regard to, concerning'

- (1) *'á cačàla! <sup>+</sup>ótlə <sup>+</sup>xàbra mən-da-báxta.* 'This bald man has a report concerning this woman.' (A 1:36)
- (2) *'átnən <sup>+</sup>valux *kválta mən-<sup>+</sup>hàji?** 'Did you have a complaint about the pilgrim?' (A 1:44)
- (3) *<sup>+</sup>tlábloxun but-<sup>+</sup>zrùta *katóxun xácmə məndyánə tánən!* mən-<sup>+</sup>Mùšáva, <sup>+</sup>inə! *'áha móndit 'ána <sup>+</sup>báyyən tanànnə! bədvákələ mən-cíllə matvátat diyyan.** 'You have asked me to tell you a few things with regard to agriculture with regard to Mushava, but what I want to say holds with regard to all our villages.' (B 2:1)

### 11.5.10 *Temporal*

The preposition is combined with *+bar* ‘after’ or *kam* ‘before’ in temporal adverbial expressions such as the following:

- (1) *m-+bàr-hada* ‘after this’ (A 3:22)
- (2) *mən-+bár brəzvalə*, *xína míyya ýe-+dán +mútra tálja +šúla +rayyíva ju-béta lè +salíva.* ‘After it dried, when it rained or snowed and so forth water would not come down into the house.’ (B 2:22)
- (3) *+’əsrá yumánə m-kám +dána káy-táni.* ‘Ten days beforehand tell me.’ (A 2:18)

### 11.5.11 *Complements of Verbs and Expressions*

The preposition *mən* is used as the complement of various verbs and expressions, e.g.

- (1) *lá +buķárri mónnux hàč-məndi.* ‘I did not ask anything of you.’ (A 3:52)
- (2) *+bətlábəla +paxàltá mónnu.* ‘He asks for forgiveness from him.’ (A 3:54)
- (3) *þučþəčlə mən-xà-mənne.* ‘He whispered to one of them.’ (A 19:2)
- (4) *’ána +byáyən mən-nášux lìpəl mən-jú +’átrət dìyyux +’árpa xamšá mənd-yánə kátil +jùvvab ódi.* ‘I want your learned men from your land, to give me a response to four or five things.’ (A 3:39)
- (5) *lótvali +zdúta mən-háč náša.* ‘I did not have fear of anybody.’ (A 2:28)
- (6) *’á-sapar ’òtvalun +’arràtəl šúk mən-carmàna.* ‘Now, other than vineyards they had fields.’ (B 2:6)

## 11.6 Repetition of Prepositions

Some prepositions are repeated in particular contexts. In all such cases the first component of the repetitive phrase has a long form of the preposition ending in an *-a* vowel and the second component has the normal form of the preposition.

### 11.6.1 *bíyya b-*

When the preposition *b-* has a comitative sense, it is sometimes repeated in constructions such as the following:

- (1) *bəškáləna bíyya b-dó sàla*, *bábat ... vàzzər*, *labíluna cəs-màlca.* ‘They take the father of the vizier together with the basket and carry it to the king.’ (A 2:25)
- (2) *bəškálələ +’Axíkar bíyya bí ... rijavàtu*, *+kòšun.* ‘Axiqar takes an army together with his servants.’ (A 3:60)

- (3) *'u-áyən bíyya b-ječítə +rába +rāhat bitáyəla.* ‘And she together with the goat comes very calmly.’ (A 38:18)
- (4) *bíyya b-sépa 'àtxa| ... bərràxšəla.* ‘He goes together with his sword.’ (A 39:9)
- (5) *+xúllə bíyya b-kálpu!* ‘Eat it together with its shell.’

### 11.6.2 +bara +bar

The repetition of this preposition is used when the prepositional phrase is a complement of a verb of movement, e.g.

- (1) *tílun +bara +bàru.* ‘They came behind him.’ (A 28:1)
- (2) *+bára-+bar sépa bərràxšəla.* ‘He goes after his sword.’ (A 39:9)
- (3) *'áxnan=da +bára +barè| t-azàxva.* ‘We followed behind them.’ (B 5:10)

### 11.6.3 java jav

The repetition is attested in cases such as the following in which the prepositional phrase has the sense of ‘in various places within’ an entity:

- (1) *'án=t 'ótvale cármət +'ànvəl cármət +'ànvəl jáva jávu c-odíva +màšəl jáv dán zulàlu.* ‘Those who had a vineyard of grapes, a vineyard of grapes, in various places within it they used to cultivate beans in its strips.’ (B 17:13)

### 11.6.4 kama kam

This phrase is found after dynamic perfective verbs expressing change of location:

- (1) *xzili| +slíla tilə| tóvlə +ul-sùysəl káma kam-dìyyi.* ‘I saw that he came down and sat on the horse in front of me.’ (A 2:32)
- (2) *dáryuna káma kamèl kat-là-'arək.* ‘They have put him in front of them so that he does not run away.’ (A 7:7)

# The Clause

## 12.1 The Copula Clause

Some aspects of the function of the various copulas and the clauses in which they occur have already been dealt with in § 10.5. Here we shall be concerned with some features of the word order of copula clauses. The clauses are divided into three groups according to the type of copula they contain: (i) enclitic copula (including present and past copula), (ii) independent copula (including present and past copula) and (iii) deictic copula. Each section will include consideration also of clauses containing compound verbal forms consisting of a copula and resultative participle (*ptixələ, dulə ptixa, velə ptixa*) or progressive stem (*bəptaxələ, dulə bəptaxə, velə bəptaxə*).

### 12.1.1 Enclitic Copula

#### 12.1.1.1 Basic Predicate

When the enclitic copula occurs in a clause consisting of a predicate without any independently standing subject constituent, it is suffixed to the predicate, e.g.

- (1) *karibàyəvax*.| 'We are foreigners.' (A 2:6)
- (2) *šulkètən*.| 'I am naked.' (A 1:11)
- (3) *bràtila* 'She is my daughter.' (A 1:14)
- (4) *+yakùrtəla*.| 'It (the waterskin) is heavy.' (A 37:15)
- (5) *+ràba racíxana*.| 'They are very soft.' (A 38:9)
- (6) *+rába b-šənnələ*.| 'He is very aged.' (A 2:24)
- (7) *bètət díyyivət*.| 'You are my home.' (A 3:54)
- (8) *+šavvá 'axunvàtəva*.| 'They were seven brothers.' (A 37:7)
- (9) *xàmməva*.| 'It was hot.' (A 37:21)
- (10) *+rába-zə naxùpəva* *+rába-zə +zadùyəva*.| 'He was very shy and was very timid (at that time).' (A 37:1)

When the predicate is a 1st or 2nd person pronoun, the copula agrees with the predicate, e.g. *'ànəvən*| 'It is me', *àt-ivət*| 'It is you' (see § 12.5.6.8.). Examples from the text corpus:

- (11) *mára mániva mórrə Ɂat-mujtáyyəd +slúta +salùyəla?* *màrrəl +kúrbān ànənva.* ‘He said “Who said that the jurist is saying a prayer?” He said “Sir, it was me.”’ (A 7:9)
- (12) *xšávlə Ɂat-’át-ítva.* ‘It (the fire) thought it was you.’ (A 23:3)
- (13) *léxva hár ’áxnan.* ‘It was not just us.’ (B 9:5)

The predicate cannot be gapped and the copula retained where such gapping is acceptable in English, e.g.

- (14) A: *cpìnəvət?* B: *hì,* *cpìnəvən.* ‘A: Are you hungry? B: Yes, I am (literally: I am hungry).’

The same applies to the compound verbal forms containing a copula, e.g.

- (15) *’út ’áhmak-ívət!* *’ína mən-jánux buš-áhmaɁ xəz̥yat?* *+màlla mára!* *hìl xəz̥yən.* ‘“You are stupid, but have you seen a more stupid person than you?” The mullah said “Yes, I have (literally: I have seen).”’ (A 16:1–2)

#### 12.1.1.2 Clauses Containing a Subject Constituent

When the clause contains a subject constituent in the form of an independent pronoun or a nominal, the subject is normally placed before the predicate and the copula is cliticized to the predicate with the nuclear stress occurring on the predicate, e.g.

- (1) *+Axíkar xàyəla.* ‘Axiqar is alive.’ (A 3:49)
- (2) *’áxnan +šavwá ’axunvàtəvax.* ‘We are seven brothers.’ (A 37:10)
- (3) *’ánnə +xuyravàtuna.* ‘These are his friends.’ (A 2:7)
- (4) *báxtu +rába honàntəva.* ‘His wife was very clever.’ (A 3:57)
- (5) *+’áv-da +rába lìpəva.* ‘He also was very learned.’ (A 3:1)
- (6) *’át +sàrəvət! ... ’áni-da palàxux-na.* ‘You are the moon ... and they are your workers.’ (A 3:63)
- (7) *’áha márət jnàyəla.* ‘This one is guilty of a crime.’ (A 3:80)
- (8) *bráta ju-bètula.* ‘The girl is in his house.’ (A 1:21)
- (9) *’áha +jòrax-lə?* ... *hìl ... ’áha +jòril.* ‘Is this your husband? ... Yes ... This is my husband.’ (A 1:38)

The clause may be given a slower prosody by placing the subject constituent in a separate intonation group. Constructions such as these often occur at some kind of boundary in the discourse. The clause in (10), for example, opens an explanatory background section of the narrative. The clause in (11) stands apart

from the adjacent discourse due to its gnomic nature. The slower prosody of the clause in (12) gives the proposition particular prominence:

- (10) *'a-ctàva| trè-saməla.* ‘The letter is (in) two parts.’ (A 3:21)
- (11) *nàkva| mən-’úrza buš-xelàntəla.* ‘A woman is stronger than a man.’ (A 2:36)
- (12) *’á +xàbra| +xábrət +’aturàyəla.* ‘This word is an Assyrian word.’ (B 2:17)

On some occasions the subject constituent is placed after the predicate. When a definite nominal subject is postposed in this way, the clause is bound pragmatically to what precedes. It normally expresses supplementary information that is tagged onto the preceding statement, e.g.

- (13) *+hàjil ’átvəla xá-dana rìja| +rába +spày-iva| o-rìja.* ‘The pilgrim had a servant. That servant was very good.’ (A 1:7)
- (14) *xá-yuma bərràšxalə| +hà| dàxivət? Ilíyyələ šámmu.* ‘Iliyya dàxivət? ‘One day he goes (to visit) “Ah, how are you?”—His name is Iliyya—“Iliyya how are you?”’ (A 36:5)
- (15) *ptàna vadónva| tre-nùyna| +plátlun ju-’úpra| ’ánnəna ’an-núyna.* ‘I was ploughing and two fish came out of the soil. These are those fish.’ (A 5:7)
- (16) *mən-ju-kúnya šxùnta +pláṭəla| +rába šaxinəva kúnya.* ‘Heat is coming out of the well. The well was very hot.’ (A 39:7)
- (17) *+doràna| ’átxa késa flùləla| +dorànlə šámmu lišán-t suràyə hí.* ‘A rolling pin is a round stick like this. Its name is rolling pin in the Assyrian language, yes.’ (B 17:22)
- (18) *’á t-íva bitáya bëta| +ravàyəva ’akúbra| pâkkka t-íva màyu| pólla ju-’ákłat càlla.* ‘When she (the frog) was going home—the mouse was drunk—when the frog was bringing him (the mouse) back, she fell into the hoof print of a buffalo.’ (A 52:6)

The clause in (19) occurs at the end of a section that describes the preparation of yoghurt water (+*davvə*):

- (19) *+davvəna-’anna.* ‘This is yoghurt water.’ (A 5:8)

The construction in (20) is a comment by a jurist on a preceding report of a witness in the court room:

- (20) *mára xób +rába xərbələ ’a-+šúla.* ‘He (the jurist) said “Well, this is a very bad situation.”’ (A 7:10)

In (21) the postposition of the subject expresses a close temporal cohesion of the clause with what precedes:

- (21) *yámmo tila.| +'úxča xdítøla bràta.| +rxáṭa +rxáṭa +bərxáṭøla kam-yàmмо.*  
 'Her mother comes. The girl is so happy, she runs, runs runs up to her mother.' (A 43:12)

Occasionally the enclitic copula is attached to the subject constituent, e.g.

- (22) *'á-ilø xá +bar-nàša.*| 'This is a human.' (A 37:12)

The placement of the copula on the subject can be explained as a reflection of the topical prominence of this constituent. The topical prominence of the referent arises from the fact that it has been evoked in the immediately preceding discourse. This construction is not regularly used with all subject constituents that have been previously evoked. The purpose of the 'heavy coding' of the initial topical subject is to mark a boundary in the discourse, endowing the clause with a distinctness from what precedes. This may mark a new discourse section or give a clause distinctness for the sake of making it more prominent, as is the case in (22), in which the ascription to the subject referent of the property of 'human' is given prominence since it is presented in contrastive opposition to the expectations of those in the speech situation (§ 10.5.1. example 27).

In (23) 'the net' is the subject of the second clause and 'on her' is the predicate. The copula is attached to the subject to give it enhanced prominence. Here also this is topical prominence rather than focal prominence. The construction involves the setting up of two propositions in parallel opposition. The endowment of the subject topic with greater prominence marks the clause off distinctly from the other side of the opposition. In general, the enhancement of the prominence given to a topic marks a discourse boundary with greater distinctness. The topical prominence is also signalled by the nuclear stress.

- (23) *+hám šulxètøla| +hám jàrdøla +állu.*| 'She is naked and also a net is on her.'  
 (A 38:16)

#### 12.1.1.2 Split Predicate

When the predicate is a composite phrase consisting of several constituents, the copula is sometimes placed on the head of the predicate before the dependent elements.

This is frequently the case when the head of the predicate is modified by a dependent prepositional phrase, e.g.

- (1) *xa-mən-dan-šəcvànəvən| xut-ákłat málca.* ‘I am one of those ants under the feet of the king.’ (A 3:66)
- (2) *’axúna +fùrələ-zə katé.* ‘He is the eldest brother in relation to them.’ (A 37:15)

The copula is also sometimes placed on a head noun that is modified by a following adjective, e.g.

- (3) *xá nášəva +rába ... +rába fanatičaya.* ‘He was a very, very fanatic person.’ (B 2:16)

The split of the predicate is regularly found when the head of the predicate has a subordinate clause as its dependent, e.g.

- (4) *+spày-ilə| kat-jú malciyta| t-ávə vazzər kátu.* ‘He is suitable to be a minister for him in the royal court.’ (A 3:16)

### **12.1.2 *Independent Copula***

#### **12.1.2.1 Basic Predicate**

An independent standing copula without a subject constituent may be placed either before or after the predicate:

- (1) *+várəljavay| bëta.* ‘*’ila +xorət +joro.* ‘He enters inside the house. He is the friend of her husband.’ (A 5:13)
- (2) *bəxzáyələ ’ina| a-+Hárun ’ar-Rašíd| vélə tívə.* ‘*’ila +kazi.* ‘He sees that Harun ar-Rashid is sitting there. He is the judge.’ (A 10:9)
- (3) *+rába sivəval ’ina ’íva vazzirət bábət málca.* ‘He was very old, but he used to be the vizier of the father of the king.’ (A 2:14)
- (4) *bas-múdilə ’o-mándi búš +tavána ju-dùnyə?* ‘*márra taxmántət +bar-nàša.* ... *’ila +rába ràba jáldə.* ‘“But what is the fastest thing in the world?” She said “The thought of a man. ... it is very very fast.”’ (A 36:11)
- (5) *+yakúyra ’ila.* ‘It is heavy.’

Constructions such as (1) and (2) occur in clauses that present background information in a narrative without a change in grammatical subject from that of the preceding clause. In (3) the background clause has a different temporal reference from the preceding clause ‘he was old’, the temporal reference of

which is that of the main narrative line. In (4) the independent copula is used to give the clause prominence due to its importance. Example (5) was uttered by a speaker as a parenthetical comment.

The construction is used where the predicate is constituted by the following discourse, e.g.:

- (6) *'ilə xà-dana| caçàla| ðtva| fu-xà| mdita.* | 'It (the story) is (as follows): There was a bald man in a town.' (A 1:1)

#### 12.1.2.2 Clauses Containing a Subject Constituent

Clauses containing an independent copula generally have a subject constituent in the form of an independent pronoun or a nominal. The constructions discussed in § 12.1.2.1., which lack a subject constituent, are far more rarely attested in the text corpus. The subject constituent is regularly placed at the front of the clause before the predicate. In the majority of cases attested in the text corpus the copula is placed before the predicate immediately after the subject:

- (1) *ána 'ivən +'Axíkar.* | 'I am Axiqar.' (A 3:67)
- (2) *šámmət díyyi 'ilə ... +pàllan cás.* | 'My name is so-and-so.' (A 37:8)
- (3) *xá mən-caçála 'ilə +tàjər.* | 'One of the bald men is a merchant.' (A 1:30)
- (4) *bás 'áxnan 'ivax +shàvva.* | 'But we are (only) seven.' (A 37:9)
- (5) *bábət dáha 'iva vázzər ka-bábət málca| kámta.* | 'His father was formerly vizier to the father of the king.' (A 2:14)

If the predicate is a 1st or 2nd person pronoun, the copula agrees in person with the predicate, e.g.

- (6) *+ávva 'ivən àna.* | 'That is me.' (The informant is pointing to a picture of himself)

In (7) an adverbial prepositional phrase intervenes between the subject and the copula:

- (7) *'áha málca káttí 'iva xá +karùvvə| kát +úxča šapíra kàla 'ðtvalə.* | 'This king was for me a rooster, which had such a beautiful voice.' (A 3:81)

Clauses with the independent copula have communicative salience which disjoins them from preceding clauses. They are typically used in identificatory clauses, specifical clauses or clauses that ascribe a permanent property to a subject. Such clauses, by their nature, are more independent of the context

than clauses predicating contingent properties. The placement of the copula after the subject endows the subject topic of the clause with greater prominence. Increasing the prominence of an initial topic is in general a strategy for marking boundaries in the discourse. As we have seen, a copula is occasionally cliticized to an initial subject (§ 12.1.1.2. example 22), in which case it has a similar function of marking topical prominence. The prosodic separation of the independent copula from the subject topic can be regarded as a further device for marking prominence, which is a kind of heavy coding. In sporadic cases this heavy coding is increased by extraposing the subject and resuming it by an independent pronoun, as in (8):

- (8) *míya 'ánnə 'ína 'o-mándi búš xelàna.* | 'Water—it is the strongest thing.'  
(A 38:11)

In (9) an independent copula is placed after an initial prepositional phrase in two successive clauses which are set up in a parallel opposition. Here the copula has an existential function, in that it expresses the existence of an item rather than predicating a property of an item. The prepositional phrases have the status of topics, in that they set the spatial frame for the clause. The placement of the copula after the initial topical prepositional phrases gives prominence to these. The motivation for this is to make a sharp distinction between the two sides of the opposition. In general, the enhancement of the prominence given to a topic marks a discourse boundary with greater distinctness.

- (9) *xut-xáčo 'íla càrvəšl b-xá-'ido-zə 'íla ... tèra.* | 'Under her armpit is a rabbit and in one of her hands is a bird.' (A 38:16)

In (10) an independent copula is placed after the predicate rather than the subject. This clause constitutes an elaborative comment on what precedes.

- (10) *'áyya rásmt díyán 'íla.* | 'This is our custom.' (A 36:16)

These constructions with the independent copula are used, therefore, to mark discourse boundaries (for further details see § 10.5.2.). Due to their function of marking discourse boundaries, the postposition of the subject constituent after the predicate is avoided, since this is a feature of discourse conjoining and continuity.

### 12.1.3 *Deictic Copula*

In this section the use of the deictic copulas in all constructions, including compound verbal forms with deictic copulas, will be considered.

#### 12.1.3.1 Basic Predicate

When the deictic copula occurs in a clause without a subject constituent, it is normally placed before the predicate:

- (1) *dúla xèta.*! 'She is alive.' (A 1:38)
- (2) *dúlə làxxa.*! 'He is here.' (A 6:12)
- (3) *vélə ju-kánna dmíxa.*! 'There he is asleep in the den.' (A 42:25)
- (4) *véna +tàmma.*! 'They are over there.' (A 1:11)

Occasionally it is placed after the predicate, e.g.

- (5) *ju-xá-dana kùnya véla.*! 'It is in a well.' (A 40:3)

#### 12.1.3.2 Clauses Containing a Subject Constituent

When a subject constituent in the clause is placed before the deictic copula, the subject is topical in status. It may have this status due to its being bound in some way to the preceding discourse:

- (1) *'ádi dayyána +hála bùš vélə críba.*! 'Now the judge (already mentioned) is yet more angry.' (A 38:14)
- (2) *'ád-lelə 'ána hal-kedám̩ta tóvli +slúta +sulíli.*! *+jóri dúla bsíma.*! 'This night I sat until the morning and prayed. My husband (previously mentioned) has been cured.' (A 36:17, end of story)
- (3) *jás yám̩mi dùla.*! 'Look, here is my mother (previously mentioned).' (A 44:12)

Indefinite nouns with a specific referent that is newly introduced into the discourse and typically plays a role in what follows are generally placed before the deictic copula, e.g.

- (4) *cmá-šənnə +vərtəla! xá-dana +còban!* *vélə 'ɔrbə!* *+marrúyə +tàma.*! 'Several years have gone by and a shepherd is grazing sheep there.' (A 40:6)
- (5) *xá tanína vélə +'ál xa-brát-málca xítə purtəllələ.*! 'A dragon has wrapped himself around another daughter of a king.' (A 40:17)
- (6) *kárjə véna +bixàlu.*! 'Crows are eating him.' (B 6:7)

In dialogue 1st and 2nd person pronouns are often placed before the deictic copula at the onset of a turn of conversation or a discourse boundary of some sort, e.g.

- (7) *'át +rába dívət sìva.* | 'You have become very old.' (A 3:14)
- (8) *'ána dún +rába sòvta.* | 'I am very old.' (A 39:24)

In (9) the predicate has an enclitic copula in addition to a deictic copula:

- (9) *'ánnə dúna kìdəna.* | *'oyátva ju-màšxa kùlité.* | 'These are burnt. You should have fried them.' (A 36:8, onset of speech)

In (10) the subject is placed in a separate intonation group. This sets up a clear opposition between 'the chickens here' and 'the chickens in the village':

- (10) *ctayatət lāxxa!* *véna máya bíyyə là b-+karúvva.* | 'The chickens here produce eggs without a rooster.' (B 7:4)

The subject constituent may be placed after the copula. In some such cases the subject is topically bound with what precedes and the clause is presented with a greater cohesion with what precedes than subject—copula clauses. In (11) the clause elaborates on the preceding request by pointing out the location of the forest in question. In (12) the initial relative clause with the pronominal head is a grammatical component of the clause containing the deictic copula and so there is clearly close cohesion:

- (11) *xúš kèsə mélan!* *món dáyya mèša.* | *véla méša kùrba.* | 'Go and bring us wood from the forest. The forest is over there nearby.' (A 37:14).
- (12) *mút vítəla!* *'ádi lāxxa!* *véx cùllan vàdo.* | 'What was (there in the village), now here we all make it.' (B 10:5)

In (13) a nominal phrase with a contrastive narrow focus on a numeral is placed after the deictic copula:

- (13) *véna trè 'áklu píšə.* | 'Two of its legs are remaining.' (A 39:28)

An indefinite subject is often placed after the deictic copula when the proposition is the complement of a verb of perception (14) or at least perception is implied (15):

- (14) *bəxzáyən vélə xa-yàlə| mən-xa-bàxtə +tamma| šulxàya.* ‘I see that there is a lad together with a woman over there (both) naked.’ (A 4:11)
- (15) *’ína mèdrə| sódu bitàyələ| vélə céca +támma piša.* ‘But again he is happy (when he sees) there is still a cake remaining there.’ (A 37:4)

#### 12.1.4 *Copula on Focused Elements*

The subject of an ascriptive clause typically expresses given information whereas the property that is ascribed to it typically expresses a new information focus. This is the case in the vast majority of such clauses that are attested in the text corpus. The focus of new information is signalled by the nuclear stress, which is typically placed on the item expressing the property. In some contexts, however, ascriptive copula clauses may have a different information structure, whereby the subject item is the focus of new information and the item expressing the property expresses given information. In such cases the enclitic copula is generally used, rather than an independent or deictic copula, and this usually remains in its position at the end of the clause after the property item. The basic syntactic structure of the predication, therefore, does not change and from a syntactic point of view the property item should still be regarded as the predicate. The nuclear stress, however, is placed on the subject rather than on the predicate. Also the focused element is typically moved to the front of the clause if it is not already situated there.

This is the case in clauses in which the subject is a contrastive focus. In such cases the speaker wishes to correct a misunderstanding by strongly asserting that one particular referent should be selected for the role in question rather than the one currently entertained by the hearer, e.g.

- (1) A: *bábi cpínələ.* B: *là,| +mamùnux cpínələ,| lá bábux.* ‘A: “My father is hungry.” B: “No, *your uncle* is hungry, not your father.”’
- (2) A: *’ávva cpínələ.* B: *là,| ’ána cpínəvən,| lá +’ávva.* ‘A: “He is hungry.” B: “No, *I* am hungry, not him.”’
- (3) A: *bábi ju-bétələ.* B: *là,| +mamùnux ju-bétələ,| lá bábux.* ‘A: “My father is in the house”. B: “No, *your uncle* is in the house, not your father.”’

This applies also to clauses containing compound verbal forms consisting of a copula and resultative participle (*ptixələ, dulə ptixa, velə ptixa*) or the progressive stem (*bəptaxələ, dulə bəptaxa, velə bəptaxa*):

- (4) A: *bábi tìyyələ.* B: *là,| +mamùnux tìyyələ,| lá bábux.* ‘A: “My father has come.” B: “No, *your uncle* has come, not your father.”’
- (5) A: *brúni +bixálələ ju-bèta.* B: *là,| ju-càrma +bixálələ,| lá ju-bèta.* ‘A: “My

son is eating in the house". B: "No, he is eating *in the vineyard*, not in the house."

When the subject of an equative copula clause is in contrastive focus, this item takes the nuclear stress and the predicate normally takes the enclitic copula, e.g.

- (6) A: *Yósəp* 'ílə +xòran.| B: *là*,| *Yònán* +xóran-ilə.| 'A: "Yosəp is our friend." B: "No, Yònán is our friend."

When a speaker wishes to give a particularly strong contrastive focus to an item, the copula may be moved from its normal position and cliticized to the focused item, thus:

- (7) A: *bábi ju-bétələ*.| B: *là*,| +mamùnux-ilə ju-béta,| *lá bábux*.| 'A: "My father is in the house". B: "No, *your uncle* is in the house, not your father."
- (8) A: *bábi cpínələ*.| B: *là*,| +mamùnux-ilə cpína,| *lá bábux*.| 'A: "My father is hungry." B: "No, *your uncle* is hungry, not your father."
- (9) A: +'ávva cpínələ.| B: *là*,| 'ànəvən cpína,| *lá* +'ávva.| 'A: "He is hungry." B: "No, I am hungry, not him."
- (10) A: *Yósəp* 'ílə +xòran.| B: *là*,| *Yònán*-ilə +xóran.| 'A: "Yosəp is our friend." B: "No, Yònán is our friend."
- (11) A: *bábi tìyyələ*.| B: *là*,| +mamùnux-ilə tíyya,| *lá bábux*.| 'A: "My father has come." B: "No, *your uncle* has come, not your father."
- (12) A: *brúni* +bixálələ ju-béta.| B: *là*,| *ju-càrmələ* +bixálə,| *lá ju-béta*.| 'A: "My son is eating in the house". B: "No, he is eating *in the vineyard*, not in the house."

This movement of the copula is highly marked in the C. Urmi dialect and is rarely used. Only a few sporadic examples are found in the text corpus, e.g.

- (13) +'ávun-va cíllə 'a-+'átrət díyyi| *tajbúru*.| 'He used to administer all this land.'  
(A 48:27)

The vast majority of clauses with narrow focus that are attested in the text corpus do not exhibit such movement:<sup>1</sup>

---

<sup>1</sup> The movement of the copula onto the focused item is more frequent in some other NENA

- (14) +‘av *krímələ*.<sup>1</sup> ‘He has won (not you).’ (A 22:4)
- (15) +‘arabánət *dīyyi dáltolə*.<sup>1</sup> ‘My cart (not your mare) has given birth to it.’ (A 38:4)
- (16) ‘á *dúlə cílla nákvə xumyèl* ‘urzə +*ktilélə*.<sup>1</sup> ‘He has preserved all the women and has killed the men.’ (A 2:23)
- (17) ‘át *xšívət* +‘*vvā kíməl* +*al-jánux*.<sup>1</sup> ‘You thought that *he* (not the animal) mounted you.’ (A 5:18)
- (18) ‘an-cmá šánnə ‘ána *plíxən*.<sup>1</sup> ‘For so many years have *I* worked.’ (A 25:1)
- (19) ‘ína ‘íman *bəfrásələ* ‘áy *bəjrášəla* *kátlə* sáb *lélə* +*msáya jarášla*.<sup>1</sup> ‘But when he pulls it (the waterskin), *it* pulls *him*, because he cannot pull it.’ (A 37:15)
- (20) ‘ána +*várən*! *kaṭunti* +*pláṭələ*.<sup>1</sup> *kaṭunti* +*várələl* ‘ána +*pláṭən*.<sup>1</sup> ‘I come in and my cat goes out. My cat comes in and *I* go out.’ (A 42:13)

In (21)–(23) the focus is inclusive:

- (21) ‘ú +*hàji-da bərráxšələ* +*hàmmam*.<sup>1</sup> ‘And also the pilgrim goes to the bath-room.’ (A 1:6)
- (22) *bəxzáyələ* ‘áy-zə *dúz-ila*.<sup>1</sup> ‘He sees that this also is true.’ (A 38:11)
- (23) *xamšámma-da* ‘áva *mattúyələ*.<sup>1</sup> ‘He also puts down five hundred.’ (A 7:18)

### 12.1.5 *Interrogative Predicates Containing the Copula*

The predicate of a copula clause may be an interrogative particle or phrase, e.g.

- (1) *mànīlə?* ‘Who is he?’
- (2) *mù-iłə?* ‘What is it?’ (A 3:47)
- (3) *mù-ina?* ‘What are they?’ (A 3:56)
- (4) *mù-ivət?* ‘What are you?’ (A 3:82)
- (5) ‘ícələ?’. (A 3:50)
- (6) ‘əm-bətələ?’. ‘Which house is it?’

In (7) a pronominal suffix is attached to the interrogative particle *mudi* in an idiomatic expression:

- (7) *mùdyux-iva?* ‘What was wrong with you?’ (A 37:21)

---

<sup>1</sup> dialects; see Khan (2002, 396–402) and Khan (2008a, 677–691, 824–827) for descriptions of the situation in the dialects of Qaraqosh and Barwar respectively. In the Jewish dialect of Urmi the position of the copula is completely fixed and it is never moved from its canonical position after the predicate (Khan 2008b, 317–318).

When a clause with an interrogative particle as predicate contains also a subject constituent, the subject constituent is placed either before or after the predicate. Examples of subjects before the predicate:

- (8) *+tína b-dokíla móñ ... túyna. | túyna mù-ilə?* ‘They bind the mud with straw. What is straw?’ (B 14:7)
- (9) *+jór dá-baxta 'icələ?* ‘Where is the husband of this woman?’ (A 2:7)
- (10) *bas-ànnə mó-iná láxxa?* ‘But what are these (people) here?’ (A 2:7)
- (11) *'at-mànivət kat-málca +šùdrux=la?* ‘Who are you that the king has sent?’ (A 3:65)

The basic principle determining the position of the subject is the same as in assertive clauses. The placement of the subject in initial position before the predicate typically marks some kind of boundary in the discourse, whereas a topical subject is postponed after the predicate when the speaker wishes to present that clause as having greater cohesion with what precedes. In (8) the clause occurs at the beginning of a section of discourse that supplies an explanatory comment on what precedes. The clauses in (9)–(11) occur at the beginning of speech turns. The constructions in (9) and (10) introduce new topic referents and so are orientated to the succeeding discourse rather than cohering with what precedes. In (11) the use of the independent pronoun in initial position marks the clause off from what precedes and so gives the question added prominence.

The nuclear stress is by default placed on the interrogative predicate, as in examples above except (10), in which the subject takes the nuclear stress due to the fact that it is presented in a contrastive opposition to the referent in the preceding question (9).

The subject constituent is postponed in various contexts where the clause is presented by the speaker as cohesive with what precedes. In (12)–(15) the question concerns a particular referent that has been evoked in the preceding turn in the dialogue.

- (12) *ka-bàxtu mórrə | kàt | +xàyəš vádən | á +bùsra | 'odátlə +tuyàtə. | +berášə baš-làtlə | 'ána t-avili-'ärxa. | +málla bərráxšəl +bár pəlxánu. | ... +berášə bitáyələ +màlla, | mára bas-cèla +búsra?* ‘He said to his wife “I would like you to make this meat into kebabs. Cook it in the evening, I shall have guests.” The mullah goes about his business. ... In the evening the mullah comes and says “But where is the meat?”’ (A 11:1–2)
- (13) *b-šàrt t-odánnə 'a +šúla. | mára mù-ilə šártux?* ‘“I shall do it on one condition.” He says “What is your condition?”’ (A 1:41)

- (14) *'áha márət fnáyəla.* | *mù-ila fnáyo?* | “It is guilty of a crime.” “What is its crime?”” (A 3:80)
- (15) *célə* | *é çàççə?* | ‘Where is the girl?’ (A 51:9)

If the interrogative element is the subject of a copula clause, the copula is generally placed after the particle rather than after the predicate. The copula may be enclitic or independent, e.g.

#### Enclitic copula

- (16) *mánilə hàccəm?* | ‘Who is a doctor?’
- (17) *mánilə ju-bèta?* | ‘Who is in the house?’
- (18) *'ámnela úrxə xàtta?* | ‘Which of them is a new road?’
- (19) *'əm-+sárbaz-ilə buš-+spày?* | ‘Which soldier is the best?’
- (20) *múdilə o-mándi búš xelàna ju-dúryə?* | ‘What is the strongest thing in the word?’ (A 38:7)

In such constructions the nuclear stress is in principle put on the predicate. The placement of the copula on the subject can be explained as a reflection of the topical prominence of this constituent. It is not topically prominent in the sense that it is referentially bound to the preceding discourse, but rather due to the fact that it is the central concern of the clause which is typically expected to be talked about in the following discourse. This may be termed ‘forward-pointing’ topical prominence (for this concept see Khan 2008a, 627).

The nuclear stress is placed on the interrogative subject constituent when the predicate is a component of the presuppositional background the clause. The prosodic pattern *mánilə ju-béta*, for example, would typically be used when the speaker assumes that the hearer is entertaining the presupposition that somebody is in the house.

#### Independent copula

- (21) *máni 'ílə hàccəm?* | ‘Who is a doctor?’
- (22) *máni 'ílə ju-bèta?* | ‘Who is in the house?’
- (23) *'ámne 'ílə úrxə xàtta?* | ‘Which of them is a new road?’
- (24) *'əm-+sárbaz 'ílə buš-+spày?* | ‘Which soldier is the best?’

The independent copula is generally used when the predicate is not a component of the presuppositional background of the clause and so the nuclear stress is placed on the predicate.

Examples of the copula placed on other types of interrogative particle include (25), where it is cliticized to an adverbial interrogative:

- (25) *ka-mú-inə +ràba?* ‘Why are they so many?’ (A 37:17)

In clauses with compound verbal forms the copula component is likewise often cliticized to the interrogative element at the front of the clause. In (26)–(30) the nuclear stress is on the interrogative element since the remainder of the clause is presuppositional:

- (26) *mù-ilə výya?* ‘What has happened? (I assume that something has happened judging by your appearance).’ (A 2:15)  
 (27) *mànìlə ka-díyyux tunyé?* ‘Who has told them to you? (I assume that somebody has told them to you).’ (A 38:12)  
 (28) *ka-mù-itun cálva?* ‘Why have you stopped? (I can see that you have stopped).’ (A 3:72)  
 (29) *'a-mú-ila +šrá bəllá +tàmma?* ‘Why is a lantern burning there?’ (A 2:4)  
 (30) *mút-inə tanùya?* ‘What do they say?’ (A 3:51)

The movement of the copula onto the interrogative element is not, however, obligatory in interrogative copula clauses or clauses containing a compound verbal form. Many examples are found that do not exhibit such movement, e.g.

- (31) *máni hàccəm-ilə?* ‘Who is a doctor?’  
 (32) *máni ju-bètələ?* ‘Who is in the house?’  
 (33) *'ámne 'úrxa xàttela?* ‘Which of them is a new road?’  
 (34) *'əm-+sárbaž buš-+spày-ilə?* ‘Which soldier is the best?’  
 (35) *mú vítəla?* ‘What has happened?’ (A 40:8)  
 (36) *kám xá-xča +naràhat-ivət?* ‘Why are you so upset?’ (A 2:15)  
 (37) *mú vádət ləxxa?* ‘What are you doing here?’ (A 29:1)  
 (38) *mù mårət?* ‘What are you saying?’ (A 3:82)  
 (39) *'a-mút +šúla vídəvət?* ‘What work have you done?’ (A 2:24)  
 (40) *'ána mut-xərbayúta kátxux vídənva! kat-átən 'á-+šula vódlux b-riši?* ‘What evil had I done to you that you did this to me?’ (A 3:27)  
 (41) *'a-mù vídələ?* ‘What has he done?’ (A 2:23)  
 (42) *kám càlyatun?* ‘Why have you stopped?’ (A 3:59)  
 (43) *mónnux mùt +xítəla?* ‘Why is it hidden from you?’ (A 2:17)  
 (44) *'a-+kátu +héyvan kákx mú vòttəla? mü vóttəla ka-díyyux kat-xà-xča mxáyot?* ‘What has this cat, this animal, done to you? What has it done to you that you beat it so much?’ (A 3:80)

- (45) *+al-mú bədmàyələ?* ‘What does he resemble?’ (A 3:63)
- (46) *'ən-'ána yávən +sàra,| nášət xut-'ídət díyyi mùdi vâyəna?* ‘If I am the moon, what are the people under my hand?’ (A 3:61)
- (47) *'ica bərrássət?* ‘Where are you going?’ (A 52:1)

Examples of interrogative clauses containing an existential particle:

- (48) *mú-'at +xàbra?* ‘What news is there?’ (A 2:15)
- (49) *mù-'ətlux tánət káti?* ‘What do you have to tell me?’ (A 2:25)

### 12.1.6 Existential Usage

In a few cases the enclitic copula is used simply to predicate the existence of a referent rather than ascribe some property to it or identify it with another item.

#### 12.1.6.1 Meteorological Expressions

This is most commonly found in meteorological expressions, where English would generally have an impersonal subject, e.g.

- (1) *xàmmələ.* ‘It is hot’ (literally: There is heat).
- (2) *kàrtəla.* ‘It is cold’ (literally: There is cold).
- (3) *màž-ilə.* ‘It is foggy (literally: There is fog).’
- (4) *béta xàčələ. jári +páltənju-dárta +bàrəl,| +ṭavíyən +bàro.* ‘It is dark in the house (literally: There is darkness). I must go out into the yard (where) there is light and look for it.’ (A 27:1)
- (5) *'é-+danət sátvə tìyyələ| táljələ| cùl díyca kàrtəla,| késə látłun| jári 'é-+dana ázi késə máyyi.* ‘When winter has come, there is snow, and everywhere there is cold, (if) they do not have wood, they must then go and fetch wood.’ (A 37:13)

In some expressions of this nature the experiencer is expressed by a pronominal suffix, e.g.

- (6) *xàmmila.* ‘I am hot (literally: There is my heat).’
- (7) *xámmələ +àlli.* ‘I am hot (literally: There is heat on me).’

By contrast ‘I am cold’ is expressed by a verb with the experiencer as subject:

- (8) *xabùləvən.* ‘I am cold.’ (*xabəl* II ‘to be cold’)

The verb *xayəm* I ‘to become hot’ is used with an animate subject only to denote sexual heat, or with an inanimate subject:

- (9) *bəxyàmələ*.! ‘He is on heat.’
- (10) +čáydan mút xəmtəla!.! ‘How hot the kettle has become!’

The pattern III verb *maxyəm* III ‘to cause to be hot’ is used to form the causative of all senses, e.g.

- (11) *xəmmux-ilə*.! ‘You are hot’—šámša bət-maxyəmmàlux.! ‘The sun will make you hot.’
- (12) *bəxyàməvət*.! ‘You are on heat’—áha báxta bət-maxyəmmàlux.! ‘That woman will turn you on (sexually).’

If the predicate of a meteorological expression is an adjective, the copula agrees with a subject such as *údyu* ‘today’, e.g.

- (13) *údyu +muṭrànələ*.! ‘Today it is rainy.’
- (14) *údyu šəmšànələ*.! ‘Today it is sunny.’
- (15) *údyu +ayvànələ*.! ‘Today it is cloudy.’

#### 12.1.6.2 Expressions of Sound

An existential copula is regularly used in constructions expressing sound that contain compound verbal nouns of the pattern *CəCCá-CəC* (or closely related patterns, § 4.25.4.8), e.g. *kəžžá-kəž* ‘rattling’, +šərrá-+šər ‘plashing sound’, +mərrá-mər ‘whining sound’. These verbal nouns, which are formed productively from quadrilateral verbal roots expressing sounds, are feminine in gender and so take the 3fs. copula, e.g.

- (1) *kəžžà-kəž-ila*.! ‘There is a rattling noise.’
- (2) +šərrá-+šər-ila!.! ‘There is a plashing sound.’
- (3) +mərrá-+mər-ila!.! ‘There is a whining sound.’

If a noun that is the source of the sound is included in the clause, this is a dependent modifier of the verbal noun. It is often placed at the front of the clause and resumed by a co-referential pronominal suffix on the verbal noun. In such cases the verbal nouns are generally split into two separate stress units, e.g.

- (4) *+múṭra kóžža kóžžola.* ‘The rain is rattling’
- (5) *+uśita jórra jórrola.* ‘The avalanche is making a rumbling noise.’
- (6) *náti čónna čónnola.* ‘My ear is buzzing’
- (7) *+kátu +márra +mòrrola.* ‘The cat is whining’
- (8) *cálba +vásta +vàstula.* ‘The dog is whining’
- (9) *+tárpa xóšša xóššela.* ‘The leaves are rustling’
- (10) *míyya +sórra +sórrèla.* ‘The water is making a plashing sound’
- (11) *’ánnə násə cmá čákka čákkelä!* ‘How those people chatter!’

The copula may also be deictic, as in (12)

- (12) *dívə véla závvva zárvé.* ‘The wolves are howling’

Alternatively the noun expressing the source of the sound follows the verbal noun and its dependency is expressed by nominal annexation. When the annexation suffix is added the form is likewise generally split into two separate stress units, e.g.

- (13) *jórra jórrat míyyala.* ‘There is the prattling of water’
- (14) *čárra čárrat násela.* ‘There is shouting of people’
- (15) *čávvva čávvat sàprala.* ‘There is a sound of the twittering of sparrows.’

The source of the sound is typically fronted if it has some topical connection to what precedes, whereas it is postposed if it is being newly introduced into the discourse.

These constructions with the verbal noun are equivalent semantically to clauses containing the verb from the same root, e.g.

- (16) *náti čančúnala.* ‘My ear is buzzing’
- (17) *kátu +marmùrsla.* ‘The cat is whining’

A pronominal suffix alone expresses the source of the sound pronominally, e.g.

- (18) *hárra hòrrula.* ‘He is laughing loudly’

The copula is often omitted when the construction expresses the circumstantial background of adjacent clauses (§ 12.4), e.g.

- (19) *dmòxlə, +xárra +xárru hàl móriša.* ‘He slept, snoring until morning’  
(A 45:5)

- (20) *'áyən=da +hàyan| tòvla,| víla bàxya,| +bárра +bárro bàxya.* | 'She, the poor beast, sat down and started crying, wailing and crying.' (A 51:3)

The copula is omitted also in other contexts in accordance with the general principles for the omission of the copula. In (21), for example, it is omitted after a verb of perception (§ 13.1.8.1.):

- (21) *jášək 'ína 'ánnə +zàyə| síra sirè,| +vásta +vástè.* | 'He looks, he sees that the young are yelling and whining.' (A 53:3)

The construction is negated by the negative copula, e.g.

- (22) *+kátu lèla +márra +màrro.* | 'The cat is not whining'  
 (23) *lèla čárra čárrux.* | 'You are not shouting'

When the source of the sound is questioned by using an interrogative particle, this is placed either before or after the verbal noun, e.g.

- (24) *mut +təppà-+təp-ilə?* | 'What is that sound of stamping?'  
 (25) *mút +márča +mərčoxun-la?* | 'What is that loud sucking noise (of kissing) that you are making?'  
 (26) *jórra jórrat mudila?* | 'What is that rumbling sound?'

It can be seen that when it precedes the verbal noun there is no resumptive pronoun, in contrast to constructions with referential nouns.

The verbal noun is also used in other constructions in which it is the subject of various intransitive verbs such as the following:

- (27) *jerrá-jər-ilə bitàya.* | 'A rumbling noise is approaching.'  
 (28) *xá čənná-čən npálta-la fu-nàti.* | 'There is a buzzing in my ear.'  
 (29) *mút zəvvá-zəv npálta-la b-dívə!* | 'What is that howling among the wolves?'

The causative of the constructions with the copula is expressed by the cognate verb, e.g.

- (30) *nàti čórra čérrola.* | 'My ear is buzzing.'—*a-kála +ráma bət-çarçérrola nàti.* | 'This loud noise will make my ear ring.'

Both the form and the syntax of the type of verbal nouns described above that express sounds have been borrowed from Kurdish. For examples of the form of

such nouns in Kurdish see § 4.25.4.8. Examples of the syntax, with an existential type of copula are (31) and (32):<sup>2</sup>

### Kurmanji

- (31) *šȋrešȋr-a baran-ê-ye*  
           rattling-EZ.FS rain-OBL.FS-COP.3SG  
       ‘The rain is rattling’

### Mukri

- (32) *manga bȏrebȏr-ye-t-ī*  
       cow low-COP.3SG-GLIDE=3SG  
       ‘The cow is lowing’

### 12.1.6.3 Other Cases

- (1) *hàl dé-+danta| +ràba +dánəla.* ‘Until that time there is much time.’ (A 2:18)
- (2) *é-+danət ána zúyza muttíli làxxa| ’íva xá-dana +’ayva| clítəva +’ullul m-rišan.* ‘When I put the money here, there was a cloud, which was standing over our head.’ (A 29:1)
- (3) *bàxzàyələ| ’ína xa-bàxčələ| +’úxča šapərta.* ‘He sees that there is a garden, which is so beautiful.’ (A 39:10)
- (4) *xá-dana bràtələ| ju-dé +’átra xíta.* ‘There is a girl in another land.’ (A 40:9)
- (5) *xá-dana ... marjanítələ| ju-xá-dana kùnya véla.* ‘There is a pearl, it is in a well.’ (A 40:3)
- (6) *sənjiyyəva,| jòzəva,| cəšmišəva,| ’ànnə=zə b-xamíva.* ‘There were jujube fruits, walnuts, raisins. They preserved these.’ (B 1:25)
- (7) *+táma miyyəna.* ‘There is water there.’ (B 17:18)
- (8) *’ánnə fnayèla.* ‘It is their fault (literally: their fault is).’ (A 45:12)

### 12.1.7 Clauses Containing a Negative Copula

The negative copula is in principle placed before the predicate. The most basic construction consists of a simple nexus of copula and predicate, e.g.

- (1) *lèla bšálta.* ‘It is not cooked.’ (B 12:7)
- (2) *léna +xlúma* ‘They are not thick.’ (B 14:6)

---

<sup>2</sup> I am grateful to Ergin Öpengin for supplying me with the data on Kurdish.

- (3) *lélə +t̪òlyá.* ‘He is not asleep.’ (A 37:19)
- (4) *léva pr̪òšta.* ‘It was not different.’ (B 2:3)
- (5) *léva ’áxči ju-mátat díyyan.* ‘It was not only in our village.’ (B 2:5)

When the clause contains a subject constituent, this is generally placed before the predicate, e.g.

- (6) *’axúnax lélə míta.* ‘Your brother is not dead.’ (A 1:14)
- (7) *+málla lélə béta.* ‘The mullah is not at home.’ (A 18:2)
- (8) *+jóri lélə láxxa.* ‘My husband is not here.’ (A 6:5)
- (9) *bétat díyi lélə +tlá tabákə.* ‘My house is not three floors.’ (A 7:16)
- (10) *márət díyyi lélə xšíxa | kat-’ána ’átxa hamzámmən bázú.* ‘My master does not need me to speak about him like this.’ (A 3:64)

In (11) additional prominence is given to negation by placing the deictic copula before the negative copula:

- (11) *+bár ... xà-+sa’at, | trè +sa’áttə, | bitáyəna kat-xázi ’ádi šlikələ | bšilələ | bəxzáz-yəna là, | dílə +áynu praxé | +hála táza +bərràša. | ’aybó ’á dílə lélə míta.* ‘After an hour or two, they come to see if he has been boiled and cooked by now, but they see that no, he is rubbing his eyes and is just now waking up. Alas, he is not yet dead.’ (A 37:21)

The negative copula is sporadically placed after the predicate. This is attested in contexts such as (12), in which the clause is a comment that is presented as a tag to the preceding remark and not the onset of a new discourse section.

- (12) *+’úxča tálja ci-+rayyíva. | ’ádi! xína ’áx kámta lélə.* ‘So much snow used to fall. Now it is not like before.’ (B 2:19)

## 12.2 The Existential Particles

The existential particles (*’ət*, *’ətva*, *lat*, *latva* and their variants) are placed either before or after the nominal with which they are combined.

### 12.2.1 Particle—Nominal

Constructions in which the positive existential particle is placed before the nominal are typically used to introduce at the beginning of a narrative referents that play a major role in what follows, e.g.

- (1) *'átvə xa-dana-màlca.*! 'There was once a king.' (A 2:1)  
 (2) *kám̥ta 'átvə xa-dána nàša.*! 'Once there was a man.' (A 7:1)

The construction is also used to introduce new referents within the body of the narrative that typically have durability over the succeeding clauses, e.g.

- (3) *+táma 'átvə +šavvá dèva.*! 'There were seven monsters.' (A 37:7)

This construction is used at the beginning of a new episode to introduce the spatial frame within which the events take place, e.g.

- (4) *kúrbət mdíta 'átvə bət-+kúravàtə.*! 'Near the town there was a cemetery.' (A 1:10)  
 (5) *+táma 'átvə xa-dána bëta,*! *'ína xrìva.*! 'There was a house, but (it was) a ruin.' (A 1:26)

### 12.2.2 *Nominal—Particle*

Constructions in which the existential particle is placed after the nominal are often used to introduce incidental referents that have no durability in the discourse, e.g.

- (1) *xa-náša 'áttən ju-+dùssa[k]! bədmáyələ +'àlli.*! 'There is a man in jail who resembles me.' (A 3:35)  
 (2) *+jàllad 'átvə +táma.*! 'There was an executioner there.' (A 1:40)  
 (3) *xa-cípa +rába +júra 'átvə +'àllu.*! 'There was a large stone on it.' (A 39:7)

The construction is used also when the fronted nominal is set up in an opposition with another referent, e.g.

- (4) *xá-sama xína-da +álma 'áttən kat-ci-táni mən-jíbət nipùxta!* <sup>P</sup>*méye pox-*  
*tè.*<sup>P</sup>! 'There is another group of people [opposed to the proponents of the aforementioned opinion] who instead of *nipuxta* say *meye poxte*.' (B 12:8)

It is also used in contexts such as (5), in which the referent of the nominal has already been introduced and the clause coheres with what precedes:

- (5) *bətxàràt! xa-kàssat 'átvəl xa-+tàjər 'átvə?*! 'Do you remember there was a story, there was a merchant?' (A 1:29)

### 12.2.3 Particle Alone

In certain contexts the existential particle is used by itself, without any other clause constituents. It may refer anaphorically to a referent in the previous discourse, e.g.

- (1) *'áni céca +bixalèla +tárrat dàrta-za šváktula ptíxa. baxzáyala +tárrat dárta-za 'òttən.'* 'He eats the cakes. She has left the door of the courtyard open. He sees that there are some at the courtyard door.' (A 37:4)

### 12.2.4 Negation of Existential Particles

The nominal that complements the negative existential particle is generally placed before the particle.

- (1) *+čára lát.* 'There is no solution.' (A 35:9)  
 (2) *é-+danta telefóna melefóna látva.* 'At that time there were no telephones and the like.' (A 2:2)  
 (3) *náša xína látva kát ka-díyyux xa-šácvána +šúdrəla cəs-xa-málcat Màssər.* 'Were there no other people, that he sent you, an ant, to a king of Egypt?' (A 3:66)  
 (4) *xá-’axča móndi látta.* 'Such a thing does not exist.' (A 36:14)

A modifier of the nominal may be placed after the particle, e.g.

- (5) *náša lát! kat-’á-məndi ’avàdlə.* 'There is nobody who can do this.' (A 3:45)  
 (6) *’ína kála lát mən-báxta.* 'But there is no word about the woman.' (A 1:16)

In (7) and (8) the nominal is definite:

- (7) *+málla bəspàrlə, bəspàrlə ’a-náša lát +hála.* 'The mullah waits and waits, but the man is still not there.' (A 21:3)  
 (8) *+’ávva húšu látva b-ríšu.* 'This one's mind was not in his head (i.e. He was not composed).' (A 10:6)

This syntax may be compared to the practice of placing incidental referents before the positive existential particle. Items the existence of which is negated clearly do not have any durability in the following discourse.

In (9) the nominal is placed after the negative copula. This seems to have been a strategy to express a contrastive opposition between the 'shoes' (*+solə*) and the 'sandals' (*čaruxə*) by paralleling the clause-final position of the 'sandals' in the first clause.

- (9) *kámta náša ci-lošíva 'annə-čariùxa. lètva +sóla.* 'In the old days people used to wear sandals. There were no shoes.' (A 4:2)

When two clauses are set up in parallel, the positive particle may be negated by placing the negator *la* at the front of the clause before the nominal complement, e.g.

- (10) *lá dàvə 'áttən. lá 'o-nàša 'áttən.* 'Neither are the gold coins there nor is the man there.' (A 10:8)

### 12.2.5 *Interrogative Predicates Containing the Existential Particle*

When an interrogative clause with the existential particle contains an interrogative particle, the existential particle is generally placed after this at the front of the clause, e.g.

- (1) *mú-'ot +xàbra?* 'What news is there?' (A 2:15)

### 12.2.6 *Possessive Constructions*

The existential particles are commonly used together with L-suffixes to express possession. The item possessed is placed either after or before the particle.

#### 12.2.6.1 Particle—Possessed Item

- (1) *'òtvalə 'øští-danə baxtàta.* 'He had sixty wives.' (A 3:2)
- (2) *'átlí trè +xábra kátxus tánən.* 'I have two words to tell you.' (A 2:25)
- (3) *bøjrásəla kátu| sáb lèlə +msáya jarášla, látlə xèla.* 'It pulls him, because he cannot pull it, he does not have strength.' (A 37:15)
- (4) *'átlux 'øsrí +dinàrə?* 'Do you have twenty dinars?' (A 30:6)

#### 12.2.6.2 Possessed Item—Possessor

- (1) *+rába čátun šømma 'átlə.* 'He has a very difficult name.' (A 3:47)
- (2) *cúllə móndi 'òtli.* 'I have everything.' (A 3:86)
- (3) *+'úxča šápíra kálə 'átvälə.* 'He had such a beautiful voice.' (A 3:81)
- (4) *+kúsárta +júrta látli.* 'I do not have a big pot.' (A 8:1)
- (5) *'ína yálə látvalə.* 'But he did not have children.' (A 3:2)
- (6) *késə látłun| jári é-+dana 'ázi késə máyyi.* '(If) they do not have wood, they must then go and fetch wood.' (A 37:13)

### 12.2.6.3 Possessor Expressed by a Nominal or Independent Pronoun

If the possessor is expressed by a nominal or independent pronominal form, it is not made the complement of the preposition *l-* but rather is extraposed and cross-referenced by an L-suffix. This reflects the fact that the L-suffix has acquired the properties of verbal inflection as is the case in the *ptəxlə* form of the verb. In most cases the subject is placed at the front of the clause, e.g.

- (1) 'á cačálal' átlə +xábra mən-da-báxta. | 'This bald man has a report concerning this woman.' (A 1:36)
- (2) 'áxnan' átlan xayúyta šap̄ərta. | 'We have a beautiful life.' (A 5:4)
- (3) 'ána' átlí +xábra. | 'I have news.' (A 1:37)
- (4) 'átən' átvalux kvláta mən-+hàjì? | 'Did you have a complaint about the pilgrim?' (A 1:44)
- (5) +tájər' átval xa-báxta +rába šap̄ərta. | 'The merchant had a very beautiful wife.' (A 1:4)
- (6) 'ùl +hàjì' átvala xá-dana riža. | 'Now, the pilgrim had a servant.' (A 1:7)
- (7) 'ína' +Axíkar +xábra lòtlə. | 'But Axiqar had nothing to say (literally: he had no word).' (A 3:19)

Occasionally the possessor is placed after the existential particle. This is attested with a postposed independent pronoun in (8)–(11). The motivation appears to be to give the clause prominence through the heavy coding of the participants:

- (8) dàžmən' átli 'ána. | 'I have an enemy.' (A 43:2)
- (9) màyolə, háč-məndi lòtlun 'ánnəju-béta. | 'He brings her back, but they have nothing in the house.' (A 35:6)
- (10) xá náša lòtlux' átən. | 'You have nobody.' (A 36:1)
- (11) 'átlux +xábra' átən' mən-da-báxta tlàktal' ó mòtta, báxtat +hàjì' mán +tájər? | 'Do you have any news of the woman who has disappeared or died, the woman of the pilgrim, (taken) from the merchant?' (A 1:36)

In (12) and (13) the possessive constructions with the postposed independent pronoun supply supplementary background material regarding a referent mentioned in the preceding clause:

- (12) +bár clétat +rətxu| bədráyunaju-de-+kazànča. | 'átlə' áyən csèta, macùsona. | 'After its boiling stops, they put it in the pan. This has a lid and they cover it.' (B 17:18)

- (13) 'áni 'átle kánnatjanè,| kutíyyatjanè.| 'ásla +bàzza 'áyən.| 'áni +plátəna +várə-na +xálta vágəna ka-janè.| 'They have their own nest, their own box. It has a hole. They go out and come in, making food for themselves.' (B 17:43)

A nominal is postposed in (14), which is an elaborative tag at the end of a story, cohering with what precedes:

- (14) 'áyya-da xá +manáy jàno 'ásla xína 'a-məttálta.| 'This story has its own meaning.' (A 48:35)

Ongoing possession may be expressed by a form of the verb *payəš* I 'to remain,' with the possessor expressed by an L-suffix, e.g.

- (15) 'átl xácmá mənné t̄-avile pyáša| ju-<sup>R</sup>patvál,<sup>R</sup>| atíkə t̄-avíle,| 'ína 'áni 'ádi xína lèna maplúxa.| 'There are some who still have some in the basement, who have old ones, but they do not use them anymore.' (B 17:56)

For possessive constructions with the verb *ávə* I see the following section.

### 12.3 Predications with the Verb *ávə* I

In various contexts, which have been fully described in § 10.12., the copula and existential particle are replaced by a form of the verb *ávə* I. Here we shall restrict ourselves to some remarks concerning the word order of predications with this verb.

When the verb in the predicate of a main clause expresses a generic or habitual sense, it is often placed after the other constituents, e.g.

- (1) 'up-bétət tanùiyra| +rába šaxína c-ávə.| 'Also, the oven house is very hot.' (B 14:2)
- (2) ju-máta| buxaríya 'átl-kësa c-ávi.| 'In the village stoves are of wood.' (B 14:3)
- (3) +rába basíma c-ávə, vá +tamàna c-ávə m-dó kát bí ... +nùytal b-+jazìyl váguna.| 'It is very delicious and is more tasty than the one that they make (in stoves fuelled) with oil or diesel fuel.' (B 14:4)
- (4) max-þòlla c-ávə ká-sàtvə.| 'It is like grass for winter.' (B 14:7)
- (5) +rába sodànta c-oyáva.| 'It was very pleasant.' (B 14:2)
- (6) +turšíyya +rába basíma c-avíva.| 'The pickles were very tasty.' (B 7:16)
- (7) +baǵvànə c-avíva| 'They used to be vineyard-keepers.' (B 2:7)
- (8) +ullíylu-da kësa p̄t-ávə.| 'Above it is a (beam of) wood.' (B 14:6)

- (9) *'e-xítə jəns p̄t-óya.* 'The other one will be good.' (A 44:5)
- (10) *'átxa čúp!* *kürba +al-'uydàlə t-ávi-xina.* 'Thus, thud, they are near to one anaother.' (B 14:6)

The frequent posposition of the verb *'avə* to the end of the predicate in generic/habitual main clauses is no doubt by analogy with the position of the copula in main clauses. This has come about due to the semantic proximity between this generic/habitual function of the verb and the function of the copula.

When used in contexts other than these generic/habitual main clauses, the verb *'avə* is generally placed before the predicate constituents, e.g.

- (11) *'ávən +xlápux.* 'May I be your substitute.' (A 3:52)
- (12) *t-ávə brùna kátux.* 'He will be a son for you.' (A 3:6)
- (13) *'ána ḳa-díyyux mulàpli!* *'ávət +spày.* 'I taught you to be good.' (A 3:90)
- (14) *ví macìxa.* *ví xubbàna.* *ví jaxùca.* *ví +spày náša.* 'Be humble. Be loving. Be jolly. Be a good man.' (A 3:13)
- (15) *lá-'avət +rába šaxìna.* *lá-'avət +rába +kàyra.* 'Do not be very hot. Do not be very cold.' (A 3:9)

If the clause contains a subject constituent, this is generally placed before the verb. Examples:

- (16) *clítəla mÙjjur béta 'ávə.* 'It depends on how the house is.' (B 14:13)
- (17) *'ána lè-+bayyən! hác xa-+šrà! óya ju-màta.* 'I do not want any lantern to be in the village.' (A 2:1)
- (18) *'àxči! ju-+átrət díyyi áha móndi 'ávə!* *'ána lè kablónnə.* 'But I do not accept that this thing should be in my land.' (A 2:12)
- (19) *'ən-'ána 'ávən +sàra!* ... 'If I am the moon ...' (A 3:61)
- (20) *'én béta 'ávə +jùra!* ... 'If the house is big ...' (B 2:19)

Occasionally the subject is placed after the verb. This is attested, for example, where the grammatical subject is an indefinite nominal and the verb is used to express the existence of an item rather than to predicate something of it:

- (21) *lá-'avilux +šùla.* 'Do not have concern (= Do not worry).' (A 3:57)
- (22) *lè-'avilux brúna.* 'You will not have a son.' (A 3:5)
- (23) *lá-vilə xa-+xábra mannè.* 'There was no word from them.' (A 3:3)

In many cases, however, an indefinite nominal in such existential constructions is placed before the verb. In most such cases the subject takes the nuclear stress, e.g.

- (24) *+duràša vâyəla bilé.* ‘An argument starts (literally: comes into existence) between them.’ (A 38:4)
- (25) *kɔnyàna=zə c-avívalun.* ‘They also had cattle.’ (B 2:10)
- (26) *cúl béta káttat +àrra-da c-avívalə carmànə=zə c-avívalo.* ‘Every house had a piece of land and had vineyards.’ (B 2:11)

In a number of cases the predicate is preposed before a non-habitual form of *avə*, e.g.

- (27) *'át výyyət bâba káti.* *mádrə har-ó-baba vi-kâti.* ‘You have been a father to me. Be the same father to me again.’ (A 3:92)
- (28) *'án mändyánət kat-kámta miréva kâtu kat-+spày-vi, xubbâna-vi, faxcàna-vi, 'àtxa-vi, 'átxa furvássuva +râba zúyzə xurjéva +àllu.* ‘The things that he had previously told him (saying) “Be good, be loving, be merry, be like this”—he had brought him up like this and spent a lot of money on him ...’ (A 3:89)
- (29) *'ána +narahât-ivan.* *+jòro mårəla lâ, lâ, +narahát lâ-vi.* ‘“I am uncomfortable.” Her husband says “No, no. Do not be uncomfortable.”’ (A 6:3)

In (27) the clause with the preposed predicate is bound cohesively to the preceding clause, with a high degree of overlap in content. The nominal in the predicate, moreover, has a referent that has been invoked in the preceding clause. In (28) the cited direct speech is a recapitulation of imperative clauses that occurred earlier in the discourse, so here the clauses cohere with what precedes at a greater distance. In (29) the imperative coheres with the preceding statement.

In other cases the preposing has another function, as in the following examples:

- (30) *Nátan brínu ... +narahat vîlo.* ‘Natan his son became upset.’ (A 3:17)
- (31) *málca +narahat vâyəla.* ‘The king becomes upset.’ (A 3:26)
- (32) *'adíyya 'ánnə nàkva! cùlla +házər vâyəna.* ‘Now the women are all ready.’ (A 2:22)
- (33) *mən-'álahə lèla +fšíta.* *mánnux müt +fšíta?!* *'àtxa vîla kóssat.* ‘It is not hidden from God. Why is it hidden from you? The story was like this.’ (A 2:17)

- (34) *+narahát là-’oyat.* | *’axúnax lèlə míta.* | ‘Do not be upset. Your brother has not died.’ (A 1:14)

In these constructions the preposing of the predicate may be compared to the preposing in verbal clauses of objects that have topical relevance in what follows, termed ‘topic-orientated’ preposing. The constructions occur in narratives and the predicate has relevance to, sets the framework for or is referentially linked to what follows. In (33) the definite subject constituent *kássat* is postposed after the verb, which expresses cohesion with what precedes, the clause being thus linked syntactically in both directions.

The perfective form of the existential particle *’at* ‘there is’ in possessive constructions with an indefinite subject is formed by the 3fs. *ptəxələ* form of the verb *’avə* i, e.g.

- (35) *mádrə viyyála +zàyə.* | ‘She again had children.’ (A 53:2, *viyya* [3fs.] + *la* [3fs])  
 (36) *vilálən xámša yàlə.* | ‘We had five children.’

The form *vilálən* in (36) corresponds to *’atlan* and includes a series of two consecutive L-suffixes (*vi-la-lan*).

Existential or possessive constructions in the *ptixələ* and *bəptaxələ* forms, on the other hand, generally have 3ms subjects, e.g.

- (37) *+ròba ’átxa kášə viyyan=la.* | ‘We had many priests like that.’ (B 16:11, *viyya* + *an* [1pl.] + *ilə* [3ms copula])  
 (38) *xa-bráta vàyolə.* | ‘A girl is born to her.’ (A 43:9)  
 (39) *cut-yál súr lél vàyū,* | *jabúyələ mónnu +bixàlə,* | *vàyulə yál sùrə.* | ‘Whoever does not have children picks (fruit) from it and eats, then he has children.’ (A 49:3)  
 (40) *+dòstə vàyələ.* | ‘There are friends.’ (A 41:1)  
 (41) *+árpa yál-súrə=zə vayélə* é *+dànta.* | ‘They have four children at that time.’ (A 41:14)  
 (42) *dəžmànnə vàyol.* | ‘It (*malcuta* fs. the kingdom) has enemies.’ (A 48:34)  
 (43) *+várəna šánnə lèlə váyan +xábra mənné.* | ‘Years pass and we do not have any information about them.’ (B 1:1)

Sporadically such constructions have a 3fs subject, e.g.

- (44) Óttoman Émpire *xína xèla vàyola +’al-’Urmi.* | ‘The Ottoman Empire gains control over Urmi.’ (B 1:8)

## 12.4 Verb 'to be' Omitted

In some cases the verb 'to be', in the form of a copula, existential particle or the verb *'avə I*, is omitted from a clause.

Cases of this phenomenon in clauses with compound verbal forms containing the resultative participle or progressive stem have been discussed already (§ 10.10.1.5., § 10.11.1.7.). In such cases the clause normally expresses circumstantial background information that is supplementary to what is expressed in the adjacent clauses, e.g.

- (1) *har-nipúxta=zə mən-míyyət +'ānvə pyášəla škólta,| 'albátta lá +xdíra +al-xàmra.* 'Molasses too is produced from grape juice, but of course it has not turned into wine.' (B 12:8)
- (2) *'ana jøddálū +házər vidèvən,| partúls +al-'uydàls.* 'I have prepared its threads, twisting (them) together.' (A 3:74)

In (3) the circumstantial clause contains predicates of both a qualitative adjective and a progressive, both lacking the copula:

- (3) *'ína +bar-našùyta cùllə jaššùkəla,| cùlləl +narahát bàxya.* 'Now, the people are all watching, all being moved and weeping.' (A 1:48)

In (4)–(11) the copula is omitted from various types of predicate that express a circumstantial situation:

- (4) *yúmat +tlə màra| 'ána júlli lvišèli,| tóvli +al-sútysə +házər,| sèpi=da p̄-ídi.* 'On the third day I put on my clothes, sat ready on the horse, my sword in my hand.' (A 2:28)
- (5) *'u-yála súra +al-+xàso| labláva lâxma| kəa-+jòro.* 'And the child (being) on her back, she would take food to her husband.' (A 5:6)
- (6) *'áha +rába xàdyə| xá-axča zúyzə palùtələ.* 'He (being) very pleased, he takes out a lot of money.' (A 35:10)
- (7) *bərrákəla márət xmára=da +bàru.* 'He runs, the owner of the donkey being behind him.' (A 7:5)
- (8) *xzíl xa-duccàna| +tárra ptìxa.* 'He saw a shop, the door being open.' (A 10:2)
- (9) *c-asķàxval 'áklan xupyày.* 'We used to go up, our feet (being) bare (= barefoot).' (B 17:14)
- (10) *ríšu cúpa +várələ.* 'He enters, his head (being) bowed (= with a bowed head).' (A 42:33)

- (11) *xá náša sáva tívələ +al-dápnət šákita| dáknu +xvàra.* ‘An old man is sitting by the side of the stream, his beard (being) white (= with a white beard).’ (A 42:6)

In (12) and (13) the clauses without the copula supply elaborative background relating to one of the protagonists of the narrative:

- (12) *'abúna +vàrəl.| 'abúna mən-dàni buš-xárba.* ‘The bishop enters. The bishop is worse than the others.’ (A 6:8)
- (13) *'áha| 'an-bnátu-da fvìrə.| tré xətnavày 'ótlə,| 'áha-da +tlà.* ‘As for him (the king), his (other) daughters are married. He has two sons-in-law, and this (boy made) three.’ (A 42:20)

In (14) a series of clauses without a copula describes the circumstantial activities attending the main event of clients coming into a shop:

- (14) *nášə bərrəxšəna| mändi bəzvànəna,| b-dá-'ídu zùyzə bəškálə,| b-dé-'ídu zùyzə bəškálə| 'ú fòxca| jánu laxiyma| 'ú palàxə| ju-duccàna.* ‘People go there and buy something, he (the owner) takes money with this hand and takes money with that hand, he laughs, he himself is handsome, and there are workers in the shop.’ (A 4:3)

On some occasions a verb without a copula expresses an event that does not overlap temporally with the main verb but is rather closely linked to it in a sequential relationship, e.g.

- (15) *dvíkələ xa-+kátu ju-+xiyàvand,| mxàyə.* ‘He has caught a cat in the street and is beating it’ (A 3:79)

One should contrast circumstantial clauses lacking the copula such as (16) with those that contain the *vayələ* form such as (17):

- (16) *yúmət +tlə màra| 'ána júlli lvišèli,| tóvli +al-súysə +hàzər,| sèpi-*da* p-ídi.* ‘On the third day I put on my clothes, sat ready on the horse, my sword in my hand.’ (A 2:28)
- (17) *sépu-*zə* vâyəla b-dàpnū| sépu bəškàlolə| 'átxa bədvačkólə kàm.* ‘His sword is by his side. He takes his sword and holds it like this in front.’ (A 39:9)

In (16) the clause presents supplementary background information, whereas in (17) the clause with *vayəla* presents background information that sets the frame for what follows.

In (18) the copula is omitted in the second clause not, it seems, because it is dependent or circumstantial to the first, but due to a gapping of the copula in a parallel structure:

- (18) *'átən brāt-màlcət, 'ána zabnánət nùyna!* 'You are the daughter of a king, but I a seller of fish.' (A 34:7)

The omission of the verb 'to be' is found after expressions of perception, either where there is an explicit verb of perception (10–20) or where there is simply the presentative particle *'ina* 'behold' (21):

- (19) *baxzàyələ +'Axíkar 'ína +tàma!* 'He sees that Axiqar is there.' (A 3:51)  
 (20) *baxzáyələ xàya!* 'He sees he is alive.' (A 3:88)  
 (21) *+palùtulə! 'ína +'Axíkar dáknu +rìxa, ránju +rùppu! zàrda víyya, cícu cílla xriñva!* 'He brings him out (and sees that) Axiqar's beard is long, he has lost his colour, he has become yellow and all his teeth are ruined.' (A 3:51)

The copula is omitted in prayers, curses and exclamations, such as the following:

- (22) *tæžbúxta +'al-'alàha!* ... *xkíra šómmət 'alàha!* 'Praise be to God ... May the name of God be glorified.' (A 25:1)  
 (23) *'ay-+kátmə b-rìš!* 'Oh, ash be on my head!' (A 1:37)  
 (24) *bétu +šìyya!* 'His house be sealed up!' (A 1:28)  
 (25) *'átən násə!* 'You are a man!' (A 28:2)  
 (26) *'at-xàya!* 'You are alive!' (A 32:4)  
 (27) *dí márət +dàwva-da +bàru!* 'Now also the master of this man is (chasing) after him!' (A 7:6)  
 (28) *'ána 'abùna!* *+abúyri t-àza!* 'I am a bishop! My reputation will be lost!' (A 6:9)  
 (29) *xa-jáššək mú kavvúmə ju-+átrət diyyan!* 'Just look (for once) what is happening in our land!' (A 1:39)  
 (30) *'áyən m-íca 'átxa jùllo?!* *m-íca júllət dàyən?!* 'From where are her clothes?! From where are her clothes?!' (A 51:5)  
 (31) *básət díva, díva b-+tàrra!* '(Talking) about the wolf, the wolf is at the door! (= Talking of the devil!)

Omission of a copula with resultative participles can have the function of deontic exclamations:

- (32) *ka-mú +ruppàlux?* *mùyyo!* ‘Why did you throw it (the fish) away? You should have brought it back!’ (A 54:3)
- (33) *’áha còlpat lá švíkò b-dá jùrra!* ‘I must not leave this family like this.’ (B 6:6)
- (34) *šòxna +xíla!* ‘(I wish) you had the plague!’

The copula is often omitted in proverbial expressions, e.g.

- (35) *zyarté ju-+tàrra, pòrdé ju-+kàrra.* ‘Their pride is out of doors (lit. in the door), but their pounded wheat is in a gourd (i.e. they keep up appearances, but they are poor).’
- (36) *màttálta crítá +xlita.* ‘A short proverb is sweet (= short and sweet).’
- (37) *+tarrána dvírə, +káddə +vírə.* ‘Doors locked, misfortunes past (= ignorance is bliss).’

When listing items of a group, the copula is omitted in contexts such as (38):

- (38) *’á dìyyi, ’á dìyyi, ’á la-dìyyi.* ‘This is mine, this is mine, this is not mine.’ (A 39:35)

A deictic demonstrative can be used in a presentative type of construction without a copula, e.g.

- (39) *’áha scànta.* *+’ávva +tízət yàla.* ‘This is the knife. That is the bottom of the lad.’ (A 7:11)
- (40) *’áha ka-dìyyux.* ‘This is for you.’ (A 39:15)
- (41) *’ánnə zìyzux.* ‘Here is your money.’ (A 7:2)
- (42) *’ánnə jùllux.* ‘Here are your clothes.’ (A 1:50)

The pronoun may be used alone with the enclitic particle *da* (§13.1.3.), e.g.

- (43) *’ánnə=da! škúl +xùl.* ‘Here they are. Take and eat.’ (A 36:9)

In (44) this construction is used to introduce a following proposition:

- (44) *’á-da mən-jíbət +dàvun! kàt-kày máxyələ!* *’ána kàx mxíli.* ‘There it is—instead of him, who has hit me, I have hit you.’ (A 21:3)

The form *bassa* ‘enough’ is used as a predicate without a copula (§ 8.5.1), e.g.

- (45) *'àna| +narahatíytət jáni ka-jáni bássa.|* ‘My own trouble is enough for me.’  
 (A 10:3)

## 12.5 Verbal Clauses

The term verbal clause refers to clauses with a predicate that contains a finite verb. They include clauses with inflected verbs derived from the past and present templates and also compound verb forms, which consist of a resultative participle or a progressive stem combined with a copula or a form of the verb *'avə* i. The compound verbal forms behave in the same way as other forms of finite verbs with regard to the order of components in the clause, which is the main concern of this section.

### 12.5.1 Basic Verbal Clauses

A verbal clause may consist of a verbal form alone, with the participants of the activity expressed by affixes but without any other independently standing components, e.g.

- (1) *buxxàllə|* ‘He became jealous.’ (A 3:17)
- (2) *+bixàlələ|* ‘He eats.’ (A 3:38)
- (3) *mxayèlə|* ‘He beats them.’ (A 3:38)
- (4) *+pàxəlli!|* ‘Forgive me!’ (A 3:52)
- (5) *št̪l!|* ‘Drink!’ (A 3:53)
- (6) *+bəddàyən|* ‘I know.’ (A 3:54)
- (7) *taxmùnələ|* ‘He thinks.’ (A 3:73)
- (8) *šuddànnət?|* ‘Have you gone mad?’ (A 3:82)
- (9) *nšàkłə|* ‘He kissed him.’ (A 3:85)
- (10) *+k̪tilàli|* ‘I have killed her.’ (A 1:9)

### 12.5.2 Clauses Containing a Subject Constituent

When the clause contains a subject constituent, this is placed either before or after the verb.

#### 12.5.2.1 Subject—Verb

Most subjects that are placed before the verb are definite, either because their referent is recoverable from the preceding context or because they refer to a generic class, e.g.

- (1) *'a-yála jarvùsəl.* 'This boy grows up.' (A 3:8)
- (2) *málca +rába xdila.* 'The king became very happy.' (A 3:34)
- (3) *Nátan bitáyələ.* 'Natan comes.' (A 3:37)
- (4) *+šúpra lè-paš kátux.* 'Beauty will not last for you.' (A 3:11)
- (5) *cúlla dínyə +yat̪tāvalə.* 'The whole world knew him.' (A 3:1)

In the foregoing examples the nuclear stress is placed on the predicate. In some cases the nuclear stress is placed on a definite subject that is before the verb, which gives the subject particular prominence. This is for various purposes.

In some such cases the subject is contrastive, e.g.

- (6) *Nátan brùnux ýá-məndi vódlə.* 'Natan, your son did this thing (not anybody else).' (A 3:54)
- (7) *yòmmax pitéla!* *'ána m-òdan?!* 'Your mother baked them (not me). What can I do?' (A 43:17)

In (6) 'Natan' is in contrastive narrow focus, the rest of the clause being presuppositional ('X did this thing'). The narrow focus expresses that Natan is the correct candidate for the role of subject in contrast to other possible candidates that the speaker assumes the hearer is entertaining. A similar construction is found in (7).

In (8), on the other hand, the contrastive construction does not involve putting narrow focus on 'Pharaoh' with the remainder of the clause presuppositional. Rather the event expressed by the clause as a whole is set up in opposition to the event expressed by the preceding clause. 'Pharaoh' and 'Axiqar' are the most prominent constituents in these events but are contrastive topics rather than contrastive foci, since the rest of the clause is not presuppositional:

- (8) *+jammíyol kòšun.* *'a-yba-xína-da für'un bitáyələ.* '(Axiqar) assembles the army. On the other side Pharaoh is coming' (A 3:25)

In (9) a definite subject is likewise given nuclear stress when the remainder of the clause is assertive and not presuppositional. Here again the subject should be identified as the topic. It is not, however, contrasted with another topic, as in (8). Rather the nuclear stress gives enhanced prominence to the topic in order to give prominence to the proposition as a whole, which is a sudden, surprising event. The enhancement of the prominence of a clause-initial topic is a strategy for marking off the clause distinctly from the preceding discourse, the purpose of which here is to give the content of the proposition distinctness:

- (9) +*téra* +*báyya yavvála* *kátu* | *ido ptáxola* *kát šakàlla*,| *téra práxala*.| 'She wants to give him the bird, she opens her hand for him to take it, but the bird flies away.' (A 38:19)

Likewise in (10) the placement of the nuclear stress on the initial definite topical nominal gives added prominence to the threat expressed by the clause:

- (10) *šúk sìl rìsux bálsax*.| 'Go away (or) we will crush your head.' (A 43:5)

A similar strategy is used by the speaker in (11) to give prominence to the clause as a whole, making it very clear that what she has just said is only a conjecture:

- (11) *'àna bəxšávən*.| 'I think so.' (B 9:7)

In (12) two events are set up in parallel opposition. The subject 'the goat' in the second clause has nuclear stress. Again, this is not narrow focus. This constituent should be regarded as the topic of the clause, since the remained is not presuppositional. It is presented as the most prominent constituent in the clause, signalled by the nuclear stress, to make a sharp distinction between the two sides of the parallel opposition. This is topical rather than focal prominence. In general, the enhancement of the prominence given to a topic marks a discourse boundary with greater distinctness. In the first clause the topic is the adverbial 'on the road':

- (12) +*ham-**ùrxə bərráxšəla* +*ham-ječita bərráxšəla*.| 'She is walking on the road and the goat is also walking.' (A 38:16)

In (13) the nuclear stress on the subject signals that 'my wife' was not expected to play this role. In such cases there is a presuppositional background that some other referent would be the agent of this event:

- (13) *'ò-yuma* *bàxti* +*tárra ptáxla* *káti*.| *hammáša rijavày* *káy* +*tárra patxívala*.| 'That day *my wife* opened the door for me. Always *the servants* (not my wife) used to open the door for me.' (A 4:14)

Indefinite subjects that are unexpected in particular roles may likewise be placed before the verb with nuclear stress. In (14) 'a bullet' is not expected to be in the role of 'not reaching':

- (14) *súysət þjóri +íuxča +tavàna c-ázəl júlla lé +matyálə.* ‘The horse of my husband goes so fast that a bullet cannot catch it.’ (A 38:9)

The subject with nuclear stress may be a new referent that is presented as an unexpected or significant arrival on the scene. This may be expressed by an indefinite or definite noun, e.g.

- (15) *nùynə dúna +plátlun!* ‘Fish have come out!’ (A 5:6)  
 (16) *'ay-+kótma b-riši! +jóri tíla!* ‘Oh, ash be on my head, my husband has come back!’ (A 6:6)  
 (17) *+cárvan bitáyla.* ‘A caravan comes.’ (A 43:4)  
 (18) *har-b-dé-+danta xá-dana siyssə tíla.* ‘Just at that moment a horse came.’ (B 6:6)

On some occasions the subject is separated from the following predicate by an intonation group boundary. This is generally used to mark a greater degree of disjunction from what precedes than clauses that do not have such a prosodic division. In narratives, for example, it occurs at the onset of new episodes, e.g.

- (19) *xa-yúma! fúr'un! xa-ctáva bæctàvələ! ka-+Nuxadnásər.* ‘One day Pharaoh writes a letter to Nebuchadnezzar.’ (A 3:39)  
 (20) *+Nuxadnásər málca! +bækráyla +rába náše lípa.* ‘King Nebuchadnezzar summons many learned men.’ (A 3:42)

Within a section of discourse this prosodic strategy is used to ensure that the clause is not interpreted as being in close causal sequence to the preceding clause. In (21), for example, the event of the king becoming sad does not follow in causal sequence to the event ‘I did not kill him’:

- (21) *xá +dána! bábət díyyux-zəl +bayyíva +kaṭlívalə! yna 'ána là +któlli! málca! +pšəmlə.* ‘Once they wanted to kill your father, but I did not kill him. The king became sad.’ (A 3:34)

Such prosodic separation of the subject is also used to give distinctness to two subject referents where they and their predicates are set up in a contrastive opposition, e.g.

- (22) *ka-mùdi! suysavátət diyyòxun! jávət Nènvəl hurhàmlun?!* *susyátət díyyan láxxa! murxàšlun?* ‘Why did your horses in Nineveh neigh? Our horses here aborted.’ (A 3:78)

It also occurs where there is a shift in subject referent without a contrastive opposition being set up between the events, e.g.

- (23) *'áha málca káti 'tva xá +karíuvva| kát +'úxča šapíra kála 'ztvalə. | ... 'ína ýá +kátañtət díyyux| m-áxxa kámila, | xášla 'ád-lelo kdálu +kčítula, | titəla. |* 'This king was a rooster to me, who had such a beautiful voice. ... But this cat of yours, he got up from here and went this night and has snapped his neck, then has come back.' (A 3:81)

In descriptive discourse, indefinite subject constituents introducing new referents are sometimes placed before the verb in foreground sections concerning a habitual activity or generic situation, e.g.

- (24) *xájúra xína +tína taròsva. |* 'Another type of mud used to be made.' (B 2:21)

In narrative, indefinite subjects that introduce a specific referent tend to be placed before the verb in background rather than foreground sections of the discourse. The constructions in (25) and (26), for example, set the scene at the beginning of the narrative:

- (25) *xá 'urxáči, | +bar-náša, | vágala 'urxa bárráxša. |* 'A wayfarer, a man, is going along a road.' (A 47:1)
- (26) *xa-yúma! xa-náša! mòrrə! 'ána járac 'ázən! jàvət! cílla dínyə! +xádrən! +táv-vən! máčxən kat-xa-náša! +'áx! látla. |* 'One day, a man said "I must go and travel throughout the whole world and seek to find whether there is a man who has no worries." (A 4:1)

### 12.5.2.2 Verb—Subject

In clauses expressing a foreground event the subject constituent is generally postposed after the verb if it introduces a new referent:

- (1) *tíla +tálā t-+axálle! |* 'A fox has come to eat me!' (A 37:5)
- (2) *'ína 'ána xá-yuma! 'ína ju-duccána, | 'ax-díyyux kat-káti tílux xzilux, | tíla xa-náša káti mòrrə! kát ta-jálda. |* 'I was one day in my shop, just as you came and saw me, a man came to me and said ...' (A 4:12)
- (3) *+méta ci-+mayyávala báxta. |* 'A woman would churn the churn.' (B 17:19)

The subject is sometimes in a separate intonation group:

- (4) *tilun! 'arpì dánə +harambášə. |* 'Forty master thieves came.' (A 43:2)

In (5) the postposed subject is placed at the end of the clause after a prepositional phrase complement of the verb:

- (5) *tàlma<sub>1</sub> | 'ótvälə káttə +xòla<sub>1</sub> | mattíval +'al-+rušané baxtátə<sub>1</sub> | c-azíva mən-šákítə miyya jaršíval kàl štèta<sub>1</sub>* 'A pitcher has a handle of rope. Women would put it on their shoulders and go to draw water from the stream for drinking.' (A 6:1)

This type of presentative function of clauses with a postposed subject is found also where the subject referent has been mentioned previously but has been temporally off the scene. The construction re-introduces the referent onto the scene:

- (6) *+tárra ptòxlə<sub>1</sub> | +vàrrə 'á náša<sub>1</sub>* 'The door opened and this man came in.' (A 42:5)  
 (7) *bitáyələ +màlla<sub>1</sub>* 'The mullah comes (into the court).' (A 1:31)  
 (8) *'u-tílə +kàssab<sub>1</sub> | tílə +màlla<sub>1</sub> | tílə +kàzi<sub>1</sub>* 'And the butcher came, the mullah came, the judge came.' (A 1:46)  
 (9) *bitáyələ +bérašə +málla šuršíyya<sub>1</sub> | jíyya<sub>1</sub>* 'The mullah comes back in the evening, exhausted and tired.' (A 5:8)

In (10) the subject is placed in a separate intonation group:

- (10) *'áyən b-+šešàvala<sub>1</sub> yòmma<sub>1</sub>* 'Mother used to shake it.' (B 10:16)

The subject is sometimes postposed if it is in focus. In (11) the subject is preceded by the exclusive focus particle *'axči* 'only':

- (11) *cúllə xàšlun<sub>1</sub> pásłə 'áxči +màlla<sub>1</sub>* 'They all went. Only the mullah remained.' (A 19:4)

On many occasions, however, the postposition of the subject after the verb does not have this presentative or focus function. In such cases the motivation for the construction is rather to express the existence of a close semantic relationship of the clause with the preceding discourse. The subject is familiar to the hearer from the previous context or is, at least, related in some way to the previous context. When it is used in narrative, the close relationship with what precedes may be one of close temporal sequence and spatial continuity, e.g.

- (12) *xá-yuma +málla +Nasràdən| báxtu mára kàtu| 'ən-lá muyyìlux| 'sri +di-nàrə| ju-dá béta là-+orət| lá +'orət| bərráxshələ +málla.* ‘One day the wife of mullah Nasradin says to him “If you do not bring back twenty dinars, you will not enter this house. You will not enter.” The mullah goes off.’ (A 30:1)
- (13) *bəsyákəna +'üllul| hál cma-+dána 'atxa-+'üllul bəsyákəna| bálcət| 'alpá mótrə +'üllul-inə| mən-+táma +šaríyəna bədra-kálə 'ánnə yāl-sùrə.* ‘They go up, until (when) they go up for some time, they are perhaps 1,000 metres above (the ground). From there the children begin to shout.’ (A 3:71–72)
- (14) *+xábra yávələ ka-für'un kət-násət díyi bitàyəna| bəškálələ +'Axíkar bíyya bí ... ríjavátu| +kóšun bərráxshəna.* ‘He (the king) sends word to Pharaoh (saying) “My people are coming.” Axiqar takes an army together with his servants and they march.’ (A 3:60)
- (15) *'adíyya 'ána 'a-+xábri kákx taníyur| 'adíyya cépux-la| 'ádi nàkva pármətlə 'ürza parmátlə mü +bayyət 'ódət| kómlə málca| nšáklə ju-+kòssu mórrə 'ána +púxlən cúlla móndi.* ‘“Now I am telling you this. Now it is up to you if you want to slaughter the woman or slaughter the man, whatever you want to do.” The king got up and kissed him on his forehead. He said “I have forgiven everything.”’ (A 2:36–37)
- (16) *márra 'átan 'a-+šúla víndlə| lá-'avilux +šúla| bitàyəna| +jár bədráyələ váz-zər.* ‘He said “You (vizier) do this and you shall have no worries.” They come and the vizier makes an announcement.’ (A 2:21–22)
- (17) *+rappuvvélə +'állu kat-páyəš b-+arallágge| bəndáyələju-+hàva +Ášur.* ‘He throws them (the millstones) at him in order for him to be between them. Ashur jumps in the air.’ (A 39:13)

The events expressed by clauses with postposed subjects may overlap in some way with the preceding clause. In (18), for example, the clause in question is a recapitulation of the contents of the previous clause. In (19) the clause ‘Natan dies’ is a tag that elaborates on the preceding event.

- (18) *+o-kaṭùla| ... mórrəl málca t-ávət basıma| +báyyən xà-məndi tanánnux| mára müylə?| tání!| bitáyələ 'o-+kaṭùla| mára kátu kát| málca t-ávət basıma| 'ána ci-+báyyən| +xtíti tanònna.* ‘The executioner ... said “King, be well, I want to tell you something.” He says “What is it? Speak!” The executioner comes, the servant, the servant of the king, the executioner. He says to him “King, be well, I want to tell my sin.”’ (A 3:47–48)
- (19) *+tlá yumána lélé vàyə| Nátan| bəzyárələ| bəzyárələ| bəzyárələ| bùm! p̄kàyələ| myàtələ Nátan.* ‘Hardly had three days past, when Natan begins to swell, he swells, he swells boom! He explodes. Natan dies.’ (A 3:95)

In (20) there is an interval of several years between the events, but the verb—subject word order presents the birth and coming-of-age of the daughter as a single episode:

- (20) *xa-bráta vàyola<sup>l</sup> šòcla<sup>l</sup> mən-jáno bùš šápárta<sup>l</sup> +xamsár šánnə vàyela 'á bráta<sup>l</sup> xákùvvala yámmo<sup>l</sup>* ‘She has a daughter, a picture (of beauty), more beautiful than herself. The girl becomes fifteen and her mother tells (the story).’ (A 43:9–10)

On some occasions the postposed subject is put in a separate intonation group, e.g.

- (21) *mùdiva kóssa<sup>?</sup> +tájər<sup>l</sup> módrə hakúyolə ka-màlca<sup>l</sup> mára xúš túy +támma<sup>l</sup> +dílux müjjur hukyálə xína<sup>l</sup> kat-báxtu màttəla<sup>l</sup> +tájər mattùyulə +támma<sup>l</sup> caçàla<sup>l</sup>* ‘“What was the story?” The merchant tells this again to the king. He (the bald man) says “Go and sit over there.” You know how he told it, that his wife had died. The bald man puts the merchant over there.’ (A 1:30–31)
- (22) *fu-màta<sup>l</sup> tívəva nàšəl +rába hamzùməva m-+uydálə<sup>l</sup> xá mən-do xína<sup>l</sup> hamzùməval<sup>l</sup> 'úrzə<sup>l</sup>* ‘In the village people were sitting talking a lot together. The men were talking with one another.’ (A 5:1)

In constructions such as (21) and (22) the addition of the subject after a hesitation seems to be primarily intended as a clarificatory tag with regard to the reference of the subject.

Finally, the postposition of the subject is exhibited also by deontic clauses, such as the curse in (23), which are isolated from the information structure of the context:

- (23) *méti cmá-t 'átlux lòtlux<sup>l</sup>* ‘May as many as you have and do not have die (= may all your family die).’ (A 4:14)

### 12.5.3 *Independent Subject Pronouns*

A pronominal reference to the subject of the clause is contained within the inflection of a verb and so the additional occurrence of an independent subject pronoun is redundant with regard to the identification of the subject. The use of an independent pronoun does, nevertheless, have discourse functions. These functions are performed both by independent pronouns in verbal clauses and also by those that occur in copula clauses. The following discussion, therefore, will include examples from both verbal and copula clauses. The subject pronoun may be placed either before or after the verb/copula.

### 12.5.3.1 Preposed Subject Pronouns

When an independent subject is placed before the verb or copula, its function depends on the prosody. If it does not bear the nuclear stress, the motivation for the use of the pronoun is generally to mark some kind of semantic discontinuity in the discourse. The various types of semantic discontinuities include the following.

#### (i) Shift in subject referent

An independent subject pronoun is used when there is a change in subject, e.g.

- (1) *cárvəš bərràkəla,| cálba bərráxšəna +bàro! 'u-áyən býya b-ječita +rába +ràhat bitáyəla.* 'The rabbit runs away, the dogs run after it, and she together with the goat comes very calmly.' (A 38:18)
- (2) *bərràxšəla,| +mṭáyəla +tàma,| mótnno +ṭavìləla,| +bəkràməla.* 'He goes, he arrives there, plays with her and wins. She flees.' (A 39:38)
- (3) *xá +dàna! bàbat díyyux-za! +bayyíva +kaṭlivála! 'ína 'ána là +ktálli.* 'Once they wanted to kill your father, but I did not kill him.' (A 3:34)
- (4) *'át ku-+al-àklux clí,| 'ána hamzámmən bàzu.* 'Stand on your feet (i.e. stop and listen). I'll speak about him.' (A 3:64)
- (5) *xàyəla.| +pàllan díuctəla! 'ána +túmrún kam-+tárrat bètu.* 'He is alive. He is in such-and-such a place. I have buried him outside his house.' (A 3:50)
- (6) *báxta xètəla.| 'ána mùčxon.* 'The woman is alive. I have found her.' (A 1:37)
- (7) *'áxči hálli 'árpi yumána +dána.| 'ána b-zarzənnun.* 'Only give me forty days. I'll deal with them.' (A 3:56)
- (8) *'ána clíli +tàma.| 'á sákla mən-sammálta.* 'I waited there. He went up by a ladder.' (A 2:31)
- (9) *'áltax 'átvə +tòpa.| 'an-míyya bətpáxəva +al-de-+tòpa,| 'áyən partùləva.* 'Underneath there was a wheel. The water would pour on the wheel and it would turn.' (B 17:6)

Subject pronouns are used also when there is a change of subject across subordinate clause boundaries, e.g.

- (10) *mù tánən?| mü +amsən ódən kat-át +paxlòtli?* 'What should I say? What can I do so that you will forgive me?' (A 3:54)
- (11) *xášlux cəs-nàša xína! kat-'áni lá-+msíva káktux ódīva.* 'You went to other people, who could not do this for you.' (A 3:5)
- (12) *'e-+dánət zamərva,| 'ána +šammənva.* 'When he sang, I used to listen.' (A 3:81)

- (13) *'ána mut-xərbayúta kátux vidiðenva| kat-'átən 'á-+šula vádlux b-riši?|* 'What evil had I done to you that you have done this against me?' (A 3:27)

Subject pronouns are used when subjects and their predicates are set up in a contrastive opposition, e.g.

- (14) *'ána| dokánat nùynəvən.| 'átən brät-xa-málcəvat.|* 'I am a fisherman. You are the daughter of a king' (A 34:12)
- (15) *'átən| brún málcəvat,| 'ána brún +casibəvan.|* 'You are the son of a king, I am the child of paupers.' (A 56:2)
- (16) *'ána kátux vádli násə,| 'átən ka-díyyi dušdàšlux.| 'ána ka-díyyux muttíli ju-béti-malcıtya,| 'átən ka-díyyi muttílux ju-+arrə.|* 'I made you a man, but you trampled on me. I put you in the royal household, but you put me in the ground.' (A 3:90)

An independent pronoun is often used at the beginning of a turn in conversation, e.g.

- (17) *cúllə mārəna| 'áxnan p-+hayyərràxlux.|* 'They all say "We shall help you." (A 1:23)
- (18) *màrrə| 'ána lè-+bayyən| hác xa-+šrà| óya ju-màta,| ju-mdita.|* 'He said "I do not want any lantern to be in the village, in the town." (A 2:1)
- (19) *mára 'ána +byáyən xa-dána +xòla.|* 'He says "I want a rope." (A 3:73)
- (20) *mára 'átən denánat ká ... +Nuxadnásər málca.|* 'He says "You are in debt to king Nebuchadnezzar, the king of Nineveh." (A 3:76)
- (21) *+Áxiqar,| 'át +rába dívət sìva.|* 'Axiqar, you have become very old.' (A 3:14)
- (22) *'áxtun xphúkun +uydalə.|* 'You embrace one another.' (A 1:38)

#### (ii) Discontinuity on Other Levels of Discourse

On some occasions where an independent subject pronoun is used, there is no change in the subject referent. In such cases the use of the pronoun reflects a discontinuity on another level of the discourse. One such discontinuity is the lack of temporal sequence between the situation expressed by the clause and that of the adjacent discourse. The situation expressed by the clause may overlap temporally with it, e.g.

- (23) *+ávva síla bədráyələ,| síla bədráyələ mən-+táma +bázza +bázza.| +ávva síla 'átxa 'átxa partùlələ.|* 'He sprinkles sand. He sprinkles sand there in holes. He twists the sand like this.' (A 3:73–74)
- (24) *'ù| cúllə-da 'an-+sarbàzə t-éva mónnu| cúllə šótyəna +rùyəna.| 'ánnə hác-xa-*

*mənne lēna +bəddáya.*! 'All the soldiers who were with him are all drunk and inebriated. None of them knows about it.' (A 3:35)

The clauses may overlap also in content with that which precedes, e.g.

- (25) *'ána lén +bəddáya.*! *'ána lá-+msən 'ánnə +juvvába yavvənnun.*! 'I do not know. I cannot give you the answers.' (A 3:43)

Clauses with subject pronouns that involve a change of subject are sometimes also non-sequential to what precedes, e.g.

- (26) *màlca!* +*pšəmlə!* +*pšəmlə!* *kat-ka-mù!* +*ktxəllun!* *'ína 'ána lènva +ktxílu.*! 'The king became sad, he became sad (and wondered) why they killed him, but I had not killed him.' (A 3:34)
- (27) +*Axiqar xàyəla.*! *'ána lèn +ktxílu.*! 'Axiqar is alive. I have not killed him.' (A 3:49)
- (28) *ka-díyyux +muktxəlli.*! *átən ítva +maxdərránət +'àtri.*! 'I had you killed. You were the administrator of my land.' (A 3:45)
- (29) *šamašúyta mxáyəla +tàma.*! +*ávva sìla bədráyəla.*! 'The sun-ray strikes there. He sprinkles sand.' (A 3:73)

In the passage in (30) the 3ms independent subject pronoun in the final clause [3] follows a clause concerning the same referent [2]. The motivation for the use of the pronoun in the final clause [3] is to mark a shift back to the narrative after a section of elaborative background [2]. Note that the background clause in [2] has a clause-initial extraposed subject pronoun (§ 12.14.), which has a similar function of marking discourse boundaries, in this case from narrative [1] to background [2]:

- (30) [1] *'áxči é-+dān P Nādəršāh,*! *xá mən-málca!* +*Íran tīlə!* ... +*atüráyat díyyan bəškalèval mən-dáštat* 'Urmi labuléva la-dó-rišət +*'àtra!* +*Kòčan, Màšad,*! *la-dán jibànə.*! ... [2] +*áyun P Nādəršāh P afšär*! *'íva-da šómmu.*! [3] +*áyun šakálvalun mayyivalun +táma.*! '[1] Only at the time when Nadershah, one of the kings of Iran came ... he took our Assyrians from the plain of Urmi and deported them to the far end of the country, Kochan, Mashhad, to those parts. ... [2] He—his name was Nadershah *Afšar.* [3] He took them and brought them there.' (B 2:16–17)

In some cases the main motivation to use an independent pronoun is to express the independence of the clause for the sake of giving it prominence. This

applies to (31) and (32), where the clause occurs at the end of a discourse section where there is no change of subject from the preceding clauses:

- (31) *+páltxən mən-ju-’átri cùl-məndi| daválta +páltxən,| ka-tláy šónne ’ána b-yavvónna kàx.* ‘I shall bring everything out of my land, I shall bring out wealth, and give it to you for thirty years.’ (A 3:41)
- (32) *’én čarúxə| b-léla c-atíval| mačxívalun,| t-aztva marcəxxívalun,| +xallívalun| ’áni t-+axlívalun.* ‘At night they came and found the sandals, they went and softened them and washed them, then they ate them.’ (B 3:36)

This strategy of giving the clause a heavy coding of the subject for the sake of prominence is applied also to subordinate clauses. In (33), for example, the goal for the addressee to be able to work is a prominent one in the narrative, with which the speaker, the father of the addressee, is emotionally engaged.

- (33) *’ána jári málpxən kátux| ’áton +’ámsət pálxət.* ‘I must teach you so you can work.’ (A 36:1)

Occasionally a 2nd person independent pronoun is used with an imperative form. The motivation of this is likewise to mark off the construction clearly from what precedes in order to enhance its prominence:

- (34) *’áti sílux bëta.* ‘You go home.’ (A 54:8)
- (35) *ví ’áx tuyta| lá-vi ’áx +šàda.| +šàda| kámta| ci-yávva +tárpa| +xártá ci-yavvála +tùnto.| ’ína ’áti ví ’áx tuyta.* ‘Be like a mulberry. Do not be like an almond. An almond tree first produces leaves and then produces its fruit. But you be like the mulberry.’ (A 3:12)

### (iii) Pronoun bears Nuclear Stress

When the independent pronoun bears the nuclear stress, the function of the construction is generally different. The motivation for the use of the pronoun in such cases is normally to express an information focus on the pronominal referent, the remainder of the clause being presuppositional. The construction may be used to express contrastive assertion, e.g.

- (36) *+’áv kríməla.* ‘He (not you) has won.’ (A 22:4)
- (37) *’áti jári yavvátla.* ‘You (not me) must give it.’ (A 3:41)
- (38) *’ána ci-+yáttən| mu-þt-ódən b-rišu.* ‘I know what to do to him (if you do not, which I presume is the case).’ (A 3:26)
- (39) *+’ávun þt-ávə ka-sebýytux.* ‘He (and nobody else) will be for your old age.’ (A 3:6)

In (40) nuclear stress occurs on two subject pronouns that are set up as contrastive topics ('he' vs 'we') with contrastive predicates:

- (40) *pályə +'àv šakálva| pályə 'àxnan mayyáxvalə.* | 'He took half and we brought back half.' (B 3:18)

In (41) the purpose of the nuclear stress is not to contrast the subject referent with another referent, but rather to give added prominence to the topic of the clause in order to increase the salience of the proposition expressed by the clause (for a similar function of nuclear stress on full nominal subjects see §12.5.2.1. examples (8)–(12)):

- (41) *'ána=da brūn-málcən.| 'ána=da lén tlíka yàla.* | 'I am the son of a king. I am not a lost child.' (A 43:15)

#### 12.5.3.2 Postposed Subject Pronouns

Independent subject pronouns are on some occasions postposed after the verb or copula predicate. This construction expresses greater continuity and cohesion with the preceding discourse than the construction where the pronoun stands before the verb.

In (1) the motivation for the redundant pronoun appears to be to mark the end boundary of an introductory section of discourse about the general activities of protagonists. The next section concerns specifically one of the protagonists:

- (1) *'ína c-azíva +màlyat šaklívə mən-nášə| mən-ducanànə ci-+jammívə +màlyat| b-dó-məndi ci-xayyìva-'annə.* | *'ína 'á +fùrət cačálə| +fùrət cačálə| ... 'íva| bùš| +'ullul mòn| dan-xìna| xàšlə| còs| xá-dana +tàjər.* | 'Now, they used to go and take protection money from people. They used to gather protection money from shops. They used to live by this. Now, the elder of the bald men ... he was higher (in rank) than the others. He went to a merchant.' (A 1:2)

In (2) the postposed independent pronoun is used with the repeated verb marking the end of the discourse section:

- (2) *xà-dana| +'àttar| tánax duccàndar ja-mdítə| šámmu Mixàyəl 'átvalan.* | *ci-lablívə ka-+dàv| ... zavònvalun.* | *'é-+dana lén-+bədda| c-odívalun ka-+páltùynə| ka-kdàlə| ... zavánvalun +'àvun.* | 'We had a pedlar, let's say a shop-keeper, in the town, whose name was Mixayəl. They used to take them

(the rabbits' skins) to him ... He used to buy them. Then, I don't know, they used to make them into overcoats, for collars. ... He used to buy them.' (B 4:11)

At the beginning of speeches a 2nd person independent pronoun referring to the addressee is sometimes postposed after the predicate, e.g.

- (3) mára 'áttən láxxa xa-cačála| ... á cačála| 'átla +xàbra mən-da-báxta.| ... +júrət cačálət 'átən.| +báyyən +bákərən mənnux xa-+xàbra.| 'There is here a bald man ... this bald man has a report about this woman. ... "You are the elder of the bald men. I want to ask you something." (A 1:36)
- (4) mára +màlla t-ávət basima| +kusárta müyyovət 'átən| cmá-+dana kám 'adíyya.| 'He says "Mullah, if you please, you took the pot some time ago." (A 8:5)
- (5) 'ávət basima| ka-díyyi xàyyi purkélux 'átən.| 'Thank you. You have saved my life for me.' (A 40:8)

In many cases the motivation for this additional coding appears to be to give prominence to the clause as a whole, e.g.

- (6) là xášvət 'ádi 'ána kála lèn váda| cíu-məndit vādət.| ... mxáyola mədrə| mára xà-ilə xób.| kála lè-’odan 'ána| "Do not think that I do not speak out whatever you do" ... He beats her again. She says "Well, it is all the same. I shall not speak out." (A 36:10)
- (7) 'ádi maxzíyyànnna ka-díyyux 'ána! 'Now I'll show you!' (A 48:11)
- (8) lè joránnux 'ána! 'I will not marry you!' (A 52:1)
- (9) mára ka-mù-itun cályə?| hállun +tìna| hállun miyyal hállun cípə| mára müjjur yávvax 'àxnan?!| müjjur yávvax +támma 'úxnan +tìna| cípə| miyya?| müjjury yávvax?| 'He says "Why have you stopped? Give clay, give water, give stones." They say "How can we give? How can we give there clay, stones, water? How can we give?"' (A 3:72)
- (10) jári ju-dó xášca b-nòšux dámxət 'átən.| 'You must sleep alone in the dark.' (A 36:17)
- (11) 'áy +Àxiqar! ay-xàyyi!| jànivət 'átən! 'Oh Axiqar! Oh my life! You are my soul!' (A 3:52)
- (12) púš b-šlāma 'átən! 'Farewell!' (A 48:25)

In (6) the clause with the postposed pronoun stands in contrastive opposition to a previous statement. In (9) the pronoun gives added emotional force to the question 'How can we give?', which is an exhortation rather than the request

for instructions. The postposition of the pronoun binds the clause closely to what precedes. In (10) the statement is emotionally-charged since the speaker is using it as a deterrent to the hearer. The construction in (11) is an exclamation.

In (13)–(15) the clause has both preposed and postposed independent subject pronoun. The effect is to give the clause greater prominence. This is clear in (13), which is a question uttered in exasperation:

- (13) *'ána ḁa-diyyax mü-īn vída-'ana?* ‘What have I done to you?’ (A 47:9)
- (14) *'átən +'alduyit 'átən.* ‘You are tricking me.’ (A 47:13)
- (15) *'átən +spáy báxta lét 'át.* ‘You are not a good wife.’ (A 47:13)

#### 12.5.3.3 Long Independent Pronouns

The 3rd person and 2nd person singular independent pronouns have short and long forms:

	Short	Long
3ms.	+av	+avun
3fs.	'ay	'ayən
2ms.	'at	'atən

The distribution of the variant forms of these pronouns is conditioned largely by prosody. In general the short forms do not occur at the end of an intonation group, whereas the long forms occur in all positions within an intonation group, including the end. Examples:

#### Short forms

- (1) *+áv mánni bùš xmárlə.* ‘He is more of an ass than me.’ (A 16:3)
- (2) *'án xá-xta maxiva, +'áv bát-xayyiva.* ‘If he were to strike again, I would live.’ (A 39:14)
- (3) *'áy é +júrtəva ju-bnátə.* ‘She was the eldest among the girls.’ (A 39:15)
- (4) *'áy massùkona.* ‘They bring her up.’ (A 39:17)
- (5) *'át +dílux báxta mòttəla?* ‘Did you know that the woman had died?’ (A 1:31)
- (6) *'át t-ávət šópət vazziri.* ‘You shall be in place of my vizier.’ (A 1:50)

#### Long forms

- (7) *+avun-da 'ílə ríyət +hàji.* ‘He is the servant of the pilgrim.’ (A 1:33)
- (8) *márlə kət-+avun! 'ən-tána ḁa-šámša clì, bát-càlyā.* ‘He says that he, if he says to the sun “Stop!” it would stop.’ (A 3:64)

- (9) *'áyən=za k̄əmla.* | 'She rose.' (A 36:12)
- (10) *'ax-š̄ēr-ilə áyən.* | 'It is like a poem.' (A 37:8)
- (11) *átən 'átvələx k̄válta mən-+hàjì?* | 'Did you have a complaint against the pilgrim?' (A 1:44)
- (12) *+júrət cačálət átən.* | 'You are the leader of the bald men.' (A 1:36)

In some cases the occurrence of a long form instead of a short form before the end of the intonation group functions as a device to give added weight to a clause at the end of a discourse unit. This is seen, for example, in (13), in which a clause is repeated, the first containing a short form of the pronoun and the second a long form

- (13) *+àv krímalə.* ... *+àvun +krímalə.* | 'He has won. ... He has won.' (A 22:4)

#### 12.5.4 *Impersonal 3pl. Subjects*

If the identity of a subject referent is not known, the verb may be given 3pl. subject inflection. In such cases an independent subject pronoun is not used in the clause, e.g.

- (1) *+tárra +tačtùkuna.* | 'Somebody is knocking at the door.'
- (2) *é-+dana mándi zábniwa ju-+ahúla jári kàla dáriva.* | 'At that time when people sold something in the street, they had to cry out.' (A 34:2)
- (3) *mən-+málla +bakùrəna māra!* | 'People ask the mullah saying ...' (A 16:1)
- (4) *b-sùysa ci-+xadárva, b-xáčča júllə 'atíkəl kat-là yattívalə.* | 'He would travel around on a horse, in some old clothes, so that people would not recognize him.' (A 35:3)
- (5) *átən ... ka-díyyax ... brilun! kat-úrxə dùz 'azátvala.* | 'You were created to go on the straight path.' (A 30:3)
- (6) *'ána! ju-béti tivənva! e-+dántat 'ínvajvànka, +tarri mxílun, +tučtákłun.* | 'I was sitting in my house, when I was young, and somebody banged on my door. Somebody banged on my door, somebody knocked.' (A 2:26)
- (7) *'ána 'ád-lelə jári dàmxən, yátvən +al-do-búškət +nùyṭəl kat-lá-'ati janvíla.* | 'Tonight I must sleep sitting on the barrel of oil so that people do not come and steal it.' (A 6:10)
- (8) *núynə-da ju-míyya ci-bašlílun! ánnə lèna basímə.* | 'Fish that one cooks in water are not tasty.' (A 36:8)
- (9) *+xadárvánan məššəlmànəva.* | 'Around us they were Muslims.' (B 2:6)

### 12.5.5 *Clauses Containing a Direct Object Constituent*

#### 12.5.5.1 Verb—Direct Object

The default position for the placement of a direct object nominal is after the verb, e.g.

- (1) *+palúčulə +Axíkar.* ‘He brings out Axiqar.’ (A 3:53)
- (2) *bəškálulə Nátan.* ‘He takes Natan.’ (A 3:88)
- (3) *+jammúyol cíllə kòšun.* ‘He gathers the army.’ (A 3:25)
- (4) *+šáda! kámta ci-yávva +tárpa!* *+xárta ci-yavvála +túnito.* ‘An almond tree first produces leaves and then produces its fruit.’ (A 3:12)
- (5) *hálli xa-brùna.* ‘Give me a son.’ (A 3:4)
- (6) *škúlla +págrot bábu.* ‘Take the body of your father.’ (A 3:37)
- (7) *lá +’áxlət! láxma +háram.* *+’axlátłə láxma dùz.* ‘Do not eat forbidden food. Eat proper food.’ (A 3:9)
- (8) *mattúyøna miyya.* ‘They serve water.’ (A 3:36)
- (9) *vúd +támta ka-dá ... +xànəm.* ‘Make breakfast for this lady.’ (A 1:14)

In most cases the nuclear stress is put on the object, as in the examples above.

#### 12.5.5.2 Direct Object—Verb

On numerous occasions the object is placed before the verb. Although this word order is frequently attested, it is used as a strategy to perform various discourse functions and should be regarded as a marked order. The placement of the object after the verb, on the other hand, is unmarked.

A distinction should be made between constructions where the fronted object is an information focus marked by the nuclear stress and those in which it is not an information focus and does not bear the nuclear stress.

The latter type of construction without the nuclear stress on the fronted object is used to perform two main functions, which may be designated as ‘event-orientated’ and ‘topic-orientated’ respectively. When it has an event-orientated function, it expresses an event or situation that has a close cohesion with what precedes. The object in such cases has some referential link with the preceding discourse, either by explicit previous mention or by some kind of associative anaphora. In narrative the construction presents an event as occurring in close spatio-temporal sequence to the preceding event, e.g.

- (1) *márrə xa-náša ’áttən ju-+düssak! bədmáyələ +àlli.* ... *’o-náša +bəktálulə.* *labúlulə ka-málca* ... *’o-ríšət do-náša labúlulə ká +Nuxadnásar* ‘He said “There is a man in prison who resembles me.” ... They kill this man. They take him to the king. ... They take the head of that man to Nebuchadnezzar.’ (A 3:35–37)

- (2) *málca ḁa-Nàtan márələ| kát ... mélə xázən ... ḁa-mù-ilə ‘átxa vída.| +Axíkar máyyuna cəs-málca.* ‘The king says to Natan “Bring him and let me see why he has done this.” They bring Axiqar to the king’ (A 3:26–27)
- (3) *ḥa-+Axíkar| ... kam-+tárrət bétu| +bəkkárəna xa-+čála,| ... +Axíkar mat-túyuna +támə.* ‘They dig a hole for Axiqar before his house. ... They put Axiqar there.’ (A 3:36)
- (4) *mára ‘ána +byáyən xa-dána +xòla| ... +zakròtlı b-sila| ... +‘ávva sīla bədrá-yələ.* ... +‘ávva sīla ‘átxa ‘átxa partūlələ. ‘He says “I want you to weave me a rope with sand.” ... He sprinkles sand ... He twists sand like this.’ (A 3:73–74)

In (5) the clause with the fronted object is bound to the preliminary background clause in that it expresses a defeated expectation of what would logically follow from it:

- (5) *‘áha málca káti ‘íva xá +karùvvə| kát +úxča šapíra ḁala ‘ótvalə.* ... ‘ína ‘á +kətúntət díyyux| m-áxxa ḁəmlə,| xəšla ‘ád-lelə ɭdálu +kçitula,| títəla. ‘This king was a rooster to me, who had such a beautiful voice. ... But this cat of yours, he got up from here and went this night and has snapped his neck.’ (A 3:81)

The cohesion may be one of overlap, in that the clause is a reiteration of the content of what precedes, e.g.

- (6) *mattúyəna miyya,| ləxma| cül-məndi mattúyəna ḁatū.* ‘They put there water, bread, they put there everything for him.’ (A 3:36)
- (7) *+Nuxadnásər málcal +bəkráyələ +rába náše lipəl vazzirə,| vaccilə,| cul-nášəl Prámoldàrə<sup>P</sup>| cül-našə +bəkrayéłə ...* ‘King Nebuchadnezzar summons many learned people, viziers, stewards, every kind of people, magicians, he summons every kind of people.’ (A 3:42)

The construction is sometimes used in clauses that provide clarification or elaboration on what precedes, e.g.

- (8) *susyátət díyyan ləxxal murxəšlun| yánə yalé munpəllun.* ‘Our horses here aborted, that is they aborted their young.’ (A 3:78)
- (9) *+xábra yávələ ḁa-báxtu.| šámmət báxtu munšítun,| xa-šəmma-‘otla.* ḁa-báxtu +xábra yávələ | ká-‘ána bitáyən bëta. ‘He sends word to his wife—I have forgotten the name of his wife, she has a name.—He sends word to his wife (saying) “I am coming home.”’ (A 3:31)

- (10) *Nátan brùnux á-məndi vádlə.* 'Natan your son did this thing.' (A 3:54)
- (11) *bæctávələ fu-ctával̥ kat-’átən fur’un̥ denánət ká ... málca!* *dúz-ila?* mára +*byáyələ dénuł šakəllə mónnux.* 'He writes in a book "You, Pharaoh, are in debt to the king. Is that true?" He says "He wants to collect your debt from you.'" (A 3:76)

The preposed object in such event-orientated constructions may be a non-referential negative expression that has no anaphoric connection with what precedes, e.g.

- (12) *málca ka-Nátan brúnu mārələ* *xùš̥ škúllə +pájrət bábułx* +*Axiłkar* +*ṭamər-rə.* *Nátan bitáyələ háč-məndi léłə váda ka-bàbu.* 'The king says to Natan his son "Go and take the body of your father, Axiqar, and bury him." Natan comes but does nothing to his father (in contrast to what he was ordered to do in the preceding context).' (A 3:37)
- (13) *márrə mü +báyyət ’ána kàx yávvən?* *márrə háč móndi mónnux lén +byáya.* 'He said "Whatever you want I shall give you." "I do not want anything from you.'" (A 3:87)

The fronting of the object may be used to express cohesion with a preceding subordinate clause, e.g.

- (14) *’e-+dān-sòvlux, t-ávə brùna kátux.* *’e-+dān-màtlux,* +*áynux p-+čámla.* 'When you have become old, he will be a son for you. When you die, he will close your eyes.' (A 3:6)

Fronting may take place in a subordinate clause to express cohesion with what precedes, e.g.

- (15) *’íman-t a-ctáva kabùlulə, +jammúyol kòšun.* 'When he receives this letter, he musters the army.' (A 3:25)
- (16) *náša lòt̥ kat-’á-məndi ’avədlə.* 'There is nobody who can do this.' (A 3:45)

When the construction is topic-orientated, the initial object is set up as a topic that is the main centre of concern in the clause. This strategy is used at the beginning of a section of discourse, in which the referent of the preposed object typically retains its central topicality in what follows. The fronted referent is often a newly introduced referent, e.g.

- (17) *xa-ctàva ctávlə| mən-púmmət +Axìkar| ka-málcət Mèssər| ... 'a-ctàva| trè-samələ.* ‘He wrote a letter on behalf of Axiqar to the king of Egypt ... This letter is in two parts.’ (A 3:19–21)
- (18) *xá-dana +kátu dùkun.| +kátu bədvàkona.| ka-dáha +kátu +'ùxča mxáyələ,| +'ùxča mxáyələ| ju-+xiyàvand| +ajjùzolə,| čarçùrələ.* ‘“Take a cat.” They take the cat. He beats the cat hard and harries it in the street, and it whines.’ (A 3:78–79)
- (19) *'u-yálə súrə-da mattúyəna ju-xa-+kərṭàla,| 'ánnə nàšrə| bəškalèna| mas-suķéna| ju-+hàvə.* ‘They also put young children in a basket and the eagles pick them up and take them up into the air.’ (A 3:58)
- (20) *+báyyən xà-məndi tanónnux.* | *mára mù-ilə?* | *tàni!* | ‘I want to tell you something.’ He says ‘What is it? Speak!’ (A 3:47)
- (21) *'ína 'áha móndi 'ána +báyyən tanánnə kàtux.* | *mára mù-ilə?* | *hàmzəm!* | ‘But I want to tell you this thing.’ He says ‘What is it? Speak!’ (A 3:48–49)

This strategy is often used in descriptive discourse when speakers introduce new items that they wish to talk about, e.g.

- (22) *tlívvə ci-+tarsíva.* | *+ánvə har-hàda| tàza| čambəllívalun| jú ... čuxyàtə| čúxta c-avívalun ju-xdšca.* | ... *ci-yatvíval marzánət taníyral mən-dánnə tlívvə ci-mayyíval ci-+maslíval* | *'árxa darívalun c-+axlíva.* | ‘They used to make preserved grape-clusters. They used to hang up grapes, exactly as they were fresh (from the vineyards) in cellars—they used to have a cellar—in the dark. ... They used to sit around an oven and used to bring some of those preserved grape-clusters. They used to take them down and serve them to guests and they would eat them.’ (B 2:4)
- (23) *'ína| xína| mən-carmànə,| nipùxta ci-bašlíva.* | *+ánvə mayyívalun ju-čaràza| +marčívalun,| šíra| 'íta ju-+tiyàna daríva.* | *xuté mallíva niyra| nipùxta bašlíva.* | ‘Also from the (produce of) the vineyards they would cook molasses. They used to bring the grapes in water-jugs, they used to press them and pour the must into cauldrons. They used to light a fire beneath them and cook molasses.’ (B 2:4)

The topicality of the referent of the fronted object may relate specifically to a following subordinate clause. In such cases the referent of the object is generally not resumed in the subordinate clause, but rather it has some kind of relevance for the event expressed in the main clause, e.g.

- (24) *xa-+bózza bəšvàkəna| kat-napásu lə-+kat̥ta.* | ‘They leave a hole so that his breathing would not be cut off.’ (A 3:36)

- (25) *ka-báxtu* +*xàbra yávələ* | *kat-*<sup>‘</sup>*ána bitáyən bëta.* | ‘He sends word to his wife (saying) “I am coming home.”’ (A 3:31)
- (26) *xa-mándi* +*báyyən tānət káti* | *kat-háč náša lā-*<sup>‘</sup>*avə* +*šámyu ju-dúnyə.* | ‘I want you to tell me something that nobody in the world has heard.’ (A 3:75)
- (27) *kòšun muyyéla* | *kat-*<sup>‘</sup>*áti* +*pàləš mónnux.* | ‘He has brought the army in order to fight with you.’ (A 3:20)

When two or more such topic-orientated constructions are juxtaposed, they are presented as two parallel situations without being connected sequentially, e.g.

- (28) *‘a-ctáva* | *trè-samələ.* | *xa-ka-fír’uŋ* +*šadúrələ m-púmmət* +*Axíkar.* | *xà* | *ka-málca* +*šadúrələ.* | ‘The letter is in two parts. He sends one to Pharaoh on behalf of Axiqar and one he sends to the king.’ (A 3:21)
- (29) *fír’uŋ dúlə tílə láxxa hámlea váda* | *u-* +*Axíkar=da kòšun* +*jumméla.* | ‘Pharaoh has come here to make an attack and Axiqar has mustered the army.’ (A 3:25)

In (30) the verb is elided by gapping from the second clause:

- (30) *ví ‘ax-tílyta* | *kámta cíllə* +*tún̥ta ci-yavvála ka-nášə,* | +*xàrtə* +*tárpa.* | ‘Be like the mulberry. First it gives all the fruit to people and afterwards leaves.’ (A 3:12)

The initial object that is set up as the topic of the clause may be a generic relative phrase. The relevance of such topics often does not go beyond the clause, but within the clause they are the dominant referent, e.g.

- (31) *cúl-məndit* +*báyyət* | *b-yavvənnux.* | ‘I shall give you whatever you want.’ (A 3:85)
- (32) *cíllət* +*báyyət* *‘ódət b-rišu vùd.* | ‘Do whatever you want to do to him.’ (A 3:88)

As can be seen from the foregoing examples, when the referent that is set up as the topic of the following discourse is newly introduced and indefinite, it is often given added prominence by receiving the nuclear stress in the intonation group. A further type of object fronting is where the object is fronted and given the nuclear stress but does not have topical durability in what follows. In some such cases the nuclear stress is used to give prominence not to the referents so much as the descriptive contents of the nominal phrases, e.g.

- (33) *'ən-ávə xàya,| páljət malcùtyti b-yawwánna kátux.'* ‘If he is alive, I shall give you half of my kingdom.’ (A 3:50)
- (34) *'át +sàrəvət,| +bárət lèlə yávəvət.'* ‘You are the moon. You give the light of night (an important phenomenon).’ (A 3:61)

In other cases this type of fronting is used to express contrastive assertion, e.g.

- (35) A: *xzíli bábux!* B: *là,| +mamùni xzílux.* ‘A: “I saw your father.” B: “No, you saw my uncle.”’

In such cases the remainder of the clause belongs to the presuppositional background, i.e. it is assumed to be known to the hearer. What is unknown is the identity of the argument in question. In (35) the presuppositional background of the clause with the fronted object is ‘You saw *x*’. A related type of contrastive focus is exhibited by cases such as the following:

- (36) *dìylə márət?* ‘Are you telling *lies*? (rather than the truth that you are ostensibly telling) (A 3:49)

The fronted objects in (37) are given focus to express a parallel opposition:

- (37) *hám nùyna zabúnəla,| hám +bùsra zabúnəla.* ‘Both does he sell fish and also does he sell meat (= Not only does he sell fish but he also sells meat).’ (A 34:6)

When a clause with a fronted object contains also a subject constituent, this may be placed either before or after the object, e.g.

- (38) *Nátan brùnux á-məndi vódlə.* ‘Natan, your son did this thing (not anybody else).’ (A 3:54)
- (39) *'áxnan nùyna zabúnəx.* ‘We are selling fish.’ (A 34:2)
- (40) *'é bráta súrṭa áyála +biyyàlə.* ‘The boy fell in love with the youngest girl.’ (A 42:15)
- (41) *'á meymunóxun ána b-zonònna.* ‘I shall buy this monkey of yours.’ (A 44:10)

In some cases the subject is placed after the verb. In (42) a topical subject is placed after the verb and a topical object is preposed, which are both strategies for expressing cohesion with what precedes:

- (42) *kalé +šmīlə 'á +sedàči.* ‘This hunter heard their voice.’ (A 53:4)

The fronting of objects in a number of constructions is likely to be the result of calquing of object preposing in Iranian languages. This applies in particular to a number of phrasal verbs, which often consist of a loaned object constituent of an Aramaic verb, e.g.

- (43) *'aláha +jùvvab yuvvállə kátu.* ‘God answered him.’ (A 3:5; cf. Pers. *javāb dādan*)
- (44) *+pállanyúma,| +póllan +tárax| málcət Mèssər,| fír'un| hámla t-ávəd +'állux.* ‘On such-and-such a day, on such-and-such a date, the king of Egypt, Pharaoh, will attack you.’ (A 3:20; cf. Pers. *hamle kardan*)
- (45) *fárk lélá váda.* ‘It does not make a difference.’ (A 3:48; cf. Pers. *farq-i námikonad*)
- (46) *+'ómza vídət.* ‘You have signed.’ (A 7:3; cf. Pers. *emza kardan*)
- (47) *+málla c-azálva ptána 'avádva.* ‘The mullah used to go to plough.’ (A 5:5; cf. Pers. *šoxm kardan*)
- (48) *xá mən-məššəlmànə| dást +námaz bəškáləva +táma.* ‘One of the Muslims was performing ablutions there.’ (A 6:15; cf. Pers. *dast namāz gereftan*)
- (49) *záhmat bəjrásax kát nùyna dókax.* ‘We are taking trouble to catch fish.’ (A 9:3; cf. Pers. *zahmat kašidan*)
- (50) *'ána xáslı míyya màyyan| šamáša +'áyna məxyánnə| 'u-ķàša +'áyna məx-yánnə| 'u-'abùna +'áyna məxyánnə.* ‘I went to fetch water and the deacon winked at me, a priest winked at me and a bishop winked at me.’ (A 6:3; cf. Turk. *göz kirpmak*, Azer. *göz vurmaq*, Pers. *cešmak zadan*)
- (51) *p-ùrxət šákítə| šamàša ... káto ... +'áyna +kásłə.* ‘On the way to the stream, a deacon winked at her.’ (A 6:1, see previous example)

The position of the loanword element before the verb is not, however, totally fixed in such phrasal constructions, as is shown by (52)–(54):

- (52) *'atətva,| ju-cúllə 'ánnə +xabráne ci-yavvátvələ +jùvvab.* ‘If only you would come, you would give me an answer for all these things.’ (A 3:45; cf. Pers. *javāb dādan*)
- (53) *táni ka-násux| tına| +kašíyyə,| carpiyčə,| míyya,| cúllə 'odílun +házər.* ‘Tell your people to prepare mud, tiles, bricks, water, everything.’ (A 3:70; Kurd. *házir-l kirin*)
- (54) *'ána lé maxánnə mùšta.* ‘I shall not give him a punch (literally: hit him a fist).’ (A 21:2, Pers. *mošt zadan*)

### 12.5.5.3 Independent Object Pronouns

The vast majority of the independent pronominal objects that are attested in the text corpus are placed before the verb.

When the direct object constituent is an independent 3rd person pronoun, either the nominative form or the oblique form after the preposition *ka-*, the principles of placement are similar to those for the placement of nominal phrase object constituents. When they are fronted without the nuclear stress, the clause is bound semantically in some way with what precedes, e.g.

- (1) *xá-yuma +Axíkar bəškáləl brùnu,| víyyələ xa-jvàñka,| +màtya,| labúlu cás +Noxadnásər.|| ... áha máttuyul +tàma.|| +Axíkarl bərráxšəl bëta.||* ‘One day Axiqar takes his son—he has become a mature young man—he takes him to Nebuchadnezzar. ... He (Nebechadnezzar) installs him there (in his palace) and Axiqar goes home.’ (A 3:16)
- (2) *+Axíkar-da bəškáləl mən-+sarbàzul ka-danno-mxàyələ.||* ‘Axiqar takes (the items) from his soldiers and beats them.’ (A 3:72)
- (3) *xa-náša ́ttənju-+dùssakl bədmáyələ +àlli.|| ... +ávun +ktul-làbəlla.||* ‘There is a man in jail who resembles me ... kill him and take him (to the king).’ (A 3:35)
- (4) *dévə ka-jané bərráxšəna! +sèda vágəna,| ýá švíkuna bëta.||* ‘The monsters go by themselves and hunt, they have left him at home (= having left him at him).’ (A 37:13)

In (1) the clause with the fronted object is temporally sequential to the preceding events. In (2) the act of beating overlaps temporally with the act of taking items from the soldiers. The initial clause in (3) provides the grounds for the action commanded by the clause with the fronted object. The clause (4) provides a circumstantial background for the events described in the preceding clauses.

When the fronted pronoun has the nuclear stress, it is generally a contrastive focus, the remainder of the clause being presuppositional, e.g.

- (5) *'ánnə +al-mú madmuyévət?||* ‘What do you compare *these* to?’ (as opposed to the other item just mentioned, which you have already compared with something) (A 3:62)

On some occasions a pronoun with nuclear stress is topical and the effect of the nuclear stress is to enhance the prominence of the topic in order to give prominence to the proposition as a whole. In (6) the eating of the children is a pivotal event:

- (6) *'áxnanjári 'ázax| cí +dánət +'ávun nára bədvàkula| xátréyála súrə +ráppax +al-márzət náral| +'ávun ci-+pálət kát 'ani +'axállun| 'ita míyya m-+xútū c-+óri c-àti.*| ‘Every time it blocks the river, we must go and throw one or two children onto the river bank. He comes out to eat them, then the water flows and comes from beneath him.’ (A 39:18)

Object pronouns placed after the verb, as in (7) and (8), do not have such a clear discourse function, but the heavier coding of the object by an independent pronoun rather than a pronominal object suffix gives greater prominence to the clause:

- (7) *'ína ý +kačúntat díyyux| m-áxxa kòmla,| xášla 'ád-lelə kdálu +kçitula,| titəla. bas-járəc 'ána maxənna 'áha.*| ‘But this cat of yours, he got up from here and went this night and has snapped his neck, then has come back. So I must beat it.’ (A 3:81)
- (8) *me-+moráxxə,| +tamràxxə +'ávva| ju-pajéni kat-náš là xázzi müjjurra bæxpárəx.*| ‘Bring him and we’ll take him in there, we’ll bury him in our stable, so people do not see us digging.’ (A 48:10)

When independent 1st or 2nd person object pronouns are used, they are generally placed before the verb. When the verb is derived from the past template, the primary motivation is to avoid 1st or 2nd person object agreement on the verbal base (§ 4.3.5., § 10.18.1.), e.g.

- (9) *ka-díyyux +ktəllun.*| ‘They killed you.’ (A 3:68)  
 (10) *yámmət díyyux ka-díyyux tuybòrra.*| ‘Your mother brought you up.’ (A 3:91)

With other forms of verb the motivation to use heavier coding than that of object pronominal suffixes appears to be to give heightened prominence to the proposition, e.g.

- (11) *'ána parpùləvən b-díyyux| ka-díyyan là +kátlət.*| ‘I beg you, do not kill us.’  
 (A 37:10)  
 (12) *ka-díyyi +bílun +kátlí.*| ‘They wanted to kill me.’ (A 3:69)

In (13) a nominative form of the 2nd person singular pronoun is placed after the verb:

- (13) *kédamta b-lablálxux +al-+ùmra 'átən.*| ‘In the morning we shall take you to church.’ (A 36:16)

If the pronoun takes the nuclear stress, the function is contrastive, e.g.

- (14) *lá +màxəllə| ka-dìyyi +máxəl!* 'Do not feed him. Feed me!'

### 12.5.6 *Verb and Copula Agreement*

In principle, the subject inflection of the verb or copula agrees in number, gender and person with the subject nominal. In a few cases, however, there is a discrepancy of agreement. The attested examples may be classified as follows.

#### 12.5.6.1 Comitative Constructions

A singular subject has a plural agreement on the verb when the action is presented as being carried out comitatively with another participant, e.g.

- (1) *b-lèlə| vázzər mən-málca +plátəna.* 'At night the vizier leaves together with the king.' (A 2:3)
- (2) *xá-yuma kédamta jàldə| málca bíyya bi-vazzíru,| +nazzíru,| bi-+tazíyyu,| b-calbanànu,| +plátəna +al-+sèda.* 'One day early in the morning the king, together with his vizier, his overseer, his greyhound, his dogs, goes out hunting' (A 48:3)
- (3) *mən-brúnu m-+úydalə jarvùsəna.* 'He grows up together with his son.' (A 46:2)
- (4) *mən-+jóri +hála hamzùməx.* 'I am still speaking with my husband.' (A 36:9)
- (5) *'ána| 'á yála sùra 'átən| fu-dá béta jári xàyyax| b-xùbba.* 'I, the small child and you must live in this house with love.' (A 36:17)
- (6) *'ána mən-+dàvva +túmrux| 'o-nàša.* 'I have buried the man together with him.' (A 48:19)
- (7) *'ána bətxárəvən jàni| sùrəvənva| bábi-da sàvəva| ci-yaskákva mən-bábi m-+úydalə cùt-yum| tàyal| jári +rappáxvalə m-+ál-jàrə.* 'I myself remember, I was young and my father was old, I used to go up together with my father and every day we had to throw off the snow from the roof.' (B 2:19)

In (8) the referent of the speaker is entailed by the phrase 'all the grandchildren of my grandfather':

- (8) *cúlla navájjat savùni| calàtu| c-avákva tívə máccə pràxa.* 'All of the grandchildren of my grandfather, his daughters-in-law, we used to sit hulling the maize.' (B 17:4)

In (9) the 1pl. is used where the action of the clause is carried out by one person, but this is a component of a larger collaborative action:

- (9) *xá-mənnan t-azáxva mən-dò-yba! b-ķesa cašcəššàxva.* ‘One of us would go and drive the fish from the other side with a stick.’ (B 4:12)

In a similar manner, the plural pronominal object on the verb in (10) agrees with a singular object that has an item combined with it in a comitative relation:

- (10) *'ádi kat ... lét bəšváka +òrən! é +čappáltil! mán de-scənti! +ráppilun l-á-pát jùyda.* ‘Now, since you do not allow me to enter, throw me my club, together with my knife to this side of the wall.’ (A 37:6)

Likewise in (11) an adjective in a predicative complement (§ 12.7.1.) is plural in agreement with a singular noun and a second noun that is linked to it in a comitative relationship:

- (11) *bəxzáyən vélə xa-yàla! mən-xa-bàxta +támma! šulxàyo.* ‘I see that there is a lad together with a woman over there (both) naked.’ (A 4:11)

When one of a group expressed by the subject performs the action, the verb is singular, as in (12):

- (12) *'əmnən +sálə?* ‘Which one of us will go down?’ (A 42:35)

#### 12.5.6.2 Exclusive and Inclusive Subject

In (1) the subject is an exclusive disjunction ('either ... or') including a feminine and a masculine referent and the verb agrees with the masculine singular referent, which is nearest to it:

- (1) *'u-xá bàxta! yán xà! 'úrza yatávva kat-+mayyìvala.* ‘A woman or a man would sit in order to churn it.’ (B 7:1)

In (2) a plural verb is used where there is a disjunctive subject:

- (2) *yá xá jár +ķàrmí! yá 'o-xìna.* ‘Either one or the other must win.’ (B 17:3)

In (3) the subject is a list closing with the inclusive phrase ‘also the grandfather’. The verb is singular, agreeing with the last member of the list:

- (3) *yàmmo,| xàto,| yàmmu,| yàmmat bráta,| bábət bráta,| savùna-da tíyyəla.*  
 ‘Her mother, her sister, his mother, the mother of the girl, the father of the girl, also the grandfather has come.’ (A 43:24)

#### 12.5.6.3 Agreement with Class or Set rather than Members

In (1) and (2) the subject is the negative expression *hàč naša*, which excludes all members of the class designated by the noun. The verbs are plural, agreeing with the members of the class rather than the class itself:

- (1) *léna xázyu hàč náša.* ‘Nobody has seen him.’ (A 52:5)  
 (2) *hàč náša b-+arallə́jé lá +vírun.* ‘Nobody interfere with them.’ (A 56:5)

In (3) the subject denotes one member of a set of referents, but the verb agrees with all the members of the set and is plural:

- (3) *cút lèlə| xá mənnóxun t-atítun +’álli +karàvul.* ‘Every night one of you will come to guard over me.’ (A 45:4)

In (4) a 3pl. pronominal suffix (*katé*) refers back to an indefinite singular phrase referring to a non-referential class (*xa-náša*):

- (4) *’íman xa-náša kát tánə ’ána ’àtxən| ’ána ’àtxən,| ’áha ci-tanyànnə katé.*  
 ‘When somebody says “I am like this, I am like that”, I tell them this (anecdote).’ (A 4:16)

#### 12.5.6.4 Agreement according to Sense of Collective Noun

Agreement on the verb may be according to sense rather than form, as is the case in (1)–(3), in which the nouns *dasta* ‘group’ and *sama* ‘portion’ take plural subject agreement:

- (1) *dástə +várənaja-+tòr.* ‘A group enters the net.’ (B 4:2)  
 (2) *xá sáma hár +al-+kunṭòpa ci-pešíva brízə.* ‘Some became dry while still in a bunch (on the vine).’ (B 10:1)  
 (3) *+táma xá samé pòšlun.* ‘Some of them (literally: one portion of them) remained there.’ (B 1:14)

Likewise in (4) the direct object noun *košun* (f.) ‘army’ has 3pl. object agreement on the verb:

- (4) *kòšun tuyyéla.* ‘He has brought the army.’ (A 3:20)

In (5), by contrast, the object agreement is 3fs. in accordance with the gender of the noun *košun*:

- (5) *+jammúyol cíllə košun.* ‘He gathers all the army.’ (A 3:25)

Pluralia tantum occasionally exhibit variations in number agreement. The word *míya*, for example, is generally treated as a plural (6), but occasionally speakers treat it as a singular, as can be seen in (7), where it has both singular and plural agreement:

- (6) *kat-míya là bazbákki.* ‘so that the water does not disperse.’ (B 3:8)  
 (7) *'ína míyu +salíva +ávun nòšu.* | *'ína 'an-míyət +'ánvə +rába +sàpyə šápírə c-odáxvələ nipùxta.* | ‘But its juice flowed by itself. That grape juice was very pure and fine. We used to make grape molasses (like that).’ (B 7:16)

In (8) the subject is a nominal annexation phrase and the verb agrees with the dependent noun *dunyə* (fs.) ‘the world’ rather than the head noun *našət* (pl.) ‘people of’, presumably since the noun *dunyə* could be used by itself to express the same sense (cf. 9)

- (8) *cíllə nášət dúnýə=da +jmítəla* ‘All the people of the world (= everybody) is gathered.’ (A 3:71)  
 (9) *cíllə dúnýə +yat̪tāvalə.* ‘The whole world knew him.’ (A 3:1)

In (10)–(12) the subject nominals ‘our group’, ‘our people’, and ‘the children of the village’ are identified by the speaker as including herself in their reference and the verb is given a 1st person plural agreement:

- (10) *dástət díyyan 'æštájanáyə p̪t-avàxva.* | ‘Our group—we were ten people (= Our group was ten people).’ (B 9:5)  
 (11) *ju+bažarl zabbánnaðva 'almèni.* | ‘Our people used to sell (the bread) in the market.’ (Canda)  
 (12) *cíllə yál-súrət máta ò-leləl blíjəxva b-dà.* | ‘All the children of the village that night—we were busy with that (= All we children of the village that night were busy with this).’ (B 9:5)

#### 12.5.6.5 Newly Introduced Referents

Occasionally, when the referents of plural subject nominals are introduced onto the scene and are an information focus, the subject agreement on the verb is singular, e.g.

- (1) *ju-de-+dánta +tàrra mxílun.| xášli +tárra pátxən xzíli 'an-tre-+xuravay-xínə tilə.* | 'At that moment there was a knock at the door. I went to open the door and I saw that the other two friends had come.' (A 10:7)

#### 12.5.6.6 Temporal Situation

As discussed in § 9.15.2., the feminine singular is used in some temporal adverbial expressions to refer to the general temporal situation in a narrative. This can result in some constructions in which 3fs. verb forms appear to take a following plural noun as their grammatical subject, e.g.

- (1) *cmá-šənnə +várəla.* | 'Several years pass.' (A 40:6)  
 (2) *+tlá yumánə lélə vàyə,| Nátan| bəzyárəla.* | 'It is not three days (i.e. hardly had three days past), (when) Natan swells.' (A 3:95)

In such cases, however, the 3fs. inflection should be interpreted as referring to the general temporal situation: '(Time) passes (for) several years', etc.

#### 12.5.6.7 Existential Constructions

In existential constructions expressed by the verb *'avə* 1 'to be', the subject on some occasions does not agree with a plural nominal that refers to the item whose existence is predicated, but rather is in the 3ms or 3fs. In such constructions the nominal is indefinite, e.g.

- (1) *'átən-da máral jùr| càlu 'avíli.* | 'Get married so I can have a daughter-in-law.' (A 44:1)  
 (2) *mádrə viyyálə +zàya.* | 'She again had children.' (A 53:2, *viyya* [3fs.] + *la* [3fs])  
 (3) *vilálən xamšà yálə.* | 'We had 5 children.' (*vila* [3fs] + *lan* [1pl])  
 (4) *'apəskúpə kat-vàyən-lə.* | 'bishops that we had' (B 2:14 = *vaya* + *-an* [1pl] + *ilə* [3ms copula])

#### 12.5.6.8 Agreement of the Copula

It has been observed (§ 12.1.1.1.) that when the predicate is a 1st or 2nd person pronoun, the copula agrees with the predicate, e.g.

- (1) *'ánəvən|* 'It is me.'  
 (2) *'át=ivət|* 'It is you.'

Note also a case such as (3)

- (3) +'ávva ́ivən ́àna.| 'That is me.' (the informant is pointing to a picture of himself on the wall)

Agreement of the copula with the predicate is also attested when the subject is singular and the predicate is plural, e.g.

- (4) *tré kèsəna pálla.*| 'A shaft is two pieces of wood.' (B 17:52)

It is worth pausing at this point to consider whether the items here that behave like the predicate pragmatically are indeed the predicate on the syntactic level.

In his classification of copular clauses in English, Higgins (1979) distinguishes a particular type of clause which he terms a 'specification' clause. Examples of such clauses in English include

- (5) *What I don't like about John is his tie*  
 (6) *The number of planets is nine*

They are termed 'specification' because the nominal phrase after the copula gives the value of the description in the first nominal phrase. It 'specifies' the identity of the nominal phrase before the copula by providing a referent that is known or accessible to the hearer. The second nominal phrase is referential, whereas the first typically gives an attributive, indirectly referential, or concealed-question description of a referent. Higgins (1979) distinguishes specificational copular clauses from predicational copular clauses, such as (7):

- (7) a. *That thing is heavy*  
 b. *Helen is a teacher*  
 c. *Bill is my best friend*

Predicational clauses contain an attributive description after the copula, which corresponds in some cases (e.g. in 7c) to the type of item that serves as the first nominal in a specification clause. For this reason it has been proposed by some theoretical linguists that specification clauses are derived by inverting the arguments of predicational clauses (Williams 1983, 1997; Partee 1986). Difficulties have been pointed out in finding evidence for inversion in English (Heycock and Kroch 1998). Evidence, however, has been identified in other languages, notably Russian, in which the first nominal in specification sentences may be in the instrumental case (Chvany 1975). In Russian copular clauses the referential argument is made the grammatical subject which is postponed after the less referential argument when the latter is more topical (Partee 1998).

In English specification clauses the initial less referential argument is topical but it is grammatically the subject not the predicate. Higgins (1979) distinguishes specification clauses from identification copular clauses such as:

- (8) *That is Joe Smith*

In the light of these theoretical issues, it is possible to explain the agreement patterns of the NENA copula in (1)–(4). Although it appears *prima facie* that the copula is agreeing with the predicate, one could interpret these constructions as being inversions of subject and predicate. If this is so, what looks like the predicate is, in fact, the grammatical subject, which is indeed the item that one would expect would control the agreement of the copula.

In (4) the plural copula could be taken as reflecting that the plural phrase ‘two pieces of wood’ is the grammatical subject. This plural phrase can be regarded as more referential than the nominal ‘a shaft’ and the clause can be regarded as specification, in that the ‘two pieces of wood’ specify the constituency of ‘a shaft’ rather than ascribe to it an attribute. Apart from lack of agreement with the copula, the nominal ‘a shaft’ has the pragmatic status and syntactic behaviour of a subject. It is topical, since it has been referred to in the immediately preceding discourse. It is placed in second position, which is the marked position for a subject. This, however, conforms to the normal discourse strategy of postposing a topical subject after the predicate to express cohesion with what precedes, typically when the clause expresses an elaboratory tag (§ 12.1.1.2.).

In (3) the subject could be considered to be the 1st person pronoun and this would explain why the copula agrees with it. The initial demonstrative would be the grammatical predicate. Apart from lack of agreement with the copula, the initial item has the pragmatic status and syntactic position of a subject, i.e. it is topical and is in clause-initial position. A clause such as (3) looks more like an identification clause than a specification clause according to the classification of Higgins. The analysis of the first person pronoun as the subject can, however, be correlated with the principle of Russian copular clauses whereby the most referential item is to be identified as the subject. This principle can be extended to a clause such as (3) even though it is identification since a 1st person pronoun is inherently more referential than a third person pronoun. This is because 1st and 2nd person pronouns are indexed for person whereas third person pronouns are unspecified for person.

In (1) and (2) the 1st and 2nd person pronouns could be taken to be the grammatical subject, as in (3). Unlike (3), however, there is no explicit con-

stituent that is the predicate item. This can be assumed to be an impersonal item with zero realization, which refers with a maximally low degree of specificity to a participant who is assumed to exist in the speech situation.

### 12.5.7 *Clauses Containing Prepositional Phrases as Complements of Verbs*

#### 12.5.7.1 Verb—Prepositional Phrase

A prepositional phrase expressing an indirect object or some other complement of the verb is normally placed after the verb, e.g.

- (1) *hállə þ-íðət diyyi.* 'Give him into my hands.' (A 3:26)
- (2) *labúlu cás +Noxadnásər.* 'He takes him to Nebuchadnezzar.' (A 3:16)
- (3) *lá-’azət +bár +šúp̥ra.* 'Do not go after beauty.' (A 3:11)
- (4) *málca márəl ḁa-+’Axìkar.* 'The king says to Axiqar.' (A 3:14)
- (5) *kóšun +jummévət +’al-žàni.* 'You have gathered the army against me.' (A 3:27)
- (6) *bráčələ +’al-bərcàcu.* 'He kneels on his knees.' (A 3:46)
- (7) *bitáyələ ju-bétət bábu.* 'He comes into his father's house.' (A 3:38)
- (8) *ku-ta-mònni.* 'Get up come with me.' (A 3:23)

The nuclear stress is generally placed on the prepositional phrase, unless this is pronominal, in which case the nucleus exhibits a greater tendency to be placed on the verb, e.g.

- (9) *fúr’un +báyyə +pàləš mánnux.* 'Pharaoh wants to fight with you.' (A 3:21)

In (10) the nuclear stress is on the subject constituent to express contrastive assertion, the verb and the prepositional phrase belonging to the presuppositional component of the clause:

- (10) *+’avun þt-ávə ḁa-sebúytux.* 'He will be for your old age.' (A 3:6)

#### 12.5.7.2 Prepositional Phrase—Verb

A prepositional phrase is fronted before the verb in similar contexts to those in which a direct object constituent is fronted. A distinction should be made between constructions where the fronted phrase is in focus and those in which it is topical. The latter type of construction, where typically the initial phrase does not take the nuclear stress, may be 'event-orientated' or 'topic-orientated'. Event-orientated constructions are closely cohesive with what precedes, e.g.

- (1) *báxtu +rába honàntəva. | ka-báxtu +xábra yàvəla.* 'His wife was very clever. He gives a message to his wife.' (A 3:57)
- (2) *'a-ctáva Nátan yávulə ká ... +Noxadnásər, | málca. | 'ita, | m-+bár-hada, | Nátan ka-málca márəla* 'Natan gives this book to Nebuchadnezzar, the king. Then, afterwards, Natan says to the king ...' (A 3:22)

In (3)–(5) the fronted prepositional phrase is pronominal:

- (3) *+Axíkar máyyuna cəs-málca. | málca kátu mārəla* 'They bring Axiqar to the king. The king says to him.' (A 3:26)
- (4) *xáslux cəs-nášə xínəl ḳat-'áni lá-+msiva kátux 'odíva.* 'You went to other people who could not perform (the task) for you.' (A 3:5)
- (5) *+xártal 'átxa késa súra 'átxa ci-parmívalun | +katkattívalun. | ka-dáni +kári-vá pardívva.* 'Then, there was a small piece of wood—they cut them like this, they cut them into small pieces. They called those laths.' (B 2:19)

In verbs of low informational content such as 'to say' in narratives the nuclear stress is sometimes placed on the fronted phrase, e.g.

- (6) *ka-rýja márəla.* 'He (the pilgrim) says to the servant.' (A 1:7)
- (7) *ka-yàmmi márrun.* 'They said to my mother.' (B 6:4)

Topic-orientated types of the constructions are attested in contexts where two events are presented as occurring in parallel, e.g.

- (8) *'annə-tré yálə sùrəna. | ka-xá-mənne xúbba maxzùyət. | o-xína +naràhat vágəla.* 'They are two children. To one he shows love. The other becomes upset.' (A 3:17)
- (9) *'a-ctával trè-saməla. | xa-ka-für'un +šadúrəla m-púmmət +Axíkar. | xá | ka-málca +šadúrəla.* 'This letter is (in) two parts. One he sends to Pharaoh on behalf of (literally: from the mouth of) Axiqar. The other he sends to the king.' (A 3:21)
- (10) *ka-šamásá tání | +sa'átət 'òšta 'átə. | ... ka-kaša tání +sá'at 'òšta pàlyə. | ka-abúna tání +sá'at +šàvva.* 'Tell the deacon to come at six o'clock. ... Tell the priest half past six. Tell the bishop seven o'clock.' (A 6:4)

The fronted prepositional phrase may also express an information focus, the rest of the clause being presuppositional, or at least less prominent. In such cases it regularly bears the nuclear stress and is sometimes placed in a separate intonation group from the following verb. In (13) the prepositional phrase

expresses prominence due to the unexpectedness of the material and in (12) due to the unexpected location of the situation. In (11) the phrase is given prominence due to its crucial role in discrediting the action in the eyes of the speaker. In (14) the focus is exclusive ('only on one condition'):

- (11) *kàmtal xášlux cás nášət kát p̄-ida plíxona.* 'Previously you went to people (i.e. idols) who are made by hand.' (A 3:5)
- (12) *báxta xètala.* 'ána mùčxon. ádi *ju-bèti bəxxáyəla.* 'The woman is alive. I have found her. Now she is living in my house.' (A 1:37)
- (13) *xá-xina 'áttən kát mən-sila jəddàlə zárəz.* 'There is another one (i.e. another task) that he should make threads of sand.' (A 3:56)
- (14) *b-šárt t̄-odánnə 'a-+šúla.* 'I shall do this job (only) on one condition.' (A 1:41)

In (15)–(17) the prominence is contrastive:

- (15) *kat-ju malciyta ... ávə, lá ju-+alulàna.* 'So that he would be in the royal household, not in the streets.' (A 3:7)
- (16) *+màlla! 'átən! 'isàktux! ju-bèta tulkòt. ká-mu xíšət ju-dàrta +ṭarvúyə +báro?* 'Mullah, you lost your ring in the house. Why have you gone to look for it in the yard?' (A 27:1)
- (17) *xa-ctàva ctávlə mən-púmmat +'Axìkar! ka-málcət Məssər, ... ka-málca bəctávələ!* 'He wrote a letter on behalf of Axiqar to the king of Egypt ... to the king (of Assyria) he writes ...' (A 3:20)

#### 12.5.7.3 Prepositional Phrases as Subject and Object constituents

On some occasions a prepositional phrase is treated like a subject or direct object constituent of a verb and has subject or object pronominal agreement on the verb. The agreement corresponds to the gender of the noun in the prepositional phrase, e.g.

- (1) *xut-xáčo 'íla cərvəš! b-xá-'ido-zə 'íla ... t̄era.* 'Under her armpit is a rabbit and in one of her hands is a bird.' (A 38:16)
- (2) *xá tanína 'áttən ... kám nára ci-davàkla.* 'There is a dragon which blocks before the river (= blocks access to the river).' (A 39:18)

## 12.6 Experiencer Arguments

An argument that expresses an experiencer or the undergoer of some psychological internal process is in some cases made the grammatical subject of a verb (intransitive or transitive) or of a copula in a clause with a predicative adjective. In a number of cases, however, the experiencer is expressed with different grammatical roles, including direct object and possessor. In some cases the role is left uncoded grammatically.

### 12.6.1 Subject

- (1) *bəxdàyəla.* 'He is happy.'
- (2) *xabùləvən.* 'I am cold.'
- (3) *bəxzàyux-vən.* 'I see you.'
- (4) *ci-<sup>+</sup>bayyənnax.* 'I love you.'
- (5) *ci-maǵǵəbbánnun xòxə.* 'I like the peaches.'
- (6) *kàyrəvən.* 'I am cold.'
- (7) *šaxìnəvən.* 'I am hot'

### 12.6.2 Direct Object

- (1) *kàrta mxítila.* 'I have caught a cold (literally: A cold has struck me).'
- (2) *ńánnə várda kàrta +ruppítela.* 'Those flowers have caught the frost (literally: Cold has thrown down those flowers).'
- (3) *+ujába dvíkənnə.* 'I was amazed (literally: Amazement seized me).'
- (4) *xàrpu dvákla káti.* 'I hiccupped (literally: A hiccup seized me).'

### 12.6.3 Possessor

- (1) *xəmmilə.* 'I am hot (literally: There is my heat).'
- (2) *xóši bitáyəla mən-dàha.* 'I like this (literally: My goodness is coming from this).'
- (3) *bəxšávən ka-díyyax xòšax átya mánno.* 'I think you will like it (literally: your goodness will come to you from it).' (A 40:3)
- (4) *śánti bitáyəla.* 'I am sleepy (literally: My sleep is coming).'
- (5) *cépi là tíla.* 'I did not enjoy it (literally: My enjoyment did not come).'
- (6) *lábbi +tlábələ +àxlən.* 'I feel like eating (literally: My heart requests to eat).'
- (7) *záli bərráxšəla mən-dàha.* 'I do not like it (literally: My dislike is going from this).'

- (8) *sódux bitáyələ?* ‘Are you enjoying it? (literally: Is your enjoyment coming).’
- (9) *sóda látli.* ‘I don’t feel like doing it (literally: I do not have enjoyment).’
- (10) *hosála látli ’ázən.* ‘I don’t feel like going (literally: I do not have the disposition of mind to go).’

#### 12.6.4 Grammatical Role Not Coded

In this category fall constructions such as the following:

- (1) *’á náša +x̣ítō tila.* ‘This man felt sorry for it (the fish) (literally: This man—the sin of it came).’ (A 54:3)
- (2) *bratóxun xóši titəla.* ‘I have become fond of your daughter (literally: Your daughter—my goodness has come).’ (A 43:15)

#### 12.6.5 Experiencer Arguments in Languages in Contact

The expression of experiencer arguments as objects or possessors is generally due to borrowing of material and patterns from the non-Semitic languages of the region, which have closely related constructions. The Kurdish data below are from the dialect spoken in Şemdinli (south-eastern Turkey), which is very close that spoken in the Urmia region:

- (1) Kurdish

*sírr-ê                yê                li    min                day*  
cold-OBL.F.SG EZ.F.SG at 1SG.OBL give.PST.PTCP

Azeri (Tabriz)

*Män-ä soyox däy-ib*  
I-dat cold struck-EVID

Azeri (Baku)

*Mən-ə soyuq dəy-ib*  
I-DAT cold strike-EVID  
'I have caught a cold (literally: A cold has struck me)'

- (2) Kurdish

*sírr-ê                yê                li    wan                gul-a                day*  
cold-OBL.F.SG EZ.F.SG at DEM.PL.OBL rose-OBL.PL give.PST.PTCP

## 12.7 Other Complements

### 12.7.1 *Predicative Complements*

In some cases an adjective phrase or a non-referential noun phrase expresses a quality that is ascribed to one of the arguments of the verb. These may be termed 'predicative complements' in that they express semantic predicates.<sup>3</sup> In intransitive clauses they ascribe a quality to the subject (1–9) and in transitive clauses to the object (10–16) or the subject (17). They typically, though not obligatorily, follow the verb. They may be classified as optional or obligatory. Optional predicative complements include constructions such as (1–18). These are adjuncts that have a function similar to that of circumstantial predicates:

---

<sup>3</sup> For an analysis of these constructions in English see Huddleston and Pullum (2002, 251–266).

- (1) *távli +al-súysə +hàzər.* ‘I sat on the horse ready (= while I was ready).’ (A 2:28)
- (2) *‘áha bëdmáxəla cpònta.* ‘She goes to sleep hungry.’ (A 35:7)
- (3) *mən-kédamta ’at-tívat làxxa, cpína +sìyya.* ‘You have been sitting here from the morning, hungry and thirsty.’ (A 4:5)
- (4) *bitáyələ +bérašə +málla šuršìyya, jiyya.* ‘The mullah comes back in the evening, exhausted and tired.’ (A 5:8)
- (5) *tíli bëta, cílla dëmmàna jvíla fu-dàmma.* ‘I came home, all bloody, covered in blood.’ (A 4:13)
- (6) *súysat +jóri ’úxča +tavàna c-ázəl! jùlla lé +matyálə.* ‘The horse of my husband goes so fast (= while being fast) that a bullet cannot catch it.’ (A 38:9)
- (7) *bërráxələ +rába +pšíma ka-dà mändi.* ‘He goes off sad (= while being sad) because of this situation.’ (A 1:21)
- (8) *’axunvátu tílun +bérašə +šìyyə, šuršìyyə, lišané dvíka.* ‘His brothers came in the evening, exhausted, tired, their tongue sticking (with thirst).’ (A 45:11)
- (9) *xmári pásłə d-la-čùp̄ra.* ‘My donkey remained without a tail.’ (A 7:13)
- (10) *báxta bëšvákol šulxéta.* ‘He leaves the woman naked (= while she is naked).’ (A 1:9)
- (11) *c-aváxva zúrzo šap̄árta.* ‘We had made it attractive.’ (B 7:1)
- (12) *’adíyya +bëddáyən kat-’aláha ka-díyyan lé-šavək cpína.* ‘Now I know that God will not leave us hungry.’ (A 30:6)
- (13) *báxtu mìttova cásli hemánta.* ‘He placed his wife with me as an item placed in trust (= she being an item placed in trust).’ (A 1:19)
- (14) *+zakránnna svítar.* ‘I should knit it into a sweater (= it becoming a sweater).’ (A 18:2)
- (15) *’íta b-+jammáxvalun kùxa.* ‘Then we gathered it into a heap.’ (B 3:12)
- (16) *sùrṭa xuķýáli ’áyya ka-díyyux.* ‘I have told you this short (= in a short version).’ (A 44:12)
- (17) *+tlájanày +’ärpá ci-+taláxva +badùšə.* ‘We played +*baduša* in threes and fours (literally: We played +*baduša* [being] three people or four).’ (B 17:1)
- (18) *xáčča susavày-na! xá mən-do-xína šap̄ira.* ‘There were some horses, each (being) more more beautiful than the other.’ (A 42:11)

The predicative complements in constructions such as (19)–(22), on the other hand, which cannot be felicitously paraphrased by circumstantial predicates, are obligatory components of the clause:

- (19) *+tárrat dàrta-zə šváktula ptíxa.* ‘She has left the door of the courtyard open.’ (A 37:4)
- (20) *kat-+xabré lá-+palət dùyla.* ‘So that their word does not turn out to be a lie.’ (A 1:22)
- (21) *ka-díyyi +byáyəna málca mattíni.* ‘They want to set me up as king.’ (B 16:12)
- (22) *+aturàya! ka-díyyi prášlun málca.* ‘The Assyrians selected me as king.’ (B 16:13)

Note that a non-referential noun in predicative complements, as in (9), (13)–(15), (20)–(22) above has no indefinite determiner *xa*.

Nouns that describe the resultant form of the object of the verb *'avəd* i ‘to do’ in constructions such as (23)–(27) can also be interpreted as predicative complements rather than as second direct objects of the verb:

- (23) *xá mən-cačála vádulə vázzər.* *xá vádulə +tājər.* ‘He makes one of the bald men vizier. He makes one the merchant.’ (A 1:24)
- (24) *+xáyəš vádən!* *á +bùsra!* *odátlə +tuyàtə.* ‘I would like you to make this meat into kebabs.’ (A 11:1)
- (25) *fánu vádol báxta.* ‘He makes himself a woman.’ (A 23:2)
- (26) *cúlla vádlun dòmma.* ‘They made him all blood (= they made him bloody [with beating]).’ (A 9:6)
- (27) *xmàru!* *cúlla vádlun +káttə +kèttə.* ‘They made his donkey pieces.’ (A 13:3)

This analysis is demonstrated by examples such as (28)–(30) in which the components in question are pronouns that are in their nominative rather than oblique form, which is not possible in these constructions. The nominative form is compatible with their status as predicates rather than direct objects of the verb:

- (28) *táclat 'odánnux +àvva.* ‘I wish I could make you him.’
- (29) *táclat 'avádvalux ýána ka-xá yùma.* ‘I wish he could make you me for one day.’
- (30) *t-odánnə 'àna.* ‘I shall make him me.’

Occasionally the preposition *ka-* is used before the complement, expressing directionality of a process, e.g.

- (31) *c-odívalun ka-+páltùyna.* ‘He used to make them into overcoats.’ (B 4:11)

The resultant state of the object of *'avəd* I may also be expressed by an adjective, which is a further demonstration that it should be identified as a predicate rather than a verbal object, e.g.

- (32) *'á béti súra| vúdlə +júra.* | 'Make this small house of mine big.' (A 54:5)

Occasionally the various types of predicative complement that are described above are fronted before the verb. When the fronted item rather than the verb takes the nuclear stress, particular focal prominence is given to the fronted item, e.g.

- (33) *+xàyən +plítələ +állux.* | 'He has turned out treacherous to you.' (A 3:23)  
 (34) *ka-díyyi málca vídat.* | 'You have made me a king.' (A 40:20)

The nominative form of pronouns is used after verbs of perception in construction such as (35)–(36):

- (35) *+báyyən xázzən 'át 'u-áy mən-+ùydalə.* | 'I want to see you and her together'  
 (= I want to see you and she being together)  
 (36) *xzíla 'át 'u-ána ju-béta.* | 'She saw you and me in the house.' (= She saw you and me being in the house)

The nominative can be explained by the fact that the pronouns are the subjects of reduced predicative propositions and that it is these predicates, rather than the arguments, that are the object of the verb. These constructions may be compared to a construction such as (37), which contains a verbal form within the perceived proposition:

- (37) *xzíla 'át 'u-ána +bixàla.* | 'She saw you and me eating.'

The oblique form of the pronouns may also be used, e.g.

- (38) *+báyyən xázzən kátux 'u-káto mən-+ùydalə.* | 'I want to see you and me together'

If the pronouns do not have a predicative locative adverbial, corresponding to 'together' and 'in the house' in the examples above, the oblique forms of the pronouns are obligatory, e.g.

- (39) *+báyya xázza kátux 'u-káto.* | 'She wants to see you and me.'

### 12.7.2 Expression of Content and Extent

Some verbs are complemented by nominals that describe the resultant content or extent of the changed state undergone by the direct object:

- (1) *'urxátə dvákluŋ jdila.* | 'The roads became blocked with ice.'
- (2) *'a-+ótaǵ mlítəla nášə.* | 'This room is full of people.'
- (3) *malánnə tìyna.* | 'I shall fill it with straw (= I shall make it fill, it being full of straw).' (A 1:33)
- (4) *b-+zarrénnə +'ámra.* | 'I shall sow it with wool.' (A 17:2)
- (5) *malúpulə +rába mändyána.* | 'He teaches him many things (= He makes him learned in many things).' (A 3:7)
- (6) *+mardáxxáxlə miyya.* | 'Let us boil it with water.' (A 37:19)
- (7) *b-tammazzíváluŋ cípa* *'én láttən javé.* | 'They cleaned it of stones in case there were any in it.' (B 10:7)
- (8) *bət-málvəš +casíbə jùllə.* | 'He will cause paupers to be dressed with clothes (= He will dress paupers with clothes).'

The complement in most such cases may alternatively be introduced by the preposition *b-*, e.g.

- (9) *malánnə b-tìyna.* | 'I shall fill it with straw.'

This *b-* is close semantically to the *b-* in attributive expressions such as *b-šəmma* 'with a name', *b-šənnə* 'with years (= aged)' (§ 6.8. ii). Its use is more frequent with the complement noun when the verb contains a direct object than when the verb is intransitive, e.g.

- (10) a. *luláffa dvákla 'ùpra.* | 'The pipe became blocked with mud.'
- b. *bət-dokánna +bázzət luláffa b-'ùpra.* | 'I shall block the hole of the pipe with mud.'
- (11) a. *+ótaǵ mlíla cursíyyə.* | 'The room became full of chairs.'
- b. *bət-malánnə +ótaǵ b-cursíyyə.* | 'I shall fill the room with chairs.'
- (12) a. *+xásət xmára +muṭánnələ +kərtàlə.* | 'The back of the ass has become loaded with bags.'
- b. *'ána bət-+maṭənnánnə +xásət xmára b-+kərtàlə.* | 'I shall load the back of the ass with bags.'

### 12.7.3 Inner Objects

An 'inner object' (§ 4.25.3.1. examples (48)–(56)), which is typically a verbal noun or abstract noun derived from the same root as the verb, does not express

a patient that is affected by the action of the verb, like a regular object, but rather comes about when the action takes place. Its clausal syntax, nevertheless, corresponds to that of regular objects. Its default position is after the verb, but it may be fronted before the verb in the same contexts as a regular object is fronted, e.g.

- (1) *zmárrə zmàrta.* 'He sang a song.'
- (2) *zmàrta zmárrə.* 'He sang a song.' (narrow focus)
- (3) *xílə xayúyta +yaràxta.* 'He lived a long life.'
- (4) *xayúyta +yaràxta xílə.* 'He lived a *long life.*' (narrow focus)

Examples from the text corpus:

- (5) *+xárta mammúyulə momìta.* 'He causes him to swear an oath.' (A 3:67)
- (6) *xa-+makréta +mukriyyélun.* 'They gave them a (good) education.' (A 42:4)

In (7) the noun '*urxa* 'road, journey' has the status of an inner object of the intransitive verb '*azəl* I 'to go':

- (7) *ctóvtəla ju-+oràyta| kát átən á 'urxa t-azətta.* 'It is written in the Torah that you will travel this journey.' (A 42:7)

#### 12.7.4 *Expression of Goal*

When a noun without a preposition expresses the goal of an action, it is normally placed after the verb, e.g.

- (1) *bitáyəna bëta.* 'They come home.' (A 3:32)
- (2) *bëškálulə Nàtan, mágulə bëta.* 'They take Natan and bring him home.' (A 3:88)
- (3) *ku-tálux Nànvə.* 'Get up and go to Nineveh.' (A 3:19)
- (4) *'ázax +póllan dùcta.* 'Let's go to such-and-such a place.' (A 3:23)
- (5) *á +kärtála sókla +'ullul.* 'This basket went upwards.' (A 3:59)

When there is narrow focus on the goal, typically to express contrastiveness, it may be fronted. In such cases it bears the nuclear stress:

- (6) *bëta bərráxšəna.* 'They are going *home.*'

If the clause contains a copula, this may optionally be placed on the focused goal, though such constructions are used only marginally, e.g.

- (7) *bètəna bərréxša.* ‘They are going *home*.’

## 12.8 Placement of Adverbials

The placement of adverbials in relation to other components in the clause is conditioned by a number of factors. We shall consider here both verbal and copula clauses, since the conditioning factors are the same. The majority of adverbials that occur in the text corpus are temporal or spatial expressions. The various positions can be classified as follows.

### 12.8.1 In Clause Initial Position

Temporal or spatial adverbials that stand at the front of a clause in principle mark a shift in the discourse and set the temporal or spatial frame for what follows. This frame often incorporates a series of clauses. Examples:

- (1) *xá-yuma +'Axíkar bəškáləl brùnu,| výyələ xa-jvànkə,| +màtya,| labúlu cás +Noxadnásər.|| +Noxadnásər málca ka-dáha ... cíl-məndi taniyəl.* ‘One day Axiqar takes his son, when he has become a mature young man, he takes him to Nebuchadnezzar. King Nebuchadnezzar tells him everything.’ (A 3:16)
- (2) *kúdmə bitáyələ mədrə.|| mára mu-+byàyət?||* ‘The next day he comes again. He says “What do you want?”’ (A 3:70)
- (3) *+jammúyol kòšun.|| 'a-yba-xína-da für'un bitáyələ.||* ‘He musters the army. On the other side Pharaoh approaches.’ (A 3:25)

On some occasions the initial adverbial is placed in a separate intonation group. The effect of this is to disjoin more forcefully the clause from what precedes, marking the onset of a distinct discourse section, e.g.

- (4) *xa-yúma| für'un| xa-ctáva bəctávələ| ka-+Nuxadnásər.* ‘One day Pharaoh writes a letter to Nebuchadezzar.’ (A 3:39)
- (5) *xà-yuma| +kríla +rába mən-dánnə nášə lipə.* ‘One day he summoned many learned men.’ (A 3:3)
- (6) *+póllan yúma,| +póllan +tárəx| málcət Məssər,| für'un hámlea t-ávəd +állux,| hámlea,| +plásə.|| kòšun tuyyéla| kat'-áti +pálaš mánnox.* ‘On such-and-such a day, such-and-such a date, the king of Egypt, Pharaoh, will make an

attack on you, an attack, a war. He has brought an army in order to fight with you.' (A 3:20)

- (7) *úta b-+dánət +kèṭal +’álma c-azálva carmànəl +’ánvə ci-+jammívalun.* 'So, in the summer the people used to go to the orchards.' (B 12:3)
- (8) *hár ɻe-+dánał +šadúrəna xa-xína xáxča ’ázəl míyya mayyılun.* 'Then they send another one to go and get some water for them.' (A 37:16)
- (9) *làxxał cačàlał cíllə ɻánnə +bəšmayèlał.* 'Here, the bald man hears all these things.' (A 1:21)

In (10) two sections of discourse in the temporal framework of 'the day' and the 'the night' respectively are set up in an opposition, the first being marked by an adverbial in a separate intonation group, the second by an adverbial with the discourse boundary marking clitic *da* (§13.1.3.):

- (10) *úta b-yùmał bnàtə ci-yatvívał +baġvànał c-avívał kát jinávə +šúlə là-’atívał. tèrə=da c-atívał káat-+’ánvə +axlivalun ci-maprəxxivalun. b-léłə=da jvànkə c-azívał.* 'So during the day girls would sit (there). They used to be vineyard-keepers so that thieves and so forth would not come. Birds too used to come to eat the grapes and they used to drive them away. At night the lads used to go.' (B 2:7)

The temporal frame may be set by a distributive adverbial expression, e.g.

- (11) *cùt-yumł tàlfal jári +rappáxvalə m-+ál-jàrał.* 'Every day we had to throw snow off from the roof.' (A 3:1:19)

In temporally sequential discourse a shift to a new discourse section is often signalled by explicitly marking temporal sequence by an initial adverbial such as *+xarta* 'afterwards', *+bar-hada* 'after that', e.g.

- (12) *+baķúrəla mónnu +rába məndyànał +xárta mārəlał mammánnux b-momítə.* 'He asks him many things. Then he says "I pledge you with an oath." (A 3:63)
- (13) *+bár háda +dàrrəł cəs-’aláhət jànu.* 'Afterwards he appealed to his god.' (A 3:4)

In descriptive discourse, some kind of shift is often marked by a reidentification of the spatial or temporal frame by an anaphoric adverbial, e.g.

- (14) *'ita! ju-dánnə matvàtəl +zrùta! cíllə 'áx +iýdaləva.* | 'So, in these villages agriculture was all the same.' (B 2:3)

An initial adverbial that is not placed in a separate intonation group on some occasions takes the nuclear stress. This is used to put a narrow information focus on the adverbial.

- (15) *b-+kèta á +šúla c-odívalə.* | 'They did this job in summer.' (B 12:6)

An adverbial with narrow focus is also sometimes placed in a separate intonation group, e.g.

- (16) *'ádi cmá šònnəl cáslux +xìlələ,| šàtyələ! ju-bétux jurvàssələ.* | 'For how many years has he eaten and drunk in your presence! He has grown up in your house.' (A 3:22)

When narrow focus is placed on anaphoric adverbial expressions, its function is to strengthen the anaphoric bond with what precedes. This applies, for example, to the anaphoric adverbial *'atxa* in (17):

- (17) *'áxči pàti ketáva ju-pàtu,| bàss-iva.!* | 'If only my face could touch his face, that would be enough.' He says this. (A 3:46)

In (18) a copy of the 2nd person subject of the clause is attached to the initial adverbial *+xarta* 'afterwards':

- (18) *'átən +rába +spáy našàtva! 'ína +xàrtux! vádlux xórbə +šulànə.* | 'You were a very good man, but afterwards you did bad things.' (A 30:4)

### 12.8.1 *In Non-Initial Position*

When temporal or spatial adverbials are placed after one of the clause arguments or at the end of the clause, they, in principle, do not mark a shift in the discourse by setting the temporal or spatial frame for what follows. Rather their scope is restricted to that of the clause in which they occur and the clause is more cohesively bound to what precedes. This is seen in (1)–(3) in which, in each case, the second of the two clauses has a different spatial setting.

- (1) *ba-mújjurra susavátət márət díyyi +táma hehehé hurhàmlun,!* | *susavátət díyyux láxxa! murxàšlun?* | 'How is it that the horses of my master neighed there and your horses here aborted?' (A 3:83)

- (2) *'áha máttuyul +tàma. | +Axīkar| bərráxšəl bëta. |* 'They put him there. Axiqar comes home.' (A 3:16)
- (3) *c-azáxva móriša palxàxva | +bár +cavutràna c-atáxva. |* 'In the morning we went to work and in the afternoons we came back.' (B 5:7)

The adverbial in (4) relates only to the time reference of the division of property and does not hold for the events of the ensuing discourse:

- (4) *'á-naša +dánət mòtu tīla cíllə məndíyyu +pullila. |* 'This man, at the time of his death, came and divided all his property.' (A 38:1)

In (5) the adverbial *+berašə* occurs in the final clause of a section of discourse and does not set the temporal frame for what follows.

- (5) *'ànnəna 'an-núyna. | b-lablàtlun, | b-+xallàtlun | tammozàtlun | 'ú bašlàtlun | kalyàttun. | 'ána +berašə t-átən t-+axlònnum. |* 'These are the fish. You should take them, wash them, clean them, and cook and fry them. I shall come in the evening to eat them.' (A 5:7)

The comparative particle *buš* may be used adverbially before a verb, e.g.

- (6) *hár xá-ca-da buš muṭmorrálə ju-de-+àrra. |* 'He buried her more in the ground.' (A 52:7)

## 12.9 Clauses with an Interrogative Constituent

Interrogative constituents that function as a subject, object or adverbial in the clause are in principle placed before the verb. The nuclear stress is placed either on the fronted particle or at the end of the intonation group:

- (1) *mù vádlə?!* 'What has he done?' (A 3:19)
- (2) *mu-+byàyət?!* 'What do you want?' (A 3:70)
- (3) *bás mù 'óðən?!* 'But what should I do?' (A 3:35)
- (4) *+al-mú madmùyivət?!* 'What do you compare me to?' (A 3:62)
- (5) *mút +pásla +kaṭlàxla?!* 'In what way shall we kill him?' (A 37:19)
- (6) *dáx +kaṭlònna?!* 'How shall I kill him?' (A 3:50)
- (7) *mújjuryàvvax?!* 'How can we give?' (A 3:72)

In clauses with compound verbal forms the copula component is often cliticized to the interrogative element at the front of the clause (see §12.1.5. for further details), e.g.

- (8) *mút=ina tanùyə?* ‘What do they say?’ (A 3:51)
- (9) *mú-ilə viyya?* ‘What has happened?’ (A 5:10)

When the clause contains a subject constituent, this is generally not placed between the interrogative particle and the verb, but rather is positioned either before the interrogative particle or after the verb. The decision to place the subject at the front or end of the clause is conditioned by the discourse factors that have been discussed above (§12.5.2.), e.g.

- (10) *'ána mú víðan kaar-díyyux kat-'áha vódlux?* ‘What have I done to you that you have done such a thing?’ (A 3:29)
- (11) *'ána mú tíla b-riši?* ‘What has befallen me?’ (A 3:52)
- (12) *'a-+kátu +héyan kákx mú vóttəla?* ‘What has this cat, this animal, done to you?’ (A 3:81)
- (13) *'át kaar-mùl xá-xča murkàllux?* ‘Why are you so late?’ (A 37:18)
- (14) *'át kám hónux yúvvut b-hōn-nášə?* ‘Why have you taken notice of the opinion of people?’ (A 5:4)
- (15) *mújjur yávvax 'áxnan?!* ‘How can we give?’ (A 3:72)

If a direct object is fronted before the verb, this is likewise placed before the interrogative particle, e.g.

- (16) *'an-núyna dàx vóttét?* ‘How have you done those fish?’ (A 5:9)

## 12.10 Negated Verbal Clauses

### 12.10.1 Negative Polarity

#### 12.10.1.1 Negative Particle before Verb

The negative particle *la* in the vast majority of cases expresses negative polarity. When a verbal clause is negated, the negative particle is placed before the most prominent constituent in the clause, which is in most cases the verb. The same applies to the negator *le* and the negative copula, which negates compound verbal forms that have an enclitic copula when positive.

Various stress patterns are attested in relation to the negative element. In some cases it is stressed and in others it is unstressed (§1.19.3.). It takes the

nuclear stress of the intonation group when the speaker wishes to give the negation particular prominence. This is found predominantly in the following circumstances.

### (i) Negated Deontic Expressions

When the negated verb has a deontic modality, such as a prohibition addressed to the hearer or an expression of deontic intention by the speaker, the negator is often given prominence, e.g.

- (1) *là jorátlə.* 'Do not marry her.' (A 3:10)
- (2) *là +ktúlli.* 'Do not kill me.' (A 3:33)
- (3) *là táxmən.* 'Do not think about it.' (A 3:56)
- (4) *là-climun.* 'Do not stop.' (A 3:57)
- (5) *là +bákər.* 'Don't ask.' (A 2:16)
- (6) *'ána parpùləvən b-díyux<sup>1</sup> ̥ka-díyyan là +katłat.* 'I beg you not to kill us.' (A 37:10)
- (7) *là-'aviloxun +šúla.* 'Do not worry.' (A 37:17)
- (8) *'út hár 'ída là drí.* 'Don't you touch anything.' (A 37:18)
- (9) *háč xá +šrà! là-layya ju-bətvátə.* 'No lantern must be kindled in the houses.' (A 2:2)
- (10) *'átxa lè-'oya.* 'This should not be.' (A 37:18)
- (11) *hár lè +báyyax ̥ka-díyyan pálxət.* 'We do not want you to work for us anymore.' (A 37:18)
- (12) *'àxči! ju-+átrət díyi! 'áha móndi 'àvə! 'ána lè kablánna.* 'I will not permit this thing to exist in my country.' (A 2:12)

### (ii) Purpose Clauses

There is a tendency for the negator to receive the nuclear stress in irrealis purpose clauses, which are related to deontic expressions, e.g.

- (13) *+Axíkar mattúyuna +táməl xa-+bázza bəšvàkənəl kat-napásu là-+katłta.* 'They put Axiqar there and leave a hole so that his breathing would not be cut off.' (A 3:36)
- (14) *múttuvaju-xá ... +kərtálə! ju-ctána! kát là-+ajjəzva +págru.* 'They have put him in a basket, in cotton, so that his body would not be damaged.' (A 2:14)
- (15) *'út 'e-+dán b-nòšux-ivət! kát jánux-zə là sákdət! másalan xús kèsə mélan! món dáyya mèša.* 'When you are by yourself, so that you do not become bored, go, for example, and fetch wood for us from that forest.' (A 37:14)
- (16) *+baḡvànə c-avíá! kát jinávə +šúla là-'atíva.* 'They were vineyard-keepers so that thieves and so forth would not come.' (B 2:7)

- (17) *xá-dana stiyna-da xút ci-maxíva mən-+àrra| hál +tàmma| kát là taláxva.*  
 ‘They would drive in a post underneath, (coming up) from the ground until there, so that it (the house) would not collapse.’ (B 2:19)

### (iii) Adversative Contexts

The negator is given prominence when the clause defeats an expectation that arises from what precedes, e.g.

- (18) *+bayyíva +katlívalə| ’ína ’ána là +kṭálli.* ‘They wanted to kill him, but I did not kill him.’ (A 3:34)
- (19) *màlcal +pšəmlə| +pšəmlə| kat-ka-mù| +kṭəllun| ’ína ’ána lènva +kṭílu.* ‘The king became sad, he became sad (saying) “Why have they killed him,” but I had not killed him.’ (A 3:34)
- (20) *b-jíra kóšta mxilə| mxilə| ’ína +héyvan là npállə.* ‘He shot it with the bow and arrow. He shot it, but the animal did not fall.’ (A 39:5)
- (21) *hálli xa-brùna| ’aláha +jùvvab yuvvállə kátul mərrə| lè-’avilux brúna.* ‘“Give me a son.” God answered him and said “You shall not have a son.”’ (A 3:4–5)
- (22) *lá-’azat +bár +šúpра| +šúpра lè-paš kátux.* ‘Do not go after beauty. Beauty will not last for you (contrary to what you expect).’ (A 3:11)

A related context is where the negator follows a question, in which there is a presupposition of the possible truth of the proposition that is denied in the negated clause, e.g.

- (23) *+šómyutun ’áha mòndi?| ... là| lèx +šómyu.* ‘“Have you heard this thing?”  
 “No, we have not heard.”’ (A 3:76)
- (24) *’a-mú-ila +šrá bollá +tàmma?| ... ’ána lèn-+bədda ’áyya mù-ila.* ‘“What is that lantern burning there?” ... “I do not know what that is.”’ (A 2:4)

### (iv) Contrastive oppositions

When the negated clause is set up in a contrastive opposition with an adjacent proposition, the negator, which is the focus of contrast, has the nucleus, e.g.

- (25) *mádrə mən-šmàyya pállun| +tlá xabiýšə| xá ka-dó cačalùna| xá ka-bàba yuvvállə| xá ka-yòmma yuvvállə| ’ítə ka-díyan là pósłun xína mán dán xabúyšə.* ‘Again three apples fell from heaven. He (the story-teller) gave one to that bald man, one to the father, he gave another one to the mother, so none of those apples remains for us.’ (A 37:22)

- (26) *+rába dàšyàtə xázyøvax| ... dàšta| b-dá +šúp̥ra ́áxnan lèx xázyø.* ‘We have seen many plains, but we have not seen a plain with such beauty.’ (B 2:14)

(v) Verb ‘to be able’

- (27) *’ána lè-+msan ’a-+šíla ’odónna.* ‘I cannot do this job.’ (A 2:35)  
 (28) *’áxnan lè-+msax mónnux xáyyax.* ‘We cannot live with you.’ (A 37:22)  
 (29) *lèlə +másá hámzəm.* ‘He cannot speak.’ (A 3:30)  
 (30) *sáb lèlə +msáya jarášla.* ‘Because he cannot pull it.’ (A 37:15)

#### 12.10.1.2 Negative Particle Before Control Verbs and Deontic Particles

The negator is occasionally placed before a control verb or the deontic modal particle *jarəc* (or one of its variant forms) when these are not in the scope of the negation, e.g.

- (1) *lá +šurílun maǵjúba +událə.* ‘They began not to like each other.’ (B 1:29)  
 (2) *lájári baxtátə manšíva.* ‘The women were not supposed to forget.’ (B 10:12)  
 (3) *’á cálul lájárət ɔyàníl báx brùni.* ‘This bride must not be the wife of my son.’ (A 55:5)

In many cases, however, the negator is placed before the main verb, e.g.

- (4) *’ína ́ádi xína +šurílun lè +bəzdá mótnno.* ‘But now they began not to fear it.’ (B 1:30)  
 (5) *jári šaxína-da lá-’ativa, jári jarùsa-da lá-’ativa.* ‘It (the flour) must not come out hot nor must it come out coarse.’ (B 17:7)

#### 12.10.1.3 Negative Particle before Other Constituents

The negative particle is sometimes placed before another component of the clause that intervenes before the verb. This is found in constructions such as the following.

When the negative particle precedes a clause-initial phrase, the scope of negation sometimes includes the phrase but not the verb. One construction in which this occurs is exemplified by (1). Here the initial phrase has topical status and is placed in a separate intonation group. The verb is new, non-presuppositional information:

- (1) *lá b-xábrət díyyan! xášla +’al-mèša.* ‘Not by our word (= without our permission), she went to the forest.’ (A 1:17)

Examples (2) and (3) are similar constructions:

- (2) *lá b-`atnàbəl| 'ána là-+msən 'átən.* ‘Without a car I cannot come.’
- (3) *la b-díyyux| là-+msax +sárax.* ‘Without you we cannot begin.’

In (4) the clause-initial phrase is given prominence by nuclear stress and this is enhanced by the placement of the negator. The prominence is not narrow focus but prominence within a broad focus that includes the verb. The clause-initial item, moreover, is not separated from the verb by an intonation group boundary. Both this item and the verb are in the scope of negation:

- (4) *tré-+‡la dánə=da +šurtìyyəl 'áti mənnóxun kat-lá p-ùrxa +katlila.* ‘Two or three policemen should come with you so that they do not kill her on the way.’ (A 1:47)

When two negated clauses are presented together in parallel, the negative particle is placed at the beginning of each clause. In (6) the negator at the head of the second clause has the enclitic *da*, which is characteristically used in constructions that set up parallels or contrastive oppositions between topical referents (§ 13.1.3.):

- (5) *lá 'axùni +xólləl 'u-lá bàbi štīlə.* ‘Neither did my brother eat nor did my father drink.’
- (6) *'áxnan lè-+bayyaxlun,| lá zuyzè +bayyáxlun| lá=da mité +tamràxlun.* ‘We do not want them. Neither do we want their money nor shall we bury their dead.’ (A 6:15)
- (7) *lá kàla vágəl,| lá +kòxa vágəl.* ‘He does not make a sound and he does not make noise.’ (A 42:33)

In (8)–(10) the verbal predicate is gapped after some of the items that are set up in parallel:

- (8) *lá kàla vágəl,| lá=da vágəl.* ‘She does not utter a sound or an “alas.”’ (A 44:12)
- (9) *lá bàba! lá yòmma! hác náša léva +bəxváta xína ju-+šùlət| bráta hám-da yàla.* ‘No father, no mother, nobody interfered again in the affairs of a girl and boy.’ (A 56:5)
- (10) *hác móndi lèla +bəddá,| hác móndi,| lá bašùlla,| lá júlla msàyla,| lá xyàpta,| lá msèta,| lá cnàšta. hác móndi lèla +bəddá brátan.* ‘She knows nothing, nothing, she does not cook, she does not wash clothes, (she does not know) bathing, washing laundry, sweeping. Our daughter knows nothing.’ (A 35:11)

In these clauses the fronted constituent that immediately follows the negator is given a degree of prominence but it is not in narrow focus with the scope of the negation restricted to these items. Rather they are set up as contrastive topics and the scope of the negators includes the entire clause. The negator is moved to the front of the clause due to the fact that in such constructions the initial constituent is presented as the most prominent item in the clause, but this is topical prominence rather than focal prominence. The initial topics are given prominence to make a sharp distinction between the two sides of the opposition.

The syntax of the negator in (11) can be interpreted in this light. Here the progressive form *pəlxanəla* 'she is working, she works' is negated by the negator *la* rather than the expected negative copula. This appears to have been conditioned by the fact that the clauses are set up in a parallel set-relationship, which is closely allied to the strategy of forming a balanced opposition structure:

- (11) *ú +Màhəl +úxča ka-da-náša +ajjùzəla. lá pəlxanəla, +tarčuməla.* 'This Mahə annoys this man so much. She does not work, she moans.' (A 40:2)

In (12) a set-relationship is created between two adjectival predicates, which are fronted and preceded by the negative particle:

- (12) *jár xáda 'oyáni kát bítal máx čáppəç átxa mabyønnáni +al-páta kát lá +šor 'oyáni lá-da pàxta 'oyáni.* 'It must be thus, so that the egg appears on the surface like a kopeck, so that it is not over-salted nor insipid.' (B 15:3)

### 12.10.2 Negation Used with Irrealis and Indefinite Constructions

In some contexts negation does not express negative polarity, i.e. it does not have the usual reversal effect on the truth conditions of the clause containing it. This is found in a variety of contexts. In such cases the negative particle is generally unstressed or is stressed with a non-nuclear stress.

It is occasionally found in counterfactual constructions such as (1):

- (1) *la-'aváxva xelànə, úxnan 'azàxva.* 'If only we were strong, we would go.' (A 45:7)

The negation expressed by the negative existential particle in the hypothetical conditional clause in the following construction falls into the same category:

- (2) *b-tammazzívalun cípə 'án lattən javé.* 'They cleaned it of stones in case there were any in it.' (B 10:7)

It occurs in clauses introduced by the particle *hal* 'until'. This arises from the fact that the 'until'-clause describes a necessary condition for a change in the main-clause event (Eilam 2009).

- (3) *ka-díyyi fvára lòt! hál yát lá mètat, +tamrònna.* 'Marriage is not for me until you die and I bury you (i.e. so long as you do not die and I do not bury you, marriage is not for me)' (A 44:12)

Also related to this phenomenon are cases in which positive and negative clauses are juxtaposed to express indefinite generality in constructions such as the following:

- (4) *mu-’òdax, mu-le-’òdax?* 'What on earth shall we do? (literally: What shall we do? What shall we not do?).' (A 1:24)  
 (5) *taxmùnəla, taxmùnəla! mu-’àvəd, mu-là-’avəd.* 'He thinks and thinks (wondering) what on earth he should do (literally: What he should do, what he should not do).' (A 3:73)  
 (6) *cmá-t ’òtlux lòtlux.* 'Whatever you may have (literally: As much as you have, you do not have).' (A 4:14)  
 (7) *’átlí lótlí xá brùna.* 'All I have is one son.' (A 42:25)  
 (8) *’átlít yá bitáyala lòxxa.* 'Come what may, she will come there.' (A 43:3)  
 (9) *lá-da màra! ... mànilə! mán lélə.* 'He does not say who he is.' (A 42:33)

Fictional narratives commonly open with constructions such as (10), in which the protagonist is introduced by a juxtaposition of the positive and negative existential particle. The purpose of this is to reduce the commitment of the storyteller to the truth of what follows.

- (10) *’átvá lòtvá! xá yàla ’átvá.* 'There was once a lad (literally: There was, there was not, there was a lad).' (A 37:1)

A variant of this introduces the protagonist by the *vayəla* form, e.g.

- (11) *vàyəla, lèl vâyala! xá dâna màlcá vâyəla.* 'There is, there is not, there is a king.' (A 45:1)

### **12.10.3 Negative Particle Used to Express Asseveration**

The negative particle may be used to express asseveration rather than negative polarity, especially to dispel possible doubt after questions. In such cases the particle never bears the nuclear stress, e.g.

- (1) A: *kúdmə қa-mú lá tìlux?*! B: *la-tìli ʼána.*! ‘A: “Why did you not come yesterday?” B: “I *did* come.”’
- (2) A: *lévat šátyu +čàyux!* B: *la-štìli +čáy.*! ‘A: “You have not (yet) drunk your tea.” B: “I *have* drunk the tea.”’
- (3) A: *қa-mú lét bitàya?*! B: *la-þt-àtən!* ‘A: “Why are you not coming?” B: “I *shall* come!”’

If the clause contains a copula or compound verbal form with a copula, the copula is not replaced by the negative copula, e.g.

- (4) A: *қa-mú lét bitàya?*! B: *la-bitàyən!* ‘A: “Why are you not coming?” B: “I *am* coming!”’
- (5) A: *+’əstícan +támma lèlə!* B: *la-+tàmmələ!* ‘A: “The cup is not there.” B: “It *is* there.”’

Likewise, it is used with a positive existential particle rather than a negative one, e.g.

- (6) A: *+’əsticána lət.*! B: *la-+’əsticána ’àttən!* ‘A: “There are no cups.” B: “*There are* cups.”’

The asseverative negative may be used before the deictic copula, e.g.

- (7) A: *+’əstícan +támma lèlə!* B: *la-dúlə +tàmma!* ‘A: “The cup is not there.” B: “But *there it is* over there.”’

Examples of *la* from the text corpus that can be interpreted as asseverative include:

- (8) *’ína m-áxxa l-ò-jiba-zə! ’àttən tré dévə xìnə-da.*! ... *mára lá þt-àzən.*! ‘But from here to the other side there are two other monsters (i.e. it is not advisable to go there) ... I *shall* go.’ (A 39:14)
- (9) *lá bəxzáyətun kat-mítən!* ‘Surely you see that I am dead!’ (A 32:4)
- (10) *lá màrən!* *+’al-xá kùnyáyya c-áviva kənyána,*! *+hayvàn.*! ‘Indeed I am saying, in one corner there were cattle, animals.’ (B 17:54)

This asseverative use of *la* developed by the incorporation of an original prosentential negator ('no!') into the grammatical structure of the clause. The negator would have originally denied the assumed presupposition of the hearer. The grammatical incorporation is reflected prosodically by its integration into the intonation group of the clause.

### 12.10.4 Interrogative Used as a Negator

The inanimate interrogative particle *mut* ‘what’ is sometimes used with the verb <sup>+</sup>*yattə* I ‘to know’ with the function of a negator rather than an interrogative. This is seen in examples such as (1) in which the verb takes an object complement, which demonstrates that the *mut* is itself not interpreted as the object:

- (1) *mut-*<sup>+</sup>*yattə dàva mú-ilə,| sìma mu-ilə,| bòrrənč mú-ilə.| lè-*<sup>+</sup>*yattə.* ‘He does not know what gold is, what silver is, what rice is. He does not know.’  
(A 31:1)

## 12.11 Polar Questions

The syntax of questions with interrogative constituents have been described in § 12.1.5., § 12.2.5. and § 12.9. Here we are concerned with questions that do not contain interrogative constituents. They may be categorized as polar questions, since they have as answers one of a pair of polar opposites, i.e. positive ('yes') or negative ('no').

### 12.11.1 Positive Questions

Basic positive questions have the same syntax as positive assertions and differ only in a distinct intonation pattern consisting of a higher level of pitch on the nuclear accent (§ 13.7.3.). Such clauses ask the addressee to confirm or deny whether the information predicated about the subject topic is true, e.g.

- (1) *'áha +jòrax-lə?* ‘Is this your husband?’ (A 1:38)  
 (2) *húcmat málcałə?* ‘Is it the order of the king?’ (A 1:13)  
 (3) *'àtlux! sàda?* ‘Do you have witnesses?’ (A 1:19)  
 (4) *'a-báxta xètəla?* ‘Is this woman alive.’ (A 1:35)  
 (5) *+purmilux ká-díyyi?* ‘Have you understood me?’ (A 43:17)  
 (6) *'á-mändi kabülutun?* ‘Do you accept this thing?’ (A 1:43)  
 (7) *'adíyya hammùnət?* ‘Now do you believe?’ (A 3:25)  
 (8) *+báyyət? har-'àtxa +báyyət?* ‘Do you want this? Do you want really this?’  
     (A 5:4)  
 (9) *cullóxun lípotun darsòxun?* ‘Have you all learned your lesson?’ (A 1:25)  
 (10) *muyyálux?* ‘Have you brought her?’ (A 2:10)  
 (11) *c-+ámsax +hayyərràxlux?* ‘Can we help you?’ (A 4:5)

Such positive questions may be neutral or biased. In a neutral question the speaker has no expectation that the answer will be positive rather than negative, or vice versa. In a biased question the speaker is predisposed to accept one particular answer as the right one, i.e. the question is biased towards a negative or positive answer.<sup>4</sup> The question in (1), for example, which is asked in a courtroom situation, is neutral. The question in (7), however, is biased since the speaker expects the answer to be 'yes'. This may be termed epistemic bias since the speaker thinks that the addressee now does believe. In this case the bias is towards a positive answer. The question in (8) also has an epistemic bias, but in this case it is towards a negative answer, in that the speaker is surprised with the situation and expects that in the circumstances the addressee would not want it. In (9) the bias can be said to be deontic since the speaker judges that the answer ought to be positive. In (10) the speaker wants the answer to be 'yes', so this can be said to have a desiderative bias. Similarly in (11) the speakers want to help the addressee.

In a positive polar question a bias can be expressed explicitly by some kind of lexical reinforcement. In (8) the particle *har* is such a reinforcement. In (12) the reinforcement is expressed by combining the verb with an inner object in the form of a cognate infinitive. This expresses here a desiderative bias, i.e. the speaker wants the answer to be 'yes':

- (12) *kabúlə ð-kábli ́árxə?* 'Do they accept guests?' (A 43:14)

In the polar questions illustrated above there is a broad focus on the predicate and the scope of the question includes this broad focus. A positive question may also have a narrow focus, in which the speaker is asking the addressee to confirm or deny that a particular item in the predicate is correct for this role with the presupposition that the remainder of the predicate is true. The item in narrow focus typically bears the nuclear stress. Examples from the text corpus include:

- (13) *’íta ’ánnə=da +báyyat šaklátlun mánni?* 'Now, do you want to take *these too* from me?' (A 1:13)
- (14) *dúz márələ ’áha?* 'Is he telling *the truth*?' (A 14:10)
- (15) *’íta ’at-ka-díyyi-+kəryət! ’ánnə xazzánnun?* 'So you have invited me to see *them*?' (A 4:11)

---

<sup>4</sup> For the distinction between neutral and biased questions see Huddleston and Pullum (2002, 879–881).

### 12.11.2 Negative Questions

A polar interrogative clause may be negated by a negative element such the negative particle, the negative copula or the negative existential particle. Such negative clauses are in most contexts biased. An epistemic bias can be towards either a negative or a positive answer. Negative questions typically suggest some element of contrast.

When the negative question has a negative epistemic bias, this often contrasts with a positive deontic bias, i.e. it carries an implied contrast between the state of affairs which apparently obtains (negative) and what the speaker wants or his judgement of what should be the case. This applies to (1)–(3):

- (1) *bas-látlux xá nišánka?* ‘But do you not have a sign?’ (i.e. It is apparently the case that you do not have a sign but I wish you had) (A 1:17)
- (2) *lét +šámya?* *márra làl tén +šámya.* ‘“Have you not heard?” He said “No, I have not heard.”’ (i.e. It is apparently the case that you have not heard, but you ought to have heard) (A 19:3)
- (3) *'átən +hálá lét fvíra?* ‘Are you not yet married?’ (i.e. It is apparently the case that you are not yet married, but you ought to be) (A 35:5)

Exclamatory negative rhetorical questions introduced by *dax* ‘how?’ have this pragmatic function, in that they have a negative epistemic bias contrasting with a positive deontic bias, e.g.

- (4) *dàx lét-hammúna?* ‘How do you not believe (it)?’ (i.e. It is apparently the case that you do not believe it, but you should believe it) (A 47:13)
- (5) *dàx lét +díyyu?* ‘How did you not know him?’ (i.e. it is apparently the case that you did not know him, but you ought to have known him) (A 10:12)

The epistemic bias in (6)–(9) is positive:

- (6) *láxxa la-xzílux xa-+tála bərrákəva?* *lá +dílux bi-dəm-’úrxa xəšlə?* ‘Have you not seen a fox running away around here? (i.e. I assume that you must have seen a fox) Do you not know which way it went? (i.e. I assume you must know).’ (A 47:18)
- (7) *láxxa mándi lèlə píla?* *lètun škílə?* ‘Has not anything fallen? Have you not taken (anything)?’ (i.e. I assume something must have fallen and you must have taken something) (A 43:5)
- (8) *bá náša léna tìyyə,* *léna dmíxə?* ‘Have not people come and slept?’ (i.e. it is my belief that people have come) (A 42:36)

- (9) *lúšān-<sup>+</sup>hošára lèt<sup>+</sup>bədda-’átən?<sup>!</sup> lè yáttət?<sup>!</sup>* ‘Don’t you know the language of the Muslims? Don’t you know?’ (I assume you must know) (A 43:20)

Note that in (7) the word *məndi* is used without the negative polarity item *həč*.

Where the epistemic bias is positive, there is sometimes an implicit contrast between the belief of the speaker in some proposition and unwillingness on the part of the addressee or others to accept it:

- (10) *lámárri ka-díyyux?<sup>!</sup>* ‘Did I not say to you?’ (i.e. it is apparently the case that you do not accept that I said, but I maintain that I did say) (A 14:11)

In (11) the rhetorical question introduced by *dax* has a similar pragmatic function:

- (11) *dàx la-<sup>+</sup>díli?<sup>!</sup>* ‘How did I not know?!’ (i.e. it is apparently the case that you think that I did not know, but I maintain that I did know) (A 1:31)

In a few cases of negative interrogatives in the text corpus the negative particle is placed at the front of the clause before all other constituents. All such constructions have a positive epistemic bias:

- (12) *lá ’ána ₯a-díyyux xàyyux purkéli?<sup>!</sup>* ‘Have I not saved your life for you?’ (A 47:19)  
 (13) *lá ’ána ₯atux purə₯li mán ...<sup>!</sup> kyàda?<sup>!</sup>* ‘Have I not rescued you from the conflagration?’ (A 47:2)  
 (14) *lá ’adíyya ₯a-díyyi-da<sup>+</sup>₯atəl?<sup>!</sup>* ‘Will he not now kill also me?’ (A 2:23)

In some cases the initial negator is connected to the clause by the subordinating particle *₯at*, as in (15), which, likewise, has a positive epistemic bias:

- (15) *lá ₯at<sup>!</sup> +dránu<sup>x</sup> +rásťavən,<sup>!</sup> ’o-náš d-trévən?<sup>!</sup>* ‘(Is it) not (the case) that I am your right arm and I am the second man (in command)?’ (A 48:18)

In a disjunctive connection between positive and negative questions as in (16), however, the negative question is neutral without bias toward a negative or positive answer:

- (16) *+nesónna yán là +nesónna?<sup>!</sup>* ‘Should I bite him or should I not bite him?’ (A 47:5)

In most disjunctive questions of this nature in the text corpus the verb in the second clause is gapped with only the negator remaining:

- (17) *bušáltut yan-là?* 'Have you cooked it or not?' (i.e. is 'have not cooked' a true predication about 'you')? (A 11:2)
- (18) *b-hamzámmat yán là?* 'Will you speak or not?' (A 34:11)
- (19) *ú bráta plòxtəla yan-lá?* 'Has the girl worked or not?' (A 35:7)
- (20) *dúz-ivən yan-là?* 'Am I right or not?' (A 47:8)

### 12.11.3 Tag Questions

The focus of a question can be on a tag *hi?* 'yes?' or *la?* 'no?', which is appended to an assertion seeking the confirmation of its truth from the addressee, e.g.

- (1) *túyna ci-+yàttat hí?* 'You know straw, yes?' (B 17:32)
- (2) *bušála +šomyot hí?* 'You have heard of *bušala* (stew), yes?' (B 17:20)
- (3) *jórət +hošára láxxa-da ju-dá Rtséentr<sup>R</sup>-ət diyyan,| 'icət 'adlyya| 'ánnə Rmaga-zín<sup>R</sup> +šùlə 'ítən,| lā?* 'The tomb of the Afshars is here, in this centre of ours, where now there are the shops and so forth, no?' (B 16:5)

In (4) the tag is placed after the verb but before the complement of the verb, which is an indirect constituent question (§ 14.3.2.):

- (4) *damúrči +bəddáyət là mú-ilə?* 'Blacksmith, you know what it is, no?' (A 48:31)

### 12.12 The Particle *xu*

This particle, which is related etymologically to Syriac *kbar*, is cliticized to the predicate of a clause. In fast speech it is sometimes shortened to *x-*. It is used as an attitude marker in questions and assertions, which are distinguished by different intonation patterns.

When used in a positive question such as (1), the speaker has a positive epistemic bias and expects the answer 'yes'. Such questions are idiomatically translated with an English declarative sentence, which has an epistemic bias towards a positive answer (Huddleston and Pullum 2002, 881):

- (1) *xu-xzilux tanúyra?* 'You have seen the oven? (I assume you have)'

When used with a negative question, the speaker has an epistemic bias towards a negative answer. This negative epistemic bias frequently contrasts with an associated positive deontic bias.

- (2) *xu-lévat cpìna?* 'You are not hungry?' (I assume you are not)
- (3) *xu-lévat tìyya láxxa +àxlat?* 'You have not come here just to eat?' (I assume you have not come just to eat. You ought not to have come here just to eat)
- (4) *'át xú-létvə xíša nùyma dokàtva?* 'You had not gone to catch fish?' (I assume you had not gone to catch fish. You ought not to have gone to catch fish)  
(A 5:9)

In polar questions, therefore, the particle forces an interpretation with a particular bias, positive epistemic bias for positive questions and negative epistemic bias for negative questions, whereas in polar questions without the particle the direction of the bias is unmarked.

The particle is also used in non-interrogative contexts in both positive and negative clauses. When used in a positive clause it expresses the speaker's presupposition of the truth of the proposition. The construction falls short, however, of unconditional assertion and typically invites confirmation from the addressee. In many contexts this can be idiomatically conveyed by English 'surely', e.g.

- (5) *túyta xu-lišān-dìyyan-la.* 'Surely (the word) *tuyta* is our language.' (B 17:44)
- (6) *xú xzilux!* ... 'Surely you have seen ...' (B 17:31)

Examples (7) and (8) have a tag question, which invites confirmation of the speaker's presupposition:

- (7) *+turšìyyə xu-+bəddàyat hí?* 'You know "pickles", yes?' (B 17:48)
- (8) *+kurtópa xíl lišān-dìyyan-la, hí?* "Potatoes" are our language, yes?  
(B 17:13)

Negative non-interrogative clauses with *xu* express the presupposition of the speaker that the negative proposition is true but not an unconditional denial:

- (9) *xu-lá-+msan paltànnə.* 'I surely cannot take it out.' (A 43:3)
- (10) *'áy x-lèla +ság.* 'She is surely not still alive.' (A 43:20)
- (11) *'áyya 'àtxəva, bá 'e-xítə 'átxa xu-lè-'oya.* 'That (wife) was like that, but another one will surely not be the same.' (A 44:5)

- (12) *bá +karávul mù-tar c-áva?* xu-lè-'azəl dáməx. | ‘Well, how should a watchman behave? Surely he should not go and sleep!’ (A 45:17)
- (13) *ka-mú ’áha móndi škəllux?* xu-lèva díyyux. | ‘Why did you take this thing? It was surely not yours!’

The particle is often used to counteract a presupposition or expectation that the speaker assumes is being entertained by the addressee. Examples such as the following are used in this type of pragmatic context:

- (14) *mujjùrra ódənnə ’ána ’a-+šùla?* mùjjur parmánna? xu-lèn maséta. | ‘How can I do this? How can I cut it? I am not a pair of scales (contrary to what you seem to think).’ (A7:12)
- (15) *’ita m-ídi xu-lè párkət ’átən.* | ‘You will indeed not escape from my hands (contrary to what you think).’ (A 50:5)
- (16) *’áni=da sátvə xú léna +myasa +xálta màčxi.* | ‘They also (the bees) in winter indeed cannot find food.’ (B 17:43)

A translation with an adversative ('but', 'however') is sometimes appropriate, e.g.

- (17) *tálja c-áva, jarpívalə. +múṭra x-là-+amsi jarpívala. +múṭra t-íva bitáya xelánta, lè-+amsi jarpívala.* | ‘When there was snow, they used to shovel it. They are not, however, able to shovel rain. When rain fell heavily, they were not able to shovel it.’ (B 17:36)

In (18) it is used in the apodosis of a concessive construction, in which the negation is reinforced since it is contrary to what one would normally expect in the situation expressed by the protasis clause:

- (18) *’ádi tálki-da, ’át xu-lì-+yáttət.* | ‘Even if they get lost now, you would indeed not know.’ (A39:32)

In (19) the speaker uses the construction insincerely as a politeness strategy, expressing a presupposition that he does not hold:

- (19) *’árbi xažbənnənnun.* xu-lét +mubsàrra mənné. | ‘Let me count my sheep. I assume you have not lost any of them.’ (In fact I am not so sure and want to check) (A39:35)

In (20) the clause with *xu* is introduced by the particle *kam* ('why'), which is not used here interrogatively but as a similar attitude marker counteracting the assumed presupposition of the addressee:

- (20) mára +bəzdàyən! jáns là xamyálax.! mára là-+zdi.! kám xu-lèla +janavar! xu-lè +axlálí.! 'He says "I am afraid that she would not look after you well." She says "Do not be afraid. Why, she is surely not a beast, she would surely not eat me."' (A 44:2)

### 12.13 The Particle *májar*

The Persian particle *májar* may be used in assertive contexts with the sense of 'unless', e.g.

- (1) 'a-ctáva lé-+masə ɔt-avílux! májar +párrət xa-zúyza +ràba.! 'You cannot have this book, unless you pay a lot of money.'
- (2) lé-+masət +áxlət +xa-+rámša! májar ́ídux +xallòttun.! 'You cannot eat dinner, unless you wash your hands.'
- (3) é +dána látvalan tré tabákə,! májár +otágə +matrəssáxvalun! tré tabákə xuté ́avíva másalan +ambárə ́odáxva.! 'At that time we did not have two floors, unless we had them built as rooms on two floors and we would make the lower ones into, for example, storerooms.' (B 3:41)

It sometimes has the sense of 'perhaps', e.g.

- (4) ́áxnan le-+yáttax! májar Nátan +yáttə,! Nátan jurvásłə ju-́ídət +Axíkar.! 'We do not know. Perhaps Natan knows, Natan was brought up by Axíkar.' (A 3:43)

The particle may also be used in questions. If the question is negative, the particle signals that the speaker has an epistemic bias to a positive answer and he expects the answer 'yes'. There is typically an implicit contrast between the belief of the speaker in a proposition and unwillingness on the part of the addressee or others to accept it or behaviour of the addressee that suggests the opposite:

- (5) májar là mórrı kátux 'aha la-’odàtla? 'Didn't I tell you not to do that.' (i.e. I maintain that I did say so, although you appear to be unwilling to accept that)

- (6) *májar* 'át lè'-azət +támə?| 'Won't you go there?' (i.e. I assume you will, although you appear to be unwilling to do so)
- (7) *májar* létva mútta nišánka! kat-mačxàtvalun?| 'Didn't you put down a sign so you could find them (the coins)?' (i.e. I assume you must have done so, but you are behaving as if you have not) (A 29:1)
- (8) +báyyə 'árək! bədvàkułə.| mára lá lá là.| 'ád-léla 'ärxivat! májar lét +ṭavvúyə +bár dà-məndi?| 'He wants to flee, but he (the shopkeeper) seizes him. He says "No, no, no. Tonight you are my guest. Are you not looking for this thing?"' (i.e. I assume you are looking for it, although you appear to be unwilling to do so) (A 4:9)

If the question is positive, the speaker has an epistemic bias towards a negative answer, e.g.

- (9) *májar* 'ána xàrba víðən! ka-dá-naša yúvvən 'alpá +dinárə zìyza?| 'Have I done wrong to have given this man one thousand dinars of money? (= Surely I have not done wrong ...)' (A 7:10)
- (10) *májar* 'óttən málca xína ju-da-+átrat díyi 'ána lēn-+bəddà?| 'Is there another king in my land I do not know?' (= Surely there is not another king in my land) (A 1:28)
- (11) *májar* šuddànnət?| 'Have you gone mad?' (= Surely you have not gone mad. I did not expect this from you)

As is the case with *xu*, the particle *májar* forces a specific interpretation of the bias of the polar question.

The particle *májar* is also used in constituent questions, e.g.

- (12) *májar* mū vítəla?| 'What has happened?' (A 40:8)

Here the pragmatic function of the particle is to confirm that the speaker assumes that something has happened and he does not expect that answer 'Nothing has happened.' It is similar, therefore, to its function with negative polar questions, in which it expresses a positive epistemic bias.

## 12.14 Extrapositional Constructions

### 12.14.1 Structure

The structure of extraposition involves placing a nominal or independent pronoun in syntactic isolation in clause initial position and resuming it by an anaphoric element later in the clause.

A distinction should be made between two types of extraposition structures. In one type the initial item is prosodically and grammatically integrated with what follows, e.g.

- (1) *'ána +šúli 'àhələ.* | 'I—my job is this.' (A 10:4)
- (2) *'át lè-'avilux brúna.* | 'You will not have a son.' (A 3:5)
- (3) *'o-+kačúla 'ótlə šòmma.* | 'The executioner has a name.' (A 3:33)
- (4) *'áxči +Axíkar páti kéta fu-pátu.* | 'Only let my face touch the face of Axiqar.' (A 3:50)

The initial item is prosodically integrated in that it is not separated from what follows by an intonation group boundary. The initial item is followed by a clause that contains a subject and predicate, so it has the structure of extraposition. The initial item is resumed in the clause by a pronominal affix, as opposed to an independent pronoun or a full nominal. As we shall see, such initial items have all the semantic and functional properties of normal grammatical subjects. These will be referred to in what follows as Ex1 structures. Such Ex1 constructions share with grammatical subjects the structural feature of resumption by a pronominal affix—in the case of subjects this is the pronominal subject-marker affix of the verb. The initial item of analogous Ex1 type constructions in Modern Hebrew and other languages are termed 'broad subjects' by Doron and Heycock (1999; 2003) and Alexopoulou, Doron and Heycock (2004), who regard the occurrence of the second subject as the result of the recursion of the subject–predicate relation.

A distinct type of construction is where the initial item is less integrated prosodically and, in some cases, also structurally with what follows. In such cases the initial item is separated from what follows by an intonation group boundary, e.g.

- (5) *'a-Nátan| 'átväl xa-'axùna.* | 'This Natan had a brother.' (A 3:17)
- (6) *'ána| +narahatúytət jáni ka-jáni bássa.* | 'My own trouble is enough for me.' (A 10:3)
- (7) *'ána| jná lètli.* | 'I do not have any guilt.' (A 3:33)
- (8) *'u-cačàla-dal| yémmu +yatčáva| kat-xá-məndi tunilə| t-avədla.* | 'The bald man—his mother knew that if he said something, he would do it.' (A 1:14)
- (9) *'ojáxta b-šánnə kàmaya,| 'áx bətxárən,| kèsə ci-mattíva +állo.* | 'The hearth—in the early years, according to what I remember, they used to put wood on it.' (B 12:4)

In (10) both the extraposed noun and the grammatical subject stand in separate intonation groups:

- (10) *'úrìya| lòbbu| bəkyàdələ.* ‘The servant—his heart burns (= the servant feels sorry).’ (A 1:8–9)

Occasionally an extraposed referent is not resumed by a pronominal affix but rather by a noun. This can be regarded as a lower degree of grammatical integration of the initial item. Such constructions may involve a repetition of the extraposed noun, e.g.

- (11) *tàlmə, miyya c-avívalan ja-dánnə tàlmə.* ‘Jars—we had water in these jars.’ (B 3:33)
- (12) *'ína 'árxa, mən-cúllə mavày 'árxa c-atíva.* ‘As for guests, guests came from all the villages.’ (B 10:22)

In some cases the resumptive noun is not identical to the extraposed item but is linked to it in an entailment relationship, e.g.

- (13) *+kàslə +rába kálatə ci-+zakràxva, 'áxnan bnátə +šúlət díyyan-iva, mən-káttat +xàttə.* ‘Straw—we would weave many baskets from the stem of wheat—it was the job of us girls.’ (B 10:11)
- (14) *'ánnə məššəlmànə 'ùrzə c-ávi b-nošé, nákvə c-ávi b-nošè.* ‘Those Muslims—the men are by themselves and the women are by themselves.’ (A 5:1)

Constructions such as (5)–(14), in which the initial item is less prosodically integrated with what follows and in some cases also less structurally integrated, as in (11)–(14), will be referred to as Ex2 constructions.

Fronted definite object nominals and fronted independent object pronouns do not have any case marking but are cross-referenced by object agreement suffixes on the verb (§10.18.2.2.). Clauses with such fronted direct objects, therefore, formally resemble extrapositional constructions, e.g.

- (15) *'axunvátux màxzilun ka-díyyi.* ‘Show your brothers to me.’ (A 37:11)
- (16) *'áha máttuyul +tàma.* ‘He places him there.’ (A 3:16)

These constructions, however, should be classified as object fronting, since the pronominal agreement is not restricted to clauses where the object occurs in initial position, e.g.

- (17) *škúlla 'a-Nàtan| p-ìdux.* | ‘Take this Natan in your hands.’ (A 3:88)

Constructions such as (15) and (16), therefore, will not be considered to be extraposition. In some cases, however, a fronted nominal with a referent that is co-referential with a direct object pronominal element in the clause is not fully integrated prosodically and/or grammatically with the clause. In (18), for example, the fronted nominal is separated from what follows by an intonation group boundary. In (19) the fronted nominal is separated prosodically and, moreover, is resumed by an independent pronoun rather than an affix. Such constructions will be considered to be extraposition. They, indeed, differ in their function from grammatically integrated object-initial clauses, as will be discuss below:

- (18) *'ánnə məndyànəl +ràba,| +ràba| kátu tanuyèlə.* | ‘He tells him these many things.’ (A 3:13)
- (19) *ó dàyku| +'ávun ci-payyíval làxma.* | ‘The fine one—they would bake it into bread.’ (B 17:9)

#### 12.14.2 *Initial Item*

An initial item in an Ex<sub>2</sub> structure that is not prosodically integrated is restricted to nominals that are topical, i.e. they function as the informational pivot or starting point of the following clause and typically their referent is identifiable from the context.

In many cases a clause-initial grammatical subject and an initial item in an Ex<sub>1</sub> structure have such a topical status:

Ex<sub>1</sub> item

- (1) *'o-náša +šúluju-+bàzar-ilə.* | ‘That man—his business is in the market.’

Subject

- (2) *'o-náša bət-'àtə.* | ‘That man will come.’

A clause-initial subject, however, can have a variety of other types of status. An initial item in an Ex<sub>1</sub> structure corresponds to a clause-initial grammatical subject with regard to this wider range of semantic and functional properties. In this respect Ex<sub>1</sub> items are different from Ex<sub>2</sub> items, since the latter are restricted to topical status. Properties that distinguish Ex<sub>1</sub> items and grammatical subjects from Ex<sub>2</sub> items include the possibility of their being a non-referential (3–4) or downward entailing item (5–6), e.g.

Ex1 item

- (3) *háč náša lábbu lé ḫáləb šárva ḫəšta.* | 'Nobody likes cold soup (Literally: Nobody—his heart seeks cold soup)'

Subject

- (4) *háč náša lé maǵjəblə.* | 'Nobody likes him.'

Ex1 item

- (5) *nášə +basúra ləbbé ci-+ᬁáləb šárva ḫəšta.* | 'Few people like cold soup (Literally: Few people—their heart seeks cold soup)'

Subject

- (6) *nášə +basúra ci-maǵjəbbilə.* | 'Few people like him.'

An Ex1 item, like a grammatical subject, may be in narrow information focus, which is signalled prosodically by placing on it the nuclear stress of the intonation group, e.g.

Ex1 item

- (7) *brùni tpáklí býyu, la bábi.* | 'I met my son, not my father.'

Subject

- (8) *brùni bət-áta, la bábi.* | 'My son will come, not my father.'

Both an Ex1 item and a normal subject may be interrogative constituents, e.g.

Ex1 item

- (9) *máni lábbu ci-+ᬁaləb xabùyšə?* | 'Who likes apples? (Literally: Who—his heart seeks apples?)'

Subject

- (10) *máni ci-maǵjóbla?* | 'Who likes her?'

Unlike the properties just described, which are restricted to clause-initial subjects and Ex1 items, topicality is a property that is shared by clause-initial subjects, Ex1 items and Ex2 items. The topic of the clause is the starting point or pivot for the predication of the clause. It is typically some item whose referent is recoverable from the context.

A clause-initial topic may occur at the onset of a discourse without any preceding context. In such cases it may be identifiable due to its being a proper name with a referent that is assumed to be identifiable by the hearer, e.g.

- (11) *xá-yuma +málla +Nasràdən| báxtu mára kàtu|* ‘One day mullah Nasradin—his wife says to him ...’ (A 30:1)

In (12) the initial topic in a clause in the onset of the discourse is referentially indefinite and so appears *prima facie* to be an unsuitable onset of a clause. It is made the frame-setting pivot since it has ‘forward-pointing’ topical status, in that it plays an important role in the ensuing discourse:

- (12) *xá yàla| bábu myàtələ| xá yómma sòta vâyula|* ‘A boy—his father dies. He has an old mother.’ (A 34:1)

The initial topic may refer to a generic class rather than a specific referent. The referent of the class is assumed to be recoverable from the descriptive content of the nominal, as is the case in the nominalized relative construction in (13):

- (13) *cut-mačàxlə| xá-dana +dínar b-yavvànnə|* ‘Whoever finds it, I shall give him a dinar.’ (A 26:1)

In dialogue, the referent of the initial topical item may be recoverable from the speech situation. This may be one of the conversation participants (1st or 2nd person) (14–15):

- (14) *‘ána kòlilə|* ‘I—it is my promise.’ (A 43:14)

- (15) *‘át ... šámmət šidaniyta muttítən +‘àllux|* ‘You—I have placed on you the reputation of being a madman.’ (A 36:17)

#### **12.14.3 Function of Topic-Initial Extrapolation Constructions**

When a clause initial item has topical status, whether it be a subject, an Ex1 item or an Ex2 item, the basic function of the construction is to express the onset of a discourse section and, if it occurs within the body of the discourse, a disjunction of some kind from what precedes.

On some occasions the protagonist of a narrative is introduced at the beginning of the first clause of the story and stands in extraposition if it is not the subject of the clause, e.g.

- (1) *xá yàla| bábu myàtələ| xá yámma sòta vágula.* ‘A boy—his father dies. He has an old mother.’ (A 34:1)

In the series of stories about mullah Nasradin in the text corpus some begin with the phrase referring to this character in extraposition when he is not the grammatical subject of the clause, e.g.

- (2) *xá-yuma +màlla| xmáru mòtlə.* ‘One day the mullah—his ass died.’ (A 28:1)  
 (3) *xá-yuma +málla +Nasràdən| báxtu mára kàtu.* ‘One day mullah Nasradin—his wife says to him ...’ (A 30:1)

When a new topic is introduced within the body of the discourse, it is sometimes extraposed. This is the case in (4) and (5), in which the fronted noun is integrated in the clause by repeating it rather than by pronominal reference. Unlike the extraposed nouns in (1)–(3), which have specific referents, these nouns have non-specific referents:

- (4) *tàlmə,| miyya c-avívalan| ja-dánnə tàlmə.* ‘Jars—we had water in these jars.’ (B 3:33)  
 (5) *’ína ’árxa,| mən-cúllə mavày ’árxa c-atíva.* ‘As for guests, guests came from all the villages.’ (B 10:22)

Extraposition is sometimes found at the beginning of speech turns in which a topical referent is placed at the front of the clause, e.g.

- (6) *’á mú-títəla b-rišo?* ‘She—what has happened to her?’ (A 1:12)

In conversation 1st and 2nd person pronouns referring to the participants of the current speech situation are often extraposed at boundary points. In (7) and (8) such constructions occur at the boundary of the main content of the speech turn:

- (7) *’ána báxtət díyyux ’ax-xa-xàtila. ’ána +rába +spày| bət-’àvən| muķàyyad mónnə.* ‘I—your wife is like a sister of mine. I shall look after her very well.’ (A 1:5)

- (8) *bálcət 'átən| túprət xmára díyyux| har-mən-kàmta +kətyəva.* ‘Perhaps you—the tail of your donkey was already cut.’ (A 7:14)

In (9)–(10) a 1st person extraposed pronoun occurs at the onset of a discourse section that supplies an explanation of what precedes where the grammatical subject is not topical:

- (9) *lé-'azən hòč dúca.| 'ána kòlilə.* ‘I shall not go anywhere (else). I—it is my promise.’ (A 43:14)
- (10) *+úx mùjórət ka-díyyi?| 'ána dámmət díyyi b-šaklilə mára.* ‘But why will you marry me? I—they want to have my blood.’ (A 43:6)

In dialogue a 2nd person pronoun is sometimes extraposed where the grammatical subject is 1st person. In (11) the construction presents an explanation for what precedes the topical frame of which is the 2nd person pronoun:

- (11) *járiju-dó xóšca b-nòšux dámxət 'átən,| čún 'át ... šámmət šidaniýta muttítən +'àllux.* ‘You must sleep alone in the darkness because you—I have placed on you the reputation of being a madman.’ (A 36:17)

A nominal with a referent that is absent from the speech situation may be extraposed where the grammatical subject is 1st person if the noun is topically prominent due to its having been introduced in what precedes and/or due to its dominance in what follows. In (12), for example, the wife of the speaker has been mentioned to the hearer previously and she is the grammatical subject of the following clauses:

- (12) *bàxti! xína mótlíju-'ido.| hár 'àtxa| +bətlàbəla,| +rázi léla bi-dó bëta,| mádra +byáyəla mən-+dávva=da yácca bëta.* ‘My wife—I am again dying at her hands. She keeps making demands, she is not satisfied with the house, she again wants a bigger house.’ (A 54:7)

Speakers use extraposed 1st person pronouns to mark boundaries in monologue discourse concerning personal reminiscences where the grammatical subject is not topically bound to what precedes. In (13) the extraposed pronoun occurs at the onset of a section about the speaker's father and in (14) it is used to shift to a section about old houses that existed in the speaker's childhood:

- (13) *'ína sàtva| cùl-məndi mattáxva váddar ju-tàlfə.| 'ána bábi! xzìlyrə| ci-paròmvalun,| tandóvalun vàddar.* ‘In winter we put everything outside in

the snow. I—my father used to slaughter pigs and hang them outside.' (B 7:6)

- (14) *'àna| tré betanána pyášəva ju-suriytət dìyyi.* | 'I—two (old) houses remained in my childhood.' (B 17:37)

A nominal phrase with a referent that has been mentioned in the preceding discourse sometimes stands at the front of the clause in extraposition when the speaker wishes to introduce into the discourse some item that is associated with it. This is often the case when the associated item is in a genitive relationship with the given referent. The extraposed item is still topically dominant in the ensuing clauses, in that it sets the topical frame of what follows, e.g.

- (15) *'ánnə kənyàna| 'e šəxté ci-mabrəzzàxvala| c-oyáva càmra. sàtval| 'áy +šeràxvala| ja-dá tanùyra.* | 'Cattle—we dried their excrement and it became dried blocks of dung. In the winter we burnt it in the oven.' (B 3:32)
- (16) *'e-+dān +bəsyápəva 'án +dàvvə. +dávvə miyyé zóda bərràxšəva, pyášəva kàttəj.* | '... when she filtered the buttermilk. The buttermilk—its surplus water goes away and buttermilk cheese remains.' (B 10:16)

A regular annexation construction would place the associated item first ('e *šəxtət danna kənyana, miyyət +davvə*). The extraposition is used to place the topical item in initial position to mark a discourse boundary.

Extraposition is used in constructions such (17)–(19), in which two referents are set up in parallel or contrastive opposition:

- (17) *ka-xa-vazzíru| šómmu müttuyələ| Alla-Vardi-+Xàñ. | 'u-'a-vazzírət kat-íla cəs-màlcə| šómmu-da Alla-Vardi-+Xàñ-ila.* | 'He gives his vizier the name Allah-Vardi-Khan. The vizier who is with the king—his name is also Allah-Vardi-Khan.' (A 1:28)
- (18) *+ávva 'axúna +jùrələ| vélə bušayútət màndi, +yána sáma zóda mòndi +'ávva vélə škílu. | 'axúna súra kátu +rába màndi lélə +mátya| 'áxcí xa-sústa 'u-xa-+àrra.* | 'That one is the elder brother and he has taken the majority of the property, that is most of the property. The younger brother—not much property has reached him, only a mare and a field.' (A 38:5)
- (19) *ójarùsa| c-odívala +bùlču. bašlívalə ju-míyya +bərdàxa| RíR daríval mèšxa. mèšxa| yá-da +xàlva. | ódàyku| +'ávun ci-payyíval lìxma.* | 'The coarse one (i.e. flour) they made into mash. They cooked it in boiling water and they put oil in it, oil or milk. The fine one—it they would bake into bread.' (B 17:9)

In some cases the construction marks a shift from the foreground of the discourse to an elaborative background section, e.g.

- (20) *ú +týan ci-mattívala +’al-+ojáxta. | +ojáxta b-šánnə ķamaya, | úx bətxà-rən, | ķesə ci-mattíva +állo. | ’na šánnə +xàrayəl kát +’álma ’stvala zùyzał c-+amsíva zoníva +nùyta. | b-+nùyta buš-zóda +ojaxyátə zùrzəva.* ‘They used to place this cauldron on the hearth. The hearth—in the early years, according to what I remember, they used to put wood on it, but in recent years, because the people had money and could purchase oil, they had mostly made oil hearths.’ (B 12:4)
- (21) *’áxci é-+dán P NádəršáhP, | xá mən-málcət +’Irán tīləl ... +’aturáyat díyan bəškələva mən-déštət ’Úrmilabuléva la-dó-rišət +’átrał +Kòčan, | Māšad, | la-dánjibənə. | ... +’ávun P NádəršáhP P afšárP ’íva-da šámmuł* ‘But at the time when Nadershah, one of the kings of Iran came ... he took our Assyrians from the plain of Urmi and deported them to the far end of the country, Kochan, Mashhad, to those parts. ... He—his name was Nadershah Afšar.’ (B 2:16–17)
- (22) *ka-yòmmu márələl ... ́n xa-náša buķərrə mənnáx | kat-’áhal mənila, | tányat bràtila. | ́n márrax lèlał lišánax parmənna. | u-cačala-dał yámmu +yat-ṭával | kat-xá-məndi tunila | ḥ-avədla.* ‘He (the bald man) says to his mother “... If somebody asks you who this is, say “She is my sister.” If you say that she is not, I shall cut out your tongue.” Now, the bald man—his mother knew that if he said something, he would do it.’ (A 1:14)
- (23) *ka-rijavátə, | mujtáyyəd +rába rijavàyəna fu-bétu, | mára mèmun scánta u-masèta.* ‘To the servants, the jurist—there are many servants in his house, he says “Bring a knife and scales.”’ (A 7:11)
- (24) *+tlá janáyat tílun cəslı yúvvənnun +ḥammà-dane dávə, | yuvvállun ķati. | ’ána +shúlı ’áhəla.* ‘Three people who came to me gave me three hundred gold coins. They gave to me. This is my job.’ (A 10:4)
- (25) *é-šabta xítal +málla +Nasrádən bərráxšəl mədrə. | mərələl +maxlèta, | xa-+ķusártə buš-+fùrta +byáyəvən. | +málla +Nasrádən +’áynu páltaوا +al-xa-+ķusártət švàva.* ‘The next week mullah Nasradin goes again. He says “Excuse me, I want a bigger pot. Mullah Nasradin—his eye had fallen on one of the pots of the neighbour.”’ (A 8:3)

The passage in (20) is from a text concerning the production of molasses. The extrapositional construction introduces a background section that describes the fuel of the hearth. In (21) the final clause with the initial extraposed independent pronoun marks a shift from narrative to a background statement concerning the name of the protagonist. In (22) the extrapositional construction

supplies background information about the character of the protagonist. In (23)–(25) the construction is an elaborative comment.

In (26) the main topical referent of the narrative is placed in extraposition both at the beginning of the story and also at the front of the clause that marks the shift from the introductory background of the story to the onset of the main narrative:

- (26) *xáyàla| yómmu myàtəla|’ína +rába šapìra yála víyyələ| yómmu myàtəla,| bábu pyášələ. ’á yàla| bábu márələ ’ána jári málpən kátux|’átən +’ámsət pàlxət.* ‘A boy—his mother dies, but he has become a very handsome boy. His mother dies, his father remains alive. This boy—his father says “I must teach you so you can work.”’ (A 36:1)

As remarked, the referent of the initial topic item in extrapositional constructions is the pivot that sets the frame for what follows, to which the information of the proposition is attached. Extraposition arises when the speaker makes an item that is not the immediate subject of the clause the pivot. This is the norm in some constructions in which the immediate subject of the clause is intrinsically unsuitable to be the topical pivot. In constructions containing experiencer arguments, the experiencer is sometimes not the immediate subject but rather the nominal expressing what is experienced (§ 12.6.). In such cases a nominal expressing the experiencer is regularly placed in initial position in an extraposition construction:

- (27) *’o-naša xàmmulə.* ‘That man is hot (Literally: That man—his heat is).’  
 (28) *’o náša xóšu bitàyələ.* ‘That man is happy (Literally: That man—his goodness is coming).’

In clauses denoting possession, the possessor is expressed by a dative L-suffix attached to an existential particle or verb ‘to be’. If the possessor is a full nominal, this is obligatorily placed in extraposition. Many of the extrapositional constructions that are attested in the text corpus are possessive constructions:

- (29) *’o-+kačúla ’ítłə šòmma.* ‘The killer has a name.’ (A 3:33)  
 (30) *’át lè-’avilux brúna.* ‘You will not have a son.’ (A 3:5)

Although *prima facie* it may appear that the possessed item is the immediate subject of the existential particle or verb in such constructions, in some cases it does not have the grammatical agreement expected of a grammatical subject. In constructions containing the verb ‘to be’, a possessed item that is indefinite

often does not have the expected subject agreement on the verb. In (31) the verb has 3ms agreement whereas the possessed item is feminine singular. In (32) the possessed item is plural, but the verb has 3fs agreement:

- (31) *fùr̥ calu 'avíli.* ‘Get married so I can have a daughter-in-law.’ (A 44:1)

- (32) *mádra viyyála +zàya.* ‘She again had children.’ (A 53:2)

This can be interpreted as reflecting a syntactic reanalysis whereby the possessor has become the immediate subject of the construction. In constructions such as (29) and (30) above, therefore, the initial nominal can be considered to be the immediate grammatical subject rather than an extraposed item. The possessed item has come to be analysed as the grammatical object. It is relevant to note that there is differential object marking of grammatical objects in C. Urmî whereby object marking or object agreement is in principle restricted to definite objects (§ 10.18.2.2.).

In transitive past perfective clauses the suffixes agreeing with the subject nominal are ergative:

- (33) *+xoraváti +frišálun bràti.* ‘My friends pulled my daughter.’

Ergative suffixes are derived historically from dative suffixes consisting of the dative preposition *l-* and a pronominal suffix. The historical origin of the construction is a passive construction in which the patient is the grammatical subject and the agent is expressed by an agentive adjunct by-phrase: ‘My daughter was pulled by my friends’. A construction such as (33) would, therefore, have originally been extrapositional, whereby the agent was not the immediate subject, but rather an extraposed item at the front of the clause resumed by an agentive dative phrase. In the contemporary NENA dialects, however, such passive constructions have developed into active ergative constructions in which the agent is syntactically the subject and the patient is syntactically the object. There are a number of arguments for this analysis (see Doron and Khan 2012; Khan 2016), the main one being that the verb in principle does not agree with the patient argument if it is indefinite in conformity with differential object marking conventions, e.g.

- (34) *+xoraváti +fréšlun bràta.* ‘My friends pulled a girl.’

In ergative perfective constructions, therefore, the initial item expressing the agent should be interpreted as the immediate subject of the clause rather than an extraposed item.

The discourse boundary marking function of extrapositional constructions with an initial topical constituent is performed also by subject—verb constructions with an initial topical subject constituent. This is seen clearly in the use of topical clause-initial independent subject pronouns, i.e. one that is not in narrow focus (§12.5.3.1.).

A clause initial subject constituent may be separated from the clause by an intonation group boundary, in which case it must be topical, as in Ex2 constructions:

- (35) *+Nuxadnásər málca! +bəkráyələ +rába náše lipo.* ‘King Nebuchadnezzar summons many learned men.’ (A 3:42)

All other things being equal, a construction in which a clause initial grammatical subject or extraposed item is separated from the rest of the clause by an intonation group boundary can be regarded as typically expressing a more prominent discourse boundary than one which consists of a single intonation group. According to Chafe (1994, 53, chapter 5) an intonation group coincides in cognitive terms with a single focus of consciousness and so an intonation group boundary constitutes a shift to another focus of consciousness. If we follow this view, we could say that a subject or extraposed item that is in its own intonation group and separated from what follows by an intonation group boundary is cognitively more prominent than one that is part of a cognitive unit that includes also other elements. The endowment of an initial topical item with greater prominence could be expected to constitute a greater discourse boundary.

The canonical, unmarked position of subject constituents in C. Urmi is before the verb. In some cases, however, a subject constituent is placed after the verb. The arrangement verb—subject should be considered to be the marked order. When this subject constituent has topical status and is linked anaphorically to the preceding discourse, the function of such marked verb—subject constructions is generally to express a close cohesion with what precedes (§12.5.2.2.). Such postposition of a topical constituent is attested in some Ex1 constructions. It is found in possessive constructions such as (36), or constructions such as (37) in which an experiencer argument is an extraposed item and a nominal expressing what is experienced is the grammatical subject:

- (36) *béta látvalun 'an-našə.* ‘Those people had no home.’  
 (37) *kàdlə lóbbu 'o-náša.* ‘His heart burnt (with emotion)—that man’ (= that man was upset)

As we have seen, extraposition structures are the norm in possession constructions and constructions with experiencer arguments. There is evidence, moreover, of the reanalysis of the LD structure of possessive constructions as a subject—predicate construction. Ergative constructions are clearly subject predicate constructions, although historically extrapositional. Such ergative constructions can have a topical subject postposed to express cohesion, e.g.

- (38) *ləbləla 'axúni.*! 'My brother had taken her away.'

Extrapositional constructions with experiencer arguments such as (27–28) do not exhibit any evidence of structural reanalysis, but the initial item behaves syntactically like a grammatical subject due to the inherent semantic properties of the arguments of the clause. Such inherent properties condition its behaviour like a grammatical subject on both the left and right periphery of the clause. Further examples of extrapositional constructions with experiencer arguments that allow inversion on the right periphery are (39)–(41). When extraposition is conditioned by the discourse topicality of a particular argument rather than due to semantic properties of the arguments internal to the clause, then dislocation is not possible on the right periphery (42)–(44).

- (39) *'o-náša xóšu tīla.*! *hìl tīla xóšu 'o-náša.*! 'That man was happy. Yes, that man was happy.'
- (40) *'o-náša šántu bitàyəla.*! *hìl bitàyəla šántu 'o-naša.*! 'That man is sleepy. Yes, that man is sleepy.'
- (41) *'o-náša xàmmulə.*! *hìl xàmmulə 'o-náša.*! 'That man is hot. Yes, that man is hot.'
- (42) *'o-náša bábu tīlə*! *hìl \*tīlə bábu 'o-náša.*! 'That man—his father came. Yes, his father came—that man.'
- (43) *'o-náša tpókli bìyyu.*! *hìl \*tpókli bìyyu 'o-náša.*! 'That man—I met him. Yes, I met that man.'
- (44) *'o-náša xzíli bábu*! *hìl \*xzili bábu 'o-náša.*! 'That man—I saw his father. Yes, I saw his father—that man.'

These data can be interpreted as reflecting that recursion of the subject in extraposition constructions may take place in the unmarked clause-initial position of the subject (sv) but not in the post-verb marked position of the subject (vs) unless the immediate grammatical subject of the verb has inherent properties that make it behave like a non-subject grammatical relation.

A construction with an object before the verb and a coreferential pronominal object suffix on the verb as in (45), although it resembles an extrapositional

structure on the surface, has a different function, since it does not mark a discourse boundary like extrapositional constructions. Rather when the object is topical it typically marks close cohesion with what precedes (§12.5.5.2.).

- (45) *'áha máttuyul +tàma.* | 'He places him there.' (A 3:16)

We may infer from this that the fronted nominal is not extraposed but is the direct object argument of the clause. So the grammatical relation of the fronted constituent has an impact on the discourse pragmatic function of the clause.

On the other hand, constructions such as (46), in which an initial topical constituent is disjoined from the clause by a prosodic break, and (47), where it is disjoined both prosodically, by an intonation group boundary, and structurally, by a redundant resumptive independent pronoun, have a discourse boundary marking function and they can be considered to be extraposition constructions:

- (46) *'ánnə məndyànəl +ràba,* | +ràba | *kátu tanuyèla.* | 'He tells him these many things.' (A 3:13)
- (47) *'ó dàykul* | +ávun ci-payyíval làxma. | 'The fine one—they would bake it into bread.' (B 17:9)

In conclusion, there are a variety of extrapositional structures. These differ in the degree of integration of the extraposed item into the clause. In some constructions that are historically extrapositional the initial constituent has now been reanalysed as the immediate grammatical subject and so the clause contains only one subject. This has taken place in ergative constructions and also in possessive constructions. In some constructions extraposition is the norm due to the fact that it is conditioned internally within the clause by the semantic properties of the arguments rather than by the external discourse. This applies to extrapositional constructions with experiencer arguments. In other extrapositional constructions, on the other hand, the extraposition is conditioned by the relationship of arguments to the external discourse.

The initial item in Ex1 structures, which is linked prosodically to the following clause and bound to it referentially by a light pronominal affix, has the semantic and functional properties of grammatical subjects, in that it can be in narrow focus or it can be a non-referential or downward entailing item. Such initial items, however, behave like grammatical subjects on the right periphery only if the extraposition is conditioned by the inherent properties of the arguments that are internal to the clause.

In Ex2 constructions the initial item is prosodically separated from the following clause and/or is disjoined from the clause by an intervening independent pronoun. Unlike Ex1 structures, the initial item of Ex2 structures does not have the full range of semantic and functional properties of grammatical subjects. It is restricted to topical subjects. It follows from this that intonation group boundaries have a crucial effect on the function of the extraposition constructions.

Ex1 and Ex2 topical constituents have a function analogous to that of topical grammatical subjects but different from that of clause initial topical objects, even when the object has pronominal agreement on the verb. Topicality of the initial item alone, therefore, does not determine the function of the construction, but rather the grammatical relation of the item is also a factor. It follows that Ex1 and Ex2 items should be considered to be types of subjects. Ex1 items are more grammaticalized as subjects than Ex2 items, which have greater pragmatic restrictions. It may be said Ex2 items have the prototypical property of subjects, i.e. topicality, whereas the Ex1 items, which are more advanced in their grammaticalization as subjects, allow, in addition to the prototypical property, also non-prototypical properties of subjects, such as narrow focus, which can be regarded as being rather a prototypical property of predicates. The grammaticalization process is more advanced in clauses in which the extraposition is conditioned internally by the semantic properties of the arguments. The completion of the grammaticalization process is exhibited by historically extrapositional constructions in which the original grammatical subject in the clause has become reanalysed as having a different grammatical relation and so now the construction has a single grammatical subject.

# Clause Sequences

## 13.1 Connective Particles

### 13.1.1 'u-

When functioning as a clausal conjunction, the particle 'u' is generally attached as a clitic to the initial word of a clause. Occasionally it bears its own independent stress.

The particle is used to express various types of semantic connection between clauses. In most cases such semantic connections may also be expressed by juxtaposing clauses asyndetically without the explicit linguistic expression of the connection in the form of the connective particle. The particle, therefore, should be regarded as an optional heavy coding of these connections.

In narrative the particle is used to join clauses that express sequential events. The majority of sequential clauses in narrative are joined asyndetically. The usual strategy is to use the particle before the final clause of a chain of events. In this respect, therefore, it is a device for marking sections of discourse that are presented as expressing closely cohering events, e.g.

- (1) *sépa muttíla* 'àtxa! jáno mäxyála +'àllu. | kòl škólla mónni kát +tamrònna. | *sépa muttíla* 'àtxa! +fóra škólla ju-+sàdrol jáno +ruppála +al-sépa! 'u-pròkla. | 'She put the sword like this and thrust herself upon it. She made me promise that I would bury her. She took the sword like this, she held her husband to her breast and threw herself onto the sword, **and** met her end.' (A 2:35)
- (2) *bitáyəla* ju-bétat bábu, +bixàləla, bæštàyəla, bæzmàrəla, bærkàdəla, bæš-vàrəla. | 'u-+byáyəla mən-de-yàmmu! kat-íla xumítu! báxtat +Axi̥kar! 'ávə mónnó áx +fóra. | 'He comes to the house of his father, he eats, he drinks, he sings, he dances, he leaps around, **and** he wants to be with his mother, who has nurtured him, the wife of Axiqar, as a husband.' (A 3:38)

In (3)–(4) the clause with 'u, which marks the end of a chain of clauses that are presented as a composite event, is followed by a new event unit, which typically involves a spatial shift:

- (3) *muyyíla* kátu +rába dàva, sìma, jùlla, cílla yuvvélə kátu. | 'u-tlái šànnət p'darāmàdP-ət! +'àtra! cílla yuvvélə ka-+Axi̥kar. | *muttíla* +al-susavàtə

*+šudárrə́ká ... málca| Nànnə.* | He brought to him large amounts of gold, silver, clothes, he gave everything to him, and he gave to Axiqar the income of the land for thirty years. He loaded it on horses and sent it to the king in Nineveh.' (A 3:84)

- (4) *àna| ju-béti tìvənva| e-+dántət ́tnva jvànka,| +tarri mxílun. | +tarri mxílun,| +tuktlə́klun| 'u-+plàtlı. | áxči +smíli mára ta-jáldə| ́atlı ́əhtiyáj<sup>p</sup> +állux. | +bàyyən| +máłət +álli. | I was sitting in my house, when I was young, and somebody banged on my door. Somebody banged on my door, somebody knocked and I went out. I only heard somebody saying "Come quickly, I need you (to do something for me). I want you to come to me."* (A 2:26)

In (5) the *'u* marks the final event of the chain, but this final event is itself composite and consists of a series of clauses. This is the reason why it does not appear on the final clause of the episode:

- (5) *+mardúixəna míyya| +házər vadèna,| e-+dán̄ t̄-ílə +t̄olya. +ávun jánu +tùšyolə| šópu švíkələ xá ... xá késa| xá-məndi xína müttələ| ́annəl yán júlla +šíla müttələ ́txa vidélə| ́ax t̄-ən-dmíxələ| ́annə míyya +maxduréna +állu| 'u-bərràkəna, jané +tašuyona| har-lèna mabyúna. | They boil water, they prepare it when he is asleep. He has hidden himself and has left a piece of wood in his place, (or) he has put something else, he has placed clothes or the like, and arranged them as if he is asleep. The others pour the water over him and run away, hide and do not show themselves at all.'* (A 37:20)

Example (6), which contains a chain of habitual events, illustrates the same phenomenon, whereby the last two events are presented as two components of a single composite event with the connective particle placed before the first of these:

- (6) *sábza daríva lablívala +al-mdítə| ci-zabnívala| 'u-mándit +lázəm=va ́katé| ci-šáklival mayyivala. | They used to lay out the vegetables and take them to the town and sell them, and they would buy what they needed and bring it back.'* (B 2:3)

In (7) the particle marks the end of a chain of clauses expressing the components of the event of producing a sweater and this is followed by another clause introduced by the particle which closes the higher level chain of events in the section of discourse. This hierarchical structure can be represented thus [[A<sub>1</sub> + A<sub>2</sub> + A<sub>3</sub> + 'u-A<sub>4</sub>] + 'u-B]:

- (7) +məsté ̄kat-pólla +al-+àrra! ſaklànna! +jammànna!, 'odánnna jøddàlə! 'u-+zakránna svètar! 'u-zabnànnal ̄kat-máyyan zuyzæt-díyyux yavvànnə! '(that) I should take their hair that has fallen on the ground, gather it together, make it into threads and knit it into a sweater, and sell it in order to bring in your money to give it to you.' (A 18:2)

In (8) the final deontic verb 'fry' is an elaboration of the final verb of the chain 'cook' rather than being itself the final action in the chain:

- (8) 'ànnəna 'an-núyna!. b-lablàtlun!, b-+xallàtlun! tamməzàtlun! 'ú bašlàtlun! ̄kalyattun!. 'These are the fish. You should take them, wash them, clean them, and cook and fry them.' (A 5:7)

In some cases the final event of a chain, which is marked by the connective particle, is followed by some kind of background tag. In (9) this tag is recapitulatory. In (10) it is evaluative:

- (9) 'ú mújjurra xášla +kàtəl bót ... +arþámma xamšámma cilomátrə 'ùrxa, xášla +tàma! xa-lèlə! kdálət +karúvvæt díyyux +kçila! 'u-tila!, +dárra tila? 'How is it that the cat went there on a journey of four hundred or five hundred kilometres in one night, snapped off the neck of your rooster and came back, returned and came back?' (A 3:82)
- (10) 'á dúlə cùllə nákva xumyèl 'ùrzə +ktilélə!. 'ána mírənva ̄kátu baxtátə +kažál-lun! 'á dúl 'ùrzə +ktilélə! 'u-'ádi fu-+mžéti kây=da p-+kážəl 'a-mùt +kážma dáryəl b-rišu!. 'He has preserved all the women and killed the men. I had said to him that he should kill the women, but he has killed the men, and now, when I arrive, he will kill me also. What a shameful thing he has done (literally: he has put ash on his head).' (A 2:23)

In (11) the narrator presents a series of clauses at the end of an episode all of which are introduced by the connective particle. The clauses express temporally overlapping rather than sequential events and the effect of an accumulation of connective particles is to give the closing events of the episode end-weight:

- (11) 'áha mattúyola báxtu +tàma! 'ú +tajər! bərráxšələ Mäcca! kà! trè-yarxə! 'ú cacála bərráxšələ bëtu! 'u-báxta mattúyona cəs-+hàji!. 'He places his wife there. The merchant goes to Mecca for two months and the bald man goes to his house. They place the wife with the pilgrim.' (A 1:5)

The connective particle *'u* is occasionally used to express other types of connections. In (12) it introduces a series of clauses that express circumstantial background to the narrative:

- (12) *márrə xa-náša' ɿttənju-+dússak| bədmáyələ +'älli.| 'u| cíllə=da an-+sarbázə t-íva mánnu| cíllə šátyəna +riyəna.| 'ánnə háč-xa-monne lénə +bəddáya.*  
 'He said "There is a man in prison who resembles me." **And** all the soldiers who were with him are all drunk and inebriated. None of them knows about it.' (A 3:35)

In (13) it occurs before a clause that supplies the explanation for the preceding command:

- (13) *ta-jálđə| 'u-báxtux màtla.* 'Come quickly, (for) your wife is dead.' (A 4:12)

In (14) it connects the opening formula of the narrative, which introduces the main character, with the first event. This is a case of heavy coding marking a boundary in the discourse structure:

- (14) *ɿtva xa-dana-málca.| 'u-yuvvállə +xàbra| ɿka-vázzər.| mòrrəl* 'There was once a king. **And** he gave an order to the vizier. He said ...' (A 2:1)

In (15) two events that open a narrative after the temporal setting are both introduced by *'u*:

- (15) *+áččə sànnə ɿtvállı| 'u| tílun nášə| məššəlmànə| 'u-yuvvállun tuþþányə ɿka-màta.* 'I was nine years old. Muslims came and gave guns to the village.' (B 6:2)

Elsewhere it sometimes marks the onset boundary of a new discourse section rather than the closure of a section. This is the case in examples such as (16) and (17):

- (16) *báxta čarčürəla.| čarčürəla| 'u| +hájɪl| ɿtvalə xá-dana rýja.* 'The woman screams. She screams. Now, the pilgrim had a servant ...' (A 1:6–7)  
 (17) *cúl-məndít +báyyət škúllun.| ɿxči là +kłúlli| lé-+bayyan mètan.| 'u rýja| ləbbu bəkyàdəla| lélə +bəkłálo.* ('The woman says) "Take whatever you want, but do not kill me! I do not want to die." Now, the servant feels sorry (for her). He does not kill her ..." (A 1:8–9)

### 13.1.2 va

Some speakers occasionally use the Persian form of the connective particle *va* in place of *'u*, e.g.

- (1) +rábā basíma c-ávə| *vá* +ṭamàna c-ávə m-dó kát bí ... +nùyṭa| *b-*+ṭazìyl *váduna*.| 'It is very delicious, and it is more tasty than the one they make with oil or diesel fuel.' (B 14:4)
- (2) cúllə fuydána *b-*carpíčat 'íprəva| *va-*ṭáro=da 'átxəva| *kèsə*| *vá* íta ... *b-*+ṭína +ullüylu. 'All the walls were of mud brick, and its roof was thus, wood, and then with mud on top of it.' (B 14:9)
- (3) lubálloxun ka-dýyi cəs-dé +simáxur,| é +simáxur=da 'adíyya +zàyo 'átlə. | vídən xa-+šúla 'átlə +zàyo. | *va-*+báyya +palṭáli +al-de-dúnyət +bàra. 'You took me to the +simaxur bird. The +simaxur now has its young. I have done something and she has young. And she wants to take me out to the world of light.' (A 39:25)

### 13.1.3 da

The particle *da*, which is a loan from Turkish, is normally attached as an enclitic at the end of a nominal, independent pronoun, adverbial or particle. On some occasions it is attached to a verbal predicate or copula. Its function depends on the informational status of the item it is attached to, namely whether it is topical or focal in status. In general it enhances the prominence of these types of informational status, i.e. endowing the item it is attached to with topical or focal prominence.

#### 13.1.3.1 Topical

The particle is used with the following functions when the item to which it is attached has topical status. The examples are classified according to the grammatical category of the host of the enclitic.

##### 13.1.3.1.1 Nominal or Independent Pronoun

In some cases the particle is attached to an item that is set up in contrastive opposition or in parallel to an item mention in the preceding discourse. The item with the particle is typically the subject of the clause. The particle gives 'heavy coding' to the topical item, which marks the clause off distinctly from the preceding discourse. Its topical status may be due to the fact that its referent is recoverable from the preceding context, e.g.

- (1) fúr'un dúlə tílə láxxa hám̥la váda| *'u-*+Axíkar=da kòšun +jumméla. 'Pharaoh has come here to make an attack and Axiqar has mustered the army.' (A 3:25)

- (2) *'át +sàrəvət, +bárət lèlə yávəvət' áni-da palàxux-na.* 'You are the moon and you give the light of the night. They are your workers.' (A 3:61)
- (3) *málca +'ávva bəxšálulə báxtu-da láxma marcùxula.* 'The king pounds that (garlic) and his wife softens the bread.' (A 35:10)
- (4) *'ax-díyyux professor-ivət +'áv-da +rába lípəva.* 'Just as you are a professor, he was very learned.' (A 3:1)
- (5) *'át túy +táməl 'ána-da cálən dàpnax.* 'You sit there and I shall stand beside you.' (A 39:19)

It may be topical due to the fact that it stands in a set-relationship with an item that precedes, i.e. it is linked to a preceding item by associative anaphora in that both items belong to the same set, e.g.

- (6) *xá-sama xína-da +'álma 'áttən kət-ci-táni mən-jíbat nipùxta* P'méye poxté.<sup>P</sup> 'There is another group of people who instead of *nipuxta* say *meye poxté*.' (B 12:8)
- (7) *jàni sùrəvənva bábi-da sàvəva.* 'I myself was young and my father was old.' (B 2:19)

We may include here (8), in which the particle is used to express the parallel occurrence of tokens of the class of a particular sign:

- (8) *'ána xášli kédamta xzilí 'ína cùllə 'o-+xiyàvand +'ó nišánkət 'ána müttun +'áv-da vəl-+támma.* 'I went in the morning and saw that the sign that I had placed, the same one was (also) in the entire street.' (A 2:10)

In (9) the items in a list of items set up in parallel are marked by the particle:

- (9) *'ánnə cùllə šəmmané mattuyélə vadələ. šámmət vazzíru-da mattúyulə Alla-Várdi +Xàñ čúncət vazzírət málca 'aslí 'ílə Alla-Várdi +Xàñ. málca-da málca-lə.* 'He fixes all their names. He makes the name of his vizier Allah-Vardi-Khan, because the vizier of the original king is Allah-Vardi-Khan. The king is (called) king.' (A 1:24)

In some cases the particle is used more loosely with an initial topical item to express the onset of a distinct section of discourse with a shift in topic. This may be sequential to what precedes in a narrative. The topical item has been mentioned in the preceding context or is at least recoverable by associative anaphora, e.g.

- (10) *mən-+táma +šaríyəna bədra-kálə ́nnə yāl-sùrəl ̄kat-hállun cipa,| hállun miyya,| hállun +t̄ina.| +Axíkar-da bəškálələ mən-+sarbàzu| ̄ka-dannə-mxàylə.* ‘From there the children begin to shout “Give stones, give water, give clay.” Axiqar takes (things) from his soldiers and beats them.’ (A 3:72)
- (11) *mára yòmmi| bábi ̄ka-dýyi mülpələ| ́na mujjúrra ́nnə tòrə lablánnun,| +’árra +akrila,| mú ’odíla +shúla ’àtxa.| ́ha ́na c-+ámsən pàlxən.| yámmu-da màral+ bəzdáyən là +ámsət,| xá móndi ’oya.* ‘He says “Mother, my father has taught me how to take the oxen to plough the field, and what they do to it and so forth. So I can work.” But his mother says “I am afraid that you will not be able to and something will happen.”’ (A 35:1)
- (12) *bas-́nnə +tlá-našə tílun cəslí| káti yuvvállun +t̄la-mmà dáva.| mórrun xàmilun káti| ́na-da xumyèli.* ‘But these three people came to me and gave three hundred gold coins. They said “Look after them for me.” So I looked after them.’ (A 10:5)
- (13) *báxta +bəddáyələl mü-ila kóssat.| mára +rába honàntva,| +ràba.| +bəd-dáyələl kóssat mü-ila.| bitáyəna bétal+maxúləla maštìyəla.| ’o-+kat̄ula-da| xína| vâyəla bəstàya| ... +Axíkar ka-+dàv márələl márələ ́na| fná lətli.* ‘The wife knows what is happening. It is said that she was very clever. She knows what is happening. They come home and she offers food and drink. (As) the executioner is drinking ... Axiqar says to him, he says “I am not guilty. Do not kill me.”’ (A 3:32–33)
- (14) *mára bábil mən-’ála ha lèla +t̄sítələ,| mónnux müt +t̄sítələ?| ’àtxa víla kóssat.| málca-da yúvvəl dàstur| ̄kat-cílla panánnun.* ‘He says “Father, it is not hidden from God, why should it be hidden from you? This is what has happened. The king has given a command that I should eradicate everybody.”’ (A 2:17)

In (15) the enclitic *da* occurs at the onset of a clause that is circumstantial to the event expressed before it. In (16) it occurs at the onset of a section that is circumstantial to the main narrative. This is also marked by the connective particle *’u* (§ 13.1.1.):

- (15) *áha kédamta tílə,| xabúša-da müyyuva ̄ka-bàbu.* ‘He came back in the morning, bringing back the apple for his father (literally: he had brought back the apple to his father).’ (A 39:5)
- (16) *márrə xa-náša ́ttən fu-+düssak| bədmáyələ +’älli.| ’ù| cílla-da ’an-+sar-bàzə t-íva mónnu| cílla šátyəna +riyəna.| ́nnə háč-xa-mənne lēna +bəd-dáya.* ‘He said “There is a man in prison who resembles me.” All the soldiers who were with him are all drunk and inebriated. None of them knows about it.’ (A 3:35)

In (17) the phrase carrying the enclitic opens an evaluative section of discourse after the description of the preparation of bread:

- (17) *ci-pášva xá +árpa xamšà dakíkəl jáns ci-bašòlva. rába šapíra laxedma. hác áx do-láxmət matvátə=da* <sup>P</sup>aslán<sup>P</sup> *hác-ductal* *ánna láxxa b-ánnə ducána lè-mačxat mən-do-láxma* *+raba šapíra.* ‘It stayed there for four or five minutes, and baked well. (It was) very fine bread. Nothing like the bread of the villages—nowhere in these places (here) will you find such fine bread.’ (B 2:9–10)

In (18) the construction that opens with the noun carrying the particle marks a shift to a section that supplies background information about the character of the protagonist. In (19) the construction introduces a clause that supports what precedes by stating the identity of the referent evoked in what precedes:

- (18) *ka-yàmmu márləl ... ’án xa-náša +buķərrə mənnáx kat-’áha mànila, tányat bràtila. ’án márrax lèla lišánax parmənnə. u-cačàla=da* *yámmu +yatłáva kat-xá-məndi tunilə t-avòdla.* ‘He (the bald man) says to his mother “... If somebody asks you who this is, say “She is my sister.” If you say that she is not, I shall cut out your tongue.” Now, the bald man—his mother knew that if he said something, he would do it.’ (A 1:14)
- (19) *láxxa ’áttan xá-dana náša xìna búš +spáy-ila kat-yavállan +xàbra. ávun=da* *’ila ríjat +hàji.* ‘There is here another man, who is better (qualified) to give us a report. He is the servant of the pilgrim.’ (A 1:33)

In (20) the particle is used in a clause that recapitulates information that has already been given as supportive background to the preceding statement:

- (20) *+bəddáyonə ’adi-cúlla ’a-+tálta mù-ila, šəmmané=da* *cúlla mattuyèla.* ‘They now all know what this game is, (since) he fixes all their names.’ (A 1:25)

The particle sometimes occurs in a supplementary tag that is attached to the end of a narrative. As elsewhere, the basic function here is to mark a boundary and signal that there is a discontinuity with what precedes. In (21) the initial topic item is a pronoun referring to the preceding discourse as a whole:

- (21) *’áyya=da +Axiqar-ila.* ‘That is (the story) of Axiqar.’ (A 3:94)

In (22) the purpose of marking a boundary with the particle in the clause opening with the 1st person pronoun ('ana=da) appears to be to separate the clause from what precedes in order to give it added prominence:

- (22) mára 'áx brùni<sup>l</sup> 'ána=da bàbux=vən.<sup>l</sup> 'a-cúl dax-č-öya<sup>l</sup> 'ána xáčča bùš-zoda mónnux<sup>l</sup> xìyyən.<sup>l</sup> 'But my son, I am your father. Whatever the case may be, I have lived a little more than you.' (A 2:16)

### 13.1.3.1.2 Adverbial

A temporal or spatial adverbial that carries the enclitic is sometimes set up in clear contrastive opposition to an adverbial in the preceding context, resulting in the contrast of two different temporal or spatial frames. In such cases the adverbial has topical status due to it being in a set-relationship with the preceding adverbial, e.g.

- (1) 'íta b-yúma<sup>l</sup> bnàtə ci-yatvíva.<sup>l</sup> ... b-léla=da jvánkə c-azíva.<sup>l</sup> 'So during the day girls would sit (there) ... and at night the lads used to go.' (B 2:7)
- (2) +xàrtal<sup>l</sup> čé+dana b-yúma tanúyra c-odvíval<sup>l</sup> ka-làxma pyèta,<sup>l</sup> 'íta +beraš-vànə=da<sup>l</sup> kat-àrxa 'atíva<sup>l</sup> ju-dó bét tanúyra<sup>l</sup> mattívalun xá-dana mìz.<sup>l</sup> 'Now, during the day they used the oven for baking bread, then in the evenings, when guests arrived, in that oven house they laid for them a table.' (B 14:2)

In (3) the adverbial with the enclitic and its spatial frame is set up in opposition to the spatial frame of what precedes but there is no explicit expression of the latter in the form of an adverbial word:

- (3) +jammúyol cíllə kòšun<sup>l</sup> 'íman=ət 'a-ctáva kabùlulə,<sup>l</sup> +jammúyol kòšun<sup>l</sup> 'a-yba-xína=da fir'un bitáyələ.<sup>l</sup> 'He musters all the army when he receives this letter. He musters the army. On the other side Pharaoh approaches.' (A 3:25)

The particle occurs also on initial adverbials that mark the onset of a new section of discourse with a new spatial or temporal frame without being clearly set up in opposition to what precedes. The initial adverbials are often anaphorically linked to what precedes, e.g.

- (4) mən-+táma dásłət 'Ùrmil ci-mabyənnáva +rába šapòrta.<sup>l</sup> 'íta dápñət dé dàšta=da<sup>l</sup> 'ótlən xa-yàma<sup>l</sup> yámłat 'Ùrmi ci-+karíla,<sup>l</sup> yámłat mòlxə.<sup>l</sup> 'From there the plain of Urmı looked very beautiful. Now, next to the plain we have a sea, they call it the lake of Urmı, the sea of salt.' (B 2:13)

- (5) +ál dáni ci-mattíva pardúvvə, mən-dà-rišə. +ál dán pardúvvə-da ci-mattíva +pavánət 'ilànə brízə. ‘On those they put laths, from this side. On the laths they put dry branches of trees.’ (B 2:20)

The phrase *+ál dán pardúvvə-da* in (5) marks the onset of the next stage in the building of a house. The phrase *+ullíylu-da* in (6) likewise marks an incremental stage in the same process. The section opening with the adverbial *láxxa-da* in (6), however, is not an incremental stage but rather presents elaborative background. The particle here, therefore, marks the boundary between foreground and background rather than a shift in spatial frame. The same applies to (7), in which the section opening with the adverbial *moriša-jáldə-da* presents background elaboration:

- (6) fúyda 'àtxa bət-baníva. +ullíylu-da kësa p̄t-ávə kësa maxíva, daríva. láxxa-da 'ánnə kësəna, 'ína késət díyān fùləna, 'àtxa kësə. 'ilána kat-pràmuna! kësəl c-odílun 'àtxa ci-darilun. ‘They would build a wall like that. Above it there was wood, they put wood. Here they are wood, but our wooden beams were round, wood like this. When they cut the tree, they make the wooden beams like this.’ (B 14:5–6)
- (7) xèšla cáslu! kat-šakálvala zùyzə. moriša-jáldə-da ci-kemíva, m-kám nášə naplíva +al-+šùla, kat-zuyzé šaklivala mənné, nášə yavvíyalun +màlyat. ci-šaklívə zùyzəl c-azíva xayyíva biyyé. ‘He went to him to take money. In the early morning they used to get up, before people went to work, to take their money from them, the people used to give them protection money. They used to take money, go off and live by it.’ (A 1:2)

In (8) the clause with the adverbial *'adíyya-da* also constitutes elaborative background in relationship to what precedes. It should be noted, however, that here the adverbial does not occur in clause-initial position, but rather after the verb. Such a construction appears to be bound more tightly to what precedes than those in which the adverbials are in initial position. It has the status rather of a tag than as an independent section of discourse:

- (8) mən-+táma máyəva +afšariyyəl 'ánnə 'áxnan +karáxlun 'adíyya-da +hošárə. ‘From there he brought afšars. We now call these hošará.’ (B 2:16)

In (9) the particle is used both on an initial subject and on the following adverbial. The purpose of this is apparently to mark the clause off particularly sharply from what precedes to give the statement prominence. The speaker uses the additional strategy of using the deictic copula (§ 10.6.) to achieve this:

- (9) *'é +simáxur-da ádi-da xína véla +šuríta bəsyàva| mən-xəššo| mən-+nara-hatùyo.* ‘The *+simaxur* bird has now begun to age from its sorrow and distress.’ (A 39:21)

### 13.1.3.1.3 *Predicate*

Occasionally the particle is attached to a verbal or copular predicate. In such cases the clause that has the particle constitutes some kind of boundary in the discourse. In (1) the clause stands at the onset of a background section within a narrative:

- (1) *ka-dó brúnu +júra mərrəl brùni,| xùš,| ó xabúša +nṭùrrəl ... o-brùnu| ham-máša c-atíva-da xá +hèyvan,| mən-+háva c-atíva,| o-xabúša c-+axəlvalə,| c-azəlva,| lé-šavəkva pàyəšva,| o-brúnu +júra xəšlə.* ‘To the older son he said “My son, go and guard that apple.” ... That son of his—an animal would always come, it would come from the air, eat the apple and go away; it would not allow it to remain. That older son of his went—(the animal) used to come at night—his elder son went ...’ (A 39:2)

In (2) it marks the onset of a new event, which is separated from the event of preparing the nesting place of the hens by a time gap:

- (2) *ka-bíyyə ci-mattíva 'ərbàla,| 'ərbálə 'atéktə ci-mattíva jávo tìyna| yánət 'é ctéta ju-dé 'ərbàla mattáva bíyyə,| ci-maxpívala-da 'é-+danət 'an-bíyyo t-íva +bajmá zòda.* ‘They used to put a sieve for the eggs, an old sieve, in which they put straw, so that the hen would lay eggs in the sieve. They would make it brood when an excess of eggs gathered.’ (B 17:41)

In (3) the clause with the particle has an adversative relationship with what precedes, defeating an expectation:

- (3) *'ána lén lápta b-nóši +'àxlan,| hál bəkyámən-da kat-+àxlana,| cíllə vâyəna +xilə.* ‘I am not used to eating by myself, but before I get up to eat everybody has eaten.’ (A 35:13)

In (4) the conditional protasis ‘if you want to kill him (i.e. Axiqar)’ is set up in opposition to the preceding statement by the speaker that he himself did not kill Axiqar. This is similar in function to the use of *da* on nouns and pronouns to mark off items in contrastive opposition.

- (4) mára hè. | málca ḫ-ávət basıma, | 'ána +Axíkar lèn +᷊ktílu. | 'icələ?| mórrə xàyələ +pòllan dúctələ. | 'ána +túmrún kam-+tárrət bëtu, | 'ína xàyələ. | 'ita +báyyət +katlətlə=da, | +᷊ktùlla. | 'He says "Yes, oh king, be well, I have not killed Axiqar." "Where is he?" He said "He is alive in such-and-such a place. I have buried him outside his house, but he is alive. So, if you indeed want to kill him, kill him." (A 3:49–50)

#### 13.1.3.1.4 Particle

On some occasions the *da* is attached to a clause-initial particle.

In (1) the *da* is attached to the negative particle *la* at the front of the second of two parallel negative clauses:

- (1) 'áxnan lè-+bayyaxlun, | lá zuyzè +bayyáxlun | lá=da mité +᷊tamràxlun. | 'We do not want them. Neither do we want their money nor shall we bury their dead.' (A 6:15)

In (2) it is attached to the negative particle *la* that expresses an alternative situation that is set up in contrastive opposition to what precedes:

- (2) +bayyítun +bayyítun. | lá=da, | 'ána b-šókən ḫ-àzən. | 'If you want it, fine. If not, I shall leave (everything) and go.' (A 55:7)

In (3) the initial *la-da* introduces a phrase that is set up in parallel with what precedes:

- (3) jár xáda 'oyáni! ḫát bìta! máx çàppəç! átxa mabyənnáni +al-pàta! ḫát lá +šòr 'oyáni! lá=da pàxta 'oyáni. | 'It must be thus, so that the egg appears on the surface like a kopeck, so that it is not over-salted nor is it insipid.' (B 15:3)

In narratives speakers sometimes use the word *hi* 'yes' as a discourse connective marking the onset of a new section of discourse. In such cases the particle *da* is occasionally attached to *hi*, e.g.

- (4) hí=da xàšlə, | 'akúbra xàšlə. | xàšlə 'á 'akùbra. | 'Yes, he went, the mouse went, this mouse went.' (A 52:5)
- (5) hí=da 'á náša +x̄títə tila. | 'The man felt sorry for it.' (A 54:3)

## 13.1.3.2 Focal

13.1.3.2.1 *Focus on Constituent*

When combined with a constituent in focus, the enclitic *da* has the inclusive sense of 'also' or 'even'. It is attached with this function to nominals and adverbials. The inclusive phrase may occur anywhere in the clause. The item in focus often takes the nuclear stress, which is a prosodic marker of focal prominence, e.g.

- (1) 'ú +**hàji:-da** bərráxšələ +hàmmam.| 'And also the pilgrim goes to the bath-room.' (A 1:6)
- (2) '**át:-da** xuš-+támma.| 'You also go over there.' (A 1:31)
- (3) **mən-diyyi:-da** buš-šaþírəna.| 'They are more beautiful even than me.' (A 39:14)
- (4) málca-**da** yúvvəl dástur| kat-cùllə panánnun| báxtət jáni-zə, | **bax-málca:-da** cùllə náþvə mən-pát +àrra þaklónnun.| 'The king has given a command that I should eradicate everybody, even my own wife, also the wife of the king, that I should remove from the face of the earth all females.' (A 2:17)
- (5) +baþvánə c-avíva| kát fináva +šúla là-’atíva.| +**téro:-da** c-atíva ká-+ánvə +axlívalun| ci-maprəxxívalun.| 'They used to be vineyard-keepers so that thieves and so forth would not come. Birds too used to come to eat the grapes and they used to drive them away.' (B 2:7)
- (6) cül bëta káttət +àrra-**da** c-avívalə.| 'Every house used to have also a piece of land.' (B 2:11)
- (7) 'ánnə **məndyànə:-da** tanúyəna.| 'They speak also about these things.' (B 2:14)
- (8) 'u-’ádi ju-+mtéti **kay:-da** p̄-+kátləl.| 'And now when I arrive he will kill me also.' (A 2:23)
- (9) 'án béta ’áva +júra| xá-dana stùyna-**da** xút ci-maxíva mən-+àrra| hál +tám-ma| kát là talóxva.| 'If the house was big, they used to place also a pillar underneath (coming up) from the ground up to there, so that it would not collapse.' (B 2:19)
- (10) +xadərvánan məssəlmànəva| məssəlmánə=zə ... háč-xa mənné látvalun carmànə.| lá carmànə ’átvəlun| lá baxcánətyéməš| cùllə ’at-díyyən| +'aturáy| 'u-’arəmnáy-**da**.| 'Around us were Muslims, none of the Muslims had any vineyards. They had no vineyards nor fruit orchards. They all belonged to us, the Assyrians and also the Armenians.' (B 2:6)

In (11) an inclusive phrase occurs at the beginning of each of two parallel clauses:

- (11) *ka-dìyyax-da kátlən| ka-<sup>+</sup>jòrax-da kátlən.* ‘I shall kill you and I shall kill your husband.’ (A 43:8)

On some occasions the items in focus do not bear the nuclear stress, e.g.

- (12) *cəs-bábu-da vídəva vazzirùyta.* ‘He had held the post of vizier also with his father.’ (A 3:2)
- (13) *mádra<sup>+</sup>táma-da<sup>+</sup>bəkráməla.* ‘Again also there he wins.’ (A 3:72)

In (14) the particle expresses incremental progress of an action:

- (14) *<sup>+</sup>xàrta | xáčča-da kámta xòšlə.* ‘Then he went a little further forward.’ (A 1:11)

A series of two constituents with a focal *da* enclitic expresses ‘both ... and’ or, in a negative clause, ‘neither ... nor’, e.g.

- (15) *zuyzè-da<sup>+</sup>janè-da<sup>+</sup>áxnan lè-<sup>+</sup>bayyax.* ‘We want neither their money nor them themselves.’ (A 6:15)

The scope of the inclusive focus may include the proposition as a whole rather than being restricted to the item that carries the enclitic. This applies to (16) and (17), where it is appropriate to translate the clause with a discourse connective such as ‘moreover’:

- (16) *‘áxnan jvìrəx.<sup>+</sup> xá-dana-da brùna ‘átlan.* ‘We are married. Moreover we have a son.’ (A 36:10)
- (17) *‘ána bərrášxən dàmxən<sup>+</sup> rába šuršìyyən<sup>+</sup> xa-móndi-da látva ‘ána<sup>+</sup>axlən-va.* ‘I am going to sleep. I am very tired and moreover there was nothing to eat.’ (A 36:10)

The particle is used in its focal function with deictic pronouns in presentative constructions such as (18) and (19):

- (18) *‘ánnə-da<sup>+</sup> škúl<sup>+</sup>xiùl.* ‘Here they are. Take and eat.’ (A 36:9)
- (19) *‘ánnə-da xá dínyə dàvəna<sup>+</sup> kàtux.* ‘Here are a load (literally: world) of gold coins for you.’ (A 1:5)

In (20) this construction is used to introduce a following proposition:

- (20) *'á-da mən-jibət +dàvun| kət-kày máxyələ| 'ána kàx mxíli.'* ‘There it is—instead of him, who has hit me, I have hit you.’ (A 21:3)

### 13.1.3.2.2 *On Inclusive Particle*

The *da* is sometimes attached to the inclusive particle *ham* ‘also’ that joins one nominal constituent with another. In most cases the phrase *ham-da* that links the constituents is rendered idiomatically by English ‘and’, e.g.

- (1) *pákka hám-da +akùbra jvárre.* ‘The frog and the mouse got married.’ (A 52:4)
- (2) *+bár=t én brité hám-da bruné t-i-jurvàslə|* ‘After their daughter and their son grew up ...’ (A 55:2)
- (3) *'é yómma 'ýja,| škólla ánnə +xàttə| hám-da +rèzza,| hám-da mül 'àtxa dər-yéla +'al-+'árra,| buzbakkéla dəryéla kám dé brító 'ýja.* ‘The stepmother took grains of wheat, and rice and I don’t know what, and threw them on the ground, she scattered them, threw them before her stepdaughter.’ (A 51:3)

In (4) *ham-da* is placed before both the first and the second of the two joined constituents, in which case it is idiomatically rendered ‘both ... and’:

- (4) *hám-da jánu báxtu 'u-hám-da 'o-brúnu bəxxáyəva ju-dé čullùxta.* ‘Both he and his wife and also his son used to live in that hut.’ (A 54:1)

In (5) the *da* is attached to the disjunctive particle *ya* ‘or’. In this context it acts as a connective that signals a coordinative link of the ‘or’ phrase with what precedes (X and an alternative Y):

- (5) *bašlívələ ju-míyya +bərdàxa| RÍR daríval məšxa,| məšxa| yá-da +xàlvə.* ‘They cooked it in boiling water and they put oil in it, oil or milk.’ (B 17:9)

### 13.1.3.2.3 *Focus on Predicate*

On a few occasions the enclitic *da* is attached to a verb or copula with an inclusive focal sense, which can be rendered ‘also’, ‘even’ or ‘moreover’, e.g.

- (1) *'áxči 'é-+dān P NādəršáhP| xá mən-málcət +Íran tilə| ... +'aturáyət díyyan bəškələvəl mən-dáštat 'Úrmi labuléva la-dó-rišat +'átra| +Kòčan, Màšad,| lə-dán jibànə.| mən-+táma máyəva +afšariyyə| ... +'ávun P NādəršáhP P afšärP 'íva-da šámmu.* ‘But at the time when Nadershah, one of the kings of Iran came ... he took our Assyrians from the plain of Urmia and deported them

to the far end of the country, Kochan, Mashhad, to those parts. From there he brought afsars ... His name was also Nadershah Afšar.' (B 2:16–17)

- (2) *'át xa-náša sàvəvət. | cùrəva-da. |* ‘‘You are an old man.’’ He was also blind.’  
(A 39:32)

The construction is used to express concessive clauses, e.g.

- (3) *'ádi tálki-da | át xu-li-+yáttət. |* ‘Even if they get lost now, you would indeed not know.’ (A 39:32)
- (4) *yála mára jašùkələ | xá dána báxta | +'úxča +bјèrtəla-da, | 'ína | hár bəzmàrə-la. |* ‘The young man sees a woman who even though she has become very skinny, she is nevertheless singing.’ (A 44:8)

If the particle is attached to a negative predicate and the focus is inclusive, it is appropriate to translate the clause into English by the negative clausal connective ‘nor’, e.g.

- (5) *xá-'axča móndi 'ána lén mòrta | lén-da xzítə nūynə. |* ‘I have not said such a thing. Nor have I seen fish.’ (A 36:14)

#### 13.1.4 *zə*

The enclitic particle *zə*, which is of Kurdish origin, has a function that is similar to that of the particle *da*. As with *da*, the function of *zə* depends on the informational status of the item it is attached to, namely whether it is topical or focal and endows the item with topic or focal prominence accordingly.

##### 13.1.4.1 Topical

###### 13.1.4.1.1 *Nominal or Independent Pronoun*

The item the particle is attached to is generally in clause initial position, typically the subject. It has topical status due to the fact that its referent is recoverable directly from the preceding context or indirectly through associative anaphora and the fact that it sets the frame for the clause and often for a longer stretch of discourse. In general the particle enhances the topical prominence of the item to mark a topic shift, e.g.

- (1) *mláyolə pòxal | +bət̚tánolə | +'ál-+rùyšu | bitáyələ bëta. | dévə-zə | +sìyyəna. |* ‘He fills it with wind, lifts it onto his shoulder, and he returns home. The monsters are thirsty.’ (A 37:15)
- (2) *'áxnan | +šavvá 'axunvàtəvax. | láxxa cu-m-+báyyət b-yavvàxlux. | 'át-zə | ta-ví 'axiúnat tmànya ka-díyyan. |* ‘We are seven brothers. Here we will grant

you whatever you wish. You come and be the eighth brother for us.'  
(A 37:10)

- (3) *'é-+dān tilun,| 'é-+dana 'urxátə=zə 'ásfalt lèva víyya.|| 'urxátə P'susèPva| 'ásfalt lèva víyya| 'ita látva +mašinə=zə| kát b-+mašinə nášə 'azíva 'atíva.|| b-susavý b-cavádnə b-xmàrə c-azíva.* 'When they came, at that time the roads had not (yet) been laid with asphalt, the roads were surfaced (with sand), they had not (yet) been laid with asphalt. So there were no cars, so that people could come and go in cars, they used to travel by horses, mules and donkeys.' (B 2:12)

The shift in topic sometimes coincides with a shift to a description of circumstantial background, e.g.

- (4) *víyyələl| šuršíyya +tòlyə,| 'áy=zə vítala dàpnu.* 'He had become tired and fallen asleep, and that (inscription) was beside him.' (A 37:8)
- (5) *mára 'ay-+kátmə b-riši| +jóri tíla.|| mù-'ódən?!|| mù-'odən?!| +jóro=zə mìrəvə| mattátlun ju-búšk +nùȳta.* 'She says "Oh ash be on my head! My husband has come. What should I do? What should I do?" Her husband had said "Put them (the guests) in an oil barrel.'" (A 6:6)

The particle may occur on an item that continues a previous topical referent in order to mark a boundary on some other dimension of the discourse. In (6), for example, the subject pronoun *'ani=zə* 'they', which refers to a group of protagonists in the narrative, occurs at the onset of a new section of discourse after a section of direct speech:

- (6) *'áxnan jári +rába +myakràxlə.|| 'ána míttyəvən xá 'axúnət tmánya ka-jànán| 'ón macərbàxlə| +áv hár parpàslan| hár +dardàkłan| b-xá +čap̄páltu +masə máxə 'arþí dánə dèvə.|| cullana'ít| 'áni=zə cíllə hammùnənəl pyàšələ cəslé xà-sabta| tré šabáy| +tłà šabáy.* '“We should show him great respect. I have brought an eighth brother for us. If we upset him, he will totally destroy us, he will totally shatter us. He can strike forty monsters with just his one staff.” All in all, they all believe this and he stays with them for one week, two weeks, three weeks.' (A 37:12–13)

In (7) the particle is used on a pronoun referring to the protagonist when the discourse returns to the foreground of the narrative after a background section:

- (7) *'é-+dana +ràba| lè hamzəmmíva| nášə sùra| mən-nášə +jùra.|| masàlan| 'íman-ət xá náša +júra +avàrvə| jári kemótva +al-'ákłux| ka-xəmyànux| ka-*

*xmàtux<sup>1</sup> ka-savùnux.<sup>1</sup> áha-zə léva +bašúrə hamzámva mán +hàji.<sup>1</sup>* ‘At that time young people did not talk much with the older people. For example, when an old person entered, you would have to get up on your feet, for your father-in-law, for your mother-in-law, for your grandfather. So he (the merchant) did not manage to talk to the pilgrim.’ (A 1:16)

In (8) and (9) the initial items with *zə*, which have topical referents, occur at the onset of a section that presents elaborative background on what precedes:

- (8) *+xadərvánan məššəlmànəva.<sup>1</sup> məššəlmána-zə ... hác-xa mənné látvalun carmànə.<sup>1</sup>* ‘Around us were Muslims. None of the Muslims had any vineyards.’ (B 2:6)
- (9) *+morívala<sup>1</sup>ju-+ambárə ka-kənyàna.<sup>1</sup> áyya-zə +mixùltət<sup>1</sup>+heyvànəva.<sup>1</sup>* ‘They brought it into the storerooms for the cattle. This was the food of the animals.’ (B 10:10)

In (10) the current topic is reiterated with the particle in a clause that has a status of a final tag that summarizes the preceding section of discourse. There is, therefore, a discourse boundary at this point. The initial particle *'ita* here has a similar boundary marking function (§ 13.1.7.):

- (10) *'ita<sup>1</sup> cíllə bátə-zə c-avívalun.<sup>1</sup>* ‘So all homes used to have (these).’ (B 2:11)

In (11) the construction has a concessive function:

- (11) *+šúla lèva yavé,<sup>1</sup> cíllə-zə +kəryànəva.<sup>1</sup>* ‘They did not give them work, although all of them were educated.’ (A 41:15)

Sporadically the topical constituent to which the particle *zə* is attached does not occur at the beginning of the construction. In (12), for example, the particle occurs on the subject of an embedded clause. The whole construction expresses an elaborative background comment on what precedes:

- (12) *+yánə b-nobánə +báyi<sup>1</sup> áha-zə 'áx t-ən-pálax.<sup>1</sup>* ‘That is they want him to work as it were in turns.’ (A 37:14)

#### 13.1.4.1.2 Adverbial

On some occasions the particle *zə* occurs on an initial adverb. This marks a boundary and sets the temporal or spatial frame of a new section of discourse, e.g.

- (1) *xá-yuma xína-zə k̥esə xíšəva mayyíva.* ‘On another day he had gone to bring logs.’ (A 37:17)
- (2) *'íta +'al-dáni daríva +t̥ína, t̥ína lá +rába miyyána.* ‘t̥ína ci-daríva, dašdəš-šívalə. +xárta-zə ci-+mačrivalə.

‘Then on those they would pour mud, mud that was not very watery. They used to pour the mud and stamp on it. Then they used to smooth it.’ (B 2:21)

#### 13.1.4.1.3 *Predicate*

Occasionally the particle *zə* is attached to a verb or copula. In the attested examples this occurs in clauses that constitute the onset of a background comment, e.g.

- (1) *'á m̥àrələ| l̥à! 'ána +hála šuršíyyən| jári kámta 'ána šátən.* ‘axúna +jùrə-lə-zə katé! +yánə 'axúnət tmánya víduna.

‘He says “No! I am still tired, I must drink first.” He is the eldest brother in relation to them, that is they have made him the eighth brother.’ (A 37:15)

In (2) it has a concessive sense:

- (2) *'ánnə m-+údalə bət-+dárši 'ón 'ána kémən ... dyànta 'ódən súsa yavvánnəl +záya yavvánnə ká ... 'axúna súral kát +bəddáyən-zə 'át sústələ.* ‘They will argue together if I make a judgement to give the horse, give the foal, to the younger brother, which I know to be (the foal) of the mare (= although I know it is the foal of the mare).’ (A 38:5)

#### 13.1.4.2 *Focal*

When combined with a constituent in focus, the enclitic *zə* generally has the inclusive sense of ‘also’ or ‘even’. The constituent may be a nominal, pronoun or adverbial. It sometimes has the nuclear stress, but this is not regularly the case in the attested examples, e.g.

- (1) *k̥onyàna-zə c-avívalun.* ‘They used to have also cattle.’ (B 2:10)
- (2) *ctávə 'atiķə-zə kat-víyyan-lə| bərráxšəna cílla bəxzayèna.* ‘They go and see also all the old books that we had.’ (B 2:15)
- (3) *'u-+Axiķar| cás bàbat| málca-zə plíxəva.* ‘Axiqar had worked also with the father of the king’ (A 3:2)
- (4) *xá +dàna| bàbat díyyux-zə| +bayyíva +katlívälə| 'ína 'ána l̥à +ktálli.* ‘Once they wanted to kill also your father, but I did not kill him.’ (A 3:34)
- (5) *'o-nášət ká ... +al-málcət jànu| PxáyānàtP 'ávəd,| +xəłta 'ávəd| +al-'alàha-zə vádələ| +xəłta.* ‘A man who does treachery to his own king, who commits a fault, he commits the fault also against God.’ (A 3:48)

- (6) *málca-da yúvvəl dàstur| Ɂat-cùlla panánnun| bàxtət jáni-zə.* ‘The king has given a command that I should eradicate everybody, even my own wife.’ (A 2:17)
- (7) *'ána jáni-zə| jú xá šítə +ám jvánkə m-+uydálə ú-+šula vìdux.* ‘Also I myself together with the lads did this task for a year.’ (B 2:7)

Examples where a noun with the particle does not bear the nuclear stress:

- (8) *har-nipúxta-zə mən-mýyət +'ánvə pyásəla škálta.* ‘Molasses too is produced from grape juice.’ (B 12:8)
- (9) *'áha-zə +bałlàyəla.* ‘He also goes to sleep.’ (A 39:3)
- (10) *xá-dana-zə lət?* ‘Is there not even one?’

Examples of focal adverbials with the particle:

- (11) *mára yá 'álaha! xá-ja xítə-zə +Axíkar xazənvalə.* ‘Oh God, if only I could see Axícar even just once again.’ (A 3:46)
- (12) *ú-+šula láxxa-zə c-odàxla.* ‘We carry out this practice also here.’ (B 12:9)

In some cases the placement of the particle on a gradable adverbial enhances its intensity, e.g.

- (13) *'átvə lətva| xá yála 'átvə| +másta +al-ríšu +rába lətva. ci-+karívalə cačáluna. +rába-zə naxíupəva| +rába-zə +zadíiyəva.* ‘Once up on a time, there was a lad who did not have much hair on his head. They used to call him baldy. He was indeed very shy and indeed very timid.’ (A 37:1)

In parallel or contrastive oppositions such as (14) the particle is attached to an initial constituent with nuclear stress, but this initial constituent is not in narrow focus and the scope of the inclusive focus of the construction is the whole clause. The initial items should rather be regarded as contrastive topics. In each clause the initial constituent is presented as the most prominent item in the clause, but this is topical prominence rather than focal prominence. The initial topics are given prominence to make a sharp distinction between the two sides of the opposition.

- (14) *'ón-là,| Ɂa-díyyax-zə p-kátləl,| záya-zə p-šakállə.* ‘If not, he will both kill you and also take the foal.’ (A 38:14)

### 13.1.4.3 Russian *'uže* for *-zə*

Speakers in the Caucasus sometimes use the Russian particle *'uže* 'already', which has a phonetic similarity to *-zə*, as a clitic substituting for *-zə* with the same pragmatic function, e.g.

- (1) *+xárta plátle 'æt-pràzla-RužeR|* 'Then also iron ones came out.' (B 17:28)
- (2) *ú-spar míya ci-šokàxvale,| c-azálva 'o-xína,| švàva,| xèzman,| švávan| ci-maštìva,| 'an-t-íva-RužeR mən-+bár díyyan ka-maštìya.|* 'Then we released the water, and another person would come, a neighbour, a relative, our neighbour, and would irrigate, those whose turn it was after us to irrigate.' (B 17:31)

### 13.1.5 *'up*

#### 13.1.5.1 Clause-Level

The particle *'up* can serve as a clause-level connective. In such cases it introduces clauses that are supplementary or recapitulative to a proposition in the preceding discourse, e.g.

- (1) *'u-sámət +jarbiyya kat-bàxxáyəva ju-+turànəl ci-xayyíva b-’ärba.| 'up kən-yána +rába látvalun| sáb ju-ťura kənyána +rába lélə +msá xáyyi.* 'In the northern region, where they lived in the mountains, they made a livelihood from sheep. They did not have many cattle, since cattle cannot live easily.' (B 1:23)
- (2) *xína lèva +lázəm buxàri tápi.| 'up-bétət tanùyra| +rába šaxína c-ávəl* 'There was no need to light a stove. So the oven house was very warm.' (B 14:2)

#### 13.1.5.2 Constituent-Level

In the majority of attested cases the scope of the particle is a constituent of a clause, which is in inclusive focus:

- (1) *cúl xá-mándi ... 'æt-snükəva,| +lázəm-iva +jammívalə ka-sàtvə.| 'up kəkənyàna| +jammíva jèlla.* 'Everything that they needed, that was necessary, they would gather for winter. Also for their cattle they would gather grass.' (B 1:25)
- (2) *'an-bìyyəl lótvalan +yàxčal ju-máta,| ci-mattáxvalun ju-mòlxə.| +mèta,| 'ætvalan +meyàtə-ze| 'up mòlxə ci-mattáxva javé.* 'We did not have a refrigerator in the village, we put the eggs in salt. Churning pot, we had churning pots, we put also salt in those.' (B 7:4)
- (3) *b-jaššákətət +al- dà +súla| 'up matváta xínə-zəl +šurílun +adáttət janè 'ætvalun,| 'ax +šaravátət kát ci-dokívalun.* 'By looking at this, also other villages

began, as they had their own customs, such as festivals of saints that they used to hold.' (B 11:14)

### 13.1.6 *xina*

The word *xina*, which is in origin a non-attributive modifier meaning 'other' (§ 9.7.11.) is often used by speakers as a discourse connective. It is inserted in various positions in the clause. In general it is used in clauses that express something that is supplementary in some way to the adjacent discourse.

In narratives it is sometimes used in clauses that express an activity or state that is circumstantial to the main events, e.g.

- (1) *'o-+kaṭùla-da| xina| vâyəla bəštāyal| kàtu mára|* 'The executioner (meanwhile) is drinking and says to him ...' (A 3:33)
- (2) *'áy bitàyəla.| ýha-da b-süysa vâyəla tíyya xína.|* 'She comes. He has come on a horse.' (A 39:28)
- (3) *vâyəla xína +rába ráx̥ka m-cós 'axùnu| m-cás bâbu xína.|* 'He is very far from his brother, from his father.' (A 39:30)
- (4) *+m̥ilun| +al-xa-ķunya,| xa-cípa +rába +fùra +állu,| +al-xa-ķunya.| dómma +táma xína +bəsláyəva ju-ķunya,| prákəva +táma.|* 'They arrived at a well, over which there was a very large stone, over a well. The blood was flowing there into the well and stopped there.' (A 39:6)

In several of these examples the *vayəla* form is used instead of the copula, which is also a strategy to express circumstantial situations (§ 10.12.14.1.).

In some cases the connective *xina* is used in narrative to express elaborative background comments or parenthetical statements, e.g.

- (5) *+xulásá ýha +bazbùzulə| b-sèpu,| bəndàyəla.| d̥ev vâyəla xína.|* 'In short he pierces him with his sword, but he jumps. He is a monster.' (A 39:11)
- (6) *+rába šapàrtət,| +rába laxùmtat.| +janàvar vâyəla xína,| ýna +áv +baxkàro-łə.|* 'You are very beautiful, you are very comely.' She is a monster, but he praises her.' (A 39:34)
- (7) *xína lé +báyyən +rába +maryəxənnə.|* 'I do not want to prolong it (the story) too much.' (A 39:15)
- (8) *+bəddàyəla xína| ýdi súysu t-+axlàłə| t-átya +al-jànū.| bəkyáməla bərràkə-łə.|* 'He knows that now she will eat his horse and attack him. He gets up and flees.' (A 39:28)
- (9) *ýdi,| cúra xambáša t-átə t-+axəllux.| cúra xambáša +jòrolə xína.|* "Now the blind giant will come and eat you." The blind giant is her husband.' (A 39:30)

In (10) and (11) the discourse boundary expressed by the particle has an adversative function:

- (10) *xášlə +rxàtlə| +rxàtlə +bàro,| là mučxálə xína.* ‘He went and ran and ran after her, but he did not find her.’ (A 51:8)
- (11) *ju-xá +čólə +vàrtəval čullùxta.| xína cút-jur t̄-ìva,| švávə +pultàle.* ‘She had gone into a hut, into a cabin, but one way or another, the neighbours brought her out.’ (A 51:10)

In (12) the *xina* connective occurs in a clause that is marked off from the surrounding discourse also by the use of the particle *da* and by the deictic copula:

- (12) *é +simáxur=da ýdi=da xína véla +šurítə bəsyàva.* ‘The *+simaxur* bird has now begun to age.’ (A 39:21)

In (13) *xina* is used in a question directed to the hearer:

- (13) *’átvälə čaríxə. čaríxə +bəddàyat mü-inə xína?* ‘He had sandals. You know what “sandals” are?’ (A 39:34)

In (14) the clause with *xina* that supplies supplementary information is a subordinate relative clause:

- (14) *cúlla ýnnə məndiyé +šúlə +jammùyuna| bitáyəna +al-do-kùnya| kát ýha +sèlyəva xína.* ‘They all gather up their belongings and so forth and come to the well where he had descended.’ (A 39:15)

In expository discourse speakers often use the *xina* connective when presenting additional information about a particular theme, e.g.

- (15) *xá-dana +’àdyl dárí| nášə ’aklatè p-čambəllívalun ju-dó tanùyra,| cúlla šaxína. xína lèva +lázəm buxàri tápi.* ‘They lay a blanket and the people hang their legs into the oven, all hot. It was not necessary to light a stove.’ (B 14:2)
- (16) *ju-màta buxaríyyə ’et-kësa c-ávi. ... kámta ... bárka ju-maváy lätva. | ’adíyya bárka tiyyələ xína.* ‘In the village the stoves were of wood. In the old days there was no electricity in the villages. Now electricity has come.’ (B 14:3)

### 13.1.7 *'ita*

The particle *'ita* general marks temporal or logical sequence. On some occasions it marks discourse boundaries.

#### 13.1.7.1 Temporal Sequence

When it marks temporal sequence, it is generally appropriate to translate it by English ‘then’, e.g.

- (1) *+tamrətli! 'ita 'azət!* ‘Bury me, then go.’ (A 2:34)
- (2) *+ánvə mayyivalun ju-čaràzəl +marçivalun, šìra! 'ita ju-+tiyànə daríva!*  
‘They used to bring the grapes in water-jugs, they used to press them and then they used to pour the must into cauldrons.’ (B 2:4)
- (3) *'ita mən-dánnə míyyət +ánvə +sàpyəl ci-šakliva xàčča! ci-darívalun ju-+tiyān!* ‘Then from this pure grape juice they used to take a little and pour it into a cauldron.’ (B 12:4)
- (4) *'ita ci-kašyàva! c-oyáva takrīban áx +çàrra!* ‘Then it thickened and became almost like butter.’ (B 12:6)

It is sometimes combined with a following temporal adverbial, e.g.

- (5) *'átlı trè +xábra kátux tánən! 'ita +xàrtal kámmtat cílla ríš-díyyi mxíla!* ‘I have a couple of things to tell you. Then cut off my head before all others.’ (A 2:25)
- (6) *+xàrtal é-+dana b-yúma taníyra c-odívalə ka-làxma pyèta!, 'ita +beraš-vànə-da! kat-àrxə 'atíval ju-dó bét taníyra mattívalun xá-dana mítz!* ‘Now, during the day they used the oven for baking bread, then in the evenings, when guests arrived, in that oven house they laid for them a table.’ (B 14:2)

#### 13.1.7.2 Logical Sequence

When expressing logical sequence, it is generally appropriate to translate the particle ‘so’, e.g.

- (1) *mára vázzer! 'ána kátux mìrənva! 'a-mú-ila +šrá bəllá +tàmma?* *márrə málca 'ávət basıma, 'ána mìrən! 'ita 'ána lèn-+bəddə 'áyya mù-ila!* ‘He (the king) says “Vizier, I told you, what is that lantern burning there?” He said “King, be well, I have said (what you ordered me to say) and so I do not know what that is.”’ (A 2:4)
- (2) *mára hè! málca t-ávat basıma, 'ána +Axíkar lèn +ktílu! 'icələ?* *márrə xà-yələ! +pòllan díuctələ! 'ána +túmrən kám-+tárrət bëtu, 'ána xàyələ! 'ita*

*+báyyət +kətlətlə=da,| +ktullə.||* ‘He says “Yes, oh king, be well, I have not killed Axiqar.” “Where is he?” He said “He is alive in such-and-such a place. I have buried him outside his house, but he is alive. So, if you indeed want to kill him, kill him.”’ (A 3:49–50)

- (3) *cúl bëta| ’at-cùlmáta| ’átvälə xa-+kóttət càrma| kátju-càrmu| +’ánvə,| +’ánvət +xàla| ’ítə mən-+’ánvə=zə| cəsmišə-zə doķíva| sàbzə=zə.||* ‘Every house of every village had a section of a vineyard and in his (the householder’s) vineyard there are grapes, grapes for eating, and so from the grapes they used to produce raisins, and (there were) vegetables.’ (B 2:3)
- (4) *mádrə mən-šmàyya pállun| +tlá xabúyšə.|| xá ka-dó cačalùna,| xá ka-bàba yuvválla,| xá ka-yòmma yuvválla.|| ’ítə ka-díyan là pásłun xína mán dán xabúyšə.||* ‘Again three apples fell from the heaven. He (the story-teller) gave one to that bald man, he gave one to the father and he gave another one to the mother. So then none of those apples remains for us.’ (A 37:22)

### 13.1.7.3 Onset of New Discourse Section

In some cases the particle is used as a device for marking the onset of a new discourse section, which is not sequential to what follows, e.g.

- (1) *cut-+álma ’átvälə xà-táxta,| ya-trè-taxta,| ya-xá-tanap carmàna.|| ’ítə b-+dánat +kètə| +’álma c-azálva carmàna| +’ánvə ci-+jammiyalun.||* ‘Each family had a plot or two plots or a *tanap* of orchards. Now, in the summer the people used to go to the orchards and gather grapes.’ (B 12:1)
- (2) *’ítə ’áha=zə xá mən-+adáttət bne-’Úrmila| katju-mátxət šónnə vïdonəl’údyu yúma=zə +n̄t̄irona.||* ‘So, this too is one of the traditions of the Urmi people that they have practiced for a period of (many) years and they have preserved it to this very day.’ (B 12:9)
- (3) *mən-+táma dáštət ’Úrmil ci-mabyənnáva +rába šap̄ərta.|| ’ítə dápnət dé dàšta-da| ’átlan xa-yáma| yámtət ’Úrmi ci-+karíla,| yámət məlxə.||* ‘From there the plain of Urmi looked very beautiful. Now, next to the plain we have a sea, they call it the lake of Urmi, the sea of salt.’ (B 2:13)

When it has this boundary marking function, it is sometimes presented in a separate intonation group, e.g.

- (4) *’áxnan jú ... dáštət ’Úrmi Salámas +al-+uydála ’átvalan ’ámmo tláy +tlá matváta,| matvátət| ’áxcí ’at-+aturáyəva.|| ’ítə ’átvalan xácmə ... +xvítə mən-’arəmnáy.|| cíllə ’ána šəmmanə ’stli,| hì,| láxxa ’stli šəmmanə.|| ’ítə ju-dánnə matvátə| +zrùta| cíllə ’áx +uydaləva.||* ‘We, in the plain of Urmi and Salamas, we had altogether one hundred and thirty-three villages, villages that

were only (those) of Assyrians. We had some that were mixed with Armenians. I have all their names, yes I have their names here. Now, in these villages agriculture was all the same.' (B 2:2–3)

- (5) *'ita| ju-dán +'arràtə| šúk mən-xàttə| šəptiyə, bašlə| júrrə júrrə mən-dánnə yemišə| +zarriva.* | 'Now, in those fields other than wheat, they used to cultivate watermelons, muskmelons, different types of these fruits.' (B 2:10)
- (6) *'ita| dáshtət 'Ùrmi xína| ràba šapártəva.* | 'Now, the plain of Urmi was very beautiful.' (B 2:12)

In (7) the particle marks an elaborative tag to what precedes and is placed at the end of the phrase:

- (7) *cút=da vâyələ +màryə,| mən-dó xabúša jabùyulə,| +bixàlələ,| +màrru,| bər-ràssəl,| parpùsəl,| mən-'alàha 'ita.* | 'Also whoever is ill, he picks from the apple tree and eats, then his illness goes away and is eliminated—it is from God.' (A 49:3)

### 13.1.8 *'ina*

The basic function of this particle is presentative, i.e. it draws attention to something. The item to which attention is directed may be a referent or a proposition. The contexts where it is most commonly used are as follows.

#### 13.1.8.1 In Association with Verbs of Perception

It is used in narrative to introduce what is perceived. It usually occurs after a verb of perception, especially 'to see', but in some cases the verb is not explicitly expressed. It generally introduces a proposition rather than a referent, though in some contexts the interpretation may be ambiguous (see §14.5.6 for further details). The proposition typically denotes a state or an imperfective progressive activity rather than a perfective action, e.g.

- (1) *bəxzáyələ mən-rèkkələ 'ína xá-dana +šrá véla bəlláya| ju-xa-bèta.* | 'He sees from afar a single lantern burning in a house.' (A 2:4)
- (2) *+xárta bəxzàyənəl xácma jáha bəxzáya bitàyənəl 'ína núyra lát +šíra| késə líttən* | 'Then they see, sometimes they see when they come back that there is no fire lit (= no fire has been lit) and there are no logs of wood.' (A 37:13)

The clause that expresses the proposition often lacks a copula element, e.g.

- (3) *bərráxšələ +várəl +táməl jaššúkələ 'ína xá-dana báxtəl mán təryəssər 'úrzə.* | 'He goes and enters there. He sees a single woman is with twelve men.' (A 2:5)

- (4) *bəxzàyələ| +'Axíkar 'ína +tàma.* | 'He sees that Axiqar is there.' (A 3:51)
- (5) *+palùtulə| 'ína +'Axíkar dòknu +rìxa,| ránju +rùppu| zàrda víyya,| cícu cùlla  
xriva.* | 'He brings him out (and sees that) Axiqar's beard is long, he has lost his colour, he has become yellow and all his teeth are ruined.' (A 3:51)

An informant from Armenia uses presentative clauses introduced by *+amman*, which also, like *'ina*, may have an adversative meaning of 'but', e.g.

- (6) *'ùl vazzírət málca bəxzàyəl| +'amman| 'axúnat málca tìvəl ... kam- +darvázət  
məndita.* | 'Then the vizier of the king sees that the brother of the king is sitting ... in front of the city gates.' (A 48:4)

In (7) the presentative particle *'ina* is combined with the interrogative *mu* 'what':

- (7) *xá +dana| lèlə| jušd̥klə| 'ína mù| xá póxa tilə.* | 'At some time in the night he sees what? A wind has come' (A 45:6)

In many cases the interrogative *mu* is combined in the same intonation group with the item perceived, which reflects grammatical integration:

- (8) *+harámbaš jašùkələ| 'ína mù təflito.* | 'The thief looks and sees her shoe.' (A 43:3)
- (9) *ptàxulə| 'ína mù xá +ðənsan-la.* | 'He opens it and sees that it is a human being.' (A 43:6)

### 13.1.8.2 Drawing Attention to Something Unexpected

The presentative particle *'ina* is used in a variety of contexts to introduce a clause that denotes a situation that is assumed to be unexpected following the preceding context or one that is contrastive with it. In such cases it is most idiomatically translated by the English adversative particle 'but', e.g.

- (1) *xá +dàna| bàbat díyyux=zəl| +bayyíva +kaṭlìvalə| 'ína 'ána là +kṭálli.* | *málca  
+pšòmlə| +pšòmlə| kat-ka-mùl| +kṭállun| 'ína 'ána lènva +kṭílu.* | 'Once they wanted to kill your father, but I did not kill him. The king was sad, he was sad (and wondered) why they killed him, but I had not killed him.' (A 3:34)
- (2) *yámmat díyyux ka-díyyux tuybàrra| 'ína 'át +bílux mánno əvátvə 'ax-xa-  
+jòra.* | 'Your mother brought you up, but you wanted to be with her like a husband.' (A 3:91)
- (3) *cu-+dána 'úklu mattùyolə| xáčča jašùkələ| +bəzdáyələ +várələ favày.* | 'ína

*màdrəl sódu bitàyələl vélə céca +támma piša.* ‘He is afraid and comes back inside. But again he is (constantly) tempted, there is still a cake remaining there.’ (A 37:4)

- (4) *sábab brúni +Nátan +xáyyən +plátlə +àlli| ka-díyyi +bílun +kàtlı,| ’ína ’aldáha la-švàkla.* ‘Since Natan my son turned out to be treacherous to me and they wanted to kill me, but God did not permit this.’ (A 3:69)

In (5) the verb of the clause has been gapped:

- (5) *har-ò-+šula c-odívalə,| ’ína búš hasanày,| búš támmez.* ‘They (the oil stoves) used to perform the same task, but more easily and cleanly.’ (B 12:4)

In (6) the particle is placed after a clause-initial subject and in (7) it is placed at the end of the clause as a tag:

- (6) *b-dáyən ci-+zakráxva kálata.* ‘úrzə ’ína ci-+zakrìva.‘ With this we wove baskets. The men, in fact, used to weave.’ (B 10:11)
- (7) *’ýən-da bnítələl pótvo xá mòtra| ka-dmàxa,| ... xína ő-t kámta,|  -jöt kám-ta.| ... ju-dá +dórət díyan ’átxa látva ’ína.* ‘It (the platform) is built a metre in width for sleeping, for sleeping, of the old times, in the old times. This was not, however, in our time.’ (B 17:33)

### 13.1.8.3 Marking Boundaries in Discourse

In some cases the particle *’ína* is used to mark the onset of discourse sections. This is generally found in sections that present the preliminary background of what follows. In (1) the particle occurs in the introductory sections of a narrative, which presents the background of the subsequent main chain of events. In (2) and (3), from within a narrative, the section in question sets the spatio-temporal background of the following foreground chain of events. In such cases it is equivalent to an English ‘when’-clause, e.g.

- (1) *’ína c-azíva +màlyat šaklíva mən-nášə,| mən-ducanàns ci-+jammíva +màlyat| b-dó-məndi ci-xayyíva-’anna.* ’ína á +jùrət cačáləl +júrət cačáləl +yànəl sar-dastèval ‘íva búš +’ullul mòn| dan-xína.‘ Now, they used to go and take protection money from people. They used to gather protection money from shops. They used to live by this. The elder of the bald men, the elder of the bald men, that is he was the head of their gang, he was higher (in rank) than the others.’ (A 1:2)
- (2) *’àna| jùl duccàni ’ína| dax-ət-’údyu káti xzìlux ju-duccána,| ... ’ína ’ána xà-yumal ’ína ju-duccàna,| ’ax-díyyux káti tílux xzìlux,| tílə xa-náša káti*

*màrrəl* ‘I was in my shop, as you saw me today in the shop ... When I was one day in my shop, just as you came and saw me, a man came to me and said ...’ (A 4:12)

- (3) *'ína +málla m-cəs-dánnə bərràxsələl mára həč, həč, həč, həč, 'ánnə yàləl +rába cribəva.* ‘The mullah passes by them saying ‘*həč, həč, həč, həč*’ and these lads are angry.’ (A 9:2)

In (4) the *'ína* particle is used at the beginning of a section that gives the circumstantial background against which the events narrated in the preceding discourse took place:

- (4) *yála +tajər har-bəxzáyolə báxtu, +hávar vádələ. mxáyələ ju-rišu. 'áy 'ávən +xlàpux, 'á báxtila, bás márəva məttələ. 'ína +bar-našüytal cùllə jaššù-kəla, cùlləl +narahát báxya.* ‘The lad, the merchant, as soon as he sees his wife, he yells. He beats his head. “Oh, may I be your substitute, this is my wife, but he had said that she was dead!” Now, the people are all watching, all being moved and weeping.’ (A 1:48)

In (5) and (6) the particle introduces a unit of discourse that gives explanatory background for what precedes:

- (5) *'ú ríja! lèbbul bəkyàdələ. lèlə +bəktálo. bəškaléla júllo šaluxèləl 'ína +háji mírəva kat-júllo dəmmána mayyátlun katíl ka-ríju.* ‘The servant takes pity. He does not kill her. He strips her clothes off, since the pilgrim had said to his servant “Bring her bloody clothes to me.”’ (A 1:9)
- (6) *mórrə həl bálcət +huyyárri katux-xina. 'ína +áyun lèlə-+bədda áha +Hárun ar-Rašíd-ilə.* ‘He said “Ah, well perhaps I might help you.” He does not know that he is Harun ar-Rashid.’ (A 10:3)

In (7) from a description of customs the construction introduces a new section about the preparation of molasses:

- (7) *'ína! xína! mən-carmàna, nipùxta ci-bašlíva. +'ánvə mayyívalun ju-čaràzəl +marçívalun, šíra! 'ita ju-+týàna daríva. xuté mallíva nùyra! nipùxta baš líva.* ‘Also from the (produce of) the vineyards they would cook molasses. They used to bring the grapes in water-jugs, they used to press them and pour the must into cauldrons. They used to light a fire beneath them and cook molasses.’ (B 2:4)

### 13.2 Correlative Particles

The propositional content of two main clauses may be linked by the demonstrative adverbials such as *hada/hadax* and *'atxa*. Some of the attested constructions of this type include:

- (1) *b-láblət* +*bár* +*šavvá* +*ṭuyrànə* | **háda** *jóldu* +*palṭòttə* | **kálū** *là* +*šammánnə*.| ‘You must take it beyond seven mountains and flay off his skin in such a way that I do not hear his cry.’ (A 42:26)
- (2) **hádax** *vàdəval* *yánət* +*ànvə-də* *'avívale* | +*màš-də* *'avívale*.| ‘They farmed it thus so that they would have grapes and would have beans.’ (B 17:13)
- (3) *tína* *'atxa* *ci-*+*mamṭívalə* | +*kíuya* *'avíva*.| ‘They would process the mud in such a way that it would be hard.’ (B 3:37)

### 13.3 Intonation Group Boundaries

When presenting a series of connected main clauses, the speaker may utter each clause in a separate intonation group, e.g.

- (1) +*bixàləla*,| *bəštàyəla*,| *bəzmàrəla*,| *bərkàdalə*,| *bəšvàrəla*.| ‘He eats, he drinks, he sings, he dances, he leaps around.’ (A 3:38)
- (2) +*xìl*,| *šti*,| *xùp*.| ‘Eat, drink and wash!’ (A 3:53)
- (3) *bərràxshəla*,| +*mṭáyəla* +*tāma*,| *mónno* +*ṭavùləla*,| +*bəkràməla*.| *'áha bərràkəla*.| ‘He goes, he arrives there, plays with her and wins. She flees.’ (A 39:38)
- (4) *hamzùməna*,| *tanùyəna*,| *fèxcəna*,| +*bixàləna*,| *bəštàyəna*.| ‘They are speaking, telling stories, laughing, eating, drinking.’ (A 2:5)
- (5) *'áxnanjānan=zə* *módra* *o-*+*šúla c-odàxlə*,| +*yána c-ázax* | *ci-zónax* +*ànvə* | *ci-*+*marχàxlun* | *ci-bašlàxlun*.| ‘We still practice this tradition, that is we go and buy grapes, we crush them and cook them.’ (B 12:9)
- (6) *sépa muttīla* *'atxa* | *jáno məxyála* +*àllu*.| *kòl škálla* *mánni kát* +*ṭamrònna*.| *sépa muttīla* *'atxa* | +*jóra škálla* *ju-*+*sàdro* | *jáno* +*ruppála* +*al-sépa* | *'u-pròkla*.| ‘She put the sword like this and thrust herself upon it. She made me promise that I would bury her. She took the sword like this, she held her husband to her breast and threw herself onto the sword, and met her end.’ (A 2:35)

In some cases more than one main clause is placed in the same intonation group. This is found particularly with short verbal clauses, often consisting of

no more than the verbal form without any nominal complements. If there are nominal complements, these tend to occur in the final clause.

In general, the effect of placing two or more clauses together in the same intonation group is to present the activities expressed by the clauses as being closely related in that they can be interpreted as forming components of a single overall event. The clauses of the series, moreover, usually have the same subject. There is no formal syntactic subordination in the form of subordinating particles and the verbs in the series are, in principle, in the same form (e.g. *ptəxlə*, *bəptaxələ* etc.). There are, however, some formal signals of dependence, which reflect their close cohesion. The initial verb, for example, is combined directly with the following verbal clause in an asyndetic paratactic construction rather than being linked with the connective particle '*u*', e.g.

- (7) *'ázax xàzzax.*! 'Let's go and see.' (A 2:4)
- (8) *bitáyələ bəxzáyələ +támə.*! 'He comes and sees there.' (A 3:59)
- (9) *xášli +m̥ílli xít xa-+túrya.*! 'I went and arrived under a mountain.' (A 2:30)
- (10) *ku-ta-+vúr +čày ští.*! 'Get up, come, enter and drink tea.' (B 6:6)

In a series of compound verbal forms in sequences the cohesion of the two verbs in such prosodic units is sometimes reflected syntactically by the omission of the copula element on one of them (§ 10.11.1.7.), e.g.

- (11) *+Axíkar +pláṭa bərrəxšələ.*! 'Axiqar leaves and goes.' (A 3:78)
- (12) *'átxa +vára bərrəxšələ.*! '(Time) passes in this way.' (A 3:39)
- (13) *púmmu mšáya 'u-+pláṭələ.*! 'He wipes his mouth and goes out.' (A 7:8)
- (14) *bərráxša ḳa-báxta mārələ.*! 'He goes and says to the woman.' (A 1:22)
- (15) *+rxáṭa +rxáṭa +bərxáṭələ ḳam-yòmmo.*! 'She runs, runs, runs up to her mother.' (A 43:12)
- (16) *é +méta átxa labúlo màyova, +marúmo maccùpova.*! 'They push the churn back and forth (literally: take it and bring it), up and down (literally: raise it and lower it).' (B 17:20)
- (17) *candúrə candúrələ ...*! 'He rolls and rolls.' (B 16:8)

Another syntactic reflection of the cohesion is the fact that a pronominal object is sometimes placed only on the second verb, e.g.

- (18) *lábləl zabənnun.*! 'Take them away and sell them.' (A 1:9)
- (19) *lábləl +t̥ášilun.*! 'Take them and hide them.' (A 45:6)
- (20) *láblən mattànnna cásłu.*! 'I shall take her and place her with him.' (A 1:4)
- (21) *láblun +kt̥ùlunlə.*! 'Take him away and kill him.' (A 3:31)

- (22) *nášə bitàyəna| ƙat-lábli +tamrìlə.* ‘People come to take him and bury him.’ (A 6:11)
- (23) *+masyùdələ| ́ica dávək labəlla.* ‘He is watching where he could capture and take her.’ (A 43:3)
- (24) *+byáyəna dóki xànkili.* ‘They want to catch me and strangle me.’ (A 47:17)
- (25) *tá-me banènnun.* ‘Come, bring them for me to count them.’ (A 10:6)
- (26) *me-+moràxxə.* ‘Bring him and we’ll take him in.’ (A 48:10)
- (27) *máyyən zabnànnun.* ‘I shall bring them back and sell them.’ (A 34:1)
- (28) *máyələ ju-mdítə zabunèlə.* ‘He brings them to the town and sells them.’ (A 34:2)
- (29) *+’ávun +kṭul-làbəllə.* ‘Kill him and take him (to the king).’ (A 3:35)
- (30) *škúl lvùšlun.* ‘Take them and put them on.’ (A 1:13)
- (31) *’áha bəškálá čamčumèlə.* ‘He takes them and throws them away.’ (A 36:7)
- (32) *ci-+zarríva +xazdívala.* ‘They sowed it (the clover) and harvested it.’ (B 10:10)
- (33) *fníva mìyyol.* ‘He has kidnapped her and brought her.’ (A 50:4)

In (34)–(36) three verbs are joined with the pronominal suffix on the final one:

- (34) *háč-naša látle ’ázəl šákəl +tamàrrə.* ‘He has nobody to go and take him and bury him.’ (A 33:3)
- (35) *ku-škúl bāšəllun.* ‘Get up, take them and cook them.’ (A 36:8)
- (36) *símun máčxun mèmunklə.* ‘Go and find him and bring him.’ (A 10:11)

Likewise when there is a definite object nominal, only the second verb has a pronominal agreement suffix, e.g.

- (37) *kat-láblən ’a-báxta +katlònna.* ‘in order to take the woman and kill her.’ (A 1:35)
- (38) *škúl xuš-mèla ’e-báxta.* ‘Go and bring the woman (literally: Take, go, bring that woman).’ (A 1:37)
- (39) *dúk ’ido +sùrrun.* ‘Seize her and bind her hands.’ (A 1:7)
- (40) *+bəzdáyən ... ’ánnə tóra máxi císux +parṭila.* ‘I am afraid that those oxen will strike and rip your stomach.’ (A 35:1)

In (41) the degree of bonding of the two verbs has gone one stage further in that also the inflectional subject suffix of the first verb has been elided and the remaining stem cliticized to the following verb:

- (41) *’ína cíllə škəl-lublèlun.* ‘But they took everything away.’ (B 6:9)

In (42) the second verb takes a prepositional phrase as its complement:

- (42) *'á pátxi šáti mánnu.* | 'They open it and drink from it.' (B 3:17)

In (43)–(45) the second verb is intransitive and does not take the object suffix. As a result the definite object has no pronominal agreement.

- (43) *mádrə bacyàpələ| šákal +sólu àrək.* | 'Again he bends down to take his shoes and flee.' (A 4:11)
- (44) *navájjə p̄t-avili. híl b-xázyan xína b-xàdyan.* | 'I would have grandchildren. Yes, I would see them and be happy.' (A 44:1)
- (45) *'ádi zarduštáy dúna +trúppə xišə m-áxxa.* | 'Now the Zoroastrians have abandoned it and gone from here.' (B 1:5)

The object of the second verb in the series is sometimes fronted before the first, e.g.

- (46) *ju-dá-+danta 'at káy týyət zvínət.* | 'At that moment you came and bought me.' (A 28:3)

A negative particle placed before the first verb includes in its scope also the second verb without the particle being repeated, e.g.

- (47) *xína lá xúš ju-+alulána zábənnun 'ánnə.* | 'Do not go and sell them in the streets.' (A 34:5)

Syntactic properties such as these suggest that these constructions are verbal compounds expressing a single event rather than sequences of discreet verbs expressing discreet events. It should be noted, however, that they may be split by intervening material, e.g.

- (48) *dáxila 'ána láblən láxxa jú bēt-málca 'ánnə zabnànnun?* | 'How about I take them here into the house of the king and sell them?' (A 34:2)

In (49) the verbs are even more loosely connected, since the second object is not identical with that of the first but is associated with it in an inalienable relationship. The lack of an object pronoun on the first verb (*b-láblət*), however, is likely to be due to the fact that the sequence *b-láblət ... jéldu +paltəttəl* was conceived as a single event:

- (49) *b-láblat +bár +šavvá +tuyrànəl háda jóldu +palṭàttəl kálù là +šammánna.*  
 ‘You must take it beyond seven mountains and flay off his skin in such a way that I do not hear his cry.’ (A 42:26)

When the two verbs are habitual, the habitual pre-verbal particle *ci-* is often used only with the first verb, e.g.

- (50) *xa-yála láxxa ci-daváklun bašällun.* ‘A lad here catches them and cooks them.’ (A 34:9)

Prosodic combinations of main clauses are particularly common when the first verb denotes some kind of movement, e.g.

- (51) *bərráxšələ +várəl +támə.* ‘He goes and enters there.’ (A 2:5)  
 (52) *bərráxšəl +bərxáṭəl javày.* ‘He goes and runs inside.’ (A 1:7)  
 (53) *xášli +mṭíli xút xa- +tuyra.* ‘I went and arrived under a mountain.’ (A 2:30)  
 (54) *xášla ’ád-lelə kḍálu +kçítula.* ‘She went and this night has snapped his neck.’ (A 3:81)  
 (55) *’ázax xázzax.* ‘Let’s go and see.’ (A 2:4)  
 (56) *’átxa +vára bərráxšəla.* ‘(Time) passes in this way.’ (A 3:39)  
 (57) *bitáyála bəxzáyála +támə.* ‘He comes and sees there.’ (A 3:59)  
 (58) *bitáyála +várələ.* ‘He comes and enters.’ (A 3:80)  
 (59) *+bəsláyəna bitáyəna.* ‘They descend and come.’ (A 3:72)  
 (60) *+slíla tilə.* ‘He descended and came.’ (A 2:32)  
 (61) *’ána +rxáṭli xášli.* ‘I ran and went.’ (A 1:34)  
 (62) *ráklə xášla.* ‘He ran and went.’ (A 30:5)  
 (63) *ptóllə ká-díyyi mərrəl* ‘He turned round to me and said ...’ (A 2:29)  
 (64) *tubálli yuvválli ká-málca.* ‘I took him away and gave him to the king.’  
     (A 3:34)  
 (65) *láblun +kṭùlunla.* ‘Take him away and kill him.’ (A 3:31)

Sequences of other verbs are occasionally found, which are presented as components of unitary events, e.g.

- (66) *bəškaléla júllo šaluxèlə.* ‘He takes her clothes and strips them (= he strips off her clothes).’ (A 1:9)  
 (67) *’u-šáklən báxti mayyànnə.* ‘I shall take and bring my wife back (= I shall bring my wife back).’ (A 1:16)  
 (68) *’icət ’áttēn cačàləl bədvačé mayèna.* ‘Wherever there are bald men they seize them and bring them in.’ (A 1:40)

- (69) *xumxámla mètla.* ‘She got a fever and died.’ (A 1:46)  
 (70) *muttílə ríšu +tlila.* ‘He lay down his head and slept.’ (A 39:2)

The verb *kayəm* I ‘to rise’ is often combined with a following verb in the same intonation group, e.g.

- (71) *kómla zurázla káto +támta.* ‘She got up and prepared breakfast for her.’  
 (A 1:15)  
 (72) *ó brùnul kómla tilə bëta +rába +pšima.* ‘His son got up and went back home, very sad.’ (A 39:3)

This is particularly common with the imperative of the verb, which is combined with a following imperative or deontic form, e.g.

- (73) *ku-tálux còsli!* ‘Get up and come to me!’ (A 3:53)  
 (74) *ku-+yàrmox.* ‘Get up, let’s go!’ (A 2:8)  
 (75) *kú ‘ázax bëta.* ‘Get up, let’s go home!’ (A 37:11)  
 (76) *’át ku-+al-’áklux clí.* ‘Stand on your feet, stop!’ (A 3:64)

In (77) the imperative *ku* is combined with two other imperatives:

- (77) *ku-ta-xzi!* ‘Get up, come and see!’ (A 3:58)

Pairs of synonymous or near-synonymous verbs are sometimes combined together in the same prosodic unit. These are not necessarily verbs of movement, e.g.

- (78) *sphírri clíli.* ‘I waited and stood.’ (A 2:31)  
 (79) *+dárri tili.* ‘I returned and came back.’ (A 2:27)  
 (80) *+maxúləla maštiyəla.* ‘She feeds (them) and gives drink.’ (A 3:32)  
 (81) *cúllə-da ’an-+sarbázə t-íva mónnu! cílla šátyəna +rùyəna.* ‘All the soldiers who were with him were drunk and inebriated.’ (A 3:35)

Occasionally a series of two realis verbs that are linked paratactically are combined prosodically with a following verb when the first has some kind of semantic dependence on the second, e.g.

- (82) *’ína ’aláha bsámlə ka-díyyi +xumílə.* ‘It pleased God to protect me’ (A 3:69)

### 13.4 Pronominal Objects in Clause Sequences

Narratives typically concern specific referents and specific events. In sequences of clauses in narratives when these referents are pronominal objects of transitive verbs, they are typically indexed by pronominal object suffixes or independent pronominal object phrases. An exception is where verbs are combined in compound sequences and a suffix is added only to the final verb (§ 13.3.).

When non-specific referents and generic classes are introduced into the discourse, these are more frequently left without explicit grammatical expression in subsequent clauses. Some examples of this phenomenon from narratives have been given in § 10.18.2.1 (13–20). Further examples from expository discourse are as follows:

- (1) *cəšmišəva| mabrəzzivalun,| c-+axlīva [Ø].|* ‘There were raisins. They dried them and ate them.’ (B 3:15)
- (2) *+bár pšórvalə +’avun,| ja-+kazánča b-darīva [Ø].|* ‘After it (the potash) had dissolved, they poured it into a pan.’ (B 3:14)
- (3) *’ō-t lòtla +xáttəl ci-zonīva [Ø].|* ‘Whoever did not have wheat would buy it.’ (B 10:7)
- (4) *’īta +xārtəl ’āt +dána c-+asrīva dástə dástəl ’ax-dàrza c-odívalə.|| šaklīva [Ø],| maxíva [Ø] +’al-+arabàna,|| lablīva [Ø]| ja-+budràtəl xašlīvalə.||* ‘Then, at times they would tie the various handfuls. They made it like a sheaf (of corn). They took it and placed it on a wagon, took it and ground it on the threshing floors.’ (B 3:6)
- (5) *hàl ’ōm-+dān +bayyíva šatīva| c-atíva patxivaləl b-+tásə šaklīva [Ø]|| šatīva [Ø].|* ‘until whenever they wanted to drink, they would come and open it (the pot), they would take it (the wine) in a cup and drink it.’ (B 3:16)
- (6) *bí +tásə šaklīva [Ø],| ja-vádra malīva [Ø],| mayyíva [Ø] mattíva [Ø] ja-pí-palgət mágłəs.|| ’īta| ci-+maxdárriva [Ø] bí +tásə.||* ‘They took it (the wine) with a cup, and filled buckets with it, they brought it and placed in the middle of a gathering (of people) and handed it around in a cup.’ (B 3:17)
- (7) *+búsra kat-paràmva,| šakláxva +ràba,| ’u-kalàxvalə +búsra.|| kàlaxvalə,| +mardəxxàxva [Ø],| bašàlva,|| daráxva móšxa +’allu,|| mólxə +’allu,|| daráxva [Ø] ju-kadálə.||* ‘When meat was slaughtered, we took a lot and we fried the meat. We fried it, we boiled it and it cooked, we put clarified butter on it, salt on it, and put it in pots.’ (B 7:5)

### 13.5 Repetition of Clauses

In narrative the narrator sometimes repeats the mention of an event or situation that has already been given before advancing. The purpose of this is generally to give prominence to events or situations that the narrator deems to be of importance.

In many case the order of the constituents of the repeated construction is rearranged chiastically, e.g.

- (1) *+xábra yávələ ka-bàxtu. | ... ka-báxtu +xàbra yávələ. |* 'He sends word to his wife ... to his wife he sends word.' (A 3:31)
- (2) *+tàma ka-díyyan muttīlə. | ka-díyyan muttīlə +tàma. |* 'He put us there. He put us there.' (B 6:5)
- (3) *+Axíkar 'ána +ktòlli. | ... 'ána +Axíkar +ktòlli. |* 'I have killed Axiqar ... I have killed Axiqar.' (A 3:36–37)
- (4) *xá-yuma +màlla! +mutṭánnəva +rába +rába kèsə! +al-+xásət xmàra. | ?àtxa, | +mutṭánnəva +al-xmára kèsə +rába. |* 'One day the mullah had loaded a lot of pieces of wood on the back of a donkey. Like this, he had loaded on a donkey many pieces of wood.' (A 15:1)

In (5) chiasmus is achieved by using an extrapositional construction in the second clause:

- (5) *bətpákəna b-xa-+áynət mìyya. | +áynət mìyya bətpákəna bìyyo. |* 'They meet a spring of water. They meet a spring of water.' (A 47:7)

In (6) the two embedded interrogative clauses, which are overlapping in content, have the copula in different positions. Here also the motivation seems to be to create some kind of chiasmus:

- (6) *jáššək mù-ilə váyal mü kavvùmələ. |* 'Watch what is going on, what is happening' (A 1:28)

In (7) the repetition involves the chiastic positioning of a circumstantial adjunct:

- (7) *bərràkələ, | bərrákələ márət xmára-da +bàru. | márət xmára-da +bàra! bərrákəla bərràkələ. |* 'He runs and runs, with the owner of the donkey behind him. With the owner of the donkey behind, he runs and runs.' (A 7:5)

Repetition may be incremental, as in (8)–(9), where the second clause elaborates on the first:

- (8) *'ína c-azíva +màlyat šaklívá mən-nášə| mən-ducañanə ci-+jammíva +màlyat.* ‘Now, they used to go and take protection money from people. They used to gather protection money from shops.’ (A 1:2)
- (9) *'étva +rába cačálə| +kúrbət +'əsrà-danə cačálə-'étva.* ‘There were many bald men. There were nearly ten bald men.’ (A 1:1)

The repetition of clauses in many cases follows the insertion of some elaborative or parenthetic background material, e.g.

- (10) *'ánnə ka-dáyála xáčča +hayyùrəna| cút +dána xá-məndi bášli màyyi kátu| mára kátu| 'átən léša +tárəslə ta-láxxə| 'ána bašlánna ju-tanúrya kátu|x| +hayyùrəna ka-da-yála.* ‘They help this boy a little—every time they cook something, they bring it to him. They say “Make the dough, come here and I shall bake it in the oven for you.” They help this boy.’ (A 36:2)
- (11) *+xábra yávələ ka-báxtu| šómmət báxtu munšítun| xa-šómma-’ətlə| ka-báxtu +xábra yávələ| kat-ána bitáyən bëta.* ‘He gives word to his wife—I have forgotten the name of his wife, she has a name.—He sends word to his wife (saying) “I am coming home.”’ (A 3:31)
- (12) *báxta +bəddáyələ mü-ila kássat| mára +rába honàntəva| +ràba| +bəd-dáyələ kássat mü-ila.* ‘The wife knows what is happening.—It is said that she was very clever.—She knows what is happening.’ (A 3:32)

Another structural feature of repeated clauses is that they are sometimes made heavier than their initial counterpart by long morphology or reidentification of referents. This is seen in (13) and (14) where, as in the preceding examples, the repetition occurs after an elaborative or parenthetical insertion:

- (13) *cúllə +karavàšu| ríjavàtu| cúlla +byáyələ màxə| mxayèlə| +'ajuzèlə| +bəd-dáyət mu-màrən?* ‘He wants to beat all the housekeepers and servants. He beats them and harasses them. You know what I am saying? He harasses them a lot.’ (A 3:38)
- (14) *'o-+kačúla-dal xína| výyələ bəštäyal kátu mára| 'étlə šàmma| bas-šàmma +'úxča munšítun| 'o-+kačúla 'étlə šàmma| mårələ kátu|* ‘(As) the executioner is drinking, he (Axiqar) says to him—he has a name but I have forgotten the name, the executioner has a name—he says to him ...’ (A 3:33)

In (15) and (16) the subject of the second clause is expressed by an independent pronoun:

- (15) *npálələ +al-’áštat kùnya.* | *npálələ +al-’áštat kúnya ’àha.* | ‘He falls to the bottom of the well. He falls to the bottom of the well.’ (A 39:17)
- (16) *+bəzdàyən mónnax +’áxər,* | *’ána +bəzdáyən.* | ‘But I am afraid for you, I am afraid.’ (A 44:5)

In (17) the first clause has a contracted form of copula on the verb whereas an uncontracted form is used on the verb in the second clause:

- (17) *kámxa +bənxàlux.* | *kámxa +bənxàluvax,* | *’íta léša ci-lešàxlə.* | ‘We sieve the flour. We sieve the flour, then we knead the dough.’ (Canda)

In the second clause in (18) the independent pronoun serving as subject *’at* is replaced by the longer pronominal form *janax* and in (19) a genitive 3ms suffix *-u* is replaced by the longer form *jānu*:

- (18) *’át mùdivat?* | *jánax mùdivat?* | ‘What are you? What are you?’ (A 5:3)
- (19) *’u-baxxúləl bí ’axúnū.* | *baxxúləl bí hónat dó ’axún-jānu.* | ‘He is jealous of his brother. He is jealous of the intelligence of his own brother.’ (A 48:1)

Another example of the reidentification of a referent is (20) (see also 14 above):

- (20) *víla bràta.* | *+jéyran víla bràta.* | ‘It becomes a girl. The gazelle becomes a girl.’ (A 42:31)

In (21) the content of the first clause is repeated in two subsequent clauses with increasingly heavy coding of the subject referent:

- (21) *hí=da xòšla,* | *’akúbra xòšla.* | *xóšla ’á ’akúbra.* | ‘Yes, he went off, the mouse went off, the mouse went off.’ (A 52:5)

In some cases the narrator repeats the mention of an event that has already been narrated without any intervening insertion. The informational status of the clause, therefore, may be compared to that of a topical referent. The purpose of ‘heavy’ coding of topical information at the front of a sentence is generally to mark some kind of boundary in the narrative (§ 9.2.4.7., § 12.5.3.1, § 12.14.2.). This is, indeed, how the function of the construction can be interpreted here.

Such repeated clauses may be presented as subordinate temporal clauses, e.g.

- (22) *lá-vilə xa-<sup>+</sup>xábra mənnè.<sup>1</sup> +bár hàda<sup>1</sup> +bár=ət<sup>1</sup> +xábra lá-vilə mən-dànnə,<sup>1</sup> +bár háda<sup>1</sup> dàrrə<sup>1</sup> cəs-’aláhət jànu.<sup>1</sup>* ‘No word was forthcoming from them. Afterwards, after no word was forthcoming from them, he appealed to his god.’ (A 3:3-4)
- (23) *bəsyákəna<sup>1</sup> <sup>+</sup>üllul,<sup>1</sup> hál cma-<sup>+</sup>dána<sup>1</sup> atxa-<sup>+</sup>üllul bəsyákəna<sup>1</sup> bàlcət<sup>1</sup> ’alpá mótrə<sup>1</sup> <sup>+</sup>üllul-inə.<sup>1</sup>* ‘They go up, until (when) they go up for some time, they are perhaps 1,000 metres above (the ground).’ (A 3:71)

On many occasions the repeated clause is not subordinated, e.g.

- (24) *’àha<sup>1</sup> bənpàlələ,<sup>1</sup> myàtələ,<sup>1</sup> myàtələ,<sup>1</sup> ’é húri pàri<sup>1</sup> ’é báxta šapòrta<sup>1</sup> márəla kátu<sup>1</sup>* ‘He falls down and dies. He dies, the nymph, the beautiful woman, says ...’ (A 39:14)
- (25) *šəp̪páščə mxàyolə<sup>1</sup> núyra bətpàyələ<sup>1</sup> núyra bətpàyələ<sup>1</sup> báxtat<sup>1</sup> <sup>+</sup>málla bità-yələ.<sup>1</sup>* ‘He strikes matches and the fire lights. The fire lights and the wife of the mullah comes back.’ (A 23:2)
- (26) *+dárrə cəs-’aláhət jànu.<sup>1</sup> +dárrə cəs-’aláhət mərrə kátu<sup>1</sup>* ‘He appealed to his god. He appealed to God. He said to him ...’ (A 3:4)
- (27) *’ána<sup>1</sup> ju-béti tívənva<sup>1</sup> ’e-<sup>+</sup>dántat<sup>1</sup> ’ína jvánka<sup>1</sup> +tarri mxílun,<sup>1</sup> +tuktòklun<sup>1</sup> ’u-<sup>+</sup>plàtlí.<sup>1</sup>* ‘I was sitting in my house, when I was young, and somebody banged on my door. Somebody banged on my door, somebody knocked, and I went out.’ (A 2:26)
- (28) *ju-bétux jurvàssələ<sup>1</sup> ’ína ’adíyya velə-víyya<sup>1</sup> xàyyən<sup>1</sup> <sup>+</sup>állux.<sup>1</sup> +xàyyən<sup>1</sup> plítəla<sup>1</sup> <sup>+</sup>állux,<sup>1</sup> +báyyə mamxílux b-ó ... fur'un málca.<sup>1</sup>* ‘He has grown up in your house but now he has become treacherous to you. He has turned out to be treacherous to you and wants to cause you to be smitten by Pharaoh.’ (A 3:22-23)

In (29) the subject *súysə* in the first clause takes the nuclear stress, marking it as a new referent, whereas in the repeated clause the verb takes the nuclear stress, since the subject referent is now topical:

- (29) *har-b-dé-<sup>+</sup>danta xá-dana sìysə tíla.<sup>1</sup> súysə tíla,<sup>1</sup> yámmyi<sup>1</sup> rxətla jáno<sup>1</sup> rup-pàla.<sup>1</sup>* ‘Just at that moment a horse came. A horse came and my mother ran and threw herself down.’ (B 6:6)

In (30) there is a series of repetitions in the narration of a chain of actions. This clearly divides them into discrete events:

- (30) *'áha bərràkəla. bərràkəla,| +bərxáṭəl +bəro. +bərxáṭəl +bəro,| 'áha| +mṭà-yolə,| +bəktàlələ. +bəktàlələ| 'ína béto bəxzàyulə.* 'She flees. She flees and he runs after her. He runs after her, he catches her and kills her. He kills her and sees her house.' (A 39:38)

In some cases the motivation for repetition of clauses appears to be to give prominence to their contents. This is found in particular in the opening sections of narratives that set the scene for what follows (31–33), at the onset of major episodic breaks (34), or the beginning of speeches (35):

- (31) *'ína yálə lətvalə. +Axíkar yálə lətvalə. 'ətvalə| 'əští-danə baxtàta. 'əští baxtàta 'ətvalə.* 'But he did not have children. Axiqar did not have children. He had sixty wives. He had sixty wives.' (A 3:2)
